Resolved Issues

The following issues are resolved in this release:

Table 1 *Resolved Issues in this release of AsyncOS for Email Security*

Defect ID	Description
84068	<p>Fixed: Content Scanning Engine Stops Scanning Due to Memory Leak</p> <p>Previously, the Email Security appliance's content scanning engine would go out of operation and stop scanning documents and attachments if it leaked memory and the leaked memory and memory usage reached 400 MB. The scanning engine would instead log, "no filter available for this file type." This issue has been resolved.</p>
50924	<p>Fixed: \$filenames and \$filetypes Action Variables Returned "None" for Dropped Attachment Information</p> <p>Previously, the action variables <code>\$filenames</code> and <code>\$filetypes</code> would return "None" instead of the correct file names and file types when used in message filters that dropped attachments.</p> <p>This issue has been resolved.</p> <p>Now, even when a message filter drops attachments, the <code>\$filenames</code> and <code>\$filetypes</code> action variables return the relevant information on the attachment files.</p>
