

# Release Notes for Cisco WRV210 Wireless-G VPN Router with RangeBooster Firmware Version 2.0.1.5

5/19/2011

These Release Notes describe the changes delivered in the Cisco WRV210 firmware version 2.0.1.5, updated from version 2.0.0.11.

## Upgrading the Firmware

We recommend that you backup the device configuration to a file on another device before upgrading the firmware.

## Open Caveats

**Link Labels Do Not Change Language**—The **About** and **Help** links in the upper-right hand corner of the GUI do not change when the language is changed. (The links do point to and the system does display the correct target URLs.)

- You must enable Windows Firewall on Windows Vista for QuickVPN Client to function properly. (By default, the IPSec service on Vista is disabled when Windows Firewall is disabled.)
- Windows XP SP2 Firewall ICMP packets are dropped when the Firewall is enabled causing the QuickVPN Client to fail to establish a tunnel with the remote QuickVPN Server.

Microsoft has released a patch to fix this issue. After you install the patch, the issue should be resolved.

## Closed Caveats

The following are issues that have been resolved.

- When the router is set to Router mode, the WAN port gets a DHCP IP address.
- The web interface allows an administrator to manually disconnect a QuickVPN client. (Previously the **Disconnect** button had failed to drop the client.)
