LAN Configuration Files Guide

● ● ● SMART BUSINESS ARCHITECTURE

February 2013 Series

Preface

Who Should Read This Guide

This Cisco® Smart Business Architecture (SBA) guide is for people who fill a variety of roles:

- Systems engineers who need standard procedures for implementing solutions
- Project managers who create statements of work for Cisco SBA implementations
- Sales partners who sell new technology or who create implementation documentation
- Trainers who need material for classroom instruction or on-the-job training

In general, you can also use Cisco SBA guides to improve consistency among engineers and deployments, as well as to improve scoping and costing of deployment jobs.

Release Series

Cisco strives to update and enhance SBA guides on a regular basis. As we develop a series of SBA guides, we test them together, as a complete system. To ensure the mutual compatibility of designs in Cisco SBA guides, you should use guides that belong to the same series.

The Release Notes for a series provides a summary of additions and changes made in the series.

All Cisco SBA guides include the series name on the cover and at the bottom left of each page. We name the series for the month and year that we release them, as follows:

month year Series

For example, the series of guides that we released in February 2013 is the “February Series”.

You can find the most recent series of SBA guides at the following sites:

How to Read Commands

Many Cisco SBA guides provide specific details about how to configure Cisco network devices that run Cisco IOS, Cisco NX-OS, or other operating systems that you configure at a command-line interface (CLI). This section describes the conventions used to specify commands that you must enter.

Commands to enter at a CLI appear as follows:

```
configure terminal
```

Commands that specify a value for a variable appear as follows:

```
ntp server 10.10.48.17
```

Commands with variables that you must define appear as follows:

```
class-map [highest class name]
```

Commands shown in an interactive example, such as a script or when the command prompt is included, appear as follows:

```
Router# enable
```

Long commands that line wrap are underlined. Enter them as one command:

```
wrr-queue random-detect max-threshold 1 100 100 100 100 100  
100 100 100
```

Noteworthy parts of system output or device configuration files appear highlighted, as follows:

```
interface Vlan64  
ip address 10.5.204.5 255.255.255.0
```

Comments and Questions

If you would like to comment on a guide or ask questions, please use the [SBA feedback form](#).

If you would like to be notified when new comments are posted, an RSS feed is available from the SBA customer and partner pages.

What's In This SBA Guide

Cisco SBA Borderless Networks

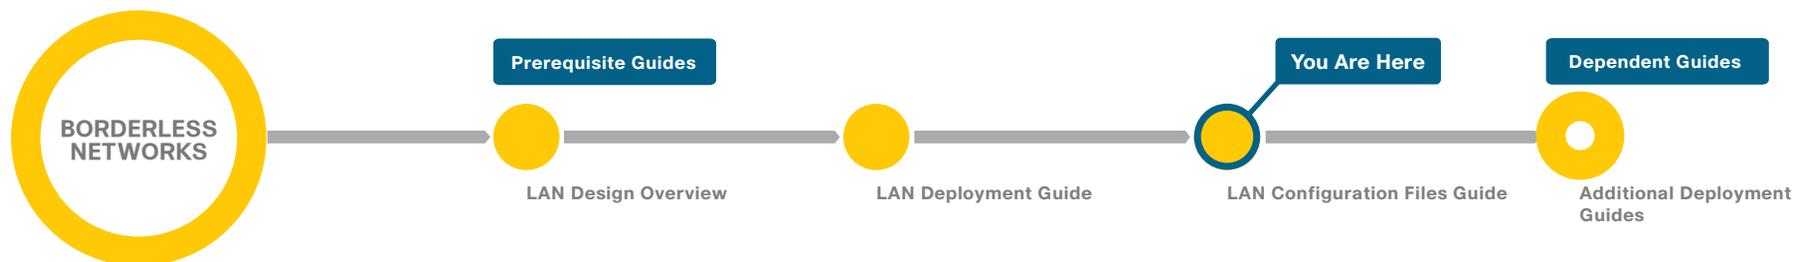

Cisco SBA helps you design and quickly deploy a full-service business network. A Cisco SBA deployment is prescriptive, out-of-the-box, scalable, and flexible.

Cisco SBA incorporates LAN, WAN, wireless, security, data center, application optimization, and unified communication technologies—tested together as a complete system. This component-level approach simplifies system integration of multiple technologies, allowing you to select solutions that solve your organization's problems—without worrying about the technical complexity.

Cisco SBA Borderless Networks is a comprehensive network design targeted at organizations with up to 10,000 connected users. The SBA Borderless Network architecture incorporates wired and wireless local area network (LAN) access, wide-area network (WAN) connectivity, WAN application optimization, and Internet edge security infrastructure.

Route to Success

To ensure your success when implementing the designs in this guide, you should first read any guides that this guide depends upon—shown to the left of this guide on the route below. As you read this guide, specific prerequisites are cited where they are applicable.

About This Guide

This *configuration files guide* provides, as a comprehensive reference, the complete network device configurations that are implemented in a Cisco SBA deployment guide.

You can find the most recent series of Cisco SBA guides at the following sites:

Introduction

The *Cisco SBA—Borderless Networks LAN Deployment Guide* provides an out-of-the-box deployment for wired network access with ubiquitous capabilities that scale from small environments with one to a few LAN switches to the larger campus-size LAN. Resiliency, security, and scalability are included to provide a robust communications environment. Quality of service (QoS) is integrated to ensure that the base architecture can support a multitude of applications including low latency, drop-sensitive, multimedia applications coexisting with data applications on a single network.

The Cisco SBA LAN architecture is designed to meet the needs of organizations with LAN connectivity requirements that range from a small remote-site LAN to up to 5,000 connected users at a single location.

Notes

Figure 1 - Cisco SBA scalable LAN architecture

2082

The modular design of the Cisco SBA LAN architecture provides multiple scale points to meet your organization's specific requirements:

- A highly resilient and scalable distribution layer with two modular chassis-based platforms using the Cisco Catalyst 6500 Virtual Switching System (VSS), that acts as a single logical distribution layer platform. This design allows for high density aggregation of Gigabit Ethernet and 10 Gigabit Ethernet connected wiring closets and other platforms. Cisco Catalyst 6500 VSS provides the most advanced feature set and the highest resiliency of the available platforms.
- A resilient modular chassis distribution layer design for locations where there is a mix of Gigabit Ethernet or 10-Gigabit Ethernet connected wiring closets that need to be aggregated. Cisco Catalyst 4507 with dual supervisors and dual power supplies provides resiliency with ISSU and sub-second failover.
- A stackable Cisco Catalyst 3750-X distribution layer switch to accommodate locations where there is a small number of gigabit connected wiring closets and other platforms that need to be aggregated. Cisco Catalyst 3750-X provides a resilient platform with StackWise and StackPower.
- A three tier network design that can accommodate the most demanding LAN requirements by incorporating one or many of the distribution layer designs connected to a highly reliable core layer. As the LAN design scales, the distribution layer modules that make up the design remain consistent to provide a scalable design.

In two-tier LAN designs where there is only an access layer and a single distribution layer, the distribution layer acts as a *collapsed core* as the distribution layer becomes the core for all connectivity in these locations.

Access Layer Configurations

Catalyst 2960-S Series Switch

The Cisco Catalyst 2960-S Series switches are fixed-configuration, stackable, 10/10/1000 Ethernet switches, with Power over Ethernet (PoE+) and non-powered versions designed for entry-level enterprise, midmarket, and remote site networks.

Catalyst 3750-X Series Switch

The Cisco Catalyst 3750-X Series switches are fixed-port, stackable, 10/100/1000 Ethernet switches, with PoE+ and non-PoE versions, that provide enhanced resiliency through the Cisco StackWise Plus and Cisco StackPower technologies.

Catalyst 4500+E Series Switch

The Cisco Catalyst 4500 E-Series switches are modular switches that support multiple Ethernet connectivity options including 10/100/1000 Ethernet, 100-MB fiber, gigabit fiber, and 10-gigabit fiber. The Catalyst 4500 E-Series switches also have an upgradable supervisor module that enables future functionality to be added with a supervisor module upgrade while maintaining the initial investment in the chassis and the modules.

Distribution Layer Configurations

Catalyst 3750X-12S Switch

The Catalyst 3750X-12S switch is configured as a single unit, but has independent load-sharing power supplies and processor for each switch in the Cisco StackWise Plus stack. The Cisco SBA LAN architecture uses a pair of stacked 3750X-12S-E switches that provide Layer 2 and Layer 3 switching for a small to medium density of Gigabit Ethernet access-closet support. The switches use Small Form-Factor Pluggable (SFP) transceivers for a port-by-port option of copper or fiber optic Gigabit Ethernet EtherChannel uplinks to access closets.

Catalyst 4507R+E Switch

The Cisco Catalyst 4507R+E switch has redundant supervisors, line cards, and power supplies. This design uses a single 4507R+E chassis configured with resilient components as a distribution layer platform. The Supervisor 7E has the ability to provide a medium density of Gigabit Ethernet and even 10-Gigabit Ethernet EtherChannel links to the access layer.

Catalyst Virtual Switching System 4T

The Cisco Catalyst 6500 VSS 4T system effectively allows the clustering of two physical chassis into a logical entity that can be operated as a single device. This configuration provides redundant chassis, supervisors, line cards, and power supplies, and can also provide the highest density of the product options for Gigabit Ethernet and 10-Gigabit Ethernet EtherChannel uplinks using Cisco Multi-chassis EtherChannel.

Core Layer Configurations

Catalyst 6500 Series Switch

The Cisco Catalyst 6500 Series switch, powered by the Supervisor 2T, is the premier LAN core platform. It delivers scalable performance, intelligence, and a broad set of features to address the needs of the most demanding deployment requirements for building a modular, resilient, scalable, and secure Layer 3 backbone solution.
