

Using Autodiscovery for L2 Services

All discovery steps are integrated in a discovery workflow, controlled from the ISC GUI. This is accessed in ISC through **Service Inventory > Discovery**. The following discovery features are supported:

- File-based device discovery is supported.
- Rules-based device role assignment is supported.
- Discovery progress messages and logs are viewable in the GUI to keep track of various discovery stages.
- Bulk creation of Provider, Customer, Site, and Region objects is available through an XML data file.

For detailed steps on using the autodiscovery feature in ISC, see [Cisco IP Solution Center Infrastructure Reference, 4.1](#).
