

# A APPENDIX

## VSS-Enabled Campus Best Practice Configuration Example

Figure A-1 illustrates the baseline best practice configuration required to set up basic VSS enabled network. The circle indicates the essential steps required to create the VSS systems from standalone. The red text highlights the important CLI information with VSS configuration. Comments are provided in *blue italic* font.

**Figure A-1** Overall VSS-Enabled Campus Best Practice Configuration Summary

226958

## End-to-End Device Configurations

The end-to-end devices configuration is categorized into three major sections. Each section configuration contains specific CLI which is a required as part of best practice configuration and corresponding explanation.

- VSS and L2 Domain- Includes above base configuration as well as L2 domain configuration
- Access-layer- Sample L2 domain configuration
- L3 Domain - Includes global L3 configuration for VSS and core routers. Then separate section for specifics topologies (ECMP and MEC) for EIGRP and OSPF. In addition, the core devices configuration shown below are standalone router/devices.

## VSS Specific

### VSS Global Configuration

```

switch virtual domain 10 ! Must configure unique domain ID
switch mode virtual
switch 1 priority 110 ! Not needed, helps in operational mgmt
switch 2 priority 100 ! Not needed, helps in operational mgmt
dual-active exclude interface GigabitEthernet1/5/3 ! Connectivity to VSS during dual active
mac-address use-virtual ! Required for consistent MAC address
dual-active detection pagp trust channel-group 202 ! Enhanced PAgP based dual active detection

redundancy ! Default SSO Enabled
main-cpu
    auto-sync running-config
mode sso

```

### Switch 1

```

interface Port-channel1 ! Unique port-channel number for SW 1
description VSL Link from Switch 1
no switchport
no ip address
switch virtual link 1 ! Defines switch ID for SW 1
mls qos trust cos
no mls qos channel-consistency

interface ten 1/5/4
channel-group 1 mode on ! EC mode is ON - EtherChannel Management Protocol off
interface ten 1/1/1
channel-group 1 mode on

```

### Switch 2

```

interface Port-channel2 ! Unique port-channel number for SW 1
description VSL Link from Switch 2
no switchport
no ip address
switch virtual link 2 ! Defines switch ID for SW 2
mls qos trust cos
no mls qos channel-consistency

interface ten 2/5/4

```

```
channel-group 2 mode on ! EC mode is ON - EtherChannel Management Protocol off
interface ten 2/1/1
channel-group 2 mode on
```

## Layer-2 Domain

### VSS

```
udld enable
vtp domain campus-test
vtp mode transparent

spanning-tree mode rapid-pvst
no spanning-tree optimize bpdu transmission
spanning-tree extend system-id
spanning-tree vlan 2-999 priority 24576 ! STP Root

port-channel load-balance src-dst-mixed-ip-port ! Enhanced hash algorithm

vlan 400 ! VLANs spanning multiple access-layer SWs
name L2_Spaned_VLAN_400

vlan 450
name L2_Spaned_VLAN_450

vlan 500
name L2_Spaned_VLAN_500

vlan 550
name L2_Spaned_VLAN_550

vlan 600
name L2_Spaned_VLAN_600

vlan 650
name L2_Spaned_VLAN_650

vlan 900
name NetMgmt_VLAN_900

vlan 999
name Unused_Port_VLAN_999

vlan 2
name cr7-3750-Stack-Data-VLAN
!
vlan 102
name cr7-3750-Stack-Voice-VLAN

interface Vlan2 ! Sample VLAN interface configuration
ip address 10.120.2.1 255.255.255.0
no ip redirects
no ip unreachables
ip flow ingress
ip pim sparse-mode
logging event link-status
hold-queue 150 in
hold-queue 150 out
!
```

## VSS—Multi-Chassis EtherChannel

### PAgP

```

interface GigabitEthernet1/8/23 ! Interface on SW 1
description Access Switch Facing Interface
switchport
switchport trunk encapsulation dot1q
switchport trunk native vlan 202
switchport mode dynamic desirable ! Trunk mod dynamic and desirable
switchport trunk allowed vlan 2,102,400,450,500,550,600,650,900 ! Only allow need VLANs
for a given trunk
logging event link-status ! Logging for link status
logging event trunk-status ! Logging for trunk status
logging event bundle-status ! Logging for port-channel status
load-interval 30
mls qos trust dscp
channel-protocol pagp
channel-group 202 mode desirable ! Define Port-channel, PAgP mode desirable

interface GigabitEthernet2/8/23 ! Interface on SW 2
description Access Switch Facing Interface
switchport
switchport trunk encapsulation dot1q
switchport trunk native vlan 202
switchport mode dynamic desirable
switchport trunk allowed vlan 2,102,400,450,500,550,600,650,900
logging event link-status
logging event trunk-status
logging event bundle-status
load-interval 30
mls qos trust dscp
load-interval 30
channel-protocol pagp
channel-group 202 mode desirable

interface Port-channel202 ! Automatically created by defining at interfaces
description Access Switch MEC
switchport
switchport trunk encapsulation dot1q
switchport trunk native vlan 202
switchport trunk allowed vlan 2,102,400,450,500,550,600,650,900
logging event link-status
logging event spanning-tree status ! STP logging enabled on port-channel
load-interval 30
mls qos trust dscp
spanning-tree portfast ! Optional - helps during initialization
hold-queue 2000 out

```

## LACP

### LACP Sample Configuration

```

interface GigabitEthernet1/8/23
description Access Switch Facing Interface
switchport
switchport trunk encapsulation dot1q
switchport trunk native vlan 202
switchport mode dynamic desirable
switchport trunk allowed vlan 2,102,400,450,500,550,600,650,900
logging event link-status

```

```

logging event trunk-status
logging event bundle-status
load-interval 30
mls qos trust dscp
channel-protocol lacp
channel-group 202 mode active
hold-queue 2000 out

interface GigabitEthernet2/8/23
description Access Switch Facing Interface
switchport
switchport trunk encapsulation dot1q
switchport trunk native vlan 202
switchport mode dynamic desirable
switchport trunk allowed vlan 2,102,400,450,500,550,600,650,900
logging event link-status
logging event trunk-status
logging event bundle-status
load-interval 30
mls qos trust dscp
channel-protocol lacp
channel-group 202 mode active
hold-queue 2000 out

interface Port-channel202 ! Automatically created by defining at interfaces
description Access Switch MEC
switchport
switchport trunk encapsulation dot1q
switchport trunk native vlan 202
switchport trunk allowed vlan 2,102,400,450,500,550,600,650,900
logging event link-status
logging event spanning-tree status
load-interval 30
mls qos trust dscp
spanning-tree portfast ! Optional - helps during initialization
hold-queue 2000 out

```

## Access-Layer Switch

### Sample Configuration (Platform Specific Configuration Varies)

```

interface GigabitEthernet0/27
description Uplink to VSS Switch Gig 1/8/24
switchport trunk encapsulation dot1q
switchport trunk native vlan 203
switchport mode dynamic desirable
switchport trunk allowed vlan 3,103,400,450,500,550,600,650,900
logging event link-status
logging event trunk-status
logging event bundle-status
carrier-delay msec 0
srr-queue bandwidth share 1 70 25 5
srr-queue bandwidth shape 3 0 0 0
priority-queue out
mls qos trust dscp
channel-protocol pagp
channel-group 1 mode desirable

interface GigabitEthernet0/28
description Uplink to VSS Switch Gig 2/8/24
switchport trunk encapsulation dot1q
switchport trunk native vlan 203

```

```

switchport trunk allowed vlan 3,103,400,450,500,550,600,650,900
switchport mode dynamic desirable
logging event link-status
logging event trunk-status
logging event bundle-status
carrier-delay msec 0
srr-queue bandwidth share 1 70 25 5
srr-queue bandwidth shape 3 0 0 0
priority-queue out
mls qos trust dscp
channel-protocol pagp
channel-group 1 mode desirable

interface Port-channel1 ! Automatically created by defining at interfaces
description EC Uplink to VSS
switchport trunk encapsulation dot1q
switchport trunk native vlan 203
switchport trunk allowed vlan 3,103,400,450,500,550,600,650,900
switchport mode dynamic desirable
logging event link-status
logging event spanning-tree status
carrier-delay msec 0
spanning-tree portfast ! Optional - helps during initialization

```

## Layer-3 Domain

The Layer 3 domain represents VSS interconnection to the core-layer. The core-layer devices configuration shown below are standalone router/switch.

### Global Configuration

```
mls ip cef load-sharing <option> ! Apply Campus Best Practices
```

### Multicast

#### VSS

```

ip multicast-routing
ip pim rp-address 10.122.100.1 GOOD-IPMC override ! RP mapping with filter

ip access-list standard GOOD-IPMC
permit 224.0.1.39
permit 224.0.1.40
permit 239.192.240.0 0.0.3.255
permit 239.192.248.0 0.0.3.255

```

### Core 1 Standalone Router (No VSS)

#### Core RP ANYCAST - Primary

```

ip multicast-routing

interface Loopback0
description MSDP PEER INT ! MSDP Loopback
ip address 10.122.10.1 255.255.255.255

```

```

interface Loopback1
description ANYCAST RP ADDRESS (PRIMARY) ! Anycast RP Primary
ip address 10.122.100.1 255.255.255.255

interface Loopback2
description Garbage-CAN RP
ip address 2.2.2.2 255.255.255.255

interface Port-channel1 ! Core 1- Core2 L3 for MSDP
description Channel to Peer Core Node
dampening
ip address 10.122.0.18 255.255.255.254
ip pim sparse-mode
load-interval 30
carrier-delay msec 0
mls qos trust dscp

ip access-list standard GOOD-IPMC
permit 224.0.1.39
permit 224.0.1.40
permit 239.192.240.0 0.0.3.255
permit 239.192.248.0 0.0.3.255

ip msdp peer 10.122.10.2 connect -source Loopback0 ! MSDP Configuration
ip msdp description 10.122.10.2 ANYCAST-PEER-6k-core-2
ip msdp cache -sa-state
ip msdp originator-id Loopback0

```

## Core 2 Standalone Router (No VSS)

```

ip multicast-routing

interface Loopback0
description MSDP PEER INT
ip address 10.122.10.2 255.255.255.255

interface Loopback1
description ANYCAST RP ADDRESS
ip address 10.122.100.1 255.255.255.255 ! Secondary ANYCAST RP
delay 600

interface Loopback2
description Garbage-CAN RP
ip address 2.2.2.2 255.255.255.255

interface Port-channel1
description Channel to Peer Core node
dampening
ip address 10.122.0.19 255.255.255.254
ip pim sparse-mode
load-interval 30
carrier-delay msec 0
mls qos trust dscp

ip pim rp-address 10.122.100.1 GOOD-IPMC override
ip access-list standard GOOD-IPMC
permit 224.0.1.39
permit 224.0.1.40
permit 239.192.240.0 0.0.3.255
permit 239.192.248.0 0.0.3.255

```

```
ip msdp peer 10.122.10.1 connect-source Loopback0
ip msdp description 10.122.10.1 ANYCAST-PEER-6k-core-1
ip msdp cache-sa-state
ip msdp originator-id Loopback0
```
