

Release Notes for Cisco RV120W Firmware Version 1.0.3.10

April 2012

Contents

This document includes the following topics:

- [Changes Since Firmware Release 1.0.2.6](#)
- [Known Issues in Release 1.0.3.10](#)
- [Related Information](#)

Changes Since Firmware Release 1.0.2.6

Resolved Issues

Table 1 Resolved Issues in Firmware Version 1.0.3.10

Ref Number	Description
none	Cannot add Static DNS for PPPoE Profiles.
CSCtr39253	Router does not apply new SSL Certificate to HTTPS sessions.
none	The upgrade progress bar does not update when using Internet Explorer to access the management interface.
none	When the country code is set to Europe, only channels 1-11 are displayed.

Known Issues in Release 1.0.3.10

Table 2 Known Issues in Firmware Version 1.0.3.10

Ref Number	Description
CSCts32168	<p>Issue—When the DMZ is enabled, access to a device through the WAN is not allowed.</p> <p>Workaround—Use port forwarding instead.</p>
CSCtn43366	<p>Issue—Microsoft Internet Explorer version 8 accessibility upon reboot issue.</p> <p>Workaround—To prevent problems, clear the web browser cache after the router is upgraded.</p>
CSCtj31483	<p>Issue—When remote management is enabled and a non-standard QVPN port (standard QVPN ports are 443 or 60443) is configured, the QuickVPN client cannot successfully establish a connection.</p> <p>Workaround—Use port 443 or 60443 QVPN port when defining the remote management.</p> <p>NOTE 443 is the default remote management port.</p>
CSCto46996	<p>Issue—PPTP connected/configured users are not shown on the VPN Client Connection Status page.</p> <p>Workaround—Go to the Dashboard page to see the numerical count of connected PPTP users.</p>
CSCts21176	<p>Issue—Enable inter-VLAN option does not work when setting up multiple VLANs at one time.</p> <p>Workaround—Create VLANs individually. Choose Networking > VLAN Membership. Create the new VLAN and enable the Inter-VLAN option. Click Add and add the additional VLANS. Click Save.</p>
CSCts24763	<p>Issue—Changing the MTU value from the default value in the WAN window prevents clients from connecting to the Internet.</p> <p>Workaround—None. Use the default MTU value (1500 bytes) to ensure that clients can connect to the Internet.</p>
CSCtu24324	<p>Issue—QoS Profile Binding does not work properly for a selected service.</p> <p>Workaround—Select the service type Any instead of selecting a particular service when configuring a QoS profile. QoS profile binding is then based on an IP address or a group of IP addresses.</p>

Table 2 Known Issues in Firmware Version 1.0.3.10

Ref Number	Description
CSCtw85203	<p>Issue—The QuickVPN client cannot access the computers in the LAN of the RV120W when the LAN subnet is smaller than a /24 subnet.</p> <p>Workaround—Leave the LAN subnet as a standard /24 subnet.</p>
CSCtx84235	<p>Issue—If a manually-configured NTP server is used, the RV120W does not synchronize with the NTP server after a reboot.</p> <p>Workaround—Use one of the default NTP servers from the drop-down list.</p>
CSCty01349	<p>Issue—When the Access Rules table contains more than 10 rules, the reorder function may not work.</p> <p>Workaround—Delete and re-add the access rules in the desired order.</p>
none	<p>Issue—Configuring Wi-Fi Protected Setup using the push-button configuration method does not work properly.</p> <p>Workaround—Configure WPS using the PIN method.</p>
	<p>Issue—6to4 Tunneling will not work when SLA ID is set to zero.</p> <p>Workaround—User should set a non-zero SLA ID value.</p>
	<p>Issue—6to4 tunneling requires a static route to work.</p> <p>Workaround—Under IPv6 routing, add a static route to point to the destination's IPv4 gateway. For more information on setting up 6to4, see the following Cisco support community document (this can be used with the Cisco RV120W as well as the Cisco RV220W, although menu names and options may differ):</p> <p>https://supportforums.cisco.com/docs/DOC-17069</p>
	<p>Issue—Windows native FTP File transfer fails when using QuickVPN behind NAT on Windows 7.</p> <p>Workaround—Use an FTP Client (for example, FileZilla FTP Client) or configure FTP client in Passive mode.</p>
