

# CHAPTER 1

## System Recommendations

This chapter describes the system recommendations and requirements for Cisco IP Solution Center (ISC). ISC is a web-based application you install on a Sun Solaris server, along with a web server and other supporting packages. You access ISC using a web browser.

The recommendation is to thoroughly review this list before even planning your installation, to be sure you have all the hardware and software you must successfully install.

The recommendations are explained in the following topics:

- [ISC Server Hardware, page 1-1](#)
- [ISC Server Solaris Configuration, page 1-2](#)
- [ISC Client, page 1-3](#)
- [Supported Cisco Network Devices and Software Versions, page 1-4](#)

## ISC Server Hardware

You must have a CD-ROM drive to install the ISC 5.0 product.

For the Sun™ Solaris server, the minimum recommendations are as shown in [Table 1-1](#).

**Table 1-1 Minimum Sun Solaris Server Recommendations for ISC Applications**

Class	Applications	Minimum Sun Solaris Server	RAM	Swap Space	Disk Space
Entry	Cisco MPLS Diagnostics Expert or L2VPN and L3 MPLS with a total of up to 1500 attachment circuits  Note: Not recommended for API use.	Sun™ SPARC T1000 or T2000, 1 CPU, 1 GHz	2 GB	4 GB	73 GB hard drive

**Table 1-1 Minimum Sun Solaris Server Recommendations for ISC Applications (continued)**

Mid-range	Traffic Engineering Management (TEM) of up to 5000 TE tunnels or L2VPN and L3 MPLS with a total of up to 10,000 attachment circuits	Sun™ SPARC T5220, Quad-core CPU, 1.2 GHz	4 GB	8 GB	73 GB hard drive
High End	Traffic Engineering Management (TEM) of more than 5000 TE tunnels or L2VPN and L3 MPLS with a total of more than 10,000 attachment circuits	Sun™ SPARC M4000, 2 CPUs, 2.15 GHz	16 GB	32 GB	146 GB hard drive

**Notes:**

The recommended servers in this table are examples for typical installations. Relative performance can be impacted by many factors. Please contact your Cisco account representative if you need assistance in selecting the correct server.

The default Oracle and Sybase database layouts are sufficient for ISC. Further optimization is your preference.

## ISC Server Solaris Configuration

Solaris 10 is supported in this release. Solaris 10 with recommended patches of at least 118822-30 for the kernel level of the patch cluster and JDK 1.4.2\_08 patches are found at: <http://sunsolve.sun.com>. As a minimum, you must get your system up to the 118822-30 Kernel patch level. For installation instructions, see the README file which is at the same location as the patch bundle.

Before installing ISC, configure the server to be able to perform hostname to IP address translations. Ensure that Domain Naming System (DNS) or an alternative is configured.

Table 1-2, “Solaris Software Requirements,” explains the Solaris requirements.

**Table 1-2 Solaris Software Requirements**

Requirements	Description
Solaris 10	<p>Install Solaris 10 on the Sun Sparc server following these guidelines:</p> <p>Full Distribution—Install the full distribution, which includes the following required packages. If you did not install the full distribution, you can install these packages at any time.</p> <ul style="list-style-type: none"> <li>—<b>SUNWldap</b>—LDAP libraries</li> <li>—<b>SUNWbzip</b>—The <b>bzip</b> compression utility</li> </ul> <p>To check if your installation includes these packages, enter:</p> <p><b>pkginfo package</b></p> <p>where: <i>package</i> is one of the three packages listed above.</p>

**Note**

When you install Solaris 10, be sure to choose either the Developer System Support or the Entire Distribution software groups. Do *not* choose the End User System software group. The Developer System Support and Entire Distribution software groups contain the software required for a correct operating system installation (such as the **SUNWbtool** and **SUNWsprot** packages).

**Caution**

Make sure that the file descriptor limit is *not* set in the ISC workstation login shell file (which can be the **.login** file, the **.cshrc** file, the **.profile** file, or the **.kshrc** file). If the login shell file contains a line with the **ulimit -n** command (for example, “**ulimit -n <number>**”), comment out this command line in the file. Log out and then log back in to ensure that the ulimit is no longer set.

ISC cannot override the file descriptor limitation setting in the login shell file. If the value is set incorrectly, ISC might experience operational problems.

## ISC Client

The following is needed for the ISC client:

- A web browser is needed for the client machine on which to run ISC. Microsoft Internet Explorer 7.0 for Windows, Mozilla Firefox 2.0 for Windows, and Mozilla Suite 1.7 for Solaris are supported.

**Note**

In Internet Explorer, we recommend disabling the script debugging feature. To do this, navigate to **Tools > Internet Options** and click the **Advanced** tab. Select the check box **Disable script debugging** and click **OK**.

- Java Runtime Environment (JRE) and Java Web Start must be installed on the client machine to run Inventory Manager. JRE 1.4.2\_04 and 1.4.2\_08 are supported.

**Note**

When using more than one ISC login, ensure each login is using a different HTTP session. To do so, run each session in a separate browser launched from the command line or by clicking on the browser icon on the desktop or **Start** menu. Do not run parallel ISC logins in tabs within the same browser window or in browser windows launched from existing browser windows.

## Supported Cisco Network Devices and Software Versions

The following hardware and software are recommended and required as specified:

- ISC 5.0 testing on an Oracle database has been on Oracle Database 10g Enterprise Edition Release 10.2.0.1.0 - 64 bit Production. If you would like to use another version of Oracle, see Oracle's compatibility information.
- CEs are supported with Cisco IOS 12.1 or later if the CE is a router, and if connecting using Ethernet then it must have a VLAN ethernet interface. The Management Customer Edge router (MCE) can be any CE.
- The MPE can be any of the PE devices in the following tables.

The devices and related software supported are listed in the following tables:

- [Table 1-3, “MPLS/L3VPN Devices for N-PE Role and Related Software Supported with ISC 5.0”](#)
- [Table 1-4, “L2VPN/Ethernet Over MPLS \(Including VPLS\) N-PE Devices and Related Software Supported with ISC 5.0”](#)
