

Security Device Manager Overview

This chapter provides a high-level overview of the Cisco Security Device Manager.

About the Security Device Manager

The Cisco Router and Security Device Manager (SDM) provides an intuitive, graphical user interface for configuring and monitoring advanced IP-based QoS functionality within Cisco routers, and is used to ease QoS configuration and monitoring for a single device.

Additionally, the Cisco SDM provides integrated management of Cisco IOS features like wide-area network (WAN) access, dynamic routing, IPSec virtual private networks (VPNs), firewalls, and intrusion prevention.

For more information about the Cisco SDM, please visit <http://www.cisco.com/go/sdm>.
