

Installing CompactFlash Memory Cards in Cisco 3800 Series Routers

This document describes how to remove and install CompactFlash memory cards in Cisco 3800 series integrated services routers. It contains the following sections:

- [Preventing Electrostatic Discharge Damage, page 1](#)
- [Removing CompactFlash Memory Cards, page 2](#)
- [Installing CompactFlash Memory Cards, page 3](#)

Preventing Electrostatic Discharge Damage

CompactFlash memory cards are sensitive to electrostatic discharge (ESD) damage. ESD damage, which can occur when electronic cards or components are handled improperly, results in complete or intermittent failures.

To prevent ESD damage, follow these guidelines:

- Always use an ESD wrist or ankle strap and ensure that it makes good skin contact.
- Connect the equipment end of the strap to an unfinished chassis surface.
- Place a removed CompactFlash memory card on an antistatic surface or in a static shielding bag. If the card will be returned to the factory, immediately place it in a static shielding bag.
- Avoid contact between the card and clothing. The wrist strap protects the card from ESD voltages on the body only; ESD voltages on clothing can still cause damage.
- Do not remove the wrist strap until the installation is complete.

For safety, periodically check the resistance value of the antistatic strap. The measurement should be between 1 and 10 megohms (Mohm).

Removing CompactFlash Memory Cards

Caution Disconnect the router from the network before removing a CompactFlash memory card.

To remove a CompactFlash memory card from the router, follow these steps (see [Figure 46](#) and [Figure 47](#)):

- Step 1** Press the ejector button next to the CompactFlash card. The ejector button moves outward so that it projects from the panel.
- Step 2** Press the ejector button again. This ejects the CompactFlash card partway out of its slot.
- Step 3** Carefully pull the card out of the slot.
- Step 4** Place the removed CompactFlash memory card on an antistatic surface or in a static shielding bag.
- Step 5** Push the ejector button in until it clicks.

Caution To prevent damage to the ejector mechanism, the ejector button must remain fully seated when not being used to eject a CompactFlash card.

Installing CompactFlash Memory Cards

To install a CompactFlash memory card, follow these steps (see [Figure 46](#) and [Figure 47](#)):

-
- Step 1** Make sure that the ejector button is fully seated so that it does not project from the panel.

- Note** If the ejector button projects from the panel, push it in until it clicks.
-

- Step 2** Insert the CompactFlash card into the slot until it is fully seated. The ejector button should remain flush with the panel.

- Note** If the ejector button projects from the panel after you insert the CompactFlash card, remove the card, press the ejector button until it clicks, and reinsert the card.
-

- Caution** To prevent damage to the ejector mechanism, the ejector button must remain fully seated when not being used to eject a CompactFlash card.
-

Using the Compact Flash Guard

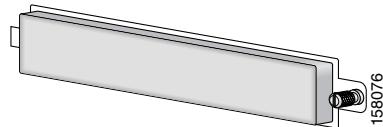

The Compact Flash guard (CF-guard) provides protection for the compact flash memory slot.

Note A small flat-head screwdriver is required to attach the CF-guard.

To install the CF-guard, follow these steps:

Step 1 Unpack the CF-guard.

Step 2 Slip the CF-guard flap into the notch in the CompactFlash memory slot.

Step 3 Screw the CF-guard into the screw hole.
