

## **clear conn through clear xlate Commands**

---

# clear conn

To clear a specific connection or multiple connections, use the **clear conn** command in privileged EXEC mode. This command supports IPv4 and IPv6 addresses.

```
clear conn [all] [protocol {tcp | udp}] [address src_ip[-src_ip] [netmask mask]]
           [port src_port[-src_port]] [address dest_ip[-dest_ip] [netmask mask]]
           [port dest_port[-dest_port]]
```

## Syntax Description

<b>address</b>	(Optional) Clears connections with the specified source or destination IP address.
<b>all</b>	(Optional) Clears all connections that are to the device or from the device, in addition to through-traffic connections.
<i>dest_ip</i>	(Optional) Specifies the destination IP address (IPv4 or IPv6). To specify a range, separate the IP addresses with a dash (-), For example:  10.1.1.1-10.1.1.5
<i>dest_port</i>	(Optional) Specifies the destination port number. To specify a range, separate the port numbers with a dash (-), For example:  1000-2000
<b>netmask</b> <i>mask</i>	(Optional) Specifies a subnet mask for use with the given IP address.
<b>port</b>	(Optional) Clears connections with the specified source or destination port.
<b>protocol</b> { <b>tcp</b>   <b>udp</b> }	(Optional) Clears connections with the protocol <b>tcp</b> or <b>udp</b> .
<i>src_ip</i>	(Optional) Specifies the source IP address (IPv4 or IPv6). To specify a range, separate the IP addresses with a dash (-), For example:  10.1.1.1-10.1.1.5
<i>src_port</i>	(Optional) Specifies the source port number. To specify a range, separate the port numbers with a dash (-), For example:  1000-2000

## Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Privileged EXEC	•	•	•	•	—

## Command History

Release	Modification
7.0(8)/7.2(4)	This command was introduced.

**Usage Guidelines**

When the security appliance creates a pinhole to allow secondary connections, this is shown as an incomplete conn by the **show conn** command. To clear this incomplete conn use the **clear conn** command.

**Examples**

The following example shows all connections, and then clears the management connection between 10.10.10.108:4168 and 10.0.8.112:22:

```
hostname# show conn all
TCP mgmt 10.10.10.108:4168 NP Identity Ifc 10.0.8.112:22, idle 0:00:00, bytes 3084, flags
UOB
```

```
hostname# clear conn address 10.10.10.108 port 4168 address 10.0.8.112 port 22
```

**Related Commandss**

Commands	Description
<b>clear local-host</b>	Clears all connections by a specific local host or all local hosts.
<b>clear xlate</b>	Clears a NAT session, and any connections using NAT.
<b>show conn</b>	Shows connection information.
<b>show local-host</b>	Displays the network states of local hosts.
<b>show xlate</b>	Shows NAT sessions.

# clear console-output

To remove the currently captured console output, use the **clear console-output** command in privileged EXEC mode.

## clear console-output

### Syntax Description

This command has no arguments or keywords.

### Defaults

No default behavior or values.

### Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Privileged EXEC	•	•	•	•	•

### Command History

Release	Modification
Preexisting	This command was preexisting.

### Examples

The following example shows how to remove the currently captured console output:

```
hostname# clear console-output
```

### Related Commands

Command	Description
<b>console timeout</b>	Sets the idle timeout for a console connection to the security appliance.
<b>show console-output</b>	Displays the captured console output.
<b>show running-config console timeout</b>	Displays the idle timeout for a console connection to the security appliance.

# clear counters

To clear the protocol stack counters, use the **clear counters** command in global configuration mode.

**clear counters** [**all** | **context** *context-name* | **summary** | **top** *N* ] [**detail**] [**protocol** *protocol\_name* [:*counter\_name*]] [ **threshold** *N* ]

## Syntax Description

<b>all</b>	(Optional) Clears all filter details.
<b>context</b> <i>context-name</i>	(Optional) Specifies the context name.
<b>:</b> <i>counter_name</i>	(Optional) Specifies a counter by name.
<b>detail</b>	(Optional) Clears detailed counters information.
<b>protocol</b> <i>protocol_name</i>	(Optional) Clears the counters for the specified protocol.
<b>summary</b>	(Optional) Clears the counter summary.
<b>threshold</b> <i>N</i>	(Optional) Clears the counters at or above the specified threshold. The range is 1 through 4294967295.
<b>top</b> <i>N</i>	(Optional) Clears the counters at or above the specified threshold. The range is 1 through 4294967295.

## Defaults

**clear counters summary detail**

## Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Global configuration	•	•	•	•	•

## Command History

Release	Modification
7.0(1)	This command was introduced.

## Examples

This example shows how to clear the protocol stack counters:

```
hostname(config)# clear counters
```

## Related Commands

Command	Description
<b>show counters</b>	Displays the protocol stack counters.

# clear crashinfo

To delete the contents of the crash file in Flash memory, enter the **clear crashinfo** command in privileged EXEC mode.

## clear crashinfo

**Syntax Description** This command has no arguments or keywords.

**Defaults** No default behaviors or values.

**Command Modes** The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Privileged EXEC	•	•	•	—	•

Release	Modification
Preexisting	This command was preexisting.

**Command History**

**Usage Guidelines** This command has no usage guidelines.

**Examples** The following command shows how to delete the crash file:

```
hostname# clear crashinfo
```

<b>crashinfo force</b>	Forces a crash of the security appliance.
<b>crashinfo test</b>	Tests the ability of the security appliance to save crash information to a file in Flash memory.
<b>show crashinfo</b>	Displays the contents of the crash file stored in Flash memory.

**Related Commands**

# clear crypto accelerator statistics

To clear the the global and accelerator-specific statistics from the crypto accelerator MIB, use the **clear crypto accelerator statistics** command in global configuration and privileged EXEC modes.

## clear crypto accelerator statistics

### Syntax Description

This command has no keywords or variables.

### Defaults

No default behavior or values.

### Command Modes

The following table shows the mode in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Global configuration	•	•	•	—	—
Privileged EXEC	•	•	•	—	—

### Command History

Release	Modification
7.0(1)	This command was introduced.

### Examples

The following example entered in global configuration mode, displays crypto accelerator statistics:

```
hostname(config)# clear crypto accelerator statistics
hostname(config)#
```

### Related Commands

Command	Description
<b>clear crypto protocol statistics</b>	Clears the protocol-specific statistics in the crypto accelerator MIB.
<b>show crypto accelerator statistics</b>	Displays the global and accelerator-specific statistics in the crypto accelerator MIB.
<b>show crypto protocol statistics</b>	Displays the protocol-specific statistics from the crypto accelerator MIB.

# clear crypto ca crls

To remove the CRL cache of all CRLs associated with a specified trustpoint or to remove the CRL cache of all CRLs, use the **clear crypto ca crls** command in global configuration.

**clear crypto ca crls** [*trustpointname*]

## Syntax Description

*trustpointname* (Optional) The name of a trustpoint. If you do not specify a name, this command clears all CRLs cached on the system.

## Defaults

No default behavior or values.

## Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Global configuration	•	•	•	•	

## Command History

Release	Modification
7.0(1)	This command was introduced.

## Examples

The following example issued in global configuration mode, removes all of the CRL cache from all CRLs from the security appliance:

```
hostname(config)# clear crypto ca crls
hostname(config)#
```

## Related Commands

Command	Description
<b>crypto ca crl request</b>	Downloads the CRL based on the CRL configuration of the trustpoint.
<b>show crypto ca crls</b>	Displays all cached CRLs or CRLs cached for a specified trustpoint.

# clear [crypto] ipsec sa

To remove the IPSec SA counters, entries, crypto maps or peer connections, use the **clear [crypto] ipsec sa** command in global configuration mode. To clear all IPSec SAs, use this command without arguments.

```
clear [crypto] ipsec sa [counters | entry {hostname | IP address} {esp | ah} {SPI}| map {map name}
| peer {hostname | IP address}]
```

Be careful when using this command.

## Syntax Description

<b>ah</b>	Authentication header.
<b>counters</b>	Clears all IPSec per SA statistics.
<b>entry</b>	Deletes the tunnel that matches the specified IP address/hostname, protocol and SPI value.
<b>esp</b>	Encryption security protocol.
<i>hostname</i>	Identified a hostname assigned to an IP address.
<i>IP address</i>	Identifies an IP address.
<b>map</b>	Deletes all tunnels associated with the specified crypto map as identified by map name.
<i>map name</i>	An alphanumeric string that identifies a crypto map. Max 64 characters.
<b>peer</b>	Deletes all IPSec SAs to a peer as identified by the specified hostname or IP address.
<i>SPI</i>	Identifies the Security Parameters Index (a hexadecimal number).

## Defaults

No default behavior or values.

## Command Modes

The following table shows the modes in which you can enter the command:

	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Global configuration	•	—	•	—	—

## Command History

Release	Modification
7.0(1)	This command was introduced.

## Examples

The following example, issued in global configuration mode, removes all of the IPSec SAs from the security appliance:

```
hostname(config)# clear ipsec sa
```

```
hostname(config)#
```

The next example, issued in global configuration mode, deletes SAs with a peer IP address of 10.86.1.1.

```
hostname(config)# clear ipsec peer 10.86.1.1
hostname(config)#
```

#### Related Commands

Command	Description
<b>clear configure crypto map</b>	Clears all or specified crypto maps from the configuration.
<b>clear configure isakmp</b>	Clears all ISAKMP policy configuration.
<b>show ipsec sa</b>	Displays information about IPSec SAs, including counters, entry, map name, peer IP address and hostname.
<b>show running-config crypto</b>	Displays the entire crypto configuration, including IPSec, crypto maps, dynamic crypto maps, and ISAKMP.

# clear crypto protocol statistics

To clear the protocol-specific statistics in the crypto accelerator MIB, use the **clear crypto protocol statistics** command in global configuration or privileged EXEC modes.

**clear crypto protocol statistics** *protocol*

## Syntax Description

<i>protocol</i>	Specifies the name of the protocol for which you want to clear statistics. Protocol choices are as follows:  <b>ikev1</b> —Internet Key Exchange version 1. <b>ipsec</b> —IP Security Phase-2 protocols. <b>ssl</b> —Secure Socket Layer. <b>other</b> —Reserved for new protocols. <b>all</b> —All protocols currently supported.  In online help for this command, other protocols may appear that will be supported in future releases.
-----------------	--

## Defaults

No default behavior or values.

## Command Modes

The following table shows the mode in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Global configuration	•	•	•	—	—
Privileged EXEC	•	•	•	—	—

## Command History

Release	Modification
7.0(1)	This command was introduced.

## Examples

The following example entered in global configuration mode, clears all crypto accelerator statistics:

```
hostname(config)# clear crypto protocol statistics all
hostname(config)#
```

## Related Commands

Command	Description
<b>clear crypto accelerator statistics</b>	Clears the global and accelerator-specific statistics in the crypto accelerator MIB.

Command	Description
<b>show crypto accelerator statistics</b>	Displays the global and accelerator-specific statistics from the crypto accelerator MIB.
<b>show crypto protocol statistics</b>	Displays the protocol-specific statistics in the crypto accelerator MIB.

# clear dhcpd

To clear the DHCP server bindings and statistics, use the **clear dhcp** command.

**clear dhcpd** {**binding** [*IP\_address*] | **statistics**}

## Syntax Description

<b>binding</b>	Clears all the client address bindings.
<i>IP_address</i>	Clears the binding for the specified IP address.
<b>statistics</b>	Clears statistical information counters.

## Defaults

No default behavior or values.

## Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Global configuration	•	•	•	•	—

## Command History

Release	Modification
Preexisting	This command was preexisting.

## Usage Guidelines

If you include the optional IP address in the **clear dhcpd binding** command, only the binding for that IP address is cleared.

To clear all of the DHCP server commands, use the **clear configure dhcpd** command.

## Examples

The following example shows how to clear the **dhcpd** statistics:

```
hostname(config)# clear dhcpd statistics
```

## Related Commands

Command	Description
<b>clear configure dhcpd</b>	Removes all DHCP server settings.
<b>show dhcpd</b>	Displays DHCP binding, statistic, or state information.

# clear dhcprelay statistics

To clear the DHCP relay statistic counters, use the **clear dhcprelay statistics** command in privileged EXEC mode.

## clear dhcprelay statistics

**Syntax Description** This command has no arguments or keywords.

**Defaults** No default behavior or values.

**Command Modes** The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Privileged EXEC	•	—	•	•	—

Release	Modification
Preexisting	This command was preexisting.

**Usage Guidelines** The **clear dhcprelay statistics** command only clears the DHCP relay statistic counters. To clear the entire DHCP relay configuration, use the **clear configure dhcprelay** command.

**Examples** The following example shows how to clear the DHCP relay statistics:

```
hostname# clear dhcprelay statistics
hostname#
```

Command	Description
<b>clear configure dhcprelay</b>	Removes all DHCP relay agent settings.
<b>debug dhcprelay</b>	Displays debug information for the DHCP relay agent.
<b>show dhcprelay statistics</b>	Displays DHCP relay agent statistic information.
<b>show running-config dhcprelay</b>	Displays the current DHCP relay agent configuration.

# clear dns-hosts cache

To clear the DNS cache, use the **clear dns-hosts cache** command in privileged EXEC mode. This command does not clear static entries you added with the **name** command.

## clear dns-hosts cache

**Syntax Description** This command has no arguments or keywords.

**Defaults** No default behavior or values.

**Command Modes** The following table shows the modes in which you can enter the command:

	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Privileged EXEC	•	•	•	•	—

Command History	Release	Modification
	7.0(1)	This command was introduced.

**Examples** The following example clears the DNS cache:

```
hostname# clear dns-hosts cache
```

Related Commands	Command	Description
	<b>dns domain-lookup</b>	Enables the security appliance to perform a name lookup.
	<b>dns name-server</b>	Configures a DNS server address.
	<b>dns retries</b>	Specifies the number of times to retry the list of DNS servers when the security appliance does not receive a response.
	<b>dns timeout</b>	Specifies the amount of time to wait before trying the next DNS server.
	<b>show dns-hosts</b>	Shows the DNS cache.

# clear failover statistics

To clear the failover statistic counters, use the **clear failover statistics** command in privileged EXEC mode.

## clear failover statistics

### Syntax Description

This command has no arguments or keywords.

### Defaults

No default behavior or values.

### Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Privileged EXEC	•	•	•	•	•

### Command History

Release	Modification
Preexisting	This command was introduced.

### Usage Guidelines

This command clears the statistics displayed with the **show failover statistics** command and the counters in the Stateful Failover Logical Update Statistics section of the **show failover** command output. To remove the failover configuration, use the **clear configure failover** command.

### Examples

The following example shows how to clear the failover statistic counters:

```
hostname# clear failover statistics
hostname#
```

### Related Commands

Command	Description
<b>debug fover</b>	Displays failover debug information.
<b>show failover</b>	Displays information about the failover configuration and operational statistics.

# clear fragment

To clear the operational data of the IP fragment reassembly module, enter the **clear fragment** command in privileged EXEC mode. This command clears either the currently queued fragments that are waiting for reassembly (if the **queue** keyword is entered) or clears all IP fragment reassembly statistics (if the **statistics** keyword is entered). The statistics are the counters, which tell how many fragments chains were successfully reassembled, how many chains failed to be reassembled, and how many times the maximum size was crossed resulting in overflow of the buffer.

**clear fragment** {**queue** | **statistics**} [*interface*]

## Syntax Description

<i>interface</i>	(Optional) Specifies the security appliance interface.
<b>queue</b>	Clears the IP fragment reassembly queue.
<b>statistics</b>	Clears the IP fragment reassembly statistics.

## Defaults

If an *interface* is not specified, the command applies to all interfaces.

## Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Privileged EXEC	•	•	•	•	—

## Command History

Release	Modification
7.0(1)	The command was separated into two commands, <b>clear fragment</b> and <b>clear configure fragment</b> , to separate clearing of the configuration data from the operational data.

## Examples

This example shows how to clear the operational data of the IP fragment reassembly module:

```
hostname# clear fragment queue
```

## Related Commands

Command	Description
<b>clear configure fragment</b>	Clears the IP fragment reassembly configuration and resets the defaults.
<b>fragment</b>	Provides additional management of packet fragmentation and improves compatibility with NFS.
<b>show fragment</b>	Displays the operational data of the IP fragment reassembly module.
<b>show running-config fragment</b>	Displays the IP fragment reassembly configuration.

# clear gc

To remove the garbage collection process statistics, use the **clear gc** command in privileged EXEC mode.

**clear gc**

**Syntax Description** This command has no arguments or keywords.

**Defaults** No default behaviors or values.

**Command Modes** The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Privileged EXEC	•	•	•	—	•

Release	Modification
7.0(1)	This command was introduced.

**Examples** The following example shows how to remove the garbage collection process statistics:

```
hostname# clear gc
```

Command	Description
show gc	Displays the garbage collection process statistics.

# clear igmp counters

To clear all IGMP counters, use the **clear igmp counters** command in privileged EXEC mode.

**clear igmp counters** [*if\_name*]

## Syntax Description

<i>if_name</i>	The interface name, as specified by the <b>nameif</b> command. Including an interface name with this command causes only the counters for the specified interface to be cleared.
----------------	--

This command has no arguments or keywords.

## Defaults

No default behavior or values.

## Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Privileged EXEC	•	—	•	—	—

## Command History

Release	Modification
7.0(1)	This command was introduced.

## Examples

The following example clears the IGMP statistical counters:

```
hostname# clear igmp counters
```

## Related Commands

Command	Description
<b>clear igmp group</b>	Clears discovered groups from the IGMP group cache.
<b>clear igmp traffic</b>	Clears the IGMP traffic counters.

# clear igmp group

To clear discovered groups from the IGMP group cache, use the **clear igmp** command in privileged EXEC mode.

**clear igmp group** [*group* | *interface name*]

## Syntax Description

<i>group</i>	IGMP group address. Specifying a particular group removes the specified group from the cache.
<i>interface name</i>	Interface name, as specified by the <b>namif</b> command. When specified, all groups associated with the interface are removed.

## Defaults

No default behavior or values.

## Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Privileged EXEC	•	—	•	—	—

## Command History

Release	Modification
Preexisting	This command was preexisting.

## Usage Guidelines

If you do not specify a group or an interface, all groups are cleared from all interfaces. If you specify a group, only the entries for that group are cleared. If you specify an interface, then all groups on that interface are cleared. If you specify both a group and an interface, only the specified groups on the specified interface are cleared.

This command does not clear statically configured groups.

## Examples

The following example shows how to clear all discovered IGMP groups from the IGMP group cache:

```
hostname# clear igmp group
```

## Related Commands

Command	Description
<b>clear igmp counters</b>	Clears all IGMP counters.
<b>clear igmp traffic</b>	Clears the IGMP traffic counters.

# clear igmp traffic

To clear the IGMP traffic counters, use the **clear igmp traffic** command in privileged EXEC mode.

**clear igmp traffic**

**Syntax Description** This command has no arguments or keywords.

**Defaults** No default behavior or values.

**Command Modes** The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Privileged EXEC	•	—	•	—	—

Command History	Release	Modification
	7.0(1)	This command was introduced.

**Examples** The following example clears the IGMP statistical traffic counters:

```
hostname# clear igmp traffic
```

Related Commands	Command	Description
	<b>clear igmp group</b>	Clears discovered groups from the IGMP group cache.
	<b>clear igmp counters</b>	Clears all IGMP counters.

# clear interface

To clear interface statistics, use the **clear interface** command in privileged EXEC mode.

**clear interface** [*physical\_interface*[*.subinterface*] | *mapped\_name* | *interface\_name*]

## Syntax Description

<i>interface_name</i>	(Optional) Identifies the interface name set with the <b>nameif</b> command.
<i>mapped_name</i>	(Optional) In multiple context mode, identifies the mapped name if it was assigned using the <b>allocate-interface</b> command.
<i>physical_interface</i>	(Optional) Identifies the interface ID, such as <b>gigabitethernet0/1</b> . See the <b>interface</b> command for accepted values.
<i>subinterface</i>	(Optional) Identifies an integer between 1 and 4294967293 designating a logical subinterface.

## Defaults

By default, this command clears all interface statistics.

## Command Modes

The following table shows the modes in which you can enter the command:

	Firewall Mode		Security Context		
				Multiple	
Command Mode	Routed	Transparent	Single	Context	System
Privileged EXEC	•	•	•	•	•

## Command History

Release	Modification
Preexisting	This command was preexisting.

## Usage Guidelines

If an interface is shared among contexts, and you enter this command within a context, the security appliance clears only statistics for the current context. If you enter this command in the system execution space, the security appliance clears the combined statistics.

You cannot use the interface name in the system execution space, because the **nameif** command is only available within a context. Similarly, if you mapped the interface ID to a mapped name using the **allocate-interface** command, you can only use the mapped name in a context.

## Examples

The following example clears all interface statistics:

```
hostname# clear interface
```

## Related Commands

Command	Description
<b>clear configure interface</b>	Clears the interface configuration.
<b>interface</b>	Configures an interface and enters interface configuration mode.
<b>show interface</b>	Displays the runtime status and statistics of interfaces.
<b>show running-config interface</b>	Displays the interface configuration.

# clear ip audit count

To clear the count of signature matches for an audit policy, use the **clear ip audit count** command in privileged EXEC mode.

**clear ip audit count** [**global** | **interface** *interface\_name*]

## Syntax Description

<b>global</b>	(Default) Clears the number of matches for all interfaces.
<b>interface</b> <i>interface_name</i>	(Optional) Clears the number of matches for the specified interface.

## Defaults

If you do not specify a keyword, this command clears the matches for all interfaces (**global**).

## Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Privileged EXEC	•	•	•	•	—

## Command History

Release	Modification
Preexisting	This command was preexisting.

## Examples

The following example clears the count for all interfaces:

```
hostname# clear ip audit count
```

## Related Commands

Command	Description
<b>ip audit interface</b>	Assigns an audit policy to an interface.
<b>ip audit name</b>	Creates a named audit policy that identifies the actions to take when a packet matches an attack signature or an informational signature.
<b>show ip audit count</b>	Shows the count of signature matches for an audit policy.
<b>show running-config ip audit attack</b>	Shows the configuration for the <b>ip audit attack</b> command.

# clear ip verify statistics

To clear the Unicast RPF statistics, use the **clear ip verify statistics** command in privileged EXEC mode. See the **ip verify reverse-path** command to enable Unicast RPF.

**clear ip verify statistics** [**interface** *interface\_name*]

## Syntax Description

**interface** Sets the interface on which you want to clear Unicast RPF statistics.  
*interface\_name*

## Defaults

No default behavior or values.

## Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Privileged EXEC	•	—	•	•	—

## Command History

Release	Modification
Preexisting	This command was preexisting.

## Examples

The following example clears the Unicast RPF statistics:

```
hostname# clear ip verify statistics
```

## Related Commands

Command	Description
<b>clear configure ip verify reverse-path</b>	Clears the <b>ip verify reverse-path</b> configuration.
<b>ip verify reverse-path</b>	Enables the Unicast Reverse Path Forwarding feature to prevent IP spoofing.
<b>show ip verify statistics</b>	Shows the Unicast RPF statistics.
<b>show running-config ip verify reverse-path</b>	Shows the <b>ip verify reverse-path</b> configuration.

# clear ipsec sa

To clear IPsec SAs entirely or based on specified parameters, use the **clear ipsec sa** command in global configuration and privileged EXEC modes. You can also use an alternate form: **clear crypto ipsec sa**.

**clear ipsec sa** [**counters** | **entry** *peer-addr protocol spi* | **peer** *peer-addr* | **map** *map-name*]

## Syntax Description

<b>counters</b>	(Optional) Clears all counters.
<b>entry</b>	(Optional) Clears IPsec SAs for a specified IPsec peer, protocol and SPI.
<b>map</b> <i>map-name</i>	(Optional) Clears IPsec SAs for the specified crypto map.
<b>peer</b>	(Optional) Clears IPsec SAs for a specified peer.
<i>peer-addr</i>	Specifies the IP address of an IPsec peer.
<i>protocol</i>	Specifies an IPsec protocol: <b>esp</b> or <b>ah</b> .
<i>spi</i>	Specifies an IPsec SPI.

## Defaults

No default behavior or values.

## Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Global configuration	•	•	•	—	—
Privileged EXEC	•	•	•	—	—

## Command History

Release	Modification
Preexisting	This command was preexisting.

## Examples

The following example, entered in global configuration mode, clears all IPsec SA counters:

```
hostname(config)# clear ipsec sa counters
hostname(config)#
```

## Related Commands

Command	Description
<b>show ipsec sa</b>	Displays IPsec SAs based on specified parameters.
<b>show ipsec stats</b>	Displays global IPsec statistics from the IPsec flow MIB.

# clear ipv6 access-list counters

To clear the IPv6 access list statistical counters, use the **clear ipv6 access-list counters** command in privileged EXEC mode.

**clear ipv6 access-list *id* counters**

## Syntax Description

*id* The IPv6 access list identifier.

## Defaults

No default behavior or values.

## Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Privileged EXEC	•	—	•	•	—

## Command History

Release	Modification
7.0(1)	This command was introduced.

## Examples

The following example shows how to clear the statistical data for the IPv6 access list 2:

```
hostname# clear ipv6 access-list 2 counters
hostname#
```

## Related Commands

Command	Description
<b>clear configure ipv6</b>	Clears the <b>ipv6 access-list</b> commands from the current configuration.
<b>ipv6 access-list</b>	Configures an IPv6 access list.
<b>show ipv6 access-list</b>	Displays the <b>ipv6 access-list</b> commands in the current configuration.

# clear ipv6 mld traffic

To clear the IPv6 Multicast Listener Discovery (MLD) traffic counters, use the **clear ipv6 mld traffic** command in privileged EXEC mode.

## clear ipv6 mld traffic

### Defaults

No default behavior or values.

### Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Privileged EXEC	•	—	•	•	—

### Command History

Release	Modification
7.2(4)	This command was introduced.

### Usage Guidelines

The **clear ipv6 mld traffic** command allows you to reset all the Multicast Listener Discovery traffic counters.

### Examples

The following example shows how to clear the traffic counters for the IPv6 Multicast Listener Discovery:

```
hostname# clear ipv6 mld traffic
hostname#
```

### Related Commands

Command	Description
<b>show debug ipv6 mld</b>	Displays the <b>ipv6</b> Multicast Listener Discovery commands in the current configuration.

# clear ipv6 neighbors

To clear the IPv6 neighbor discovery cache, use the **clear ipv6 neighbors** command in privileged EXEC mode.

## clear ipv6 neighbors

### Syntax Description

This command has no arguments or keywords.

### Defaults

No default behavior or values.

### Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Privileged EXEC	•	—	•	•	—

### Command History

Release	Modification
7.0(1)	This command was introduced.

### Usage Guidelines

This command deletes all discovered IPv6 neighbor from the cache; it does not remove static entries.

### Examples

The following example deletes all entries, except static entries, in the IPv6 neighbor discovery cache:

```
hostname# clear ipv6 neighbors
hostname#
```

### Related Commands

Command	Description
<b>ipv6 neighbor</b>	Configures a static entry in the IPv6 discovery cache.
<b>show ipv6 neighbor</b>	Displays IPv6 neighbor cache information.

# clear ipv6 traffic

To reset the IPv6 traffic counters, use the **clear ipv6 traffic** command in privileged EXEC mode.

## clear ipv6 traffic

**Syntax Description** This command has no arguments or keywords.

**Defaults** No default behavior or values.

**Command Modes** The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Privileged EXEC	•	—	•	•	—

Release	Modification
7.0(1)	This command was introduced.

**Usage Guidelines** Using this command resets the counters in the output from the show ipv6 traffic command.

**Examples** The following example resets the IPv6 traffic counters. The output from the **ipv6 traffic** command shows that the counters are reset:

```
hostname# clear ipv6 traffic
hostname# show ipv6 traffic
IPv6 statistics:
  Rcvd: 1 total, 1 local destination
        0 source-routed, 0 truncated
        0 format errors, 0 hop count exceeded
        0 bad header, 0 unknown option, 0 bad source
        0 unknown protocol, 0 not a router
        0 fragments, 0 total reassembled
        0 reassembly timeouts, 0 reassembly failures
  Sent: 1 generated, 0 forwarded
        0 fragmented into 0 fragments, 0 failed
        0 encapsulation failed, 0 no route, 0 too big
  Mcast: 0 received, 0 sent

ICMP statistics:
  Rcvd: 1 input, 0 checksum errors, 0 too short
        0 unknown info type, 0 unknown error type
        unreachable: 0 routing, 0 admin, 0 neighbor, 0 address, 0 port
        parameter: 0 error, 0 header, 0 option
        0 hopcount expired, 0 reassembly timeout, 0 too big
```

```

0 echo request, 0 echo reply
0 group query, 0 group report, 0 group reduce
0 router solicit, 0 router advert, 0 redirects
0 neighbor solicit, 1 neighbor advert
Sent: 1 output
  unreach: 0 routing, 0 admin, 0 neighbor, 0 address, 0 port
  parameter: 0 error, 0 header, 0 option
0 hopcount expired, 0 reassembly timeout, 0 too big
0 echo request, 0 echo reply
0 group query, 0 group report, 0 group reduce
0 router solicit, 0 router advert, 0 redirects
0 neighbor solicit, 1 neighbor advert

UDP statistics:
  Rcvd: 0 input, 0 checksum errors, 0 length errors
        0 no port, 0 dropped
  Sent: 0 output

TCP statistics:
  Rcvd: 0 input, 0 checksum errors
  Sent: 0 output, 0 retransmitted

```

**Related Commands**

Command	Description
<b>show ipv6 traffic</b>	Displays IPv6 traffic statistics.

# clear isakmp sa

To remove all of the IKE runtime SA database, use the **clear isakmp sa** command in global configuration or privileged EXEC mode.

## clear isakmp sa

### Syntax Description

This command has no keywords or arguments.

### Defaults

No default behavior or values.

### Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Global configuration	•	—	•	—	—
Privileged EXEC	•	—	•	—	—

### Command History

Release	Modification
7.0(1)	The <b>clear isakmp sa</b> command was introduced.
7.2(1)	This command was deprecated. The <b>clear crypto isakmp sa</b> command replaces it.

### Examples

The following example removes the IKE runtime SA database from the configuration:

```
hostname<config># clear isakmp sa
hostname<config>#
```

### Related Commands

Command	Description
<b>clear isakmp</b>	Clears the IKE runtime SA database.
<b>isakmp enable</b>	Enables ISAKMP negotiation on the interface on which the IPSec peer communicates with the security appliance.
<b>show isakmp stats</b>	Displays runtime statistics.
<b>show isakmp sa</b>	Displays IKE runtime SA database with additional information.
<b>show running-config isakmp</b>	Displays all the active ISAKMP configuration.

# clear local-host

To release network connections from local hosts displayed by entering the **show local-host** command, use the **clear local-host** command in privileged EXEC mode.

**clear local-host** [*ip\_address*] [**all**]

## Syntax Description

<b>all</b>	(Optional) Specifies to clear the local hosts state-made connections, including to the security appliance and from the security appliance.
<i>ip_address</i>	(Optional) Specifies the local host IP address.

## Defaults

No default behaviors or values.

## Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Privileged EXEC	•	•	•	•	—

## Command History

Release	Modification
Preexisting	This command was preexisting.

## Usage Guidelines

The **clear local-host** command releases the cleared hosts from the license limit. You can see the number of hosts that are counted toward the license limit by entering the **show local-host** command.

### Caution

Clearing the network state of a local host stops all network connections and xlates that are associated with the local hosts.

---

**Examples**

The following example shows how the **clear local-host** command clears the information about the local hosts:

```
hostname# clear local-host 10.1.1.15
```

After the information is cleared, nothing more displays until the hosts reestablish their connections.

---

**Related Commands**

Command	Description
show local-host	Displays the network states of local hosts.

# clear logging asdm

To clear the ASDM logging buffer, use the **clear logging asdm** command in privileged EXEC mode.

## clear logging asdm

**Syntax Description** This command has no arguments or keywords.

**Defaults** No default behavior or values.

**Command Modes** The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Privileged EXEC	•	•	•	•	•

Command History	Release	Modification
	7.0(1)(1)	This command was changed from the <b>show pdm logging</b> command to the <b>show asdm log</b> command.

**Usage Guidelines** ASDM system log messages are stored in a separate buffer from the security appliance system log messages. Clearing the ASDM logging buffer only clears the ASDM system log messages; it does not clear the security appliance system log messages. To view the ASDM system log messages, use the **show asdm log** command.

**Examples** The following example clears the ASDM logging buffer:

```
hostname(config)# clear logging asdm
hostname(config)#
```

Related Commands	Command	Description
	<b>show asdm log_sessions</b>	Displays the contents of the ASDM logging buffer.

# clear logging buffer

To clear the logging buffer, use the **clear logging buffer** command in global configuration mode.

**clear logging buffer**

## Syntax Description

This command has no arguments or keywords.

## Defaults

This command has no default settings.

## Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Global configuration	•	•	•	•	•

## Command History

Release	Modification
7.0(1)(1)	Support for this command was introduced on the security appliance.

## Examples

This example shows how to clear the contents of the log buffer:

```
hostname # clear logging buffer
```

## Related Commands

Command	Description
<b>logging buffered</b>	Configures logging.
<b>show logging</b>	Displays logging information.

# clear mac-address-table

To clear dynamic MAC address table entries , use the **clear mac-address-table** command in privileged EXEC mode.

**clear mac-address-table** [*interface\_name*]

<b>Syntax Description</b>	<i>interface_name</i> (Optional) Clears the MAC address table entries for the selected interface.
---------------------------	---

<b>Defaults</b>	No default behavior or values.
-----------------	--------------------------------

<b>Command Modes</b>	The following table shows the modes in which you can enter the command:
----------------------	---

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Privileged EXEC	—	•	•	•	—

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	7.0(1)	This command was introduced.

<b>Examples</b>	The following example clears the dynamic MAC address table entries:
-----------------	---

```
hostname# clear mac-address-table
```

<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<b>arp</b>	Adds a static ARP entry.
	<b>firewall transparent</b>	Sets the firewall mode to transparent.
	<b>mac-address-table aging-time</b>	Sets the timeout for dynamic MAC address entries.
	<b>mac-learn</b>	Disables MAC address learning.
	<b>show mac-address-table</b>	Shows MAC address table entries.

# clear memory delayed-free-poisoner

To clear the delayed free-memory poisoner tool queue and statistics, use the **clear memory delayed-free-poisoner** command in privileged EXEC mode.

**clear memory delayed-free-poisoner**

## Syntax Description

This command has no arguments or keywords.

## Defaults

No default behaviors or values.

## Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Privileged EXEC	•	•	•	—	•

## Command History

Release	Modification
7.0(1)	This command was introduced.

## Usage Guidelines

The **clear memory delayed-free-poisoner** command returns all memory held in the delayed free-memory poisoner tool queue to the system without validation and clears the related statistical counters.

## Examples

The following example clears the delayed free-memory poisoner tool queue and statistics:

```
hostname# clear memory delayed-free-poisoner
```

## Related Commands

Command	Description
<b>memory delayed-free-poisoner enable</b>	Enables the delayed free-memory poisoner tool.
<b>memory delayed-free-poisoner validate</b>	Forces validation of the delayed free-memory poisoner tool queue.
<b>show memory delayed-free-poisoner</b>	Displays a summary of the delayed free-memory poisoner tool queue usage.

# clear memory profile

To clear the memory buffers held by the memory profiling function, use the **clear memory profile** command in privileged EXEC configuration mode.

**clear memory profile [peak]**

## Syntax Description

**peak** (Optional) Clears the contents of the peak memory buffer.

## Defaults

Clears the current “in use” profile buffer by default.

## Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Privileged EXEC	•	•	—	•	•

## Command History

Release	Modification
7.0(1)	This command was introduced.

## Usage Guidelines

The **clear memory profile** command releases the memory buffers held by the profiling function and therefore requires that profiling stop before it is cleared.

## Examples

The following example clears the memory buffers held by the profiling function:

```
hostname# clear memory profile
```

## Related Commands

Command	Description
<b>memory profile enable</b>	Enables the monitoring of memory usage (memory profiling).
<b>memory profile text</b>	Configures a text range of memory to profile.
<b>show memory profile</b>	Displays information about the memory usage (profiling) of the security appliance.

# clear mfib counters

To clear MFIB router packet counters, use the **clear mfib counters** command in privileged EXEC mode.

**clear mfib counters** [*group* [*source*]]

## Syntax Description

<i>group</i>	(Optional) IP address of the multicast group.
<i>source</i>	(Optional) IP address of the multicast route source. This is a unicast IP address in four-part dotted-decimal notation.

## Defaults

When this command is used with no arguments, route counters for all routes are cleared.

## Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Privileged EXEC	•	—	•	—	—

## Command History

Release	Modification
7.0(1)	This command was introduced.

## Examples

The following example clears all MFIB router packet counters:

```
hostname# clear mfib counters
```

## Related Commands

Command	Description
<b>show mfib count</b>	Displays MFIB route and packet count data.

# clear module recover

To clear the AIP SSM recovery network settings set in the **hw-module module recover** command, use the **clear module recover** command in privileged EXEC mode.

**clear module 1 recover**

## Syntax Description

**1** Specifies the slot number, which is always 1.

## Defaults

No default behavior or values.

## Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Privileged EXEC	•	•	•	—	•

## Command History

Release	Modification
7.0(1)	This command was introduced.

## Examples

The following example clears the recovery settings for the AIP SSM:

```
hostname# clear module 1 recover
```

## Related Commands

Command	Description
<a href="#">hw-module module recover</a>	Recovers an AIP SSM by loading a recovery image from a TFTP server.
<a href="#">hw-module module reset</a>	Shuts down an SSM and performs a hardware reset.
<a href="#">hw-module module reload</a>	Reloads the AIP SSM software.
<a href="#">hw-module module shutdown</a>	Shuts down the SSM software in preparation for being powered off without losing configuration data.
<a href="#">show module</a>	Shows SSM information.

# clear ospf

To clear OSPF process information, use the **clear ospf** command in privileged EXEC mode.

**clear ospf** [*pid*] {**process** | **counters** [**neighbor** [*neighbor-intf*] [*neighbor-id*]]}

## Syntax Description

<b>counters</b>	Clears the OSPF counters.
<b>neighbor</b>	Clears the OSPF neighbor counters.
<i>neighbor-intf</i>	(Optional) Clears the OSPF interface router designation.
<i>neighbor-id</i>	(Optional) Clears the OSPF neighbor router ID.
<i>pid</i>	(Optional) Internally used identification parameter for an OSPF routing process; valid values are from 1 to 65535.
<b>process</b>	Clears the OSPF routing process.

## Defaults

No default behavior or values.

## Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Privileged EXEC	•	—	•	—	—

## Command History

Release	Modification
Preexisting	This command was preexisting.

## Usage Guidelines

This command does not remove any part of the configuration. Use the **no** form of the configuration commands to clear specific commands from the configuration or use the **clear configure router ospf** command to remove all global OSPF commands from the configuration.

### Note

The **clear configure router ospf** command does not clear OSPF commands entered in interface configuration mode.

## Examples

The following example shows how to clear the OSPF process counters:

```
hostname# clear ospf process
```

**Related Commands**

Command	Description
<b>clear configure router</b>	Clears all global router commands from the running configuration.

# clear pc

To clear connection, xlate, or local-host information maintained on PC, use the **clear pc** command in global configuration mode.

**clear pc**

**Syntax Description** This command has no arguments or keywords.

**Defaults** No default behavior or values.

**Command Modes** The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Global configuration	•	•	•	•	—

Release	Modification
7.0(1)	This command was introduced.

**Examples** The following example clears PC information:

```
hostname(config)# clear pc
```

Command	Description
<b>clear pclu</b>	Clears PC logical update statistics.

# clear pclu

To clear PC logical update statistics, use the **clear pclu** command in global configuration mode.

## clear pclu

**Syntax Description** This command has no arguments or keywords.

**Defaults** No default behavior or values.

**Command Modes** The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Global configuration	•	•	•	•	—

Command History	Release	Modification
	7.0(1)	This command was introduced.

**Examples** The following example clears PC information:

```
hostname(config)# clear pclu
```

Related Commands	Command	Description
	clear pc	Clears connection, xlate, or local-host information maintained on PC.

# clear pim counters

To clear the PIM traffic counters, use the **clear pim counters** command in privileged EXEC mode.

**clear pim counters**

**Syntax Description** This command has no arguments or keywords.

**Defaults** No default behavior or values.

**Command Modes** The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Privileged EXEC	•	—	•	—	—

Command History	Release	Modification
	7.0(1)	This command was introduced.

**Usage Guidelines** This command only clears the traffic counters. To clear the PIM topology table, use the **clear pim topology** command.

**Examples** The following example clears the PIM traffic counters:

```
hostname# clear pim counters
```

Related Commands	Command	Description
	<b>clear pim reset</b>	Forces MRIB synchronization through reset.
	<b>clear pim topology</b>	Clears the PIM topology table.
	<b>show pim traffic</b>	Displays the PIM traffic counters.

# clear pim reset

To force MRIB synchronization through reset, use the **clear pim reset** command in privileged EXEC mode.

## clear pim reset

### Syntax Description

This command has no arguments or keywords.

### Defaults

No default behavior or values.

### Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Privileged EXEC	•	—	•	—	—

### Command History

Release	Modification
7.0(1)	This command was introduced.

### Usage Guidelines

All information from the topology table is cleared and the MRIB connection is reset. This command can be used to synchronize state between the PIM topology table and the MRIB database.

### Examples

The following example clears the topology table and resets the MRIB connection:

```
hostname# clear pim reset
```

### Related Commands

Command	Description
<b>clear pim counters</b>	Clears PIM counters and statistics.
<b>clear pim topology</b>	Clears the PIM topology table.
<b>clear pim counters</b>	Clears PIM traffic counters.

# clear pim topology

To clear the PIM topology table, use the **clear pim topology** command in privileged EXEC mode.

**clear pim topology** [*group*]

## Syntax Description

<i>group</i>	(Optional) Specifies the multicast group address or name to be deleted from the topology table.
--------------	---

## Defaults

Without the optional *group* argument, all entries are cleared from the topology table.

## Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Privileged EXEC	•	—	•	—	—

## Command History

Release	Modification
7.0(1)	This command was introduced.

## Usage Guidelines

This command clears existing PIM routes from the PIM topology table. Information obtained from the MRIB table, such as IGMP local membership, is retained. If a multicast group is specified, only those group entries are cleared.

## Examples

The following example clears the PIM topology table:

```
hostname# clear pim topology
```

## Related Commands

Command	Description
<b>clear pim counters</b>	Clears PIM counters and statistics.
<b>clear pim reset</b>	Forces MRIB synchronization through reset.
<b>clear pim counters</b>	Clears PIM traffic counters.

# clear priority-queue statistics

To clear the priority-queue statistics counters for an interface or for all configured interfaces, use the **clear priority-queue statistics** command in either global configuration or privileged EXEC mode.

**clear priority-queue statistics** [*interface-name*]

## Syntax Description

*interface-name* (Optional) Specifies the name of the interface for which you want to show the best-effort and low-latency queue details.

## Defaults

If you omit the interface name, this command clears the priority-queue statistics for all configured interfaces.

## Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Privileged EXEC	•	•	•	•	—

## Command History

Release	Modification
7.0(1)	This command was introduced.

## Examples

This example shows the use of the **clear priority-queue statistics** command in privileged EXEC mode to remove the priority queue statistics for the interface named “test”.

```
hostname# clear priority-queue statistics test
hostname#
```

## Related Commands

Command	Description
<b>clear configure priority queue</b>	Removes the priority-queue configuration from the named interface.
<b>priority-queue</b>	Configures priority queueing on an interface.
<b>show priority-queue statistics</b>	Shows the priority queue statistics for a specified interface or for all interfaces.
<b>show running-config priority-queue</b>	Shows the current priority-queue configuration on the named interface.

## clear resource usage

To clear resource usage statistics, use the **clear resource usage** command in privileged EXEC mode.

```
clear resource usage [context context_name | all | summary | system] [resource {[rate]
resource_name | all}]
```

### Syntax Description

<b>context</b> <i>context_name</i>	(Multiple mode only) Specifies the context name for which you want to clear statistics. Specify <b>all</b> (the default) for all contexts.
<b>resource</b> [ <b>rate</b> ] <i>resource_name</i>	<p>Clears the usage of a specific resource. Specify <b>all</b> (the default) for all resources. Specify <b>rate</b> to clear the rate of usage of a resource. Resources that are measured by rate include <b>conns</b>, <b>inspects</b>, and <b>syslogs</b>. You must specify the <b>rate</b> keyword with these resource types. The <b>conns</b> resource is also measured as concurrent connections; only use the <b>rate</b> keyword to view the connections per second.</p> <p>Resources include the following types:</p> <ul style="list-style-type: none"> <li>• <b>asdm</b>—ASDM management sessions.</li> <li>• <b>conns</b>—TCP or UDP connections between any two hosts, including connections between one host and multiple other hosts.</li> <li>• <b>inspects</b>—Application inspections.</li> <li>• <b>hosts</b>—Hosts that can connect through the security appliance.</li> <li>• <b>mac-addresses</b>—For transparent firewall mode, the number of MAC addresses allowed in the MAC address table.</li> <li>• <b>ssh</b>—SSH sessions.</li> <li>• <b>syslogs</b>—System log messages.</li> <li>• <b>telnet</b>—Telnet sessions.</li> <li>• <b>xlates</b>—NAT translations.</li> </ul>
<b>summary</b>	(Multiple mode only) Clears the combined context statistics.
<b>system</b>	(Multiple mode only) Clears the system-wide (global) usage statistics.

### Defaults

For multiple context mode, the default context is **all**, which clears resource usage for every context. For single mode, the context name is ignored and all resource statistics are cleared.

The default resource name is **all**, which clears all resource types.

### Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Privileged EXEC	•	•	•	—	•

**Command History**

Release	Modification
7.2(1)	This command was introduced.

**Examples**

The following example clears all resource usage statistics for all contexts, but not the system-wide usage statistics:

```
hostname# clear resource usage
```

The following example clears the system-wide usage statistics:

```
hostname# clear resource usage system
```

**Related Commands**

Command	Description
<b>context</b>	Adds a security context.
<b>show resource types</b>	Shows a list of resource types.
<b>show resource usage</b>	Shows the resource usage of the security appliance.

# clear route

To remove dynamically learned routes from the configuration, use the **clear route** command in privileged EXEC mode.

**clear route** [*interface\_name*]

## Syntax Description

*interface\_name* (Optional) Internal or external network interface name.

## Defaults

No default behavior or values.

## Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Privileged EXEC	•	•	•	•	—

## Command History

Release	Modification
Preexisting	This command was preexisting.

## Examples

The following example shows how to remove dynamically learned routes:

```
hostname# clear route
```

## Related Commands

Command	Description
<b>route</b>	Specifies a static or default route for the an interface.
<b>show route</b>	Displays route information.
<b>show running-config route</b>	Displays configured routes.

# clear service-policy

To clear operational data or statistics (if any) for enabled policies, use the **clear service-policy** command in privileged EXEC mode. To clear service policy statistics for inspection engines, see the **clear service-policy inspect** commands.

**clear service-policy** [**global** | **interface** *intf*]

## Syntax Description

<b>global</b>	(Optional) Clears the statistics of the global service policy.
<b>interface</b> <i>intf</i>	(Optional) Clears the service policy statistics of a specific interface.

## Defaults

By default, this command clears all the statistics for all enabled service policies.

## Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Privileged EXEC	•	•	•	•	—

## Command History

Release	Modification
7.0(1)	This command was introduced.

## Examples

The following example shows the syntax of the **clear service-policy** command:

```
hostname(config)# clear service-policy outside_security_map interface outside
```

## Related Commands

Command	Description
<b>clear service-policy inspect gtp</b>	Clears service policy statistics for the GTP inspection engine.
<b>clear service-policy inspect radius-accounting</b>	Clears service policy statistics for the RADIUS accounting inspection engine.
<b>show service-policy</b>	Displays the service policy.
<b>show running-config service-policy</b>	Displays the service policies configured in the running configuration.
<b>clear configure service-policy</b>	Clears service policy configurations.
<b>service-policy</b>	Configures service policies.

# clear service-policy inspect gtp

To clear global GTP statistics, use the **clear service-policy inspect gtp** command in privileged EXEC mode.

```
clear service-policy inspect gtp {pdp-context [all | apn ap_name | imsi IMSI_value | ms-addr IP_address | tid tunnel_ID | version version_num ] | requests | statistics [gsn IP_address] }
```

## Syntax Description.

<b>all</b>	Clears all GTP PDP contexts.
<b>apn</b>	(Optional) Clears the PDP contexts based on the APN specified.
<i>ap_name</i>	Identifies the specific access point name.
<b>gsn</b>	(Optional) Identifies the GPRS support node, which is the interface between the GPRS wireless data network and other networks.
<b>gtp</b>	(Optional) Clears the service policy for GTP.
<b>imsi</b>	(Optional) Clears the PDP contexts based on the IMSI specified.
<i>IMSI_value</i>	Hexadecimal value that identifies the specific IMSI.
<b>interface</b>	(Optional) Identifies a specific interface.
<i>int</i>	Identifies the interface for which information will be cleared.
<i>IP_address</i>	IP address for which statistics will be cleared.
<b>ms-addr</b>	(Optional) Clears PDP contexts based on the MS Address specified.
<b>pdp-context</b>	(Optional) Identifies the Packet Data Protocol context.
<b>requests</b>	(Optional) Clears GTP requests.
<b>statistics</b>	(Optional) Clears GTP statistics for the <b>inspect gtp</b> command.
<b>tid</b>	(Optional) Clears the PDP contexts based on the TID specified.
<i>tunnel_ID</i>	Hexadecimal value that identifies the specific tunnel.
<b>version</b>	(Optional) Clears the PDP contexts based on the GTP version.
<i>version_num</i>	Specifies the version of the PDP context. The valid range is 0 to 255.

## Defaults

No default behavior or values.

## Command Modes

The following table shows the modes in which you can enter the command:

	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Privileged EXEC	•	•	•	•	•

## Command History

Release	Modification
7.0(1)	This command was introduced.

**Usage Guidelines**

The Packet Data Protocol context is identified by the tunnel ID, which is a combination of IMSI and NSAPI. A GTP tunnel is defined by two associated PDP Contexts in different GSN nodes and is identified with a tunnel ID. A GTP tunnel is necessary to forward packets between an external packet data network and a mobile station (MS) user.

**Examples**

The following example clears GTP statistics:

```
hostname# clear service-policy inspect gtp statistics
```

**Related Commands**

Commands	Description
<b>debug gtp</b>	Displays detailed information about GTP inspection.
<b>gtp-map</b>	Defines a GTP map and enables GTP map configuration mode.
<b>inspect gtp</b>	Applies a GTP map to use for application inspection.
<b>show service-policy inspect gtp</b>	Displays the GTP configuration.
<b>show running-config gtp-map</b>	Shows the GTP maps that have been configured.

# clear service-policy inspect radius-accounting

To clear global GTP statistics, use the **clear service-policy inspect radius-accounting** command in privileged EXEC mode.

**clear service-policy inspect radius-accounting { }**

## Syntax Description.

**all**

## Defaults

No default behavior or values.

## Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Privileged EXEC	•	•	•	•	•

## Command History

Release	Modification
7.2(1)	This command was introduced.

## Usage Guidelines

## Examples

The following example clears RADIUS accounting statistics:

```
hostname# clear service-policy inspect radius-accounting statistics
```

## Related Commands

Commands	Description

# clear shun

To disable all the shuns that are currently enabled and clear the shun statistics, use the **clear shun** command in privileged EXEC mode.

**clear shun** [*statistics*]

## Syntax Description

*statistics* (Optional) Clears the interface counters only.

## Defaults

No default behavior or values.

## Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Privileged EXEC	•	•	•	•	—

## Command History

Release	Modification
7.0(1)	This command was introduced.

## Examples

The following example shows how to disable all the shuns that are currently enabled and clear the shun statistics:

```
hostname(config)# clear shun
```

## Related Commands

Command	Description
<b>shun</b>	Enables a dynamic response to an attacking host by preventing new connections and disallowing packets from any existing connection.
<b>show shun</b>	Displays the shun information.

# clear startup-config errors

To clear configuration error messages from memory, use the **clear startup-config errors** command in privileged EXEC mode.

## clear startup-config errors

**Syntax Description** This command has no arguments or keywords.

**Defaults** No default behavior or values.

**Command Modes** The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Privileged EXEC	•	•	•	—	•

Release	Modification
7.0(1)	This command was introduced.

**Usage Guidelines** To view configuration errors generated when the security appliance loaded the startup configuration, use the **show startup-config errors** command.

**Examples** The following example clears all configuration errors from memory:

```
hostname# clear startup-config errors
```

Related Commands	Command	Description
	<b>show startup-config errors</b>	Shows configuration errors generated when the security appliance loaded the startup configuration.

# clear sunrpc-server active

To clear the pinholes opened by Sun RPC application inspection, use the **clear sunrpc-server active** command in global configuration mode.

## clear sunrpc-server active

### Defaults

No default behavior or values.

### Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Global configuration	•	•	•	•	—

### Command History

Release	Modification
Preexisting	This command was preexisting.

### Usage Guidelines

Use the **clear sunrpc-server active** command to clear the pinholes opened by Sun RPC application inspection that allow service traffic, such as NFS or NIS, to pass through the security appliance.

### Examples

The following example shows how to clear the SunRPC services table:

```
hostname(config)# clear sunrpc-server
```

### Related Commands

Command	Description
<b>clear configure sunrpc-server</b>	Clears the Sun remote processor call services from the security appliance.
<b>inspect sunrpc</b>	Enables or disables Sun RPC application inspection and configures the port used.
<b>show running-config sunrpc-server</b>	Displays information about the SunRPC services configuration.
<b>show sunrpc-server active</b>	Displays information about active Sun RPC services.

# clear traffic

To reset the counters for transmit and receive activity, use the **clear traffic** command in privileged EXEC mode.

## clear traffic

**Syntax Description** This command has no arguments or keywords.

**Defaults** No default behavior or values.

**Command Modes** The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Privileged EXEC	•	•	•	•	—

Command History	Release	Modification
	Preexisting	This command was preexisting.

**Usage Guidelines** The **clear traffic** command resets the counters for transmit and receive activity that is displayed with the **show traffic** command. The counters indicate the number of packets and bytes moving through each interface since the last clear traffic command was entered or since the security appliance came online. And the number of seconds indicate the duration the security appliance has been online since the last reboot.

**Examples** The following example shows the **clear traffic** command:

```
hostname# clear traffic
```

Related Commands	Command	Description
	<b>show traffic</b>	Displays the counters for transmit and receive activity.

# clear uauth

To delete all the cached authentication and authorization information for a user or for all users, use the **clear uauth** command in privileged EXEC mode.

**clear uauth** [*username*]

## Syntax Description

*username* (Optional) Specifies, by username, the user authentication information to remove.

## Defaults

Omitting username deletes the authentication and authorization information for all users.

## Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Privileged EXEC	•	•	—	—	•

## Command History

Release	Modification
Preexisting	This command was preexisting.

## Usage Guidelines

The **clear uauth** command deletes the AAA authorization and authentication caches for one user or for all users, which forces the user or users to reauthenticate the next time that they create a connection.

This command is used with the **timeout** command.

Each user host IP address has an authorization cache attached to it. If the user attempts to access a service that has been cached from the correct host, the security appliance considers it preauthorized and immediately proxies the connection. Once you are authorized to access a website, for example, the authorization server is not contacted for each image as it is loaded (assuming the images come from the same IP address). This process significantly increases performance and reduces the load on the authorization server.

The cache allows up to 16 address and service pairs for each user host.

### Note

When you enable Xauth, an entry is added to the uauth table (as shown by the **show uauth** command) for the IP address that is assigned to the client. However, when using Xauth with the Easy VPN Remote feature in Network Extension Mode, the IPSec tunnel is created from network to network, so that the users behind the firewall cannot be associated with a single IP address. For this reason, a uauth entry cannot be created upon completion of Xauth. If AAA authorization or accounting services are required, you can enable the AAA authentication proxy to authenticate users behind the firewall. For more information on AAA authentication proxies, see the AAA commands.

Use the **timeout uauth** command to specify how long the cache should be kept after the user connections become idle. Use the **clear uauth** command to delete all the authorization caches for all the users, which will cause them to have to reauthenticate the next time that they create a connection.

### Examples

This example shows how to cause the user “Lee” to reauthenticate:

```
hostname(config)# clear uauth lee
```

### Related Commands

Command	Description
<b>aaa authentication</b>	Enable, disable, or view LOCAL, TACACS+ or RADIUS user authentication (on a server designated by the <b>aaa-server</b> command).
<b>aaa authorization</b>	Enable, disable, or view TACACS+ or RADIUS user authorization (on a server designated by the <b>aaa-server</b> command).
<b>show uauth</b>	Display current user authentication and authorization information.
<b>timeout</b>	Set the maximum idle time duration.

# clear url-block block statistics

To clear the block buffer usage counters, use the **clear url-block block statistics** command in privileged EXEC mode.

## clear url-block block statistics

**Syntax Description** This command has no arguments or keywords.

**Defaults** No default behavior or values.

**Command Modes** The following table shows the modes in which you can enter the command:

	Firewall Mode		Security Context		
				Multiple	
Command Mode	Routed	Transparent	Single	Context	System
Privileged EXEC	•	•	•	•	•

Release	Modification
Preexisting	This command was preexisting.

**Usage Guidelines** The **clear url-block block statistics** command clears the block buffer usage counters, except for the `Current number of packets held (global) counter`.

**Examples** The following example clears the URL block statistics and displays the status of the counters after clearing:

```
hostname# clear url-block block statistics
hostname# show url-block block statistics
```

```
URL Pending Packet Buffer Stats with max block 0
```

```
-----
Cumulative number of packets held: | 0
Maximum number of packets held (per URL): | 0
Current number of packets held (global): | 38
Packets dropped due to
| exceeding url-block buffer limit: | 0
| HTTP server retransmission: | 0
Number of packets released back to client: | 0
```

## Related Commands

Commands	Description
<b>filter url</b>	Directs traffic to a URL filtering server.
<b>show url-block</b>	Displays information about the URL cache, which is used for buffering URLs while waiting for responses from an N2H2 or Websense filtering server.
<b>url-block</b>	Manage the URL buffers used for web server responses.
<b>url-cache</b>	Enables URL caching while pending responses from an N2H2 or Websense server and sets the size of the cache.
<b>url-server</b>	Identifies an N2H2 or Websense server for use with the <b>filter</b> command.

# clear url-cache statistics

To remove **url-cache** command statements from the configuration, use the **clear url-cache** command in privileged EXEC mode.

## clear url-cache statistics

### Syntax Description

This command has no arguments or keywords.

### Defaults

No default behavior or values.

### Command Modes

The following table shows the modes in which you can enter the command:

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Privileged EXEC	•	•	•	•	•

### Command History

Release	Modification
Preexisting	This command was preexisting.

### Usage Guidelines

The **clear url-cache** command removes **url-cache** statistics from the configuration.

Using the URL cache does not update the Websense accounting logs for Websense protocol Version 1. If you are using Websense protocol Version 1, let Websense run to accumulate logs so you can view the Websense accounting information. After you get a usage profile that meets your security needs, enter the **url-cache** command to increase throughput. Accounting logs are updated for Websense protocol Version 4 and for N2H2 URL filtering while using the **url-cache** command.

### Examples

The following example clears the URL cache statistics:

```
hostname# clear url-cache statistics
```

### Related Commands

Commands	Description
<b>filter url</b>	Directs traffic to a URL filtering server.
<b>show url-cache statistics</b>	Displays information about the URL cache, which is used for buffering URLs while waiting for responses from an N2H2 or Websense filtering server.
<b>url-block</b>	Manages the URL buffers used for web server responses while waiting for a filtering decision from the filtering server.

<b>url-cache</b>	Enables URL caching while pending responses from an N2H2 or Websense server and sets the size of the cache.
<b>url-server</b>	Identifies an N2H2 or Websense server for use with the <b>filter</b> command.

# clear url-server

To clear URL filtering server statistics, use the **clear url-server** command in privileged EXEC mode.

## clear url-server statistics

**Syntax Description** This command has no arguments or keywords.

**Defaults** No default behavior or values.

**Command Modes** The following table shows the modes in which you can enter the command:

	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Privileged EXEC	•	•	•	•	•

Command History	Release	Modification
	Preexisting	This command was preexisting.

**Usage Guidelines** The **clear url-server** command removes URL filtering server statistics from the configuration.

**Examples** The following example clears the URL server statistics:

```
hostname# clear url-server statistics
```

Related Commands	Commands	Description
	<b>filter url</b>	Directs traffic to a URL filtering server.
	<b>show url-server</b>	Displays information about the URL cache, which is used for buffering URLs while waiting for responses from an N2H2 or Websense filtering server.
	<b>url-block</b>	Manages the URL buffers used for web server responses while waiting for a filtering decision from the filtering server.
	<b>url-cache</b>	Enables URL caching while pending responses from an N2H2 or Websense server and sets the size of the cache.
	<b>url-server</b>	Identifies an N2H2 or Websense server for use with the <b>filter</b> command.

# clear wccp

To reset WCCP information, use the **clear wccp** command in privileged EXEC mode.

**clear wccp** [ **web-cache** | *service\_number* ]

<b>Syntax Description</b>	<b>web-cache</b>	Specifies the web-cache service.
	<i>service-number</i>	A dynamic service identifier, which means the service definition is dictated by the cache. The dynamic service number can be from 0 to 254 and up to 255. There is a maximum allowable number of 256 that includes the web-cache service specified with the <b>web-cache</b> keyword.

<b>Defaults</b>	No default behavior or values.
-----------------	--------------------------------

<b>Command Modes</b>	The following table shows the modes in which you can enter the command:
----------------------	---

Command Mode	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple	
				Context	System
Privileged EXEC	•	•	•	•	—

<b>Command History</b>	Release	Modification
	7.2(1)	This command was introduced.

<b>Examples</b>	The following example shows how to reset the WCCP information for the web-cache service:
-----------------	--

```
hostname(config)# clear wccp web-cache
```

<b>Related Commands</b>	Command	Description
	<b>show wccp</b>	Displays the WCCP configuration.
	<b>wccp redirect</b>	Enables support of WCCP redirection.

# clear xlate

To clear current translation and connection information, use the **clear xlate** command in privileged EXEC mode.

```
clear xlate [global ip1[-ip2] [netmask mask]] [local ip1[-ip2] [netmask mask]]
               [gport port1[-port2]] [lport port1[-port2]] [interface if_name] [state state]
```

## Syntax Description

<b>global</b> <i>ip1</i> [- <i>ip2</i> ]	(Optional) Clears the active translations by global IP address or range of addresses.
<b>gport</b> <i>port1</i> [- <i>port2</i> ]	(Optional) Clears the active translations by the global port or range of ports.
<b>interface</b> <i>if_name</i>	(Optional) Displays the active translations by interface.
<b>local</b> <i>ip1</i> [- <i>ip2</i> ]	(Optional) Clears the active translations by local IP address or range of addresses.
<b>lport</b> <i>port1</i> [- <i>port2</i> ]	(Optional) Clears the active translations by local port or range of ports.
<b>netmask</b> <i>mask</i>	(Optional) Specifies the network mask to qualify the global or local IP addresses.
<b>state</b> <i>state</i>	(Optional) Clears the active translations by state. You can enter one or more of the following states: <ul style="list-style-type: none"> <li>• <b>static</b>—specifies <b>static</b> translations.</li> <li>• <b>portmap</b>—specifies PAT global translations.</li> <li>• <b>norandomseq</b>—specifies a <b>nat</b> or <b>static</b> translation with the <b>norandomseq</b> setting.</li> <li>• <b>identity</b>—specifies <b>nat 0</b> identity address translations.</li> </ul> When specifying more than one state, separate the states with a space.

## Defaults

No default behavior or values.

## Command Modes

The following table shows the modes in which you can enter the command:

	Firewall Mode		Security Context		
	Routed	Transparent	Single	Multiple Context	System
Privileged EXEC	•	•	•	•	•

## Command History

Release	Modification
Preexisting	This command was preexisting.

### Usage Guidelines

The **clear xlate** command clears the contents of the translation slots (“xlate” refers to the translation slot). Translation slots can persist after key changes have been made. Always use the **clear xlate** command after adding, changing, or removing the **aaa-server**, **access-list**, **alias**, **global**, **nat**, **route**, or **static** commands in your configuration.

An xlate describes a NAT or PAT session. These sessions can be viewed with the **show xlate** command with the **detail** option. There are two types of xlates: static and dynamic.

A static xlate is a persistent xlate that is created using the **static** command. The **clear xlate** command does not clear for a host in a static entry. Static xlates can only be removed by removing the **static** command from the configuration; the **clear xlate** does not remove the static translation rule. If you remove a **static** command from the configuration, preexisting connections that use the static rule can still forward traffic. Use the **clear local-host** to deactivate these connections.

A dynamic xlate is an xlate that is created on demand with traffic processing (through the **nat** or **global** command). The **clear xlate** removes dynamic xlates and their associated connections. You can also use the **clear local-host** command to clear the xlate and associated connections. If you remove a **nat** or a **global** command from the configuration, the dynamic xlate and associated connections may remain active. Use the **clear xlate** or the **clear local-host** command to remove these connections.

### Examples

The following example shows how to clear the current translation and connection slot information:

```
hostname# clear xlate global
```

### Related Commands

Command	Description
<b>clear local-host</b>	Clears local host network information.
<b>clear uauth</b>	Clears cached user authentication and authorization information.
<b>show conn</b>	Displays all active connections.
<b>show local-host</b>	Displays the local host network information.
<b>show xlate</b>	Displays the current translation information.
