CONTENTS

Preface	Preface xi
	Changes to This Document xi
	Obtaining Documentation and Submitting a Service Request xi
CHAPTER 1	BNG AAA Commands 1
	accounting aaa list 3
	accounting aaa list type service 5
	aaa accounting service 7
	aaa accounting subscriber 9
	aaa accounting system rp-failover 11
	aaa attribute format 13
	aaa authentication subscriber 16
	aaa authorization subscriber 18
	aaa group server radius (BNG) 20
	aaa intercept 22
	aaa radius attribute 24
	aaa service-accounting 26
	aaa server radius dynamic-author 28
	aaa radius attribute nas-port-type 30
	radius-server attribute 32
	radius-server dead-criteria 34
	radius-server deadtime (BNG) 36
	radius-server disallow null-username 38
	radius-server host (BNG) 39
	radius-server ipv4 dscp 42
	radius-server key (BNG) 43
	radius-server load-balance 45

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release

	radius-server retransmit (BNG) 47
	radius-server source-port 49
	radius-server timeout (BNG) 50
	radius-server vsa attribute ignore unknown 51
	radius-server throttle 52
	radius source-interface (BNG) 54
	show aaa trace 56
	show radius (BNG) 58
	show radius server-groups detail 61
	statistics period service-accounting 63
CHAPTER 2	ACL and ABF Commands 65
	ipv4 access-group (BNG) 66
	ipv4 access-list (BNG) 69
	ipv6 access-group (BNG) 71
	ipv6 access-list (BNG) 73
CHAPTER 3	Address Pool Service Commands 77
	address-range 78
	exclude 80
	network (BNG) 82
	prefix-length 84
	prefix-range 86
	pool vrf 88
	pool ipv4 90
	pool ipv6 92
	utilization-mark 94
	show pool ipv4 name 96
	show pool ipv6 name 100
	show pool vrf 107
CHAPTER 4	Control Policy Commands 111
	activate 112
	authenticate (BNG) 114
	authorize 116

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

	class-map type control subscriber 118
	deactivate 120
	event 122
	match (class-map) 124
	policy-map type control subscriber 126
	policy-map type pbr 128
	service-policy type control subscriber 130
	show class-map 132
	show policy-map 134
CHAPTER 5	BNG DHCP Commands 137
	address-pool 139
	aftr-name 140
	broadcast-flag policy check (BNG) 141
	class 143
	dhcp ipv4 (BNG) 145
	dhcp ipv6 (BNG) 146
	dhepv6 address-pool 147
	dhcpv6 delegated-prefix-pool 149
	dns-server (BNG) 150
	domain-name (DHCP IPv6 pool-BNG) 152
	framed-prefix-pool 154
	helper-address (BNG) 155
	inner-cos 157
	interface (DHCP-BNG) 159
	interface subscriber-pppoe profile 161
	lease 162
	match option 164
	match vrf 166
	outer-cos 167
	prefix-pool 169
	profile (BNG) 170
	relay information authenticate (BNG) 172
	relay information check (BNG) 174
	relay information option (BNG) 176

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release

	relay information option allow-untrusted (BNG) 178
	relay information policy (BNG) 180
	relay option remote-id 182
	limit lease per-circuit-id 184
	limit lease per-remote-id 186
	limit lease per-interface 188
	lease proxy client-lease-time 190
	show dhep ipv4 proxy binding 192
	show dhep ipv4 proxy interface (BNG) 195
	show dhep ipv4 proxy profile 197
	show dhep ipv4 proxy statistics 199
	show dhep ipv6 proxy binding (BNG) 201
	show dhep ipv6 proxy interface (BNG) 203
	show dhep ipv6 proxy profile 205
	show dhep ipv6 proxy statistics 207
	show dhep ipv6 server binding 209
	show dhcp ipv6 server interface 212
	show dhep ipv6 server profile 214
	show dhep ipv6 server statistics 216
CHAPTER 6	Dynamic Template Commands 219
	dynamic-template 220
	dynamic-template type ipsubscriber 222
	dynamic-template type ppp 224
	dynamic-template type service 226
	service-policy (BNG) 228
	vrf (dynamic-template-BNG) 230
CHAPTER 7	Excessive Punt Flow Trap Commands 233
	lpts punt excessive-flow-trap 234
	lpts punt excessive-flow-trap non-subscriber-interfaces 236
	lpts punt excessive-flow-trap penalty-rate 237
	lpts punt excessive-flow-trap penalty-timeout 239
	lpts punt excessive-flow-trap subscriber-interfaces 241
	show lpts punt excessive-flow-trap 242

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

vi

	show lpts punt excessive-flow-trap information 245
	show lpts punt excessive-flow-trap interface 248
	show lpts punt excessive-flow-trap protocol 251
CHAPTER 8	– IPoE Commands 253
	ipsubscriber 12-connected 254
	initiator dhep 256
	initiator unclassified-source 258
	ipsubscriber session-limit 260
	show ipsubscriber access-interface 262
	show ipsubscriber interface 265
	show ipsubscriber summary 269
CHAPTER 9	– IPv4 and IPv6 Commands 273
	ipv4 mtu (BNG) 274
	ipv4 unnumbered (point-to-point -BNG) 276
	ipv4 unreachables disable (BNG) 278
	ipv4 verify unicast source reachable-via (BNG) 280
	ipv6 enable (BNG) 282
	ipv6 mtu (BNG) 284
	ipv6 unreachables disable (BNG) 286
	show ipv4 interface (BNG) 288
	show ipv4 traffic (BNG) 292
	show ipv6 interface (BNG) 295
	show ipv6 neighbors (BNG) 299
	show ipv6 neighbors summary (BNG) 304
	show ipv6 traffic (BNG) 306
CHAPTER 10	– Multicast Commands 309
	router igmp vrf 310
	igmp accounting 311
	igmp explicit-tracking 312
	igmp query-interval 314
	igmp query-max-response-time 316
	multicast (BNG) 318

	unicast-qos-adjust 320
	show igmp unicast-qos-adjust statistics 322
	show igmp vrf (BNG) 325
	clear igmp unicast-qos-adjust 327
	Neichhau Diaganan Commonda, 220
CHAPTER 11	Neighbor Discovery Commands 329
	ipv6 nd dad attempts (BNG) 330
	ipv6 nd framed-prefix-pool 333
	ipv6 nd managed-config-flag (BNG) 334
	ipv6 nd ns-interval (BNG) 336
	ipv6 nd nud-enable 338
	ipv6 nd other-config-flag (BNG) 339
	ipv6 nd ra-initial 341
	ipv6 nd ra-interval (BNG) 343
	ipv6 nd ra-lifetime (BNG) 345
	ipv6 nd ra-unicast 347
	ipv6 nd reachable-time (BNG) 348
	ipv6 nd suppress-cache-learning 350
	ipv6 nd suppress-ra (BNG) 351
CHAPTER 12	BNG PPP Commands 353
	ppp authentication (BNG) 354
	ppp chap 357
	ppp ipcp 359
	ppp lcp 361
	ppp max-bad-auth (BNG) 363
	ppp max-configure (BNG) 365
	ppp max-configure (BNG) 365 ppp max-failure (BNG) 367
	ppp max-failure (BNG) 367
	ppp max-failure (BNG) 367 ppp ms-chap 369
	ppp max-failure (BNG) 367 ppp ms-chap 369 ppp timeout 371

Preface

The Preface contains these topics:

- Changes to This Document, page xi
- Obtaining Documentation and Submitting a Service Request, page xi

Changes to This Document

This table lists the changes made to this document since it was first printed.

Table 1: Changes to This Document

Revision	Date	Change Summary
OL-28446-03	September 2013	Republished with documentation updates for Cisco IOS XR Release 4.3.2 features.
OL-28446-02	May 2013	Republished with documentation updates for Cisco IOS XR Release 4.3.1 features.
OL-28446-01	December 2012	Initial release of this document.

Obtaining Documentation and Submitting a Service Request

For information on obtaining documentation, submitting a service request, and gathering additional information, see the monthly *What's New in Cisco Product Documentation*, which also lists all new and revised Cisco technical documentation, at:

http://www.cisco.com/en/US/docs/general/whatsnew/whatsnew.html

Subscribe to the *What's New in Cisco Product Documentation* as a Really Simple Syndication (RSS) feed and set content to be delivered directly to your desktop using a reader application. The RSS feeds are a free service and Cisco currently supports RSS version 2.0.

BNG AAA Commands

This module describes the Cisco IOS XR software commands used to configure the AAA commands for Broadband Network Gateway (BNG) on the Cisco ASR 9000 Series Router. For details regarding the related configurations, refer to the *Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide*.

accounting aaa list

To configure the subscriber accounting feature, use the **accounting aaa list** command in the dynamic template configuration mode. To disable this feature, use the **no** form of this command.

accounting aaa list {method_list_name| default} type session {dual-stack-delay time| periodic-interval time}

no accounting aaa list {method_list_name| default} type session {dual-stack-delay time| periodic-interval time}

Syntax Description	method_list_name	Specifies the preconfigured method list name.
	default	Specifies the default method list.
	type	Specifies the type of accounting performed.
	session	Applies the accounting to a session.
	dual-stack-delay	Specifies the dual stack set delay wait in seconds.
	time	Specifies the value of the dual stack delay time in seconds. The value ranges from 1-30.
	periodic-interval	Specifies the periodic accounting interval in minutes.
	time	Specifies the value of the periodic accounting interval in minutes. The value ranges from 1-65535.
Command Default	None	
Command Modes	Dynamic template configuration	n
Command History	Release	Modification
	Release 4.2.0	This command was introduced.
Usage Guidelines	IDs. If the user group assignment for assistance.	be in a user group associated with a task group that includes appropriate task nt is preventing you from using a command, contact your AAA administrator nmand to enter dynamic template configuration mode.

Task ID	Task ID	Operation
	config-services	read, write

Examples

This is an example of configuring **accounting aaa list** command for periodic accounting interval of 456 minutes:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# dynamic-template
RP/0/RSP0/CPU0:router(config-dynamic-template)# type service s1
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# accounting aaa list 11 type session
periodic-interval 456
```

Related Commands

as	Command	Description	
	dynamic-template, on page 220	Enables the dynamic template configuration mode.	
	dynamic-template type ppp, on page 224	Enables the ppp dynamic template type.	
	dynamic-template type ipsubscriber, on page 222	Enables the ipsubscriber dynamic template type.	

accounting aaa list type service

To configure the service accounting feature, use the **accounting aaa list type service** command in the dynamic template configuration mode. To disable this feature, use the **no** form of this command.

accounting aaa list {method_list_name| default} type service [periodic-interval time] no accounting aaa list {method_list_name| default} type service [periodic-interval time]

Syntax Description		
Syntax Description	method_list_name	Specifies the pre-configured method list name.
	default	Specifies the default method list.
	type	Specifies the type of accounting performed.
	service	Applies the accounting to a service.
	periodic-interval	Specifies the periodic accounting interval in minutes.
	time	Value of the periodic accounting interval in minutes. The range is from 1 to 65535.
Command Default	None	
Command Modes	Dynamic template configura	tion
Command History	Release	Modification
	Release 4.3.1	This command was introduced.
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrato for assistance. Use the dynamic-template command to enter dynamic template configuration mode.	
Task ID	Task ID	Operation
	config-services	read, write

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release

Examples

This is an example of configuring service accounting for periodic accounting interval of 600 minutes:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# dynamic-template
RP/0/RSP0/CPU0:router(config-dynamic-template)# type service s1
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# accounting aaa list 11 type service
periodic-interval 600
```

Related Commands

Command	Description
dynamic-template, on page 220	Enables the dynamic template configuration mode.
dynamic-template type service, on page 226	Specifies the service template type for a group of subscribers or services.

aaa accounting service

To create an accounting list for service accounting, use the **aaa accounting service** command in global configuration mode or administration configuration mode. To disable the service authentication method, use the **no** form of this command.

aaa accounting service {list_name| default} {broadcast group {group_name| radius}| group {group_name| radius}}

no aaa accounting subscriber {*list_name*| default} {broadcast group {*group_name*| radius}| group {*group_name*| radius}}

Syntax Description	default	Uses the listed authentication methods that follow this keyword as the default list of methods for authentication.
	list-name	Represents the character string of the list name for AAA authentication.
	broadcast	Specifies the broadcast accounting for the service.
	group	Specifies the server-group.
	group_name	Specifies the server group name.
	radius	Specifies the list of all RADIUS hosts.
Command Default	None	
Command Modes	Global configuration	
Command History	Release	Modification
	Release 4.3.1	This command was introduced.
Usage Guidelines		you must be in a user group associated with a task group that includes appropriate task ssignment is preventing you from using a command, contact your AAA administrator
	for assistance.	
Task ID		Operation

Examples This is an example of configuring the **aaa accounting service** command for the grpFR server group:

RP/0/RSP0/CPU0:router(config)# aaa accounting service default group grpFR

Related Commands

5	Command	Description	
	aaa accounting subscriber, on page 9	Creates an accounting list for subscriber accounting.	

aaa accounting subscriber

To create an accounting list for subscriber accounting, use the **aaa accounting subscriber** command in global configuration mode or administration configuration mode. To disable this accounting list for subscriber accounting, use the **no** form of this command.

aaa accounting subscriber {*list_name*| default} {broadcast group {*group_name*| radius}| group {*group_name*| radius}}

no aaa accounting subscriber {*list_name*| default} {broadcast group {*group_name*| radius}| group {*group_name*| radius}}

Syntax Description	default	Uses the listed authentication methods that follow this keyword as the default list of methods for authentication.
	list-name	Represents the character string for the list name for AAA authentication.
	broadcast	Specifies the broadcast accounting for subscriber.
	group	Specifies the server-group.
	group_name	Specifies the server group name.
	radius	Specifies the list of all RADIUS hosts.
Command Default	None	
Command Modes	Clabel configuration m	
oominana moues	Global configuration me	ode
Command History	Release	Modification
	Release	Modification
	Release Release 4.2.0	Modification
Command History	Release Release 4.2.0 To use this command, ye IDs. If the user group as	Modification This command was introduced. ou must be in a user group associated with a task group that includes appropriate task

Examples

This is an example of configuring the **aaa accounting subscriber** command for sg1 server group:

RP/0/RSP0/CPU0:router(config)# aaa accounting subscriber sub1 broadcast group radius group
sg1

Related Commands

Command	Description
aaa accounting system rp-failover, on page 11	Creates an accounting list for system events.

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

aaa accounting system rp-failover

To create an accounting list to send rp-failover or rp-switchover start or stop accounting messages, use the **aaa accounting system rp-failover** command in global configuration mode. To disable the system accounting for rp-failover, use the **no** form of this command.

aaa accounting system rp-failover {*list_name* {start-stop| stop-only}| default {start-stop| stop-only}} no aaa accounting system rp-failover {*list_name* {start-stop| stop-only}| default {start-stop| stop-only}}

Syntax Description	list_name	Specifies the accounting list name.
	default	Specifies the default accounting list.
	start-stop	Enables the start and stop records.
	stop-only	Enables the stop records only.
Command Default	None	
Command Modes	Global configuration mode	
Command History	Release	Modification
	Release 4.2.0	This command was introduced.
Usage Guidelines		ust be in a user group associated with a task group that includes appropriate task nent is preventing you from using a command, contact your AAA administrator
Task ID	Task ID	Operation
	ааа	read, write
Examples	This is an example of config list:	uring the aaa accounting system rp-failover command for default accounting
	RP/0/RSP0/CPU0:router(co	nfig)# aaa accounting system rp-failover default start-stop none

Related Commands

Command	Description
aaa attribute format, on page 13	Create an AAA attribute format name.

aaa attribute format

To create an AAA attribute format name and to enter the configuration ID format sub mode, use the **aaa attribute format** command in global configuration mode. To disable this AAA attribute format, use the **no** form of this command.

aaa attribute format *format_name* [circuit-id[plus][mac-address| remote-id] [separator *separator*] | format-string [length length] {*string* [*Identity-Attribute*]} | mac-address [plus][circuit-id | remote-id][separator *separator*] | remote-id [plus][circuit-id | mac-address][separator *separator*] | username-strip {prefix-delimiter| suffix-delimiter} { *delimiter*}]

no aaa attribute format format name

Syntax Description	format_name	Specifies the name of the format.
	circuit-id	Specifies the construction of the AAA attribute format name for subscribers based on the circuit-ID.
	format-string	Specifies the extended string format of the AAA attribute format name.
	string	Specifies the regular ASCII characters that includes conversion specifiers. The value is enclosed in double quotes.
	Identity-Attribute	Identifies a session.
		For more information about the syntax for the router, use the question mark (?) online help function.
	length	Specifies the length of the formatted attribute string.
	length	Length of the formatted string, in integer.
		The range is from 1 to 253.
	mac-address	Specifies the construction of the AAA attribute format name for subscribers based on the mac-address. The MAC address must be in the form of three 4-digit values (12 digits in dotted decimal notation).
	remote-id	Specifies the construction of the AAA attribute format name for subscribers based on the remote-ID.
	plus	Specifies the use of additional identifiers.
	separator	Specifies the separator to be used between keys.
	separator	Separator to be used between keys, default is a semicolon.

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release

	username-strip	Configures a network access server (NAS) to strip both suffixes and/or prefixes from the username before forwarding the username to the remote RADIUS server.
	prefix-delimiter	Enables prefix stripping and specifies the character that will be recognized as a prefix delimiter.
	suffix-delimiter	Enables suffix stripping and specifies the character that will be recognized as a suffix delimiter.
	Delimiter	Suffix or prefix delimiter.
Command Default	None	
Command Modes	Global configuration mode	
Command History	Release	Modification
	Release 4.2.0	This command was introduced.
	Release 4.2.1	The support for format-string keyword was added.
Usage Guidelines		nust be in a user group associated with a task group that includes appropriate task ment is preventing you from using a command, contact your AAA administrator
Task ID	Task ID	Operation
	aaa	read, write

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

14

Related Commands

Command	Description
aaa accounting subscriber, on page 9	Creates an accounting list for subscriber accounting.

aaa authentication subscriber

To create a method list for subscriber authentication, use the **aaa authentication subscriber** command in global configuration mode. To disable this subscriber authentication method, use the **no** form of this command.

aaa authentication subscriber {*list_name*| default} group {*server_group_name*| radius} no aaa authentication subscriber {*list_name*| default} group {*server_group_name*| radius}

Syntax Description	default	Uses the listed authentication methods that follow this keyword as the default list of methods for authentication.
	list-name	Represents the character string for the list name for AAA authentication.
	group	Specifies the server-group.
	radius	Specifies the list of all RADIUS hosts.
	server_group_name	Specifies the server group name.
Command Default	None	
Command Modes	Global configuration mode	
Command History	Release	Modification
	Release 4.2.0	This command was introduced.
Usage Guidelines	s To use this command, you must be in a user group associated with a task group that includes appropria IDs. If the user group assignment is preventing you from using a command, contact your AAA admini for assistance.	
Task ID	Task ID	Operation
	aaa	read, write

Examples This is an example of configuring the **aaa authentication subscriber** command in the global configuration mode:

RP/0/RSP0/CPU0:router(config) # aaa authentication subscriber sub1 group sg1 group sg2

Related Commands

Command	Description	
aaa authorization subscriber, on page 18	Creates authorization-related configurations	

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release

aaa authorization subscriber

To create authorization-related configurations, use the **aaa authorization subscriber** command in global configuration mode. To disable this subscriber authorization method, use the **no** form of this command.

aaa authorization subscriber {*list_name*| default} group {*server_group_name*| radius} no aaa authorization subscriber {*list_name*| default} group {*server_group_name*| radius}

Syntax Description	default	Uses the listed authentication methods that follow this keyword as the default list of methods for authentication.
	list-name	Represents the character string for the list name for AAA authorization.
	group	Specifies the server-group.
	radius	Specifies the list of all RADIUS hosts.
	server_group_name	Specifies the server group name.
Command Default	None	
Command Modes	Global configuration mode	
Command History	Release	Modification
	Release 4.2.0	This command was introduced.
Usage Guidelines		nust be in a user group associated with a task group that includes appropriate task ment is preventing you from using a command, contact your AAA administrator
Task ID	Task ID	Operation
	aaa	read, write

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

Examples This is an example of configuring the **aaa authorization subscriber** command in the global configuration mode:

RP/0/RSP0/CPU0:router(config)# aaa authorization subscriber sub1 group sg1 group sg2

Related Commands

Command	Description	
aaa authentication subscriber, on page 16	Creates a method list for subscriber authentication.	

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release

aaa group server radius (BNG)

To configure a group server radius, use the **aaa group server radius** command in global configuration mode. To disable this AAA group server radius, use the **no** form of this command.

aaa group server radius sever group name [accounting] authorization| deadtime| load-balance| server| server-private| source-interface| throttle| vrf]

no aaa group server radius sever_group_name [accounting] authorization| deadtime| load-balance| server| server-private| source-interface| throttle| vrf]

Syntax Description

Syntax Description	server_group_name	Specifies the AAA group server RADIUS name.
	accounting	Specifies a RADIUS attribute filter for accounting.
	authorization	Specifies a RADIUS attribute filter for authorization.
	deadtime	Specifies the time in minutes after which a RADIUS server will be marked up after it has gone dead.
	load-balance	Specifies the radius load-balancing options.
	server	Specifies the RADIUS server.
	server-private	Specifies the RADIUS server.
	source-interface	Specifies interface for source address in RADIUS packet.
	throttle	Specifies RADIUS throttling options.
	vrf	Specifies the VRF to which the server group belongs.
Command Default	None	
Command Modes	Global configuration mode	
Command History	Release	Modification
	Release 4.2.0	This command was introduced.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.		
Task ID	Task ID	Operation	
	ip-services	read, write	
Examples	xamples This is an example of configuring the aaa group server radius command in the global configuration		ifiguration mode:

RP/0/RSP0/CPU0:router(config)#aaa group server radius SG1
RP/0/RSP0/CPU0:router(config-sg-radius)#server 99.1.1.10 auth-port 1812 acct-port 1813
RP/0/RSP0/CPU0:router(config-sg-radius)#throttle access 10 access-timeout 5 accounting 5

aaa intercept

To enable RADIUS-based Lawful Intercept (LI) feature on a router, use the **aaa intercept** command in global configuration mode. To disable RADIUS-based Lawful Intercept feature, use the **no** form of this command.

aaa intercept no aaa intercept

- **Syntax Description** This command has no keywords or arguments.
- **Command Default** RADIUS-based Lawful Intercept feature is not enabled.
- **Command Modes** Global configuration mode

Command History	Release	Modification
	Release 4.3.0	This command was introduced.
	Release 4.3.2	By default, Lawful Intercept (LI) is not a part of the Cisco IOS XR software. The LI package needs to be installed separately. So, this command is enabled only after installing and activating the asr9k-li-px.pie.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

To use aaa intercept command, you must install and activate the asr9k-li-px.pie.

Use the **aaa intercept** command to enable a RADIUS-Based Lawful Intercept solution on your router. Intercept requests are sent (through Access-Accept packets or CoA-Request packets) to the network access server (NAS) or the Layer 2 Tunnel Protocol (L2TP) access concentrator (LAC) from the RADIUS server. All data traffic going to, or from, a PPP or L2TP session is passed to a mediation device.

Task ID

Task ID	Operation
aaa	read, write
li	read

Examples This example shows how to configure **aaa intercept** command:

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# aaa intercept

aaa radius attribute

To configure a format e encode string for particular interface or NAS-Port type and to create an AAA radius attribute format configuration, use the **aaa radius attribute** command in global configuration mode. To disable this AAA Radius attribute, use the **no** form of this command.

aaa radius attribute {called-station-id {format *format_name*| type value}| calling-station-id {format *format_name*| type value}| nas-port {format e *format_name*| type value}| nas-port-id {format e *format_name*| type value}} type value}}

no aaa radius attribute {called-station-id {format *format_name*| **type** *value*}| **calling-station-id {format** *format_name*| **type** *value*}| **nas-port {format** *e format_name*| **type** *value*}| **nas-port-id {format** *e format_name*| **type** *value*}| **nas-port-id {format** *e format_name*| **type** *value*}}

Syntax Description	called-station-id	Specifies the AAA nas-port attribute.
	calling-station-id	Specifies the AAA nas-port attribute.
	nas-port	Specifies the AAA nas-port attribute.
	nas-port-id	Specifies the AAA nas-port-id attribute.
	format	Specifies the AAA nas-port attribute format.
	e	Specifies the AAA format type.
	format_name	Specifies a 32 character string representing the format to be used.
	type	Specifies the AAA nas-port attribute format.
	value	Specifies the Nas-Port-Type value to apply format string on. The nas port value ranges from 0-44.
Command Default	None	
Command Modes	Global configuration mode	
Command History	Release	Modification

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

 Usage Guidelines
 To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

 Task ID
 Task ID
 Operation

 ip-services
 read, write

Examples This is an example of configuring the **aaa radius attribute** command in the global configuration mode:

RP/0/RSP0/CPU0:router(config) # aaa radius attribute format e red type 40

aaa service-accounting

To set accounting parameters for service, use the **aaa service-accounting** command in global configuration mode or administration configuration mode. To disable this behavior, use the **no** form of this command.

aaa service-accounting [extended | brief]

no aaa service-accounting [extended | brief]

Syntax Description	extended	Sends extended service accounting records.
	brief	Sends brief service accounting records.
Command Default	The default setting is ext	ended.
Command Modes	Global configuration	
Command History	Release	Modification
	Release 4.3.1	This command was introduced.
Usage Guidelines	IDs. If the user group ass for assistance.The extended keyword a the service accounting red	the unset be in a user group associated with a task group that includes appropriate task signment is preventing you from using a command, contact your AAA administrator allows to report all the subscriber accounting identities and state attributes within all cords. While, the brief keyword allows to report only brief information about service but any parent accounting record details.
Task ID	Task ID	Operation
	aaa	read, write
Examples	records:	to set service accounting parameters to send brief information about service accounting

Related Commands

Command	Description
aaa accounting subscriber, on page 9	Creates an accounting list for subscriber accounting.
aaa accounting service, on page 7	Creates an accounting list for service accounting.

aaa server radius dynamic-author

To configure radius dynamic author server, use the**aaa server radius dynamic-author** command in global configuration mode or administration configuration mode. To disable this subscriber authentication method, use the **no** form of this command.

aaa server radius dynamic-author {auth-type {all| any| session-key}| client *hostname*| ignore {server-key| session-key}| port *port_number*| server-key {0| 7| line_number}}

no aaa server radius dynamic-author

Syntax Description	auth-type	Represents the COA client authentication type.	
	all	Represents all the COA client authentication type.	
	any	Represents any COA client authentication type.	
	session-key	Specifies that the session-key could be ignored.	
	client	Represents the COA client configuration.	
	ignore	Specifies the ignore options.	
	port	Specifies the COA server port to listen on.	
	server-key	Sets the shared secret to verify client COA requests.	
	port_number	Represents the port number and the value ranges from 1000 to 5000.	
	0	Specifies that the unencrypted key will follow.	
	7	Specifies that the encrypted key will follow.	
	line_number	Represents the unencrypted (cleartext) key.	

Command Default No default behavior or values

Command Modes Global configuration

Command History

Release	Modification
Release 4.2.0	This command was introduced.
Release 4.2.1	The support for the keywords, auth-key and ignore {session-key} were removed.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. Task ID Task ID Operation read, write

Examples

RP/0/RSP0/CPU0:router(config) # aaa server radius dynamic-author ignore server-key

	aaa radius attribute, on page 24	Configures a format e encode string for particular interface or NAS-Port type.	

radius-server attribute

To customize the selected radius attributes, use the **radius-server attribute** command in the global configuration mode. To disable the Radius server attribute, use the **no** form of this command.

radius-server attribute list list_name [attribute {list| vendor-id value}]

no radius-server attribute *list_name* [**attribute** {*list*| **vendor-id** *value*}]

Syntax Description	list	Specifies a list of attributes that are used in conjunction with server-groups to accept or reject a list of attributes.
	list_name	Specifies the list name.
	attribute	Specifies a list of Radius attributes.
	list	Specifies the list of comma-delimited Radius attributes.
	vendor-id	Specifies the vendor-id of the RADIUS attribute.
	value	Specifies the vendor-id value. The value ranges from 0 to 429496729.
Command Default	None	
Command Modes	Global configuration n	node
Command History	Release	Modification
	Release 4.2.0	This command was introduced.
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate tas IDs. If the user group assignment is preventing you from using a command, contact your AAA administrate for assistance.	
Task ID	Task ID	Operations
	aaa	read, write

Examples This is an example of configuring the **radius-server attribute** command in the global configuration mode:

RP/0/RSP0/CPU0:router(config)# radius-server attribute list list1
RP/0/RSP0/CPU0:router(config-attribute-filter)# attribute list_1
RP/0/RSP0/CPU0:router(config-attribute-filter)# radius-server attribute vendor-id 429

radius-server dead-criteria

To configure the dead server detection criteria for a configured RADIUS server, use the **radius-server dead-criteria** command in the global configuration mode. To disable the Radius server dead-criteria, use the **no** form of this command.

radius-server dead-criteria {time value| tries number_of_tries}

no radius-server dead-criteria {**time** *value*| **tries** *number_of_tries*}

Syntax Description	time	Specifies the minimum time that must elapse since a response was received from this RADIUS server.
	value	Specifies the time in seconds. The value ranges from 1 to 120.
	tries	Specifies the minimum number of transmissions (original attempts plus retransmits) to this RADIUS server.
	number_of_tries	Specifies the number of tries. The range is from 1 to 100.
Command Default	None	
Command Modes	Global configuration m	node
Command History	Release	Modification
	Release 4.2.0	This command was introduced.
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrato for assistance.	
Task ID	Task ID	Operations
	aaa	read, write

Examples This is an example of configuring the **radius-server dead-criteria** command with 100s time and 34 tries:

RP/0/RSP0/CPU0:router(config)#radius-server dead-criteria time 100
RP/0/RSP0/CPU0:router(config)#radius-server dead-criteria tries 34

radius-server deadtime (BNG)

To improve RADIUS response times when some servers are unavailable and cause the unavailable servers to be skipped immediately, use the **radius-server deadtime** command in global configuration mode. To set deadtime to 0, use the **no** form of this command.

radius-server deadtime value

no radius-server deadtime value

Syntax Description	value	Length of time, in minutes, for which a RADIUS server is skipped over by transaction requests, up to a maximum of 1440 (24 hours). The range is from 1 to 1440. The default value is 0.

Command Default Dead time is set to 0.

Command Modes Global configuration mode

Command History	Release	Modification	
	Release 3.7.2	This command was introduced.	
	Release 4.2.0	This command was supported on BNG.	

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

A RADIUS server marked as dead is skipped by additional requests for the duration of minutes unless all other servers are marked dead and there is no rollover method.

Task ID	Task ID	Operations
	aaa	read, write

Examples This example specifies five minutes of deadtime for RADIUS servers that fail to respond to authentication requests for the **radius-server deadtime** command:

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# radius-server deadtime 5

radius-server disallow null-username

To drop radius access-requests that has blank or no username, use the **radius-server disallow null-username** command in the global configuration mode. To disable the Radius server disallow null-username, use the **no** form of this command.

radius-server disallow null-username

no radius-server disallow null-username

Syntax Description This command has no keywords or arguments.

Command Default None

Command Modes Global configuration mode

Command History	Release	Modification
	Release 4.2.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operations
	aaa	read, write

Examples This is an example of configuring the **radius-server disallow null-username** command in the global configuration mode:

RP/0/RSP0/CPU0:router(config)#radius-server disallow null-username

radius-server host (BNG)

To specify a RADIUS server host, use the **radius-server host** command in global configuration mode. To delete the specified RADIUS host, use the **no** form of this command.

radius-server host *ip-address* [**auth-port** *port-number*] [**acct-port** *port-number*] [**timeout** *seconds*] [**retransmit** *retries*] [**key** *string*]

no radius-server host ip-address [auth-port port-number] [acct-port port-number]

Syntax Description	ip-address	IP address of the RADIUS server host.
	auth-port port-number	(Optional) Specifies the User Datagram Protocol (UDP) destination port for authentication requests; the host is not used for authentication if set to 0. If unspecified, the port number defaults to 1645.
	acct-port port-number	(Optional) Specifies the UDP destination port for accounting requests; the host is not used for accounting if set to 0. If unspecified, the port number defaults to 1646.
	timeout seconds	(Optional) The time interval (in seconds) that the router waits for the RADIUS server to reply before retransmitting. This setting overrides the global value of the radius-server timeout command. If no timeout value is specified, the global value is used. Enter a value in the range from 1 to 1000. Default is 5.
	retransmit retries	(Optional) The number of times a RADIUS request is re-sent to a server, if that server is not responding or is responding slowly. This setting overrides the global setting of the radius-server retransmit command. If no retransmit value is specified, the global value is used. Enter a value in the range from 1 to 100. Default is 3.
	key string	(Optional) Specifies the authentication and encryption key used between the router and the RADIUS server. This key overrides the global setting of the radius-server key command. If no key string is specified, the global value is used.
		The key is a text string that must match the encryption key used on the RADIUS server. Always configure the key as the last item in the radius-server host command syntax. This is because the leading spaces are ignored, but spaces within and at the end of the key are used. If you use spaces in the key, do not enclose the key in quotation marks unless the quotation marks themselves are part of the key.

Command Default No RADIUS host is specified; use global radius-server command values.

Command Modes Global configuration

Command History	Release	lodification	
	Release 3.7.2	his command was introduced.	
	Release 4.2.0	his command was supported on BNG.	
Usage Guidelines		oup associated with a task group that includes appropriate task gyou from using a command, contact your AAA administrator	
	You can use multiple radius-server host commands to specify multiple hosts. The Cisco IOS XR software searches for hosts in the order in which you specify them.		
	•	values are specified, the global values apply to each host.

radius-server throttle

To configure RADIUS throttling options for access and accounting to flow control the number of access and accounting requests sent to a RADIUS server, use the **radius-server throttle** command in the global configuration mode. To disable the radius server throttle, use the **no** form of this command.

radius-server throttle {access value {access-timeout *time*| accounting value}| accounting acc_value} no radius-server throttle {access value {access-timeout *time*| accounting value}| accounting acc_value}

Syntax Description	access	Controls the number of access requests sent to a radius server.
	value	Specifies the number of outstanding access requests after which throttling should be performed. The value ranges from 0 to 65535 and the preferred value 100.
	access-timeout	Specifies the number of timeouts exceeding which a throttled access request is dropped.
	time	Specifies the number of timeouts for a transaction. The default value is 3.
	accounting	Controls the number of accounting requests sent to a radius server.
	acc_value	Specifies the number of outstanding accounting transactions after which throttling should be performed. The value ranges from 0 to 65535 and the preferred value 100.
Command Modes Command History	Global configuration	mode
	Release 4.2.1	This command was introduced.
Usage Guidelines		, you must be in a user group associated with a task group that includes appropriate task assignment is preventing you from using a command, contact your AAA administrator
Task ID	Task ID	Operation
	aaa	read, write

Examples

This is an example of configuring the **radius-server throttle** command in the global configuration mode:

RP/0/RSP0/CPU0:router(config) # radius-server throttle access 10 access-timeout 5 accounting
10

radius source-interface (BNG)

To force RADIUS to use the IP address of a specified interface or subinterface for all outgoing RADIUS packets, use the **radius source-interface** command in global configuration mode. To prevent only the specified interface from being the default and not from being used for all outgoing RADIUS packets, use the **no** form of this command.

radius source-interface interface [vrf vrf_name]
no radius source-interface interface

yntax Description	interface-name	Name of the interface that RADIUS uses for all of its outgoing packets.	
	vrf vrf-id	Specifies the name of the assigned VRF.	
ommand Default	If a specific source interface is not configured, or the interface is down or does not have an IP address configured, the system selects an IP address.		
ommand Modes	Global configuration mod	le	
Command History	Release	Modification	
	Release 3.7.2	This command was introduced.	
	Release 4.2.0	This command was supported on BNG.	
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.		
	Use the radius source-interface command to set the IP address of the specified interface or subinterface for all outgoing RADIUS packets. This address is used as long as the interface or subinterface is in the up state. In this way, the RADIUS server can use one IP address entry for every network access client instead of maintaining a list of IP addresses.		
	The specified interface or subinterface must have an IP address associated with it. If the specified interface or subinterface does not have an IP address or is in the down state, then RADIUS reverts to the default. To avoid this, add an IP address to the interface or subinterface or bring the interface to the up state.		
	The radius source-interface command is especially useful in cases in which the router has many interfaces or subinterfaces and you want to ensure that all RADIUS packets from a particular router have the same IP address.		

Task ID	Operations
aaa	read, write

Examples This example shows how to make RADIUS use the IP address of subinterface s2 for all outgoing RADIUS packets:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# radius source-interface Loopback 10 vrf vrf-1
```

show aaa trace

To display all trace data for AAA sub-system, use the show aaa trace command in the EXEC mode.

show aaa trace [basic| errors| file| func| hexdump| job| last| location| reverse| stats| tailf| unique| usec| verbose| wide| wrapping]

Syntax Description	basic	Displays the data for AAA basic events.
	errors	Displays the data for AAA client library errors.
	file	Displays the specific file.
	func	Displays the data for AAA function.
	hexdump	Displays the traces in hexadecimal.
	job	Displays the job ID.
	last	Displays the last n entries.
	location	Displays the card location.
	reverse	Displays the latest traces first.
	stats	Displays the statistics.
	tailf	Displays the new traces as they were added.
	unique	Displays the unique entries with counts.
	verbose	Displays the internal debugging information.
	wrapping	Displays the wrapping entries.
		Displays the output modifiers.
Command Default	None	
Command Modes	EXEC	

Command History	Release	Modification
	Release 4.2.0	This command was introduced.

ACL and ABF Commands

This module describes the Cisco IOS XR software commands used to configure the ACL and ABF commands for Broadband Network Gateway (BNG) on the Cisco ASR 9000 Series Router. For details regarding the related configurations, refer to the *Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide*.

- ipv4 access-group (BNG), page 66
- ipv4 access-list (BNG), page 69
- ipv6 access-group (BNG), page 71
- ipv6 access-list (BNG), page 73

ipv4 access-group (BNG)

To control access to an interface, use the **ipv4 access-group** command in an appropriate configuration mode. To remove the specified access group, use the **no** form of this command.

ipv4 access-group *access-list-name* {common *acl-p* {[*acl1* ingress [hardware-count] [interface-statistics]]| ingress}| *acl1* {ingress [hardware-count] [interface-statistics] }

no ipv4 access-group *access-list-name* {common *acl-p* {[*acl1* ingress [hardware-count] [interface-statistics]]| ingress}| *acl1* {ingress} [gress] [hardware-count] [interface-statistics]}

Syntax Description	access-list-name	The name of the ipv4 access list as specified by the ipv4 access-list command.
	common	The name of the common ACL. Common ACL is only supported on the ingress direction.
	ingress	Filters on inbound packets.
	egress	Filters on outbound packets.
	hardware-count	(Optional) Specifies to access a group's hardware counters.
	interface-statistics	(Optional) Specifies per-interface statistics in the hardware. Not available for common ACL.
Command Modes Command History	Dynamic template configura	ation Modification
	Release 4.1.1	This command was introduced.
	Release 4.2.0	This command was supported in the dynamic template configuration mode for BNG.
Usage Guidelines		

Use the **ipv4 access-group** command to control access to an interface. To remove the specified access group, use the **no** form of the command. Use the *access-list-name* argument to specify a particular IPv4 access list.

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

nere

66

Use the **ingress** keyword to filter on inbound packets or the egress keyword to filter on outbound packets. Use the *hardware-count* argument to enable hardware counters for the access group.

Permitted packets are counted only when hardware counters are enabled using the hardware-count argument. Denied packets are counted whether hardware counters are enabled or not.

To enter the dynamic template configuration mode, run **dynamic-template** command in the global configuration mode.

Note

•

Note

Task ID

For packet filtering applications using the ipv4/ipv6 access-group command, packet counters are maintained in hardware for each direction. If an access group is used on multiple interfaces in the same direction, then packets are counted for each interface that has the hardware-count argument enabled.

Under the dynamic template configuration mode, only the egress and ingress keywords are displayed.

If the access list permits the addresses, the software continues to process the packet. If the access list denies the address, the software discards the packet and returns an Internet Control Message Protocol (ICMP) host unreachable message.

If the specified access list does not exist, all packets are passed.

By default, the unique or per-interface ACL statistics are disabled.

Examples

This example shows how to apply filters on packets inbound and outbound from GigabitEthernet interface 0/2/0/2:

RP/0/RSP0/CPU0:router(config) # interface gigabitethernet 0/2/0/2 RP/0/RSP0/CPU0:router(config-if) # ipv6 access-group p-in-filter ingress RP/0/RSP0/CPU0:router(config-if) # ipv6 access-group p-out-filter egress This example shows how to apply per-interface statistics in the hardware:

RP/0/RSP0/CPU0:router(config)# interface gigabitethernet 0/2/0/2
RP/0/RSP0/CPU0:router(config-if)# ipv6 access-group p-in-filter ingress interface-statistics

ipv6 access-list (BNG)

To define an IPv6 access list and to place the router in IPv6 access list configuration mode, use the **ipv6 access-list** command in global configuration mode. To remove the access list, use the **no** form of this command.

ipv6 access-list name

no ipv6 access-list name

Syntax Description	name	Name of the IPv6 access list. Names cannot contain a space or quotation mark, or begin with a numeric.
Command Default	No IPv6 access lis	st is defined.
ommand Modes	Interface configur	ation
Command History	Release	Modification
	Release 3.7.2	This command was introduced.
	Release 4.3.0	Support for IPv6 ACL on L2 transport interface was added.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The ipv6 access-list command is similar to the ipv4 access-list command, except that it is IPv6-specific.

The IPv6 access lists are used for traffic filtering based on source and destination addresses, IPv6 option headers, and optional, upper-layer protocol type information for finer granularity of control. IPv6 access lists are defined by using the **ipv6 access-list** command in global configuration mode and their permit and deny conditions are set by using the **deny** and **permit** commands in IPv6 access list configuration mode. Configuring the **ipv6 access-list** command places the router in IPv6 access list configuration mode—the router prompt changes to router (config-ipv6-acl)#. From IPv6 access list configuration mode, permit and deny conditions can be set for the defined IPv6 access list.

See the "Examples" section for an example of a translated IPv6 access control list (ACL) configuration.

No more than one IPv6 access list can be applied to an interface per direction.

	in at least one entry for the implicit deny ipv6 any any statement to take effect.
IPv6 prefix lists, not a	access lists, should be used for filtering routing protocol prefixes.

Examples

```
10 deny ipv6 fec0:0:0:2::/64 any
20 permit ipv6 any any
RP/0/RSP0/CPU0:router(config)# interface gigabitethernet 0/2/0/2
RP/0/RSP0/CPU0:router(config-if)# ipv6 access-group list2 egress
```

IPv6 is automatically configured as the protocol type in **permit any any** and **deny any any** statements that are translated from global configuration mode to IPv6 access list configuration mode.

Note

An IPv6 router does not forward to another network an IPv6 packet that has a link-local address as either its source or destination address (and the source interface for the packet is different from the destination interface for the packet).

Address Pool Service Commands

This chapter describes the Cisco IOS XR software Address Pool Service commands for Broadband Network Gateway (BNG). For details regarding related configurations, refer to the *Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide*.

- address-range, page 78
- exclude, page 80
- network (BNG), page 82
- prefix-length, page 84
- prefix-range, page 86
- pool vrf, page 88
- pool ipv4, page 90
- pool ipv6, page 92
- utilization-mark, page 94
- show pool ipv4 name, page 96
- show pool ipv6 name, page 100
- show pool vrf, page 107

address-range

To specify address range for allocation, use the **address-range** command in Pool IPv4 or IPv6 configuration submode. To remove the address range, use the **no** form of this command.

address-range first_range last_range

no address-range *first_range last_range*

Syntax Description	first_range	Specifies the first address in range from which the IP addresses can be assigned to clients.	
	last_range	Specifies the last address in range until which the IP addresses can be assigned to clients.	
Command Default	None		
Command Modes	Pool IPv4 configuration	n	
	Pool IPv6 configuration	n	
Command History	Release	Modification	
	Release 4.2.0	This command was introduced.	
	Release 4.3.0	Support for IPv6 was added.	
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.		
	You should only specify the addresses that are assignable to clients in a particular subnet. The interface and broadcast addresses should not be included in the address-range configuration.		
	Use the pool ipv4 command to enter IPv4 pool configuration submode and pool ipv6 command to enter IPv6 pool configuration submode.		
	Multiple address-ranges are allowed within a pool.		
Task ID	Task ID	Operation	
	ip-services	read, write	

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

Examples

This is an example of configuring the **address-range** command for IPv4 in the global configuration mode:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pool vrf vrf1 ipv4 pool2
RP/0/RSP0/CPU0:router(config-pool-ipv4)# address-range 11.11.11.11 14.14.14.14
This is an example of configuring the address-range command for IPv6 in the global configuration mode:
```

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pool vrf vrfl ipv6 pool3
RP/0/RSP0/CPU0:router(config-pool-ipv6)# address-range 2001::1 2001::100
```

Related Commands

Command	Description
pool ipv4, on page 90	Enables distributed address pool service on ipv4.
pool vrf, on page 88	Enables distributed address pool service on vrf.
exclude, on page 80	Specifies a range of IP addresses that distributed address pool service should not assign to clients.

exclude

To specify a range of IPv4 or Pv6 addresses that distributed address pool service (DAPS) must not assign to clients, use the exclude command in Pool IPv4 or IPv6 configuration submode. To remove the excluded IP addresses, use the **no** form of this command. **exclude** {*first address*| *last address*} **no exclude** {*first address*| *last address*} **Syntax Description** first address Specifies the first address in the range that needs to be excluded for IPv4 and specifies the first address or prefix in the range for IPv6. last address Specifies the last address in the range that needs to be excluded and specifies the last address or prefix in the range for IPv6. **Command Default** None **Command Modes** Pool IPv4 configuration Pool IPv6 configuration **Command History** Release Modification Release 4.2.0 This command was introduced. Release 4.3.0 Support for IPv6 was added. **Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. Use the **pool ipv4** command to enter IPv4 pool configuration submode and **pool ipv6** command to enter IPv6 pool configuration submode.

The low IP address cannot overlap with the IP address of a reserved address command. Multiple exclude commands are allowed within a pool. To exclude a single address, <highIpAddress> can be omitted.

Note	The exclude command can be configured along with the network , address-range , and the prefix-rang commands.		
Task ID	Task ID	Operation	
	ip-services	read, write	
Examples	This is an example to configure the ex	nfigure fig)# pool vrf vrf1 ipv4 pool2 fig-pool-ipv4)# exclude 10.10.10.1 10.10.10.10	
	RP/0/RSP0/CPU0:router# configure RP/0/RSP0/CPU0:router(config)# p RP/0/RSP0/CPU0:router(config-poo	ool vrf vrf1 ipv6 pool3	
Related Commands	Command	Description	
	pool ipv4, on page 90	Enables distributed address pool service on IPv4.	
	pool vrf, on page 88	Enables distributed address pool service on vrf.	
	network (BNG), on page 82	Specifies a set of addresses or prefixes inside a	

subnet.

network (BNG)

To specify a set of addresses or prefixes inside a subnet, use the **network** command in Pool IPv4 or IPv6 configuration submode. To remove the addresses or prefixes, use the **no** form of this command.

network {*IPv4_subnet/length* | *IPv6_subnet/length*} **no network** {*IPv4_subnet/length* | *IPv6_subnet/length*}

Syntax Description	IPv4_subnet	Specifies the decimal representation of the IPv4 subnet mask.
	IPv6_subnet	Specifies the hexadecimal value for the IPv6 subnet mask.
	length	Specifies the length of the prefix.NoteThe prefix length must be a maximum of 16 bit more than the subnet mask.
Command Default	None	
Command Modes	Pool IPv4 configuration Pool IPv6 configuration	
	root ir vo configuration	
Command History	Release	Modification
	Release 4.2.0	This command was introduced.
	Release 4.3.0	Support for IPv6 was added.
Usage Guidelines		st be in a user group associated with a task group that includes appropriate task ent is preventing you from using a command, contact your AAA administrator
	Use the pool ipv4 command to pool configuration submode.	enter IPv4 pool configuration submode and pool ipv6 command to enter IPv6
	The prefix-length command m	nust be configured whenever the network command is used. The prefix-length

must be configured to 128 to signify singleton addresses and a smaller value to signify IPv6 prefixes. The number of addresses or prefixes that can be allocated by DAPS can become huge when this command is used. The prefix-length command should be configured to a number that limits the number of addresses or prefixes for each pool to 64K.

The prefix is written as the first address of a network, followed by a slash character (/), and ends with the bit-length of the prefix. For example, 192.168.1.0/24 is the prefix of the IPv4 network starting at the given address, having 24 bits allocated for the network prefix, and the remaining 8 bits reserved for host addressing. The IPv6 address specification 2001:db8::/32 is a large network with 2 ⁹⁶ addresses, having a 32-bit routing prefix. In IPv4 the routing prefix is also specified in the form of the subnet mask, which is expressed in quad-dotted decimal representation like an address. For example, 255.255.255.0 is the network mask for the 192.168.1.0/24 prefix.

Task ID	Task ID	Operation
	ip-services	read, write

Examples

This is an example of configuring the **network** command for IPv4:

RF/0/RSP0/CPU0:router# configure RF/0/RSP0/CPU0:router(config)# pool vrf vrf1 ipv4 pool2 RF/0/RSP0/CPU0:router(config-pool-ipv4)# network 11.11.11.0/24 This is an example of configuring the network command for IPv6:

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pool vrf vrf1 ipv6 pool3
RP/0/RSP0/CPU0:router(config-pool-ipv6)# network 10:1:1:::/50

Related Commands

Command	Description
pool ipv4, on page 90	Enables distributed address pool service on ipv4.
pool vrf, on page 88	Enables distributed address pool service on vrf.
prefix-length, on page 84	Specifies the length of the prefix that is assigned to the client.

prefix-length

To specify the length of the prefix that is assigned to the client, use the **prefix-length** command in IPv6 configuration submode. To remove the length of the prefix, use the **no** form of this command.

prefix-length prefix_length

no prefix-length *prefix_length*

Syntax Description	prefix_length	Specifies the length of the prefix.
Command Default	None	
Command Modes	Pool IPv6 configuration	
Command History	Release	Modification
	Release 4.3.0	This command was introduced.
Usage Guidelines		ist be in a user group associated with a task group that includes appropriate task nent is preventing you from using a command, contact your AAA administrator
	Use the pool ipv6 command	to enter ipv6 pool configuration submode.
		under the pool ensures all the prefixes (described in the prefix-range section) gth. The prefix-length command must be configured when the network and the used.
Task ID	Task ID	Operation
	ip-services	read, write
Examples	RP/0/RSP0/CPU0:router# co RP/0/RSP0/CPU0:router(con	uring the prefix-length command in the IPv6 configuration submode: onfigure hfig) # pool vrf vrf1 ipv6 pool3 hfig-pool-ipv6) # prefix-length 50

Related Commands

Command	Description
pool ipv4, on page 90	Enables distributed address pool service on ipv4.
pool vrf, on page 88	Enables distributed address pool service on vrf.
network (BNG), on page 82	Specifies a set of addresses or prefixes inside a subnet.

prefix-range

To specify a range of IPv6 address prefixes, use the **prefix-range** command in IPv6 configuration submode. To remove the range of prefixes, use the **no** form of this command.

prefix-range {first_ipv6_range| last_ipv6_range}
no prefix-range {first_ipv6_range| last_ipv6_range}

Syntax Description	first_ipv6_range	Specifies the first IPv6 in the prefix range.
	last_ipv6_range	Specifies the last IPv6 in the prefix range.
Command Default	None	
Command Modes	Pool IPv6 configuration	
Command History	Release	Modification
	Release 4.3.0	This command was introduced.
Usage Guidelines	IDs. If the user group assignme for assistance.	t be in a user group associated with a task group that includes appropriate task ent is preventing you from using a command, contact your AAA administrator
	Multiple prefix-ranges are allo	b enter IPv6 pool configuration submode. wed within a pool. The length of the prefix in any pool is the same for all the prefix-length command. The prefix-length has to be mandatorily configured figured.
Task ID	Task ID	Operation
	ip-services	read, write
Examples	This is an example of configur	ing the prefix-range command in IPv6 configuration submode:
		hfigure Fig)# pool vrf vrf1 ipv6 pool3 Fig-pool-ipv6)# prefix-range 1001:1:1:1:1: 1001:1:1:10::

86

Related Commands

Command	Description
pool ipv4, on page 90	Enables distributed address pool service on ipv4.
pool vrf, on page 88	Enables distributed address pool service on vrf.
prefix-length, on page 84	Specifies the length of the prefix that is assigned to the client.

pool vrf

To enable distributed address pool service on a vrf and to enter the corresponding configuration submode, use the **pool vrf** command in the global configuration mode. To disable this feature, use the **no** form of this command.

pool vrf {vrf_name| all} {ipv4| pool_name| ipv6| pool_name}
no pool vrf {vrf_name| all} {ipv4| pool_name| ipv6| pool_name}

yntax Description	vrf_name	Specifies the name of the vrf.
	ipv4	Specifies IPv4 pool name. Each pool must have a unique name across all VRFs.
	ірνб	Specifies IPv6 pool name. Each pool must have a unique name across all VRFs.
	pool_name	Specifies the name of the pool for IPv4 or IPv6.
ommand Default	all	Specifies the global pool.
		Specifies the global pool.
ommand Modes	None	Specifies the global pool. Modification
ommand Default ommand Modes ommand History	None Global configuration mode	

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **pool ipv4** command to enter IPv4 pool configuration submode and **pool ipv6** command to enter IPv6 pool configuration submode.

Note	Each pool must have a unique name across all VRFs. For example, pool1 can not be created in both vrf and vrf2.	
Task ID	Task ID	Operation
	ip-services	read, write
Examples This is an example of configuring the pool vrf comm RP/0/RSP0/CPU0:router# configure RP/0/RSP0/CPU0:router(config)# pool vrf vrf1 RP/0/RSP0/CPU0:router(config-pool-ipv4)#		ig)# pool vrf vrf1 ipv4 pool2
	This is an example of configuri	ng the pool vrf command for IPv6 in the global configuration mode: figure ig) # pool vrf vrf1 ipv6 pool3
Related Commands	Command	Description
	pool ipv4, on page 90	Enables distributed address pool service on IPv4.
	pool ipv6, on page 92	Enables distributed address pool service on IPv6.

pool ipv4

To enable distributed address pool service on IPv4 and to enter the pool IPv4 configuration submode, use the **pool ipv4** command in the global configuration mode. To disable this feature, use the **no** form of this command. pool ipv4 pool name no pool ipv4 pool name Syntax Description Specifies the name of the IPv4 pool. pool name **Command Default** None **Command Modes** Global configuration mode **Command History Modification** Release Release 4.2.0 This command was introduced. **Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. Use the **pool ipv4** command to enter IPv4 pool configuration submode. Task ID Task ID Operation ip-services read, write Examples This is an example of configuring the **pool ipv4** command in the global configuration mode: RP/0/RSP0/CPU0:router# configure RP/0/RSP0/CPU0:router(config) # pool ipv4 pool1 RP/0/RSP0/CPU0:router(config-pool-ipv4)# address-range 10.10.10.1 10.10.254 **Related Commands** Command Description pool vrf, on page 88 Enables distributed address pool service on vrf.

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

Command	Description
exclude, on page 80	Specifies a range of IP addresses that distributed address pool service should not assign to clients.
address-range, on page 78	Specifies a range of IP addresses.

pool ipv6

To enable distributed address pool service on IPv6 and to enter the IPv6 pool configuration submode, use the **pool ipv6** command in the global configuration mode. To disable this feature, use the **no** form of this command.

pool ipv6 pool_name

no pool ipv6 pool_name

Syntax Description	pool_name		Specifies the IPv6 pool name.		
Command Default	None				
Command Modes	Global configuration mode				
Command History	Release	Modifica	tion		
	Release 4.3.0	This com	mand was introduced.		
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. Use the pool ipv6 command to enter IPv6 pool configuration submode.				
Task ID	Task ID		peration		
	ip-services		ead, write		
Examples	This is an example of configuring the pool ipv6 command in the global configuration mode: RP/0/RSP0/CPU0:router# configure RP/0/RSP0/CPU0:router(config)# pool ipv6 p6 prefix-length 45 RP/0/RSP0/CPU0:router(config-pool-ipv6)#				
Related Commands	Command		Description		
	pool vrf, on page 88		Enables distributed address pool service on vrf.		

utilization-mark

To specify a utilization threshold, use the **utilization-mark** command in Pool IPv4 or IPv6 configuration submode. To remove the utilization threshold, use the **no** form of this command.

utilization-mark {high| high_value| low| low_value}

no utilization-mark {**high** | *high_value*| **low** | *low_value*}

Syntax Description	high	Specifies the high mark in the threshold value.	
	high_value	Specifies the numerical value as percentage, for the low mark in the threshold.	
	low	Specifies the low mark in the threshold value.	
	low_value	Specifies the numerical value as percentage, for the low mark in the threshold.	
Command Default	None		
Command Modes	Pool IPv4 configuration	on	
	Pool IPv6 configuration	on	
Command History	Release	Modification	
	Release 4.2.0	This command was introduced.	
	Release 4.3.0	Support for IPv6 was added.	
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.		
	Use the pool ipv4 command to enter IPv4 pool configuration submode and pool ipv6 command to enter IPv6 pool configuration submode.		
	When the utilization threshold is reached, a LOG_WARNING message is logged with syslog facility. The high and low values are entered as percentages between 0 and 100. The utilization is defined as the # allocated addresses or # total addresses.		
Task ID			
Task ID	Task ID	Operation	

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

Examples This is an example of configuring the **utilization-mark** command in Pool IPv4 configuration submode:

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pool vrf vrf1 ipv4 pool2
RP/0/RSP0/CPU0:router(config-pool-ipv4)# utilization-mark high 90 low 10
This is an example of configuring the utilization-mark command in Pool IPv6 configuration submode:

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pool vrf vrf1 ipv6 pool3
RP/0/RSP0/CPU0:router(config-pool-ipv6)# utilization-mark high 70 low 40

Related Commands

Command	Description
pool ipv4, on page 90	Enables distributed address pool service on ipv4.
pool vrf, on page 88	Enables distributed address pool service on vrf.
exclude, on page 80	Specifies a range of IP addresses that distributed address pool service should not assign to clients.

show pool ipv4 name

To display the status of an IPv4 pool, use the **show pool ipv4 name** command in the EXEC mode.

show pool ipv4 name pool_name {location| verbose| }

Syntax Description	pool_name	Specifies the name of the IPv4 pool.		
	location	Specifies the location of the IPv4 pool.		
	verbose	Displays all allocations for the pools.		
		Specifies the output modifiers.		
Command Default	None			
Command Modes	EXEC			
Command History	Release	Modification		
	Release 4.2.0	This command was introduced.		
	Release 4.3.0	Support for IPv6 was added.		
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes the proper task IDs. If you suspect user group assignment is preventing you from using a command, contact your AAA administrator for assistance.			
	Use the pool ipv4 command to enter Pool IPv4 configuration submode.			
Task ID	Task ID	Operation		
	ip-services	read		
Examples	This is the sample output of the show pool ipv4 name command:			
	RP/0/RSP0/CPU0:router# show pool ipv4 name POOL1

Command	Description
pool vrf, on page 88	Enables distributed address pool service on vrf.
pool ipv4, on page 90	Enables distributed address pool service on ipv4.
exclude, on page 80	Specifies a range of IP addresses that distributed address pool service should not assign to clients.
address-range, on page 78	Specifies a range of IP addresses.

show pool ipv6 name

To show the status of an IPv6 pool, use the show pool ipv6 name command in the EXEC mode.

show pool ipv6 name pool_name {location| verbose| }

Syntax Description	pool_name	Specifies the name of the IPv6 pool.	
	location	Specifies the location of the IPv6 pool.	
	verbose	Displays all allocations for the pools.	
		Specifies the output modifiers.	
Command Default	None		
Command Modes	EXEC		
Command History	Release	Modification	
	Release 4.3.0	This command was introduced.	
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes the proper task IDs. If you suspect user group assignment is preventing you from using a command, contact your AAA administrator for assistance.		
	Use the pool ipv6 comm	and to enter Pool IPv6 configuration submode.	
Task ID	Task ID	Operation

Control Policy Commands

This module describes the Cisco IOS XR software commands used to configure the Control Policy commands for Broadband Network Gateway (BNG) on the Cisco ASR 9000 Series Router. For details regarding the related configurations, refer to the *Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide*.

- activate, page 112
- authenticate (BNG), page 114
- authorize, page 116
- class-map type control subscriber, page 118
- deactivate, page 120
- event, page 122
- match (class-map), page 124
- policy-map type control subscriber, page 126
- policy-map type pbr, page 128
- service-policy type control subscriber, page 130
- show class-map, page 132
- show policy-map, page 134

activate

To activate the dynamic template mode in the class map sub-configuration mode, use the **activate** command in the global configuration mode. To disable this feature, use the **no** form of this command.

activate dynamic-template name aaa list {list_name| default}

no activate

nan aaa list def <i>list</i> Command Default Non Command Modes Glob Command Ulistered	a Sault _name	Specifies the actions related to dynamic templates. Specifies the name of the dynamic template. Specifies the AAA parameters. Specifies the AAA method list that identifies the radius server from which to acquire the service definition. Specifies the default AAA method list. (Optional) Specifies the name of the AAA method list. If provided, the template is downloaded from radius. If not provided, then the template is expected to be locally configured.
aaa list def <i>list def list command Default</i> Non Command Modes Glob	a fault name	Specifies the AAA parameters. Specifies the AAA method list that identifies the radius server from which to acquire the service definition. Specifies the default AAA method list. qos	3	read, write

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

Examples This is an example of configuring the **activate** command in the global configuration mode:

RP/0/RSP0/CPU0:router# configure

```
RP/0/RSP0/CPU0:router(config)# policy-map type control subscriber PL1
RP/0/RSP0/CPU0:router(config-pmap)# event session-activate match-first
RP/0/RSP0/CPU0:router(config-pmap-e)# class type control subscriber CL2
RP/0/RSP0/CPU0:router(config-pmap-c)# 1 activate dynamic-template DL1 aaa list default
```

Related Commands

Command	Description
, I C	Deactivates the dynamic template mode in the class map sub-configuration mode.

authenticate (BNG)

To authenticate and specify the AAA method list that authentication should be made with in the class map sub-configuration mode, use the **authenticate** command in the global configuration mode. To disable the AAA method list authentication, use the **no** form of this command.

authenticate aaa list{list_name| default}

no authenticate

Syntax Description	aaa	Specifies the AAA parameters.	
	list	Specifies AAA method list that authentication should be made with.	
	default	Specifies the default AAA method list.	
	list_name	Specifies the name of the AAA method list.	
Command Default	None		
Command Modes	Global configuration n	node	
Command History	Release	Modification	
	Release 4.2.0	This command was introduced.	
Usage Guidelines		you must be in a user group associated with a task group that includes appropriate task assignment is preventing you from using a command, contact your AAA administrator	
Task ID	Task ID	Operation	
	qos	read, write	
Examples	This is an example of configuring the authenticate command in the global configuration mode:		
		er# configure er(config)# policy-map type control subscriber PL1 er(config-pmap)# event session-start match-first	

RP/0/RSP0/CPU0:router(config-pmap-e)# class type control subscriber CL2
RP/0/RSP0/CPU0:router(config-pmap-c)# 1 authenticate aaa list default

authorize

To authenticate and specify the AAA method list that authorization should be made with in the class map sub-configuration mode, use the **authorize** command in the global configuration mode. To disable the AAA method list authorization, use the **no** form of this command.

authorize aaa list{*list_name*| default} {format_*name* } | identifier {circuit-id| remote-id| source-address-ipv4| source-address-mac| username} {password | {use-from-line| *password*}} no authorize

Syntax Description	aaa	Specifies the AAA parameters.
	list	Specifies AAA method list that authorization should be made with.
	default	Specifies the default AAA method list.
	list_name	Specifies the name of the AAA method list.
	format	Specifies an authorize format name.
	format_name	Specifies to use format_name, which was defined using CLI 'aaa attribute format'. The result of format is used as user name in authorization request.
	password	Specifies a password to be used for AAA request.
	use-from-line	Specifies the line from which the password needs to be used.
	password	Specifies a clear text password.
	identifier	Specifies an authorize identifier.
	circuit-id	Specifies to use circuit-id as the username in authorize request.
	remote-id	Specifies to use remote-id as the username in authorize request
	source-address-ipv4	Specifies to use source-address-ipv4 as the username in authorize request.
	source-address-mac	Specifies to use source-address-mac as the username in authorize request.
	username	Specifies an authorize username.

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

Command	Description
event, on page 122	Enables the event in the policy-map.

service-policy type control subscriber

To associate a subscriber control service policy to the interface, use the **service-policy type control subscriber** command in interface configuration mode. To disable the service-policy type control subscriber, use the **no** form of this command.

service-policy type control subscriber name

no service-policy type control subscriber name

Syntax Description	name	Represents the po	licy map name.
Command Default	None		
Command Modes	Interface configuration mod	le	
Command History	Release	Modifica	tion
	Release 4.2.0	This com	nmand was introduced.
Usage Guidelines Task ID	IDs. If the user group assign for assistance.		ociated with a task group that includes appropriate task om using a command, contact your AAA administrator
	Task ID config-services		Operation read, write
Examples	This is an example of configuring the service-policy type control subscriber command in interface configuration mode: RP/0/RSP0/CPU0:router(config)# interface Bundle-Ether 344 RP/0/RSP0/CPU0:router(config-if)# service-policy type control subscriber sub1		
Related Commands			
	Command class-map type control sub	scriber, on page 118	Description Enables the class-map.

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

Command	Description
event, on page 122	Enables the event in the policy-map.

show class-map

To show the class-map related information, use the **show class-map** command in the EXEC mode.

show class-map type control subscriber name

Current Description		
Syntax Description	type	Displays the type of classmap.
	control	Displays all the control class maps.
	subscriber	Displays all the subscriber control class maps.
	name	Displays the class map name.
Command Default	None	
Command Modes	EXEC	
Command History	Release	Modification
	Release 4.2.0	This command was introduced.
Usage Guidelines		ast be in a user group associated with a task group that includes the proper task assignment is preventing you from using a command, contact your AAA
Task ID	Task ID	Operation
	qos	read
Examples	RP/0/RSP0/CPU0:router# sh The show class-map output is Wed Jan 23 08:55:15.027 G 1) ClassMap: PTA_CLASS Referenced by 1 Polic	MT Type: subscriber control

Table 7: show class-map Field Descriptions

Field	Description
ClassMap	Specifies the class map name.
Туре	Specifies the type of the class map.

Related Commands

Command	Description
class-map type control subscriber, on page 118	Determines the list of actions to be executed for the class and enters the class-map configuration mode.

show policy-map

To show the policy-map related information, use the show policy-map command in the EXEC mode.

show policy-map type control subscriber pmap-name name

Syntax Description	type	Displays the type of policy-map.
	control	Displays the control type policy-map.
	subscriber	Displays the subscriber control type policy-map.
	pmap_name	Specifies the policy-map name.
	name	Displays the policy map name.
Command Default	None	
	None	
Command Modes	EXEC	
Command History	Release	Modification
	Release 4.2.0	This command was introduced.
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes the proper task IDs. If you suspect user group assignment is preventing you from using a command, contact your AAA administrator for assistance.	
Task ID	Task ID	Operation
	qos	read
Examples	This is a sample output of the show policy-map command in the EXEC mode:	
	RP/0/RSP0/CPU0:router# show policy-m	ap control subscriber pmap-name POLICY1
	The show policy-map output is as follows:	
	Wed Jan 23 08:56:13.794 GMT	

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference,

```
policy-map type control subscriber POLICY1
event session-start match-all
   class type control subscriber PTA_CLASS do-all
   1 activate dynamic-template PPP_PTA_TEMPLATE
   !
   end-policy-map
!
```

This table describes the significant fields shown in the display.

Table 8: show policy-map Field Descriptions

Field	Description
policy-map	Specifies the policy map name.
Туре	Specifies the type of the class type control subscriber.

Related Commands

Command	Description
policy-map type control subscriber, on page 126	Determines the list of events that are applicable to the subscriber lifecycle and to enter the policy-map configuration mode.

address-pool

To specify the name of an address pool by integrating the DHCPv6 sever with distributed address pool service (DAPS), use the **address-pool** command in the DHCP IPv6 server profile class configuration mode. To remove the address pool name, use the **no** form of this command.

address-pool pool_name

no address-pool *pool_name*

Syntax Description	pool_name	Specifies the name of a address pool.	
Command Default	None		
Command Modes	DHCP IPv6 server profile	class configuration	
Command History	Release	Modification	
	Release 4.3.0	This command was introduced.	
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.		
	DHCPv6 configuration mo	erver profile class configuration, enter class class_name command in the DHCPv6	
Task ID	Task ID	Operations	
	ip-services	read, write	
Examples	This is an example of creating a address-pool name using the address-pool command:		
	RP/0/RSP0/CPU0:router(<pre>config)# dhcp ipv6 config-dhcpv6)# profile my_profile server config-dhcpv6-server-profile)# class class_dhcp config-dhcpv6-server-profile-class)# address-pool pool_addr</pre>	

aftr-name

To set the Address Family Transition Router's (AFTR) name for Dual-stack Lite support, use the **aftr-name** command in DHCPv6 server profile configuration mode. To disable the AFTR-name, use the **no** form of this command.

aftr-name aftr-name

no aftr-name aftr-name

Syntax Description	aftr-name	Specifies the AFTR fully qualified domain name for the server profile.
Command Default	Dual-stack support is	not enabled.
Command Modes	DHCPv6 server profi	le configuration
Command History	Release	Modification
	Release 4.3.0	This command was introduced.
Usage Guidelines		you must be in a user group associated with a task group that includes appropriate task assignment is preventing you from using a command, contact your AAA administrator
Task ID	Task ID	Operation
	ip-services	read, write
Examples	RP/0/RSP0/CPU0:rou RP/0/RSP0/CPU0:rou	now to configure the AFTR Fully Qualified Domain Name (FQDN) for a server profile: ter(config) # dhcp ipv6 ter(config-dhcpv6) # profile my_profile server ter(config-dhcpv6-server-profile) # aftr-name aftr-server.example.com

broadcast-flag policy check (BNG)

To configure Dynamic Host Configuration Protocol (DHCP) IPv4 Relay to only broadcast BOOTREPLY packets, if the DHCP IPv4 broadcast flag is set in the DHCP IPv4 header, use the **broadcast-flag policy check** command in DHCP IPv4 relay profile configuration submode . By default, the DHCP IPv4 Relay always broadcasts BOOTREPLY packets. To restore the default, use the **no** form of this command.

broadcast-flag policy{ check}

no broadcast-flag policy{ check}

Syntax Description	check	Checks the broadcast flag in packets.
	unicast-always	Sets the broadcast-flag policy to unicast-always.
Command Default	Relay agent always broadd	casts DHCP IPv4 packets to a client.
Command Modes	DHCP IPv4 relay profile c	onfiguration
Command History	Release	Modification
	Release 3.7.0	This command was introduced.
	Release 4.2.0	This command was supported for BNG.
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate tast IDs. If the user group assignment is preventing you from using a command, contact your AAA administrato for assistance.	
Task ID	Task ID	Operations
	ip-services	read, write
Examples	This an example of the bro	padcast-flag policy check command:
	RP/0/RSP0/CPU0:router# RP/0/RSP0/CPU0:router(RP/0/RSP0/CPU0:router(

RP/0/RSP0/CPU0:router(config-dhcpv4-relay-profile)# broadcast-flag policy check

Command	Description
dhcp ipv4 (BNG), on page 145	Enables DHCP for IPv4 and enters DHCP IPv4 configuration mode.
helper-address (BNG), on page 155	Configures the DHCP relay agent to relay packets to a specific DHCP server.
relay information check (BNG), on page 174	Configures a DHCP server to validate the relay agent information option in forwarded BOOTREPLY messages.
relay information option (BNG), on page 176	Enables the system to insert a DHCP relay agent information option in forwarded BOOTREQUEST messages to a DHCP server.
relay information option allow-untrusted (BNG), on page 178	Configures the DHCP component to not drop BOOTREQUEST messages that have the relay information option set and the giaddr set to zero.
relay information policy (BNG), on page 180	Configures how a relay agent processes BOOTREQUEST messages that already contain a relay information option.

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

class

To create a proxy profile class and to enter the proxy profile class sub configuration mode, use the class command in an appropriate configuration mode. To disable this feature and exit the profile mode, use the no form of this command.

class class name {helper-address| match} {address-pool| dns-server| domain-name| prefix-pool}

no class class_name

Syntax Description	class_name	Specifies the class name.
	helper-address	Specifies the server address
	match	Inserts a match keyword.

helper-address	Specifies the server address to relay packets.
match	Inserts a match keyword.
address-pool	Specifies the name of the address pool
dns-server	Specifies the name of a dns server.
domain-name	Specifies the name of a domain.
prefix-pool	Specifies the name of the prefix pool.

Command Default No class is specified.

Command Modes	DHCP IPv4 proxy profile configuration
	DHCP IPv6 proxy profile configuration
	DHCP IPv6 server profile configuration

Command History	Release	Modification
	Release 4.2.0	This command was introduced.
	Release 4.3.0	The support for IPv6 was added.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

	configuration submodes.	sent in both DHCP IPv6 proxy profile configuration and DHCP IPv6 server profile A class is associated with a match criterion, which is used to determine if the class or not. The class name needs to be unique for the system.
Note	server profile configuration	ever, domain-name, and prefix-pool keywords appear only in the DHCP IPv6 on mode. However, the helper-address keywords appears in both DHCP IPv4 on and DHCP IPv6 proxy profile configuration modes.
Task ID	Task ID	Operation
	ip-services	read, write
Examples	RP/0/RSP0/CPU0:router RP/0/RSP0/CPU0:router RP/0/RSP0/CPU0:router	to create a class in the DHCP IPv4 proxy profile configuration mode: (config) # dhcp ipv4 (config-dhcpv4) # profile dhcp_profile proxy (config-dhcpv4-proxy-profile) # class blue to create a class in the DHCP IPv6 proxy profile configuration mode:
	RP/0/RSP0/CPU0:router RP/0/RSP0/CPU0:router RP/0/RSP0/CPU0:router	(config)# dhcp ipv6 (config-dhcpv6)# profile dhcp_profile1 proxy (config-dhcpv4-proxy-profile)# class blue
	This example shows how	to create a class in the DHCP IPv6 server profile configuration mode:
		<pre>(config)# dhcp ipv4 (config-dhcpv6)# profile dhcp_profile2 server (config-dhcpv4-server-profile)# class red</pre>
Related Commands	Command	Description

class-map type control subscriber, on page 118 This topic describes the class-map type control subscriber command.

dhcp ipv4 (BNG)

To enable Dynamic Host Configuration Protocol (DHCP) for IPv4 and to enter DHCP IPv4 configuration mode, use the **dhcp ipv4** command in global configuration mode. To disable DHCP for IPv4 and exit the DHCP IPv4 configuration mode, use the **no** form of this command.

	dhcp ipv4	
	no dhcp ipv4	
iption	This command has no keywo	rds or arguments.
odes	None

dhcp ipv6 (BNG)

To enable Dynamic Host Configuration Protocol (DHCP) for IPv6 and to enter DHCP IPv6 configuration mode, use the **dhcp ipv6** command in global configuration mode. To disable the DHCP for IPv6, use the **no** form of this command.

dhcp ipv6 no dhcp ipv6 **Syntax Description** This command has no keywords or arguments. **Command Modes** Global configuration mode **Command History** Modification Release Release 4.3.0 This command was supported for BNG. **Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. Use the **dhcp ipv6** command to enter DHCP IPv6 configuration mode. Task ID Task ID **Operations** ip-services read, write **Examples** This example shows how to enable DHCP for IPv6:

> RP/0/RSP0/CPU0:router(config) # dhcp ipv6 RP/0/RSP0/CPU0:router(config-dhcpv6) #

dhcpv6 address-pool

To specify addresses for DHCPv6 when Radius does not provide IPv6 address, use the **dhcpv6 address-pool** command in the dynamic template configuration mode. To remove the IPv6 address pool name for DHCPv6, use the **no** form of this command.

dhcpv6 address-pool pool name

no dhcpv6 address-pool pool_name

Syntax Description	pool_name	Specifies the name of a IPv6 address pool name for DHCPv6.
Command Default	None	
Command Modes	Dynamic template confi	iguration
Command History	Release	Modification
	Release 4.3.0	This command was introduced.
Usage Guidelines	IDs. If the user group as for assistance.	ou must be in a user group associated with a task group that includes appropriate task ssignment is preventing you from using a command, contact your AAA administrator mplate configuration mode, enter dynamic-template command in the global
	The IPv6 address pool i	s used for both PPPoE and IPoE subscribers.
Task ID	Task ID	Operations
	config-services	read, write
Examples	This is an example of cr command:	reating an IPv6 address pool for PPPoE subscribers using the dhcpv6 address-pool
	RP/0/RSP0/CPU0:route	er(config)# dynamic-template er(config-dynamic-template)# type ppp my-ipv6-pppoe-tempate er(config-dynamic-template-type)# dhcpv6 address-pool my-pppoe-addr-pool

This is an example of creating an IPv6 address pool for IPoE subscribers using the **dhcpv6 address-pool** command:

RP/0/RSP0/CPU0:router(config)# dynamic-template
RP/0/RSP0/CPU0:router(config-dynamic-template)# type ppp my-ipv6-tempate
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# dhcpv6 address-pool my-ipsub-addr-pool

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

dhcpv6 delegated-prefix-pool

To specify the default pool name for (IA-PD) prefix delegation when no pool name or prefix is provided by the Radius, use the **dhcpv6 delegated-prefix-pool** command in the dynamic template configuration mode. To remove the delegated prefix pool name, use the **no** form of this command.

dhcpv6 delegated-prefix-pool pool_name

no dhcpv6 delegated-prefix-pool pool_name

Syntax Description	pool_name	Specifies the name of a delegated prefix pool for DHCPv6.
Command Default	None	
Command Modes	Dynamic template config	guration
Command History	Release	Modification
	Release 4.3.0	This command was introduced.
Usage Guidelines	IDs. If the user group ass for assistance.	ou must be in a user group associated with a task group that includes appropriate task signment is preventing you from using a command, contact your AAA administrator nplate configuration mode, enter dynamic-template command in the global
Task ID	Task ID	Operations
	config-services	read, write
Examples	This is an example of cro command:	eating a delegated prefix-pool name using the dhcpv6 delegated-prefix-pool
	RP/0/RSP0/CPU0:router	r(config)# dynamic-template r(config-dynamic-template)# type ipsubscriber ipsub1 r(config-dynamic-template-type)# dhcpv6 delegated-prefix-pool myPool

dns-server (BNG)

To specify the Domain Name System (DNS) IPv6 servers available to a Dynamic Host Configuration Protocol (DHCP) for IPv6 client, use the **dns-server** command in an appropriate configuration mode. To remove the DNS server list, use the **no** form of this command.

dns-server *ipv6-address*

no dns-server ipv6-address

Syntax Description	ipv6-address	IPv6 address of a DNS server.		
		This argument must be in the form documented in RFC 2373, where the address is specified in hexadecimal using 16-bit values between colons.		
Command Default	When a DHCP for	IPv6 pool is first created, no DNS IPv6 servers are configured.		
Command Modes	DHCP IPv6 server	profile configuration		
	DHCP IPv6 server	profile class configuration		
Command History	Release	Modification		
	Release 4.3.0	This command was supported in DHCP IPv6 server profile and class configuration mode in BNG.		
Usage Guidelines		nd, you must be in a user group associated with a task group that includes appropriate task up assignment is preventing you from using a command, contact your AAA administrator		
		Name System (DNS) server addresses can be configured by issuing this command multiple ses do not overwrite old addresses.		
	To enter the DHCP IPv6 server profile configuration, enter profile <i>profile_name</i> server command in the DHCPv6 configuration mode.			
	To enter the DHCP IPv6 server profile class configuration, enter class <i>class_name</i> command in the DHCPv6 server profile configuration mode.			
Task ID	Task ID	Operations		
	ip-services	read, write		

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x **Examples** This is an example of setting the DNS address - 2001:db8:1203::1 and 2001:db8:1204::1 - using the **dns-server** command in the DHCP IPv6 server profile configuration mode:

```
RP/0/RSP0/CPU0:router(config)# dhcp ipv6
RP/0/RSP0/CPU0:router(config-dhcpv6)# profile my_profile server
RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile)# dns-server 2001:db8:1203::1 and
2001:db8:1204::1
```

This is an example of setting the DNS address - 2001:db8:1203::1 and 2001:db8:1204::1 - using the **dns-server** command in the DHCP IPv6 server profile class configuration mode:

```
RP/0/RSP0/CPU0:router(config)# dhcp ipv6
RP/0/RSP0/CPU0:router(config-dhcpv6)# profile my_profile server
RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile)# class proxy-red
RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile-class)# dns-server 2001:db8:1203::1 and
2001:db8:1204::1
```

domain-name (DHCP IPv6 pool-BNG)

To configure a domain name for a Dynamic Host Configuration Protocol (DHCP) for IPv6 client, use the **domain-name** command in an appropriate configuration mode. To remove the domain name, use the **no** form of this command.

domain-name domain

no domain-name

Syntax Description	domain	Specifies the domain name string to be used by the client.		
Command Default	When a DHCP for IP	v6 pool is first created, no domain name for clients is configured.		
Command Modes	DHCP IPv6 server pro	ofile configuration		
	DHCP IPv6 server pro	ofile class configuration		
Command History	Release	Modification		
	Release 4.3.0	This command was supported in DHCP IPv6 server profile and class configuration mode in BNG.		
Usage Guidelines		you must be in a user group associated with a task group that includes appropriate task assignment is preventing you from using a command, contact your AAA administrator		
	1	ne System (DNS) domain names can be configured by issuing the domain-name nes. The new domain name does not overwrite existing domain names.		
	To enter the DHCP IPv6 server profile configuration, enter profile <i>profile_name</i> server command in the DHCPv6 configuration mode.			
	To enter the DHCP IPv6 server profile class configuration, enter class <i>class_name</i> command in the DHCPv6 server profile configuration mode.			
		efined in DHCP IPv6 server profile and DHCP IPv6 server profile class configuration. are defined in the class scope, then the values defined in the class scope takes precedence.		
Task ID	Task ID	Operations		
	ip-services	read, write		

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

Examples

This is an example of setting the domain name using the **domain-name** command in the DHCP IPv6 server profile configuration mode:

```
RP/0/RSP0/CPU0:router(config)# dhcp ipv6
RP/0/RSP0/CPU0:router(config-dhcpv6)# profile my_profile server
RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile)# domain-name my.domain.com
```

This is an example of setting the domain name using the **domain-name** command in the DHCP IPv6 server profile class configuration mode:

```
RP/0/RSP0/CPU0:router(config)# dhcp ipv6
RP/0/RSP0/CPU0:router(config-dhcpv6)# profile my_profile server
RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile)# class proxy-red
RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile-class)# domain-name my.domain.com
```

framed-prefix-pool

To specify the default pool name for ipv6 prefixes for assignment only from SLAAC (Stateless Address Auto-Configuration), use the **framed-prefix-pool** command in the dynamic template configuration mode. To remove the framed prefix pool name, use the **no** form of this command.

framed-prefix-pool pool_name

no framed-prefix-pool *pool_name*

Syntax Description	pool_name	Specifies the name of a prefix pool.
Command Default	None	
Command Modes	Dynamic template configu	ration
Command History	Release	Modification
	Release 4.3.0	This command was introduced.
Usage Guidelines	IDs. If the user group assig for assistance.	must be in a user group associated with a task group that includes appropriate task gnment is preventing you from using a command, contact your AAA administrator plate configuration mode, enter dynamic-template command in the global
	The dynamic template cont	figuration is used when Radius does not return pool name or prefix for the SLAAC.
Task ID	Task ID	Operations
	config-services	read, write
Examples	This is an example of creat	ting a framed prefix pool name using the framed-prefix-pool command:
	RP/0/RSP0/CPU0:router(config)# dynamic-template config-dynamic-template)# type ipv6 config-dynamic-template-type)# framed-prefix-pool my-slaac-pool

helper-address (BNG)

To configure the Dynamic Host Configuration Protocol (DHCP) IPv4 and IPv6 relay agent to relay BOOTREQUEST packets to a specific DHCP server, use the **helper-address** command in an appropriate configuration mode. Use the **no** form of this command to clear the address.

helper-address [vrf vrf-name] [address] [giaddr gateway-address]

no helper-address [vrf vrf-name] [address] [giaddr gateway-address]

Syntax Description	vrf-name	(Optional) Specifies the name of a particular VRF.
	address	IPv4 and Pv6 address in four part, dotted decimal format.
	giaddr gateway-address	Specifies the gateway address to use in packets relayed to server.
Command Default	Helper address is not configure	ed.
Command Modes	DHCP IPv6 proxy profile class	s configuration
Command History	Release	Modification
	Release 3.7.2	This command was introduced.
	Release 4.2.0	This command was supported for BNG.
	Release 4.3.0	The support for IPv6 was added in BNG.
Usage Guidelines		t be in a user group associated with a task group that includes appropriate task ent is preventing you from using a command, contact your AAA administrator
	A maximum of upto eight help	er addresses can be configured.
Task ID	Task ID	Operations
	ip-services	read, write

Examples

This example shows how to set the helper-address for a VRF using the **helper-address** command in DHCP IPv6 proxy profile class configuration mode:

```
RP/0/RSP0/CPU0:router# config
RP/0/RSP0/CPU0:router(config)# dhcp ipv6
RP/0/RSP0/CPU0:router(config-dhcpv6)# profile myprofile proxy
RP/0/RSP0/CPU0:router(config-dhcpv4-proxy-profile)# class myclass
RP/0/RSP0/CPU0:router(config-dhcpv4-proxy-profile-class)# helper-address vrf my-server-vrf
1:1:1:1
```

Related Commands

Command	Description
dhcp ipv4 (BNG), on page 145	Enables Dynamic Host Configuration Protocol (DHCP) for IPv4 and enters DHCP IPv4 configuration mode.

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

interface (DHCP-BNG)

To enable Dynamic Host Configuration Protocol (DHCP) for IPv4 or IPv6 on an interface, use the **interface** command in the appropriate configuration mode. To disable DHCPv4 or DHCPv6 on an interface, use the **no** form of the command.

interface type interface-path-id {server| relay| proxy}

no interface *type interface-path-id* {**relay**| **proxy**| **server**}

Syntax Description	type	Interface type. For more information, use the question mark (?) online help function.
	interface-path-id	Physical interface or virtual interface.
		Note Use the show interfaces command to see a list of all interfaces currently configured on the router.
		For more information about the syntax for the router, use the question mark (?) online help function.
	relay Specifies a destination address.	
	proxy	Specifies the proxy and assigns option 82 to an interface.
Command Default	None	
Command Modes	DHCP IPv6 configura	tion
Command History	Release	Modification
	Release 4.3.0	The support for IPv6 was added in BNG.
	Release 4.3.0	The support for IPv6 was added in BNG.
Task ID	Task ID	Operations
	ip-services	read, write
Examples	This is an example of the interface comman	enabling the DHCP interface mode on a Packet over Sonet/SDH (POS) interface using id:

RP/0/RSP0/CPU0:router(config)# dhcp ipv6
RP/0/RSP0/CPU0:router(config-dhcpv6)# interface POS 0/5/0/0 relay

Related Commands

Command	Description
dhcp ipv6 (BNG), on page 146	Enables Dynamic Host Configuration Protocol (DHCP) for IPv6 and enters DHCP IPv6 configuration mode.
dhcp ipv4 (BNG), on page 145	Enables Dynamic Host Configuration Protocol (DHCP) for IPv4 and enters DHCP IPv4 configuration mode.
show dhcp ipv6 interface	Displays DHCP for IPv6 interface information.

interface subscriber-pppoe profile

To enable the PPPoE subscribers to use a profile for all the PPPoE subscribers, use the **interface subscriber-pppoe profile** command in the DHCP IPv6 configuration mode. To disable this feature, use the **no** form of this command.

interface subscriber-pppoe profile profile name

no interface subscriber-pppoe profile *profile_name*

Syntax Description	profile_name	Specifies the name of the profile.
Command Default	VRF is disabled.	
Command Modes	DHCP IPv6 configuration	
Command History	Release	Modification
	Release 4.3.0	This command was introduced.
Usage Guidelines		ast be in a user group associated with a task group that includes appropriate task ment is preventing you from using a command, contact your AAA administrator
Task ID	Task ID	Operations
	ip-services	read, write
Examples	subscribers using the interfac	ng PPPoE subscribers to use the "my-def-pppoe-green" profile for all the PPPoE ce subscriber-pppoe profile command:
	RP/0/RSP0/CPU0:router(cor RP/0/RSP0/CPU0:router(con	nfig)# dhcp ipv6 nfig-dhcpv6)# interface subscriber-pppoe profile my-def-pppoe-green

lease

To set a client lease time on a per profile basis, use the **lease** command in DHCPv6 server profile configuration mode. To disable the client lease time, use the **no** form of this command.

lease {{days| hours| minutes}|infinite }

no lease {{*days*|*hours*|*minutes*}|**infinite**}

Syntax Description	days	Specifies the number of days for the lease time. The value ranges from 1 to 365.
	hours	Specifies the number of hours for the lease time. The value ranges from 0 to 23.
	minutes	Specifies the number of minutes for the lease time. The value ranges from 0 to 59.
	infinite	Specifies an infinite amount of lease.
Command Default	Lawful intercept is	not enabled.
Command Modes	DHCPv6 server pro	file configuration
Command History	Release	Modification
	Release 4.3.0	This command was introduced.
Usage Guidelines		d, you must be in a user group associated with a task group that includes appropriate task p assignment is preventing you from using a command, contact your AAA administrator
		plied to the class only and not to the whole profile. When both profile and class lease the class lease time is applied. The default lease time is 1 day, when no lease time.
	The lease time is sp	ecified in seconds or date format.
Task ID	Task ID	Operation
	ip-services	read, write

Examples This example shows how to configure lease time for 1 day, 6 hours, and 0 minutes:

RP/0/RSP0/CPU0:router(config) # dhcp ipv6 RP/0/RSP0/CPU0:router(config-dhcpv6) # profile my_profile server RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile) # lease 1 6 0 This example shows how to configure infinite amount of lease time:

RP/0/RSP0/CPU0:router(config)# dhcp ipv6 RP/0/RSP0/CPU0:router(config-dhcpv6)# profile my_profile server RP/0/RSP0/CPU0:router(config-dhcpv6-server-profile)# lease infinite

match option

To match the proxy with the configured pattern, use the **match option** command in the DHCP IPv4 proxy profile class configuration mode. To disable the match option, use the **no** form of the command.

match option {124| 125| | 60| 77} hex hex_string mask bit_mask_string
no match option {124| 125| | 60| 77} hex hex_string mask bit_mask_string

Syntax Description	124	Inserts option 124 vendor-identifying vendor class.
	125	Inserts option 125 vendor-identifying vendor-specific info.
	60	Inserts option 60 vendor class ID.
	77	Inserts option 124 user class.
	hex	Inserts a hex pattern.
	hex_string	Specifies the hex pattern string.
	mask	Inserts bit mask pattern.
	bit_mask_string	Specifies the bit mask pattern string. The string pattern is between 0 and 4294967295.
Command Default Command Modes	None DHCP IPv4 proxy profi	le class configuration
Command History	Release	Modification
	Release 4.2.0	This command was introduced.
Usage Guidelines		ou must be in a user group associated with a task group that includes appropriate task signment is preventing you from using a command, contact your AAA administrator
Task ID	Task ID	Operation
	ip-services	read, write

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

Examples This is an example of configuring the match option command in the DHCP IPv4 proxy profile class configuration mode: RP/0/RSP0/CPU0:router(config)# dhcp ipv4 RP/0/RSP0/CPU0:router(config-dhcpv4)# profile dhcp_profile proxy RP/0/RSP0/CPU0:router(config-dhcpv4)# profile dhcp_profile proxy RP/0/RSP0/CPU0:router(config-dhcpv4-proxy-profile)# class blue RP/0/RSP0/CPU0:router(config-dhcpv4-proxy-profile)# class blue RP/0/RSP0/CPU0:router(config-dhcpv4-proxy-profile-class)# match option 124 hex hex_name mask 3445 3445

Related Commands	Command	Description
	class, on page 143	Creates a proxy profile class and enters the proxy profile class sub configuration mode.

match vrf

To match class based on VRF name, use the **match vrf** command in the DHCP IPv4 proxy profile class configuration mode. To disable the match vrf, use the **no** form of the command.

match vrf vrf_name

no match vrf vrf_name

Syntax Description	vrf_name	Specifies the VRF name.
Command Default	None	
Command Modes	DHCP IPv4 proxy profile clas	s configuration
Command History	Release	Modification
	Release 4.2.0	This command was introduced.
Usage Guidelines		st be in a user group associated with a task group that includes appropriate task ent is preventing you from using a command, contact your AAA administrator
Task ID	Task ID	Operation
	ip-services	read, write
Examples	This is an example of configu	ring the match vrf command
	RP/0/RSP0/CPU0:router(con	fig)# dhcp ipv4 fig-dhcpv4)# profile dhcp_profile proxy fig-dhcpv4-proxy-profile)# class blue fig-dhcpv4-proxy-profile-class)# match vrf vrf1
Related Commands	Command	Description
	match option, on page 164	Matches the proxy with the configured pattern.

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

outer-cos

		outer-cos value for DHCPv4 control packets sent on BNG subscriber interfaces, use the in DHCP IPv4 configuration mode. To set the outer-cos value back to the default value, his command.
	outer-cos value	
	no outer-cos value	
Syntax Description		
Syntax Description	value	Value of outer-cos for DHCPv4 control packets.
		The range is from 0 to 7.
Command Default	None	
Command Modes	DHCP IPv4 configu	ration
Command History	Release	Modification
	Release 4.3.2	This command was introduced.
Usage Guidelines		d, you must be in a user group associated with a task group that includes appropriate task p assignment is preventing you from using a command, contact your AAA administrator
Task ID	Task ID	Operation
	ip-services	read, write
Examples	subscriber interfaces RP/0/RSP0/CPU0:rc RP/0/RSP0/CPU0:rc	

Related Commands

Command	Description
inner-cos, on page 157	Resets the default inner-cos value for DHCPv4 control packets sent on BNG subscriber interfaces.

prefix-pool

To specify the name of prefix pool by integrating the DHCPv6 sever with distributed address pool service (DAPS), use the **prefix-pool** command in the DHCP IPv6 server profile class configuration mode. To remove the prefix pool name, use the **no** form of this command.

prefix-pool pool_name

no prefix-pool *pool_name*

Syntax Description	pool_name	Specifies the name of a prefix pool.	
Command Default	When a DHCP for IPv6 pool is first created, no DNS IPv6 servers are configured.		
Command Modes	DHCP IPv6 server profile	class configuration	
Command History	Release	Modification	
	Release 4.3.0	This command was introduced.	
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. To enter the DHCP IPv6 server profile configuration, enter profile <i>profile name</i> server command in the		
	 DHCPv6 configuration mode. To enter the DHCP IPv6 server profile class configuration, enter class <i>class_name</i> command in the DHCPv6 server profile configuration mode. 		
Task ID	Task ID	Operations	
	ip-services	read, write	
Examples	This is an example of crea	ating a prefix-pool name using the prefix-pool command:	
	RP/0/RSP0/CPU0:router	<pre>(config)# dhcp ipv6 (config-dhcpv6)# profile my_profile server (config-dhcpv6-server-profile)# class class_dhcp (config-dhcpv6-server-profile-class)# prefix-pool pool1</pre>	

profile (BNG)

To specify a DHCP profile for the Dynamic Host Configuration Protocol (DHCP) IPv4 and IPv6 component and to enter the profile mode, use the **profile** command in DHCP IPv4 or DHCP IPv6 configuration submode. To disable a profile and exit the profile mode, use the **no** form of this command.

profile profile_name {proxy | server }

no profile profile_name proxy

Cuntau Description		
Syntax Description	profile_name	Specifies the name of the profile that uniquely identifies the proxy or server.
	proxy	Creates a DHCP proxy profile.
	server	Creates a DHCP server profile.
Command Default	None	
Command Modes	DHCP IPv4 configuration	1
	DHCP IPv6 configuration	1
Command History	Release	Modification
	Release 4.2.0	This command was introduced.
	Release 4.3.0	Support was added for IPv6.
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.	
Task ID	Task ID	Operations
	ip-services	read, write

Examples

This example shows how to enable the dhcpv4 configuration mode and how to create a profile called dhcp_profile in the dhcpv4 configuration submode:

RP/0/RSP0/CPU0:router(config) # dhcp ipv4 RP/0/RSP0/CPU0:router(config-dhcpv4) # profile dhcp_profile proxy RP/0/RSP0/CPU0:router(config-dhcpv4-proxy-profile) # This example shows how to enable the dhcpv6 configuration mode and how to create a profile called dhcp_v6 in the dhcpv6 configuration submode:

RP/0/RSP0/CPU0:router(config)# dhcp ipv6 RP/0/RSP0/CPU0:router(config-dhcpv6)# profile dhcp_v6 proxy RP/0/RSP0/CPU0:router(config-dhcpv6-proxy-profile)#

relay information authenticate (BNG)

To specify relay agent information option to the policy plane for authentication purposes, use the **relay information authenticate** command in the DHCP IPv4 proxy profile configuration mode. To disable the relay option, use the **no** form of this command.

relay information authenticate {received| inserted}

no relay information authenticate {received| inserted}

Syntax Description	received	Authenticate using received relay agent information option.		
	inserted	Authenticate using inserted relay agent information option.		
Command Default	None			
Command Modes	DHCP IPv4 proxy profile configuration			
Command History	Release	Modification		
	Release 4.3.1	This command was introduced.		
Usage Guidelines Task ID		you must be in a user group associated with a task group that includes appropriate task assignment is preventing you from using a command, contact your AAA administrator Operations		
	ip-services	read, write		
Examples	This example shows h relay information au RP/0/RSP0/CPU0:rout RP/0/RSP0/CPU0:rout RP/0/RSP0/CPU0:rout	ow to specify the received relay agent information option for authentication using the thenticate command in DHCP IPv4 proxy profile configuration mode:		

Related Commands

Command	Description
dhcp ipv4 (BNG), on page 145	Enables Dynamic Host Configuration Protocol (DHCP) for IPv4 and enters DHCP IPv4 configuration mode.
relay information check (BNG), on page 174	Configures a DHCP server to validate the relay agent information option in forwarded BOOTREPLY messages.
relay information option (BNG), on page 176	Enables the system to insert a DHCP relay agent information option in forwarded BOOTREQUEST messages to a DHCP server.
relay information option allow-untrusted (BNG), on page 178	Configures the DHCP component to not drop BOOTREQUEST messages that have the relay information option set and the giaddr set to zero.
#unique_116	Configures how a relay agent processes BOOTREQUEST messages that already contain a relay information option.

relay information check (BNG)

To configure a Dynamic Host Configuration Protocol (DHCP) IPv4 Relay to validate the relay agent information option in forwarded BOOTREPLY messages, use the **relay information check** command in DHCP IPv4 relay profile configuration submode. To disable this feature, use the **no** form of this command.

relay information check

no relay information check

- **Syntax Description** This command has no keywords or arguments.
- **Command Default** DHCP validates the relay agent information option.
- **Command Modes** DHCP IPv4 relay profile configuration

Command History	Release	Modification
	Release 3.7.2	This command was introduced.
	Release 4.2.0	This command was supported for BNG.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes the proper task IDs. If you suspect user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task	ID
------	----

Task ID	Operations
ip-services	read, write
basic-services	read, write

Examples

This example shows how to use the **relay information check** command:

```
RP/0/RSP0/CPU0:router#config
RP/0/RSP0/CPU0:router(config)# dhcp ipv4
RP/0/RSP0/CPU0:router(config-dhcpv4)# profile client relay
RP/0/RSP0/CPU0:router(config-dhcpv4-relay-profile)# relay information check
```

Related	Commands
---------	----------

Command	Description
dhcp ipv4 (BNG), on page 145	Enables DHCP for IPv4 and enters DHCP IPv4 configuration mode.
helper-address (BNG), on page 155	Configures the DHCP relay agent to relay packets to a specific DHCP Server.
profile (BNG)	Configures a relay profile for the DHCP IPv4 component.
relay information option (BNG), on page 176	Enables the system to insert a DHCP relay agent information option in forwarded BOOTREQUEST messages to a DHCP server.
relay information option allow-untrusted (BNG), on page 178	Configures the DHCP component to not drop BOOTREQUEST messages that have the relay information option set and the giaddr set to zero.

relay information option (BNG)

To configure Dynamic Host Configuration Protocol (DHCP) IPv4 relay or DHCP snooping Relay to insert relay agent information option in forwarded BOOTREQUEST messages to a DHCP server, use the **relay information option** command in DHCP IPv4 relay profile relay configuration or DHCP IPv4 profile snoop submode. To disable inserting relay information into forwarded BOOTREQUEST messages, use the **no** form of this command.

	relay information option no relay information option	
Syntax Description	This command has no keywords or arguments.	
Command Default	None	
Command Modes	DHCP IPv4 relay profile relay configuration DHCP IPv4 profile snoop configuration	
Command History	Release	Modification
	Release 3.7.2	This command was introduced.
	Release 4.2.0	This command was supported for BNG.

Usage Guidelines The relay information option command automatically adds the circuit identifier suboption and the remote ID suboption to the DHCP relay agent information option.

The **relay information option** command enables a DHCP server to identify the user (for example, cable access router) sending the request and initiate appropriate action based on this information. By default, DHCP does not insert relay information.

If the **information option** command is enabled, DHCP snooping mode does not set the giaddr field in the DHCP packet.

The upstream DHCP server or DHCP relay interface must be configured to accept this type of packet using the **relay information option allow-untrusted** configuration. This configuration prevents the server or relay from dropping the DHCP message.

Task ID	Task ID	Operations
	ip-services	read, write
	basic-services	read, write

Examples

es This example shows how to use the **relay information option** command:

```
RP/0/RSP0/CPU0:router# config
RP/0/RSP0/CPU0:router(config)# dhcp ipv4
RP/0/RSP0/CPU0:router(config-dhcpv4)# profile client relay
RP/0/RSP0/CPU0:router(config-dhcpv4-relay-profile)# relay information option
```

Related Commands

Command	Description
dhcp ipv4 (BNG), on page 145	Enables DHCP for IPv4 and enters DHCP IPv4 configuration mode.
helper-address (BNG), on page 155	Configures the DHCP relay agent to relay packets to a specific DHCP Server.
relay information check (BNG), on page 174	Configures a DHCP server to validate the relay agent information option in forwarded BOOTREPLY messages.
relay information option allow-untrusted (BNG), on page 178	Configures the DHCP component to not drop BOOTREQUEST messages that have the relay information option set and the giaddr set to zero.

relay information option allow-untrusted (BNG)

To configure the Dynamic Host Configuration Protocol (DHCP) IPv4 relay or DHCP snooping Relay not to drop discard BOOTREQUEST packets that have the relay information option set and the giaddr set to zero, use the relay information option allow-untrusted command in DHCP IPv4 relay profile configuration submode or DHCP IPv4 profile snoop configuration submode. To restore the default behavior, which is to discard the BOOTREQUEST packets that have the relay information option and set the giaddr set to zero, use the **no** form of this command.

	relay information option a no relay information optio	
Syntax Description	This command has no keyw	ords or arguments.
Command Default	The packet is dropped if the	e relay information is set and the giaddr is set to zero.
Command Modes	DHCP IPv4 relay profile n DHCP IPv4 profile snoop c	
Command History	Release	Modification
	Release 3.7.2 Release 4.2.0	This command was introduced. This command was supported for BNG.
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriat IDs. If the user group assignment is preventing you from using a command, contact your AAA administ for assistance.	
	According to RFC 3046, relay agents (and servers) receiving a DHCP packet from an untrusted circuit with giaddr set to zero but with a relay agent information option already present in the packet shall discard the packet and increment an error count. This configuration prevents the server or relay from dropping the DHCP message.	
Task ID	Task ID	Onerations

Task ID

Task ID	Operations
ip-services	read, write
basic-services	read, write

Examples

This example shows how to use the relay information option allow-untrusted command:

```
RP/0/RSP0/CPU0:router# config
RP/0/RSP0/CPU0:router(config)# dhcp ipv4
RP/0/RSP0/CPU0:router(config-dhcpv4)# profile client relay
RP/0/RSP0/CPU0:router(config-dhcpv4-relay-profile)# relay information option allow-untrusted
```

Related Commands

Command	Description
dhcp ipv4 (BNG), on page 145	Enables DHCP for IPv4 and enters DHCP IPv4 configuration mode.
helper-address (BNG), on page 155	Configures the DHCP relay agent to relay packets to a specific DHCP Server.
relay information check (BNG), on page 174	Configures a DHCP server to validate the relay agent information option in forwarded BOOTREPLY messages.
relay information option (BNG), on page 176	Enables the system to insert a DHCP relay agent information option in forwarded BOOTREQUEST messages to a DHCP server.

relay information policy (BNG)

To configure how the Dynamic Host Configuration Protocol (DHCP) IPv4 relay processes BOOTREQUEST packets that already contain a relay information option, use the **relay information policy** command in DHCP IPv4 relay profile configuration submode. To restore the default relay information policy, use the **no** form of this command.

relay information policy {drop| keep| encapsulate}

no relay information policy {drop| keep| encapsulate}

yntax Description	drop	Directs the DHCP IPv4 Relay to discard BOOTREQUEST packets with the existing relay information option.
	keep	Directs the DHCP IPv4 Relay not to discard a BOOTREQUEST packet that is received with an existing relay information option and to keep the existing relay information option value.
	encapsulate	Encapsulates the DHCP relay agent information option received from a prior relay agent in forwarded BOOTREQUEST messages.

Command Default The DHCP IPv4 Relay does not discard a BOOTREQUEST packet that has an existing relay information option. The option and the existing relay information option value is replaced.

Command Modes DHCP IPv4 relay profile configuration

Command History	Release	Modification
	Release 3.7.2	This command was introduced.
	Release 4.2.0	This command was supported for BNG.
	Release 4.3.1	The encapsulate keyword was added.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes the proper task IDs. If you suspect user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **encapsulate** keyword allows the second relay agent to encapsulate option 82 information in a message received from the first relay agent, if it is also configured to add its own option 82 information. This configuration allows the DHCP server to use option 82 information from both relay agents.

 Task ID
 Operations

 ip-services
 read, write

 basic-services
 read, write

Examples

This is sample output from executing the relay information policy command:

```
RP/0/RSP0/CPU0:router# config
RP/0/RSP0/CPU0:router(config)# dhcp ipv4
RP/0/RSP0/CPU0:router(config-dhcpv4)# profile client relay
RP/0/RSP0/CPU0:router(config-dhcpv4-relay-profile)# relay information policy keep
```

This example shows how to encapsulate the DHCP relay agent information option:

```
RP/0/RSP0/CPU0:router# config
RP/0/RSP0/CPU0:router(config)# dhcp ipv4
RP/0/RSP0/CPU0:router(config-dhcpv4)# profile client relay
RP/0/RSP0/CPU0:router(config-dhcpv4-relay-profile)# relay information policy encapsulate
```

Related Commands

Command	Description
dhcp ipv4 (BNG), on page 145	Enables the Dynamic Host Configuration Protocol (DHCP) for IPv4.

lease proxy client-lease-time

To specify the lease limit each circuit id each interface, use the **lease proxy client-lease-time** command in the DHCP IPv4 sub configuration mode. To disable the lease proxy client-lease-time, use the **no** form of this command.

 Iease proxy client-lease-time value

 no lease proxy client-lease-time value

 Syntax Description

 value

 Specifies the time in seconds for the lease proxy client. The minimum value of lease

 Command Default
 If you set the default (no), then the lease proxy gets disabled.

 Command Modes
 DHCP IPv4 configuration

 Command History
 Release 4.2.1

 Modification

 This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

When the binding is created, the client-lease-time is cached on a per-binding basis, thus, the changes to the profile client-lease-time does not cause any impact to any existing bindings. However, changes are effective only for subsequently created bindings.

Task ID	Task ID	Operation
	ip-services	read, write

Examples

This is an example of configuring the **lease proxy client-lease-time** command in the DHCP IPv4 sub configuration mode:

RP/0/RSP0/CPU0:router(config)# dhcp ipv4 RP/0/RSP0/CPU0:router(config-dhcpv4)# profile myproxyprofile proxy RP/0/RSP0/CPU0:router(config-dhcpv4)# lease proxy client-lease-time 600

ated Commands

Command	Description
dhcp ipv4 (BNG), on page 145	Enables the Dynamic Host Configuration Protocol (DHCP) for IPv4.

show dhcp ipv4 proxy binding

To show information concerning DHCP client bindings for proxy, use the **show dhcp ipv4 proxy binding** command in the EXEC mode.

show dhcp ipv4 proxy binding [circuit-id *circuit_id_name*| detail| interface| *ipspecifier*| location| *locationspecifier*| mac-address| remote-id| summary]{location| vrf| *vrf_name*}

Syntax Description	circuit-id	Displays the DHCP IPv4 proxy client binding based on circuit ID.				
	circuit_id_name	Displays the name of the circuit ID.				
	detail	Displays detailed binding information for DHCP proxy.				
	interface	Specifies the interface based on which the DHCP bindings are filtered.				
	ipspecifier	Displays the name of the interface.				
	location	Specifies the node location of the DHCP proxy.				
	locationspecifier	Displays the name of the location.				
	mac-address	Displays detailed client binding information based on mac-address.				
	remote-id	Displays the DHCP IPv4 proxy client binding based on remote ID.				
	summary	Displays the summary binding information for proxy.				
	vrf	Displays the VRF information.				
	vrf_name	Displays the name of the VRF.				
		Displays the output modifiers.				
Command Default	Displays brief information	about all DHCP proxy client bindings.				
Command Modes	EXEC					
Command History	Release	Modification				

This command was introduced.

show dhcp ipv6 server interface

To display the server interface information for Dynamic Host Configuration Protocol (DHCP), use the **show dhcp ipv6 server interface** command in EXEC mode.

show dhcp ipv6 server interface{type| interface-path-id} {location| location}

Interface-path-id Either a physical interface instance or a virtual interface instance as follows: Physical interface instance. Naming notation is rack/slot/module/port and a slash between values is required as part of the notation. * rack: Chassis number of the rack. * slot: Physical slot number of the modular services card or line card. * module: Module number. A physical layer interface module (PLIM) is always 0. * port: Physical port number of the interface. Note In references to a Management Ethernet interface located on a route processor card, the physical slot number is alphanumeric (RP0 or RP1) and the module is CPU0. Example: interface MgmEth0/RP1/CPU0/0. • Virtual interface instance. Number range varies depending on interface type. For more information about the syntax for the router, use the question mark (?) online help function. location Displays the node location by Interface. location Displays the fully qualified location specification of an interface. Command Default None EXEC Release Modification Release 4.3.0	Syntax Description	type	Interface type. For more information, use the question mark (?) online help function.

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	ip-services	read

Examples

This is a sample output from the **show dhcp ipv6 server interface** command:

RP/0/RSP0/CPU0:router# show dhcp ipv6 server interface bundle-Ether 2.3

Tue Sep 4 05:02:03.861 UTC

Interface:	Bundle-Ether2.3
VRF:	abc
Mode:	Server
Profile Name:	test
Lease Limit:	None

show dhcp ipv6 server profile

To display the server profile information for Dynamic Host Configuration Protocol (DHCP) server, use the **show dhcp ipv6 server profile** command in EXEC mode.

show dhcp ipv6 server profile name profile_name {location| location}

Syntax Description	name	Displays the detailed proxy profile information for the profile.					
	profile_name	Specifies the name of the profile.					
	location	Displays the node location by Interface.					
	location	Displays the fully qualified location specification of an interface.					
Command Default	None						
Command Modes	EXEC						
Command History	Release	Modification					
	Release 4.3.0	This command was introduced.					
Usage Guidelines		you must be in a user group associated with a task group that includes appropriate task ssignment is preventing you from using a command, contact your AAA administrator					
Task ID	Task ID	Operation					
	ip-services	read					
Examples	This is a sample output	from the show dhcp ipv6 server profile command:					
	RP/0/RSP0/CPU0:router# show dhcp ipv6 server profile name test						
	Tue Sep 4 05:00:57.938 UTC						
	Profile: test DNS Addresses:None						

Client Lease Time: 0 secs (00:00:00) Framed Address Pool: p1 Delegated Prefix Pool: p2 Interface References: Bundle-Ether2.3

show dhcp ipv6 server statistics

To display the statistics for Dynamic Host Configuration Protocol (DHCP) server, use the **show dhcp ipv6** server statistics command in EXEC mode.

show dhcp ipv6 server statistics {debug| location| vrf}

Syntax Description	debug	Displays th	e debug statis	stics for the	proxy.			
	location	Displays th	e node locati	on for the pr	oxy.			
	vrf	Displays th	e proxy statis	stics by VRF	•

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release

Dynamic Template Commands

This module describes the Cisco IOS XR software commands used to configure the Dynamic Template commands for Broadband Network Gateway (BNG) on the Cisco ASR 9000 Series Router. For details regarding the related configurations, refer to the *Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide.*

- dynamic-template, page 220
- dynamic-template type ipsubscriber, page 222
- dynamic-template type ppp, page 224
- dynamic-template type service, page 226
- service-policy (BNG), page 228
- vrf (dynamic-template-BNG), page 230

dynamic-template

To group a set of configuration items that can be applied to a group of subscribers and to enter the dynamic-template configuration mode, use the **dynamic-template** command in the global configuration mode. To disable this feature and exit the dynamic-template configuration mode, use the **no** form of this command.

dynamic-template type {ipsubscriber name| ppp name| service name}

no dynamic-template

Syntax Description	type	Specifies the type of templates, for example, ppp or ipsubscriber or service.
	name	Specifies the name of the dynamic template type.
	ipsubscriber	Specifies the ipsubscriber dynamic template type.
	ррр	Specifies the ppp dynamic template type.
	service	Specifies the service dynamic template type.
Command Default	None	
Command Modes	Global configuration mode	
Command History	Release	Modification
	Release 4.2.0	This command was introduced.
Usage Guidelines	Use the dynamic-templat	e command to enter dynamic template configuration mode.
Task ID	Task ID	Operation
	config-services	read, write
Examples	This is an example of conf	iguring the dynamic-template command in the global configuration mode:
		<pre>configure config)# dynamic-template config-dynamic-template)#</pre>

Related Commands

Command	Description
dynamic-template type ppp, on page 224	Enables the ppp dynamic template type.
dynamic-template type ipsubscriber, on page 222	Enables the ipsubscriber dynamic template type.
dynamic-template type service, on page 226	Enables the service dynamic template type.

dynamic-template type ipsubscriber

To group a set of configuration items that can be applied to a group of subscribers based on the ipsubscriber template type and to enter the dynamic-template configuration mode, use the **dynamic-template type ipsubscriber** command. To disable this feature and exit the dynamic-template configuration mode, use the **no** form of this command.

dynamic-template type ipsubscriber *template-name* no dynamic-template type ipsubscriber *template-name*

Syntax Description	template-name	Specifies the dynamic template name.
Command Default	None	
Command Modes	Dynamic template configuration mode	
Command History	Release	Modification
	Release 4.2.0	This command was introduced.
Usage Guidelines Task ID	Use the dynamic-template command Task ID config-services	to enter dynamic template configuration mode. Operation read, write
Examples	RP/0/RSP0/CPU0:router# configure RP/0/RSP0/CPU0:router(config)# d	
Related Commands	Command	Description
	dynamic-template, on page 220	Enables the dynamic template configuration mode.
	dynamic-template type ppp, on page	Enables the ppp dynamic template type.

Command	Description
dynamic-template type service, on page 226	Enables the service dynamic template type.

dynamic-template type ppp

To group a set of configuration items that can be applied to a group of subscribers based on the ppp template type and to enter the dynamic-template configuration mode, use the **dynamic-template type ppp** command. To disable this feature and exit the dynamic-template configuration mode, use the **no** form of this command.

dynamic-template type ppp template-name

no dynamic-template type ppp template-name

Syntax Description	template-name	Specifies the dynamic template name.
Command Default	None	
Command Modes	Dynamic template configuration mode	
Command History	Release	Modification
	Release 4.2.0	This command was introduced.
Usage Guidelines	Use the dynamic-template command to en	nter dynamic template configuration mode.
Task ID	Task ID	Operation
	config-services	read, write
Examples	This is an example of configuring the dyna	amic-template type ppp command:
	RP/0/RSP0/CPU0:router# configure RP/0/RSP0/CPU0:router(config)# dynam RP/0/RSP0/CPU0:router(config-dynamic	-
Related Commands	Command	Description
	dynamic-template, on page 220	Enables the dynamic template configuration mode.
	dynamic-template type ipsubscriber, on p	Enables the ipsubscriber dynamic template type.

Command	Description
dynamic-template type service, on page 226	Enables the service dynamic template type.

dynamic-template type service

To group a set of configuration items that can be applied to a group of subscribers based on the service template type and to enter the dynamic-template configuration mode, use the **dynamic-template type service** command. To disable this feature and exit the dynamic-template configuration mode, use the **no** form of this command.

dynamic-template type service template-name

no dynamic-template type service template-name

Syntax Description	template-name	Specifies the dynamic temp	plate name.
Command Default	None		
Command Modes	Dynamic template configurati	ion mode	
Command History	Release	Modification	
	Release 4.2.0	This command was introd	uced.
Usage Guidelines Task ID	Use the dynamic-template config-services	ommand to enter dynamic template config Operation read, write	guration mode.
Examples	RP/0/RSP0/CPU0:router# co RP/0/RSP0/CPU0:router(con		
Related Commands	Command		Description
	dynamic-template, on page 2	220	Enables the dynamic template configuration mode.

Command	Description
dynamic-template type ppp, on page 224	Enables the ppp dynamic template type.
dynamic-template type ipsubscriber, on page 222	Enables the ipsubscriber dynamic template type.

service-policy (BNG)

To associate a service-policy to the dynamic template, use the **service-policy** command in the dynamic template configuration mode. To disable this feature, use the **no** form of this command.

service-policy {input| output| type} service-policy_name [acct-stats] [merge seq_num]

no service-policy

	input	Configures an ingress service-policy.
	-	
	output	Configures an egress service-policy.
	type	Creates the service policy for policy-based routing (PBR).
	service-policy_name	Name of the service policy.
	acct-stats	(Optional) Enables service accounting.
	merge	(Optional) Enables the policy to be merged.
	seq_num	Sequence number of the policy. Range is from 0 to 255.
	Dynamic template configur	ration mode
Command Modes Command History	Dynamic template configur	ration mode Modification
	Release	Modification
	Release A.2.0	Modification This command was introduced.

Use the **dynamic-template type ppp** command to enter the ppp dynamic template type configuration mode.

Task ID	Task ID Operation			
	qos	read, write		
Examples	This is an example of config	ing the service noticy command in the dynamic temp	late configuration mode:	
Examples	This is an example of configuring the service-policy command in the dynamic template configuration mode:			
	RP/0/RSP0/CPU0:router(co. periodic-interval 60 du RP/0/RSP0/CPU0:router(co RP/0/RSP0/CPU0:router(co	fig)# dynamic-template type ppp p1 ig-dynamic-template-type)# accounting aaa list L-stack-delay 1 fig-dynamic-template-type)# service-policy in fig-dynamic-template-type)# service-policy ou	put i1 tput o1	
	<pre>RP/0/RSP0/CPU0:router(config-dynamic-template-type)# service-policy type pbr pbr_policy</pre>			
	This example shows how to enable service accounting feature in the dynamic template configuration mode using service-policy command:			
	<pre>RP/0/RSP0/CPU0:router# configure RP/0/RSP0/CPU0:router(config)# dynamic-template type service s1 RP/0/RSP0/CPU0:router(config-dynamic-template-type)# accounting aaa list 11 type service periodic-interval 500 RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ipv4 access-group ACL1 RP/0/RSP0/CPU0:router(config-dynamic-template-type)# service-policy input QoS1 acct-stats RP/0/RSP0/CPU0:router(config-dynamic-template-type)# service-policy output QoS2 acct-stats</pre>			
	This example shows how to merge policy maps using service-policy command in the dynamic template configuration mode:			
	RP/0/RSP0/CPU0:router# configure RP/0/RSP0/CPU0:router(config)# dynamic-template type service MyService RP/0/RSP0/CPU0:router(config-dynamic-template-type)# service-policy input i1 merge 20 RP/0/RSP0/CPU0:router(config-dynamic-template-type)# service-policy output o1 merge 30			
Related Commands	Command	Description		
	dynamic-template, on page	20 Enables the dynamic templat	e configuration mode.	

dynamic-template type ppp, on page 224

accounting aaa list type service, on page 5

dynamic-template type ipsubscriber, on page 222

Enables the ppp dynamic template type.

Configures service accounting feature.

Enables the ipsubscriber dynamic template type.

vrf (dynamic-template-BNG)

To set the vrf in which the interface operates, use the **vrf** command in the dynamic template type configuration mode. To disable the VRF, use the **no** form of this command.

	vrf vrf-name	
	no vrf	
ntax Description	vrf_name	Specifies the name of the vrf.
mmand Default	None	
mmand Modes	Dynamic template type configuration mo	de
ommand History	Release	Modification
	Release 4.2.0	This command was introduced.
isk ID	Task ID	
	lask ID	Operation
	config-services	Operation read, write
amples	config-services	read, write command in the dynamic template type configuration mode: mic-template ic-template) # type service s1
	config-services This is an example of configuring the vrf RP/0/RSP0/CPU0:router# configure RP/0/RSP0/CPU0:router(config)# dyn. RP/0/RSP0/CPU0:router(config-dynam	read, write command in the dynamic template type configuration mode: mic-template ic-template) # type service s1
camples	config-services This is an example of configuring the vrf RP/0/RSP0/CPU0:router# configure RP/0/RSP0/CPU0:router(config)# dyn. RP/0/RSP0/CPU0:router(config-dynam RP/0/RSP0/CPU0:router(config-dynam	read, write command in the dynamic template type configuration mode: mic-template ic-template) # type service s1 ic-template-type) # vrf vrf1

Command	Description
dynamic-template type ipsubscriber, on page 222	Enables the ipsubscriber dynamic template type.

Excessive Punt Flow Trap Commands

This module describes the Cisco IOS XR software commands used to configure the Excessive Punt Flow Trap commands for Broadband Network Gateway (BNG) on the Cisco ASR 9000 Series Router. For details regarding the related configurations, refer to the *Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide*.

- lpts punt excessive-flow-trap, page 234
- lpts punt excessive-flow-trap non-subscriber-interfaces, page 236
- lpts punt excessive-flow-trap penalty-rate, page 237
- lpts punt excessive-flow-trap penalty-timeout, page 239
- lpts punt excessive-flow-trap subscriber-interfaces, page 241
- show lpts punt excessive-flow-trap, page 242
- show lpts punt excessive-flow-trap information, page 245
- show lpts punt excessive-flow-trap interface, page 248
- show lpts punt excessive-flow-trap protocol, page 251

lpts punt excessive-flow-trap

To activate the Excessive Punt Flow Trap feature and to enter the control plane policer configuration mode, use the **lpts punt excessive-flow-trap** command in global configuration mode. To exit the control plane policer configuration mode and disable the Excessive Punt Flow Trap feature, use the **no** form of this command.

lpts punt excessive-flow-trap {subscriber-interfaces| non-subscriber-interfaces| penalty-rate| penalty-timeout}

no lpts punt excessive-flow-trap {subscriber-interfaces| non-subscriber-interfaces| penalty-rate| penalty-timeout}

Syntax Description	subscriber-interfaces	Enables the Excessive Punt Flow Trap for subscriber interfaces.
	non-subscriber-interfaces	Enables the Excessive Punt Flow Trap for non-subscriber interfaces.
	penalty-rate	Sets the penalty policing rate for a protocol.
	penalty-timeout	Sets the penalty timeout for a protocol.
Command Default	None	
Command Modes	Global configuration mode	
Command History	Release	Modification
	Release 4.3.0	This command was introduced.
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.	
Task ID	Task ID	Operations
	config-services	read, write

Examples This example shows how to enable the Excessive Punt Flow Trap feature in the global configuration mode:

RP/0/RSP0/CPU0:router(config)# lpts punt excessive-flow-trap RP/0/RSP0/CPU0:router(config-control-plane-policer)#

Related Commands	Command	Description
	show lpts punt excessive-flow-trap, on page 24	2 Displays the running configuration for the Excessive Punt Flow Trap feature.

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release

Ipts punt excessive-flow-trap non-subscriber-interfaces

	To enable the Excessive Punt Flow Trap feature on non-subscriber interfaces, use the lpts punt excessive-flow-trap non-subscriber-interfaces command in global configuration mode. To disable the Excessive Punt Flow Trap feature on subscriber interfaces, use the no form of this command.		
	lpts punt excessive-flow-trap non-subscriber-interfaces		
	no lpts punt excessive-flow-trap non-subscriber-interfaces		
Syntax Description	This command has no keywords or arguments.		
Command Default	None		
Command Modes	Global configuration mode		
Command History	Release	Modification	
	Release 4.3.0	This command was introduced.	
Usage Guidelines Task ID	IDs. If the user group assign for assistance.	nust be in a user group associated with a task group that includes appropriate task iment is preventing you from using a command, contact your AAA administrator	
Idsk ID	Task ID	Operations	
Examples	config-services read, write This example shows how to enable the Excessive Punt Flow Trap feature on the non-subscriber interfaces in the global configuration mode: RP/0/RSP0/CPU0:router(config)# lpts punt excessive-flow-trap non-subscriber-interfaces RP/0/RSP0/CPU0:router(config)#		
Related Commands	Command	Description	
		w-trap, on page 242 Displays the running configuration for the Excessive Punt Flow Trap feature.	

Ipts punt excessive-flow-trap penalty-rate

To set the penalty policing rate for a protocol, use the **lpts punt excessive-flow-trap penalty-rate** command in global configuration mode. To restore the default penalty-rate, use the **no** form of this command.

lpts punt excessive-flow-trap penalty-rate {trace| arp| icmp| dhcp| pppoe| ppp| igmp| ip| l2tp| all| interface| information} *penalty rate*

no punt excessive-flow-trap penalty-rate {trace| arp| icmp| dhcp| pppoe| ppp| igmp| ip| l2tp| all| interface| information}

Syntax Description	on default Sets the default penalty policing rate for all protocols.		
	arp	Sets the penalty policing rate for the ARP protocol.	
	icmp	Sets the penalty policing rate for the ICMP protocol.	
	dhcp	Sets the penalty policing rate for the DHCP protocol.	
	рррое	Sets the penalty policing rate for the PPPoE protocol.	
	ppp Sets the penalty policing rate for the PPP protocol. igmp Sets the penalty policing rate for the IGMP protocol.		
	ір	Sets the penalty policing rate for the IPv4 protocol.	
	l2tp	Sets the penalty policing rate for the L2TP protocol.	
Command Default	The default packets pe	r seconds(pps) is 10 pps.	
Command Modes	Global configuration mode		
Command History	Release	Modification	
	Release 4.3.0	This command was introduced.	
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.		

Task ID	Task ID	Operations
	config-services	read, write
xamples	This example shows how to set the penalty policing rate of 4 pps for the ARP protocol in the global configuration mode:	
	<pre>RP/0/RSP0/CPU0:router(config)# lpts punt excessive-flow-trap penalty-rate arp 4 RP/0/RSP0/CPU0:router(config)#</pre>	
Related Commands	Command	Description

Ipts punt excessive-flow-trap penalty-timeout

To set the penalty timeout value for a protocol, use the **lpts punt excessive-flow-trap penalty-timeout** command in global configuration mode. To restore the default penalty timeout value, use the **no** form of this command.

lpts punt excessive-flow-trap penalty-timeout{trace| arp| icmp| dhcp| pppoe| ppp| igmp| ip| l2tp| all| interface| information} *timeout*

no lpts punt excessive-flow-trap penalty-timeout{trace| arp| icmp| dhcp| pppoe| ppp| igmp| ip| l2tp| all| interface| information}

Syntax Description	default	Sets the default penalty timeout for all protocols.	
	arp	Sets the penalty timeout for the ARP protocol.	
	icmp	Sets the penalty timeout for the ICMP protocol.	
dhcp Sets the penalt		Sets the penalty timeout for the DHCP protocol.	
	pppoe Sets the penalty timeout for the PPPoE protocol. ppp Sets the penalty timeout for the PPP protocol.		
	igmp	Sets the penalty timeout for the IGMP protocol.	
	ір	Sets the penalty timeout for the IPv4 protocol.	
	l2tp	Sets the penalty timeout for the L2TP protocol.	
Command Default	The default value in min	utes is 15.	
Command Modes	Global configuration mode		
Command History	Release	Modification	
	Release 4.3.0	This command was introduced.	
Usage Guidelines		ou must be in a user group associated with a task group that includes appropriate task signment is preventing you from using a command, contact your AAA administrator	

Task ID	Task ID	Operations	
	config-services	read, write	
Examples	This example shows how to set the penalty timeout value of 70 minutes for the DHCP proto configuration mode:		
	RP/0/RSP0/CPU0:router(config)# lpts punt excessive-flow-trap penalty-timeout dhcp 70 RP/0/RSP0/CPU0:router(config)#		
Related Commands	Command	Description	
	lpts punt excessive-flow-trap, on page 234	Enables the Excessive Punt Flow Trap feature.	

Ipts punt excessive-flow-trap subscriber-interfaces

		The on subscriber interfaces, use the lpts punt excessive-flow-trap configuration mode. To disable the Excessive Punt Flow Trap form of this command.	
	lpts punt excessive-flow-trap subscriber-i	nterfaces	
	no lpts punt excessive-flow-trap subscribe	er-interfaces	
Syntax Description	This command has no keywords or arguments.		
Command Default	None		
Command Modes	Global configuration mode		
Command History	Release	Modification	
	Release 4.3.0	This command was introduced.	
Usage Guidelines		group associated with a task group that includes appropriate task ng you from using a command, contact your AAA administrator	
Task ID	Task ID	Operations	
	config-services	read, write	
Examples	configuration mode:	sive Punt Flow Trap feature for subscriber interfaces in the global	
Related Commands	Command	Description	
	show lpts punt excessive-flow-trap, on page	242 Displays the running configuration for the Excessive Punt Flow Trap feature.	

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release

show lpts punt excessive-flow-trap

To display the running configuration for the Excessive Punt Flow Trap feature, use the **show lpts punt excessive-flow-trap** command in the EXEC mode.

show lpts punt excessive-flow-trap {protocol| interface| type| interface-path-id| information}

Syntax Description	protocol	Enter the protocol type.			
		• arp—Displays ARP bad actors.			
		• icmp—Displays ICMP bad actors.			
	 dhcp—Displays DHCP bad actors. 				
		• pppoe—Displays PPPoE bad actors.			
		• ppp—Displays PPP bad actors.			
		• igmp—Displays IGMP bad actors.			
		• ipv4—Displays IPv4 bad actors.			
		• l2tp—Displays L2TP bad actors.			
		• all—Displays bad actors for all protocols.			
interface Displays the bad actors on an interface. For more information on the question mark (?) online help function.		Displays the bad actors on an interface. For more information on the interface types, use the question mark (?) online help function.			
	type	Specifies the interface type. For more information, use the question mark (?) online help function.			

	interface-path-io	<i>d</i> Either a phy	vsical interface instance or a virtual interface instance as follows:
			cal interface instance. Naming notation is <i>rack/slot/module/port</i> and a slash en values is required as part of the notation.
		°۲	rack: Chassis number of the rack.
		°	slot: Physical slot number of the modular services card or line card.
			<i>nodule</i> : Module number. A physical layer interface module (PLIM) is always).
		°₽	port: Physical port number of the interface.
		Note	In references to a Management Ethernet interface located on a route processor card, the physical slot number is alphanumeric (RSP0) and the module is CPU0. Example: interface MgmtEth0/RSP0/CPU0/0.
		• Virtua	l interface instance. Number range varies depending on interface type.
		For more in help functio	formation about the syntax for the router, use the question mark (?) online on.
	information	Displays the	e Excessive Punt Flow Trap feature information.
Command Default	None		
Command Modes	EXEC		
Command History	Release		Modification
	Release 4.3.0		This command was introduced.
Usage Guidelines			st be in a user group associated with a task group that includes appropriate task ent is preventing you from using a command, contact your AAA administrator
Task ID	Task ID		Operation
	lpts		read
	basic-services		read, write

Examples

The **show running-config** output for the above **show lpts punt excessive-flow-trap** command is:

```
RP/0/RSP0/CPU0:router# show running-config lpts punt excessive-flow-trap
lpts punt excessive-flow-trap
penalty-rate arp 15
penalty-rate pppoe 25
penalty-timeout arp 2
non-subscriber-interfaces
```

This table describes the significant fields shown in the display.

Table 12: show lpts punt excessive-flow-trap Field Descriptions

Field	Description
penalty-rate	The penalty policing rate for a protocol. For arp the value is 15 and for pppoe the value is 2.
penalty-timeout	The penalty timeout value for a protocol. For arp the value is 2.

Related Commands

show lpts punt excessive-flow-trap interface

To display the penalty status of an interface for one or all protocols, use the **show lpts punt excessive-flow-trap interface** command in the EXEC mode.

show lpts punt excessive-flow-trap interface type interface-path-id [protocol]

Syntax Description	type	Specifies the interface type. For more information, use the question mark (?) online help function.			
	interface-path-id	Either a physical interface instance or a virtual interface instance:			
		• Physical interface instance. Naming notation is <i>rack/slot/module/port</i> and a slash between values is required as part of the notation.			
		• <i>rack</i> : Chassis number of the rack.			
		• <i>slot</i> : Physical slot number of the modular services card or line card.			
		• <i>module</i> : Module number. A physical layer interface module (PLIM) is always 0.			
		• port: Physical port number of the interface.			
		Note In references to a Management Ethernet interface located on a route processor card, the physical slot number is alphanumeric (RSP0) and the module is CPU0. Example: interface MgmtEth0/RSP0/CPU0/0.			
		• Virtual interface instance. Number range varies depending on interface type.			
		For more information about the syntax for the router, use the question mark (?) online help function.			
	protocol	Specifies the protocol type.			
		• arp—Displays ARP bad actors.			
		• icmp—Displays ICMP bad actors.			
		• dhcp—Displays DHCP bad actors.			
		• pppoe—Displays PPPoE bad actors.			
		• ppp—Displays PPP bad actors.			
		• igmp—Displays IGMP bad actors.			
		• ipv4—Displays IPv4 bad actors.			
		• l2tp—Displays L2TP bad actors.			
		• all—Displays bad actors for all protocols.

- show ipsubscriber access-interface, page 262
- show ipsubscriber interface, page 265
- show ipsubscriber summary, page 269

ipsubscriber I2-connected

To enable 12-connected IP subscriber for IPv4 or IPv6, use the **ipsubscriber 12-connected** command in the interface configuration mode. To disable this feature, use the **no** form of this command.

ipsubscriber {ipv4| ipv6} l2-connected initiator{dhcp| unclassified-source}

no ipsubscriber {ipv4| ipv6} l2-connected initiator {dhcp| unclassified-source}

Syntax Description	ipv4	Specifies IPv4 address prefixes.
	ipv6	Specifies IPv6 address prefixes.
	initiator	Configures the IP subscriber initiator.
	dhcp	Configures DHCP as first-sign-of-life protocol for IPv4 subscriber.
	unclassified-source	Configures unclassified packets as first-sign-of-life for IPv4 subscriber.
Command Default	None	
Command Modes	Interface configuration mode	e
Command History	Release	Modification
	Release 4.2.0	This command was introduced.
	Release 4.3.0	Supported was added for IPv6 prefixes.
Usage Guidelines		nust be in a user group associated with a task group that includes appropriate task ment is preventing you from using a command, contact your AAA administrator
Task ID	Task ID	Operation
	network	read, write

Examples This is an example of configuring the **ipsubscriber 12-connected** command in the interface configuration mode for IPv4:

RP/0/RSP0/CPU0:router# configure RP/0/RSP0/CPU0:router(config)# interface Bundle-Ether 56 RP/0/RSP0/CPU0:router(config-if)# ipsubscriber ipv4 12-connected initiator dhcp This is an example of configuring the ipsubscriber 12-connected command in the interface configuration mode for IPv6:

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# interface Bundle-Ether 56
RP/0/RSP0/CPU0:router(config-if)# ipsubscriber ipv6 12-connected initiator dhcp

Related Commands	Command	Description
	show ipsubscriber summary, on page 269	Displays the ipsubscriber information.

initiator dhcp

To enable DHCP as first-sign-of-life protocol for IPv4 or IPv6 subscriber, use the **initiator dhcp** command in the appropriate configuration submode. To disable this feature, use the **no** form of this command.

	initiator dhcp no initiator dhcp	
Syntax Description	This command has no keywords or argume	ents.
Command Default	None	
Command Modes	IP subscriber IPv4 L2-connected configuration IP subscriber IPv6 L2-connected configuration	
Command History	Release	Modification
	Release 4.2.0	This command was introduced.
	Release 4.3.0	Supported was added for IPv6.
Usage Guidelines Task ID	IDs. If the user group assignment is preventing you from using a command, contact your AAA ac for assistance.	
	network	read, write
Examples	This is an example of configuring the initiator dhcp command in the Interface configuration mode: RP/0/RSP0/CPU0:router# configure RP/0/RSP0/CPU0:router(config)# interface Bundle-Ether 56 RP/0/RSP0/CPU0:router(config-if)# ipsubscriber ipv4 12-connected RP/0/RSP0/CPU0:router(config-if-ipsub-ipv4-12conn)# initiator dhcp This is an example of configuring the initiator dhcp command in the Interface configuration mode: RP/0/RSP0/CPU0:router# configure RP/0/RSP0/CPU0:router# configure RP/0/RSP0/CPU0:router(config)# interface Bundle-Ether 56 RP/0/RSP0/CPU0:router(config-if)# ipsubscriber ipv6 12-connected RP/0/RSP0/CPU0:router(config-if)# ipsubscriber ipv6-12conn)# initiator dhcp	

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

Related Commands

Command	Description

ipsubscriber 12-connected, on page 254	Displays the subscriber management session information.

IPv4 and IPv6 Commands

This module describes the Cisco IOS XR software commands used to configure the IPv4 and IPv6 commands for Broadband Network Gateway (BNG) on the Cisco ASR 9000 Series Router. For details regarding the related configurations, refer to the *Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide*.

- ipv4 mtu (BNG), page 274
- ipv4 unnumbered (point-to-point -BNG), page 276
- ipv4 unreachables disable (BNG), page 278
- ipv4 verify unicast source reachable-via (BNG), page 280
- ipv6 enable (BNG), page 282
- ipv6 mtu (BNG), page 284
- ipv6 unreachables disable (BNG), page 286
- show ipv4 interface (BNG), page 288
- show ipv4 traffic (BNG), page 292
- show ipv6 interface (BNG), page 295
- show ipv6 neighbors (BNG), page 299
- show ipv6 neighbors summary (BNG), page 304
- show ipv6 traffic (BNG), page 306

ipv4 mtu (BNG)

To set the maximum transmission unit (MTU) size of IPv4 packets sent on an interface, use the **ipv4 mtu** command in an appropriate configuration mode. To restore the default MTU size, use the **no** form of this command.

ipv4 mtu bytes

no ipv4 mtu

Syntax Description	bytes	MTU in bytes. Range is 68 to 65535 bytes for IPv4 packets. The maximum MTU size that can be set on an interface depends on the interface medium.
Command Default	If no MTU size is Layer 2 MTU.	configured for IPv4 packets sent on an interface, the interface derives the MTU from the
Command Modes	Dynamic template	e configuration
Command History	Release	Modification
	Release 3.7.2	This command was introduced.
	Release 4.2.0	This command was supported in the dynamic template configuration mode for BNG.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The router will fragment any IPv4 packet that exceeds the MTU set for the interface.

The maximum MTU size that can be set on an interface depends on the interface medium. If the Layer 2 MTU is smaller than the Layer 3 MTU, the Cisco IOS XR software uses the Layer 2 MTU value for the Layer 3 MTU. Conversely, if the Layer 3 MTU is smaller than the Layer 2 MTU, the software uses Layer 3 MTU value. In other words the Cisco IOS XR software uses the lower of the two values for the MTU.

All devices on a physical medium must have the same protocol MTU to operate.

To enter the dynamic template configuration mode, run **dynamic-template** command in the global configuration mode.

	Note	Changing the MTU value (with the mtu interface configuration command) can affect the IPv4 MTU value. If the current IPv4 MTU value is the same as the MTU value, and you change the MTU value, the IPv4 MTU value will be modified automatically to match the new MTU. However, the reverse is not true; changing the IPv4 MTU value has no effect on the value for the mtu command.		
Task ID		Task ID	Operations	
		ipv4	read, write	
		network	read, write	
		config-services	read, write	
Examples		This example shows how to set the mode:	maximum IPv4 packet size to 300 bytes in dynamic template configuration	

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# dynamic-template type ppp p1
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ipv4 mtu 300
```

Related Commands

Command	Description
show ipv4 interface (BNG), on page 288	Displays the MTU status of interfaces configured for IPv4.

ipv4 unnumbered (point-to-point -BNG)

To enable IPv4 processing on a point-to-point interface without assigning an explicit IPv4 address to that interface, use the **ipv4 unnumbered** command in an appropriate configuration mode. To disable this feature, use the **no** form of this command.

ipv4 unnumbered interface-type interface-instance

no ipv4 unnumbered interface-type interface-instance

Syntax Description	interface-type	Interface typ	pe. For more information, use the question mark (?) online help function.	
	<i>interface-instance</i> Either a physical interface instance or a virtual interface instance as follows:			
			cal interface instance. Naming notation is <i>rack/slot/module/port</i> and a slash en values is required as part of the notation.	
		° 1	rack: Chassis number of the rack.	
		° S	slot: Physical slot number of the modular services card or line card.	
			<i>nodule</i> : Module number. A physical layer interface module (PLIM) is always).	
		°P	port: Physical port number of the interface.	
		Note	In references to a Management Ethernet interface located on a route processor card, the physical slot number is alphanumeric (RSP0) and the module is CPU0. Example: interface MgmtEth0/RSP0/CPU0/0.	
		• Virtua	l interface instance. Number range varies depending on interface type.	
		For more in help functio	formation about the syntax for the router, use the question mark (?) online on.	
Command Default	IPv4 processing or interface.	g on a point-to-point interface is disabled unless an IPv4 address is assigned explicitly to that		
Command Modes	Dynamic template	ate configuration		
Command History	Release		Modification	
	Release 3.7.2		This command was introduced.	
	Release 4.2.0		This command was supported in the dynamic template configuration mode for BNG.	

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

To enter the dynamic template configuration mode, run **dynamic-template** command in the global configuration mode.

Whenever the unnumbered interface generates a packet (for example, for a routing update), it uses the address of the specified interface as the source address of the IPv4 packet. It also uses the IPv4 address of the specified interface in determining which routing processes are sending updates over the unnumbered interface. Restrictions include the following:

• You cannot use the **ping** EXEC command to determine whether the interface is up because the interface has no address. Simple Network Management Protocol (SNMP) can be used to remotely monitor interface status.

The interface you specify by the *interface-type* and *interface-number* arguments must be enabled (listed as "up" in the **show interfaces** command display).

Task ID

Task ID	Operations
ipv4	read, write
network	read, write
config-services	read, write

Examples In this example the Bundle-Ether interface is assigned address 100.10 in the dynamic template configuration mode:

RP/()/RSP0	/CPU0:	:router	# configu	re						
RP/(0/RSP0	/CPU0:	:router	(config)#	dynami	c-template	type	ppp	p1		
RP/(0/RSP0	/CPU0:	:router	(config-d	ynamic-	template-t	ype)#	ipv4	unnumbered	Bundle-Ether100	.10

ipv4 unreachables disable (BNG)

To disable the generation of IPv4 Internet Control Message Protocol (ICMP) unreachable messages, use the **ipv4 unreachables disable** command in an appropriate configuration mode. To re-enable the generation of ICMP unreachable messages, use the **no** form of this command.

ipv4 unreachables disable

no ipv4 unreachables disable

- **Syntax Description** This command has no keywords or arguments.
- **Command Default** IPv4 ICMP unreachables messages are generated.
- **Command Modes** Dynamic template configuration

Command History	Release	Modification
	Release 3.7.2	This command was introduced.
	Release 4.2.0	This command was supported in the dynamic template configuration mode for BNG.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

If the software receives a nonbroadcast packet destined for itself that uses a protocol it does not recognize, it sends an ICMP protocol unreachable message to the source.

If the software receives a datagram that it cannot deliver to its ultimate destination because it knows of no route to the destination address, it replies to the originator of that datagram with an ICMP host unreachable message.

This command affects a number of ICMP unreachable messages.

To enter the dynamic template configuration mode, run **dynamic-template** command in the global configuration mode.

Task ID

Task ID	Operations
ipv4	read, write
network	read, write

Task ID	Operations
config-services	read, write

Examples This example shows how to disable the generation of ICMP unreachable messages on dynamic template configuration mode:

RP/0/RSP0/CPU0:router(config)# dynamic-template type ppp foo
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ipv4 unreachables disable

ipv4 verify unicast source reachable-via (BNG)

To enable IPv4 unicast Reverse Path Forwarding (RPF) checking, use the **ipv4 verify unicast source reachable-via** command in an appropriate configuration mode. To disable unicast RPF, use the **no** form of this command.

ipv4 verify unicast source reachable-via {any| rx} [allow-default] [allow-self-ping] no ipv4 verify unicast source reachable-via {any| rx} [allow-default] [allow-self-ping]

Syntax Description	any	Enables loose unicast RPF checking. If loose unicast RPF is enabled, a packet is not forwarded unless its source prefix exists in the routing table.
	rx	Enables strict unicast RPF checking. If strict unicast RPF is enabled, a packet is not forwarded unless its source prefix exists in the routing table and the output interface matches the interface on which the packet was received.
	allow-default	(Optional) Enables the matching of default routes. This option applies to both loose and strict RPF.
	allow-self-ping	(Optional) Enables the router to ping out an interface. This option applies to both loose and strict RPF.

Command Default IPv4 unicast RPF is disabled.

Command Modes Dynamic template configuration

Command History	Release	Modification
	Release 3.7.2	This command was introduced.
	Release 4.2.0	This command was supported in the dynamic template configuration mode for BNG.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes the proper task IDs. If you suspect user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

To enter the dynamic template configuration mode, run **dynamic-template** command in the global configuration mode.

Use the **ipv4 verify unicast source reachable-via** interface command to mitigate problems caused by malformed or forged (spoofed) IP source addresses that pass through a router. Malformed or forged source addresses can indicate denial-of-service (DoS) attacks based on source IP address spoofing.

When strict unicast RPF is enabled on an interface, the router examines all packets received on that interface. The router checks to make sure that the source address appears in the routing table and matches the interface on which the packet was received.

When loose unicast RPF is enabled on an interface, the router examines all packets received on that interface. The router checks to make sure that the source address can be reached through any of the router interfaces.

Task ID

Task ID	Operations
ipv4	read, write
network	read, write
config-services	read, write

Examples

This example shows how to configure strict RPF on dynamic template configuration mode:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# dynamic-template type ppp p1
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ipv4 verify unicast source reachable-via
rx
```

ipv6 enable (BNG)

To enable IPv6 processing on an interface that has not been configured with an explicit IPv6 address, use the **ipv6 enable** command in an appropriate configuration mode. To disable IPv6 processing on an interface that has not been configured with an explicit IPv6 address, use the **no** form of this command.

ipv6 enable no ipv6 enable

Syntax Description This command has no keywords or arguments.

Command Default IPv6 is disabled.

Command Modes Dynamic template configuration

Command History	Release	Modification
	Release 3.7.2	This command was introduced.
	Release 4.3.0	This command was supported in the dynamic template configuration mode for BNG.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **ipv6 enable** command automatically configures an IPv6 link-local unicast address on the interface while also enabling the interface for IPv6 processing. The **no ipv6 enable** command does not disable IPv6 processing on an interface that is configured with an explicit IPv6 address.

To enter the dynamic template configuration mode, run **dynamic-template** command in the global configuration mode.

Task ID

Task ID	Operations
ipv6	read, write
network	read, write
config-services	read, write

Examples

This example show how to enable IPv6 processing on dynamic template configuration mode:

RP/0/RSP0/CPU0:router(config)# dynamic-template type ppp foo
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ipv6 enable

Related Commands

	Command	Description

ipv6 mtu (BNG)

To set the maximum transmission unit (MTU) size of IPv6 packets sent on an interface, use the **ipv6 mtu** command in an appropriate configuration mode. To restore the default MTU size, use the **no** form of this command.

ipv6 mtu bytes

no ipv6 mtu

Syntax Description	bytes	MTU in bytes. Range is 1280 to 65535 for IPv6 packets. The maximum MTU size that can be set on an interface depends on the interface medium.
Command Default	If no MTU size is Layer 2 MTU.	s configured for IPv6 packets sent on an interface, the interface derives the MTU from the
Command Modes	Dynamic templat	e configuration
Command History	Release	Modification
	Release 3.7.2	This command was introduced.
	Release 4.3.0	This command was supported in the dynamic template configuration mode for BNG.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

If an IPv6 packet exceeds the MTU set for the interface, only the source router of the packet can fragment it.

The maximum MTU size that can be set on an interface depends on the interface medium. If the Layer 2 MTU is smaller than the Layer 3 MTU, the Cisco IOS XR software uses the Layer 2 MTU value for the Layer 3 MTU. Conversely, If the Layer 3 MTU is smaller than the Layer 2 MTU, the software uses Layer 3 MTU value. In other words the Cisco IOS XR software uses the lower of the two values for the MTU.

All devices on a physical medium must have the same protocol MTU to operate.

To enter the dynamic template configuration mode, run **dynamic-template** command in the global configuration mode.

Note	If the current IPv6 MTU value is the same as the	e configuration command) can affect the IPv6 MTU value. ne MTU value, and you change the MTU value, the IPv6 natch the new MTU. However, the reverse is not true; the value for the mtu command.
Task ID	Task ID	Operations
	ipv6	read, write
	network	read, write

Table 19: show ipv4 interface Command Field Descriptions

Field	Description
Loopback0 is Up	If the interface hardware is usable, the interface is marked "Up." For an interface to be usable, both the interface hardware and line protocol must be up.
line protocol is Up	If the interface can provide two-way communication, the line protocol is marked "Up." For an interface to be usable, both the interface hardware and line protocol must be up.
Internet address	IPv4 Internet address and subnet mask of the interface.
Secondary address	Displays a secondary address, if one has been set.
MTU	Displays the IPv4 $MTU^{\underline{1}}$ value set on the interface.
Multicast reserved groups joined	Indicates the multicast groups this interface belongs to.
Directed broadcast forwarding	Indicates whether directed broadcast forwarding is enabled or disabled.
Outgoing access list	Indicates whether the interface has an outgoing access list set.
Inbound access list	Indicates whether the interface has an incoming access list set.
Proxy ARP	Indicates whether proxy ARP^2 is enabled or disabled on an interface.
ICMP redirects	Specifies whether $ICMPv4^3$ redirects are sent on this interface.
ICMP unreachables	Specifies whether unreachable messages are sent on this interface.
Internet protocol processing disabled	Indicates an IPv4 address has not been configured on the interface.

¹ MTU = maximum transmission unit

ARP = Address Resolution Protocoladdress resolution protocol
 ICMPv4 = Internet Control Message Protocol internet control message protocol version 4

This table describes the significant fields shown in the display.

Field	Description
GigabitEthernet0 /3/0/0 is Shutdown, line protocol is Down	Indicates whether the interface hardware is currently active (whether line signal is present) and whether it has been taken down by an administrator. If the interface hardware is usable, the interface is marked "Up." For an interface to be usable, both the interface hardware and line protocol must be up.
line protocol is Up (or down)	Indicates whether the software processes that handle the line protocol consider the line usable (that is, whether keepalives are successful). If the interface can provide two-way communication, the line protocol is marked "Up." For an interface to be usable, both the interface hardware and line protocol must be up.
IPv6 is enabled, stalled, disabled (stalled and disabled are not shown in sample output)	Indicates that IPv6 is enabled, stalled, or disabled on the interface. If IPv6 is enabled, the interface is marked "enabled." If duplicate address detection processing identified the link-local address of the interface as being a duplicate address, the processing of IPv6 packets is disabled on the interface and the interface is marked "stalled." If IPv6 is not enabled, the interface is marked "disabled."
link-local address	Displays the link-local address assigned to the interface.
TENTATIVE	 The state of the address in relation to duplicate address detection. States can be any of the following: duplicate—The address is not unique and is not being used. If the duplicate address is the link-local address of an interface, the processing of IPv6 packets is disabled on that interface. tentative—Duplicate address detection is either pending or under way on this interface. Note If an address does not have one of these states (the state for the address is blank), the address is unique and is being used.
Global unicast addresses	Displays the global unicast addresses assigned to the interface.
ICMP redirects	State of Internet Control Message Protocol (ICMP) IPv6 redirect messages on the interface (the sending of the messages is enabled or disabled).

Table 21: show ipv6 interface Command Field Descriptions

Field	Description
ND DAD	State of duplicate address detection on the interface (enabled or disabled).
number of DAD attempts	Number of consecutive neighbor solicitation messages that are sent on the interface while duplicate address detection is performed.
ND reachable time	Displays the neighbor discovery reachable time (in milliseconds) assigned to this interface.

Related Commands

Command	Description
show ipv4 interface (BNG), on page 288	Displays the usability status of interfaces configured for IPv4.

show ipv6 neighbors (BNG)

To display the IPv6 neighbor discovery cache information, use the **show ipv6 neighbors** command in the EXEC mode.

show ipv6 neighbors [type interface-path-id] **location** node-id]

Syntax Description	type	(Optional) Interface type. For more information, use the question mark (?) online help function.		
	interface-path-id	(Optional) Physical interface instance or a virtual interface.		
		Note Use the show interfaces command to see a list of all interfaces currently configured on the router. For more information about the syntax for the router, use the question mark (?) online help function		
	location node-id	online help function.(Optional) Designates a node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.		
Command Default	All IPv6 neighbor disc	covery cache information is displayed.		
Command Modes	EXEC			
Command History	Release	Modification		
	Release 3.7.2	This command was introduced.		
	Release 4.3.0	This command was supported for BNG.		
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.			
	When the <i>interface-type</i> and <i>interface-number</i> arguments are not specified, cache information for all IPve neighbors is displayed. Specifying the <i>interface-type</i> and <i>interface-number</i> arguments displays only cach information about the specified interface.			
Task ID	Task ID	Operations		

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release

Examples

This is the sample output of the **show ipv6 neighbors** command when entered with an interface type and number:

RP/0/RSP0/CPU0:router# show ipv6 neighbors
gigabitethernet

0/0/0/0

IPv6 Address 2000:0:0:4::2	Age Link-layer Addr State Interface 0 0003.a0d6.141e REACH gigabitethernet2
FE80::203:A0FF:FED6:141E	0 0003.a0d6.141e REACH gigabitethernet2
3001:1::45a	- 0002.7d1a.9472 REACH gigabitethernet2

This is the sample output of the **show ipv6 neighbors** command when entered with an IPv6 address:

RP/0/RSP0/CPU0:router# show ipv6 neighbors 2000:0:0:4::2

IPv6 Address	Age	Link-layer	Addr	State	Interface
2000:0:0:4::2	0	0003.a0d6.3	141e	REACH	gigabitethernet2

This table describes significant fields shown in the display.

Field	Description
IPv6 Address	IPv6 address of neighbor or interface.
Age	Time (in minutes) since the address was confirmed to be reachable. A hyphen (-) indicates a static entry.
Link-layer Addr	MAC address. If the address is unknown, a hyphen (-) is displayed.

Field	Description
State	

Field	Description
	The state of the neighbor cache entry. These are the states for dynamic entries in the IPv6 neighbor discovery cache:
	• INCMP (incomplete)—Address resolution is being performed on the entry. A neighbor solicitation message has been sent to the solicited-node multicast address of the target, but the corresponding neighbor advertisement message has not yet been received.
	• reach (reachable)—Positive confirmation was received within the last ReachableTime milliseconds that the forward path to the neighbor was functioning properly. While in reach state, the device takes no special action as packets are sent.
	• stale—More than ReachableTime milliseconds have elapsed since the last positive confirmation was received that the forward path was functioning properly. While in stale state, the device takes no action until a packet is sent.
	 delay—More than ReachableTime milliseconds have elapsed since the last positive confirmation was received that the forward path was functioning properly. A packet was sent within the last DELAY_FIRST_PROBE_TIME seconds. If no reachability confirmation is received within DELAY_FIRST_PROBE_TIME seconds of entering the delay state, send a neighbor solicitation message and change the state to probe.
	 probe—A reachability confirmation is actively sought by resending neighbor solicitation messages every RetransTimer milliseconds until a reachability confirmation is received.
	These are the possible states for static entries in the IPv6 neighbor discovery cache:
	• reach (reachable)—The interface for this entry is up.
	• INCMP (incomplete)—The interface for this entry is down.
	Note Reachability detection is not applied to static entries in the IPv6 neighbor discovery cache;

Field	Description	
	therefore, the descriptions for the INCMP (incomplete) and reach (reachable) states are different for dynamic and static cache entries.	
Interface	Interface from which the address is reachable.	

Related Commands

Command	Description
show ipv6 neighbors summary (BNG), on page 304	Displays summary information for the neighbor entries.

show ipv6 neighbors summary (BNG)

To display summary information for the neighbor entries, use the **show ipv6 neighbors summary** command in the EXEC mode.

This table describes the significant fields shown in the display.

Table 23: show ipv6 traffic Command Field Descriptions

Field	Description
Rcvd:	Statistics in this section refer to packets received by the router.
total	Total number of packets received by the software.
local destination	Locally destined packets received by the software.
source-routed	Packets seen by the software with RH.
truncated	Truncated packets seen by the software.
bad header	An error was found in generic HBH, RH, DH, or HA. Software only.

Field	Description
unknown option	Unknown option type in IPv6 header.
unknown protocol	Protocol specified in the IP header of the received packet is unreachable.
Sent:	Statistics in this section refer to packets sent by the router.
forwarded	Packets forwarded by the software. If the packet cannot be forwarded in the first lookup (for example, the packet needs option processing), then the packet is not included in this count, even if it ends up being forwarded by the software.
Mcast:	Multicast packets.
ICMP statistics:	Internet Control Message Protocol statistics.

router igmp vrf

To configure route-policy to be used to map the bandwidth profile, use the **router igmp vrf** command in the global configuration mode. To disable this feature, use the **no** form of this command.

router igmp vrf vrf_name {traffic| profile| profile_name}

no router igmp vrf vrf_name {traffic| profile | profile_name}

vrf_name	Specifies the VRF name.
traffic	Configures IGMP traffic variables.
profile	Configures route-policy to be used to map the bandwidth profile.
profile_name	Specifies the profile name.
None

Table 25: show igmp vrf Field Descriptions

Field	Description
Supported Interfaces	Specifies the number of supported interfaces.
Unsupported Interfaces	Specifies the number of unsupported interfaces.
Enabled Interfaces	Specifies the number of interfaces that are enabled.
Disabled Interfaces	Specifies the number of interfaces that are disabled.

clear igmp unicast-qos-adjust

To clear IGMP unicast rate adjustment database, use the **clear igmp unicast-qos-adjust** command in the EXEC mode.

clear igmp unicast-qos-adjust {rate | statistics } interface {type | interface_path_id }

Suntax Description				
Syntax Description	rate	Specifies the rate programmed in QoS.		
	statistics	Specifies the unicast rate adjustment statistics.		
	interface	Specifies the interface specific rate.		
	type	Interface type. For more information, use the question mark (?) online help function.		
	interface-path-id	Either a physical interface instance or a virtual interface instance as follows:		
		• Physical interface instance. Naming notation is <i>rack/slot/module/port</i> and a slash between values is required as part of the notation.		
		• rack: Chassis number of the rack.		
		• slot: Physical slot number of the modular services card or line card.		
		• <i>module</i> : Module number. A physical layer interface module (PLIM) is always 0.		
		• port: Physical port number of the interface.		
		Note In references to a Management Ethernet interface located on a route processor card, the physical slot number is alphanumeric (RP0 or RP1) and the module is CPU0. Example: interface MgmtEth0/RP1/CPU0/0.		
		• Virtual interface instance. Number range varies depending on interface type.		
		For more information about the syntax for the router, use the question mark (?) online help function.		
Command Default	Clears all unicast o	os adjust parameters.		
Command Modes	EXEC			
Command History	Release	Modification		
	Release 4.2.0	This command was introduced.		

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes the proper task IDs. If you suspect user group assignment is preventing you from using a command, contact your AAA administrator for assistance.		
Task ID	Task ID	Operation	
	multicast	exec	
Examples	This is an example of using the cl	lear igmp unicast-qos-adjust command:	

RP/0/RSP0/CPU0:router# clear igmp unicast-qos-adjust rate interface Loopback 1

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

Neighbor Discovery Commands

This module describes the Cisco IOS XR software commands used to configure the Neighbor Discovery Commands for Broadband Network Gateway (BNG) on the Cisco ASR 9000 Series Router. For details regarding the related configurations, refer to the *Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide*.

ipv6 nd dad attempts (BNG)

To configure the number of consecutive neighbor solicitation messages that are sent on an interface while duplicate address detection is performed on the unicast IPv6 addresses of the interface, use the **ipv6 nd dad attempts** command in an appropriate configuration mode. To return the number of messages to the default value, use the **no** form of this command.

ipv6 nd dad attempts value

no ipv6 nd dad attempts value

Syntax Description	disal	aber of neighbor solicitation messages. Range is 0 to 600. Configuring a value of 0 bles duplicate address detection processing on the specified interface; a value of 1 igures a single transmission without follow-up transmissions.		
Command Default	Duplicate address detection is enabled. The default	ction on unicast IPv6 addresses with the sending of one neighbor solicitation message is one message.		
Command Modes	Dynamic template configuration			
Command History	Release	Modification		
	Release 3.7.2	This command was introduced.		
	Release 4.3.0	This command was supported in the dynamic template configuration mode for BNG.		
Usage Guidelines		you must be in a user group associated with a task group that includes appropriate task ssignment is preventing you from using a command, contact your AAA administrator		
	Duplicate address detection verifies the uniqueness of new unicast IPv6 addresses before the addresses are assigned to interfaces (the new addresses remain in a tentative state while duplicate address detection is performed). Duplicate address detection uses neighbor solicitation messages to verify the uniqueness of unicast			

IPv6 addresses.

The DupAddrDetectTransmits node configuration variable (as specified in RFC 2462, *IPv6 Stateless Address Autoconfiguration*) is used to automatically determine the number of consecutive neighbor solicitation messages that are sent on an interface while duplicate address detection is performed on a tentative unicast IPv6 address.

The interval between the sending of duplicate address detection neighbor solicitation messages (the duplicate address detection timeout interval) is specified by the neighbor discovery-related variable RetransTimer (as specified in RFC 2461, *Neighbor Discovery for IP Version 6 [IPv6]*), which is used to determine the time between retransmissions of neighbor solicitation messages to a neighbor when the address is being resolved

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference,

Release 4.3.x

or when the reachability of a neighbor is being probed. This is the same management variable used to specify the interval for neighbor solicitation messages during address resolution and neighbor unreachability detection. Use the **ipv6 nd ns-interval** command to configure the interval between neighbor solicitation messages that are sent during duplicate address detection.

Duplicate address detection is suspended on interfaces that are administratively down. While an interface is administratively down, the unicast IPv6 addresses assigned to the interface are set to a pending state. Duplicate address detection is automatically restarted on an interface when the interface returns to being administratively up.

For BNG, ensure you run this command in the dynamic template configuration mode. To enter the dynamic template configuration mode, run **dynamic-template** command in the global configuration mode.

Note

An interface returning to administratively up restarts duplicate address detection for all of the unicast IPv6 addresses on the interface. While duplicate address detection is performed on the link-local address of an interface, the state for the other IPv6 addresses is still set to tentative. When duplicate address detection is completed on the link-local address, duplicate address detection is performed on the remaining IPv6 addresses.

When duplicate address detection identifies a duplicate address, the state of the address is set to duplicate and the address is not used. If the duplicate address is the link-local address of the interface, the processing of IPv6 packets is disabled on the interface and an error message similar to the following is issued:

ipv6_nd[145]: %IPV6_ND-3-ADDRESS_DUPLICATE : Duplicate address 111::1 has been detected

If the duplicate address is a global address of the interface, the address is not used and an error message similar to the following is issued:

%IPV6-4-DUPLICATE: Duplicate address 3000::4 on gigabitethernet0

All configuration commands associated with the duplicate address remain as configured while the state of the address is set to duplicate.

If the link-local address for an interface changes, duplicate address detection is performed on the new link-local address and all of the other IPv6 address associated with the interface are regenerated (duplicate address detection is performed only on the new link-local address).

Task ID	Task ID	Operations	
	ipv6	read, write	
	config-services	read, write	

Examples

This example shows how to display the state (tentative or duplicate) of the unicast IPv6 address on the dynamic template configuration mode:

RP/0/RSP0/CPU0:router(config)# dynamic-template type ppp p1
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ipv6 nd dad attempts 1

Related Commands

Command	Description
ipv6 nd ns-interval (BNG), on page 336	Configures the interval between IPv6 neighbor solicitation transmissions on an interface.

ipv6 nd framed-prefix-pool

To set the IPv6 Neighbor Discovery (ND) framed prefix pool, use the **ipv6 nd framed-prefix-pool** command in the dynamic template configuration mode. To disable the framed prefix pool configuration, use the **no** form of this command.

ipv6 nd framed-prefix-pool pool name

no ipv6 nd framed-prefix-pool

Syntax Description	pool_name	Specifies the framed address pool name.
Command Default	None	
Command Modes	Dynamic template configura	tion
Command History	Release	Modification
	Release 4.3.0	This command was introduced.
Usage Guidelines	IDs. ipv6 nd managed-config-flag (BNG)

To set the managed address configuration flag in IPv6 router advertisements, use the **ipv6 nd managed-config-flag** command in an appropriate configuration mode. To clear the flag from IPv6 router advertisements, use the **no** form of this command.

ipv6 nd managed-config-flag

no ipv6 nd managed-config-flag

Syntax Description This command has no keywords or arguments.

Command Default The managed address configuration flag is not set in IPv6 router advertisements.

Command Modes Dynamic template configuration

Command History	Release	Modification
	Release 3.7.2	This command was introduced.
	Release 4.3.0	This command was supported in the dynamic template configuration mode for BNG.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Setting the managed address configuration flag in IPv6 router advertisements indicates to attached hosts whether they should use stateful autoconfiguration to obtain addresses. If the flag is set, the attached hosts should use stateful autoconfiguration to obtain addresses. If the flag is not set, the attached hosts should not use stateful autoconfiguration to obtain addresses.

Hosts may use stateful and stateless address autoconfiguration simultaneously.

For BNG, ensure you run this command in the dynamic template configuration mode. To enter the dynamic template configuration mode, run **dynamic-template** command in the global configuration mode.

Task ID

Task ID	Operations	
ipv6	read, write	
network	read, write	
config-services	read, write	

Examples

This example shows how to configure the managed address configuration flag in IPv6 router advertisements on dynamic template configuration mode:

	ipv6	read, write	
	network	read, write	

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

Task ID	Operations
config-services	read, write

Examples

This example configures an IPv6 neighbor solicit transmission interval of 9000 milliseconds in the dynamic template configuration mode:

RP/0/RSP0/CPU0:router(config)# dynamic-template type ppp p1
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ipv6 nd ns-interval 9000

Related Commands

Command	Description
show ipv6 interface (BNG), on page 295	Displays the usability status of interfaces configured for IPv6.

ipv6 nd nud-enable

To enable the IPv6 neighbor un-reachability detection (NUD), use the ipv6 nd nud-enable command in the dynamic template configuration mode. To disable IPv6 NUD, use the no form of this command. ipv6 nd nud-enable no ipv6 nd nud-enable Syntax Description This command has no keywords or arguments. **Command Default** None **Command Modes** Dynamic template configuration **Command History** Release **Modification** Release 4.3.0 This command was introduced. **Usage Guidelines** You must be in a user group associated with a task group that includes the proper task IDs. The command reference guides include the task IDs required for each command. If you suspect user group assignment is preventing you from using a command, contact your AAA administrator for assistance. Task ID Task ID Operation config-services read, write Examples This example shows how to enable IPv6 neighbor un-reachability detection in dynamic template configuration mode: RP/0/RSP0/CPU0:router(config) # dynamic-template type ppp p1 RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ipv6 nd nud-enable

ipv6 nd other-config-flag (BNG)

To set the other stateful configuration flag in IPv6 router advertisements, use the **ipv6 nd other-config-flag** command in an appropriate configuration mode. To clear the flag from IPv6 router advertisements, use the **no** form of this command.

ipv6 nd other-config-flag

no ipv6 nd other-config-flag

Syntax Description This command has no keywords or arguments.

Command Default The other stateful configuration flag is not set in IPv6 router advertisements.

Command Modes Dynamic template configuration

Command History	Release	Modification
	Release 3.7.2	This command was introduced.
	Release 4.3.0	This command was supported in the dynamic template configuration mode for BNG.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The setting of the other stateful configuration flag in IPv6 router advertisements indicates to attached hosts how they can obtain autoconfiguration information other than addresses. If the flag is set, the attached hosts should use stateful autoconfiguration to obtain the other (nonaddress) information.

Note

If the managed address configuration flag is set using the **ipv6 nd managed-config-flag** command, then an attached host can use stateful autoconfiguration to obtain the other (nonaddress) information regardless of the setting of the other stateful configuration flag.

For BNG, ensure you run this command in the dynamic template configuration mode. To enter the dynamic template configuration mode, run **dynamic-template** command in the global configuration mode.

Task ID

Task ID	Operations
ipv6	read, write

Task ID	Operations	
network	read, write	
config-services	read, write	

Examples

This example configures the "other stateful configuration" flag for IPv6 router advertisements in the dynamic template configuration mode:

RP/0/RSP0/CPU0:router(config)# dynamic-template type ppp p1
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ipv6 nd other-config-flag

ipv6 nd ra-unicast

To enable the IPv6 unicast router advertisement (RA), use the **ipv6 nd ra-unicast** command in the dynamic template configuration mode. To disable IPv6 unicast RA, use the **no** form of this command.

ipv6 nd ra-unicast

no ipv6 nd ra-unicast

Syntax Description This command has no keywords or arguments.

Command Default None

Command Modes Dynamic template configuration

Command History	Release	Modification
	Release 4.3.0	This command was introduced.

Usage Guidelines You must be in a user group associated with a task group that includes the proper task IDs. The command reference guides include the task IDs required for each command. If you suspect user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	config-services	read, write

Examples This example shows how to enable the IPv6 unicast router advertisement in dynamic template configuration mode:

RP/0/RSP0/CPU0:router(config)# dynamic-template type ppp p1
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ipv6 nd ra-unicast

Related Commands	Command	Description	
	dynamic-template, on page 220	Groups a set of configuration items that can be applied to a group of subscribers.	

ipv6 nd reachable-time (BNG)

To configure the amount of time that a remote IPv6 node is considered reachable after some reachability confirmation event has occurred, use the **ipv6 nd reachable-time** command in an appropriate configuration mode. To restore the default time, use the **no** form of this command.

ipv6 nd reachable-time milliseconds

no ipv6 nd reachable-time

Syntax Description	milliseconds	The amount of time (in milliseconds) that a remote IPv6 node is considered reachable. The range is from 0 to 3600000.	
Command Default		ecified) is advertised in router advertisements and 30000 (30 seconds) is used for the etivity of the router itself.	
Command Modes	Dynamic template co	nfiguration	
Command History	Release	Modification	
	Release 3.7.2	This command was introduced.	
	Release 4.3.0	This command was supported in the dynamic template configuration mode for BNG.	
Usage Guidelines		you must be in a user group associated with a task group that includes appropriate task assignment is preventing you from using a command, contact your AAA administrator	
	The configured time enables the router to detect unavailable neighbors. Shorter configured times enable the router to detect unavailable neighbors more quickly; however, shorter times consume more IPv6 network bandwidth and processing resources in all IPv6 network devices. Very short configured times are not recommended in normal IPv6 operation.		
	The configured time is included in all router advertisements sent out of an interface so that nodes on the same link use the same time value. A value of 0 indicates that the configured time is unspecified by this router.		
	For BNG, ensure you run this command in the dynamic template configuration mode. To enter the dynamic template configuration mode, run dynamic-template command in the global configuration mode.		
Task ID	Task ID	Operations	
	ipv6	read, write	

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

ipv6 nd suppress-cache-learning

To suppress cache learning for IPv6 neighbor discovery, use the **ipv6 nd suppress-cache-learning** command in the dynamic template configuration mode. To disable cache learning suppress, use the **no** form of this command.

ipv6 nd suppress-cache-learning

no ipv6 nd suppress-cache-learning

Syntax Description This command has no keywords or arguments.

Command Default None

Command Modes Dynamic template configuration

Command History	Release	Modification
	Release 4.3.0	This command was introduced.

Usage Guidelines You must be in a user group associated with a task group that includes the proper task IDs. The command reference guides include the task IDs required for each command. If you suspect user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	config-services	read, write

Examples This example shows how to suppress cache learning for IPv6 neighbor discovery in dynamic template configuration mode:

RP/0/RSP0/CPU0:router(config)# dynamic-template type ppp p1
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ipv6 nd suppress-cache-learning

ipv6 nd suppress-ra (BNG)

To suppress IPv6 router advertisement transmissions on a LAN interface, use the **ipv6 nd suppress-ra** command in an appropriate configuration mode. To reenable the sending of IPv6 router advertisement transmissions on a LAN interface, use the **no** form of this command.

ipv6 nd suppress-ra

no ipv6 nd suppress-ra

Syntax Description This command has no keywords or arguments.

Command Default IPv6 router advertisements are automatically sent on other types of interlaces if IPv6 unicast routing is enabled on the interfaces. IPv6 router advertisements are not sent on other types of interfaces.

Command Modes Dynamic template configuration

Command History	Release	Modification
	Release 3.7.2	This command was introduced.
	Release 4.3.0	This command was supported in the dynamic template configuration mode for BNG.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **no ipv6 nd suppress-ra** command to enable the sending of IPv6 router advertisement transmissions on non-LAN interface types (for example, serial or tunnel interfaces).

For BNG, ensure you run this command in the dynamic template configuration mode. To enter the dynamic template configuration mode, run **dynamic-template** command in the global configuration mode.

Task ID	Operations
ipv6	read, write
network	read, write
config-services	read, write

Task ID

Examples

This example shows how to suppress IPv6 router advertisements in the dynamic template configuration mode:

RP/0/RSP0/CPU0:router(config)# dynamic-template type ppp p1
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ipv6 nd suppress-ra

ppp authentication (BNG)

To enable Challenge Handshake Authentication Protocol (CHAP), MS-CHAP, or Password Authentication Protocol (PAP), and to specify the order in which CHAP, MS-CHAP, and PAP authentication is selected on the interface, use the **ppp authentication** command an appropriate configuration mode. To disable PPP authentication, use the **no** form of this command.

ppp authentication protocol [protocol [protocol]] {list-name| default}

no ppp authentication

Syntax Description	protocol	Name of the authentication protocol used for PPP authentication. See Table 26: PPP Authentication Protocols for Negotiation, on page 355 for the appropriate keyword. You may select one, two, or all three protocols, in any order.
	list-name	(Optional) Used with authentication, authorization, and accounting (AAA). Name of a list of methods of authentication to use. If no list name is specified, the system uses the default. The list is created with the aaa authentication ppp command.
	default	(Optional) Specifies the name of the list of methods created with the aaa authentication ppp command.

Command Default PPP authentication is not enabled.

Command Modes Dynamic template configuration

Command History	Release	Modification
	Release 3.9.0	This command was introduced.
	Release 4.2.0	This command was supported in the dynamic template configuration mode for BNG.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

When you enable CHAP or PAP authentication (or both), the local router requires the remote device to prove its identity before allowing data traffic to flow. PAP authentication requires the remote device to send a name and a password, which is checked against a matching entry in the local username database or in the remote security server database. CHAP authentication sends a challenge message to the remote device. The remote device encrypts the challenge value with a shared secret and returns the encrypted value and its name to the local router in a response message. The local router attempts to match the remote device's name with an associated secret stored in the local username or remote security server database; it uses the stored secret to encrypt the original challenge and verify that the encrypted values match.

You can enable CHAP, MS-CHAP, or PAP in any order. If you enable all three methods, the first method specified is requested during link negotiation. If the peer suggests using the second method, or refuses the first method, the second method is tried. Some remote devices support only one method. Base the order in which you specify methods on the remote device's ability to correctly negotiate the appropriate method, and on the level of data line security you require. PAP usernames and passwords are sent as clear text strings, which can be intercepted and reused.

To enter the dynamic template configuration mode, run **dynamic-template** command in the global configuration mode.

If you use a *list-name* value that was not configured with the **aaa authentication ppp** command, then authentication does not complete successfully and the line does not come up.

Table 26: PPP Authentication Protocols for Negotiation, on page 355 lists the protocols used to negotiate PPP authentication.

Table 26: PPP Authentication Protocols for Negotiation

Protocol	Description
chap	Enables CHAP on an interface.
ms-chap	Enables Microsoft's version of CHAP (MS-CHAP) on an interface.
рар	Enables PAP on an interface.

Enabling or disabling PPP authentication does not affect the ability of the local router to authenticate itself to the remote device.

MS-CHAP is the Microsoft version of CHAP. Like the standard version of CHAP, MS-CHAP is used for PPP authentication. In this case, authentication occurs between a personal computer using Microsoft Windows NT or Microsoft Windows 95 and a Cisco router or access server acting as a network access server.

Enabling or disabling PPP authentication does not affect the local router authenticating itself to the remote device.

D

Task ID	Operations
ppp	read, write
aaa	read, write

Examples

This is an example of configuring the **ppp authentication** command:

RP/0/RSP0/CPU0:router# configure

```
RP/0/RSP0/CPU0:router(config)# dynamic-template type ppp p1
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ppp authentication chap ms-chap pap
```

ppp authentication (BNG), on page 354	Sets PPP link authentication method.

ppp max-bad-auth (BNG)

To configure a PPP interface not to reset itself immediately after an authentication failure but instead to allow a specified number of authentication retries, use the **ppp max-bad-auth** command in the appropriate configuration mode. To reset to the default of immediate reset, use the **no** form of this command.

ppp max-bad-auth retries

no ppp max-bad-auth

Syntax Description	retries	Number of retries after which the interface is to reset itself. Range is from 0 to 10. Default is 0 retries.	
Command Default	retries: 0		
Command Modes	Dynamic template of	configuration	
Command History	Release	Modification	
	Release 3.9.0	This command was introduced.	
	Release 4.2.0	This command was supported in the dynamic template configuration mode for BNG.	
Usage Guidelines		d, you must be in a user group associated with a task group that includes appropriate task p assignment is preventing you from using a command, contact your AAA administrator	
	The ppp max-bad-auth command applies to any interface on which PPP encapsulation is enabled.		
	To enter the dynamic mode.	e template configuration mode, run dynamic-template command in the global configuration	
Task ID	Task ID	Operations	
	ppp	read, write	
	aaa	read, write	

Examples

This example shows how to allow two additional retries after an initial authentication failure in the dynamic template configuration mode:

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# dynamic-template type ppp p1
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ppp max-configure 5

ppp max-configure (BNG)

To specify the maximum number of configure requests to attempt (without response) before stopping the requests, use the **ppp max-configure** command in an appropriate configuration mode. To disable the maximum number of configure requests and return to the default, use the **no** form of this command.

ppp max-configure retries

no ppp max-configure

Syntax Description	retries	Maximum number of retries. Range is 4 through 20. Default is 10.
Command Default	retries: 10	
Command Modes	Dynamic template conf	iguration
Command History	Release	Modification
	Release 3.9.0	This command was introduced.

RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ppp timeout absolute 56
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ppp timeout authentication 4
RP/0/RSP0/CPU0:router(config-dynamic-template-type)# ppp timeout retry 5
```

Related Commands

Command	Description
ppp authentication (BNG), on page 354	Sets PPP link authentication method.

show ppp interfaces (BNG)

To display PPP state information for an interface, use the show ppp interfaces command in EXEC mode.

show ppp interfaces [brief| detail] {all| type interface-path-id| location node-id}

Syntax Description	brief	(Optional) Displays brief output for all interfaces on the router, for a specific POS interface instance, or for all interfaces on a specific node.
	detail	(Optional) Displays detailed output for all interfaces on the router, for a specific interface instance, or for all interfaces on a specific node.
	type	Interface type. For more information, use the question mark (?) online help function.
	interface-path-id	Physical interface or virtual interface.
		Note Use the show interfaces command to see a list of all interfaces currently configured on the router.
		For more information about the syntax for the router, use the question mark (?) online help function.
	all	(Optional) Displays detailed PPP information for all nodes.
	location node-id	(Optional) Displays detailed PPP information for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.
Command Default	No default behavior or values	
Command Modes	EXEC	
Command History	Release	Modification
	Release 3.9.0	This command was introduced.
	Release 4.2.0	This command was supported in the dynamic template configuration

mode for BNG.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

There are seven possible PPP states applicable for either the Link Control Protocol (LCP) or the Network Control Protocol (NCP).

The command output displays a summary of the interface as it is in the PPP Interface Descriptor Block (IDB). The output includes the following information (where applicable):

- Interface state
- Line protocol state
- Link Control Protocol (LCP) state
- Network Control Protocol (NCP) state
- Multilink PPP state
- Multilink PPP configuration
- Keepalive configuration
- Authentication configuration
- Negotiated MRUs
- Negotiated IP addresses

This command can display information for a single interface, all interfaces on a specified node, or all interfaces on the router.

Task ID	Task ID	Operations
	ppp	read

Examples

This example shows how to display PPP state information for a POS interface:

RP/0/RSP0/CPU0:router# show ppp interface POS 0/2/0/3

```
POS0/2/0/3 is up, line protocol is up
 LCP: Open
     Keepalives enabled (10 sec)
     Local MRU: 4470 bytes
     Peer MRU: 4470 bytes
  Authentication
               CHAP (Completed as 'test-user')
     Of Us:
     Of Peer: PAP (Completed as 'peer-user')
  CDPCP: Listen
  IPCP: Open
     Local IPv4 address: 55.0.0.1
     Peer IPv4 address: 55.0.0.2
Peer DNS Primary: 55.0.0.254
     Peer DNS Secondary: 155.0.0.254
  IPV6CP: Open
     Local IPv6 address: fe80::3531:35ff:fe55:5747/128
```

Peer IPv6 address: fe80::3531:35ff:fe55:4213/128 MPLSCP: Stopped

This example shows how to display PPP state information for a POS interface that is running as a Layer 2 attachment circuit:

RP/0/0/CPU0:# show ppp interface POS0/2/0/2

POS0/2/0/2 is up, line protocol is up LCP: Open Running as L2 AC This example shows how to display PPP state information for a multilink interface:

RP/0/RSP0/CPU0:router:# show ppp interface Multilink 0/3/0/0/100

```
Multilink0/3/0/0/100 is up, line protocol is down
  LCP: Open
     SSO-State: Standby-Up
     Keepalives disabled
  IPCP: Open
     SSO-State: Standby-Up
     Local IPv4 address: 100.0.0.1
     Peer IPv4 address: 100.0.0.2
  IPV6CP: Open
     Local IPv6 address: fe80::3531:35ff:fe55:4600/128
     Peer IPv6 address: fe80::3531:35ff:fe55:3215/128
  Multilink
     Local MRRU: 1500 bytes
Peer MRRU: 1500 bytes
     Local Endpoint Discriminator: 1234567812345678
     Peer Endpoint Discriminator: 1111222233334444
     MCMP classes: Local 4, Remote 2
     Member links: 2 active, 6 inactive (min-active 2)
   - Serial0/3/1/3/1 ACTIVE
       - Serial0/3/1/3/2 ACTIVE
       - Serial0/3/1/3/3
                           INACTIVE : LCP not negotiated
                           INACTIVE : Mismatching peer endpoint
       - Serial0/3/1/3/4
                           INACTIVE : Mismatching peer auth name
       - Serial0/3/1/3/5
       - Serial0/3/1/3/6
                           INACTIVE : MRRU option rejected by Peer
       - Serial0/3/1/3/7
                           INACTIVE : Mismatching local MCMP classes
         Serial0/3/1/3/8 INACTIVE : MCMP option rejected by peer
```

This example shows how to display PPP state information for a serial interface:

RP/0/RSP0/CPU0:router# show ppp interface Serial 0/3/1/3/1

Serial0/3/1/3/1 is down, line protocol is down LCP: Open SSO-State: Standby-Up Keepalives enabled (10 sec) Local MRU: 1500 bytes Peer MRU: 1500 bytes Local Bundle MRRU: 1500 bytes Peer Bundle MRRU: 1500 bytes Local Endpoint Discriminator: 1234567812345678 Peer Endpoint Discriminator: 1111222233334444 Local MCMP Classes: Not negotiated Remote MCMP Classes: Not negotiated Authentication Of Us: CHAP (Completed as 'test-user') Of Peer: PAP (Completed as 'peer-user') Multilink Multilink group id: 100 Member status: ACTIVE

Field	Description
Ack-Rcvd	Configuration acknowledgemt was received; waiting for peer to send configuration request.
Ack-Sent	Configuration acknowledgemt was sent; waiting for peer to respond to configuration request.
Authentication	Type of user authentication configured on the local equipment and on the peer equipment. Possible PPP authentication protocols are Challenge Handshake Authentication Protocol (CHAP), MS-CHAP, and Password Authentication Protocol (PAP).
Closed	Lower layer is up, but this layer is not required.
Closing	Shutting down due to local change.
Initial	Connection is idle.

Table 27: show ppp interfaces Field Descriptions

Field	Description
IPCP	IP Control Protocol (IPCP) state. The seven possible states that may be displayed are as follows:
	• Initial—Lower layer is unavailable (Down), and no Open has occurred. The Restart timer is not running in the Initial state.
	• Starting—An administrative Open has been initiated, but the lower layer is still unavailable (Down). The Restart timer is not running in the Starting state. When the lower layer becomes available (Up), a Configure-Request is sent.
	• Closed— IPCP is not currently trying to negotiate.
	• Stopped—A Terminate-Request has been sent and the Restart timer is running, but a Terminate-Ack has not yet been received.
	Closing—A Terminate-Request has been sent and the Restart timer is running, but a Terminate-Ack has not yet been received. Upon reception of a Terminate-Ack, the Closed state is entered. Upon the expiration of the Restart timer, a new Terminate-Request is transmitted, and the Restart timer is restarted. After the Restart timer has expired Max-Terminate times, the Closed state is entered.
	• Stopping—A Terminate-Request has been sent and the Restart timer is running, but a IPCP-Ack has not yet been received. Req-Sent.
	• ACKsent—IPCP has received a request and has replied to it.
	• ACKrcvd—IPCP has received a reply to a request it sent.
	• Open—IPCP is functioning properly.
Keepalive	Keepalive setting and interval in seconds for echo request packets.

Field	Description
LCP	Indicates the current state of LCP. The state of the LCP will report the following states:
	• Initial—Lower layer is unavailable (Down), and no Open has occurred. The Restart timer is not running in the Initial state.
	• Starting—An administrative Open has been initiated, but the lower layer is still unavailable (Down). The Restart timer is not running in the Starting state. When the lower layer becomes available (Up), a Configure-Request is sent.
	• Closed— LCP is not currently trying to negotiate.
	• Stopped—A Terminate-Request has been sent and the Restart timer is running, but a Terminate-Ack has not yet been received.
	• Closing—A Terminate-Request has been sent and the Restart timer is running, but a Terminate-Ack has not yet been received. Upon reception of a Terminate-Ack, the Closed state is entered. Upon the expiration of the Restart timer, a new Terminate-Request is transmitted, and the Restart timer is restarted. After the Restart timer has expired Max-Terminate times, the Closed state is entered.
	• Stopping—A Terminate-Request has been sent and the Restart timer is running, but a Terminate-Ack has not yet been received. Req-Sent.
	• ACKsent—LCP has received a request and has replied to it.
	• ACKrcvd—LCP has received a reply to a request it sent.
	• Open—LCP is functioning properly
Local IPv4 address	IPv4 address for the local interface.
Local MRU	Maximum receive unit. The maximum size of the information transported, in bytes, in the PPP packet received by the local equipment.
Open	Connection open.

Field	Description
OSICP	Open System Interconnection Control Protocol (OSICP) state. The possible states that may be displayed are as follows:
	• Initial—Lower layer is unavailable (Down), and no Open has occurred. The Restart timer is not running in the Initial state.
	• Starting—An administrative Open has been initiated, but the lower layer is still unavailable (Down). The Restart timer is not running in the Starting state. When the lower layer becomes available (Up), a Configure-Request is sent.
	 Closed—OSICP is not currently trying to negotiate.
	• Stopped—A Terminate-Request has been sent and the Restart timer is running, but a Terminate-Ack has not yet been received.
	• Closing—A Terminate-Request has been sent and the Restart timer is running, but a Terminate-Ack has not yet been received. Upon reception of a Terminate-Ack, the Closed state is entered. Upon the expiration of the Restart timer, a new Terminate-Request is transmitted, and the Restart timer is restarted. After the Restart timer has expired Max-Terminate times, the Closed state is entered.
	• Stopping—A Terminate-Request has been sent and the Restart timer is running, but a Terminate-Ack has not yet been received. Req-Sent.
	• ACKsent—OSICP has received a request and has replied to it.
	 ACKrcvd—OSICP has received a reply to a request it sent.
	• Open—OSICP is functioning properly.
Peer IPv4 address	IPv4 address for the peer equipment.
Peer MRU	Maximum receive unit. The maximum size of the information transported, in bytes, in the PPP packet received by the peer equipment.
Req-Sent	Configuration request was sent; waiting for peer to respond.

Field	Description
Starting	This layer is required, but lower layer is down.
Stopped	Listening for a configuration request.
Stopping	Shutting down as a result of interactions with peer.

show ppp statistics

To display the statistics information for PPP interfaces, use the show ppp statistics command in EXEC mode.

show ppp statistics {extended| {location| location} | interface| {interface-type| interface-path-id} | summary|
{location| location}}

Syntax Description	extended	Displays the extended PPP statistics across all interfaces.
	interface	Displays the PPP statistics for a single interface.
	summary	Displays aggregated PPP statistics across all interfaces.
	location	Displays the PPP statistics for interfaces at a location.
	location	Specifies the location details.
	type	Interface type. For more information, use the question mark (?) online help function.
	interface-path-id	Physical interface or virtual interface.
		 Note Use the show interfaces command to see a list of all interfaces currently configured on the router. For more information about the syntax for the router, use the question mark (?) online help function.
Command Default	None

PPPoE LAC-Specific Commands

This module describes the Cisco IOS XR software commands used to configure the PPPoE LAC-specific commands for Broadband Network Gateway (BNG) on the Cisco ASR 9000 Series Router. For details regarding the related configurations, refer to the *Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide*.

- l2tp-class, page 388
- 12tp reassembly, page 390
- process-failures switchover, page 391
- redundancy (BNG), page 393
- session-limit (BNG), page 394
- template (BNG), page 396
- tunnel, page 398
- vpdn, page 400
- vpn, page 402
- show l2tpv2, page 404
- show l2tpv2 redundancy, page 406
- show l2tpv2 redundancy mirroring, page 408
- show vpdn, page 410
- show vpdn redundancy, page 412
- show vpdn redundancy mirroring, page 414

l2tp-class

To create the l2tp class that needs to be used for L2TP parameters for the vpdn-group and to enter the l2tp class configuration submode, use the **l2tp-class** command in global configuration mode. To disable this feature, use the **no** form of this command.

12tp-class {c1 | 11 | *l2tp_class_name* } [authentication | congestion-control | digest | hello-interval | hidden | hostname | ip | password | receive-window | retransmit | security | timeout | tunnel]

no l2tp-class

c1	Specifies the l2tp class name.
11	Specifies the l2tp class name.
l2tp_class_name	Specifies the l2tp class name.
authentication	Authenticates the L2TP control connection.
congestion-control	Enables L2Tp congestion control.
digest	Specifies message digest configuration for L2TPv3 control connection.
hello-interval	Hides AVPs in outgoing control messages.
hidden	Sets HELLO message interval.
hostname	Specifies the local hostname for control connection authentication.
ip	Specifies the settings for tunnel.
password	Specifies the password for control connection authentication.
receive-window	Receives the window size for control connection.
retransmit	Specifies the control message retransmission parameters.
security	Specifies the L2TP security command.
timeout	Specifies the control connection timeout parameters.
tunnel	Specifies the tunnel settings.

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

	tunnel, on page 398	Configures l2tp tunnel.

l2tp reassembly

To configure the L2TP reassembly feature on L2TP Access Concentrator (LAC), use the **l2tp reassembly** command in VPDN configuration mode. To disable this feature, use the **no** form of this command.

12tp reassembly no l2tp reassembly Syntax Description This command has no keywords or arguments. **Command Default** None **Command Modes** VPDN configuration **Command History** Release **Modification** Release 4.3.1 This command was introduced. **Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. Use the **vpdn** command in global configuration mode to enter the VPDN configuration mode. When the L2TP reassembly is enabled, the line card supports 2000 concurrent flows in a steady state condition and the traffic rate supported for each line card is 10,000 packets per second (pps), which is 10,000 packet fragments IN per second and 5000 reassembled packets OUT per second. Task ID Task ID Operation tunnel read, write

Examples

This example shows how to enable the L2TP reassembly feature on LAC:

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# vpdn
RP/0/RSP0/CPU0:router(config-vpdn)# 12tp reassembly

Release 4.3.x

process-failures switchover

To force a switchover in case of a process failure, use the **process-failures switchover** command in VPDN redundancy configuration mode.

process-failures switchover

- **Syntax Description** This command has no keywords or arguments.
- Command Default None

Command Modes VPDN redundancy configuration mode

Command History	Release	Modification
	Release 4.3.1	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	tunnel	read, write

Examples

This is an example of enabling process-failures switchover.

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# vpdn
RP/0/RSP0/CPU0:router(config-vpdn)# redundancy
RP/0/RSP0/CPU0:router(config-vpdn-redundancy)# process-failures switchover
RP/0/RSP0/CPU0:router(config-vpdn-redundancy)#

Related Commands	Command	Description
	vpdn, on page 400	Configures VPDN and enters the VPDN sub-configuration mode.
	redundancy (BNG), on page 393	Enables VPDN redundancy and enters the VPDN redundancy configuration mode.

redundancy (BNG)

To enable VPDN redundancy and to enter the VPDN redundancy configuration mode, use the **redundancy** command in VPDN configuration mode. To disable VPDN redundancy, use the **no** form of this command.

redundancy

no redundancy

Syntax Description This command has no keywords or arguments.

Command Default None

Command Modes VPDN configuration mode

Command History	Release	Modification
	Release 4.3.1	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	tunnel	read, write

Examples

This is an example of enabling the vpdn redundancy and entering the vpdn redundancy configuration submode:

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# vpdn
RP/0/RSP0/CPU0:router(config-vpdn)# redundancy
RP/0/RSP0/CPU0:router(config-vpdn-redundancy)#

Related Commands	Command	Description	
	1 7 1 0	Configures VPDN and enters the VPDN sub-configuration mode.	

session-limit (BNG)

To configure maximum simultaneous VPDN sessions, use the **session-limit** command in vpdn configuration mode. To disable this feature, use the **no** form of this command.

session-limit number

no session-limit

Syntax Description	<i>number</i> Specifies the number of sessions and the value can range between 1-131072.		
Command Default	The default and max value	ue for global session-limit is 65536(64k sessions).	
Command Modes	VPDN configuration mo	de	
Command History	Release	Modification	
	Release 4.2.0	This command was introduced.	

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **vpdn** command to enter vpdn configuration submode.

```
      Note
      Per vpdn group session limiting is not supported on LAC.

      If limit is configured after a number of sessions are up, then those sessions remain up irrespective of the limit and new sessions will not come up based on the limit. The no form of the command results in removing limits on number of sessions and new sessions are accepted by vpdn.

      Task ID
      Task ID

      Task ID
      Operation
read, write

      This is an example of configuring the session-limit command in vpdn configuration mode:
```

RP/0/RSP0/CPU0:router# configure

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference,

Release 4.3.x

RP/0/RSP0/CPU0:router(config)# vpdn
RP/0/RSP0/CPU0:router(config-vpdn)# session-limit 567

template (BNG)

To configure the VPDN template and enter the vpdn template configuration mode, use the **template** command in vpdn configuration mode. To disable vpdn template, use the **no** form of this command.

template *vpdn-template_name* {description| caller-id| ip| dsl-line-forwarding| ipv4| l2tp-class| tunnel| vpn} no template

Syntax Description

vpdn-template_name	Specifies the vpdn template name.
description	Specifies the description of the vpdn template.
caller-id	Specifies the options to apply on calling station id.
ip	Specifies the tos ip value.
dsl-line-forwarding	Enables dsl line information forwarding.
ipv4	Specifies the ipv4 settings for tunnel.
l2tp-class	Specifies the l2tp class name.
tunnel	Specifies the l2tp tunnel commands.
vpn	Specifies the vpn id/vrf name.

Command Default None

Command Modes VPDN configuration mode

Command History Release Modification Release 4.2.0 This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **vpdn** command, to enter vpdn configuration submode.

Release 4.3.x

Task ID	Task ID	Operation
	tunnel	read, write

Examples

This is an example of configuring the **template** command in vpdn configuration mode:

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# vpdn
RP/0/RSP0/CPU0:router(config-vpdn)# template temp1
RP/0/RSP0/CPU0:router(config-vpdn-temp)#

tunnel

To configure the amount of time that the peer will be put in a dead cache, use the **tunnel** command in vpdn template configuration mode. To disable this feature, use the **no** form of this command. tunnel busy list timeout timeout value no tunnel Syntax Description Specifies the amount of time in seconds that the peer will remain in dead cache. timeout value This value ranges from 60 to 65535. **Command Default** None **Command Modes** VPDN template configuration **Command History** Release Modification Release 4.2.0 This command was introduced. **Usage Guidelines** To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. Use the vpdn template command to enter vpdn template configuration submode. Task ID Task ID Operation tunnel read, write Examples This is an example of configuring the **tunnel** command in vpdn template configuration mode: RP/0/RSP0/CPU0:router# configure RP/0/RSP0/CPU0:router(config) # vpdn template RP/0/RSP0/CPU0:router(config-vpdn-template) # tunnel busy list timeout 56

Release 4.3.x

Related Commands

Command	Description
vpdn, on page 400	Configures VPDN and to enter the VPDN sub-configuration mode.

vpdn

To configure VPDN and to enter the VPDN configuration submode, use the **vpdn** command in global configuration mode. To disable vpdn, use the **no** form of this command.

vpdn{caller-id| history| l2tp| logging| session-limit| softshut| template} no vpdn

Syntax Descriptioncaller-idSpecifies the option		Specifies the options to apply on calling station id.	
	history	Enables VPDN history logging.	
	l2tp	Specifies the l2tpv2 protocol commands.	
	logging	Enables logging for VPDN.	
	session-limit	Allows to configure maximum simultaneous VPDN sessions.	
	softshut	Specifies that a new session is no longer allowed.

pado delay

To set a delay for a PPPoE Active Discovery Offer (PADO) message for a particular PPPoE BBA-Group, use the **pado delay** command in PPPoE BBA-Group configuration mode. To disable the PADO delay configuration, use the **no** form of this command.

pado delay delay

no pado delay

Control Description			
Syntax Description	delay	Delay value for PADO message, in milliseconds.	
		The range is from 0 to 10000.	
Command Default	None		
Command Modes	PPPoE BBA-Group configuration		
Command History	Release	Modification	
	Release 4.3.1	This command was introduced.	
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance. Setting a value of 0 for <i>delay</i> means that no transmission delay is set for PADO message. Setting a value of 10000 means that an infinite delay is set for PADO message or in other words, PADO message is never sent.		
Task ID	Task ID	Operation	
	ррр	read, write	
Examples	RP/0/RSP0/CPU0:rout RP/0/RSP0/CPU0:rout	ow to configure a delay of 1000 milliseconds for the PADO message: er# configure er(config)# pppoe bba-group bba1 er(config-bbagroup)# pado delay 1000	

Related Commands

Command	Description
pado delay circuit-id, on page 420	Configures a delay for PPPoE PADO message for a PPPoE BBA-Group in BNG, based on the Circuit-ID received in PADI message.
pado delay remote-id, on page 422	Configures a delay for PPPoE PADO message for a PPPoE BBA-Group in BNG, based on the Remote-ID received in PADI message.
pado delay service-name, on page 424	Configures a delay for PPPoE PADO message for a PPPoE BBA-Group in BNG, based on the Service-Name received in PADI message.

pado delay circuit-id

To set a delay for a PPPoE Active Discovery Offer (PADO) message for a particular PPPoE BBA-Group, based on the Circuit-ID received in PPPoE Active Discovery Initiator (PADI) message, use the **pado delay circuit-id** command in PPPoE BBA-Group configuration mode. To disable the PADO delay configuration based on the Circuit-ID, use the **no** form of this command.

pado delay circuit-id {delay | {string | contains} string delay}
no pado delay circuit-id {delay | {string | contains} string delay}

Syntax Description	delay	Delay value for PADO message, in milliseconds, based on the Circuit-ID.
		The range is from 0 to 10000.
	string	Delays the PADO message, when the Circuit-ID string received in PADI message matches the configured <i>string</i> .
	contains	Delays the PADO message, when the Circuit-ID received in PADI message contains the configured <i>string</i> .
	string	String received in PADI message, that needs to be exactly matching the Circuit-ID (when used along with string keyword) or the string received in PADI message, that needs to be contained within the Circuit-ID (when used along with the contains keyword).
Command Default	None	
Command Modes	PPPoE BBA-Group configuration	
Command History	Release	Modification
	Release 4.3.1	This command was introduced.
Usage Guidelines	IDs. If the user group assignment is prev	user group associated with a task group that includes appropriate task venting you from using a command, contact your AAA administrator
	for assistance.	

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference,

Setting a value of 0 for *delay* means that no transmission delay is set for the PADO message. Setting a value of 10000 means that an infinite delay is set for PADO message; or, in other words, the PADO message is never sent.

Within the category of Circuit-ID matches, full string matches are preferred to sub-string matches. If more than one sub-string match occur, the selection is based on a random order.

If there is neither a string match nor a sub-string match, the configured Circuit-ID delay is used (if a Circuit-ID is present in the PADI message), followed by the configured Remote-ID delay (if a Remote-ID is present in the PADI message).

If there are no matches, the configured pado delay is used for PADO message.

Task ID	Task ID	Operation
	ppp	read, write

Examples

This example shows how to configure a delay of 1000 milliseconds for the PADO message:

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pppoe bba-group bba1
RP/0/RSP0/CPU0:router(config-bbagroup)# pado delay circuit-id 1000

This example shows how to configure a delay of 8000 milliseconds for the PADO message, if the Circuit-ID received in the PADI message exactly matches the configured string (circuit1 in this example):

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pppoe bba-group bba1
RP/0/RSP0/CPU0:router(config-bbagroup)# pado delay circuit-id string circuit1 8000

This example shows how to configure a delay of 5000 milliseconds for the PADO message, if the Circuit-ID received in the PADI message contains the configured string (circuit2 in this example):

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pppoe bba-group bba1
RP/0/RSP0/CPU0:router(config-bbagroup)# pado delay circuit-id contains circuit2 5000

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference,

Setting a value of 0 for *delay* means that no transmission delay is set for the PADO message. Setting a value of 10000 means that an infinite delay is set for PADO message; or, in other words, the PADO message is never sent.

Within the category of service-name matches, full string matches are preferred to sub-string matches. If more than one sub-string match occurs, the selection is based on a random order.

If there is neither a string match nor a sub-string match, the configured Circuit-ID delay is used (if a Circuit-ID is present in PADI message), followed by the configured Remote-ID delay (if a Remote-ID is present in PADI message).

If there are no matches, the configured pado delay is used for the PADO message.

Task ID	Task ID	Operation
	ррр	read, write

Examples This example shows how to configure a delay of 8000 milliseconds for the PADO message, if the Service-Name received in the PADI message exactly matches the configured string (service1 in this example):

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pppoe bba-group bba1
RP/0/RSP0/CPU0:router(config-bbagroup)# pado delay service-name string service1 8000

This example shows how to configure a delay of 5000 milliseconds for the PADO message, if the Service-Name received in the PADI message contains the configured string (service in this example):

RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# pppoe bba-group bba1
RP/0/RSP0/CPU0:router(config-bbagroup)# pado delay service-name contains service 5000

Related Commands	Command	Description
	pado delay, on page 418	Configures a specific delay for PPPoE PADO message for a PPPoE BBA-Group in BNG.
	pado delay circuit-id, on page 420	Configures a delay for PPPoE PADO message for a PPPoE BBA-Group in BNG, based on the Circuit-ID received in PADI message.
	pado delay remote-id, on page 422	Configures a delay for PPPoE PADO message for a PPPoE BBA-Group in BNG, based on the Remote-ID received in PADI message.

pppoe bba-group

To add configuration for a particular BBA-Group and to enter the BBA-Group submode, use the **pppoe bba-group** command in global configuration mode. To disable this feature, use the **no** form of this command.

pppoe bba-group *bba-group name*{ac| name| *new_name*| control-packets| priority| *priority_bits*| service| {name| *new_name*| selection| disable}| sessions| {access-interface| circuit-id| mac| mac-iwf| {access-interface| pair| limit}| max| {access-interface| limit| throttle}}| limit| session_limit| tag| {ppp-max-payload| {deny| minimum| *minimum_payload*}}}

no pppoe bba-group

Syntax Description	bba-group-name	Specifies the bba group name.
	ac	Enables modification of the access concentrator configuration.
	name	Indicates the name change to include in the AC tag.
	new_name	Specifies the new name.
	control-packets	Enables change of control-packets configuration.
	priority	Sets the priority to use in PPPoE and PPP control packets.
	priority_bits	Specifies the priority bits for outgoing PPPoE and PPP control packets. This ranges between 0 and 7, where 0 indicates highest priority and 7 indicates the lowest.
	service	Enables modification of service configuration.
	name	Configures the service name.
	new_name	Specifies the new service name.
	selection	Specifies the selection of unrequested service names.
	disable	Disables the advertising of unrequested service names.
	sessions	Enables modification of sessions configuration.
	access-interface	Limits PPPoE sessions on any one access interface.
	circuit-id	Limits PPPoE sessions with any one circuit-id.
	mac	Limits or throttles PPPoE sessions from any one mac-address.

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x

	mac-iwf	Limits or throttles IWF PPPoE sessions from any one mac-address.
	max	Sets a per-card session limit.
	limit	Specifies the action of limiting the PPPoE sessions for various attributes.
	session_limit	Specifies the access-interface session limit. The value ranges from 1 to 65535.
	tag	Enables modification of tag configuration.
	ppp-max-payload	Modifies the ppp-max-payload configuration and allows to configure minimum and maximum payloads.
	deny	Ignores the ppp-max-payload tag.
	minimum	Configures the minimum payload.
	minimum_payload	Specifies the value of the minimum payload. The value ranges from 500 to 2000.
Command Modes	Global configuration mode

Related Commands

Command	Description
pppoe bba-group, on page 426	Enables you to add configuration for a particular bba-group.

pppoe sessions limit

To set a limit for PPPoE sessions in a particular PPPoE BBA-Group, use the **sessions limit** command in PPPoE BBA-Group configuration mode. To remove the specified limit for PPPoE sessions, use the **no** form of this command.

sessions {access-interface| circuit-id| circuit-id-and-remote-id| inner-vlan| {mac| mac-iwf} [access-interface]| max| outer-vlan| remote-id| vlan} limit *limit-value* [threshold *threshold-value*]

no sessions {access-interface| circuit-id| circuit-id-and-remote-id| inner-vlan| {mac| mac-iwf} [access-interface]| max| outer-vlan| remote-id| vlan} limit *limit-value* [threshold *threshold-value*]

Syntax Description	access-interface	Limits PPPoE sessions on any one access interface.
	circuit-id	Limits PPPoE sessions with any one circuit-ID.
	circuit-id-and-remote-id	Limits PPPoE sessions by circuit-id and remote-id.
	inner-vlan	Limits PPPoE sessions with any one inner-vlan id.
	mac	Limits PPPoE sessions from any one mac address.
	mac-iwf	Limits IWF PPPoE sessions from any one mac address.
	max	Sets a per-card session limit.
	outer-vlan	Limits PPPoE sessions with any one outer-vlan id.
	remote-id	Limits PPPoE sessions with any one remote-id.
	vlan	Limits PPPoE sessions with matching vlan ids.
	limit	Specifies the action of limiting the PPPoE sessions for various attributes.
	limit-value	Specifies the session limit value.
		The range is from 1 to 65535. The default is 65535.
	threshold	Specifies the action of generating a log message when the threshold has reached.
	threshold-value	Specifies the threshold value.
		The range is from 1 to 65535.

pppoe sessions throttle, on page 434	Configures a throttle value for PPPoE sessions for a PPPoE BBA-Group in BNG.
show pppoe limits, on page 440	Shows the PPPoE session limit information.

pppoe sessions throttle

To set a throttle value for the PPPoE sessions for a particular PPPoE BBA-Group, use the **sessions throttle** command in PPPoE BBA-Group configuration mode. To remove the specified throttle value for PPPoE sessions, use the **no** form of this command.

sessions {circuit-id| circuit-id-and-remote-id| inner-vlan| mac [access-interface]| mac-iwf access-interface| outer-vlan| remote-id| vlan} throttle *request-count request-period blocking-period*

no sessions {circuit-id| circuit-id-and-remote-id| inner-vlan| mac [access-interface]| mac-iwf access-interface| outer-vlan| remote-id| vlan} throttle request-count request-period blocking-period

Syntax Description	access-interface	Throttles PPPoE sessions based on any one access interface
	circuit-id	Throttles PPPoE sessions with any one circuit-id.
	circuit-id-and-remote-id	Throttles PPPoE sessions by circuit-id and remote-id.
	inner-vlan	Throttles PPPoE sessions with any one inner-vlan id.
	mac	Throttles PPPoE sessions from any one mac address.
	mac-iwf	Throttles Inter-Working Function (IWF) sessions from any one mac address.
	outer-vlan	Throttles PPPoE sessions with any one outer-vlan id.
	remote-id	Throttles PPPoE sessions with any one remote-id.
	vlan	Throttles PPPoE sessions with matching vlan ids.
	throttle	Specifies the action of throttling the PPPoE sessions for various attributes.
	request-count	Specifies the number of session requests allowed before throttling.
	request-period	Specifies the time interval during which the session requests are counted.
	blocking-period	Specifies the time interval during which no more requests from the subscriber are accepted, when the subscriber has already been throttled.

Command Default Sessions throttle is disabled by default.

show pppoe throttles

To show the throttle information for the PPPoE sessions, use the **show pppoe throttles** command in the EXEC mode.

show pppoe throttles [active] [access-interface *type interface-path-id* | **bba-group** *bba-group-name* | **location** *node*]

Syntax Description	active	Shows only those throttles that are currently blocking packets.			
	active				
	access-interface	Shows PPPoE status for all sessions on a single access interface.			
	type	Interface type. For more information, use the question mark (?) online help function.			
	interface-path-id	Physical interface or virtual interface.			
		Note Use the show interfaces command to see a list of all interfaces currently configured on the router.			
		For more information about the syntax for the router, use the question mark (?) online help function.			
	bba-group	Shows throttles for all interfaces with a given bba-group.			
	bba_group_name	Specifies the bba-group name.			
	location	Shows PPPoE status for all sessions at a location.			
	node	Specifies the fully qualified location specification.

Command History

Release	Modification	
Release 4.2.0	This command was introduced.	
Release 4.3.1	The command output was extended for the throttle for circuit-id , remote-id , inner-vlan , outer-vlan , vlan and circuit-id-and-remote-id .	

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes the proper task IDs. If you suspect user group assignment is preventing you from using a command, contact your AAA administrator for assistance. Task ID Task ID Operation read ppp Examples This is the sample output of the **show pppoe throttles** command: RP/0/RSP0/CPU0:router# show pppoe throttles location 0/2/cpu0 BBA-Group TEST MAC throttle information: Max packets per request period: 5 Request period duration: 20s Blocking period duration: 5s Time Since MAC Address State left reset PADI PADR aabb.ccdd.1123 Idle 30s 16s 0 0 7582.1352.e29a Monitor 3s 20s 5 5 7582.1352.e29a Block 4s 17s 6 5 MAC Access-interface throttle information: Max packets per request period: 5 Request period duration: 20s Blocking period duration: 5s Time Since Access-Int MAC Address State left reset PADI PADR GE0/1/0/0 aabb.ccdd.1123 Idle 30s 16s 0 0 GE0/1/0/0 7582.1352.e29a Monitor 3s 20s 5 5 GE0/1/0/0 7582.1352.e29a Block 4s 17s 6 5 MAC IWF throttle information: Max packets per request period: 5 Request period duration: 20s Blocking period duration: 5s Time Since MAC Address State left reset PADI PADR aabb.ccdd.1123 Idle 30s 16s 0 0 7582.1352.e29a Mon 3s 20s 5 5 7582.1352.e29a Block 4s 17s 6 5 BBA-Group TEST2 MAC throttling is not configured. This table describes the significant fields displayed in the show pppoe throttles command output :

Field	Description
Block	Specifies that the throttle is active and that packets are dropped.
Idle	Specifies that the packets relevant to the throttle are not yet received.

Field	Description
Monitor	Specifies that the packets are counted, but the throttle is not yet active.
Time left	Specifies the time remaining until the throttle enters idle state, or if the throttle is already in idle state, the time until the throttle entry is removed.
Since reset	Specifies the time since the throttle counters were last reset. Throttle counters are reset upon entering the idle state.
PADI	Specifies the number of PADI messages received which match the entry criteria (say, mac address).
PADR	Specifies the number of PADR messages received which match the entry criteria (say, mac address).

Related Commands

Command	Description
pppoe sessions throttle, on page 434	Configures a throttle value for PPPoE sessions for a PPPoE BBA-Group in BNG.
show pppoe limits, on page 440	Shows the PPPoE session limit information.
show pppoe interfaces, on page 438	Shows a summary of the protocol state for the specified PPPoE interface filtered by circuit-id, remote-id, interface, or location.
show pppoe statistics, on page 444	Shows the counters for packets received and sent by the PPPoE sessions.
show pppoe summary, on page 447	Shows summary information of the PPPoE sessions.

QOS Commands

This module describes the Cisco IOS XR software commands used to configure the QoS commands for Broadband Network Gateway (BNG) on the Cisco ASR 9000 Series Router. For details regarding the related configurations, refer to the *Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide*.

- qos account, page 454
- qos output minimum-bandwidth, page 456
- service-policy (QoS-BNG), page 458
- service-policy (interface-BNG), page 460
- show qos inconsistency (BNG), page 462
- show qos interface (BNG), page 465
- show qos shared-policy-instance (BNG), page 469
- show qos summary (BNG), page 472

qos account

To enable QoS Layer 2 overhead accounting, use the qos account command in dynamic template configuration mode. To disable this gos account, use the **no** form of this command.

qos account[AAL5|user-defined offset atm] [mux-1483 routed|mux-dot1q-rbe|mux-pppoa|mux-rbe|snap-1483routed|snap-dot1q-rbe|snap-pppoa|snap-rbe] no qos account

Syntax Description

Syntax Description	AAL5	Specifies AAL5 for qos.
	user-defined	Specifies the user-defined keyword.
	offset	Specifies the user-defined offset size.
	atm	Adds ATM cell tax to the L2 overhead.
	mux-1483 routed	Specifies the mux-1483 routed.
	mux-dot1q-rbe	Specifies the mux-dot1q-rbe.
	mux-pppoa	Specifies the mux-pppoa.
	mux-rbe	Specifies the mux-rbe.
	snap-1483routed	Specifies the snap-1483routed.
	snap-dot1q-rbe	Specifies the snap-dot1q-rbe.
	snap-pppoa	Specifies the snap-pppoa
	snap-rbe	Specifies the snap-rbe.
Command Default	None

Command	Description
qos account, on page 454	Enables QoS Layer 2 overhead accounting.

service-policy (QoS-BNG)

To enable the QoS policy on a parent S-VLAN, or to enable ingress and egress VLAN policies on an access-interface, use the **service-policy** command in the interface configuration mode. To disable this feature, use the **no** form of this command.

Egress S-VLAN Policy:

service-policy output service_policy_name subscriber-parent [resource-id value]
no service-policy output service_policy_name subscriber-parent [resource-id value]

Ingress and Egress VLAN Policies:

service-policy {input | output} service_policy_name
no service-policy {input | output} service_policy_name

Syntax Description	input	Attaches the specified service-policy to the ingress direction.	
	output	Attaches the specified service-policy to the egress direction.	
	service_policy_name	Name of the input or output service-policy.	
	subscriber-parent	Configures an S-VLAN policy.	
		Note This keyword applies only to the egress direction.	
	resource-id	Specifies a resource ID that allows to map the desired chunk to be used for this S-VLAN and all the subscribers under it.	
		Note This keyword applies only to an S-VLAN policy and not to VLAN policy.	
	value	The resource ID value that ranges from 0-3.	
Command Default	None		
Command Modes	Interface configuration		
Command History	Release	Modification	
	Release 4.2.0	This command was introduced.	

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference,

Release	Modification
Release 4.3.0	Support for the resource-id keyword was added.
Release 4.3.1	Support for the ingress and egress VLAN policies on an access interface was added.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes the proper task IDs. If you suspect user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

If the **resource-id** option is not specified, then the S-VLAN policy and all the subscribers under it are assigned to the default chunk, which its parent interface is associated with.

The VLAN policy needs to be attached to the access interfaces, before bringing up the sessions with the QoS policy. It is recommended that you do not remove VLAN policies when sessions are already active.

You cannot make non-rate modifications when sessions are already active on the access-interface. To make non-rate modifications to the VLAN policy, you must bring down the sessions that are brought up over the access-interface, modify the policy, and then bring up the sessions again over the access-interface.

Task ID	Task ID	Operation
	qos	read, write

Examples This example shows how to configure an egress S-VLAN policy using the **service-policy** command, with **subscriber-parent** keyword, in the interface configuration mode:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# interface bundle-ether 18.12
RP/0/RSP0/CPU0:router(config-subif)# service-policy output svlan-policy subscriber-parent
resource-id 1
```

This example shows how to configure an ingress VLAN policy on an access-interface:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# interface bundle-ether 18.203
RP/0/RSP0/CPU0:router(config-subif)# service-policy input mark
```

This example shows how to configure an egress VLAN policy on an access-interface:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)# interface bundle-ether 18.203
RP/0/RSP0/CPU0:router(config-subif)# service-policy output metering
```

Cuntax Description

service-policy (interface-BNG)

To attach a policy map to an input interface or output interface to be used as the service policy for that interface, and optionally multiple subinterfaces, use the **service-policy** command in the appropriate configuration mode. To remove a service policy from an input or output interface, use the **no** form of the command.

service-policy {input| output} policy-map [shared-policy-instance instance-name]
no service-policy {input| output} policy-map [shared-policy-instance instance-name]

Syntax Description	input	Attaches the specified policy map to the input interface.	
	output	Attaches the specified policy map to the output interface.	
	policy-map	Name of a service policy map (created using the policy-map command) to be attached.	
	shared-policy-instance	(Optional) Allows sharing of QoS resources across multiple subinterfaces.	
		Note Sharing across multiple physical interfaces is not supported.	
	instance-name	(Optional) String of up to 32 characters to identify the shared policy instance.	
Command Modes Command History	No service policy is specified Dynamic template configura Release		
	Release 3.7.2	This command was introduced.	
	Release 3.9.0	This command was updated to support shared policy instance over bundle interfaces.	
	Release 3.6.0	The command was supported in Layer 2 transport configuration mode.	
	Release 4.3.0	The command was supported in dynamic template configuration mode in BNG.	

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Command Reference, Release 4.3.x You can attach a single policy map to one or more interfaces to specify the service policy for those interfaces. The class policies composing the policy map are then applied to packets that satisfy the class map match criteria for the class. To apply a new policy to an interface, you must remove the previous policy. A new policy cannot replace an existing policy.

To enter the dynamic template configuration mode, run **dynamic-template** command in the global configuration mode.

Task ID	Task ID	Operations
	qos	read, write

Examples

This example shows policy map policy 1 applied in the dynamic template configuration mode.

RP/0/RSP0/CPU0:router(config)#dynamic-template type ppp p1 RP/0/RSP0/CPU0:router(config-dynamic-template-type)#service-policy policy1 shared-policy-instance subscriber1 RP/0/RSP0/CPU0:router(config-dynamic-template-type)#exit

RP/0/RSP0/CPU0:router(config)# dynamic-template type ipsubscriber ipsub1 RP/0/RSP0/CPU0:router(config-dynamic-template-type)# service-policy output policy1 shared-policy-instance subscriber1

show qos inconsistency (BNG)

To display inconsistency information for the QoS policy on an interface, use the **show qos inconsistency** command in EXEC mode.

show qos inconsistency {**detail** *warning-type* {**file** *filename*| **location** *node-id*}| **summary** {**file** *filename*| **location** *node-id*}}

Syntax Description	detail	Displays interface and policy name details of the inconsistency.
	warning-type	Selects the warning types to display:
		• 0—All warning types
		• 1—ANCP - No shaper at top policy map
		• 2—ANCP - Multiple classes at top policy map
		• 3—ANCP - Downstream rate less than shaper rate
		• 4—ANCP - Downstream rate more than port speed
		• 5—ANCP - Policy resolution failure
		• 6—ANCP - Traffic manager program failure
		• 7—Port speed - Policy resolution failure
		• 8—Port speed - Traffic manager program failure
		• 9—Bundle member addition failure
		• 10—Interface state not matching system configuration
	file filename	Specify a file name, such as disk0:tmp.log or bootflash:.
	location node-id	Displays detailed QoS information for the designated node. The <i>node-id</i> argument is entered in the rack/slot/module notation.
	summary	Displays summary counts of QoS inconsistency warnings.
Command Default	None	
Command Modes	EXEC	
Command History	Release	Modification
	Release 3.7.2	This command was introduced.

Command

show qos interface (BNG), on page 465

DescriptionDisplays QoS information for a specific interface.

show qos interface (BNG)

To display QoS information for a specific interface, use the show qos interface command in the EXEC mode.

show qos interface type interface-path-id {input| output} [host-link interface-path-id| location node-id]

Syntax Description	type	Interface type. For more information, use the question mark (?) online help function.
	interface-path-id	Either a physical interface instance or a virtual interface instance as follows:
		• Physical interface instance. Naming notation is <i>rack/slot/module/port</i> and a slash between values is required as part of the notation.
		• rack : Chassis number of the rack.
		• <i>slot</i> : Physical slot number of the modular services card or line card.
		 <i>module</i> : Module number. A physical layer interface module (PLIM) is always 0.
		• <i>port</i> : Physical port number of the interface.
		Note In references to a Management Ethernet interface located on a route processor card, the physical slot number is alphanumeric (RSP0 RP0 or RP1) and the module is CPU0. Example: interface MgmtEth0/ RSP0 RP1 /CPU0/0.
		• Virtual interface instance. Number range varies depending on interface type.
		For more information about the syntax for the router, use the question mark (?) online help function.
	input	Attaches the specified policy map to the input interface.
	output	Attaches the specified policy map to the output interface.
	host-link	Specifies the host-link

Use the **host-link** option to display the output for the desired Bundle ICL. In cases when the Satellite is hosted on a redundant (Bundle ICL), the qos command to check for the qos programming also needs to include the host-link option.

The host-link is the underlying ICL Bundle member, this output can be executed for all the members belonging to the ICL Bundle via the host-link option.

For eg, Bundle ICL, Bundle-ether 2, hosting the sat-ether interface gig 100/0/0/34 has a member tengige 0/3/0/7. The qos command to check for the qos programming would be:

```
RP/0/RSP0/CPU0:router # sh qos inter gigabitEthernet 100/0/0/34 output host-link tenGigE
0/3/0/7 location 0/3/CPU0
Interface: GigabitEthernet100_0_0_34 output

show qos shared-policy-instance (BNG)

To list interface details for a specific location of a specific shared policy instance, attached to either an input or output interface, use the **show qos shared-policy-instance** command in EXEC mode.

show qos shared-policy-instance instance-name {input| output} location node-id

Syntax Description	instance name	String of up to 22 shorestors to identify the shored policy instance
-,	instance-name	String of up to 32 characters to identify the shared policy instance.
	input	Displays details for the shared policy instance attached to the input interface.
	output	Displays details for the shared policy instance attached to the output interface
	location node-id	Location of node. The node-id argument is entered in <i>rack/slot/module</i> notation.
Command Default	None	
Command Modes	EXEC	
Command History	Release	Modification
	Release 3.7.2	This command was introduced.
	Release 3.9.0	This command was updated to support shared policy instance over bundle interfaces.
	Release 4.3.0	The command was supported in BNG.
Usage Guidelines		a must be in a user group associated with a task group that includes appropriate task gnment is preventing you from using a command, contact your AAA administrator
	To enter the dynamic temp mode.	late configuration mode, run dynamic-template command in the global configuration
Task ID	Task ID	Operations
	qos	read, write

Examples

This example shows the results of the command to show details of the shared policy instance attached to the input interface at location 0/RSP0/CPU0:

show qos summary (BNG)

To list the interfaces at a specific location, use the show qos summary command in EXEC mode.

show qos summary [shared-policy-instance *instance-name* **location** *rack/slot/module/interface.subinterface*| **police [interface** *type instance*| **location** [*rack/slot/module/interface.subinterface*| *location-name*]]| **policy** *policy-name* [**interface** *type instance*| **location** *node-location*]| **queue** [**interface** *type instance*| **location** *node-location*]]

Syntax Description	shared-policy-instance instance-name	String of up to 32 characters to identify the shared policy instance.
	location <i>rack/slot/module/</i> <i>interface.subinterface</i>	Location of node in format rack/slot/module/interface.subinterface.
	police	Show policer interface statistics.
	interface type instance	Interface type and number.
	location location-name	String to identify the fully qualified location specification.
	policy policy-name	String to identify the policy.
	location node-location	Identifies fully qualified location specification.
	queue	Show queue statistics.

Command Modes EXEC

Command History

Release	Modification
Release 3.7.2	This command was introduced.
Release 4.3.0	The command was supported in dynamic template configuration mode in BNG.

Usage Guidelines

Release 4.3.x

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

To enter the dynamic template configuration mode, run **dynamic-template** command in the global configuration mode.

This example shows the results of the command to show interfaces at location 0/RSP0/CPU0 for a shared-policy-instance:			
instancetwo location			

OL-28446-03

Show Subscriber Commands

This module describes the Cisco IOS XR software commands used to configure the Show subscriber commands for Broadband Network Gateway (BNG) on the Cisco ASR 9000 Series Router. For details regarding the related configurations, refer to the *Cisco ASR 9000 Series Aggregation Services Router Broadband Network Gateway Configuration Guide*.

- show subscriber database, page 476
- show subscriber manager statistics, page 481
- show subscriber running-config, page 484
- show subscriber session, page 486
- clear subscriber session, page 490

show subscriber database

To display the configuration details of subscriber database, use the **show subscriber database** command in the EXEC mode.

show subscriber database {association |configuration |connection |interface |statistics summary }

Syntax Description	association	Displays the association between subscriber sessions and dynamic templates.	
	configuration	Displays the configuration database information.	
	connection	Displays subscriber client connection identifiers.	
	interface	Displays the mapping between subscriber labels and interface handles.	
	statistics	Displays the show subscriber database statistics information.	
	summary	Displays the show subscriber database summary counts.	
Command Default	None		
Command Modes	EXEC		
Command History	Release	Modification	
	Release 4.2.0	This command was introduced.	
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes the proper tas IDs. If you suspect user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Examples

This is the sample output of the **show subscriber manager statistics** command in the EXEC mode:

RP/0/RSP0/CPU0:router# show subscriber manager statistics summary total The show subscriber manager statistics output is as follows:

Wed Jan 23 09:57:41.855 GMT [IEDGE SUMMARY STATISTICS] Location: 0/0/CPU0 IEDGE SUMMARY _____ Control Policy errors Subscriber control policy not applied on interface = 0No class match in Start Request = 0Attribute format warnings NAS Port = 0 = 0 NAS Port id Destination station id = 0 = 0 Calling station id = 0 User Name User Profile Statistics User Profile Install = 0 = 0 User Profile Install errors = 0 User Profile Removes User Profile Errors = 0 Session Disconnect Flow Control Inflight = 0 Queued = 0 Location: 0/1/CPU0 IEDGE SUMMARY _____ Control Policy errors Subscriber control policy not applied on interface = 0 No class match in Start Request = 0Attribute format warnings NAS Port = 72 NAS Port id = 0 = 72 Destination station id = 72 Calling station id User Name = 0 User Profile Statistics = 0 User Profile Install User Profile Install errors = 0 = 0 User Profile Removes User Profile Errors = 0 Session Disconnect Flow Control Inflight = 0 = 0 Queued

This table describes the significant fields shown in the display.

Table 28: show subscriber manager statistics Field Descriptions

Field	Description
Control Policy errors	Specifies the errors in the control policy.
Attribute format warnings	Specifies the attribute format warnings.
User Profile Statistics	Specifies the user profile statistics.
Session Disconnect Flow Control	Specifies the session disconnect flow control.

show subscriber running-config

To display the subscriber running configuration derived from dynamic template, use the **show subscriber running-config** command in EXEC.

show subscriber running-config {location| subscriber-label}

Syntax Description	location	Displays subscriber database running configuration information for all sessions at specified location.	
	subscriber-label	Allows to enter a hex value subscriber-value that ranges between 0X0-0xffffffff.	
		Specifies the output modifiers.	
Command Default	None		
Command Modes	EXEC		
Command History	Release	Modification	
	Release 4.2.0	This command was introduced.	
Usage Guidelines		ou must be in a user group associated with a task group that includes the proper task group assignment is preventing you from using a command, contact your AAA nce.	
Task ID	Task ID	Operation	
	network	read	
Examples	This is a sample output of the show subscriber running-config command:		
	RP/0/RSP0/CPU0:router# show subscriber running-config Tue Jun 15 09:05:53.769 EDT		
	Session ID: 0x400000 dynamic-template type ipsubscriber T ipv4 unnumbered Lo	EMPL1

show subscriber session

To display the subscriber management session information, use the **show subscriber session** command in the EXEC mode.

show subscriber session {all| debug| filter| subscriber-label}

Syntax Description	all	Displays all subscriber sessions.	
	debug	Displays unique subscriber session selected for debugging.	
	filter	Displays the search results of the subscriber session database based on the filter criteria.	
	subscriber-label	Displays the unique ID of the subscriber session.	
Command Default	None		
Command Modes	EXEC		
Command History	Release	Modification	
	Release 4.2.0	This command was introduced.	
	Release 4.3.1	Added example output for show subscriber session all detail command to display service accounting feature information.	
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes the proper task IDs. If you suspect user group assignment is preventing you from using a command, contact your AAA administrator for assistance.		
Task ID	Task ID	Operation	
	network	read	

Examples

This is the sample output of the **show subscriber session** command in the EXEC mode:

RP/0/RSP0/CPU0:router# show subscriber session all RP/0/RSP0/CPU0:router# show subscriber session all summary location 0/1/CPU0 RP/0/RSP0/CPU0:router# show subscriber session filter vrf vrf1 location 0/1/CPU0 RP/0/RSP0/CPU0:router# show subscriber session subscriber-label 40

This is the sample output of the show subscriber session command:

Wed Jan 23 10:20:58.344 GMT Codes: IN - Initialize, CN - Connecting, CD - Connected, AC - Activated, ID - Idle, DN - Disconnecting, ED - End

This table describes the significant fields shown in the display.

Table 29: show subscriber session Field Descriptions

Field	Description
Туре	Specifies the subscriber session type.
Interface	Specifies the interface type.
State	Specifies the states of the subscriber session such as initiate, connecting, connected, activated, disconnected, idle, end.
Subscriber IP Addr / Prefix LNS Address (Vrf)	Specifies the IP address of the subscriber interface.

This example shows the detailed information about all the subscriber sessions including service accounting information.

RP/0/RSP0/CPU0:router# show subscriber session all detail

clear subscriber session

To clear the subscriber sessions in BNG, use the clear subscriber session command in EXEC mode.

clear subscriber session {**all** | **debug** { **subscriber-label** } | **identifier** { **access-interface** *interface-type interface-instance* | **interface** *interface-type interface-instance* } } [**location** *node-id*]

Syntax Description	all	Clears all subscriber sessions.
	debug subscriber-label	Clears debug tracking of unique subscriber session.
	identifier	Clears the subscriber session information based on the identifier(s) you select.
	access-interface	Clears the subscriber session based on the access interface name.
	interface-type	Specifies the interface type whose subscriber sessions you want to delete.
	interface-instance	Specifies either a physical interface instance or a virtual interface instance that you want to delete.
		The details of the interface instance are as follows:
		• Physical interface instance. Naming notation is <i>rack/slot/module/port</i> and a slash between values is required as part of the notation.
		• rack: Chassis number of the rack.
		• <i>slot</i> : Physical slot number of the modular services card or line card.
		 <i>module</i>: Module number. A physical layer interface module (PLIM) is always 0.
		• port: Physical port number of the interface.
		Note In references to a Management Ethernet interface located on a route processor card, the physical slot number is alphanumeric (RP0 or RP1) and the module is CPU0. Example: interface MgmtEth0/RP1/CPU0/0.
		• Virtual interface instance. Number range varies depending on interface type.
	location	Clears the subscriber session information of a specific location.

	node-id	Specifies the node whose subscriber sessions you want to delete. The node-id argument is entered in the rack/slot/module notation.
Command Default	None	
Command Modes	EXEC	
Command History	Release	Modification
	Release 4.2.0	This command was introduced.
Usage Guidelines	IDs. If the user group assignment is preven for assistance.	er group associated with a task group that includes appropriate task nting you from using a command, contact your AAA administrator
Task ID	Task ID	Operation
Examples	-	ubscriber sessions in a particular node location:
Related Commands	Command	Description
	show subscriber session, on page 486	Displays the subscriber management session information.
