WRV54G Firmware v2.39.2 Release Note

2/08/2006
Features added:
- Add HTTPS support for Remote Management
- Support User Defined ports for Remote Administration
- Support PeanutHull DDNS
- Open port 60443 (SSL encrypted) for QuickVPN users in case port forwarding is enabled on port 443.

Issues fixed:
- Modify warning message when the firewall disabled. Now the warning message informs users that Remote Management will be enabled if firewall is disabled. The Remote Management configuration option under Administration->Management is grayed out as a consequence.
- Resolved the issue with falsely enabling SSID broadcast.
- Resolved issues with MAC Clone
- Resolved issue with SNMP traps depending on WAN status
- Forced PPP interface netmask to be /32 at PPPoE connection
- Resolved issue with email alert using MTA
- Resolved issue with NetBIOS broadcast over IPSec tunnel
- Resolved issue where DHCP server always replies by unicast at the link layer
- Resolved the issue with DNS server's reply to QuickVPN Client
- Resolved the issue where QuickVPN cannot work if Domain Name field is left blank
- Added timestamp to SYSLOG messages
- Resolved various issues with Boingo
