

APPENDIX **B** 

## **Prime Provisioning XML Reference**

This appendix contains an alphabetical listing of the XML rules, tags, and attributes that are used in the XML files used for Prime Provisioning Discovery.

For a detailed description of the XML files and XML examples, see Appendix E, "Inventory - Discovery."

Table B-1 IPrime Provisioning XML Rules, Tags, and Attributes

| Tag                                 | Description  |
|-------------------------------------|--|
| <as-number></as-number>             | Specifies the autonomous system (AS) number for the provider. The AS number can be an integer between 1 and 65535.                                       |
| <cdp></cdp>                         | Starts a <b><cdp></cdp></b> tag. The <b><cdp></cdp></b> tag specifies an seed IP address and a hop count.  |
|                                     | The <b><cdp></cdp></b> tag must contain the following attributes:  |
|                                     | • ipaddress  |
|                                     | • hop  |
| <connection></connection>           | Starts a <b><connection></connection></b> tag. The <b><connection></connection></b> tag must specify the following attributes:                           |
|                                     | • discovery-protocol   |
|                                     | • fromDevice   |
|                                     | • FromIP   |
|                                     | • FromInterface  |
|                                     | • toDevice   |
|                                     | • toIP   |
|                                     | • toIF   |
| <create-customer></create-customer> | Starts a <b>create-customer</b> rule. The <b>create-customer</b> rule creates a region object. the create-customer rule must contain the following tags: |
|                                     | • <customer-name></customer-name>  |
|                                     | • <create-site></create-site>  |

Table B-1 IPrime Provisioning XML Rules, Tags, and Attributes (continued)

| Tag                                   | Description   |
|---------------------------------------|---|
| <create-provider></create-provider>   | Starts a <b>create-provider</b> rule. The create-provider rule creates a service provider object.   |
|                                       | The <b>create-provider</b> rule must contain the following tags:  |
|                                       | • <pre> <pre< th=""></pre<></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre> |
|                                       | • <as-number></as-number>   |
|                                       | • <create-region></create-region>   |
| <create-region></create-region>       | Starts a <b>create-region</b> rule. The <b>create-region</b> rule creates a region object. The <b>create-region</b> rule must contain a <b>region-name</b> tag.   |
| <create-site></create-site>           | Starts a <b>create-site</b> rule. The create-site rule must contain a <b><site-name></site-name></b> tag.   |
| <customer-name></customer-name>       | Specifies a customer name. Required within the create-customer rule.  |
| <device></device>                     | Starts a <b><device></device></b> tag. The <b><device></device></b> tag must contain the following tags:  |
|                                       | • <device-name></device-name>   |
|                                       | • <ip-address></ip-address>   |
|                                       | The following tags are optional within the <device> tag:</device>   |
|                                       | • <system-object-id></system-object-id>   |
|                                       | • <snmp-info></snmp-info>   |
| <device-name></device-name>           | Specifies the name of the device. Required within the <b><device></device></b> tag.   |
| <discovery_method></discovery_method> | Starts a <b><discovery_method></discovery_method></b> tag. The <b><discovery_method></discovery_method></b> tag must contain a <b><cdp></cdp></b> tag.  |
| discovery-protocol                    | Specifies the Discovery protocol used to discover the network topology. Normally, this is "CDP."  |
| fromDevice                            | Specifies the name of the device from which the Named Physical Circuit starts. Required attribute for the <b><connection></connection></b> tag.   |
| FromInterface                         | Specifies the name of the device interface from which the Named Physical Circuit starts.  Required attribute for the <b><connection></connection></b> tag.  |
| FromIP                                | Specifies the management IP address of the device from which the Named Physical Circuit starts. Required attribute for the <b><connection></connection></b> tag.  |

Table B-1 IPrime Provisioning XML Rules, Tags, and Attributes (continued)

| Tag  | Description  |
|--|--|
| hop  | Specifies the number of hops from the device identified by the <b>ipaddress</b> attribute to go in discovering devices. Required attribute for the <b><cdp></cdp></b> tag. |
| ipaddress  | Specifies the IP address of a seed device. Required attribute for the <b><cdp></cdp></b> tag.  |
| <ip-address></ip-address>  | Specifies the IP address of the device. Required within the <b><device></device></b> tag.  |
| <pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre> | Specifies the name of the provider.  |
| <region-name></region-name>  | Specifies the name of a region.  |
| <ro-community></ro-community>  | Specifies the level of SNMP access for the device.<br>Normally, this should be "public." Required<br>within the <b><snmp-info></snmp-info></b> tag.                        |
| <site-name></site-name>  | Specifies a site name.   |
| <snmp-info></snmp-info>  | Specifies SNMP information for the device. The <snmp-info> tag must contain a <ro-community> tag. Optional within the <device> tag.</device></ro-community></snmp-info>    |
| <system-object-id></system-object-id>  | (optional) Can be included to specify the SNMP Object ID (OID) for the device. If this is provided, it is specified within the <b><device></device></b> tag.               |
| toDevice   | Specifies the name of the device to which the Named Physical Circuit connects. Required attribute for the <b><connection></connection></b> tag.                            |
| toIF   | Specifies the device interface on the device to which the Named Physical Circuit connects.  Required attribute for the <b><connection></connection></b> tag.               |
| toIP   | Specifies the management IP address of the device from which the Named Physical Circuit connects Required attribute for the <b><connection></connection></b> tag.          |
