

Performance Routing - Link Groups

The Performance Routing - Link Groups feature introduces the ability to define a group of exit links as a preferred set of links, or a fallback set of links for Optimized Edge Routing (OER) to use when optimizing a specified traffic class. Primary and fallback link groups can be configured at the master controller. Link groups provide a method of grouping links such as high bandwidth links to be used, for example, by video traffic, by configuring an OER policy that specifies the best link is to be selected from the link group that consists of only high bandwidth links.

Configuration Information

Configuration information is included in the “Configuring and Applying OER Policies” chapter of the *Cisco IOS Optimized Edge Routing Configuration Guide*, Release 12.4T, at the following URL:

http://www.cisco.com/univercd/cc/td/doc/product/software/ios124/124tcg/toer_c/h_oerpc.htm

The following sections provide information about this feature:

- Performance Routing Link Grouping
- Implementing Performance Routing Link Groups
- Implementing Performance Routing Link Groups: Example

For a complete list of features included in the “Configuring and Applying OER Policies” module, see the Feature Information Table located toward the end of the module.

Command Reference Information

Release 12.4T

The following commands are new or modified for this feature:

- **link-group**
- **set link-group**
- **show oer master policy**

Americas Headquarters:

Cisco Systems, Inc., 170 West Tasman Drive, San Jose, CA 95134-1706 USA
