

Logs

This chapter provides information about log file names and locations as well as other log-related information.

This chapter is organized as follows:

- Logs Overview, page 4-1
- Log Files Stored on the Director by Role, page 4-1
- Localy-stored Log Files by Role, page 4-4
- Understanding Logs, page 4-5

Logs Overview

Most Cisco WebEx Social logs are centralized on the Director node. There are a few exceptions (log files with dynamic name patterns and non-critical logs) where log files are managed localy on nodes instead of streaming to the Director node.

Cisco WebEx Social uses rsyslog as a logging framework. rsyslog sends critical logs to the Director node but, if configured, can also stream logs to an upstream host (see the *Cisco WebEx Social Administration Guide* for details).

The central log location on the Director node is /opt/logs/<*date>*/ where *date* is the date that the log message was written. For example /opt/logs/2012_12_01/ would contain all log messages generated on Dec 1 2012.

The logs on the Director can be accessed through the Director GUI (see the *Cisco WebEx Social Administration Guide* for details) or through the Cisco WebEx Social Director API.

Log Files Stored on the Director by Role

This sections lists the log files that each role sends to the Director.

Role	Log filename
Director	%HOSTNAME%_director_web.log
	%HOSTNAME%_catalina.log
	%HOSTNAME%_localhost.log
	%HOSTNAME%_manager.log
	%HOSTNAME%_host_manager.log
	%HOSTNAME%_deploy_db.log
	%HOSTNAME%_graphite_access.log
	%HOSTNAME%_graphite_exception.log
	%HOSTNAME%_graphite_info.log
	%HOSTNAME%_graphite_error.log
	%HOSTNAME%_carbon_console.log
	%HOSTNAME%_salt_master.log
	%HOSTNAME%_mongod.log
	%HOSTNAME%_jsonstore.log
	%HOSTNAME%_analyticsstore.log
App Server	%HOSTNAME%_appserver.log
	%HOSTNAME%_analyticsmrscheduler.log
	%HOSTNAME%_catalina.log
	%HOSTNAME%_localhost.log
	%HOSTNAME%_tomcat-access.log

Localy-stored Log Files by Role

This sections lists the log files that some roles store localy.

Role	Log filename
RDBMS Store	/opt/oracle/app/oracle/diag/rdbms/[quad, rdfprod]/[quad, rdfprod]/cdump/* /opt/oracle/app/oracle/admin/[quad, rdfprod]/adump/* /opt/oracle/app/oracle/diag/tnslsnr/*/listener/alert/log.xml /opt/oracle/app/oracle/diag/tnslsnr/*/listener/trace/listener.log /opt/oracle/app/oracle/diag/rdbms/[quad,rdfprod]/[quad, rdfprod]/trace/*.trc,*.trm
Common logs (all roles)	/var/log/sa/sa* /var/log/httpd/[ssl*log] /var/log/anaconda.* /var/log/btmp /var/log/dmesg /var/log/dracut.log

Table 4-2	Localy-stored Log Files
-----------	-------------------------

Understanding Logs

This section contains log excerpts for variuos normal and abnormal events, as follows:

- Monit Logs, page 4-6
- Resource Overutilization, page 4-7
- Purging /opt, page 4-7
- Nagios Starts Up/Shuts Down, page 4-7
- Common False Positives, page 4-7
- Failure: Core Service is Down for an Extended Period of Time, page 4-8
- Rsyslog Starts Up/Shuts Down, page 4-9
- Rsyslog is Rate Limited, page 4-9
- Service is Down, page 4-9
- Analytics Service Initialized Successfully, page 4-9
- MapReduce Scheduler Logs, page 4-9
- Calendar Logs, page 4-10
- Framework Logs, page 4-19
- Streams Logs, page 4-19
- Email Integration Logs, page 4-21
- Office Plug-in Logs, page 4-37
- Cisco WebEx Social Call Plug-in Logs, page 4-38
- WebEx Social for Office Logs, page 4-39
- Open API Logs, page 4-47
- Click to Call and Click to Chat Logs, page 4-52

- Email Notifications About Announcements and Alerts, page 4-53
- Synthetic Monitor, page 4-56
- Centralized Credentials Management (Master Password), page 4-56
- Session Centralization, page 4-56

Monit Logs

This section is organized as follows:

- Monit Starts Up, page 4-6
- Monit Check Failed, page 4-6
- Manually Restarting Monit, page 4-6

Monit Starts Up

These log entries are generated during normal monit startup.

```
Mar 15 20:40:35 guad-web-a monit[19684]: Shutting down monit HTTP server
Mar 15 20:40:35 guad-web-a monit[19684]: monit HTTP server stopped
Mar 15 20:40:35 guad-web-a monit[19684]: monit daemon with pid [19684] killed
Mar 15 20:40:35 guad-web-a monit[19684]: 'system_guad-web-a.example.com' Monit stopped
Mar 15 20:40:35 guad-web-a monit[27469]: Starting monit daemon with http interface at
[*:2812]
Mar 15 20:40:35 guad-web-a monit[27469]: Monit start delay set -- pause for 120s
Mar 15 20:42:35 guad-web-a monit[27472]: Starting monit HTTP server at [*:2812]
Mar 15 20:42:35 guad-web-a monit[27472]: monit HTTP server started
Mar 15 20:42:35 guad-web-a monit[27472]: monit HTTP server started
```

Monit Check Failed

These log entries are generated when collectd and httpd are not running and are failing to start:

```
Mar 15 21:05:27 quad-web-b monit[16949]: 'collectd' process is not running
Mar 15 21:05:27 quad-web-b monit[16949]: 'collectd' trying to restart
Mar 15 21:05:27 quad-web-b monit[16949]: 'collectd' start: /etc/init.d/collectd
Mar 15 20:17:27 quad-web-a monit[19684]: 'httpd' process is not running
Mar 15 20:17:27 quad-web-a monit[19684]: 'httpd' trying to restart
Mar 15 20:17:27 quad-web-a monit[19684]: 'httpd' trying to restart
Mar 15 20:17:27 quad-web-a monit[19684]: 'httpd' trying to restart
Mar 15 20:17:27 quad-web-a monit[19684]: 'httpd' trying to restart
```

Manually Restarting Monit

These log entries are generated when a service is restarted manually in which case monit detects the PID change and logs it:

```
May 22 18:02:13 quad-web-c monit[1811]: 'rsyslog' process PID changed from 1425 to 2959
May 22 18:03:13 quad-web-c monit[1811]: 'rsyslog' process PID has not changed since last
cycle
```

Resource Overutilization

These log entries are generated when monit has detected that a resource utilization has gone over the prefedined threshold:

```
May 27 18:25:11 quad-web-a monit[2236]: 'rsyslog' cpu usage of 50.1% matches resource limit [cpu usage>50.0%]
```

Purging /opt

These log entries are generated when monit has detected that the /opt usage has grown beynd 85% and the purge action has been performed:

```
Jun 5 01:05:44 quad-test monit[16057]: 'opt' space usage 92.6% matches resource limit
[space usage>85.0%]
Jun 5 01:05:44 quad-test monit[16057]: 'opt' exec: /bin/bash
Jun 5 01:05:44 quad-test monit: /opt disk usage exceeded 85% threshold. Purging log
folder: /opt/logs/2012_06_03
```

These log entries are generated when "today" is the only remaining folder and there is nothing left to purge:

```
Jun 5 01:07:44 quad-test monit: /opt disk usage exceeded 85% threshold. Purging log folder:
```

Nagios Starts Up/Shuts Down

These log entries are generated during normal Nagios startup/shutdown.

Common False Positives

These false positives are known to appear:

- Node is No Longer Active/Available but Exists in the Topology
- Monit service Not Running on a Node
- Chart Data Missing for a Node

Node is No Longer Active/Available but Exists in the Topology

```
[1335313142] SERVICE ALERT: test.example.com;Load:
midterm;UNKNOWN;HARD;4;check_graphite_stats :err : getData failed 500
[1335296859] SERVICE ALERT: test.example.com;Disk: opt;CRITICAL;SOFT;1;CRITICAL:
Exception: [Errno 113] No route to host
```

Monit service Not Running on a Node

Node name in the example: test.example.com.

```
[1335946047] SERVICE NOTIFICATION:
nagiosadmin;test.example.com;cron;CRITICAL;notify-service-by-email;CRITICAL: Exception:
[Errno 111] Connection refused
```

Chart Data Missing for a Node

The charts are fed by collectd. If you are missing data for a particular node, look for the collectd log on the Director for that node.

In many cases the counters are either 0 or missing for certain attributes on certain nodes. For example, with ActiveMQ, there is only one active node at any one time. The other node is in standby mode waiting to take over. The resulting log messages look like this for the standby AMQ node:

May 29 16:00:09 quad-queue-2 collectd[3793]: GenericJMXConfValue.query: Querying attribute TotalEnqueueCount failed. May 29 16:00:09 quad-queue-2 collectd[3793]: GenericJMXConfValue.query: getAttribute

failed: javax.management.RuntimeMBeanException: java.lang.NullPointerException

This is normal behavior in this case as the other AMQ node is currently active.

Failure: Core Service is Down for an Extended Period of Time

These log entries are generated when a core service has not been running for an extended period of time.

```
[1335317564] SERVICE ALERT: quad-test.example.com;ntpd;CRITICAL;SOFT;1;CRITICAL: PROCESS
ntpd: failed to start
[1335317624] SERVICE ALERT: quad-test.example.com; ntpd; CRITICAL; SOFT; 2; CRITICAL: PROCESS
ntpd: failed to start
[1335317684] SERVICE ALERT: quad-test.example.com; ntpd; CRITICAL; SOFT; 3; CRITICAL: PROCESS
ntpd: failed to start
[1335317744] SERVICE ALERT: quad-test.example.com;ntpd;CRITICAL;HARD;4;CRITICAL: PROCESS
ntpd: failed to start
[1335317744] SERVICE NOTIFICATION:
test@example.com;quad-test.example.com;ntpd;CRITICAL;notify-service-by-email;CRITICAL:
PROCESS ntpd: failed to start
[1335318044] SERVICE ALERT: quad-test.example.com;ntpd;OK;HARD;4;OK: Total 1 services are
monitored
[1335318044] SERVICE NOTIFICATION:
test@example.com;quad-test.example.com;ntpd;OK;notify-service-by-email;OK: Total 1
services are monitored
```

The text highlighted in red shows that:

- There have been four successive failures, which causes Nagios to generate an email alert.
- The email address that the alert was sent to (test@example.com).
- The text that was sent in the email (the rest of the message).

The very last line shows:

- The service recovering (indicated by the OK: Total 1 services are monitored).
- The email address that the alert was sent to (test@example.com) informing the service has gone back online.

Rsyslog Starts Up/Shuts Down

These log entries are generated during normal rsyslog startup/shutdown.

```
May 31 01:22:16 quad-web-a kernel: Kernel logging (proc) stopped.
May 31 01:22:16 quad-web-a rsyslogd: [origin software="rsyslogd" swVersion="5.8.6"
x-pid="1612" x-info="http://www.rsyslog.com"] exiting on signal 15.
May 31 01:22:17 quad-web-a kernel: imklog 5.8.6, log source = /proc/kmsg started.
May 31 01:22:17 quad-web-a rsyslogd: [origin software="rsyslogd" swVersion="5.8.6"
x-pid="28666" x-info="http://www.rsyslog.com"] start
```

Rsyslog is Rate Limited

These log entries are generated when rsyslog has reached the default maximum of 200 input log messages per 5 seconds. Any excess messages are dropped for the process.

```
May 25 23:37:36 quad-web-a rsyslogd-2177: imuxsock begins to drop messages from pid 2061
due to rate-limiting
May 25 23:40:02 quad-web-a rsyslogd-2177: imuxsock lost 1085 messages from pid 2061 due to
rate-limiting
```

Service is Down

If a service is down, collectd won't be able to collect stats for that service, for example if the Worker service is not running then the Health state manager check fails and collectd logs the following:

Jun 4 21:01:44 quad-web-b collectd[7176]: curl_json plugin: curl_easy_perform failed with status 7: couldn't connect to host (http://localhost:8080/monit/status.do?output=json)

If Memcached is not running, you see a message like this:

Jun 7 00:04:24 quad-cache-1 collectd[6847]: memcached: Could not connect to daemon.

Analytics Service Initialized Successfully

This log message appears if the Analytics service on an App Server or Worker node initializes successfully.

AnalyticEventReceiver initialized

MapReduce Scheduler Logs

Mapreduce jobs are run for analytics and suggestions. Typically, these jobs are run once per day (unless you change the "Analytics Store Cron Job Hour of Day (UTC)" on the Director, in which case the scheduler job might run again for the day when it was changed).

The mapreduce scheduler logs are writen to *worker-host-name_analyticsmrscheduler.log*. One of the Worker nodes picks up the entire job for execution.

• To verify the job has started, look for:

Running Map Reduce Jobs

• The end of the job is signified by this message:

----- MapReduce Jobs completed. Exiting Program ------

• To see if all mapreduce jobs completed successfully, run:

cat worker-host-name_analyticsmrscheduler.log | grep 'exitValue'

The command should return something similar to:

```
Apr 26 00:00:08 ecp-10-194-190-32.example.com analyticsmrscheduler[]: INFO
[ANALYTICS_MR_SCHEDULER] - [pool-32-thread-2]: Process : cmd = user_library_usage,
exitValue = 0
```

An exitValue = 0 signifies that the command has executed successfully. If any command has an exitValue *not equal* to 0, there is likely some issue executing the mapreduce jobs.

• If you see messages similar to "login failed", check for the following:

Execute:

/usr/bin/mongo -u *username* -p *password analytics_store_host:port*/dbName /opt/cisco/scheduler/analytics/mapreduce/user_library_usage.js

Verify that *username*, *analytics_store_host*, *port*, and *dbName* match the respective properties set in portal-ext.properties. If they match, ensure that the credentials are valid for the quadanalytics database on the Analytics Store.

If the credentials look good, but the login still fails, there might be no primary Analytics Store node on the cluster; all available nodes might be in secondary mode. Check if that is the case by running:

db.isMaster();

inside the mongo console on each Analytics Store node.

• If you see that there are no scheduler logs being generated, go to the Director > Configuration and check the running schedule (it is set to run at midnight GMT by default). If the schedule run has passed, check if the MessageQueue Scheduler Queue has some messages stuck. If you see the messages are stuck, check if the Worker role shows exceptions. If there are no exceptions, ensure Message Queue is working properly.

Calendar Logs

This section explains the following procedures from logging standpoint:

- Getting a Month Worth of Meetings with Configured Domino and WebEx (No Cached Data), page 4-10
- Getting a Month Worth of Meetings with Configured Domino and WebEx (Cached Data), page 4-12
- Getting a Month Worth of Meetings with Configured WebDAV (No Cached Data), page 4-13
- Selecting a Domino Event from the List of Events, page 4-18

Getting a Month Worth of Meetings with Configured Domino and WebEx (No Cached Data)

When you click on the arrow to go to the next month in the Calendar application (assuming that this is the first time you request the data—that is, there is no data in the cache), the application goes through the following steps, logging the respective messages:

Step 1 Display the Domino settings that are used to connect to Domino.

DEBUG 14:07:40,269 | AGGREGATED_CALENDAR:65 | [] Using Domino Calendar settings for user: "r3". Username: "vmdomino domino", Password: "****", URL: "198.51.100.35", Domain: "dominotest"

Step 2 Try to get the events for Domino from the cache without success.

INFO 14:07:40,279 | AGGREGATED_CALENDAR:78 | [] getCachedListEvents:[AggCalCacheUtil]: Cache miss for [Mail-Chain-10195-14610005_Sat Mar 31 21:00:00 GMT 2012_Sat May 05 20:59:59 GMT 2012] - we got 0 meetings

Step 3 Try to get the events for WebEx from the cache without success.

INFO 14:07:40,279 | AGGREGATED_CALENDAR:78 | [] getCachedListEvents:[AggCalCacheUtil]: Cache miss for [WebEx-Chain-10195-14610005_Sat Mar 31 21:00:00 GMT 2012_Sat May 05 20:59:59 GMT 2012] - we got 0 meetings

Step 4 Display the period for which the events are being retrieved from Domino.

INFO 14:07:40,279 | AGGREGATED_CALENDAR:78 | [] Get events from Sat Mar 31 21:00:00 GMT 2012 to Sat May 05 20:59:59 GMT 2012

Step 5 Display the period for which the events are being retrieved from WebEx.

INFO 14:07:40,281 | AGGREGATED_CALENDAR:78 | [] Get events from Sat Mar 31 21:00:00 GMT 2012 to Sat May 05 20:59:59 GMT 2012

Step 6 Successful creation of a Domino session.

INFO 14:07:40,289 | AGGREGATED_CALENDAR:78 | [] Domino session was successfully created for user: vmdomino domino

Step 7 Execute a query to get the events from Domino.

```
DEBUG 14:07:40,293 | AGGREGATED_CALENDAR:65 | [ ] SELECT
((@ISAvailable(CalendarDateTime) & (@Explode(CalendarDateTime) *=
@Explode(@TextToTime("04/01/2012 12:00:00 AM ZE2-05/05/2012 11:59:59 PM ZE2")))) |
(@ISAvailable(EndDateTime) & (@Explode(EndDateTime) *= @Explode(@TextToTime("04/01/2012
12:00:00 AM ZE2-05/05/2012 11:59:59 PM ZE2")))) & @IsUnavailable(FailureReason) &
(@ISAvailable(AppointmentType) & AppointmentType <> "1" & AppointmentType <> "4") & (Form
= "Appointment"))
```

Step 8 Parse each Domino meeting attendees by common name (CN).

```
DEBUG 14:07:40,376 | AGGREGATED_CALENDAR:65 | [ ] Search user document for common name:

CN=gp gp

DEBUG 14:07:40,386 | AGGREGATED_CALENDAR:65 | [ ] Search user document for common name:

CN=r2@example.com

DEBUG 14:07:40,388 | AGGREGATED_CALENDAR:65 | [ ] Search user document for common name:

CN=rvmdomino domino
```

Step 9 Output each Domino meeting after we have processed it.

```
TRACE 14:07:40,397 | AGGREGATED_CALENDAR:53 | [
                                                 ] Events:
[eventId : 594B9C51FA2258CCC22579AC00431138 - 1335862800000 - 1335872700000

```

Getting a Month Worth of Meetings with Configured Domino and WebEx (Cached Data)

When you click on the arrow to go to the next month in the Calendar application (assuming that this is *not* the first time you request the data—that is, there *is* data in the cache), the application logs the following messages:

```
INFO 12:50:05,479 | AGGREGATED_CALENDAR:78 | [ ] getCachedListEvents:[AggCalCacheUtil]:
Cache hit for [WebEx-Chain-10195-14610005_Sat Mar 31 21:00:00 GMT 2012_Sat May 05 20:59:59
GMT 2012] - we got 20 meetings
INFO 12:50:05,479 | AGGREGATED_CALENDAR:78 | [ ] getCachedListEvents:[AggCalCacheUtil]:
Cache hit for [Mail-Chain-10195-14610005_Sat Mar 31 21:00:00 GMT 2012_Sat May 05 20:59:59
GMT 2012] - we got 26 meetings
```

Getting a Month Worth of Meetings with Configured WebDAV (No Cached Data)

When you click on the arrow to go to the next month in the Calendar application (assuming this that is the first time you request the data—that is, there is no data in the cache), the application goes through the following steps, logging the respective messages:

```
Step 1 Display the Exchange settings that are used to connect to Exchange.
```

DEBUG 13:52:37,382 | AGGREGATED_CALENDAR:65 | [] Using Exchange Calendar settings for user: "r2". Username: "vm2007", Password: "****", URL: "https://198.51.100.35/exchange/vm2007/", Domain: ""

Step 2 Try to get the events for Exchange from the cache without success.

INFO 13:52:37,385 | AGGREGATED_CALENDAR:78 | [] getCachedListEvents:[AggCalCacheUtil]: Cache miss for [Mail-Chain-10195-1410026_Sun Mar 25 21:00:00 GMT 2012_Sun May 06 20:59:59 GMT 2012] - we got 0 meetings

Step 3 Execute a WebDAV query to log into WebDAV.

```
DEBUG 13:52:37,421 | AGGREGATED_CALENDAR:65 | [ ] Search Query:
<?xml version='1.0'?><d:searchrequest xmlns:d="DAV:"><d:sql>SELECT
"urn:schemas:httpmail:subject",
"urn:schemas:calendar:location","urn:schemas:mailheader:to",
"urn:schemas:mailheader:cc","http://schemas.microsoft.com/mapi/nonsendableto","urn:schemas

```

Step 2 Display the Domino settings that are used to connect to Domino.

```
DEBUG 14:37:44,504 | AGGREGATED_CALENDAR:65 | [ ] Using Domino Calendar settings for user: "r3". Username: "vmdomino domino", Password: "****", URL: "198.51.100.35", Domain: "dominotest"
```

Step 3 Try to get the events for Domino from the cache without success.

INFO 14:37:44,507 | AGGREGATED_CALENDAR:78 | [] getCachedEvent:[AggCalCacheUtil]: Cache miss for [C5F48FA61382B436C22579DE003AE145-1335456000000-1335459600000-10195-14610005]

Step 4 Initiate a call to the Domino server.

```
INFO 14:37:44,507 | AGGREGATED_CALENDAR:78 | [ ] Get events with ID
C5F48FA61382B436C22579DE003AE145-1335456000000-1335459600000
INFO 14:37:44,512 | AGGREGATED_CALENDAR:78 | [ ] Domino session was successfully
created for user: vmdomino domino
```

Step 5 Log a message just before the Domino call is initiated.

```
DEBUG 14:37:44,527 | AGGREGATED_CALENDAR:65 | [ ] Get meeting details for event:
C5F48FA61382B436C22579DE003AE145-1335456000000-1335459600000
```

Step 6 Parse each Domino meeting attendees by common name (CN).

```
DEBUG 14:37:44,534 | AGGREGATED_CALENDAR:65 | [ ] Search user document for common name:
CN=vmdomino domino
DEBUG 14:37:44,544 | AGGREGATED_CALENDAR:65 | [ ] Search user document for common name:
CN=no mail
```

Step 7 Cache the event after it has been successfully retrieved.

DEBUG 14:37:44,557 | AGGREGATED_CALENDAR:65 | [] cacheMeeting:[AggCalCacheUtil]: Meeting cached for [C5F48FA61382B436C22579DE003AE145-1335456000000-1335459600000-10195-14610005]

Framework Logs

This section is organized as follows:

• Incorrect Theme ID, page 4-19

Incorrect Theme ID

ERROR [org.apache.velocity] - [TP-Processor49]: Exception in macro #content_include called at _SERVLET_CONTEXT_/html/themes/classic/templates/portal_normal.vm[line 559, column 33]

If you see this error, it is probably the theme ID that is misconfigured. Check if these advanced portal properties have values as follows:

default.regular.theme.id = albani

control.panel.layout.regular.theme.id = albani

Streams Logs

This section is organized as follows:

- Errors During Interpretation, page 4-19
- VDL Backend Debugging, page 4-20

Errors During Interpretation

The most common exceptions when interpreting social activities are due to permission related errors (when accessing resources like documents or images). If any other type of exception appears when interpreting a social activity, that activity is ignored when displaying the list of activities to the user in which case you would usually see a log entry similar to:

```
quad-web-2.example.com 2012-04-17 20:52:22,522 ERROR [socialActivities] - [TP-Processor42]
- [alafemin] - [10B879E3B61F30994AEE245D77F8F84B.quad-web-2.example.comjvm]:
PostActivityInterpreter.doInterpretToJSON : Cannot interpret private activity.
quad-web-2.example.com 2012-04-17 20:52:22,523 ERROR
[social.model.BaseSocialActivityInterpreter] - [TP-Processor42] - [alafemin] -
[10B879E3B61F30994AEE245D77F8F84B.quad-web-2.example.comjvm]: Unable to interpret activity
com.liferay.portal.PortalException: Cannot interpret private activity.
```

Note that this type of error is logged even for activities that are excluded from the user Streams for normal reasons such as privacy so they do not necessarily mean exceptions.

VDL Backend Debugging

If you want to debug Streams API calls on the backend, enable Debug logging for SocialActivity Application (see Streams FAQs, page 1-30) then look for the following in the App Server logs:

• When you refresh the Home page or navigate to it:

```
Apr 25 18:08:01 ecp-10-194-189-67.example.com quad[]: DEBUG [socialActivities] -
[TP-Processor47]: getUserActivities for 110060: Start
Apr 25 18:08:01 ecp-10-194-189-67.example.com quad[]: DEBUG [socialActivities] -
[TP-Processor47]: getUserActivities for 110060, ResultSize:1, Time:21msecs: End
```

Where:

getUserActivities is the API called, 110060 is the userid, ResultSize shows how many activities have been returned, Time shows how long this call took.

• When you navigate to your profile:

```
Apr 25 18:32:16 ecp-10-194-189-67.example.com quad[]: DEBUG [socialActivities] -
[TP-Processor44]: getUserPublicActivities for 110060: Start
Apr 25 18:32:16 ecp-10-194-189-67.example.com quad[]: DEBUG [socialActivities] -
[TP-Processor44]: getUserPublicActivities for 110060, ResultSize:3, Time:2msecs: End
```

• When you navigate to the profile of another user:

```
Apr 25 18:37:06 ecp-10-194-189-67.example.com quad[]: DEBUG [socialActivities] -
[TP-Processor47]: getUserPulbicActivities for 110112: Start
Apr 25 18:37:06 ecp-10-194-189-67.example.com quad[]: DEBUG [socialActivities] -
[TP-Processor47]: getUserPublicActivities for 110112, ResultSize:1, Time:1msecs: End
```

Where:

1100112 is user ID of the user whose profile activities you are requesting.

• If a certain activity does not appear on the Home page, check if it is supposed to be there. If it is supposed to appear, then check the logs for errors.

If there is an error returning the activity to the user interface, you see a warning like this followed by an exception:

```
Ignoring activity due to an error while building activity entry for cnId = <classname_id>, cpk = <postid or documentid etc.>
```

If there is an error during the activity creation process, it is logged. The example that follows is for a successful post creation activity. In case of an error you see the start message but not the end message and an exception is logged.

```
Apr 25 18:36:42 ecp-10-194-189-67.example.com quad[]: DEBUG [socialActivities] - [TP-Processor44]: handleSync for POST_CREATE: classNameId = 10060, classPK= 2500002: Start
```

Apr 25 18:36:42 ecp-10-194-189-67.example.com quad[]: DEBUG [socialActivities] [TP-Processor44]: PostActivityHandler:handleSynchProcess: for POST_CREATE: classNameId
= 10060, classPK= 2500002: Start
Apr 25 18:36:42 ecp-10-194-189-67.example.com quad[]: DEBUG [socialActivities] [TP-Processor44]: PostActivityHandler:handleSynchProcess: for POST_CREATE: classNameId
= 10060, classPK= 2500002, Time:7msecs: End
Apr 25 18:36:42 ecp-10-194-189-67.example.com quad[]: DEBUG [socialActivities] [TP-Processor44]: handleSync for POST_CREATE: classNameId = 10060, classPK= 2500002, Time:7msecs: End

• If DEBUG has been enabled for the QUAD_EVENTING log category:

```
Apr 25 18:36:42 ecp-10-194-189-67.example.com quad[]: DEBUG [QUAD_EVENTING] -
[TP-Processor44]: Sending event POST_CREATE
Apr 25 18:36:42 ecp-10-194-189-67.example.com quad[]: DEBUG [QUAD_EVENTING] -

Email Integration Logs

This section is organized as follows:

- Successfully Sent an Instant Email Notification, page 4-21
- Successfully Sent an Email Digest, page 4-24
- Problem with Connection to Postfix, page 4-29
- No Active SMTP Server or No SMTP Server Defined in Configuration, page 4-31
- VTL Syntax Error in Template File, page 4-32
- Expected Warning Message in Worker Log, page 4-35
- An Email is Sent Following a User Action, page 4-35
- Email Sent to a Community or a Discussion Category, page 4-36

Successfully Sent an Instant Email Notification

These log messages appear when an instant email notification has been sent successfully.

```

Expected Warning Message in Worker Log

The warning message below is logged when the user comments on a post or update and the log level for Outbound Email is INFO, DEBUG, or TRACE.

The reason this warning is logged is because the system checks if there is a parent comment to determine wether the event is a top-level comment or a reply to a comment.

In most cases these warning can be ignored, but if there is an actual problem, the provided information can be used to determine the cause.

An Email is Sent Following a User Action

When an email event is sent based on a user action, you see a log message on the App Server node that looks similarly to the following:

```
Apr 25 22:35:09 test-int.example.com quad[]: DEBUG [QUAD_EVENTING] - [TP-Processor40]:
Sending event POST_CREATE
Apr 25 22:35:09 test-int.example.com quad[]: DEBUG [QUAD_EVENTING] - [TP-Processor40]:
Event content for event: POST_CREATE:
{"addedRecipients":[{"class":"com.cisco.ecp.vdl.post.model.impl.PostRecipientImpl","id":11
0005,"permission":{"allPermissions":null,"authorize":false,"authorized":false,"class":"com
.cisco.ecp.vdl.post.model.impl.PostPermissionImpl","comment":false,"commentable":false,"ed
it":false,"editable":false,"share":false,"shared":false,"view":true,"viewable":true},"reci
pientType":"USER"},{"class":"com.cisco.ecp.vdl.post.model.impl.PostRecipientImpl","id":110
057,"permission":{"allPermissions":null,"authorize":false,"authorized":false,"class":"com.
c...
```

The above message shows a POST_CREATE event being sent to RabbitMQ when a user creates a post.

On the Worker node, a corresponding log message appears when the event is being processed by the email service:

Apr 25 22:35:09 test-int.example.com quad[]: DEBUG [digest] - [pool-3-thread-2]: DigestEventReceiver.processEvent(): delivery tag = 27, event = {{ eventType: POST_CREATE, eventTime: 1335393308458, client ip: 0, Quad Ip: 0, classPK: 4700001, classNameId: 10060, creator id: 10399, creator name: Compliance Officer, screen name: ciscosyscomplianceofficer, small portrait: 0, medium portrait 1: 0, medium portrait 2: 0, company id: 10193}, post version: 1, public scope: false, owner id: 10399, owner name: Compliance Officer, owner screen name: ciscosyscomplianceofficer, title: Solomon Wu's content has been hidden (Case 9010211), post type: TEXT_POST, mentioned users: []}

Email Sent to a Community or a Discussion Category

When an email has been sent to a community for processing, messages similar to the following appear in the Worker log:

```
2012-04-27 13:53:16,295 DEBUG [MailHandler:97]

Server Side Logs of the Shared Changes Feature

When users are uploading an attachment while creating or editting a post, you should see the debug messages shown below. The document is not associated with an asset (such as post) at this point as the asset has not been saved, but tagging of the document with certain information (such as version info and a UUID split into two 64-bit integers (VerslyUUID_MSB, VerslyUUID_LSB) has already been done completed.

```

Client Side Logs of the Shared Changes Feature

These messages appear when the user opens a document and connection to the XMPP server is established:

```
2012-04-18 15:43:44 [p:10416] [t:1]
[Cisco.Office.AbstractAddIn.AbstractOfficeObjectWatcher`2[TApplication,TOfficeObject]]
[Trace] - OfficeApplication_WindowActivate - C:\Users\shrmohan\Downloads\QFO.docx
2012-04-18 15:43:45 [p:10416] [t:4] [Cisco.Office.Sidebar.Client.ConnectionManager] [Info]
- Trying to reconnect
2012-04-18 15:43:45 [p:10416] [t:4] [Cisco.Office.Sidebar.Client.XmppClient] [Info] -
Reconnecting XMPP
2012-04-18 15:43:45 [p:10416] [t:4] [Cisco.Office.Sidebar.Client.XmppClient] [Info] -
IsRunning was False
2012-04-18 15:43:45 [p:10416] [t:4] [Cisco.Office.Sidebar.Client.XmppClient] [Trace] -
Closing XMPP connection
```

The user then makes edits to the document and clicks "Share Changes" to upload their changes to Quad, resulting in these messages:

Open API Logs

This section is organized as follows:

• Message Format, page 4-47

Message Format

Similarly to all Cisco WebEx Social log messages, API log messages follow this format:

<Timestamp> <Log Level> [Class name] - [thread name] - [user screen name] - [session id]: <log message>

The <log message> part has format that is specific to API log messages, as follows:

• For log levels different than TRACE, the format is:

[API] - message text

- For log level TRACE, the format is:
 - When capturing an entry into an API method:

>>Class.Method(args) [

Where Class is the API class name, Method is the method name and args are the arguments that have been passed to the method.

• When capturing an exit from an API method:

< return data >

] Class.method() << <time elapsed>

Where return data is the result from the method execution, Class is the API class name, Method is the method name, and time elapsed is the time spend executing this method.

- When capturing an exception:
 - < Exception >
 -] Class.method()

Where Exception is the exception text, Class is the API class name, and Method is the method name.

An example log excerpt follows. Section explanations are included inline in bold:

API entry point

```

Response is sent to the client

Click to Call and Click to Chat Logs

This section is organized as follows:

- User Clicks to Call, page 4-52
- User Clicks to Chat, page 4-53

User Clicks to Call

These messages appear in the browser's console when the user click to call another user and Cisco Jabber has been selected as preferred client:

placing a call to user[7910001] at number [+15559991130] [VideoTools] Placing a call to +15559991130 via an external call client. where 7910001 and +15559991130 are replaced with the corresponding user ID and phone number.

These messages appear in the browser's console when the user click to call another user and the built-in client has been selected as preferred client:

placing a call to user[7910001] at number [+15559991130] Logger.js:82 [VideoTools] Placing a call to +15559991130 via the build-in plugin.

where 7910001 and +15559991130 are replaced with the corresponding user ID and phone number.

User Clicks to Chat

These messages appear in the browser's console when the user click to chat with another user and Cisco Jabber has been selected as preferred client:

ChatDebug - Chat.js/startChatScreenName: Starting chat via an external chat client with moore

where moore is replaced with the corresponding user screen name.

These messages appear in the browser's console when the user click to chat with another user and the built-in client has been selected as preferred client:

ChatDebug - ChatService.js/startChatSession(): IntegrationId= moore@example.com

where moore@example.com is replaced with the corresponding user integration ID (email).

Email Notifications About Announcements and Alerts

This section is organized as follows:

- AnnouncementsMainJob Started, page 4-53
- Annoucement/Alert Subject to Email Notification is Found, page 4-54
- Announcement/Alert Pushed to MQ and DB Status Updated, page 4-54
- Consumer Retrieves Event from Queue, page 4-54
- Email Successfully Prepared, page 4-55
- SMTP Transportation Begins for Email, page 4-55
- Email Message Sent Successfully, page 4-55
- Generation of Email Failed, page 4-56

AnnouncementsMainJob Started

These messages appear on each worker.digestscheduler.announcements.mainJobRepeatInterval interval. They denote normal operation:

```
TRACE [announcements.jobs.MainJob] - [QuartzSchedulerEngineInstanceW_Worker-3] - [] - []:
AnnouncementsMainJob started at Wed Mar 20 13:24:04 GMT 2013
TRACE [announcements.jobs.MainJob] - [QuartzSchedulerEngineInstanceW_Worker-3] - [] - []:
The MainJob's name is 5cbebadd-8fa7-413c-bc7d-cda3d1577ba6
```

Annoucement/Alert Subject to Email Notification is Found

These messages appear when an annoucement or alert that is subject to email notification is found:

```
INFO [scheduler.util.UniqueRandomNumbersGenerator] -

Job com.cisco.ecp.scheduler.announcements.jobs.BulkJob: <5833ea08-60fe-4f63-bc66-5a538580efff>: no memcached record present or the database record is newer, using the database record.

Announcement/Alert Pushed to MQ and DB Status Updated

These messages appear when the announcement or alert is pushed to the message queue and its database record is created.

DEBUG [announcements.jobs.BulkJob] - [QuartzSchedulerEngineInstanceW_Worker-5] - [] - []: Processing info record 1798206359. Status = PENDING DEBUG [announcements.jobs.BulkJob] - [QuartzSchedulerEngineInstanceW_Worker-5] - [] - []: Transient info record updated successfully DEBUG [announcements.jobs.BulkJob] - [QuartzSchedulerEngineInstanceW_Worker-5] - [] - []: Announcement sent successfully.

Consumer Retrieves Event from Queue

These messages appear when the Consumer retrieves the event from the queue and starts preparing the email.

```
DEBUG [outbound.amqp.AnnouncementConsumerAction] - [pool-62-thread-2] - [] - []: An
announcement notification message received. Message: [B@efb86c0
DEBUG [outbound.amqp.AnnouncementConsumerAction] - [pool-62-thread-2] - [] - []: Processed
announcement notification message for announcement: 5310008
DEBUG [outbound.template.TemplateEngineImpl] - [pool-62-thread-1] - [] - []: Template path
for event with ID '3723bf89-4127-4e18-9928-75ee97b42983':alerts_notification.vm
TRACE [outbound.cache.AnnouncementTemplateCache] - [pool-62-thread-2] - [] - []: Templated
announcement : 5310008 not found in cache
```

Chapter 4 Logs

DEBUG [outbound.template.TemplateEngineImpl] - [pool-62-thread-2] - [] - []: Start processing the template for event with ID: 568e3d90-e7ce-4bc7-b4ae-4690a14a18e2

Email Successfully Prepared

These messages appear when the email has been successfully prepared and is ready for transportation:

DEBUG [outbound.template.TemplateEngineImpl] - [pool-62-thread-1] - [] - []: Template for event with ID '3723bf89-4127-4e18-9928-75ee97b42983' processed successfully. SMTP Transportation Begins for Email

These messages appear when the actual SMTP transporation begins for an email message.

DEBUG [sender.mail.MailTransport] - [pool-62-thread-2] - [] - []: SMTP configuration being used: protocol: smtp, host: worker.example.com, port: 25, user: null

Email Message Sent Successfully

These messages appear when the email message has been sent successfully.

```
DEBUG [sender.mail.MailSender] - [pool-62-thread-1] - [] - []: successfully send email for event 1a729a88-e94c-4b4b-8b64-21bc3c684efd
```

Generation of Email Failed

These messages appear on WARN logging level in warn.log when the the email message couldn't be created. No email will be sent in this case.

```
ERROR [velocity.app.VelocityEngine] - [pool-62-thread-2] - [] - []: ResourceManager :
unable to find resource 'alerts_notification.vm' in any resource loader.
ERROR [outbound.amqp.AnnouncementConsumerAction] - [pool-62-thread-2] - [] - []: Non
retryable exception has occured for message: [B@7d9f1f64
```

Synthetic Monitor

When Synthetic Monitoring logs a failure, it will write details into the messages log for the App Server node where the failure occurred. Consider this example where the Synthetic Monitoring test was disrupted because the App Server was restarted:

```
Apr 4 00:30:01 localhost.localdomain monitor[31730]: ERROR POST
https://localhost/quadopen/oauth/xauth_access_token response is 503
Apr 4 00:30:01 localhost.localdomain monitor[31730]: ERROR Synthetic: Error: POST
operation on uri: https://localhost/quadopen/oauth/xauth_access_token: <!DOCTYPE HTML
PUBLIC "-//IETF//DTD HTML 2.0//EN">#012<html><head>#012<title>503 Service Temporarily
Unavailable</title>#012</head><body>#012<ht>Service Temporarily Unavailable</ht>#012The
server is temporarily unable to service your#012request due to maintenance downtime or
capacity#012problems. Please try again later.
```

Centralized Credentials Management (Master Password)

When a service (VoiceMail in example) uses the master account to authenticate a user but the credentials are wrong leading to master account lock out, you can see these logs:

```
2013-06-10 11:39:42,727 DEBUG [service.impl.PaPassLocalServiceImpl] - [http-8080-2] - [ivxie] - [B4582D507A96A72A7E49FAE5154C7196]: Updated credentials for userId: 31710010 for Service: VoiceMail to -1
```

Consequently when any service tries to use the master account you can see log lines like these:

```
2013-06-10 11:39:42,823 DEBUG [service.impl.PaPassLocalServiceImpl] - [http-8080-3] -
[ivxie] - [B4582D507A96A72A7E49FAE5154C7196]: Check Credentials for user =>31710010 and
service => VoiceMail
2013-06-10 11:39:42,827 DEBUG [service.impl.PaPassLocalServiceImpl] - [http-8080-3] -
[ivxie] - [B4582D507A96A72A7E49FAE5154C7196]: Credentials for user =>31710010 and service
=> VoiceMail are INACTIVE

Session Centralization

This section is organized as follows:

- Normal startup, page 4-57
- Issues Enforcing The Sessions Limitation, page 4-57

Normal startup

When Tomcat starts up the following log messages appear in the App Server log if session centralization has been configured. If you do not see these messages then you are using normal sessions and sessions are not being stored in memcached. Session limitation cannot be enforced if this is the case.

The log messages also show different parameters configured for session centralization. For example 198.51.100.35 and 198.51.100.36 are the memcached server nodes.

```
Jun 11 22:25:39 appserver.example.com quad[]: INFO
[session.management.MemcachedSessionService] - [main] - [] - []: MemcachedSessionService
starts initialization... (configured nodes definition
n1:198.51.100.35:11211,n2:198.51.100.36:11211, failover nodes null)
Jun 11 22:25:40 appserver.example.com quad[]: INFO
[session.management.RequestTrackingHostValve] - [main] - [] - []: Setting ignorePattern to
.*\.(ico|png|gif|jpg|css|js)$
Jun 11 22:25:40 appserver.example.com quad[]: INFO
[session.management.MemcachedSessionService] - [main] - [] - []: Setting lockingMode to
nu11
Jun 11 22:25:40 appserver.example.com quad[]: INFO
[session.management.MemcachedSessionService] - [main] - [] - []: Creating transcoder
factory com.cisco.ecp.portal.kernel.session.management.JavaSerializationTranscoderFactory
Jun 11 22:25:40 appserver.example.com quad[]: INFO
[session.management.MemcachedSessionService] - [main] - [] - []: MemcachedSessionService
finished initialization, sticky true, operation timeout 1000, with node ids [n1, n2] and
failover node ids []
```

Issues Enforcing The Sessions Limitation

These log messages may appear when there are issues enforcing the number of sessions limitation.

```
Jun 11 22:25:39 appserver.example.com quad[]: INFO
[session.management.MemcachedSessionService] - [main] - [] - []: MemcachedSessionService
starts initialization... (configured nodes definition
n1:198.51.100.35:11211,n2:198.51.100.36:11211, failover nodes null)
Jun 11 22:25:40 appserver.example.com quad[]: INFO
```

To verify if this is indeed the case, check to see if all the memcached servers are up. If they are but you still see the error, run this command on the affected App Server nodes and look for TCP sessions with the memcached servers:

netstat -an | grep 11211

If you don't see any TCP connections in port 11211, then enable Caching Services debug logging as described in Q. How do I set the log trace levels for Session Centralization/Concurrent Sessions Limitation and what log files to collect?, page 1-37 and examine the logs for clues as to what is happening.
