802.1q **4-3**

A

ABR (available bit rate) **3-5**
absolute value **6-10**
access circuit **1-1**
access router **2-1**
activate protocols **6-12**
address, source **3-2**
address range **4-7**
add service class **6-21**
Administration tab **4-4**
advanced options, congestion avoidance **6-17**
aggregated
 rate limiters **3-5, 6-31**
 traffic shapers **3-5, 5-17**
architecture, network **2-1**
assumptions, implementation **4-1**
ATM
 link **2-3**
 switches **2-1**
 traffic shapers **3-5, 6-26**
auditing configuration **8-1**
audit message **8-3**
autodiscovery **4-1**
available bit rate **6-23**
average
 cell rate **6-26**
 queue size **6-17**
 rate shaping **6-13**

transmission rate **6-4, 6-13, 7-9**
avoidance options **6-17**

B

bandwidth
 guarantee **1-2**
 minimum **3-3**
 percentage **5-10**
 static **6-23**
best effort service class **3-3, 6-11**
BGP protocol **6-3**
bucket, token **6-23**
burst
 extended **6-4, 6-13**
 setting size **3-5, 6-4, 6-13, 6-26**
 tolerance **6-28**
business-data-1 service class **3-3, 6-11**

C

candidates for QoS **5-6**
CAR (committed access rate) **3-2, 5-5**
CBR (constant bit rate) **3-5**
CEF (Cisco expressed forwarding) **4-3**
cell delay variation **6-23**
cell rate **6-26**
cell transfer delay **6-23**
CIR (committed information rate) **6-13**
Cisco IOS
 commands **4-4, 8-9**
 documentation **4-4**
 versions **4-2**

- Cisco platforms supported **4-2**
 class-based rate limiting **1-5**
 class-based traffic shaper **3-5, 6-25**
 classification, see traffic classification
 class-maps **8-14**
 CLE (customer location equipment) **7-14**
 CLI (command line interface) **4-4**
 closed state **8-7**
 collection, device **4-1**
 commands
 downloaded to device **8-14**
 missing **8-3**
 sample **A-7**
 committed access rate **3-2, 5-5**
 components, QoS **1-2**
 compression, header **3-5, 6-30**
 concepts, QoS **1-1, 2-2**
 configlet
 example **4-7**
 generated **5-25**
 sample **A-1**
 viewing **8-13**

 network **5-2**
 prerequisites **4-1**
 sample **A-1**
 viewing **4-1**
 conform action **1-5, 6-5, 6-14**
 conformed burst size **6-4, 6-13**
 congestion avoidance
 defined **1-6**
 options **6-17**
 congestion indication setting **6-29**
 congestion management
 defined **1-6**
 constant bit rate **6-23**
 container, for network object **4-7**
 control messages **3-3**
 CPE
 defined **1-1**
 managed **2-3**
 marking **5-5**
 unmanaged **2-5**
 untrusted **5-12**
 cRTP (compressed real-time protocol) **3-5, 6-30**
-
- D**
- data applications **3-4**
 data service class **3-3, 6-11**
 data service class, adding **6-21**
 dCEF (distributed CEF) **4-3**
 DCPL (dynamic component properties library) **4-4, 4-6**
 default service class **3-2**
 defining link objects **5-5**
 delay, serialization **3-5**
 deleting service classes **5-14, 6-21, 7-7**
 deployed state **5-26, 8-5, 8-6**
 deploying service requests **5-26, 7-15**
 deployment
 forcing **5-26**
 scheduling **5-26**
 verify **8-1**
 deployment example **5-2**
 destination port **1-3**
 device
 collection **4-1**
 configuration **4-1**
 prefix properties **6-19**
 sample configurations **A-7**
 DiffServ **3-3, 7-2**
 direction, of traffic **6-32**
 documentation, Cisco IOS **4-4**
 documents, related **xiv, 6-8**

downloaded commands **8-14**

drop, based on **6-17**

drop packet **6-5, 6-14**

DSCP marking **1-4**

E

editing devices **5-9**

editing service classes **5-14, 7-6**

EIGRP protocol **6-3**

encapsulation, layer 2 **4-2, 5-22**

entry fields, defined **6-1**

EoMPLS link settings **5-15**

error messages **5-14, 7-7**

Ethernet QoS **1-4, 7-1, 8-14, A-18**

example configurations **5-2**

exceed action **1-5**

experimental value, MPLS **1-4**

exponential weighing constant **6-17**

expressed forwarding **4-3**

extended burst **6-4, 6-13**

F

failed audit **8-3**

failed audit state **8-6**

failed deploy state **8-6**

failed service request **8-5**

force deploy **5-26**

forwarding, distributed **4-3**

forwarding, layer 2 **4-3**

fragmentation **6-30**

fragment delay **6-31**

Frame Relay

 LFI **3-5**

 protocols **4-3**

 traffic shapers **3-5, 6-23**

FRF.12 **3-5**

FRTS (Frame Relay traffic shaper) **3-5**

FTP protocol **6-12**

G

generate audit **8-1**

GRE (generic routing encapsulation) **4-3**

GUI, launching **5-3**

GUI process **5-1**

H

HDLC (high-level data link control) **4-3**

header, RTP **3-5**

header compression **6-30**

home window **5-4**

host configuration **4-4**

hostname **5-3**

Hosts window **4-4**

HTTP protocol **6-12**

input traffic **6-32**

interface

 customer-facing **2-3**

 ingress, egress **1-1**

 marking **5-1**

 provider-facing **2-3**

interface-based

 aggregated rate limiters **5-17**

 parameters **6-21**

 rate limiting **1-5, 6-31**

introduction **1-2**

invalid state **8-6**

IP address, for login **5-3**

IP link settings **5-15**
IP precedence, marking **1-4**
IP QoS **1-1, 5-1, 7-14**
IPSec (IP security) **4-3**
ISL (inter-switch link) **4-3**

K

keepalives **3-3**

L

L2TP (layer 2 transport protocol) **4-3**
L2VPN
 CLE **7-14**
 prerequisites for QoS **7-10**
 service request **7-11**
latency, defined **1-2**
launching GUI **5-3**
layer 2 encapsulation **4-2, 5-22**
layer 2 forwarding **4-3**
leaky bucket **6-23**
line cards supported **4-2**
link efficiency **5-17**
 parameters **6-30**
 settings **3-5**
link endpoint pair **7-18**
link endpoints **5-9**
link ID **8-10**
link level policy **2-2, 3-4**
link objects **5-5**
link QoS settings **2-3, 5-1, 5-15**
link speed **2-2, 6-31**
log entries **8-15**
logging in **5-3**
lost state **8-6**

M

managed CPE **2-3**
managed PE **2-4**
management service class **3-3**
management service class, entry fields **6-3, 7-9**
mandatory parameters **6-1**
marking
 CPE devices **5-5**
 defined **1-4**
 packets **6-8**
 PE devices **5-7**
mark probability **6-20**
maximum burst size **6-26**
maximum threshold **6-20**
mean rate **6-4, 6-13, 7-9**
messages, configuration **8-14**
messages, status **5-14, 7-7**
Microsoft, version required **5-3**
minimum bandwidth **3-3**
minimum threshold **6-20**
MLPPP (multilink point-to-point protocol) **3-5, 4-3**
MLPPP for LFI **3-5**
modular QoS commands **4-4**
Monitoring tab **8-14**
MPLS
 checking prerequisites **7-14**
 experimental value **1-4**
 network **7-14**
 provisioning **7-18**
multiple data links **6-30**

N

Netscape, version required **5-3**
