rmon collection stats

Use the **rmon collection stats** interface configuration command to collect Ethernet group statistics, which include usage statistics about broadcast and multicast packets, and error statistics about cyclic redundancy check (CRC) alignment errors and collisions. Use the **no** form of this command to return to the default setting.

rmon collection stats index [owner name]

no rmon collection stats index [owner name]

Syntax Description

index	Remote Network Monitoring (RMON) collection control index. The range is 1 to 65535.
owner name	(Optional) Owner of the RMON collection.

Command Default

The RMON statistics collection is disabled.

Command Modes

Interface configuration

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

The RMON statistics collection command is based on hardware counters.

You can verify your setting by entering the **show rmon statistics** privileged EXEC command.

Examples

This example shows how to collect RMON statistics for the owner root:

Switch(config)# interface gigabitethernet0/1
Switch(config-if)# rmon collection stats 2 owner root

Command	Description
show rmon statistics	Displays RMON statistics.

sdm prefer

Use the **sdm prefer** global configuration command on the switch to configure the template used in Switch Database Management (SDM) resource allocation. You can use a template to allocate system resources to best support the features being used in your application. Use a template to provide maximum system usage for unicast routing or for VLAN configuration or to select the dual IPv4 and IPv6 template to support IPv6 forwarding Use the **no** form of this command to return to the default template.

 $sdm\ prefer\ \{access \mid default \mid dual-ipv4-and-ipv6\ \{default \mid routing \mid vlan\} \mid routing \mid vlan\} \\ [desktop]$

no sdm prefer

Syntax Description

access	Provide maximum system usage for access control lists (ACLs). Use this template if you have a large number of ACLs.
default	Give balance to all functions.
dual-ipv4-and-ipv6	Select a template that supports both IPv4 and IPv6 routing.
{default routing vlan}	 default—Provide balance to IPv4 and IPv6 Layer 2 and Layer 3 functionality.
	 routing—Provide maximum system usage for IPv4 and IPv6 host, including IPv4 policy-based routing.
	• vlan—Provide maximum system usage for IPv4 and IPv6 VLANs.
routing	Provide maximum system usage for unicast routing. You would typically use this template for a router or aggregator in the middle of a network.
vlan	Provide maximum system usage for VLANs. This template maximizes system resources for use as a Layer 2 switch with no routing.

Command Default

The default template provides a balance to all features.

Command Modes

Global configuration

Command History

Release	Modification
12.2(44)SE	This command was introduced.

Usage Guidelines

You must reload the switch for the configuration to take effect. If you enter the **show sdm prefer** command before you enter the **reload** privileged EXEC command, the **show sdm prefer** command shows the template currently in use and the template that will become active after a reload.

Use the **no sdm prefer** command to set the switch to the default template. The default templates balances the use of system resources.

The access template maximizes system resources for access control lists (ACLs) as required to accommodate a large number of ACLs.

Use the **sdm prefer vlan [desktop]** global configuration command only on switches intended for Layer 2 switching with no routing. When you use the VLAN template, no system resources are reserved for routing entries, and any routing is done through software. This overloads the CPU and severely degrades routing performance.

Do not use the routing template if you do not have routing enabled on your switch. Entering the **sdm prefer routing** global configuration command prevents other features from using the memory allocated to unicast routing in the routing template.

Do not use the ipv4-and-ipv6 templates if you do not plan to enable IPv6 on the switch. Entering the **sdm prefer ipv4-and-ipv6** {**default | routing | vlan**} global configuration command divides resources between IPv4 and IPv6, limiting those allocated to IPv4 forwarding.

Table 2-23 lists the approximate number of each resource supported in each of the IPv4-only templates for a switch. The values in the template are based on eight routed interfaces and approximately one thousand VLANs and represent the approximate hardware boundaries set when a template is selected. If a section of a hardware resource is full, all processing overflow is sent to the CPU, seriously impacting switch performance.

Table 2-23 Approximate Number of Feature Resources Allowed by Each IPv4 Template

Resource	Access	Default	Routing	VLAN
Unicast MAC addresses	4 K	6 K	3 K	12 K
IGMP groups and multicast routes	1 K	1 K	1 K	1 K
Unicast routes	6 K	8 K	11 K	0
Directly connected hosts	4 K	6 K	3 K	0
Indirect routes	2 K	2 K	8 K	0
Policy-based routing ACEs ¹	0.5 K	0	0.5 K	0
QoS classification ACEs	0.75K	0.75K	0.75K	0.75K
Security ACEs	2 K	1 K	1 K	1 K

^{1.} Policy-based routing is not supported in the IP base image on the switch.

Table 2-24 lists the approximate number of each resource supported in each of the dual IPv4-and IPv6 templates.

Table 2-24 Approximate Feature Resources Allowed by Dual IPv4-IPv6 Templates

Resource	IPv4-and-IPv6 Default	IPv4-and-IPv6 Routing	IPv4-and-IPv6 VLAN
Unicast MAC addresses	2 K	1.5 K	8 K
IPv4 IGMP groups and multicast routes	1 K	1K	1 K
Total IPv4 unicast routes:	3 K	2.75 K	0
Directly connected IPv4 hosts	2 K	1.5 K	0
Indirect IPv4 routes	1 K	1.25 K	0
IPv6 multicast groups	1.125 K	1.125 K	1.125 K

Table 2-24 Approximate Feature Resources Allowed by Dual IPv4-IPv6 Templates (continued)

Resource	IPv4-and-IPv6 Default	IPv4-and-IPv6 Routing	IPv4-and-IPv6 VLAN
Total IPv6 unicast routes:	3 K	2.75 K	0
Directly connected IPv6 addresses	2 K	1.5 K	0
Indirect IPv6 unicast routes	1 K	1.25 K	0
IPv4 policy-based routing ACEs ¹	0	0.25 K	0
IPv4 or MAC QoS ACEs (total)	0.75 K	0.75 K	0.75 K
IPv4 or MAC security ACEs (total)	1 K	0.5 K	1K
IPv6 policy-based routing ACEs ¹	0	0.25 K	0
IPv6 QoS ACEs	0.5 K	0.5 K	0.5 K
IPv6 security ACEs ²	0.5 K	0.5 K	0.5 K

^{1.} Not supported in the IP base image that runs on the switch.

^{2.} The switch supports only input IPv6 router ACLs for management traffic.

Although these features are visible in the template in the CLI, the switch does not support IPv4 or IPv6 policy-based routing or IPv6 Qos ACLs.

Examples

This example shows how to configure the access template on a switch:

```
Switch(config)# sdm prefer access
Switch(config)# exit
Switch# reload
```

This example shows how to configure the routing template on a switch:

```
Switch(config)# sdm prefer routing
Switch(config)# exit
Switch# reload
```

This example shows how to configure the dual IPv4-and-IPv6 default template on a switch:

```
Switch(config)# sdm prefer dual-ipv4-and-ipv6 default
Switch(config)# exit
Switch# reload
```

This example shows how to configure the default template:

```
Switch(config)# sdm prefer default
Switch(config)# exit
Switch# reload
```

You can verify your settings by entering the show sdm prefer privileged EXEC command.

Command	Description
show sdm prefer	Displays the current SDM template in use or displays the templates that can
	be used, with approximate resource allocation per feature.

service password-recovery

Use the **service password-recovery** global configuration command to enable the password-recovery mechanism (the default). This mechanism allows an end user with physical access to the switch to hold down the **Mode** button and interrupt the bootup process while the switch is powering up and to assign a new password. Use the **no** form of this command to disable part of the password-recovery functionality. When the password-recovery mechanism is disabled, interrupting the bootup process is allowed only if the user agrees to set the system back to the default configuration.

service password-recovery

no service password-recovery

Syntax Description

This command has no arguments or keywords.

Command Default

The password-recovery mechanism is enabled.

Command Modes

Global configuration

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

As a system administrator, you can use the **no service password-recovery** command to disable some of the functionality of the password recovery feature by allowing an end user to reset a password only by agreeing to return to the default configuration.

To use the password-recovery procedure, a user with physical access to the switch restarts the switch and then enters the break key to interrupt the bootup sequence. The user pulls the switch partially out of the module bay until the power disconnects, then pushes it in again. The switch restarts when it reseats in the blade server. The switch performs the power-on self-test (POST) after power is applied. Next the user pushes the release latch on the front of the switch to the closed position, and then within 15 seconds, presses the Mode button while the System LED is still flashing green. The user continues to press the Mode button until the System LED turns briefly amber and then solid green, and then releases the Mode button. When the button is released, the system continues with initialization. See the software configuration guide for this release for more information about this procedure

The break key character is different for each operating system.

On a SUN work station running UNIX, Ctrl-C is the break key.

On a PC running Hyperterminal on Windows XP or 2000, Ctrl-Break is the break key.

Cisco TAC has tabulated break keys for most common operating systems and an alternative *break key sequence* for those terminal emulators that do not support the break keys. See

http://www.cisco.com/warp/public/701/61.html#how-to for that list.

For instructions on how to use the break key to enter the bootloader mode, see the software configuration guide for this release.

If the password-recovery mechanism is disabled, this message appears:

The password-recovery mechanism has been triggered, but is currently disabled. Access to the boot loader prompt through the password-recovery mechanism is disallowed at this point. However, if you agree to let the system be reset back to the default system configuration, access to the boot loader prompt can still be allowed.

Would you like to reset the system back to the default configuration (y/n)?

If the user chooses not to reset the system to the default configuration, the normal bootup process continues, as if the **Mode** button had not been pressed. If you choose to reset the system to the default configuration, the configuration file in flash memory is deleted, and the VLAN database file, *flash:vlan.dat* (if present), is deleted.

If the password-recovery mechanism is enabled, this message appears:

The system has been interrupted prior to initializing the flash file system. The following commands will initialize the flash file system, and finish loading the operating system software#

flash_init
load_helper
boot

If you use the **no service password-recovery** command to control end user access to passwords, we recommend that you save a copy of the config file in a location away from the switch in case the end user uses the password recovery procedure and sets the system back to default values. Do not keep a backup copy of the config file on the switch.

If the switch is operating in VTP transparent mode, we recommend that you also save a copy of the vlan.dat file in a location away from the switch.

You can verify if password recovery is enabled or disabled by entering the **show version** privileged EXEC command.

Examples

This example shows how to disable password recovery on a switch so that a user can only reset a password by agreeing to return to the default configuration.

Switch(config)# no service-password recovery
Switch(config)# exit

Command	Description
show version	Displays version information for the hardware and firmware.

service-policy

Use the **service-policy** interface configuration command on the switch to apply a policy map defined by the **policy-map** command to the input of a physical port or a switch virtual interface (SVI). Use the **no** form of this command to remove the policy map and port association.

service-policy input *policy-map-name*

no service-policy input policy-map-name

Syntax Description

input policy-map-name

Apply the specified policy map to the input of a physical port or an SVI.

___= Note

Though visible in the command-line help strings, the **history** keyword is not supported, and you should ignore the statistics that it gathers. The **output** keyword is also not supported.

Command Default

No policy maps are attached to the port.

Command Modes

Interface configuration

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

Policy maps can be configured on physical ports or on SVIs. When VLAN-based quality of service (QoS) is disabled by using the **no mls qos vlan-based** interface configuration command on a physical port, you can configure a port-based policy map on the port. If VLAN-based QoS is enabled by using the **mls qos vlan-based** interface configuration command on a physical port, the switch removes the previously configured port-based policy map. After a hierarchical policy map is configured and applied on an SVI, the interface-level policy map takes effect on the interface.

You can apply a policy map to incoming traffic on a physical port or on an SVI. You can configure different interface-level policy maps for each class defined in the VLAN-level policy map. For more information about hierarchical policy maps, see the "Configuring QoS" chapter in the software configuration guide for this release.

Classification using a port trust state (for example, **mls qos trust** [cos | dscp | ip-precedence] and a policy map (for example, service-policy input policy-map-name) are mutually exclusive. The last one configured overwrites the previous configuration.

Examples

This example shows how to apply *plcmap1* to an physical ingress port:

Switch(config)# interface gigabitethernet0/21
Switch(config-if)# service-policy input plcmap1

This example shows how to remove *plcmap2* from a physical port:

```
Switch(config)# interface gigabitethernet0/22
Switch(config-if)# no service-policy input plcmap2
```

This example shows how to apply *plcmap1* to an ingress SVI when VLAN-based QoS is enabled:

```
Switch(config)# interface vlan 10
Switch(config-if)# service-policy input plcmap1
```

This example shows how to create a hierarchical policy map and attach it to an SVI:

```
Switch> enable
Switch# configure terminal
Enter configuration commands, one per line. End with {\tt CNTL/Z.}
Switch(config) # access-list 101 permit ip any any
Switch(config) # class-map cm-1
Switch(config-cmap) # match access 101
Switch(config-cmap)# exit
Switch(config)# exit
Switch#
Switch#
Switch# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Switch(config) # class-map cm-interface-1
Switch(config-cmap) # match input gigabitethernet0/1 - gigabitethernet0/2
Switch(config-cmap)# exit
Switch(config) # policy-map port-plcmap
Switch(config-pmap)# class-map cm-interface-1
Switch(config-pmap-c)# police 900000 9000 exc policed-dscp-transmit
Switch(config-pmap-c)# exit
Switch(config-pmap)# exit
Switch(config) # policy-map vlan-plcmap
Switch(config-pmap)# class-map cm-1
Switch(config-pmap-c) # set dscp 7
Switch(config-pmap-c)# service-policy port-plcmap-1
Switch(config-pmap-c)# exit
Switch(config-pmap)# class-map cm-2
Switch(config-pmap-c)# match ip dscp 2
Switch(config-pmap-c)# service-policy port-plcmap-1
Switch(config-pmap)# exit
Switch(config-pmap)# class-map cm-3
Switch(config-pmap-c)# match ip dscp 3
Switch(config-pmap-c)# service-policy port-plcmap-2
Switch(config-pmap)# exit
Switch(config-pmap) # class-map cm-4
Switch(config-pmap-c)# trust dscp
Switch(config-pmap)# exit
Switch(config) # interface vlan 10
Switch(config-if)#
Switch(config-if) # ser input vlan-plcmap
Switch(config-if)# exit
Switch(config)# exit
Switch#
```

You can verify your settings by entering the **show running-config** privileged EXEC command.

Command	Description
policy-map	Creates or modifies a policy map that can be attached to multiple ports to specify a service policy.
show policy-map	Displays QoS policy maps.
show running-config	Displays the running configuration on the switch.

set

Use the **set** policy-map class configuration command to classify IP traffic by setting a Differentiated Services Code Point (DSCP) or an IP-precedence value in the packet. Use the **no** form of this command to remove traffic classification.

set {dscp new-dscp | [ip] precedence new-precedence}

no set {dscp new-dscp | [ip] precedence new-precedence}

Syntax Description

dscp new-dscp	New DSCP value assigned to the classified traffic. The range is 0 to 63. You also can enter a mnemonic name for a commonly used value.
[ip] precedence new-precedence	New IP-precedence value assigned to the classified traffic. The range is 0 to 7. You also can enter a mnemonic name for a commonly used value.

Command Default

No traffic classification is defined.

Command Modes

Policy-map class configuration

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

If you have used the **set ip dscp policy**-map class configuration command, the switch changes this command to **set dscp** in the switch configuration. If you enter the **set ip dscp** policy-map class configuration command, this setting appears as **set dscp** in the switch configuration.

You can use the **set ip precedence** policy-map class configuration command or the **set precedence** policy-map class configuration command. This setting appears as **set ip precedence** in the switch configuration.

The **set** command is mutually exclusive with the **trust** policy-map class configuration command within the same policy map.

For the **set dscp** new-dscp or the **set ip precedence** new-precedence command, you can enter a mnemonic name for a commonly used value. For example, you can enter the **set dscp af11** command, which is the same as entering the **set dscp 10** command. You can enter the **set ip precedence critical** command, which is the same as entering the **set ip precedence 5** command. For a list of supported mnemonics, enter the **set dscp?** or the **set ip precedence?** command to see the command-line help strings.

To return to policy-map configuration mode, use the **exit** command. To return to privileged EXEC mode, use the **end** command.

Examples

This example shows how to assign DSCP 10 to all FTP traffic without any policers:

Switch(config)# policy-map policy_ftp
Switch(config-pmap)# class ftp_class
Switch(config-pmap-c)# set dscp 10
Switch(config-pmap)# exit

You can verify your settings by entering the **show policy-map** privileged EXEC command.

Command	Description
class	Defines a traffic classification match criteria (through the police , set , and trust policy-map class configuration commands) for the specified class-map name.
police	Defines a policer for classified traffic.
policy-map	Creates or modifies a policy map that can be attached to multiple ports to specify a service policy.
show policy-map	Displays QoS policy maps.
trust	Defines a trust state for traffic classified through the class policy-map configuration command or the class-map global configuration command.

setup

Use the **setup** privileged EXEC command to configure the switch with its initial configuration.

setup

Syntax Description

This command has no arguments or keywords.

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

When you use the **setup** command, make sure that you have this information:

- IP address and network mask
- Password strategy for your environment

When you enter the **setup** command, an interactive dialog, called the System Configuration Dialog, appears. It guides you through the configuration process and prompts you for information. The values shown in brackets next to each prompt are the default values last set by using either the **setup** command facility or the **configure** privileged EXEC command.

Help text is provided for each prompt. To access help text, press the question mark (?) key at a prompt.

To return to the privileged EXEC prompt without making changes and without running through the entire System Configuration Dialog, press **Ctrl-C**.

When you complete your changes, the setup program shows you the configuration command script that was created during the setup session. You can save the configuration in NVRAM or return to the setup program or the command-line prompt without saving it.

Examples

This is an example of output from the **setup** command:

```
Switch# setup
--- System Configuration Dialog ---
Continue with configuration dialog? [yes/no]: yes

At any point you may enter a question mark '?' for help.
Use ctrl-c to abort configuration dialog at any prompt.
Default settings are in square brackets '[]'.

Basic management setup configures only enough connectivity for management of the system, extended setup will ask you to configure each interface on the system.

Would you like to enter basic management setup? [yes/no]: yes Configuring global parameters:
```

```
Enter host name [Switch]:host-name
  The enable secret is a password used to protect access to
  privileged EXEC and configuration modes. This password, after
  entered, becomes encrypted in the configuration.
  Enter enable secret: enable-secret-password
  The enable password is used when you do not specify an
  enable secret password, with some older software versions, and
  some boot images.
  Enter enable password: enable-password
  The virtual terminal password is used to protect
  access to the router over a network interface.
  Enter virtual terminal password: terminal-password
  Configure SNMP Network Management? [no]: yes
  Community string [public]:
Current interface summary
Any interface listed with OK? value "NO" does not have a valid configuration
Interface
                           IP-Address
                                           OK? Method Status
                                                                             Protocol
Vlan1
                           172.20.135.202 YES NVRAM up
                                                                             uр
GigabitEthernet0/1
                           unassigned
                                           YES unset up
                                                                             up
GigabitEthernet0/2
                           unassigned
                                           YES unset up
                                                                             down
<output truncated>

no ip address
Use this configuration? [yes/no]: yes
[0] Go to the IOS command prompt without saving this config.
```

[1] Return back to the setup without saving this config.

[2] Save this configuration to nvram and exit.

Enter your selection [2]:

Command	Description
show running-config	Displays the running configuration on the switch.
show version	Displays version information for the hardware and firmware.

setup express

Use the **setup express** global configuration command to enable Express Setup mode. Use the **no** form of this command to disable Express Setup mode.

setup express

no setup express

Syntax Description

This command has no arguments or keywords.

Defaults

Express Setup is enabled.

Command Modes

Global configuration

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

When Express Setup is enabled on a new (unconfigured) switch, pressing the Mode button for 2 seconds activates Express Setup. You can access the switch through an Ethernet port by using the IP address 10.0.0.1 and then can configure the switch with the web-based Express Setup program or the command-line interface (CLI)-based setup program.

When you press the Mode button for 2 seconds on a configured switch, the LEDs above the Mode button start blinking. If you press the Mode button for a total of 10 seconds, the switch configuration is deleted, and the switch reboots. The switch can then be configured like a new switch, either through the web-based Express Setup program or the CLI-based setup program.

As soon as you make any change to the switch configuration (including entering *no* at the beginning of the CLI-based setup program), configuration by Express Setup is no longer available. You can only run Express Setup again by pressing the Mode button for 10 seconds. This deletes the switch configuration and reboots the switch.

If Express Setup is active on the switch, entering the **write memory** or **copy running-configuration startup-configuration** privileged EXEC commands deactivates Express Setup. The IP address 10.0.0.1 is no longer valid on the switch, and your connection using this IP address ends.

The primary purpose of the **no setup express** command is to prevent someone from deleting the switch configuration by pressing the Mode button for 10 seconds.

Examples

This example shows how to enable Express Setup mode:

Switch(config) # setup express

You can verify that Express Setup mode is enabled by pressing the Mode button:

- On an unconfigured switch, the LEDs above the Mode button turn solid green after 3 seconds.
- On a configured switch, the mode LEDs begin blinking after 2 seconds and turn solid green after 10 seconds.

If you *hold* the Mode button down for a total of 10 seconds, the configuration is deleted, and the switch reboots.

This example shows how to disable Express Setup mode:

Switch(config)# no setup express

You can verify that Express Setup mode is disabled by pressing the Mode button. The mode LEDs do not turn solid green *or* begin blinking green if Express Setup mode is not enabled on the switch.

Command	Description
show setup express	Displays if Express Setup mode is active.

show access-lists

Use the **show access-lists** privileged EXEC command to display access control lists (ACLs) configured on the switch.

show access-lists [name | number | hardware counters | ipc]

Syntax Description

name	(Optional) Name of the ACL.
number	(Optional) ACL number. The range is 1 to 2699.
hardware counters	(Optional) Display global hardware ACL statistics for switched and routed packets.
ipc	(Optional) Display Interprocess Communication (IPC) protocol access-list configuration download information.

Though visible in the command-line help strings, the rate-limit keywords are not supported.

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

The switch supports only IP standard and extended access lists. Therefore, the allowed numbers are only 1 to 199 and 1300 to 2699.

This command also displays the MAC ACLs that are configured.

Examples

This is an example of output from the show access-lists command:

```
Switch# show access-lists
Standard IP access list 1
    10 permit 1.1.1.1
   20 permit 2.2.2.2
   30 permit anv
    40 permit 0.255.255.255, wildcard bits 12.0.0.0
Standard IP access list videowizard_1-1-1-1
   10 permit 1.1.1.1
Standard IP access list videowizard_10-10-10-10
   10 permit 10.10.10.10
Extended IP access list 121
   10 permit ahp host 10.10.10.10 host 20.20.10.10 precedence routine
Extended IP access list CMP-NAT-ACL
   Dynamic Cluster-HSRP deny ip any any
    10 deny ip any host 19.19.11.11
    20 deny ip any host 10.11.12.13
    Dynamic Cluster-NAT permit ip any any
```

```

Command	Description
access-list	Configures a standard or extended numbered access list on the switch.
ip access list	Configures a named IP access list on the switch.
mac access-list extended	Configures a named or numbered MAC access list on the switch.

show archive status

Use the **show archive status** privileged EXEC command to display the status of a new image being downloaded to a switch with the HTTP or the TFTP protocol.

show archive status

Syntax Description

This command has no keywords or arguments.

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

If you use the **archive download-sw** privileged EXEC command to download an image to a TFTP server, the output of the **archive download-sw** command shows the status of the download.

If you do not have a TFTP server, you can use the embedded device manager to download the image by using HTTP. The **show archive status** command shows the progress of the download.

Examples

These are examples of output from the show archive status command:

Switch# show archive status
IDLE: No upgrade in progress

Switch# show archive status LOADING: Upgrade in progress

Switch# show archive status
EXTRACT: Extracting the image

Switch# show archive status VERIFY: Verifying software

Switch# show archive status

RELOAD: Upgrade completed. Reload pending

Command	Description
archive download-sw	Downloads a new image from a TFTP server to the switch.

show arp access-list

Use the **show arp access-list** user EXEC command to display detailed information about Address Resolution Protocol (ARP) access control (lists).

show arp access-list [acl-name]

Syntax Description

acl-name	(Optional) Name of the ACL.
----------	-----------------------------

Command Modes

User EXEC

Command History

Release	Modification
12.2(44)SE	This command was introduced.

Examples

This is an example of output from the **show arp access-list** command:

Switch> show arp access-list

ARP access list rose permit ip 10.101.1.1 0.0.0.255 mac any permit ip 20.3.1.0 0.0.0.255 mac any

Command	Description
arp access-list	Defines an ARP ACL.
deny (ARP access-list configuration)	Denies an ARP packet based on matches against the Dynamic Host Configuration Protocol (DHCP) bindings.
ip arp inspection filter vlan	Permits ARP requests and responses from a host configured with a static IP address.
permit (ARP access-list configuration)	Permits an ARP packet based on matches against the DHCP bindings.

show authentication

Use the **show authentication** command (in either user EXEC or privileged EXEC mode) to display information about authentication manager events on the switch.

show authentication {interface interface-id | registrations | sessions [session-id session-id] [handle handle] [interface interface-id] [mac mac] [method method] | statistics [summary]}

Syntax Description

interface interface-id(Optional) Display all of the authentication manager details for the specified interface.method method(Optional) Displays all clients authorized by a specified authentication method (dot1x, mab, or webauth)registrations(Optional) Display authentication manager registrationssessions(Optional) Display detail of the current authentication manager sessions (for example, client devices). If you do not enter any optional specifiers, all current active sessions are displayed. You can enter the specifiers singly or in combination to display a specific session (or group of sessions).session-id session-id(Optional) Specify an authentication manager session.handle handle(Optional) Display authentication manager information for a specified MAC address.statistics(Optional) Display authentication statistics in detail.summary(Optional) Display authentication statistics summary		
(dot1x, mab, or webauth) registrations (Optional) Display authentication manager registrations (Optional) Display detail of the current authentication manager sessions (for example, client devices). If you do not enter any optional specifiers, all current active sessions are displayed. You can enter the specifiers singly or in combination to display a specific session (or group of sessions). session-id session-id (Optional) Specify an authentication manager session. handle handle (Optional) Specify a range from 1 to 4294967295. mac mac (Optional) Display authentication manager information for a specified MAC address. statistics (Optional) Display authentication statistics in detail.	interface interface-id	
sessions (Optional) Display detail of the current authentication manager sessions (for example, client devices). If you do not enter any optional specifiers, all current active sessions are displayed. You can enter the specifiers singly or in combination to display a specific session (or group of sessions). session-id session-id (Optional) Specify an authentication manager session. handle handle (Optional) Specify a range from 1 to 4294967295. mac mac (Optional) Display authentication manager information for a specified MAC address. statistics (Optional) Display authentication statistics in detail.	method method	
example, client devices). If you do not enter any optional specifiers, all current active sessions are displayed. You can enter the specifiers singly or in combination to display a specific session (or group of sessions). session-id session-id (Optional) Specify an authentication manager session. handle handle (Optional) Specify a range from 1 to 4294967295. mac mac (Optional) Display authentication manager information for a specified MAC address. statistics (Optional) Display authentication statistics in detail.	registrations	(Optional) Display authentication manager registrations
handle handle (Optional) Specify a range from 1 to 4294967295. mac mac (Optional) Display authentication manager information for a specified MAC address. statistics (Optional) Display authentication statistics in detail.	sessions	example, client devices). If you do not enter any optional specifiers, all current active sessions are displayed. You can enter the specifiers singly or in
mac mac (Optional) Display authentication manager information for a specified MAC address. statistics (Optional) Display authentication statistics in detail.	session-id session-id	(Optional) Specify an authentication manager session.
MAC address. statistics (Optional) Display authentication statistics in detail.	handle handle	(Optional) Specify a range from 1 to 4294967295.
	mac mac	
summary (Optional) Display authentication statistics summary	statistics	(Optional) Display authentication statistics in detail.
	summary	(Optional) Display authentication statistics summary

Command Modes

User EXEC Privileged EXEC

Command History

Release	Modification
12.2(50)SE	This command was introduced.

Usage Guidelines

Table 2-25 describes the significant fields shown in the output of the show authentication command.

The possible values for the status of sessions are shown below. For a session in terminal state, *Authz Success* or *Authz Failed* is displayed along with *No methods* if no method has provided a result.

Table 2-25 show authentication Command Output

Field	Description
Idle	The session has been initialized and no methods have run yet.
Running	A method is running for this session.
No methods	No method has provided a result for this session.

Table 2-25 show authentication Command Output (continued)

Field	Description
Authc Success	A method has resulted in authentication success for this session.
Authc Failed	A method has resulted in authentication fail for this session.
Authz Success	All features have been successfully applied for this session.
Authz Failed	A feature has failed to be applied for this session.

Table 2-26 lists the possible values for the state of methods. For a session in a terminal state, *Authc Success*, *Authc Failed*, or *Failed over* are displayed. *Failed over* means that an authentication method ran and then failed over to the next method, which did not provide a result. *Not run* appears for sessions that synchronized on standby.

Table 2-26 State Method Values

Method State	State Level	Description
Not run	Terminal	The method has not run for this session.
Running	Intermediate	The method is running for this session.
Failed over	Terminal	The method has failed and the next method is expected to provide a result.
Authc Success	Terminal	The method has provided a successful authentication result for the session.
Authc Failed	Terminal	The method has provided a failed authentication result for the session.

The output of the **show authentications sessions interface** command shows fields for *Security Policy* and *Security Status*. These fields apply only if Media Access Control Security (MACsec) is supported and enabled. This switch does not support MACsec.

Examples

This is an example the **show authentication registrations** command:

Switch# show authentication registrations
Auth Methods registered with the Auth Manager:
Handle Priority Name
3 0 dot1x
2 1 mab
1 2 webauth

The is an example of the **show authentication interface** *interface-id* command:

Switch# show authentication interface gigabitethernet0/23
Client list:
MAC Address Domain Status Handle Interface
000e.84af.59bd DATA Authz Success 0xE0000000 GigabitEthernet0/23
Available methods list:
Handle Priority Name
3 0 dot1x
Runnable methods list:
Handle Priority Name
3 0 dot1x

This is an example of the **show authentication sessions** command:

Switch# show authentication sessions

 Interface
 MAC Address
 Method
 Domain
 Status
 Session ID

 Gi3/45
 (unknown)
 N/A
 DATA
 Authz Failed
 09081404000000007003651EC

 Gi3/46
 (unknown)
 N/A
 DATA
 Authz Success
 09081404000000000000070274

This is an example of the **show authentication sessions** command for a specified interface:

Switch# show authentication sessions int gi 3/46

```
Interface: GigabitEthernet3/46
         MAC Address: Unknown
          IP Address: Unknown
              Status: Authz Success
              Domain: DATA
      Oper host mode: multi-host
    Oper control dir: both
       Authorized By: Guest Vlan
         Vlan Policy: 4094
     Session timeout: N/A
        Idle timeout: N/A
    Common Session ID: 09081404000000080057C274
     Acct Session ID: 0x0000000A
              Handle: 0xCC000008
Runnable methods list:
      Method State
      dot1x
              Failed over
```

This is an example of the show authentication sessions command for a specified MAC address:

Switch# show authentication sessions mac 000e.84af.59bd

```
Interface: GigabitEthernet1/23
MAC Address: 000e.84af.59bd
Status: Authz Success
Domain: DATA
Oper host mode: single-host
Authorized By: Authentication Server
Vlan Policy: 10
Handle: 0xE0000000
Runnable methods list:
Method State
dot1x Authc Success
```

This is an example of the **show authentication session method** command for a specified method:

Switch# show authentication sessions method mab

```
No Auth Manager contexts match supplied criteria
Switch# show authentication sessions method dot1x
MAC Address Domain Status Handle Interface
000e.84af.59bd DATA Authz Success 0xE0000000 GigabitEthernet1/23
```

Command	Description
authentication control-direction	Configures the port mode as unidirectional or bidirectional.
authentication event	Sets the action for specific authentication events.
authentication host-mode	Sets the authorization manager mode on a port.
authentication open	Enables or disable open access on a port.
authentication order	Sets the order of authentication methods used on a port.
authentication periodic	Enables or disables reauthentication on a port.
authentication port-control	Enables manual control of the port authorization state.
authentication priority	Adds an authentication method to the port-priority list.
authentication timer	Configures the timeout and reauthentication parameters for an 802.1x-enabled port.
authentication violation	Configures the violation modes that occur when a new device connects to a port or when a new device connects to a port after the maximum number of devices are connected to that port.

show auto qos

Use the **show auto qos** user EXEC command to display the quality of service (QoS) commands entered on the interfaces on which automatic QoS (auto-QoS) is enabled.

show auto qos [interface [interface-id]]

Syntax Description

interface [interface-id]	(Optional) Display auto-QoS information for the specified port or
	for all ports. Valid interfaces include physical ports.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

The **show auto qos** command output shows only the auto-QoS command entered on each interface. The **show auto qos interface** *interface-id* command output shows the auto-QoS command entered on a specific interface.

Use the **show running-config** privileged EXEC command to display the auto-QoS configuration and the user modifications.

To display information about the QoS configuration that might be affected by auto-QoS, use one of these commands:

- show mls qos
- show mls qos maps cos-dscp
- show mls qos interface [interface-id] [buffers | queueing]
- show mls qos maps [cos-dscp | cos-input-q | cos-output-q | dscp-cos | dscp-input-q | dscp-output-q]
- show mls qos input-queue
- show running-config

Examples

This is an example of output from the **show auto qos** command after the **auto qos voip cisco-phone** and the **auto qos voip cisco-softphone** interface configuration commands are entered:

Switch> show auto qos GigabitEthernet0/4 auto qos voip cisco-softphone GigabitEthernet0/5 auto qos voip cisco-phone GigabitEthernet0/6

auto qos voip cisco-phone

This is an example of output from the **show auto qos interface** interface-id command when the **auto qos voip cisco-phone** interface configuration command is entered:

```
Switch> show auto qos interface gigabitethernet 0/5
GigabitEthernet0/5
auto qos voip cisco-phone
```

This is an example of output from the **show running-config** privileged EXEC command when the **auto qos voip cisco-phone** and the **auto qos voip cisco-softphone** interface configuration commands are entered:

```
Switch# show running-config
Building configuration...

This is an example of output from the **show auto qos interface** *interface-id* command when the **auto qos voip cisco-phone** interface configuration command is entered:

```
Switch> show auto qos interface gigabitethernet0/21
GigabitEthernet0/21
auto qos voip cisco-softphone
```

These are examples of output from the **show auto qos** command when auto-QoS is disabled on the switch:

```
Switch> show auto qos
AutoQoS not enabled on any interface
```

These are examples of output from the **show auto qos** interface *interface-id* command when auto-QoS is disabled on an interface:

Switch> show auto qos interface gigabitethernet0/21 AutoQoS is disabled

Command	Description
auto qos voip	Automatically configures QoS for VoIP within a QoS domain.
debug auto qos	Enables debugging of the auto-QoS feature.

show boot

Use the **show boot** privileged EXEC command to display the settings of the boot environment variables.

show boot

Syntax Description

This command has no arguments or keywords.

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Examples

This is an example of output from the **show boot** command. Table 2-27 describes each field in the display.

Switch# show boot

BOOT path-list: flash:cbs30x0-lanbase-mz-122.25.SEF2/cbs30x0-lanbase-mz-122.25.SEF2.bin

Config file: flash:/config.text Private Config file: flash:/private-config

Enable Break: no
Manual Boot: yes

HELPER path-list:
NVRAM/Config file

buffer size: 32768

Table 2-27 show boot Field Descriptions

Field	Description
BOOT path-list	Displays a semicolon separated list of executable files to try to load and execute when automatically booting up.
	If the BOOT environment variable is not set, the system attempts to load and execute the first executable image it can find by using a recursive, depth-first search through the flash file system. In a depth-first search of a directory, each encountered subdirectory is completely searched before continuing the search in the original directory.
	If the BOOT variable is set but the specified images cannot be loaded, the system attempts to boot the first bootable file that it can find in the flash file system.
Config file	Displays the filename that Cisco IOS uses to read and write a nonvolatile copy of the system configuration.
Private Config file	Displays the filename that Cisco IOS uses to read and write a nonvolatile copy of the system configuration.
Enable Break	Displays whether a break during booting up is enabled or disabled. If it is set to yes, on, or 1, you can interrupt the automatic bootup process by pressing the Break key on the console after the flash file system is initialized.

Table 2-27 show boot Field Descriptions

Field	Description
Manual Boot	Displays whether the switch automatically or manually boots up. If it is set to no or 0, the bootloader attempts to automatically boot up the system. If it is set to anything else, you must manually boot up the switch from the bootloader mode.
Helper path-list	Displays a semicolon separated list of loadable files to dynamically load during the bootloader initialization. Helper files extend or patch the functionality of the bootloader.

Command	Description
boot config-file	Specifies the filename that Cisco IOS uses to read and write a nonvolatile copy of the system configuration.
boot enable-break	Enables interrupting the automatic bootup process.
boot manual	Enables manually booting up the switch during the next bootup cycle.
boot private-config-file	Specifies the filename that Cisco IOS uses to read and write a nonvolatile copy of the private configuration.
boot system	Specifies the Cisco IOS image to load during the next bootup cycle.

show cable-diagnostics tdr

Use the **show cable-diagnostics tdr** privileged EXEC command to display the Time Domain Reflector (TDR) results.

show cable-diagnostics tdr interface interface-id

Syntax Description

interface-id	Specify	y the	interface of	on which	TDR	was run.

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

TDR is supported only on 10/100/1000 copper Ethernet ports. It is not supported on SFP module ports. For more information about TDR, see the software configuration guide for this release.

Examples

This is an example of output from the **show cable-diagnostics tdr interface** *interface-id* command:

Switch#show cable-diagnostics tdr interface gigabitethernet0/22

TDR test last run on: March 06 09:52:17

Interface	Speed	Local	pair	Pair	length		Remote pair	Pair status
Gi0/22	1000M	Pair	A	1	+/- 4	meters	Pair A	Normal
		Pair	В	0	+/- 4	meters	Pair B	Normal
		Pair	C	0	+/- 4	meters	Pair C	Normal
		Pair	D	0	+/- 4	meters	Pair D	Normal
Switch#								

Table 2-28 lists the descriptions of the fields in the show cable-diagnostics tdr command output.

Table 2-28 Fields Descriptions for the show cable-diagnostics tdr Command Output

Field	Description			
Interface	Interface on which TDR was run.			
Speed	Speed of connection.			
Local pair	Name of the pair of wires that TDR is testing on the local interface.			
Pair length	Location on the cable where the problem is, with respect to your switch. TDR conly find the location in one of these cases:			
	• The cable is properly connected, the link is up, and the interface speed is 1000 Mb/s.			
	• The cable is open.			
	• The cable has a short.			

Table 2-28 Fields Descriptions for the show cable-diagnostics tdr Command Output (continued)

Field	Description		
Remote pair	Name of the pair of wires to which the local pair is connected. TDR can learn about the remote pair only when the cable is properly connected and the link is up.		
Pair status	The status of the pair of wires on which TDR is running:		
	Normal—The pair of wires is properly connected.		
	• Not completed—The test is running and is not completed.		
	• Not supported—The interface does not support TDR.		
	• Open—The pair of wires is open.		
	• Shorted—The pair of wires is shorted.		

This is an example of output from the **show interface** *interface-id* command when TDR is running:

Switch# show interface gigabitethernet0/22 gigabitethernet0/22 is up, line protocol is up (connected: TDR in Progress)

This is an example of output from the **show cable-diagnostics tdr interface** *interface-id* command when TDR is not running:

Switch# show cable-diagnostics tdr interface gigabitethernet0/22 % TDR test was never issued on Gi0/22

If an interface does not support TDR, this message appears:

% TDR test is not supported on switch 1

Command	Description
test cable-diagnostics tdr	Enables and runs TDR on an interface.

show cisp

Use the **show cisp** privileged EXEC command to display CISP information for a specified interface.

show cisp {[interface interface-id] | clients | summary}

Syntax Description

clients	(Optional) Display CISP client details
interface interface-id	(Optional) Display CISP information about the specified interface. Valid interfaces include physical ports and port channels.
summary	(Optional) Display

Command Modes

Global configuration

Command History

Release	Modification
12.2(50)SE	This command was introduced.

Examples

This example shows output from the **show cisp interface** command:

Switch# show cisp interface fastethernet 0 CISP not enabled on specified interface

This example shows output from the **show cisp summary** command:

Switch# show cisp summary

CISP is not running on any interface

Command	Description
dot1x credentials profile	Configure a profile on a supplicant switch
cisp enable	Enable Client Information Signalling Protocol (CISP)

show class-map

Use the **show class-map** user EXEC command to display quality of service (QoS) class maps, which define the match criteria to classify traffic.

show class-map [class-map-name]

Syntax Description

class-map-name (C	ptional) Display the contents of the specified class map.	

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Examples

This is an example of output from the **show class-map** command:

```
Switch> show class-map
```

Class Map match-all videowizard_10-10-10-10 (id 2)
Match access-group name videowizard_10-10-10-10

Class Map match-any class-default (id 0)
Match any
Class Map match-all dscp5 (id 3)
Match ip dscp 5

Command	Description
class-map	Creates a class map to be used for matching packets to the class whose name you specify.
match (class-map configuration)	Defines the match criteria to classify traffic.

show cluster

Use the **show cluster** user EXEC command to display the cluster status and a summary of the cluster to which the switch belongs. This command can be entered on the cluster command switch and cluster member switches.

show cluster

Syntax Description

This command has no arguments or keywords.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SE1	This command was introduced.

Usage Guidelines

If you enter this command on a switch that is not a cluster member, the error message Not a management cluster member appears.

On a cluster member switch, this command displays the identity of the cluster command switch, the switch member number, and the state of its connectivity with the cluster command switch.

On a cluster command switch, this command displays the cluster name and the total number of members. It also shows the cluster status and time since the status changed. If redundancy is enabled, it displays the primary and secondary command-switch information.

Examples

This is an example of output when the **show cluster** command is entered on the active cluster command switch:

```
Switch> show cluster
Command switch for cluster "Ajang"
        Total number of members:
                                        7
        Status:
                                        1 members are unreachable
        Time since last status change: 0 days, 0 hours, 2 minutes
        Redundancy:
                                        Enabled
                Standby command switch: Member 1
                Standby Group:
                                        Ajang_standby
                Standby Group Number:
                                        110
                                        8
        Heartbeat interval:
        Heartbeat hold-time:
                                        80
        Extended discovery hop count:
```

This is an example of output when the **show cluster** command is entered on a cluster member switch:

```
Switch1> show cluster

Member switch for cluster "hapuna"

Member number: 3

Management IP address: 192.192.192.192

Command switch mac address: 0000.0c07.ac14

Heartbeat interval: 8

Heartbeat hold-time: 80
```

This is an example of output when the **show cluster** command is entered on a cluster member switch that is configured as the standby cluster command switch:

```
Switch> show cluster

Member switch for cluster "hapuna"

Member number: 3 (Standby command switch)

Management IP address: 192.192.192.192

Command switch mac address: 0000.0c07.ac14

Heartbeat interval: 8

Heartbeat hold-time: 80
```

This is an example of output when the **show cluster** command is entered on the cluster command switch that has lost connectivity with member 1:

```
Switch> show cluster

Command switch for cluster "Ajang"

Total number of members: 7

Status: 1 members are unreachable

Time since last status change: 0 days, 0 hours, 5 minutes

Redundancy: Disabled

Heartbeat interval: 8

Heartbeat hold-time: 80

Extended discovery hop count: 3
```

This is an example of output when the **show cluster** command is entered on a cluster member switch that has lost connectivity with the cluster command switch:

```
Switch> show cluster

Member switch for cluster "hapuna"
Member number: <UNKNOWN>
Management IP address: 192.192.192.192
Command switch mac address: 0000.0c07.ac14
Heartbeat interval: 8
Heartbeat hold-time: 80
```

Command	Description					
cluster enable	Enables a command-capable switch as the cluster command switch, assigns a cluster name, and optionally assigns a member number to it.					
show controllers cpu-interface	Displays a list of candidate switches.					
show cluster members	Displays information about the cluster members.					

show controllers cpu-interface

Use the **show controllers cpu-interface** privileged EXEC command to display the state of the CPU network interface ASIC and the send and receive statistics for packets reaching the CPU.

show controllers cpu-interface

Syntax Description

This command has no arguments or keywords.

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

This display provides information that might be useful for Cisco technical support representatives troubleshooting the switch.

Examples

This is a partial output example from the **show controllers cpu-interface** command:

Switch# show controllers cpu-interface

Command	Description					
show controllers ethernet-controller	Displays per-interface send and receive statistics read from the hardware or the interface internal registers.					
show interfaces	Displays the administrative and operational status of all interfaces or a specified interface.					

show controllers ethernet-controller

Use the **show controllers ethernet-controller** privileged EXEC command without keywords to display per-interface send and receive statistics read from the hardware. Use with the **phy** keyword to display the interface internal registers or the **port-asic** keyword to display information about the port ASIC.

show controllers ethernet-controller [interface-id] [phy [detail]] [port-asic {configuration | statistics}] [fastethernet 0]

Syntax Description

interface-id	The physical interface (including type, module, and port number).
phy	(Optional) Display the status of the internal registers on the switch physical layer device (PHY) for the device or the interface. This display includes the operational state of the automatic medium-dependent interface crossover (auto-MDIX) feature on an interface.
detail	(Optional) Display details about the PHY internal registers.
port-asic	(Optional) Display information about the port ASIC internal registers.
configuration	Display port ASIC internal register configuration.
statistics	Display port ASIC statistics, including the Rx/Sup Queue and miscellaneous statistics.
fastethernet 0	Display the status of the fa0 internal Ethernet port.

Command Modes

Privileged EXEC (only supported with the interface-id keywords in user EXEC mode)

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

This display without keywords provides traffic statistics, basically the RMON statistics for all interfaces or for the specified interface.

When you enter the **phy** or **port-asic** keywords, the displayed information is useful primarily for Cisco technical support representatives troubleshooting the switch.

Examples

This is an example of output from the **show controllers ethernet-controller** command for an interface. Table 2-28 describes the *Transmit* fields, and Table 2-29 describes the *Receive* fields.

Switch# show controllers ethernet-controller gigabitethernet0/1

Transmit GigabitEthernet0/1 Receive 0 Bytes 0 Bytes 0 Unicast frames 0 Unicast frames 0 Multicast frames 0 Multicast frames 0 Broadcast frames 0 Broadcast frames 0 Too old frames 0 Unicast bytes 0 Deferred frames 0 Multicast bytes 0 MTU exceeded frames 0 Broadcast bytes 0 1 collision frames 0 Alignment errors 0 2 collision frames 0 FCS errors 0 3 collision frames 0 Oversize frames 0 4 collision frames 0 Undersize frames 0 5 collision frames O Collision fragments 0 6 collision frames 0 7 collision frames 0 Minimum size frames 0 8 collision frames 0 65 to 127 byte frames 0 9 collision frames 0 128 to 255 byte frames 0 10 collision frames 0 256 to 511 byte frames 0 11 collision frames 0 512 to 1023 byte frames 0 12 collision frames 0 1024 to 1518 byte frames 0 13 collision frames 0 Overrun frames 0 14 collision frames 0 Pause frames 0 15 collision frames 0 Symbol error frames 0 Excessive collisions 0 Late collisions 0 Invalid frames, too large 0 VLAN discard frames 0 Valid frames, too large 0 Excess defer frames 0 Invalid frames, too small 0 64 byte frames 0 Valid frames, too small 0 127 byte frames 0 255 byte frames 0 Too old frames 0 511 byte frames 0 Valid oversize frames 0 1023 byte frames 0 System FCS error frames 0 RxPortFifoFull drop frame 0 1518 byte frames O Too large frames 0 Good (1 coll) frames

Table 2-29 Transmit Field Descriptions

Field	Description
Bytes	The total number of bytes sent on an interface.
Unicast Frames	The total number of frames sent to unicast addresses.
Multicast frames	The total number of frames sent to multicast addresses.
Broadcast frames	The total number of frames sent to broadcast addresses.
Too old frames	The number of frames dropped on the egress port because the packet aged out.
Deferred frames	The number of frames that are not sent after the time exceeds 2*maximum-packet time.
MTU exceeded frames	The number of frames that are larger than the maximum allowed frame size.
1 collision frames	The number of frames that are successfully sent on an interface after one collision occurs.
2 collision frames	The number of frames that are successfully sent on an interface after two collisions occur.
3 collision frames	The number of frames that are successfully sent on an interface after three collisions occur.
4 collision frames	The number of frames that are successfully sent on an interface after four collisions occur.

Table 2-29 Transmit Field Descriptions (continued)

Field	Description
5 collision frames	The number of frames that are successfully sent on an interface after five collisions occur.
6 collision frames	The number of frames that are successfully sent on an interface after six collisions occur.
7 collision frames	The number of frames that are successfully sent on an interface after seven collisions occur.
8 collision frames	The number of frames that are successfully sent on an interface after eight collisions occur.
9 collision frames	The number of frames that are successfully sent on an interface after nine collisions occur.
10 collision frames	The number of frames that are successfully sent on an interface after ten collisions occur.
11 collision frames	The number of frames that are successfully sent on an interface after 11 collisions occur.
12 collision frames	The number of frames that are successfully sent on an interface after 12 collisions occur.
13 collision frames	The number of frames that are successfully sent on an interface after 13 collisions occur.
14 collision frames	The number of frames that are successfully sent on an interface after 14 collisions occur.
15 collision frames	The number of frames that are successfully sent on an interface after 15 collisions occur.
Excessive collisions	The number of frames that could not be sent on an interface after 16 collisions occur.
Late collisions	After a frame is sent, the number of frames dropped because late collisions were detected while the frame was sent.
VLAN discard frames	The number of frames dropped on an interface because the CFI ¹ bit is set.
Excess defer frames	The number of frames that are not sent after the time exceeds the maximum-packet time.
64 byte frames	The total number of frames sent on an interface that are 64 bytes.
127 byte frames	The total number of frames sent on an interface that are from 65 to 127 bytes.
255 byte frames	The total number of frames sent on an interface that are from 128 to 255 bytes.
511 byte frames	The total number of frames sent on an interface that are from 256 to 511 bytes.
1023 byte frames	The total number of frames sent on an interface that are from 512 to 1023 bytes.
1518 byte frames	The total number of frames sent on an interface that are from 1024 to 1518 bytes.
Too large frames	The number of frames sent on an interface that are larger than the maximum allowed frame size.
Good (1 coll) frames	The number of frames that are successfully sent on an interface after one collision occurs. This value does not include the number of frames that are not successfully sent after one collision occurs.

^{1.} CFI = Canonical Format Indicator

Table 2-30 Receive Field Descriptions

Field	Description					
Bytes	The total amount of memory (in bytes) used by frames received on an interface, including the FCS ¹ value and the incorrectly formed frames. This value excludes the frame header bits.					
Unicast frames	The total number of frames successfully received on the interface that are directed to unicast addresses.					
Multicast frames	The total number of frames successfully received on the interface that are directed to multicast addresses.					
Broadcast frames	The total number of frames successfully received on an interface that are directed to broadcast addresses.					

Table 2-30 Receive Field Descriptions (continued)

Field	Description						
Unicast bytes	The total amount of memory (in bytes) used by unicast frames received on an interface, including the FCS value and the incorrectly formed frames. This value excludes the frame header bits.						
Multicast bytes	e total amount of memory (in bytes) used by multicast frames received on an interface, luding the FCS value and the incorrectly formed frames. This value excludes the frame heads.						
Broadcast bytes	The total amount of memory (in bytes) used by broadcast frames received on an interface, including the FCS value and the incorrectly formed frames. This value excludes the frame header bits.						
Alignment errors	The total number of frames received on an interface that have alignment errors.						
FCS errors	The total number of frames received on an interface that have a valid length (in bytes) but do not have the correct FCS values.						
Oversize frames	The number of frames received on an interface that are larger than the maximum allowed frame size.						
Undersize frames	The number of frames received on an interface that are smaller than 64 bytes.						
Collision fragments	The number of collision fragments received on an interface.						
Minimum size frames	The total number of frames that are the minimum frame size.						
65 to 127 byte frames	The total number of frames that are from 65 to 127 bytes.						
128 to 255 byte frames	The total number of frames that are from 128 to 255 bytes.						
256 to 511 byte frames	The total number of frames that are from 256 to 511 bytes.						
512 to 1023 byte frames	The total number of frames that are from 512 to 1023 bytes.						
1024 to 1518 byte frames	The total number of frames that are from 1024 to 1518 bytes.						
Overrun frames	The total number of overrun frames received on an interface.						
Pause frames	The number of pause frames received on an interface.						
Symbol error frames	The number of frames received on an interface that have symbol errors.						
Invalid frames, too large	The number of frames received that were larger than maximum allowed MTU ² size (including the FCS bits and excluding the frame header) and that have either an FCS error or an alignment error.						
Valid frames, too large	The number of frames received on an interface that are larger than the maximum allowed frame size.						
Invalid frames, too small	The number of frames received that are smaller than 64 bytes (including the FCS bits and excluding the frame header) and that have either an FCS error or an alignment error.						
Valid frames, too small	The number of frames received on an interface that are smaller than 64 bytes (or 68 bytes for VLAN-tagged frames) and that have valid FCS values. The frame size includes the FCS bits but excludes the frame header bits.						
Too old frames	The number of frames dropped on the ingress port because the packet aged out.						
Valid oversize frames	The number of frames received on an interface that are larger than the maximum allowed frame size and have valid FCS values. The frame size includes the FCS value but does not include the VLAN tag.						

Table 2-30 Receive Field Descriptions (continued)

Field	Description
System FCS error frames	The total number of frames received on an interface that have a valid length (in bytes) but that do not have the correct FCS values.
RxPortFifoFull drop frames	The total number of frames received on an interface that are dropped because the ingress queue is full.

- 1. FCS = frame check sequence
- 2. MTU = maximum transmission unit

This is an example of output from the **show controllers ethernet-controller phy** command for a specific interface:

Command	Description
show controllers cpu-interface	Displays the state of the CPU network ASIC and send and receive statistics for packets reaching the CPU.
show controllers tcam	Displays the state of registers for all ternary content addressable memory (TCAM) in the system and for TCAM interface ASICs that are CAM controllers.
show idprom	Displays the IDPROM information for the specified interface.

show controllers tcam

Use the **show controllers tcam** privileged EXEC command to display the state of the registers for all ternary content addressable memory (TCAM) in the system and for all TCAM interface ASICs that are CAM controllers.

show controllers tcam [asic [number]] [detail]

Syntax Description

asic	(Optional) Display port ASIC TCAM information.
number	(Optional) Display information for the specified port ASIC number. The range is from 0 to 15.
detail	(Optional) Display detailed TCAM register information.

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

This display provides information that might be useful for Cisco technical support representatives troubleshooting the switch.

Examples

This is an example of output from the **show controllers tcam** command:

Switch#	show	controllers	tcam
DWICCIIT	SILOW	CONCIOTIEIS	ccam

TCAM related PortASIC 1 registers

LookupType: 89A1C67D_24E35F00

LastCamIndex: 0000FFE0
LocalNoMatch: 000069E0

ForwardingRamBaseAddress:

00022A00 0002FE00 00040600 0002FE00 0000D400 00000000 003FBA00 00009000 00009000 00040600

00000000 00012800 00012900

Command	Description
show controllers cpu-interface	Displays the state of the CPU network ASIC and send and receive statistics for packets reaching the CPU.
show controllers ethernet-controller	Displays per-interface send and receive statistics read from the hardware or the interface internal registers.

show controllers utilization

Use the **show controllers utilization** user EXEC command to display bandwidth utilization on the switch or specific ports.

show controllers [interface-id] utilization

Syntax Description

interface-id (Optional	l) ID	of the	switch	interface.
------------------------	-------	--------	--------	------------

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Examples

This is an example of output from the show controllers utilization command.

```
Switch> show controllers utilization

Port Receive Utilization Transmit Utilization

Gi0/1 0 0
Gi0/2 0 0

<output truncated>

Switch Receive Bandwidth Percentage Utilization : 0

Switch Transmit Bandwidth Percentage Utilization : 0

Switch Fabric Percentage Utilization : 0
```

This is an example of output from the **show controllers utilization** command on a specific port:

```
Switch> show controllers gigabitethernet0/1 utilization Receive Bandwidth Percentage Utilization : 0 Transmit Bandwidth Percentage Utilization : 0
```

Table 2-30 shows the field descriptions.

Table 2-31 show controllers utilization Field Descriptions

Field	Description
Receive Bandwidth Percentage Utilization	Displays the received bandwidth usage of the switch, which is the sum of the received traffic on all the ports divided by the switch receive capacity.
Transmit Bandwidth Percentage Utilization	Displays the transmitted bandwidth usage of the switch, which is the sum of the transmitted traffic on all the ports divided it by the switch transmit capacity.
Fabric Percentage Utilization	Displays the average of the transmitted and received bandwidth usage of the switch.

Command	Description
show controllers ethernet-controller	Displays the interface internal registers.

show dot1q-tunnel

Use the **show dot1q-tunnel** user EXEC command to display information about IEEE 802.1Q tunnel ports.

show dot1q-tunnel [interface interface-id]

Syntax Description

interface interface-id	(Optional) Specify the interface for which to display IEEE 802.1Q tunneling
	information. Valid interfaces include physical ports and port channels.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)EA1	This command was introduced.

Examples

These are examples of output from the **show dot1q-tunnel** command:

Switch> show dot1q-tunnel
dot1q-tunnel mode LAN Port(s)
-----Gi0/1
Gi0/2
Gi0/3
Gi0/6
Po2

Switch> show dot1q-tunnel interface gigabitethernet0/1

dot1q-tunnel mode LAN Port(s)

Gi0/1

Command	Description
show vlan dot1q tag native	Displays IEEE 802.1Q native VLAN tagging status.
switchport mode dot1q-tunnel	Configures an interface as an IEEE 802.1Q tunnel port.

show dot1x

Use the **show dot1x** user EXEC command to display IEEE 802.1x statistics, administrative status, and operational status for the switch or for the specified port.

show dot1x [{all [summary] | interface interface-id} [details | statistics]]

Syntax Description

all [summary]	(Optional) Display the IEEE 802.1x status for all ports.
interface interface-id	(Optional) Display the IEEE 802.1x status for the specified port (including type, module, and port number).
details	(Optional) Display the IEEE 802.1x interface details.
statistics	(Optional) Display IEEE 802.1x statistics for the specified port.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

If you do not specify a port, global parameters and a summary appear. If you specify a port, details for that port appear.

If the port control is configured as unidirectional or bidirectional control and this setting conflicts with the switch configuration, the **show dot1x** {all | interface interface-id} privileged EXEC command output has this information:

ControlDirection = In (Inactive)

Examples

This is an example of output from the show dot1x user EXEC command:

Switch> show dot1x

Sysauthcontrol Enabled
Dot1x Protocol Version 2
Critical Recovery Delay 100
Critical EAPOL Disabled

This is an example of output from the **show dot1x all** user EXEC command:

```
Switch> show dot1x all
                       Enabled
Sysauthcontrol
                     2
100
Dot1x Protocol Version
Critical Recovery Delay
                     Disabled
Critical EAPOL
Dot1x Info for GigabitEthernet0/1

                    = 0
```

This is an example of output from the show dot1x interface interface-id details user EXEC command:

Switch# show dot1x interface gigabitethernet0/2 details

```
Dot1x Info for GigabitEthernet0/2
------
PAE = AUTHENTICATOR
PortControl = AUTO
ControlDirection = Both
HostMode = SINGLE_HOST
ReAuthentication = Disabled
QuietPeriod = 60
ServerTimeout = 30
```

Vlan Policy

```
SuppTimeout = 30

ReAuthPeriod = 3600 (Locally configured)

ReAuthMax = 2

MaxReq = 2

TxPeriod = 30

RateLimitPeriod = 0
```

Dot1x Authenticator Client List Empty

This is an example of output from the **show dot1x interface** *interface-id* **details** commmand when a port is assigned to a guest VLAN and the host mode changes to multiple-hosts mode:

Switch# show dot1x interface gigabitethernet0/1 details

Dot1x Info for GigabitEthernet0/1 ______ = AUTHENTICATOR PAE PortControl = AUTO ControlDirection = Both = SINGLE_HOST HostMode = Enabled ReAuthentication = 60 OuietPeriod = 30 ServerTimeout SuppTimeout = 30 = 3600 (Locally configured) ReAuthPeriod ReAuthMax = 2 MaxReq TxPeriod = 30 RateLimitPeriod = 0 Guest-Vlan = 182 Dot1x Authenticator Client List Empty Port Status = AUTHORIZED Authorized By = Guest-Vlan Operational HostMode = MULTI_HOST

This is an example of output from the **show dot1x interface** *interface-id* **statistics** command. Table 2-31 describes the fields in the display.

= 182

Table 2-32 show dot1x statistics Field Descriptions

Field	Description
RxStart	Number of valid EAPOL-start frames that have been received.
RxLogoff	Number of EAPOL-logoff frames that have been received.
RxResp	Number of valid EAP-response frames (other than response/identity frames) that have been received.
RxRespID	Number of EAP-response/identity frames that have been received.

Table 2-32 show dot1x statistics Field Descriptions (continued)

Field	Description
RxInvalid	Number of EAPOL frames that have been received and have an unrecognized frame type.
RxLenError	Number of EAPOL frames that have been received in which the packet body length field is invalid.
RxTotal	Number of valid EAPOL frames of any type that have been received.
TxReq	Number of EAP-request frames (other than request/identity frames) that have been sent.
TxReqId	Number of Extensible Authentication Protocol (EAP)-request/identity frames that have been sent.
TxTotal	Number of Extensible Authentication Protocol over LAN (EAPOL) frames of any type that have been sent.
RxVersion	Number of received packets in the IEEE 802.1x Version 1 format.
LastRxSrcMac	Source MAC address carried in the most recently received EAPOL frame.

Command	Description
dot1x default	Resets the IEEE 802.1x parameters to their default values.

show dtp

Use the **show dtp** privileged EXEC command to display Dynamic Trunking Protocol (DTP) information for the switch or for a specified interface.

show dtp [interface interface-id]

Syntax Description

interface	(Optional) Display port security settings for the specified interface. Valid interfaces
interface-id	include physical ports (including type, module, and port number).

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Examples

This is an example of output from the **show dtp** command:

```
Switch# show dtp
Global DTP information
Sending DTP Hello packets every 30 seconds
Dynamic Trunk timeout is 300 seconds
21 interfaces using DTP
```

This is an example of output from the **show dtp interface** command:

```
Switch# show dtp interface gigabitethernet0/21
```

```
DTP information for GigabitEthernet0/21:

show dtp

Command	Description
show interfaces trunk	Displays interface trunking information.

show eap

Use the **show eap** privileged EXEC command to display Extensible Authentication Protocol (EAP) registration and session information for the switch or for the specified port.

show eap {{registrations [method [name] | transport [name]]}} | {sessions [credentials name [interface interface-id] | interface interface-id | method name | transport name]}} | [credentials name | interface interface-id | transport name]

Syntax Description

registrations	Display EAP registration information.
method name	(Optional) Display EAP method registration information.
transport name	(Optional) Display EAP transport registration information.
sessions	Display EAP session information.
credentials name	(Optional) Display EAP method registration information.
interface interface-id	(Optional) Display the EAP information for the specified port (including type, module, and port number).

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

When you use the **show eap registrations** privileged EXEC command with these keywords, the command output shows this information:

- None—All the lower levels used by EAP and the registered EAP methods.
- method name keyword—The specified method registrations.
- transport name keyword—The specific lower-level registrations.

When you use the **show eap sessions** privileged EXEC command with these keywords, the command output shows this information:

- None—All active EAP sessions.
- **credentials** *name* keyword—The specified credentials profile.
- interface interface-id keyword—The parameters for the specified interface.
- **method** *name* keyword—The specified EAP method.
- transport name keyword—The specified lower layer.

Examples

This is an example of output from the **show eap registrations** privileged EXEC command:

```
Switch> show eap registrations

Registered EAP Methods:

Method Type Name
4 Peer MD5

Registered EAP Lower Layers:

Handle Type Name
2 Authenticator Dot1x-Authenticator
1 Authenticator MAB
```

This is an example of output from the **show eap registrations transport** privileged user EXEC command:

```
Switch> show eap registrations transport all
Registered EAP Lower Layers:
Handle Type Name
2 Authenticator Dot1x-Authenticator
1 Authenticator MAB
```

This is an example of output from the **show eap sessions** privileged EXEC command:

```
Switch> show eap sessions
Role:
                    Authenticator Decision:

<Output truncated>
```

This is an example of output from the **show eap sessions interface** *interface-id* privileged EXEC command:

Switch# show eap sessions gigabitethernet0/1				
Role:	Authenticator	Decision:	Fail	
Lower layer:	Dot1x-Authentic	aInterface:	Gi0/1	
Current method:	None	Method state:	Uninitialised	
Retransmission count:	1 (max: 2)	Timer:	Authenticator	
ReqId Retransmit (timeout: 30s, remaining: 13s)				
EAP handle:	0x5200000A	Credentials profile:	None	
Lower layer context ID:	0x93000004	Eap profile name:	None	
Method context ID:	0x00000000	Peer Identity:	None	
Start timeout (s):	1	Retransmit timeout (s):	30 (30)	
Current ID:	2	Available local methods:	None	

Command	Description
clear eap sessions	Clears EAP session information for the switch or for the specified port.

show env

Use the **show env** user EXEC command to display temperature information for the switch.

show env {all | temperature}

Syntax Description

all	Display both fan and temperature environmental status.
temperature	Display the switch temperature status.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

The show env all command does not display the fan status for the switch.

Examples

This is an example of output from the **show env all** command:

Switch> show env all

Located in Switch Slot : 1
ISMIC version : 0.102

Enclosure Name : Default Chassis Name
Rack Name : Default Rack Name
Rack ID : Default RUID
Temperature Value: 34 Degree Celsius
Temperature State: GREEN

Yellow Threshold : 63 Degree Celsius Red Threshold : 72 Degree Celsius

show errdisable detect

Use the show errdisable detect user EXEC command to display error-disabled detection status.

show errdisable detect

Syntax Description

This command has no arguments or keywords.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.
12.2(37)SE	A mode column was added to the show errdisable detect output.

Usage Guidelines

A displayed gbic-invalid error reason refers to an invalid small form-factor pluggable (SFP) module.

The error-disable reasons in the command output are listed in alphabetical order. The mode column shows how error disable is configured for each feature.

You can configure error-disabled detection in these modes:

- port mode—The entire physical port is error disabled if a violation occurs.
- vlan mode—The VLAN is error disabled if a violation occurs.
- port/vlan mode—The entire physical port is error disabled on some ports and per-VLAN error disabled on other ports.

Examples

This is an example of output from the show errdisable detect command:

Switch> show errdisable detect			
ErrDisable Reason	Detection	Mode	
arp-inspection	Enabled	port	
bpduguard	Enabled	vlan	
channel-misconfig	Enabled	port	
community-limit	Enabled	port	
dhcp-rate-limit	Enabled	port	
dtp-flap	Enabled	port	
gbic-invalid	Enabled	port	
inline-power	Enabled	port	
invalid-policy	Enabled	port	
12ptguard	Enabled	port	
link-flap	Enabled	port	
loopback	Enabled	port	
lsgroup	Enabled	port	
pagp-flap	Enabled	port	
psecure-violation	Enabled	port/vlan	
security-violatio	Enabled	port	
sfp-config-mismat	Enabled	port	
storm-control	Enabled	port	

udld	Enabled	port
vmps	Enabled	port

Command	Description
errdisable detect cause Enables error-disabled detection for a specific cause or a	
show errdisable flap-values	Displays error condition recognition information.
show errdisable recovery	Displays error-disabled recovery timer information.
show interfaces status	Displays interface status or a list of interfaces in error-disabled state.

show errdisable flap-values

Use the **show errdisable flap-values** user EXEC command to display conditions that cause an error to be recognized for a cause.

show errdisable flap-values

Syntax Description

This command has no arguments or keywords.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

The *Flaps* column in the display shows how many changes to the state within the specified time interval will cause an error to be detected and a port to be disabled. For example, the display shows that an error will be assumed and the port shut down if three Dynamic Trunking Protocol (DTP)-state (port mode access/trunk) or Port Aggregation Protocol (PAgP) flap changes occur during a 30-second interval, or if 5 link-state (link up/down) changes occur during a 10-second interval.

ErrDisable Reason	Flaps	Time (sec)
pagp-flap	3	30
dtp-flap	3	30
link-flap	5	10

Examples

This is an example of output from the **show errdisable flap-values** command:

Switch> show errdisable flap-values

ErrDisable Reason	Flaps	Time (sec
pagp-flap	3	30
dtp-flap	3	30
link-flap	5	10

Command	Description	
errdisable detect cause	Enables error-disabled detection for a specific cause or all causes.	
show errdisable detect	Displays error-disabled detection status.	
show errdisable recovery	Displays error-disabled recovery timer information.	
show interfaces status	Displays interface status or a list of interfaces in error-disabled state.	

show errdisable recovery

Use the **show errdisable recovery** user EXEC command to display the error-disabled recovery timer information.

show errdisable recovery

Syntax Description

This command has no arguments or keywords.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

A *gbic-invalid error-disable* reason refers to an invalid small form-factor pluggable (SFP) module interface.

Examples

This is an example of output from the **show errdisable recovery** command:

Switch> show errdisable recovery ErrDisable Reason Timer Statu

Erruisable Reason	Timer Status
udld	Disabled
bpduguard	Disabled
security-violatio	Disabled
channel-misconfig	Disabled
vmps	Disabled
pagp-flap	Disabled
dtp-flap	Disabled
link-flap	Enabled
12ptguard	Disabled
psecure-violation	Disabled
gbic-invalid	Disabled
dhcp-rate-limit	Disabled
unicast-flood	Disabled
storm-control	Disabled
loopback	Disabled

Timer interval:300 seconds

Interfaces that will be enabled at the next timeout:

Interface	Errdisable reason	Time left(sec)
Gi0/2	link-flap	279

Though visible in the output, the unicast-flood field is not valid.

Command	Description
errdisable recovery	Configures the recover mechanism variables.
show errdisable detect	Displays error-disabled detection status.
show errdisable flap-values	Displays error condition recognition information.
show interfaces status	Displays interface status or a list of interfaces in error-disabled state.

show etherchannel

Use the **show etherchannel** user EXEC command to display EtherChannel information for a channel.

show etherchannel [channel-group-number {detail | port | port-channel | protocol | summary}]
{detail | load-balance | port | port-channel | protocol | summary}

Syntax Description

channel-group-number	(Optional) Number of the channel group. The range is 1 to 12.
detail	Display detailed EtherChannel information.
load-balance	Display the load-balance or frame-distribution scheme among ports in the port channel.
port	Display EtherChannel port information.
port-channel	Display port-channel information.
protocol	Display the protocol that is being used in the EtherChannel.
summary	Display a one-line summary per channel-group.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.
12.2(50)SE	The <i>channel-group-number</i> range was incorrect. The correct range is from 1 to 12.

Usage Guidelines

If you do not specify a *channel-group*, all channel groups are displayed.

Examples

This is an example of output from the show etherchannel 1 detail command:

```
Switch> show etherchannel 1 detail
Group state = L2
Ports: 2 Maxports = 16
Port-channels: 1 Max Port-channels = 16
Protocol: LACP
               Ports in the group:

                                 0
Time since last port bundled: 01d:20h:20m:20s Gi0/22
```

This is an example of output from the **show etherchannel 1 summary** command:

This is an example of output from the **show etherchannel 1 port-channel** command:

Ports in the Port-channel:

Index	Load	Port	EC state	No of bits
		++		+
0	00	Gi0/1	Active	0
0	00	Gi0/2	Active	0
0	00	Gi0/21	Active	0
0	00	Gi0/22	Active	0

Time since last port bundled: 01d:20h:24m:44s Gi0/22

This is an example of output from the **show etherchannel protocol** command:

Switch# show etherchannel protocol

Channel-group listing:
-----Group: 1
----Protocol: LACP

Group: 2
----Protocol: PAgP

Command	Description
channel-group	Assigns an Ethernet port to an EtherChannel group.
channel-protocol	Restricts the protocol used on a port to manage channeling.
interface port-channel	Accesses or creates the port channel.

show fallback profile

Use the **show fallback profile** privileged EXEC command to display the fallback profiles that are configured on a switch.

show fallback profile [name]

Syntax Description

name	(Optional) Enter a profile name.	
------	----------------------------------	--

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(35)SE	This command was introduced.

Usage Guidelines

Use the **show fallback** profile privileged EXEC command to display profiles that are configured on the switch.

Examples

This is an example of output from the **show fallback profile** command:

switch# show fall profile
Profile Name: dot1x-www

Description : NONE
IP Admission Rule : webauth-fallback

IP Access-Group IN: default-policy
Profile Name: dot1x-www-lpip

Description : NONE
IP Admission Rule : web-lpip
IP Access-Group IN: default-policy

Profile Name: profile1

Description : NONE
IP Admission Rule : NONE
IP Access-Group IN: NONE

Command	Description
dot1x fallback	Configure a port to use web authentication as a fallback method for clients that do not support IEEE 802.1x authentication.
fallback profile	Specify the fallback profile for clients that do not support IEEE 802.1x authentication.
ip admission	Enable web authentication on a switch port

Command	Description
ip admission name proxy http	Enable web authentication globally on a switch
show dot1x [interface interface-id]	Displays IEEE 802.1x status for the specified port.

show flowcontrol

Use the show flowcontrol user EXEC command to display the flow control status and statistics.

show flowcontrol [interface $interface - id \mid module \ number]$

Syntax Description

interface interface-id	(Optional) Display the flow control status and statistics for a specific interface.
module number	(Optional) Display the flow control status and statistics for all interfaces on the switch. The only valid module number is 1. This option is not available if you have entered a specific interface ID.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

Use this command to display the flow control status and statistics on the switch or for a specific interface.

Use the **show flowcontrol** command to display information about all the switch interfaces. The output from the **show flowcontrol** command is the same as the output from the **show flowcontrol module** *number* command.

Use the **show flowcontrol interface** *interface-id* command to display information about a specific interface.

Examples

This is an example of output from the show flowcontrol command.

Switch>	show flowcor	ntrol				
Port			Receive admin	FlowControl oper	RxPause	TxPause
Gi0/21	Unsupp.	Unsupp.	off	off	0	0
Gi0/22	desired	off	off	off	0	0
Gi0/23	desired	off	off	off	0	0
<output< td=""><td>truncated></td><td></td><td></td><td></td><td></td><td></td></output<>	truncated>					

This is an example of output from the **show flowcontrol interface** *interface-id* command:

Switch>	show	flowcontrol	gigabitethernet0/22
---------	------	-------------	---------------------

Port	Send FlowCo	ontrol	Receive I	FlowControl	RxPause	TxPause
	admin op	per	admin	oper		
Gi0/2	desired of	f	off	off	0	0
Gi0/22	desired o	off	off	off	0	0

Command	Description
flowcontrol	Sets the receive flow-control state for an interface.

show idprom

Use the **show idprom** user EXEC command to display the IDPROM information for the specified interface.

show idprom {**interface** *interface-id*} [**detail**]

Syntax Description

interface interface-id	Display the IDPROM information for the specified 10-Gigabit Ethernet interface.
detail	(Optional) Display detailed hexidecimal IDPROM information.

Command Modes

User EXEC

Command History

Release	Modification
12.2(44)SE	This command was introduced.

Usage Guidelines

This command applies only to 10-Gigabit Ethernet interfaces.

Examples

This is an example of output from the **show idprom interface tengigabitethernet0/1** command for the 10-Gigabit Ethernet interface. It shows the XENPAK module serial EEPROM contents.

For information about the EEPROM map and the field descriptions for the display, see the XENPAK multisource agreement (MSA) at these sites:

http://www.xenpak.org/MSA/XENPAK_MSA_R2.1.pdf

http://www.xenpak.org/MSA/XENPAK_MSA_R3.0.pdf

To determine which version of the XENPAK documentation to read, check the XENPAK MSA Version supported field in the display. Version 2.1 is 15 hexadecimal, and Version 3.0 is 1E hexadecimal (not shown in the example).

Switch# show idprom interface tengigabitethernet0/1

TenGigabitEthernet0/1 (gpn:472, port-number:1)

Command	Description
show controllers	Displays per-interface send and receive statistics read from the
ethernet-controller	hardware, interface internal registers, or port ASIC information.

show interfaces

Use the **show interfaces** privileged EXEC command to display the administrative and operational status of all interfaces or a specified interface.

show interfaces [$interface-id \mid vlan \ vlan-id$] [accounting | capabilities [module number] | counters | description | etherchannel | flowcontrol | private-vlan mapping | pruning | stats | status [err-disabled] | switchport [backup | module number] | transceiver [properties | detail] [module number] | trunk]

Syntax Description

interface-id	(Optional) Valid interfaces include physical ports (including type, module, and port number) and port channels. The port-channel range is 1 to 12.
vlan vlan-id	(Optional) VLAN identification. The range is 1 to 4094.
accounting	(Optional) Display accounting information on the interface, including active protocols and input and output packets and octets.
	Note The display shows only packets processed in software; hardware-switched packets do not appear.
capabilities	(Optional) Display the capabilities of all interfaces or the specified interface, including the features and options that you can configure on the interface. Though visible in the command line help, this option is not available for VLAN IDs.
module number	(Optional) Display capabilities , switchport configuration, or transceiver characteristics (depending on preceding keyword) of all interfaces on the switch. The only valid module number is 1. This option is not available if you entered a specific interface ID.
counters	(Optional) See the show interfaces counters command.
description	(Optional) Display the administrative status and description set for an interface.
etherchannel	(Optional) Display interface EtherChannel information.
flowcontrol	(Optional) Display interface flowcontrol information
private-vlan mapping	(Optional) Display private-VLAN mapping information for the VLAN switch virtual interfaces (SVIs). This keyword is available only if your switch is running the IP services image, formerly known as the enhanced multilayer image (EMI).
pruning	(Optional) Display interface trunk VTP pruning information.
stats	(Optional) Display the input and output packets by switching path for the interface.
status	(Optional) Display the status of the interface. A status of <i>unsupported</i> in the Type field means that a non-Cisco small form-factor pluggable (SFP) module is inserted in the module slot.
err-disabled	(Optional) Display interfaces in error-disabled state.
switchport	(Optional) Display the administrative and operational status of a switching (nonrouting) port, including port blocking and port protection settings.
backup	(Optional) Display Flex Link backup interface configuration and status for the specified interface or all interfaces on the switch.

transceiver [detail properties]	 (Optional) Display the physical properties of a CWDM¹ or DWDM² small form-factor (SFP) module interface. The keywords have these meanings: detail—(Optional) Display calibration properties, including high and low numbers and any alarm information.
trunk	• properties —(Optional) Display speed and duplex settings on an interface. Display interface trunk information. If you do not specify an interface, only
	information for active trunking ports appears.

- 1. coarse wavelength-division multiplexer
- 2. dense wavelength-division multiplexer

Though visible in the command-line help strings, the **crb**, **irb**, **mac-accounting**, **precedence**, **random-detect**, **rate-limit**, and **shape** keywords are not supported.

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.
12.2(50)SE	The <i>channel-group-number</i> range was incorrect. The correct range is from 1 to 12.

Usage Guidelines

The **show interfaces capabilities** command with different keywords has these results:

- Use the **show interface capabilities module 1** to display the capabilities of all interfaces on the switch. Entering any other number is invalid.
- Use the **show interfaces** *interface-id* **capabilities** to display the capabilities of the specified interface.
- Use the **show interfaces capabilities** (with no module number or interface ID) to display the capabilities of all interfaces on the switch.
- Use the **show interface switchport module** to display the switch port characteristics of all interfaces on the switch. Entering any other number is invalid.

Examples

This is an example of output from the **show interfaces** command for an interface:

```
Switch# show interfaces gigabitethernet0/22
```

```
GigabitEthernet0/22 is down, line protocol is down

Hardware is Gigabit Ethernet, address is 0009.43a7.d085 (bia 0009.43a7.d085)

MTU 1500 bytes, BW 10000 Kbit, DLY 1000 usec,

reliability 255/255, txload 1/255, rxload 1/255

Encapsulation ARPA, loopback not set

Keepalive set (10 sec)

Auto-duplex, Auto-speed

input flow-control is off, output flow-control is off

ARP type: ARPA, ARP Timeout 04:00:00 Last input never, output never, output hang never

Last clearing of "show interface" counters never
```

```
Input queue: 0/75/0/0 (size/max/drops/flushes); Total output drops: 0
Queueing strategy: fifo
Output queue :0/40 (size/max)
5 minute input rate 0 bits/sec, 0 packets/sec
5 minute output rate 0 bits/sec, 0 packets/sec
2 packets input, 1040 bytes, 0 no buffer
Received 0 broadcasts, 0 runts, 0 giants, 0 throttles
0 input errors, 0 CRC, 0 frame, 0 overrun, 0 ignored
0 watchdog, 0 multicast, 0 pause input
0 input packets with dribble condition detected
4 packets output, 1040 bytes, 0 underruns
0 output errors, 0 collisions, 3 interface resets
0 babbles, 0 late collision, 0 deferred
0 lost carrier, 0 no carrier, 0 PAUSE output
0 output buffer failures, 0 output buffers swapped out
```

This is an example of output from the **show interfaces accounting** command.

Switch# show interfaces accounting

Vlan1

VIGITI					
	Protocol	Pkts In	Chars In	Pkts Out	Chars Out

                       yes
Dot1x:
                       yes
```

This is an example of output from the **show interfaces** *interface* **description** command when the interface has been described as *Connects to Marketing* by using the **description** interface configuration command.

```
Switch# show interfaces gigabitethernet0/22 description

Interface Status Protocol Description

Gi0/22 up down Connects to Marketing
```

This is an example of output from the **show interfaces etherchannel** command when port channels are configured on the switch:

```
Switch# show interfaces etherchannel
Port-channel1:
Age of the Port-channel = 03d:20h:17m:29s
Logical slot/port = 10/1 Number of ports = 0 GC = 0x00000000 HotStandBy port = 10
                                   HotStandBy port = null
                  = Port-channel Ag-Not-Inuse
Port state
Port-channel2:
Age of the Port-channel = 03d:20h:17m:29s
Logical slot/port = 10/2 Number of ports = 0
                 = 0 \times 000000000
                                   HotStandBy port = null
Port state
                  = Port-channel Ag-Not-Inuse
Port-channel3:
Age of the Port-channel = 03d:20h:17m:29s
Logical slot/port = 10/3 Number of ports = 0
                   = 0x00000000
GC
                                   HotStandBy port = null
Port state
                 = Port-channel Ag-Not-Inuse
```

This is an example of output from the **show interfaces** *interface-id* **pruning** command when pruning is enabled in the VTP domain:

```
Switch# show interfaces gigibitethernet0/22 pruning
Port Vlans pruned for lack of request by neighbor
Gi0/22 3,4

Port Vlans traffic requested of neighbor
Gi0/22 1-3
```

This is an example of output from the **show interfaces stats** command for a specified VLAN interface.

This is an example of partial output from the **show interfaces status** command. It displays the status of all interfaces.

Switch#	show interfaces	status				
Port	Name	Status	Vlan	Duplex	Speed Type	
Gi0/21		notconnect	1	auto	auto 10/100/	1000BaseTX
Gi0/22		notconnect	1	auto	auto 10/100/	1000BaseTX
Gi0/23		notconnect	1	auto	auto 10/100/	1000BaseTX
Gi0/24		notconnect	1	auto	auto 10/100/	1000BaseTX
<output< td=""><td>truncated></td><td></td><td></td><td></td><td></td><td></td></output<>	truncated>					

This is an example of output from the **show interfaces status err-disabled** command. It displays the status of interfaces in the error-disabled state.

Switch# **show interfaces status err-disabled**Port Name Status Reason
Gi0/22 err-disabled dtp-flap

This is an example of output from the **show interfaces switchport** command for a port. Table 2-32 describes the fields in the display.

Private VLANs trunks are not supported in this release, so those fields are not applicable.

```
{\tt Switch\#\ show\ interfaces\ gigabitethernet0/21\ switchport}
Name: Gi0/21
Switchport: Enabled
Administrative Mode: dynamic auto
Operational Mode: static access
Administrative Trunking Encapsulation: negotiate
Operational Trunking Encapsulation: native
Negotiation of Trunking: On
Access Mode VLAN: 1 (default)
Trunking Native Mode VLAN: 1 (default)
Voice VLAN: none
Administrative private-vlan host-association:10 (VLAN0010) 502 (VLAN0502)
Administrative private-vlan mapping: none
Administrative private-vlan trunk native VLAN: none
Administrative private-vlan trunk encapsulation: dot1q
Administrative private-vlan trunk normal VLANs: none
Administrative private-vlan trunk private VLANs: none
Operational private-vlan: none
Trunking VLANs Enabled: ALL
Pruning VLANs Enabled: 2-1001
Capture Mode Disabled
Capture VLANs Allowed: ALL
Protected: false
Unknown unicast blocked: disabled
Unknown multicast blocked: disabled
Voice VLAN: none (Inactive)
Appliance trust: none
```

This is an example of out put from the **show interfaces switchport backup** command when a Flex Link interface goes down (LINK_DOWN), and VLANs preferred on this interface are moved to the peer interface of the Flex Link pair. In this example, if interface Gi0/6 goes down, Gi0/8 carries all VLANs of the Flex Link pair.

This is an example of output from the **show interfaces** switchport backup command. In this example, VLANs 1 to 50, 60, and 100 to 120 are configured on the switch:

```
Switch(config)# interface gigabitEthernet 0/6
Switch(config-if)# switchport backup interface gigabitEthernet 0/8 prefer vlan 60,100-120
```

When both interfaces are up, Gi0/8 forwards traffic for VLANs 60, 100 to 120, and Gi0/6 will forward traffic for VLANs 1 to 50.

Switch# how interfaces switchport backup

Switch Backup Interface Pairs:

```
Active Interface
              Backup Interface
                               State
______
GigabitEthernet0/6 GigabitEthernet0/8 Active Up/Backup Up
Vlans on Interface Gi 0/6: 1-50
Vlans on Interface Gi 0/8: 60, 100-120
```

When a Flex Link interface goes down (LINK_DOWN), VLANs preferred on this interface are moved to the peer interface of the Flex Link pair. In this example, if interface Gi0/6 goes down, Gi0/8 carries all VLANs of the Flex Link pair.

```
Switch# show interfaces switchport backup
```

Switch Backup Interface Pairs:

```
Active Interface Backup Interface
                                         State
GigabitEthernet0/6 GigabitEthernet0/8 Active Down/Backup Up
Vlans on Interface Gi 0/6:
Vlans on Interface Gi 0/8: 1-50, 60, 100-120
```

When a Flex Link interface comes up, VLANs preferred on this interface are blocked on the peer interface and moved to the forwarding state on the interface that has just come up. In this example, if interface Gi0/6 comes up, then VLANs preferred on this interface are blocked on the peer interface Gi0/8 and forwarded on Gi0/6.

```
Switch# show interfaces switchport backup
```

Switch Backup Interface Pairs:

```
Active Interface
                     Backup Interface
                                            State
GigabitEthernet0/6 GigabitEthernet0/8 Active Up/Backup Up
Vlans on Interface Gi 0/6: 1-50
Vlans on Interface Gi 0/8: 60, 100-120
```

Table 2-33 show interfaces switchport Field Descriptions

Field	Description
Name	Displays the port name.
Switchport	Displays the administrative and operational status of the port. In this display, the port is in switchport mode.
Administrative Mode	Displays the administrative and operational modes.
Operational Mode	

Table 2-33 show interfaces switchport Field Descriptions (continued)

Field	Description
Administrative Trunking Encapsulation	Displays the administrative and operational encapsulation method and whether trunking negotiation is enabled.
Operational Trunking Encapsulation	
Negotiation of Trunking	
Access Mode VLAN	Displays the VLAN ID to which the port is configured.
Trunking Native Mode VLAN	Lists the VLAN ID of the trunk that is in native mode. Lists the
Trunking VLANs Enabled	allowed VLANs on the trunk. Lists the active VLANs on the trunk.
Trunking VLANs Active	uuik.
Pruning VLANs Enabled	Lists the VLANs that are pruning-eligible.
Protected	Displays whether or not protected port is enabled (True) or disabled (False) on the interface.
Unknown unicast blocked	Displays whether or not unknown multicast and unknown
Unknown multicast blocked	unicast traffic is blocked on the interface.
Voice VLAN	Displays the VLAN ID on which voice VLAN is enabled.
Administrative private-vlan host-association	Displays the administrative VLAN association for private-VLAN host ports.
Administrative private-vlan mapping	Displays the administrative VLAN mapping for private-VLAN promiscuous ports.
Operational private-vlan	Displays the operational private-VLAN status.
Appliance trust	Displays the class of service (CoS) setting of the data packets of the IP phone.

This is an example of output from the **show interfaces switchport backup** command:

```
Switch# show interfaces switchport backup
Switch Backup Interface Pairs:
    Active Interface Backup Interface State
```

This is an example of output from the **show interfaces** *interface-id* **pruning** command:

```
Switch# show interfaces gigibitethernet0/22 pruning Port Vlans pruned for lack of request by neighbor
```

This is an example of output from the **show interfaces** *interface-id* **trunk** command. It displays trunking information for the port.

Switch# show	interfaces gi	gabitethernet0,	/21 trunk	
Port	Mode	Encapsulation	Status	Native vlan
Gi0/21	auto	negotiate	trunking	1
Port Gi0/21	Vlans allower 1-4094	d on trunk		
Port Gi0/21	Vlans allowed	d and active in	n management	domain

Port Vlans in spanning tree forwarding state and not pruned

Gi0/21 1-4

This is an example of output from the **show interfaces** interface-id **transceiver properties** command:

${\tt Switch\#\ show\ interfaces\ gigabitethernet0/21\ transceiver\ properties}$

Name : Gi0/21

Administrative Speed: auto
Operational Speed: auto
Administrative Duplex: auto
Administrative Power Inline: N/A
Operational Duplex: auto
Administrative Auto-MDIX: off
Operational Auto-MDIX: off

This is an example of output from the **show interface** interface-id **transceiver detail** command:

Switch# show interfaces gigabitethernet0/23 transceiver detail

ITU Channel not available (Wavelength not available), Transceiver is externally calibrated.

mA:milliamperes, dBm:decibels (milliwatts), N/A:not applicable.
++:high alarm, +:high warning, -:low warning, --:low alarm.

A2D readouts (if they differ), are reported in parentheses.
The threshold values are uncalibrated.

Port	Temperature (Celsius)	Threshold		Threshold	Threshold
Gi0/23	41.5	110.0	103.0	-8.0	-12.0
Port	Voltage (Volts)	-	(Volts)	Threshold	Threshold
Gi0/23	3.20	4.00		3.00	
	Current (milliamperes)	(mA)	Threshold (mA)	Threshold	Threshold (mA)
Gi0/3		84.0			
Port	Optical Transmit Power (dBm)	Threshold (dBm)	Threshold	Threshold	Threshold (dBm)
Gi0/23	-0.0 (-0.0)		-0.0		
	Optical Receive Power (dBm)	Threshold (dBm)	Threshold (dBm)	Threshold (dBm)	Threshold (dBm)
Gi0/23	N/A (-0.0)		-0.0		

Command	Description
switchport access	Configures a port as a static-access or a dynamic-access port.
switchport block	Blocks unknown unicast or multicast traffic on an interface.
switchport backup interface	Configures Flex Links, a pair of Layer 2 interfaces that provide mutual backup.
switchport mode	Configures the VLAN membership mode of a port.
switchport mode private-vlan	Configures a port as a private-VLAN host or a promiscuous port.
switchport private-vlan	Defines private-VLAN association for a host port or private-VLAN mapping for a promiscuous port.
switchport protected	Isolates unicast, multicast, and broadcast traffic at Layer 2 from other protected ports on the same switch.
switchport trunk pruning	Configures the VLAN pruning-eligible list for ports in trunking mode.

show interfaces counters

Use the **show interfaces counters** privileged EXEC command to display various counters for the switch or for a specific interface.

show interfaces [interface-id | vlan vlan-id] counters [errors | etherchannel | protocol status |

Syntax Description

interface-id	(Optional) ID of the physical interface, including type, module, and port number.
errors	(Optional) Display error counters.
etherchannel	(Optional) Display EtherChannel counters, including octets, broadcast packets, multicast packets, and unicast packets received and sent.
protocol status	(Optional) Display status of protocols enabled on interfaces.
trunk	(Optional) Display trunk counters.

Though visible in the command-line help string, the vlan vlan-id keyword is not supported.

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

If you do not enter any keywords, all counters for all interfaces are included.

Examples

This is an example of partial output from the show interfaces counters command. It displays all counters for the switch.

Switch# show interfaces counters

Port	InOctets	InUcastPkts	InMcastPkts	InBcastPkts
Gi0/1	0	0	0	0
Gi0/2	0	0	0	0

<output truncated>

This is an example of partial output from the show interfaces counters protocol status command for all interfaces.

<output truncated>
```

Command	Description
show interfaces	Displays additional interface characteristics.

show inventory

Use the **show inventory** user EXEC command to display product identification (PID) information for the hardware.

show inventory [entity-name | raw]

Syntax Description

entity-name	(Optional) Display the specified entity. For example, enter the interface (such as gigabitethernet0/1) into which a small form-factor pluggable (SFP) module is installed.
raw	(Optional) Display every entity in the device.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

The command is case sensitive. With no arguments, the **show inventory** command produces a compact dump of all identifiable entities that have a product identifier. The compact dump displays the entity location (slot identity), entity description, and the unique device identifier (UDI) (PID, VID, and SN) of that entity.

If there is no PID, no output appears when you enter the **show inventory** command.

Examples

This is example output from the **show inventory** command:

show ip arp inspection

Use the **show ip arp inspection** privileged EXEC command to display the configuration and the operating state of dynamic Address Resolution Protocol (ARP) inspection or the status of this feature for all VLANs or for the specified interface or VLAN.

show ip arp inspection [interfaces [interface-id] | log | statistics [vlan vlan-range] | vlan vlan-range]

Syntax Description

interfaces [interface-id]	(Optional) Display the trust state and the rate limit of ARP packets for the specified interface or all interfaces. Valid interfaces include physical ports and port channels.	
log	(Optional) Display the configuration and contents of the dynamic ARP inspection log buffer.	
statistics [vlan vlan-range]	(Optional) Display statistics for forwarded, dropped, MAC validation failure, IP validation failure, access control list (ACL) permitted and denied, and DHCP permitted and denied packets for the specified VLAN. If no VLANs are specified or if a range is specified, display information only for VLANs with dynamic ARP inspection enabled (active).	
	You can specify a single VLAN identified by VLAN ID number, a range of VLANs separated by a hyphen, or a series of VLANs separated by a comma. The range is 1 to 4094.	
vlan vlan-range	(Optional) Display the configuration and the operating state of dynamic ARP inspection for the specified VLAN. If no VLANs are specified or if a range is specified, display information only for VLANs with dynamic ARP inspection enabled (active).	
	You can specify a single VLAN identified by VLAN ID number, a range of VLANs separated by a hyphen, or a series of VLANs separated by a comma. The range is 1 to 4094.	

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(44)SE	This command was introduced.

Examples

This is an example of output from the show ip arp inspection interfaces command:

Switch# show ip arp inspection interfaces

Interface	Trust State	Rate (pps)	Burst Interval
Gi0/1	Untrusted	15	1
Gi0/2	Untrusted	15	1
Gi0/3	Untrusted	15	1

This is an example of output from the **show ip arp inspection interfaces** interface-id command:

Switch# show ip	arp inspection	interfaces gigab	itethernet0/1
Interface	Trust State	Rate (pps)	Burst Interval
Gi0/1	Untrusted	15	1

This is an example of output from the **show ip arp inspection log** command. It shows the contents of the log buffer before the buffers are cleared:

```
Switch# show ip arp inspection log
Total Log Buffer Size : 32
Syslog rate : 10 entries per 300 seconds.
```

Interface	Vlan	Sender MAC	Sender IP	Num Pkts	R	eason	Time
					-		
Gi0/1	5	0003.0000.d673	192.2.10.4		5	DHCP Deny	19:39:01 UTC
Mon Mar 1 1	993						
Gi/1	5	0001.0000.d774	128.1.9.25		6	DHCP Deny	19:39:02 UTC
Mon Mar 1 1	993						
Gi0/1	5	0001.c940.1111	10.10.10.1		7	DHCP Deny	19:39:03 UTC
Mon Mar 1 1	993						
Gi0/1	5	0001.c940.1112	10.10.10.2		8	DHCP Deny	19:39:04 UTC
Mon Mar 1 1	993						
Gi0/1	5	0001.c940.1114	173.1.1.1		10	DHCP Deny	19:39:06 UTC
Mon Mar 1 1	993						
Gi 0/1	5	0001.c940.1115	173.1.1.2		11	DHCP Deny	19:39:07 UTC
Mon Mar 1 1	993						
Gi 0/1	5	0001.c940.1116	173.1.1.3		12	DHCP Deny	19:39:08 UTC
Mon Mar 1 1	993						

If the log buffer overflows, it means that a log event does not fit into the log buffer, and the display for the **show ip arp inspection log** privileged EXEC command is affected. A -- in the display appears in place of all data except the packet count and the time. No other statistics are provided for the entry. If you see this entry in the display, increase the number of entries in the log buffer, or increase the logging rate in the **ip arp inspection log-buffer** global configuration command.

This is an example of output from the **show ip arp inspection statistics** command. It shows the statistics for packets that have been processed by dynamic ARP inspection for all active VLANs.

Switch#	show ip arp inspecti	ion statist	ics	
Vlan	Forwarded	Dropped	DHCP Drops	ACL Drops
5	3	4618	4605	4
2000	0	0	0	0
Vlan	DHCP Permits ACL	Permits S	Source MAC Failur	res
5	0	12		0
2000	0	0		0
Vlan	Dest MAC Failures	IP Validat:	ion Failures	
5	0		9	
2000	0		0	

For the **show ip arp inspection statistics** command, the switch increments the number of forwarded packets for each ARP request and response packet on a trusted dynamic ARP inspection port. The switch increments the number of ACL or DHCP permitted packets for each packet that is denied by source MAC, destination MAC, or IP validation checks, and the switch increments the appropriate failure count.

This is an example of output from the **show ip arp inspection statistics vlan 5** command. It shows statistics for packets that have been processed by dynamic ARP for VLAN 5.

Switch# Vlan	show ip arp insp Forwarded	pection statis Dropped		ACL Drops	3	
5	3	4618	4605		4	
Vlan	DHCP Permits	ACL Permits	Source MAC Failur	es		
5	0	12		0		
Vlan	Dest MAC Failure	es IP Valida	tion Failures	Invalid	Protocol	Data
5		0	9			3

This is an example of output from the **show ip arp inspection vlan 5** command. It shows the configuration and the operating state of dynamic ARP inspection for VLAN 5.

Switch# sl	now ip arp inspect	ion vlan 5		
Source Mad	c Validation	:Enabled		
Destination	on Mac Validation	:Enabled		
IP Address	s Validation	:Enabled		
Vlan	Configuration	Operation	ACL Match	Static ACL
5	Enabled	Active	second	No
Vlan	ACL Logging	DHCP Logging	g.	
			_	
5	Acl-Match	A11		

Description
Defines an ARP ACL.
Clears the dynamic ARP inspection log buffer.
Clears the dynamic ARP inspection statistics.
Configures the dynamic ARP inspection logging buffer.
Controls the type of packets that are logged per VLAN.
Displays detailed information about ARP access lists.

show ip dhcp snooping

Use the **show ip dhcp snooping** user EXEC command to display the DHCP snooping configuration.

show ip dhcp snooping

Syntax Description

This command has not arguments or keywords.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

This command displays only the results of global configuration. Therefore, in this example, the circuit ID suboption appears in its default format of **vlan-mod-port**, even if a string is configured for the circuit ID.

Examples

This is an example of output from the **show ip dhcp snooping** command:

Switch> **show ip dhcp snooping**Switch DHCP snooping is enabled

 $\ensuremath{\mathsf{DHCP}}$ snooping is configured on following VLANs:

40-42

Insertion of option 82 is enabled
 circuit-id format: vlan-mod-port

remote-id format: string

Option 82 on untrusted port is allowed Verification of hwaddr field is enabled

Interface	Trusted	Rate limit (pps)
GigabitEthernet0/1	yes	unlimited
GigabitEthernet0/2	yes	unlimited
GigabitEthernet0/3	no	2000
GigabitEthernet0/4	yes	unlimited
GigabitEthernet0/1	yes	unlimited
GigabitEthernet0/2	yes	unlimited

Command	Description
show ip dhcp snooping binding	Displays the DHCP snooping binding information.

show ip dhcp snooping binding

Use the **show ip dhcp snooping binding** user EXEC command to display the DHCP snooping binding database and configuration information for all interfaces on a switch.

show ip dhcp snooping binding [ip-address] [mac-address] [**interface** interface-id] [**vlan** vlan-id]

Syntax Description

ip-address	(Optional) Specify the binding entry IP address.
mac-address	(Optional) Specify the binding entry MAC address.
interface interface-id	(Optional) Specify the binding input interface.
vlan vlan-id	(Optional) Specify the binding entry VLAN.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

The **show ip dhcp snooping binding** command output shows only the dynamically configured bindings. Use the **show ip source binding** privileged EXEC command to display the dynamically and statically configured bindings in the DHCP snooping binding database.

If DHCP snooping is enabled and an interface changes to the down state, the switch does not delete the statically configured bindings.

Examples

This example shows how to display the DHCP snooping binding entries for a switch:

Switch>	show	ip	dhcp	snooping	binding
---------	------	----	------	----------	---------

MacAddress	IpAddress	Lease(sec)	Type	VLAN	Interface
01:02:03:04:05:06	10.1.2.150	9837	dhcp-snooping	20	GigabitEthernet0/21
00:D0:B7:1B:35:DE	10.1.2.151	237	dhcp-snooping	20	GigabitEthernet0/22
Total number of hin	dinac. 2				

This example shows how to display the DHCP snooping binding entries for a specific IP address:

Switch> show ip dhcp snooping binding 10.1.2.150

MacAddress	IpAddress	Lease(sec)	Type	VLAN	Interface
01:02:03:04:05:06	10.1.2.150	9810	dhcp-snooping	20	GigabitEthernet0/21
Total number of bin	dings: 1				

This example shows how to display the DHCP snooping binding entries for a specific MAC address:

Switch> show ip dhcp snooping binding 0102.0304.0506

MacAddress	IpAddress	Lease(sec)	Type	VLAN	Interface
01:02:03:04:05:06	10.1.2.150	9788	dhcp-snooping	20	GigabitEthernet0/22
Total number of him	dings: 1				

This example shows how to display the DHCP snooping binding entries on a port:

Switch> show ip dhcp snooping binding interface gigabitethernet0/22

MacAddress	IpAddress	Lease(sec)	Type	VLAN	Interface
00:30:94:C2:EF:35	10.1.2.151	290	dhcp-snooping	20	GigabitEthernet0/22
Total number of bin	dinas: 1				

This example shows how to display the DHCP snooping binding entries on VLAN 20:

Switch> show ip dhcp snooping binding vlan 20

MacAddress	IpAddress	Lease(sec)	Type	VLAN	Interface
	10.1.2.150 10.1.2.151	9747 65	dhcp-snooping dhcp-snooping		GigabitEthernet0/21 GigabitEthernet0/22
Total number of bind	dings: 2				

Table 2-33 describes the fields in the **show ip dhcp snooping binding** command output:

Table 2-34 show ip dhcp snooping binding Command Output

Field	Description			
MacAddress	Client hardware MAC address			
IpAddress	Client IP address assigned from the DHCP server			
Lease(sec)	Remaining lease time for the IP address			
Type	Binding type			
VLAN	VLAN number of the client interface			
Interface	Interface that connects to the DHCP client host			
Total number of bindings	Total number of bindings configured on the switch			
	Note The command output might not show the total number of bindings. For example, if 200 bindings are configured on the switch and you stop the display before all the bindings appear, the total number does not change.			

Command	Description
ip dhcp snooping binding	Configures the DHCP snooping binding database
show ip dhcp snooping	Displays the DHCP snooping configuration.

show ip dhcp snooping database

Use the **show ip dhcp snooping database** user EXEC command to display the status of the DHCP snooping binding database agent.

show ip dhcp snooping database [detail]

Syntax Description

detail

(Optional) Display detailed status and statistics information.

Command Modes

User EXEC

Command History

Release	Modification
12.2(44)SE	This command was introduced.

Examples

This is an example of output from the **show ip dhcp snooping database** command:

```
Switch> show ip dhcp snooping database
```

```
Agent URL:
Write delay Timer: 300 seconds
Abort Timer: 300 seconds

```

Command	Description
ip dhcp snooping	Enables DHCP snooping on a VLAN.
ip dhcp snooping database	Configures the DHCP snooping binding database agent or the binding file.
show ip dhcp snooping	Displays DHCP snooping information.

show ip dhcp snooping statistics

Use the **show ip dhcp snooping statistics** user EXEC command to display DHCP snooping statistics in summary or detail form.

show ip dhcp snooping statistics [detail]

Syntax Description

detail (Optional) Display de	etailed statistics information.
-------------------------------------	---------------------------------

Command Modes

User EXEC

Command History

Release	Modification
12.2(37)SE	This command was introduced.

Examples

This is an example of output from the show ip dhcp snooping statistics command:

```
Switch> show ip dhep snooping statistics

Packets Forwarded = 0

Packets Dropped = 0

Packets Dropped From untrusted ports = 0
```

This is an example of output from the **show ip dhcp snooping statistics detail** command:

Packets Processed by DHCP Snooping = 0 Packets Dropped Because IDB not known = 0Oueue full = 0= 0 Interface is in errdisabled Rate limit exceeded = 0 Received on untrusted ports Nonzero giaddr = 0= 0 Source mac not equal to chaddr Binding mismatch = 0 Insertion of opt82 fail Interface Down Unknown output interface = 0= 0 Reply output port equal to input port

Table 2-34 shows the DHCP snooping statistics and their descriptions:

Table 2-35 DHCP Snooping Statistics

Packet denied by platform

DHCP Snooping Statistic	Description
Packets Processed by DHCP Snooping	Total number of packets handled by DHCP snooping, including forwarded and dropped packets.
Packets Dropped Because IDB not known	Number of errors when the input interface of the packet cannot be determined.

Table 2-35 DHCP Snooping Statistics (continued)

DHCP Snooping Statistic	Description
Queue full	Number of errors when an internal queue used to process the packets is full. This might happen if DHCP packets are received at an excessively high rate and rate limiting is not enabled on the ingress ports.
Interface is in errdisabled	Number of times a packet was received on a port that has been marked as error disabled. This might happen if packets are in the processing queue when a port is put into the error-disabled state and those packets are subsequently processed.
Rate limit exceeded	Number of times the rate limit configured on the port was exceeded and the interface was put into the error-disabled state.
Received on untrusted ports	Number of times a DHCP server packet (OFFER, ACK, NAK, or LEASEQUERY) was received on an untrusted port and was dropped.
Nonzero giaddr	Number of times the relay agent address field (giaddr) in the DHCP packet received on an untrusted port was not zero, or the no ip dhcp snooping information option allow-untrusted global configuration command is not configured and a packet received on an untrusted port contained option-82 data.
Source mac not equal to chaddr	Number of times the client MAC address field of the DHCP packet (chaddr) does not match the packet source MAC address and the ip dhcp snooping verify mac-address global configuration command is configured.
Binding mismatch	Number of times a RELEASE or DECLINE packet was received on a port that is different than the port in the binding for that MAC address-VLAN pair. This indicates someone might be trying to spoof the real client, or it could mean that the client has moved to another port on the switch and issued a RELEASE or DECLINE. The MAC address is taken from the chaddr field of the DHCP packet, not the source MAC address in the Ethernet header.
Insertion of opt82 fail	Number of times the option-82 insertion into a packet failed. The insertion might fail if the packet with the option-82 data exceeds the size of a single physical packet on the internet.
Interface Down	Number of times the packet is a reply to the DHCP relay agent, but the SVI interface for the relay agent is down. This is an unlikely error that occurs if the SVI goes down between sending the client request to the DHCP server and receiving the response.

Table 2-35 DHCP Snooping Statistics (continued)

DHCP Snooping Statistic	Description
Unknown output interface	Number of times the output interface for a DHCP reply packet cannot be determined by either option-82 data or a lookup in the MAC address table. The packet is dropped. This can happen if option 82 is not used and the client MAC address has aged out. If IPSG is enabled with the port-security option and option 82 is not enabled, the MAC address of the client is not learned, and the reply packets will be dropped.
Reply output port equal to input port	Number of times the output port for a DHCP reply packet is the same as the input port, causing a possible loop. Indicates a possible network misconfiguration or misuse of trust settings on ports.
Packet denied by platform	Number of times the packet has been denied by a platform-specific registry.

Command	Description
clear ip dhcp snooping	Clears the DHCP snooping binding database, the DHCP snooping binding database agent statistics, or the DHCP snooping statistics counters.

show ip igmp profile

Use the **show ip igmp profile** privileged EXEC command to display all configured Internet Group Management Protocol (IGMP) profiles or a specified IGMP profile.

show ip igmp profile [profile number]

Syntax Description

profile number	(Optional) The IGMP profile number to be displayed. The range is 1 to
	4294967295. If no profile number is entered, all IGMP profiles are displayed.

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Examples

These are examples of output from the **show ip igmp profile** privileged EXEC command, with and without specifying a profile number. If no profile number is entered, the display includes all profiles configured on the switch.

```
Switch# show ip igmp profile 40

IGMP Profile 40

permit

range 233.1.1.1 233.255.255.255

Switch# show ip igmp profile

IGMP Profile 3

range 230.9.9.0 230.9.9.0

IGMP Profile 4

permit

range 229.9.9.0 229.255.255.255
```

Command	Description
ip igmp profile	Configures the specified IGMP profile number.

show ip igmp snooping

Use the **show ip igmp snooping** user EXEC command to display the Internet Group Management Protocol (IGMP) snooping configuration of the switch or the VLAN.

show ip igmp snooping [groups | mrouter | querier] [vlan vlan-id]

Syntax Description

groups	(Optional) See the show ip igmp snooping groups command.
mrouter	(Optional) See the show ip igmp snooping mrouter command.
querier	(Optional) See the show ip igmp snooping querier command.
vlan vlan-id	(Optional) Specify a VLAN; the range is 1 to 1001 and 1006 to 4094 (available only in privileged EXEC mode).

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

Use this command to display snooping configuration for the switch or for a specific VLAN.

VLAN IDs 1002 to 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in IGMP snooping.

Examples

This is an example of output from the **show ip igmp snooping vlan 1** command. It shows snooping characteristics for a specific VLAN.

```
Global IGMP Snooping configuration:
_____
IGMP snooping
                       :Enabled
IGMPv3 snooping (minimal) : Enabled
Report suppression :Enabled
TCN solicit query
                       :Disabled
TCN flood query count
Last member query interval : 100
Vlan 1:
IGMP snooping
                                 :Enabled
Immediate leave
                                 :Disabled
Multicast router learning mode
                                 :pim-dvmrp
Source only learning age timer
                                 :10
CGMP interoperability mode
                                 : IGMP_ONLY
Last member query interval : 100
```

Switch# show ip igmp snooping vlan 1

This is an example of output from the **show ip igmp snooping** command. It displays snooping characteristics for all VLANs on the switch.

```
Switch# show ip igmp snooping
Global IGMP Snooping configuration:
                 : Enabled
IGMP snooping
IGMPv3 snooping (minimal) : Enabled
Report suppression : Enabled TCN solicit query : Disabled
TCN flood query count : 2
Vlan 1:

Last member query interval
                                    : 333
<output truncated>
```

Command	Description
ip igmp snooping	Enables IGMP snooping on the switch or on a VLAN.
ip igmp snooping last-member-query-interval	Enables the IGMP snooping configurable-leave timer.
ip igmp snooping querier	Enables the IGMP querier function in Layer 2 networks.
ip igmp snooping report-suppression	Enables IGMP report suppression.
ip igmp snooping ten	Configures the IGMP topology change notification behavior.
ip igmp snooping ten flood	Specifies multicast flooding as the IGMP spanning-tree topology change notification behavior.
ip igmp snooping vlan immediate-leave	Enables IGMP snooping immediate-leave processing on a VLAN.
ip igmp snooping vlan mrouter	Adds a multicast router port or configures the multicast learning method.
ip igmp snooping vlan static	Statically adds a Layer 2 port as a member of a multicast group.
show ip igmp snooping groups	Displays the IGMP snooping multicast table for the switch.
show ip igmp snooping mrouter	Displays IGMP snooping multicast router ports for the switch or for the specified multicast VLAN.
show ip igmp snooping querier	Displays the configuration and operation information for the IGMP querier configured on a switch.

show ip igmp snooping groups

Use the **show ip igmp snooping groups** privileged EXEC command to display the Internet Group Management Protocol (IGMP) snooping multicast table for the switch or the multicast information. Use with the **vlan** keyword to display the multicast table for a specified multicast VLAN or specific multicast information.

show ip igmp snooping groups [count | dynamic [count] | user [count]]

show ip igmp snooping groups vlan vlan-id [ip_address | count | dynamic [count] | user [count]]

Syntax Description

count	(Optional) Display the total number of entries for the specified command options instead of the actual entries.
dynamic	(Optional) Display entries learned by IGMP snooping.
user	Optional) Display only the user-configured multicast entries.
ip_address	(Optional) Display characteristics of the multicast group with the specified group IP address.
vlan vlan-id	(Optional) Specify a VLAN; the range is 1 to 1001 and 1006 to 4094.

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

Use this command to display multicast information or the multicast table.

VLAN IDs 1002 to 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in IGMP snooping.

Examples

This is an example of output from the **show ip igmp snooping groups** command without any keywords. It displays the multicast table for the switch.

Port List

Version

Switch# show ip igmp snooping groups

VIGII	Group	Type	VCIBION	TOTE BIBE
120	232.3.4.7	igmp	v3	Gi0/1921, Gi0/202
120	232.5.9.30	igmp	v3	Gi0/1921, Gi0/202

This is an example of output from the **show ip igmp snooping groups count** command. It displays the total number of multicast groups on the switch.

Switch# show ip igmp snooping groups count

Total number of multicast groups: 2

This is an example of output from the **show ip igmp snooping groups dynamic** command. It shows only the entries learned by IGMP snooping.

Switch#	show	ip	igmp	snooping	groups	vlan	1	dynami	.c
---------	------	----	------	----------	--------	------	---	--------	----

VIAII	Group	TAbe	VELSION	FOIC LISC
104	224.1.4.2	igmp	v2	Gi0/21, Gi0/22
104	224.1.4.3	igmp	v2	Gi0/21, Gi0/22

This is an example of output from the **show ip igmp snooping groups vlan** *vlan-id ip-address* command. It shows the entries for the group with the specified IP address.

Switch# show ip igmp snooping groups vlan 104 224.1.4.2

Vlan	Group	Type	Version	Port List
104	224.1.4.2	igmp	v2	Gi0/1, Fa0/15
104	224.1.4.2	igmp	v2	Gi0/21

Command	Description
ip igmp snooping	Enables IGMP snooping on the switch or on a VLAN.
ip igmp snooping vlan mrouter	Configures a multicast router port.
ip igmp snooping vlan static	Statically adds a Layer 2 port as a member of a multicast group.
show ip igmp snooping	Displays the IGMP snooping configuration of the switch or the VLAN.
show ip igmp snooping mrouter	Displays IGMP snooping multicast router ports for the switch or for the specified multicast VLAN.

show ip igmp snooping mrouter

Use the **show ip igmp snooping mrouter** privileged EXEC command to display the Internet Group Management Protocol (IGMP) snooping dynamically learned and manually configured multicast router ports for the switch or for the specified multicast VLAN.

show ip igmp snooping mrouter [vlan vlan-id]

Syntax Description

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

Use this command to display multicast router ports on the switch or for a specific VLAN.

VLAN IDs 1002 to 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in IGMP snooping.

When multicast VLAN registration (MVR) is enabled, the **show ip igmp snooping mrouter** command displays MVR multicast router information and IGMP snooping information.

Examples

This is an example of output from the **show ip igmp snooping mrouter** command. It shows how to display multicast router ports on the switch.

Switch# show ip igmp snooping mrouter

Vlan ports

1 Gi0/21(dynamic)

Command	Description	
ip igmp snooping	Enables IGMP snooping on the switch or on a VLAN.	
ip igmp snooping vlan mrouter	Adds a multicast router port.	
ip igmp snooping vlan static	Statically adds a Layer 2 port as a member of a multicast group.	
show ip igmp snooping	Displays the IGMP snooping configuration of the switch or the VLAN	
show ip igmp snooping groups	Displays IGMP snooping multicast information for the switch or for the specified parameter.	

show ip igmp snooping querier

Use the **show ip igmp snooping querier detail** user EXEC command to display the configuration and operation information for the IGMP querier configured on a switch.

show ip igmp snooping querier [detail | vlan vlan-id [detail]]

Syntax Description

detail	Optional) Display detailed IGMP querier information.
vlan vlan-id [detail]	Optional) Display IGMP querier information for the specified VLAN. The range is 1 to 1001 and 1006 to 4094. Use the detail keyword to display detailed information.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

Use the **show ip igmp snooping querier** command to display the IGMP version and the IP address of a detected device, also called a *querier*, that sends IGMP query messages. A subnet can have multiple multicast routers but has only one IGMP querier. In a subnet running IGMPv2, one of the multicast routers is elected as the querier. The querier can be a Layer 3 switch.

The **show ip igmp snooping querier** command output also shows the VLAN and the interface on which the querier was detected. If the querier is the switch, the output shows the *Port* field as *Router*. If the querier is a router, the output shows the port number on which the querier is learned in the *Port* field.

The **show ip igmp snooping querier detail** user EXEC command is similar to the **show ip igmp snooping querier** command. However, the **show ip igmp snooping querier** command displays only the device IP address most recently detected by the switch querier.

The **show ip igmp snooping querier detail** command displays the device IP address most recently detected by the switch querier and this additional information:

- The elected IGMP querier in the VLAN
- The configuration and operational information pertaining to the switch querier (if any) that is configured in the VLAN

Examples

This is an example of output from the **show ip igmp snooping querier** command:

Switch> show ip igmp snooping querier

Vlan	IP Address	IGMP Version	Port
120	130.1.1.1	v3	Gi0/10
129	172.20.129.1	v2	Gi0/14

Switch>	show ip	igmp	snooping	querier	
Vlan	IP Add	dress	IGMP	Version	Port
1	172.20	0.50.1	.1 v3		G0/1
2.	172.20	0.40.2	?0 v2		Router

This is an example of output from the show ip igmp snooping querier detail command:

Switch> show ip igmp snooping querier detail

Vlan	IP Address	IGMP Version Port
1	1.1.1.1	v2 Gi0/21
	MP switch queri	er status
max-respond querier-ton query ton query	sion address erval (sec) nse-time (sec) imeout (sec)	: 120 : 2 : 10
elected qu	uerier is 1.1.1	.1 on port Gi0/1
admin stat admin vers source IP query-inte max-respon querier-t tcn query tcn query operations operations	te sion address erval (sec) nse-time (sec) imeout (sec) count interval (sec)	: Enabled : 2 : 10.1.1.65 : 60 : 10 : 120 : 2

Command	Description	
ip igmp snooping	Enables IGMP snooping on the switch or on a VLAN.	
ip igmp snooping querier	Enables the IGMP querier function in Layer 2 networks.	
show ip igmp snooping	Displays IGMP snooping multicast router ports for the switch or for the specified multicast VLAN.	

show ip source binding

Use the show ip source binding user EXEC command to display the IP source bindings on the switch.

show ip source binding [ip-address] [mac-address] [**dhcp-snooping** | **static**] [**interface** interface-id] [**vlan** vlan-id]

Syntax Description

ip-address	(Optional) Display IP source bindings for a specific IP address.
mac-address	(Optional) Display IP source bindings for a specific MAC address.
dhcp-snooping	(Optional) Display IP source bindings that were learned by DHCP snooping.
static	(Optional) Display static IP source bindings.
interface interface-id	(Optional) Display IP source bindings on a specific interface.
vlan vlan-id	(Optional) Display IP source bindings on a specific VLAN.

Command Modes

User EXEC

Command History

Release	Modification
12.2(44)SE	This command was introduced.

Usage Guidelines

The **show ip source binding** command output shows the dynamically and statically configured bindings in the DHCP snooping binding database. Use the **show ip dhcp snooping binding** privileged EXEC command to display only the dynamically configured bindings.

Examples

This is an example of output from the **show ip source binding** command:

MacAddress	IpAddress	Lease(sec)	Type	VLAN	Interface
00:00:00:0A:00:0B	11.0.0.1	infinite	static	10	GigabitEthernet0/1
00:00:00:0A:00:0A	11.0.0.2	10000	dhcp-snooping	10	GigabitEthernet0/1

Command	Description		
ip dhcp snooping binding	Configures the DHCP snooping binding database.		
ip source binding	Configures static IP source bindings on the switch.		

show ip verify source

Use the **show ip verify source** user EXEC command to display the IP source guard configuration on the switch or on a specific interface.

show ip verify source [interface interface-id]

Syntax Description

interface interface-id

(Optional) Display IP source guard configuration on a specific interface.

Command Modes

User EXEC

Command History

Release	Modification
12.2(44)SE	This command was introduced.

Examples

This is an example of output from the **show ip verify source** command:

Switch> show ip verify source

DWICCII> BII	ow ib serita	SOULCE			
Interface	Filter-type	Filter-mode	IP-address	Mac-address	Vlan
gi0/1	ip	active	10.0.0.1		10
gi0/1	ip	active	deny-all		11-20
gi0/2	ip	inactive-tru	st-port		
gi0/3	ip	inactive-no-	snooping-vlan		
gi0/4	ip-mac	active	10.0.0.2	aaaa.bbbb.cccc	10
gi0/4	ip-mac	active	11.0.0.1	aaaa.bbbb.cccd	11
gi0/4	ip-mac	active	deny-all	deny-all	12-20
gi0/5	ip-mac	active	10.0.0.3	permit-all	10
gi0/5	ip-mac	active	deny-all	permit-all	11-20

In the previous example, this is the IP source guard configuration:

- On the Gigabit Ethernet 0/1 interface, DHCP snooping is enabled on VLANs 10 to 20. For VLAN 10, IP source guard with IP address filtering is configured on the interface, and a binding exists on the interface. For VLANs 11 to 20, the second entry shows that a default port access control lists (ACLs) is applied on the interface for the VLANs on which IP source guard is not configured.
- The Gigabit Ethernet 0/2 interface is configured as trusted for DHCP snooping.
- On the Gigabit Ethernet 0/3 interface, DHCP snooping is not enabled on the VLANs to which the interface belongs.
- On the Gigabit Ethernet 0/4 interface, IP source guard with source IP and MAC address filtering is
 enabled, and static IP source bindings are configured on VLANs 10 and 11. For VLANs 12 to 20,
 the default port ACL is applied on the interface for the VLANs on which IP source guard is not
 configured.
- On the Gigabit Ethernet 0/5 interface, IP source guard with source IP and MAC address filtering is
 enabled and configured with a static IP binding, but port security is disabled. The switch cannot
 filter source MAC addresses.

This is an example of output on an interface on which IP source guard is disabled:

IP source guard is not configured on the interface gi0/6.

Command	Description		
ip verify source	Enables IP source guard on an interface.		

show ipc

Use the **show ipc** user EXEC command to display Interprocess Communications Protocol (IPC) configuration, status, and statistics on a switch.

show ipc {mcast {appclass | groups | status} | nodes | ports [open] | queue | rpc | session {all | $rx \mid tx$ } [verbose] | status [cumlulative] | zones}

Syntax Description	mcast {appclass groups status}	Display the IPC multicast routing information. The keywords have these meanings:
		• appclass—Display the IPC multicast application classes.
		• groups—Display the IPC multicast groups.
		• status—Display the IPC multicast routing status.
	nodes	Display participating nodes.
	ports [open]	Display local IPC ports. The keyword has this meaning:
		• open—(Optional) Display only the open ports.
	queue	Display the contents of the IPC transmission queue.
	rpc	Display the IPC remote-procedure statistics.
	session {all rx tx}	Display the IPC session statistics (available only in privileged EXEC mode). The keywords have these meanings:
		• all—Display all the session statistics.
		• rx—Display the sessions statistics for traffic that the switch receives
		• tx—Display the sessions statistics for traffic that the switch forwards.
	verbose	(Optional) Display detailed statistics (available only in privileged EXEC mode).
	status [cumlulative]	Display the status of the local IPC server. The keyword has this meaning:
		• cumlulative —(Optional) Display the status of the local IPC server since the switch was started or restarted.
	zones	Display the participating IPC zones. The switch supports a single IPC zone.

Command Modes

User EXEC

Command History

Release	Modification
12.2(44)SE	The command was introduced.

Examples

This example shows how to display the IPC routing status:

Switch> show ipc mcast status

	IPC Mc	ast	Status	3			
					Tx	Rx	
	_				_	_	
	Total Frames				0	0	
	Total control Frames				0	0	
	Total Frames dropped				0	0	
	Total control Frames dropped				0	0	
	Total Reliable messages				0	0	
Total Reliable messages acknowledged			0	0			
	Total Out of Band Messages				0	0	
	Total Out of Band messages acknow	wle	dged		0	0	
	Total No Mcast groups				0	0	
	Total Retries	0	Total	Timeouts			0
	Total OOB Retries	0	Total	OOB Timeouts			0
	Total flushes	0	Total	No ports			0

This example shows how to display the participating nodes:

Switch> show ipc nodes

```
There is 1 node in this IPC realm.

ID Type Name Last Last
Sent Heard
10000 Local IPC Master 0 0
```

This example shows how to display the local IPC ports:

Switch> show ipc ports

There are 8 ports defined.

Port ID	Type	Name	(current/	peak/total)
There are 8 p	orts defined	1.		-
10000.1	unicast	IPC Master:Zone		
10000.2	unicast	IPC Master:Echo		
10000.3	unicast	IPC Master:Control		
10000.4	unicast	IPC Master:Init		
10000.5	unicast	FIB Master:DFS.proc	ess_level.msgs	\$
10000.6	unicast	FIB Master:DFS.inte	rrupt.msgs	
10000.7	unicast	MDFS RP:Statistics		
port_ind	lex = 0 seat	= id = 0x10000 las	t sent = 0	last heard = 0
0/2/159				
10000.8	unicast	Slot 1 :MDFS.contro	1.RIL	
port_ind	lex = 0 seat	$t_id = 0x10000$ las	t sent = 0	last heard = 0
0/0/0				
RPC packets:	urrent/peak/	'total		
				0/1/4

This example shows how to display the contents of the IPC retransmission queue:

Switch> show ipc queue

```
There are 0 IPC messages waiting for acknowledgement in the transmit queue. There are 0 IPC messages waiting for a response.

There are 0 IPC messages waiting for additional fragments.

There are 0 IPC messages currently on the IPC inboundQ.

Messages currently in use : 3

Message cache size : 1000

Maximum message cache usage : 1000
```

```
0 times message cache crossed 5000 [max]
Emergency messages currently in use : 0
There are 2 messages currently reserved for reply msg.
Inbound message queue depth 0
Zone inbound message queue depth 0
```

This example shows how to display all the IPC session statistics:

```
Switch# show ipc session all
Tx Sessions:
Port ID
             Type
             Unicast MDFS RP:Statistics
  10000.7
    port_index = 0 type = Unreliable last sent = 0 last heard = 0
    Msgs requested = 180 Msgs returned = 180
  10000.8
            Unicast
                     Slot 1 :MDFS.control.RIL
    port_index = 0 type = Reliable last sent = 0 last heard = 0
    Msgs requested = 0 Msgs returned = 0
Rx Sessions:
Port ID
             Type
                      Name
          Unicast MDFS RP:Statistics
  10000.7
    port_index = 0 seat_id = 0x10000 last sent = 0
                                                      last heard = 0
    No of msgs requested = 180 Msgs returned = 180
  10000.8
                      Slot 1 :MDFS.control.RIL
            Unicast
    port_index = 0 seat_id = 0x10000 last sent = 0
                                                      last heard = 0
    No of msgs requested = 0
                             Msgs returned = 0
```

This example shows how to display the status of the local IPC server:

Switch> show ipc status cumulative

IPC System Status

Time last IPC stat cleared :never

This processor is the IPC master server. Do not drop output of IPC frames for test purposes.

1000 IPC Message Headers Cached.

	Rx Side	Tx Side
Total Frames	12916	608
0 0		
Total from Local Ports	13080	574
Total Protocol Control Frames	116	17
Total Frames Dropped	0	0
Service Usage		
Total via Unreliable Connection-Less Service	12783	171
Total via Unreliable Sequenced Connection-Less Svo	. 0	0
Total via Reliable Connection-Oriented Service	17	116
<pre><output truncated=""></output></pre>		

show ipc

Command	Description
clear ipc	Clears the IPC multicast routing statistics.

show ipv6 access-list

Use the **show ipv6 access-list** user EXEC command to display the contents of all current IPv6 access lists.

show ipv6 access-list [access-list-name]

This command is available only if you have configured a dual IPv4 and IPv6 Switch Database Management (SDM) template on the switch.

Syntax Description

access-list-name	(Optional) Name of access list.	
------------------	---------------------------------	--

Command Modes

User EXEC

Command History

Release	Modification
12.2(44)SE	This command was introduced.

Usage Guidelines

The **show ipv6 access-list** command provides output similar to the **show ip access-list** command, except that it is IPv6-specific.

To configure the dual IPv4 and IPv6 template, enter the **sdm prefer dual-ipv4-and-ipv6** {**default | vlan**) global configuration command and reload the switch.

Examples

The following output from the **show ipv6 access-list** command shows IPv6 access lists named inbound and outbound:

```
Router# show ipv6 access-list
IPv6 access list inbound
   permit tcp any any eq bgp (8 matches) sequence 10
   permit tcp any any eq telnet (15 matches) sequence 20
   permit udp any any sequence 30
```

Table 2-35 describes the significant fields shown in the display.

Table 2-36 show ipv6 access-list Field Descriptions

Field	Description
IPv6 access list inbound	Name of the IPv6 access list, for example, inbound.
permit	Permits any packet that matches the specified protocol type.
tcp	Transmission Control Protocol. The higher-level (Layer 4) protocol type that the packet must match.
any	Equal to ::/0.

Table 2-36 show ipv6 access-list Field Descriptions (continued)

Field	Description
eq	An equal operand that compares the source or destination ports of TCP or UDP packets.
bgp (matches)	Border Gateway Protocol. The protocol type that the packet is equal to and the number of matches.
sequence 10	Sequence in which an incoming packet is compared to lines in an access list. Access list lines are ordered from first priority (lowest number, for example, 10) to last priority (highest number, for example, 80).

Command	Description
clear ipv6 access-list	Resets the IPv6 access list match counters.
ipv6 access-list	Defines an IPv6 access list and puts the switch into IPv6 access-list configuration mode.
sdm prefer	Configures an SDM template to optimize system resources based on how the switch is being used.

show ipv6 mld snooping

Use the **show ipv6 mld snooping** user EXEC command to display IP version 6 (IPv6) Multicast Listener Discovery (MLD) snooping configuration of the switch or the VLAN.

show ipv6 mld snooping [vlan vlan-id]

This command is available only if you have configured a dual IPv4 and IPv6 Switch Database Management (SDM) template on the switch.

Syntax Description

vlan vlan-id	(Optional) Specify a VLAN; the range is 1 to 1001 and 1006 to 4094.	
--------------	---	--

Command Modes

User EXEC

Command History

Release	Modification
12.2(44)SE	This command was introduced.

Usage Guidelines

Use this command to display MLD snooping configuration for the switch or for a specific VLAN.

VLAN numbers 1002 through 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in MLD snooping.

To configure the dual IPv4 and IPv6 template, enter the **sdm prefer dual-ipv4-and-ipv6** {**default | vlan**) global configuration command and reload the switch.

Examples

This is an example of output from the **show ipv6 mld snooping vlan** command. It shows snooping characteristics for a specific VLAN.

 ${\tt Switch} \gt{ \ \, \textbf{show ipv6 mld snooping vlan 100}}$

Global MLD Snooping configuration:

MLD snooping : Enabled
MLDv2 snooping (minimal) : Enabled
Listener message suppression : Enabled
TCN solicit query : Disabled

TCN flood query count : 2
Robustness variable : 3
Last listener query count : 2
Last listener query interval : 1000

Vlan 100:

MLD snooping : Disabled
MLDv1 immediate leave : Disabled
Explicit host tracking : Enabled
Multicast router learning mode : pim-dvmrp

Robustness variable : 3
Last listener query count : 2
Last listener query interval : 1000

This is an example of output from the **show ipv6 mld snooping** command. It displays snooping characteristics for all VLANs on the switch.

```
Switch> show ipv6 mld snooping
```

Global MLD Snooping configuration:

MLD snooping : Enabled
MLDv2 snooping (minimal) : Enabled
Listener message suppression : Enabled
TCN solicit query : Disabled

TCN flood query count : 2
Robustness variable : 3
Last listener query count : 2
Last listener query interval : 1000

Vlan 1:

MLD snooping : Disabled
MLDv1 immediate leave : Disabled
Explicit host tracking : Enabled
Multicast router learning mode : pim-dvmrp

Robustness variable : 1
Last listener query count : 2
Last listener query interval : 1000

<output truncated>

Vlan 951:

MLD snooping : Disabled
MLDv1 immediate leave : Disabled
Explicit host tracking : Enabled
Multicast router learning mode : pim-dvmrp
Robustness variable : 3

Robustness variable : 3
Last listener query count : 2
Last listener query interval : 1000

Command	Description
ipv6 mld snooping	Enables and configures MLD snooping on the switch or on a VLAN.
sdm prefer	Configures an SDM template to optimize system resources based on how the switch is being used.

show ipv6 mld snooping address

Use the **show ipv6 mld snooping address** user EXEC command to display all or specified IP version 6 (IPv6) multicast address information maintained by Multicast Listener Discovery (MLD) snooping.

show ipv6 mld snooping address [[vlan vlan-id] [ipv6 address]] [vlan vlan-id] [count | dynamic | user]

This command is available only you have configured a dual IPv4 and IPv6 Switch Database Management (SDM) template on the switch.

Syntax Description

vlan vlan-id	(Optional) Specify a VLAN about which to show MLD snooping multicast address information. The VLAN ID range is 1 to 1001 and 1006 to 4094.
ipv6-multicast-address	(Optional) Display information about the specified IPv6 multicast address. This keyword is only available when a VLAN ID is entered.
count	(Optional) Display the number of multicast groups on the switch or in the specified VLAN.
dynamic	(Optional) Display MLD snooping learned group information.
user	(Optional) Display MLD snooping user-configured group information.

Command Modes

User EXEC

Command History

Release	Modification
12.2(44)SE	This command was introduced.

Usage Guidelines

Use this command to display IPv6 multicast address information.

You can enter an IPv6 multicast address only after you enter a VLAN ID.

VLAN numbers 1002 through 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in MLD snooping.

Use the **dynamic** keyword to display information only about groups that are learned. Use the **user** keyword to display information only about groups that have been configured.

To configure the dual IPv4 and IPv6 template, enter the **sdm prefer dual-ipv4-and-ipv6** {**default | vlan**) global configuration command and reload the switch.

Examples

This is an example of output from the show snooping address user EXEC command:

Switch> show ipv6 mld snooping address

Vlan Group Type Version Port List
-----2 FF12::3 user Fa0/2, Gi0/2, Gi0/1, Gi0/3

This is an example of output from the **show snooping address count** user EXEC command:

Switch> show ipv6 mld snooping address count Total number of multicast groups: 2

This is an example of output from the **show snooping address user** user EXEC command:

Command	Description
ipv6 mld snooping vlan	Configures IPv6 MLD snooping on a VLAN.
sdm prefer	Configures an SDM template to optimize system resources based on how the switch is being used.

show ipv6 mld snooping mrouter

Use the **show ipv6 mld snooping mrouter** user EXEC command to display dynamically learned and manually configured IP version 6 (IPv6) Multicast Listener Discovery (MLD) router ports for the switch or a VLAN.

show ipv6 mld snooping mrouter [vlan vlan-id]

This command is available only if you have configured a dual IPv4 and IPv6 Switch Database Management (SDM) template on the switch.

Syntax Description

vlan vlan-id (O	ntional) S	St	ecify a	ı V	LAN:	the	range is	s 1	1 to	1001	and 1006 to 4094.	
VICTI FEETE FEE	\sim	peronar, s	~ 1	,cerry c		,	CIIC	141150 1	, ,		1001	and root to loy i.	

Command Modes

User EXEC

Command History

Release	Modification
12.2(44)SE	This command was introduced.

Usage Guidelines

Use this command to display MLD snooping router ports for the switch or for a specific VLAN.

VLAN numbers 1002 through 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in MLD snooping.

To configure the dual IPv4 and IPv6 template, enter the **sdm prefer dual-ipv4-and-ipv6** {**default | vlan**) global configuration command and reload the switch.

Examples

This is an example of output from the **show ipv6 mld snooping mrouter** command. It displays snooping characteristics for all VLANs on the switch that are participating in MLD snooping.

```
Switch> show ipv6 mld snooping mrouter

Vlan ports
----
2 Gi0/11(dynamic)
72 Gi0/11(dynamic)
200 Gi0/11(dynamic)
```

This is an example of output from the **show ipv6 mld snooping mrouter vlan** command. It shows multicast router ports for a specific VLAN.

```
Switch> show ipv6 mld snooping mrouter vlan 100
Vlan ports
----
2 Gi0/11(dynamic)
```

Command	Description				
ipv6 mld snooping	Enables and configures MLD snooping on the switch or on a VLAN.				
ipv6 mld snooping vlan mrouter interface interface-id static ipv6-multicast-address interface interface-id]	Configures multicast router ports for a VLAN.				
sdm prefer	Configures an SDM template to optimize system resources based on how the switch is being used.				

show ipv6 mld snooping querier

Use the **show ipv6 mld snooping querier** user EXEC command to display IP version 6 (IPv6) Multicast Listener Discovery (MLD) snooping querier-related information most recently received by the switch or the VLAN.

show ipv6 mld snooping querier [vlan vlan-id] [detail]

This command is available only if you have configured a dual IPv4 and IPv6 Switch Database Management (SDM) template on the switch.

Syntax Description

vlan vlan-id	(Optional) Specify a VLAN; the range is 1 to 1001 and 1006 to 4094.
detail	(Optional) Display MLD snooping detailed querier information for the switch or for the VLAN.

Command Modes

User EXEC

Command History

Release	Modification
12.2(44)SE	This command was introduced.

Usage Guidelines

Use the **show ipv6 mld snooping querier** command to display the MLD version and IPv6 address of a detected device that sends MLD query messages, which is also called a *querier*. A subnet can have multiple multicast routers but has only one MLD querier. The querier can be a Layer 3 switch.

The **show ipv6 mld snooping querier** command output also shows the VLAN and interface on which the querier was detected. If the querier is the switch, the output shows the *Port* field as *Router*. If the querier is a router, the output shows the port number on which the querier is learned in the *Port* field.

The output of the **show ipv6 mld snoop querier vlan** command displays the information received in response to a query message from an external or internal querier. It does not display user-configured VLAN values, such as the snooping robustness variable on the particular VLAN. This querier information is used only on the MASQ message that is sent by the switch. It does not override the user-configured robustness variable that is used for aging out a member that does not respond to query messages.

VLAN numbers 1002 through 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in MLD snooping.

To configure the dual IPv4 and IPv6 template, enter the **sdm prefer dual-ipv4-and-ipv6** {**default | vlan**) global configuration command and reload the switch.

Examples

This is an example of output from the show ipv6 mld snooping querier command:

This is an example of output from the show ipv6 mld snooping querier detail command:

```
Switch> show ipv6 mld snooping querier detail
Vlan IP Address MLD Version Port
-----2 FE80::201:C9FF:FE40:6000 v1 Gi0/1
```

This is an example of output from the show ipv6 mld snooping querier vlan command:

Switch> show ipv6 mld snooping querier vlan 2
IP address : FE80::201:C9FF:FE40:6000
MLD version : v1
Port : Gi0/1
Max response time : 1000s

Command	Description
ipv6 mld snooping	Enables and configures IPv6 MLD snooping on the switch or on a VLAN.
ipv6 mld snooping last-listener-query-cou nt	Configures the maximum number of queries that the switch sends before aging out an MLD client.
ipv6 mld snooping last-listener-query-int erval	Configures the maximum response time after sending out a query that the switch waits before deleting a port from the multicast group.
ipv6 mld snooping robustness-variable	Configures the maximum number of queries that the switch sends before aging out a multicast address when there is no response.
sdm prefer	Configures an SDM template to optimize system resources based on how the switch is being used.
ipv6 mld snooping	Enables and configures IPv6 MLD snooping on the switch or on a VLAN.

show I2protocol-tunnel

Use the **show l2protocol-tunnel** user EXEC command to display information about Layer 2 protocol tunnel ports. Displays information for interfaces with protocol tunneling enabled.

show l2protocol-tunnel [interface interface-id] [summary]

Syntax Description

interface interface-id	(Optional) Specify the interface for which protocol tunneling information appears. Valid interfaces are physical ports and port channels; the port channel range is 1 to 12.
summary	(Optional) Display only Layer 2 protocol summary information.

Command Modes

User EXEC

Command History

Release	Modification
12.2(44)SE	This command was introduced.
12.2(50)SE	The port channel range is incorrect. The correct range is from 1 to 12.

Usage Guidelines

After enabling Layer 2 protocol tunneling on an access or IEEE 802.1Q tunnel port by using the **12protocol-tunnel** interface configuration command, you can configure some or all of these parameters:

- Protocol type to be tunneled
- · Shutdown threshold
- Drop threshold

If you enter the **show l2protocol-tunnel** [**interface** *interface-id*] command, only information about the active ports on which all the parameters are configured appears.

If you enter the **show l2protocol-tunnel summary** command, only information about the active ports on which some or all of the parameters are configured appears.

Examples

This is an example of output from the show 12protocol-tunnel command:

Switch> show 12protocol-tunnel
COS for Encapsulated Packets: 5

Drop Threshold for Encapsulated Packets: 0

Port		Drop Threshold	-	n Decapsulation Counter	Drop Counter
Fa0/3		 			
	pagp	 	0	242500	
	lacp	 	24268	242640	
	udld	 	0	897960	
Fa0/4		 			

	pagp	1000		24249	242700	
	lacp			24256	242660	
	udld			0	897960	
Gi0/13	cdp			134482	1344820	
	pagp	1000		0	242500	
	lacp	500		0	485320	
	udld	300		44899	448980	
Gi0/24	cdp			134482	1344820	
	pagp		1000	0	242700	
	lacp			0	485220	
	udld	300		44899	448980	

This is an example of output from the **show l2protocol-tunnel summary** command:

Switch> show 12protocol-tunnel summary
COS for Encapsulated Packets: 5
Drop Threshold for Encapsulated Packets: 0

Port	Protocol	Shutdown Threshold (cdp/stp/vtp) (pagp/lacp/udld)	Drop Threshold (cdp/stp/vtp) (pagp/lacp/udld)	Status
Fa0/2		/	//	up
pag	p lacp udld	/	/	
Fa0/3		/	/	up
pag	p lacp udld	1000/	/	
Fa0/4		/	/	up
pag	p lacp udld	1000/ 500/	/	
Fa0/5	cdp stp vt	p/	/	down
		/	/	
Gi0/1		/	/	down
pag	mp	/	1000/	
Gi0/2		/	/	down
pag	mp	/	1000/	

Command	Description	
clear l2protocol-tunnel counters	Clears counters for protocol tunneling ports.	
12protocol-tunnel	Enables Layer 2 protocol tunneling for CDP, STP, or VTP packets on an interface.	
12protocol-tunnel cos	Configures a class of service (CoS) value for tunneled Layer 2 protocol packets.	

show lacp

Use the **show lacp** user EXEC command to display Link Aggregation Control Protocol (LACP) channel-group information.

show lacp [channel-group-number] {counters | internal | neighbor | sys-id}

Syntax Description

channel-group-number	(Optional) Number of the channel group. The range is 1 to 12.
counters	Display traffic information.
internal	Display internal information.
neighbor	Display neighbor information.
sys-id	Display the system identifier that is being used by LACP. The system identifier is made up of the LACP system priority and the switch MAC address.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.
12.2(50)SE	The <i>channel-group-number</i> range was incorrect. The correct range is from 1 to 12.

Usage Guidelines

You can enter any **show lacp** command to display the active channel-group information. To display specific channel information, enter the **show lacp** command with a channel-group number.

If you do not specify a channel group, information for all channel groups appears.

You can enter the *channel-group-number* option to specify a channel group for all keywords except **sys-id**.

Examples

This is an example of output from the **show lacp counters** user EXEC command.

Switch>	show	lacp	counters
---------	------	------	----------

	LACI	PDUs	Mar	ker	Marker R	Response	LACPDUS	3
Port	Sent	Recv	Sent	Recv	Sent	Recv	Pkts Er	r
								-
Channel grow	up:1							
Gi0/11	19	10	0	0	0	0	0	
Gi0/12	14	6	0	0	0	0	0	

Table 2-36 describes the fields in the display:

Table 2-37 show lacp counters Field Descriptions

Field	Description
LACPDUs Sent and Recv	The number of LACP packets sent and received by a port.
Marker Sent and Recv	The number of LACP marker packets sent and received by a port.
Marker Response Sent and Recv	The number of LACP marker response packets sent and received by a port.
LACPDUs Pkts and Err	The number of unknown and illegal packets received by LACP for a port.

This is an example of output from the show lacp internal command:

```
Switch> show lacp 1 internal
Flags: S - Device is requesting Slow LACPDUs
       F - Device is requesting Fast LACPDUs
       A - Device is in Active mode
                                     P - Device is in Passive mode
Channel group 1
                            LACP port
                                        Admin

                                                   0x3
                                                           0x5
                                                                   0x3D
```

Table 2-37 describes the fields in the display:

Table 2-38 show lacp internal Field Descriptions

Field	Description
State	State of the specific port. These are the allowed values:
	• — Port is in an unknown state.
	• bndl —Port is attached to an aggregator and bundled with other ports.
	• susp —Port is in a suspended state; it is not attached to any aggregator.
	• hot-sby—Port is in a hot-standby state.
	• indiv—Port is incapable of bundling with any other port.
	• indep —Port is in an independent state (not bundled but able to switch data traffic. In this case, LACP is not running on the partner port).
	• down—Port is down.
LACP Port Priority	Port priority setting. LACP uses the port priority to put ports s in standby mode when there is a hardware limitation that prevents all compatible ports from aggregating.

Table 2-38 show lacp internal Field Descriptions (continued)

Field	Description
Admin Key	Administrative key assigned to this port. LACP automatically generates an administrative key value as a hexadecimal number. The administrative key defines the ability of a port to aggregate with other ports. A port's ability to aggregate with other ports is determined by the port physical characteristics (for example, data rate and duplex capability) and configuration restrictions that you establish.
Oper Key	Runtime operational key that is being used by this port. LACP automatically generates this value as a hexadecimal number.
Port Number	Port number.
Port State	State variables for the port, encoded as individual bits within a single octet with these meanings:
	bit0: LACP_Activity
	• bit1: LACP_Timeout
	• bit2: Aggregation
	• bit3: Synchronization
	• bit4: Collecting
	• bit5: Distributing
	• bit6: Defaulted
	• bit7: Expired
	Note In the list above, bit7 is the MSB and bit0 is the LSB.

This is an example of output from the **show lacp neighbor** command:

```
Switch> show lacp neighbor
Flags: S - Device is sending Slow LACPDUs F - Device is sending Fast LACPDUs
       A - Device is in Active mode
                                      P - Device is in Passive mode
Channel group 3 neighbors

LACP Partner Partner Partner

Port Priority Oper Key Port State
32768 0x3 0x3C

This is an example of output from the **show lacp sys-id** command:

Switch> **show lacp sys-id** 32765,0002.4b29.3a00

The system identification is made up of the system priority and the system MAC address. The first two bytes are the system priority, and the last six bytes are the globally administered individual MAC address associated to the system.

Command	Description
clear ip dhcp snooping	Clears the LACP channel-group information.
lacp port-priority	Configures the LACP port priority.
lacp system-priority	Configures the LACP system priority.

show location

Use the show location user EXEC command to display location information for an endpoint.

show location admin-tag

show location civic-location {**identifier** *id number* | **interface** *interface-id* | **static**}

show location elin-location {identifier id number | interface interface-id | static}

Syntax Description

admin-tag	Display administrative tag or site information.
civic-location	Display civic location information.
elin-location	Display emergency location information (ELIN).
identifier id	Specify the ID for the civic location or the elin location. The id range is 1 to 4095.
interface interface-id	(Optional) Display location information for the specified interface or all interfaces. Valid interfaces include physical ports.
static	Display static configuration information.

Command Modes

User EXEC

Command History

Release	Modification
12.2(44)SE	This command was introduced.

Usage Guidelines

Use the **show location** command to display location information for an endpoint.

Examples

This is an example of output from the **show location civic-location** command that displays location information for an interface:

Civic location information

Identifier : :

County : Santa Clara

Street number : 3550
Building : 19
Room : C6
Primary road name : Cisco Way
City : San Jose
State : CA
Country : US

This is an example of output from the **show location civic-location** command that displays all the civic location information:

Switch> show location civic-location static

Civic location information Identifier County : Santa Clara
Street number : 3550 Building : 19 Room : C6 Primary road name : Cisco Way City : San Jose State : CA : US Country : Gi0/1 Ports

Identifier : 2 Street number : 24568 Street number suffix : West

Landmark : Golden Gate Bridge

Primary road name : 19th Ave City : San Francisco

Country : US

This is an example of output from the **show location elin-location** command that displays the emergency location information:

Switch> show location elin-location identifier 1

Elin location information

Identifier : 1

Elin : 14085553881 Ports : Gi0/2

This is an example of output from the **show location elin static** command that displays all emergency location information:

Switch> show location elin static

Elin location information

Identifier: 1

Elin : 18002228999

show link state group

Use the **show link state group** privileged EXEC command to display the link-state group information.

show link state group [number] [detail]

Syntax Description

number	(Optional) Number of the link-state group.
detail	(Optional) Specify that detailed information appears.

Defaults

There is no default.

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

Use the **show link state group** command to display the link-state group information. Enter this command without keywords to display information about all link-state groups. Enter the group number to display information specific to the group.

Enter the **detail** keyword to display detailed information about the group. The output for the **show link state group detail** command displays only those link-state groups that have link-state tracking enabled or that have upstream or downstream interfaces (or both) configured. If there is no link-state group configuration for a group, it is not shown as enabled or disabled.

Examples

This is an example of output from the **show link state group 1** command:

```
Switch> show link state group 1
Link State Group: 1 Status: Enabled, Down
```

This is an example of output from the **show link state group detail** command:

```
Switch> show link state group detail
(Up):Interface up (Dwn):Interface Down (Dis):Interface disabled

Link State Group: 1 Status: Enabled, Down
Upstream Interfaces: Gi0/15(Dwn) Gi0/16(Dwn)
Downstream Interfaces: Gi0/11(Dis) Gi0/12(Dis) Gi0/13(Dis) Gi0/14(Dis)

Link State Group: 2 Status: Enabled, Down
Upstream Interfaces: Gi0/15(Dwn) Gi0/16(Dwn) Gi0/17(Dwn)
Downstream Interfaces: Gi0/11(Dis) Gi0/12(Dis) Gi0/13(Dis) Gi0/14(Dis)

(Up):Interface up (Dwn):Interface Down (Dis):Interface disabled
```

Command	Description
link state group	Configures an interface as a member of a link-state group.
link state track	Enables a link-state group.
show running-config	Displays the current operating configuration.

show mac access-group

Use the **show mac access-group** user EXEC command to display the MAC access control lists (ACLs) configured for an interface or a switch.

show mac access-group [interface interface-id]

Syntax Description

interface interface-id	(Optional) Display the MAC ACLs configured on a specific interface. Valid
	interfaces are physical ports and port channels; the port-channel range is 1
	to 12 (available only in privileged EXEC mode).

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.
12.2(50)SE	The port-channel range was incorrect. The correct range is from 1 to 12.

Examples

This is an example of output from the **show mac-access group** user EXEC command. In this display, port 2 has the MAC access list *macl_e1* applied; no MAC ACLs are applied to other interfaces.

Switch> show mac access-group
Interface GigabitEthernet0/1:
 Inbound access-list is not set
Interface GigabitEthernet0/2:
 Inbound access-list is macl_e1
Interface GigabitEthernet0/3:
 Inbound access-list is not set
Interface GigabitEthernet0/4:
 Inbound access-list is not set

<output truncated>

This is an example of output from the show mac access-group interface gigabitethernet0/1 command:

Switch# show mac access-group interface gigabitethernet0/1

Interface GigabitEthernet0/21:
 Inbound access-list is macl_e1

Command	Description
mac access-group	Applies a MAC access group to an interface.

show mac address-table

Use the **show mac address-table** user EXEC command to display a specific MAC address table static and dynamic entry or the MAC address table static and dynamic entries on a specific interface or VLAN.

show mac address-table

Syntax Description

This command has no arguments or keywords.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Examples

This is an example of output from the **show mac address-table** command:

Switch> show mac address-table

Mac Address Table

Vlan Mac Address Type Ports 0000.0000.0001 A11 STATIC CPU A11 0000.0000.0002 STATIC CPU A11 0000.0000.0003 STATIC CPU 0000.0000.0009 A11 STATIC CPU A11 0000.0000.0012 STATIC CPU A11 0180.c200.000b STATIC CPU A11 0180.c200.000c STATIC CPU A11 0180.c200.000d STATIC CPU A11 0180.c200.000e STATIC CPU A11 0180.c200.000f STATIC CPU 0180.c200.0010 STATIC CPU 1 0030.9441.6327 DYNAMIC Gi0/24

Total Mac Addresses for this criterion: 12

Command	Description
clear mac address-table dynamic	Deletes from the MAC address table a specific dynamic address, all dynamic addresses on a particular interface, or all dynamic addresses on a particular VLAN.
show mac address-table aging-time	Displays the aging time in all VLANs or the specified VLAN.
show mac address-table count	Displays the number of addresses present in all VLANs or the specified VLAN.
show mac address-table dynamic	Displays dynamic MAC address table entries only.
show mac address-table interface	Displays the MAC address table information for the specified interface.
show mac address-table notification	Displays the MAC address notification settings for all interfaces or the specified interface.
show mac address-table static	Displays static MAC address table entries only.
show mac address-table vlan	Displays the MAC address table information for the specified VLAN.

show mac address-table address

Use the **show mac address-table address** user EXEC command to display MAC address table information for the specified MAC address.

show mac address-table address mac-address [interface interface-id] [vlan vlan-id]

Syntax Description

mac-address	Specify the 48-bit MAC address; the valid format is H.H.H.
interface interface-id	(Optional) Display information for a specific interface. Valid interfaces include physical ports and port channels.
vlan vlan-id	(Optional) Display entries for the specific VLAN only. The range is 1 to 4094.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Examples

This is an example of output from the show mac address-table address command:

Switch# show mac address-table address 0002.4b28.c482

Mac Address Table

Vlan Mac Address Type Ports
--- -----All 0002.4b28.c482 STATIC CPU
Total Mac Addresses for this criterion: 1

Command	Description
show mac address-table aging-time	Displays the aging time in all VLANs or the specified VLAN.
show mac address-table count	Displays the number of addresses present in all VLANs or the specified VLAN.
show mac address-table dynamic	Displays dynamic MAC address table entries only.
show mac address-table interface	Displays the MAC address table information for the specified interface.
show mac address-table notification	Displays the MAC address notification settings for all interfaces or the specified interface.
show mac address-table static	Displays static MAC address table entries only.
show mac address-table vlan	Displays the MAC address table information for the specified VLAN.

show mac address-table aging-time

Use the **show mac address-table aging-time** user EXEC command to display the aging time of a specific address table instance, all address table instances on a specified VLAN or, if a specific VLAN is not specified, on all VLANs.

show mac address-table aging-time [vlan vlan-id]

Syntax Description

vlan vlan-id	(Optional) Display aging time information for a specific VLAN. The range
	is 1 to 4094.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

If no VLAN number is specified, the aging time for all VLANs appears.

Examples

This is an example of output from the **show mac address-table aging-time** command:

Switch> show mac address-table aging-time
Vlan Aging Time

This is an example of output from the show mac address-table aging-time vlan 10 command:

Switch> show mac address-table aging-time vlan 10

Vlan Aging Time ---- 10 300

300

1

Command	Description
mac address-table aging-time	Sets the length of time that a dynamic entry remains in the MAC address table after the entry is used or updated.
show mac address-table address	Displays MAC address table information for the specified MAC address.
show mac address-table count	Displays the number of addresses present in all VLANs or the specified VLAN.
show mac address-table dynamic	Displays dynamic MAC address table entries only.
show mac address-table interface	Displays the MAC address table information for the specified interface.
show mac address-table notification	Displays the MAC address notification settings for all interfaces or the specified interface.

Command	Description
show mac address-table static	Displays static MAC address table entries only.
show mac address-table vlan	Displays the MAC address table information for the specified VLAN.

show mac address-table count

Use the **show mac address-table count** user EXEC command to display the number of addresses present in all VLANs or the specified VLAN.

show mac address-table count [vlan vlan-id]

Syntax Description

vlan vlan-id	(Optional) Display the number of addresses for a specific VLAN. The range is 1
	to 4094.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

If no VLAN number is specified, the address count for all VLANs appears.

Examples

This is an example of output from the **show mac address-table count** command:

Switch# show mac address-table count

Mac Entries for Vlan : 1
-----Dynamic Address Count : 2
Static Address Count : 0
Total Mac Addresses : 2

Command	Description
show mac address-table address	Displays MAC address table information for the specified MAC address.
show mac address-table aging-time	Displays the aging time in all VLANs or the specified VLAN.
show mac address-table dynamic	Displays dynamic MAC address table entries only.
show mac address-table interface	Displays the MAC address table information for the specified interface.
show mac address-table notification	Displays the MAC address notification settings for all interfaces or the specified interface.
show mac address-table static	Displays static MAC address table entries only.
show mac address-table vlan	Displays the MAC address table information for the specified VLAN.

show mac address-table dynamic

Use the **show mac address-table dynamic** user EXEC command to display only dynamic MAC address table entries.

show mac address-table dynamic [address mac-address] [interface interface-id] [vlan vlan-id]

Syntax Description

address mac-address	(Optional) Specify a 48-bit MAC address; the valid format is H.H.H (available in privileged EXEC mode only).
interface interface-id	(Optional) Specify an interface to match; valid <i>interfaces</i> include physical ports and port channels.
vlan vlan-id	(Optional) Display entries for a specific VLAN; the range is 1 to 4094.

Command Modes

User EXEC

Command History

Release	Modification	
12.2(25)SEF	This command was introduced.	

Examples

This is an example of output from the **show mac address-table dynamic** command:

Switch> show mac address-table dynamic

Mac Address Table

Vlan Mac Address Type Ports
---- 1 0030.b635.7862 DYNAMIC Gi0/22

1 00b0.6496.2741 DYNAMIC Gi0/22 Total Mac Addresses for this criterion: 2

Command	Description
clear mac address-table dynamic	Deletes from the MAC address table a specific dynamic address, all dynamic addresses on a particular interface, or all dynamic addresses on a particular VLAN.
show mac address-table address	Displays MAC address table information for the specified MAC address.
show mac address-table aging-time	Displays the aging time in all VLANs or the specified VLAN.
show mac address-table count	Displays the number of addresses present in all VLANs or the specified VLAN.
show mac address-table interface	Displays the MAC address table information for the specified interface.
show mac address-table static	Displays static MAC address table entries only.
show mac address-table vlan	Displays the MAC address table information for the specified VLAN.

show mac address-table interface

Use the **show mac address-table interface** user command to display the MAC address table information for the specified interface in the specified VLAN.

show mac address-table interface interface-id [vlan vlan-id]

Syntax Description

interface-id	Specify an interface type; valid interfaces include physical ports and port channels.
vlan vlan-id	(Optional) Display entries for a specific VLAN; the range is 1 to 4094.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Examples

This is an example of output from the show mac address-table interface command:

Switch> show mac address-table interface gigabitethernet0/22

Mac Address Table

Description
Displays MAC address table information for the specified MAC address.
Displays the aging time in all VLANs or the specified VLAN.
Displays the number of addresses present in all VLANs or the specified VLAN.
Displays dynamic MAC address table entries only.
Displays the MAC address notification settings for all interfaces or the specified interface.
Displays static MAC address table entries only.
Displays the MAC address table information for the specified VLAN.

show mac address-table learning

Use the **show mac address-table learning** user EXEC command to display the status of MAC address learning for all VLANs or the specified VLAN.

show mac address-table learning [vlan vlan-id]

Syntax Description

vlan vlan-id	(Optional) Display information for a specific VLAN. The range is 1 to 4094.
---------------------	---

Command Modes

User EXEC

Command History

Release	Modification
12.2(46)SE	This command was introduced.

Usage Guidelines

Use the **show mac address-table learning** command without any keywords to display configured VLANs and whether MAC address learning is enabled or disabled on them. The default is that MAC address learning is enabled on all VLANs. Use the command with a specific VLAN ID to display the learning status on an individual VLAN.

Examples

This is an example of output from the **show mac address-table learning** user EXEC command showing that MAC address learning is disabled on VLAN 200:

Switch> show mac address-table learning

VLAN	Learning Status
1	yes
100	yes
200	no

Command	Description
mac address-table learning vlan	Enables or disables MAC address learning on a VLAN.

show mac address-table move update

Use the **show mac address-table move update** user EXEC command to display the MAC address-table move update information on the switch.

show mac address-table move update

Syntax Description

This command has no arguments or keywords.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Examples

This is an example of output from the **show mac address-table move update** command:

```
Switch> show mac address-table move update
Switch-ID: 010b.4630.1780
Dst mac-address : 0180.c200.0010
Vlans/Macs supported : 1023/8320
Default/Current settings: Rcv Off/On, Xmt Off/On
Max packets per min : Rcv 40, Xmt 60
Rcv packet count: 10
Rcv conforming packet count : 5
Rcv invalid packet count : 0
Rcv packet count this min : 0
Rcv threshold exceed count: 0
Rcv last sequence# this min : 0
Rcv last interface : Po2
Rcv last src-mac-address: 0003.fd6a.8701
Rcv last switch-ID: 0303.fd63.7600
Xmt packet count : 0
Xmt packet count this min : 0
Xmt threshold exceed count: 0
Xmt pak buf unavail cnt : 0
```

Xmt last interface : None

switch#

Command	Description
clear mac address-table move update	Clears the MAC address-table move update counters.
mac address-table move update {receive transmit}	Configures MAC address-table move update on the switch.

show mac address-table notification

Use the **show mac address-table notification** user EXEC command to display the MAC address notification settings for all interfaces or the specified interface.

show mac address-table notification {change [interface [interface-id] | mac-move | threshold}

Syntax Description

change	Display the MAC change notification feature parameters and the history table.
interface	(Optional) Display information for all interfaces. Valid interfaces include physical ports and port channels.
interface-id	(Optional) Display information for the specified interface. Valid interfaces include physical ports and port channels.
mac-move	Display status for MAC address move notifications.
threshold	Display status for MAC-address table threshold monitoring.

Command Modes

User EXEC

Command History

Release	Modification	
12.2(25)SEF	This command was introduced.	
12.2(40)SE	The change, mac-move, and threshold keywords were added.	

Usage Guidelines

Use the **show mac address-table notification change** command without keywords to see if the MAC address change notification feature is enabled or disabled, the MAC notification interval, the maximum number of entries allowed in the history table, and the history table contents.

Use the **interface** keyword to display the notifications for all interfaces. If the *interface-id* is included, only the flags for that interface appear.

Examples

This is an example of output from the show mac address-table notification change command:

```
Switch> show mac address-table notification change
MAC Notification Feature is Enabled on the switch
Interval between Notification Traps: 60 secs
Number of MAC Addresses Added : 4
Number of MAC Addresses Removed: 4
Number of Notifications sent to NMS: 3
Maximum Number of entries configured in History Table : 100
Current History Table Length: 3
MAC Notification Traps are Enabled
History Table contents
History Index 0, Entry Timestamp 1032254, Despatch Timestamp 1032254
MAC Changed Message :

```

Command	Description
clear mac address-table notification	Clears the MAC address notification global counters.
show mac address-table address	Displays MAC address table information for the specified MAC address.
show mac address-table aging-time	Displays the aging time in all VLANs or the specified VLAN.
show mac address-table count	Displays the number of addresses present in all VLANs or the specified VLAN.
show mac address-table dynamic	Displays dynamic MAC address table entries only.
show mac address-table interface	Displays the MAC address table information for the specified interface.
show mac address-table static	Displays static MAC address table entries only.
show mac address-table vlan	Displays the MAC address table information for the specified VLAN.

show mac address-table static

Use the **show mac address-table static** user EXEC command to display only static MAC address table entries.

show mac address-table static [address mac-address] [interface interface-id] [vlan vlan-id]

Syntax Description

address mac-address	(Optional) Specify a 48-bit MAC address; the valid format is H.H.H (available in privileged EXEC mode only).
interface interface-id	(Optional) Specify an interface to match; valid <i>interfaces</i> include physical ports and port channels.
vlan vlan-id	(Optional) Display addresses for a specific VLAN. The range is 1 to 4094.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Examples

This is an example of output from the show mac address-table static command:

Switch> show mac address-table static

Mac Address Table

show mac address-table static	Displays static MAC address table entries only.	

show mls qos

Use the **show mls qos** user EXEC command to display global quality of service (QoS) configuration information.

show mls qos

Syntax Description

This command has no arguments or keywords.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Examples

This is an example of output from the **show mls qos** command:

Switch> show mls qos Qos is enabled

This is an example of output from the **show mls qos** command when QoS is enabled and Differentiated Services Code Point (DSCP) transparency is disabled:

Switch> show mls qos QoS is enabled QoS ip packet dscp rewrite is disabled

This is an example of output from the **show mls qos** command when QoS is enabled and DSCP transparency is enabled:

Switch> show mls qos QoS is enabled QoS ip packet dscp rewrite is enabled

Command	Description
mls qos	Enables QoS for the entire switch.

show mls qos aggregate-policer

Use the **show mls qos aggregate-policer** user EXEC command to display the quality of service (QoS) aggregate policer configuration. A policer defines a maximum permissible rate of transmission, a maximum burst size for transmissions, and an action to take if either maximum is exceeded.

show mls qos aggregate-policer [aggregate-policer-name]

•	-		
Syntax	Heer	rın	ntion
OVIILUA	D C 3 C	IIN	uvu

aggregate-policer-name (Optional) Display	the policer con	nfiguration for t	the specified name.
--------------------------	-------------------	-----------------	-------------------	---------------------

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Examples

This is an example of output from the **show mls qos aggregate-policer** command:

Switch> show mls qos aggregate-policer policer1

aggregate-policer policer1 1000000 2000000 exceed-action drop Not used by any policy map

Command	Description		
mls qos aggregate-policer	Defines policer parameters that can be shared by multiple classes within a policy map.		

show mls qos input-queue

Use the **show mls qos input-queue** user EXEC command to display quality of service (QoS) settings for the ingress queues.

show mls gos input-queue

Syntax Description

This command has no arguments or keywords.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Examples

This is an example of output from the show mls qos input-queue command:

Switch> sh	ow mls	qos	input-queue	
Queue	:	1	2	
buffers	:	90	10	
bandwidth	:	4	4	
priority	:	0	10	
threshold1	:	100	100	
threshold2	:	100	100	

Command	Description
mls qos srr-queue input bandwidth	Assigns shaped round robin (SRR) weights to an ingress queue.
mls qos srr-queue input buffers	Allocates the buffers between the ingress queues.
mls qos srr-queue input cos-map	Maps assigned class of service (CoS) values to an ingress queue and assigns CoS values to a queue and to a threshold ID.
mls qos srr-queue input dscp-map	Maps assigned Differentiated Services Code Point (DSCP) values to an ingress queue and assigns DSCP values to a queue and to a threshold ID.
mls qos srr-queue input priority-queue	Configures the ingress priority queue and guarantees bandwidth.
mls qos srr-queue input threshold	Assigns weighted tail-drop (WTD) threshold percentages to an ingress queue.

show mls qos interface

Use the **show mls qos interface** user EXEC command to display quality of service (QoS) information at the port level.

show mls qos interface [interface-id] [buffers | queueing | statistics]

Syntax Description

interface-id	(Optional) Display QoS information for the specified port. Valid interfaces include physical ports.
buffers	(Optional) Display the buffer allocation among the queues.
queueing	(Optional) Display the queueing strategy (shared or shaped) and the weights corresponding to the queues.
statistics	(Optional) Display statistics for sent and received Differentiated Services Code Points (DSCPs) and class of service (CoS) values, the number of packets enqueued or dropped per egress queue, and the number of in-profile and out-of-profile packets for each policer.

Though visible in the command-line help string, the **policers** keyword is not supported.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Examples

This is an example of output from the **show mls qos interface** *interface-id* command when VLAN-based QoS is enabled:

 ${\tt Switch} \gt{ \mbox{\bf show mls qos interface gigabitethernet0/1} \\$

GigabitEthernet0/1
trust state:not trusted
trust mode:not trusted
trust enabled flag:ena
COS override:dis
default COS:0
DSCP Mutation Map:Default DSCP Mutation Map
Trust device:none
qos mode:vlan-based

This is an example of output from the **show mls qos interface** *interface-id* command when VLAN-based QoS is disabled:

GigabitEthernet0/2 trust state:not trusted trust mode:not trusted trust enabled flag:ena COS override:dis

```
default COS:0
DSCP Mutation Map:Default DSCP Mutation Map
Trust device:none
qos mode:port-based
```

This is an example of output from the **show mls qos interface** interface-id **buffers** command:

```
Switch> show mls qos interface gigabitethernet0/2 buffers GigabitEthernet0/2 The port is mapped to qset : 1 The allocations between the queues are : 25\ 25\ 25\ 25
```

This is an example of output from the **show mls qos interface** *interface-id* **queueing** command. The egress expedite queue overrides the configured shaped round robin (SRR) weights.

```
Switch> show mls qos interface gigabitethernet0/2 queueing GigabitEthernet0/2
Egress Priority Queue :enabled
Shaped queue weights (absolute) : 25 0 0 0
Shared queue weights : 25 25 25
The port bandwidth limit : 100 (Operational Bandwidth:100.0)
The port is mapped to qset : 1
```

This is an example of output from the **show mls qos interface** *interface-id* **statistics** command. Table 2-38 describes the fields in this display.

Switch> show mls qos interface gigabitethernet0/2 statistics GigabitEthernet0/2

Pol	Li	cei	c:	Inp	orofile:	0 OutofPro	file:	0	

Table 2-39 show mls qos interface statistics Field Descriptions

Field		Description
DSCP incoming		Number of packets received for each DSCP value.
	outgoing	Number of packets sent for each DSCP value.
CoS	incoming	Number of packets received for each CoS value.
	outgoing	Number of packets sent for each CoS value.
Policer	Inprofile	Number of in profile packets for each policer.
	Outofprofile	Number of out-of-profile packets for each policer.

Command	Description
mls qos queue-set output buffers	Allocates buffers to a queue-set.
mls qos queue-set output threshold	Configures the weighted tail-drop (WTD) thresholds, guarantees the availability of buffers, and configures the maximum memory allocation to a queue-set.
mls qos srr-queue input bandwidth	Assigns SRR weights to an ingress queue.
mls qos srr-queue input buffers	Allocates the buffers between the ingress queues.
mls qos srr-queue input cos-map	Maps CoS values to an ingress queue or maps CoS values to a queue and to a threshold ID.
mls qos srr-queue input dscp-map	Maps DSCP values to an ingress queue or maps DSCP values to a queue and to a threshold ID.
mls qos srr-queue input priority-queue	Configures the ingress priority queue and guarantees bandwidth.
mls qos srr-queue input threshold	Assigns WTD threshold percentages to an ingress queue.
mls qos srr-queue output cos-map	Maps CoS values to an egress queue or maps CoS values to a queue and to a threshold ID.
mls qos srr-queue output dscp-map	Maps DSCP values to an egress queue or maps DSCP values to a queue and to a threshold ID.
policy-map	Creates or modifies a policy map.
priority-queue	Enables the egress expedite queue on a port.
queue-set	Maps a port to a queue-set.
srr-queue bandwidth limit	Limits the maximum output on a port.
srr-queue bandwidth shape	Assigns the shaped weights and enables bandwidth shaping on the four egress queues mapped to a port.
srr-queue bandwidth share	Assigns the shared weights and enables bandwidth sharing on the four egress queues mapped to a port.

show mls qos maps

Use the **show mls qos maps** user EXEC command to display quality of service (QoS) mapping information. During classification, QoS uses the mapping tables to represent the priority of the traffic and to derive a corresponding class of service (CoS) or Differentiated Services Code Point (DSCP) value from the received CoS, DSCP, or IP precedence value.

show mls qos maps [cos-dscp | cos-input-q | cos-output-q | dscp-cos | dscp-input-q | dscp-mutation dscp-mutation-name | dscp-output-q | ip-prec-dscp | policed-dscp]

Syntax Description

cos-dscp	(Optional) Display class of service (CoS)-to-DSCP map.
cos-input-q	(Optional) Display the CoS input queue threshold map.
cos-output-q	(Optional) Display the CoS output queue threshold map.
dscp-cos	(Optional) Display DSCP-to-CoS map.
dscp-input-q	(Optional) Display the DSCP input queue threshold map.
dscp-mutation dscp-mutation-name	(Optional) Display the specified DSCP-to-DSCP-mutation
	map.
dscp-output-q	(Optional) Display the DSCP output queue threshold map.
ip-prec-dscp	(Optional) Display the IP-precedence-to-DSCP map.
policed-dscp	(Optional) Display the policed-DSCP map.
l begin	(Optional) Display begins with the line that matches the
	expression.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

The policed-DSCP, DSCP-to-CoS, and the DSCP-to-DSCP-mutation maps appear as a matrix. The d1 column specifies the most-significant digit in the DSCP. The d2 row specifies the least-significant digit in the DSCP. The intersection of the d1 and d2 values provides the policed-DSCP, the CoS, or the mutated-DSCP value. For example, in the DSCP-to-CoS map, a DSCP value of 43 corresponds to a CoS value of 5.

The DSCP input queue threshold and the DSCP output queue threshold maps appear as a matrix. The d1 column specifies the most-significant digit of the DSCP number. The d2 row specifies the least-significant digit in the DSCP number. The intersection of the d1 and the d2 values provides the queue ID and threshold ID. For example, in the DSCP input queue threshold map, a DSCP value of 43 corresponds to queue 2 and threshold 1 (02-01).

The CoS input queue threshold and the CoS output queue threshold maps show the CoS value in the top row and the corresponding queue ID and threshold ID in the second row. For example, in the CoS input queue threshold map, a CoS value of 5 corresponds to queue 2 and threshold 1 (2-1).

Examples

This is an example of output from the show mls qos maps command:

```
Switch> show mls qos maps
Policed-dscp map:
    d1: d2 0 1 2 3 4 5 6 7 8 9

```

Command	Description
mls qos map	Defines the CoS-to-DSCP map, DSCP-to-CoS map, DSCP-to-DSCP-mutation map, IP-precedence-to-DSCP map, and the policed-DSCP map.
mls qos srr-queue input cos-map	Maps CoS values to an ingress queue or maps CoS values to a queue and to a threshold ID.
mls qos srr-queue input dscp-map	Maps DSCP values to an ingress queue or maps DSCP values to a queue and to a threshold ID.
mls qos srr-queue output cos-map	Maps CoS values to an egress queue or maps CoS values to a queue and to a threshold ID.
mls qos srr-queue output dscp-map	Maps DSCP values to an egress queue or maps DSCP values to a queue and to a threshold ID.

show mls qos queue-set

Use the **show mls qos queue-set** user EXEC command to display quality of service (QoS) settings for the egress queues.

show mls qos queue-set [qset-id]

Syntax Description

qset-id	(Optional) ID of the queue-set. Each port belongs to a queue-set, which defines
	all the characteristics of the four egress queues per port. The range is 1 to 2.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Examples

This is an example of output from the show mls qos queue-set command:

Switch> show mls qos queue-set

Queueset: 1				
Queue :	1	2	3	4
buffers :	25	25	25	25
threshold1:	100	200	100	100
threshold2:	100	200	100	100
reserved :	50	50	50	50
maximum :	400	400	400	400
Queueset: 2				
Queue :	1	2	3	4
buffers :	25	25	25	25
threshold1:	100	200	100	100
threshold2:	100	200	100	100
reserved :	50	50	50	50
	50	5 0	50	50

Command	Description
mls qos queue-set output buffers	Allocates buffers to the queue-set.
mls qos queue-set output threshold	Configures the weighted tail-drop (WTD) thresholds, guarantees the availability of buffers, and configures the maximum memory allocation of the queue-set.

show mls qos vlan

Use the **show mls qos vlan** user EXEC command to display the policy maps attached to a switch virtual interface (SVI).

show mls qos vlan vlan-id

Syntax Description

vlan-id	Specify the VLAN ID of the SVI to display the policy maps. The range is 1 to
	4094.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

The output from the **show mls qos vlan** command is meaningful only when VLAN-based quality of service (QoS) is enabled and when hierarchical policy maps are configured.

Examples

This is an example of output from the **show mls qos vlan** command:

Switch> show mls qos vlan 10 $\,$

Vlan10

Attached policy-map for Ingress:pm-test-pm-2

Command	Description
policy-map	Creates or modifies a policy map that can be attached to
	multiple ports and enters policy-map configuration mode.

show monitor

Use the **show monitor** user EXEC command to display information about all Switched Port Analyzer (SPAN) and Remote SPAN (RSPAN) sessions on the switch. Use the command with keywords to show a specific session, all sessions, all local sessions, or all remote sessions.

show monitor [session {session_number | all | local | range list | remote} [detail]]

Syntax Description

session	(Optional) Display information about specified SPAN sessions.		
session_number	Specify the number of the SPAN or RSPAN session. The range is 1 to 66.		
all	Display all SPAN sessions.		
local	Display only local SPAN sessions.		
range list	Display a range of SPAN sessions, where <i>list</i> is the range of valid sessions, either a single session or a range of sessions described by two numbers, the lower one first, separated by a hyphen. Do not enter any spaces between comma-separated parameters or in hyphen-specified ranges.		
	Note This keyword is available only in privileged EXEC mode.		
remote	Display only remote SPAN sessions.		
detail	(Optional) Display detailed information about the specified sessions.		

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

The output is the same for the show monitor command and the show monitor session all command.

Examples

This is an example of output for the **show monitor** user EXEC command:

Switch# show monitor

Session 1

Type : Local Session
Source Ports :
RX Only : Fa0/1
RX Only : Gi0/11
Both : Fa0/2-3,Fa0/5-6
Both : Gi0/12-13,Gi0/5-614-15
Destination Ports : Fa0/20

Destination Ports: Gi0/10 Encapsulation: Replicate

Ingress : Disabled

```
Session 2
-----
Type: Remote Source Session
Source VLANs:
TX Only: 10
Both: 1-9
Dest RSPAN VLAN: 105
```

This is an example of output for the **show monitor** user EXEC command for local SPAN source session 1:

```
Switch# show monitor session 1
Session 1
-----
Type: Local Session
Source Ports:
RX Only: Fa0/1
RX Only: Gi0/11
Both: Fa0/2-3,Fa0/5-6
Both: Gi0/12-13,Gi0/5-614-15
Destination Ports: Fa0/20
Destination Ports: Gi0/10
Encapsulation: Replicate
Ingress: Disabled
```

This is an example of output for the **show monitor session all** user EXEC command when ingress traffic forwarding is enabled:

```
Switch# show monitor session all
Session 1
Type : Local Session
Source Ports :
Both : Fa0/2
Both : Gi0/11
Destination Ports : Fa0/3
Destination Ports : Gi0/15
Encapsulation : Native
Ingress : Enabled, default VLAN = 5
Ingress encap : DOT1Q
Session 2
Type : Local Session
Source Ports :
Both : Fa0/8
Both: Gi0/8
Destination Ports : Fa0/1
Destination Ports : Gi0/12
{\tt Encapsulation} \, : \, {\tt Replicate}
Ingress : Enabled, default VLAN = 4
Ingress encap: Untagged
```

Command	Description	
monitor session	Starts or modifies a SPAN or RSPAN session.	

show myr

Use the **show mvr** privileged EXEC command without keywords to display the current Multicast VLAN Registration (MVR) global parameter values, including whether or not MVR is enabled, the MVR multicast VLAN, the maximum query response time, the number of multicast groups, and the MVR mode (dynamic or compatible).

show mvr

Syntax Description

This command has no arguments or keywords.

Command Modes

Privileged EXEC

Command History

Release	Modification	
12.2(25)SEF	This command was introduced.	

Examples

This is an example of output from the **show mvr** command:

```
Switch# show mvr
MVR Running: TRUE
MVR multicast VLAN: 1
MVR Max Multicast Groups: 256
MVR Current multicast groups: 0
MVR Global query response time: 5 (tenths of sec)
MVR Mode: compatible
```

In the preceding display, the maximum number of multicast groups is fixed at 256. The MVR mode is either compatible (for interoperability with Catalyst 2900 XL and Catalyst 3500 XL switches) or dynamic (where operation is consistent with IGMP snooping operation and dynamic MVR membership on source ports is supported).

Command	Description	
mvr (global configuration)	Enables and configures multicast VLAN registration on the switch.	
mvr (interface configuration)	Configures MVR ports.	
show mvr interface	Displays the configured MVR interfaces, status of the specified interface, or all multicast groups to which the interface belongs when the interface and members keywords are appended to the command.	
show mvr members	Displays all ports that are members of an MVR multicast group or, if there are no members, means the group is inactive.	

show mvr interface

Use the **show mvr interface** privileged EXEC command without keywords to display the Multicast VLAN Registration (MVR) receiver and source ports. Use the command with keywords to display MVR parameters for a specific receiver port.

show mvr interface [interface-id [members [vlan vlan-id]]]

Syntax Description

interface-id	(Optional) Display MVR type, status, and Immediate Leave setting for the interface.
	Valid interfaces include physical ports (including type, module, and port number.
members	(Optional) Display all MVR groups to which the specified interface belongs.
vlan vlan-id	(Optional) Display all MVR group members on this VLAN. The range is 1 to 4094.

Command Modes

Privileged EXEC

Command History

Release	Modification	
12.2(25)SEF	This command was introduced.	

Usage Guidelines

If the entered port identification is a non-MVR port or a source port, the command returns an error message. For receiver ports, it displays the port type, per port status, and Immediate-Leave setting.

If you enter the **members** keyword, all MVR group members on the interface appear. If you enter a VLAN ID, all MVR group members in the VLAN appear.

Examples

This is an example of output from the **show mvr interface** command:

Switch# show mvr interface

Port	Туре	Status	Immediate Leave
Gi0/21	SOURCE	ACTIVE/UP	DISABLED
Gi0/22	RECEIVER	ACTIVE/DOWN	DISABLED

In the preceding display, Status is defined as follows:

- Active means the port is part of a VLAN.
- Up/Down means that the port is forwarding/nonforwarding.
- Inactive means that the port is not yet part of any VLAN.

This is an example of output from the show mvr interface command for a specified port:

Switch# show mvr interface gigabitethernet0/22

Type: RECEIVER Status: ACTIVE Immediate Leave: DISABLED

This is an example of output from the **show mvr interface** *interface-id* **members** command:

Switch# show	mvr interfa	ace gigabitetherne	et0/22 member
239.255.0.0	DYNAMIC	ACTIVE	
239.255.0.1	DYNAMIC	ACTIVE	
239.255.0.2	DYNAMIC	ACTIVE	
239.255.0.3	DYNAMIC	ACTIVE	
239.255.0.4	DYNAMIC	ACTIVE	
239.255.0.5	DYNAMIC	ACTIVE	
239.255.0.6	DYNAMIC	ACTIVE	
239.255.0.7	DYNAMIC	ACTIVE	
239.255.0.8	DYNAMIC	ACTIVE	
239.255.0.9	DYNAMIC	ACTIVE	

Command	Description	
mvr (global configuration)	Enables and configures multicast VLAN registration on the switch.	
mvr (interface configuration) Configures MVR ports.		
show mvr	Displays the global MVR configuration on the switch.	
show mvr members	Displays all receiver ports that are members of an MVR multicast group.	

show mvr members

Use the **show mvr members** privileged EXEC command to display all receiver and source ports that are currently members of an IP multicast group.

show mvr members [ip-address]

Syntax Description

ip-address	(Optional) The IP multicast address. If the address is entered, all receiver and	
	source ports that are members of the multicast group appear. If no address is	
	entered, all members of all Multicast VLAN Registration (MVR) groups are	
	listed. If a group has no members, the group is listed as Inactive.	

Command Modes

Privileged EXEC

Command History

Release	Modification	
12.2(25)SEF	This command was introduced.	

Usage Guidelines

The **show mvr members** command applies to receiver and source ports. For MVR-compatible mode, all source ports are members of all multicast groups.

Examples

This is an example of output from the **show mvr members** command:

Switch# show m	vr members	
MVR Group IP	Status	Members
239.255.0.1	ACTIVE	Gi0/1(d), Gi0/(s)
239.255.0.2	INACTIVE	None
239.255.0.3	INACTIVE	None
239.255.0.4	INACTIVE	None
239.255.0.5	INACTIVE	None
239.255.0.6	INACTIVE	None
239.255.0.7	INACTIVE	None
239.255.0.8	INACTIVE	None
239.255.0.9	INACTIVE	None
239.255.0.10	INACTIVE	None

<output truncated>

This is an example of output from the **show mvr members** *ip-address* command. It displays the members of the IP multicast group with that address:

```
Switch# show mvr members 239.255.0.2
239.255.003.--22 ACTIVE Gi0/1(d), Gi0/2(d), Gi0/3(d), Gi0/4(d), Gi0/5(s)
```

Command	Description	
mvr (global configuration)	Enables and configures multicast VLAN registration on the switch.	
mvr (interface configuration) Configures MVR ports.		
show mvr	Displays the global MVR configuration on the switch.	
show mvr interface	Displays the configured MVR interfaces, status of the specific interface, or all multicast groups to which the interface belong when the members keyword is appended to the command.	

show network-policy profile

Use the **show network policy profile** privileged EXEC command to display the network-policy profiles.

show network-policy profile [profile number] [detail]

Syntax Description

profile	(Optional) Display the network-policy profile number. If no profile is entered, all
number	network-policy profiles appear.
detail	(Optional) Display detailed status and statistics information.

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(50)SE	This command was introduced.

Examples

This is an example of output from the **show network-policy profile** command:

Switch# show network-policy profile

Network Policy Profile 10
voice vlan 17 cos 4
Interface:
none
Network Policy Profile 30
voice vlan 30 cos 5
Interface:
none
Network Policy Profile 36
voice vlan 4 cos 3
Interface:
Interface_id

Command	Description
network-policy	Applies a network-policy to an interface.
network-policy profile (global configuration)	Creates the network-policy profile.
network-policy profile (network-policy configuration)	Configures the attributes of network-policy profiles.

show nmsp

Use the **show nmsp** privileged EXEC command to display the Network Mobility Services Protocol (NMSP) information for the switch. This command is available only when your switch is running the cryptographic (encrypted) software image.

show nmsp {attachment suppress interface | capability | notification interval | statistics {connection | summary} | status | subscription {detail | summary}}

Syntax Description

attachment suppress interface	Display attachment suppress interfaces.
capability	Display switch capabilities including the supported services and subservices.
notification interval	Display the notification intervals of the supported services.
statistics {connection summary}	Display the NMSP statistics information. • connection—display the message counters on each connection. • summary—display the global counters.
status	Display information about the NMSP connections.
subscription {detail summary}	Display the subscription information on each NMSP connection. • detail—display all services and subservices subscribed on each connection. • summary—display all services subscribed on each connection.

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(50)SE	This command was introduced.

Examples

This is an example of output from the **show nmsp attachment suppress interface** command:

Switch# show nmsp attachment suppress interface

NMSP Attachment Suppression Interfaces

GigabitEthernet1/1

 ${\tt GigabitEthernet1/2}$

This is an example of output from the **show nmsp capability** command:

Switch# show nmsp capability

NMSP Switch Capability

Service Subservice

Attachment Wired Station Location Subscription

This is an example of output from the **show nmsp notification interval** command:

This is an example of output from the **show nmsp statistics connection** and **show nmsp statistics summary** commands:

```
Switch# show nmsp statistics connection
NMSP Connection Counters
______
Connection 1:
  Connection status: UP
  Freed connection: 0

  Loc Notif: 0
Unsupported msg: 0
Switch# show nmsp statistics summary
NMSP Global Counters
 Send too big msg: 0
 Failed socket write: 0
 Partial socket write: 0
 Socket write would block: 0
 Failed socket read: 0
 Socket read would block: 0
 Transmit Q full: 0
 Max Location Notify Msg: 0
 Max Attachment Notify Msg: 0
```

This is an example of output from the **show nmsp status** command:

This is an example of output from the **show nmsp show subscription detail** and the **show nmsp show subscription summary** commands:

Max Tx Q Size: 0

Switch# show nmsp subscription summary

Mobility Services Subscribed:
MSE IP Address Services

172.19.35.109 Attachment, Location

Command	Description
clear nmsp statistics	Clears the NMSP statistic counters.
nmsp	Enables Network Mobility Services Protocol (NMSP) on the switch.

show pagp

Use the **show pagp** user EXEC command to display Port Aggregation Protocol (PAgP) channel-group information.

show pagp [channel-group-number] {counters | dual-active | internal | neighbor}

Syntax Description

channel-group-number	(Optional) Number of the channel group. The range is 1 to 12.
counters	Display traffic information.
dual-active	Display the dual-active status.
internal	Display internal information.
neighbor	Display neighbor information.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.
12.2(46)SE	The dual-active keyword was added.
12.2(50)SE	The <i>channel-group-number</i> range was incorrect. The correct range is from 1 to 12.

Usage Guidelines

You can enter any **show pagp** command to display the active channel-group information. To display the nonactive information, enter the **show pagp** command with a channel-group number.

Examples

This is an example of output from the **show pagp 1 counters** command:

Switch> show pagp 1 counters

	Inform	Information		ush	
Port	Sent	Recv	Sent	Recv	
Channel g	roup: 1				
Gi0/1	45	42	0	0	
Gi0/2	45	41	0	0	
Gi0/11	45	42	0	0	
Gi0/12	45	41	0	0	

This is an example of output from the **show pagp 1 internal** command:

```
Switch> show pagp 1 internal
```

```
Flags: S - Device is sending Slow hello. C - Device is in Consistent state.
A - Device is in Auto mode.

Timers: H - Hello timer is running.
Q - Quit timer is running.
S - Switching timer is running.

I - Interface timer is running.

Channel group 1

Hello Partner PAgP Learning Group

Port Flags State Timers Interval Count Priority Method Ifindex
```

Gi0/1	SC	U6/S7	Η	30s	1	128	Any	16
Gi0/2	SC	U6/S7	Η	30s	1	128	Any	16
Gi0/11	SC	U6/S7	Η	30s	1	128	Any	16
Gi 0 / 12	SC	U6/S7	H	30s	1	128	Anv	16

This is an example of output from the **show pagp 1 neighbor** command:

Switch> show pagp 1 neighbor

Flags: S - Device is sending Slow hello. C - Device is in Consistent state. A - Device is in Auto mode. P - Device learns on physical port.

Channel group 1 neighbors

	Partner	Partner	Partner	Partner	Group
Port	Name	Device ID	Port	Age Flags	Cap.
Gi0/1	switch-p2	0002.4b29.4600	Gi0/1	9s SC	10001
Gi0/2	switch-p2	0002.4b29.4600	Gi0/2	24s SC	10001
Gi0/11	switch-p2	0002.4b29.4600	Gi0/11	9s SC	10001
Gi0/12	switch-p2	0002.4b29.4600	Gi0/12	24s SC	10001

This is an example of output from the **show pagp dual-active** command:

Switch> show pagp dual-active

PAgP dual-active detection enabled: Yes

PAgP dual-active version: 1.1

Channel group 1

	Dual-Active	Partner	Partner	Partner
Port	Detect Capable	Name	Port	Version
Gi0/1	No	Switch	Gi0/3	N/A
Gi0/2	No	Switch	Gi0/4	N/A

<output truncated>

Command	Description
clear pagp	Clears PAgP channel-group information.

show parser macro

Use the **show parser macro** user EXEC command to display the parameters for all configured macros or for one macro on the switch.

show parser macro [{brief | description [interface interface-id] | name macro-name}]

Syntax Description

brief	(Optional) Display the name of each macro.
description [interface interface-id]	(Optional) Display all macro descriptions or the description of a specific interface.
name macro-name	(Optional) Display information about a single macro identified by the macro name.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Examples

This is a partial output example from the **show parser macro** command. The output for the Cisco-default macros varies depending on the switch platform and the software image running on the switch:

```
Switch# show parser macro
Total number of macros = 6
Macro name : cisco-global
Macro type : default global
# Enable dynamic port error recovery for link state
errdisable recovery cause link-flap
errdisable recovery interval 60
<output truncated>
Macro name : cisco-desktop
Macro type : default interface
# macro keywords $AVID
# Basic interface - Enable data VLAN only
# Recommended value for access vlan (AVID) should not be 1
switchport access vlan $AVID
switchport mode access
<output truncated>
Macro name : cisco-phone
Macro type : default interface
# Cisco IP phone + desktop template
# macro keywords $AVID $VVID
# VoIP enabled interface - Enable data VLAN
# and voice VLAN (VVID)
```

```
# Recommended value for access vlan (AVID) should not be 1
switchport access vlan $AVID
switchport mode access
<output truncated>
______
Macro name : cisco-switch
Macro type : default interface
# macro keywords $NVID
# Access Uplink to Distribution
# Do not apply to EtherChannel/Port Group
# Define unique Native VLAN on trunk ports
# Recommended value for native vlan (NVID) should not be 1
switchport trunk native vlan $NVID
<output truncated>
Macro name : cisco-router
Macro type : default interface
# macro keywords $NVID
# Access Uplink to Distribution
# Define unique Native VLAN on trunk ports
# Recommended value for native vlan (NVID) should not be 1
switchport trunk native vlan $NVID
<output truncated>
Macro name : snmp
Macro type : customizable
#enable port security, linkup, and linkdown traps
snmp-server enable traps port-security
snmp-server enable traps linkup
snmp-server enable traps linkdown
#set snmp-server host
snmp-server host ADDRESS
#set SNMP trap notifications precedence
snmp-server ip precedence VALUE
______
```

This is an example of output from the **show parser macro name** command:

```
Switch# show parser macro name standard-switch10
Macro name : standard-switch10
Macro type : customizable
macro description standard-switch10
# Trust QoS settings on VOIP packets
auto qos voip trust
# Allow port channels to be automatically formed channel-protocol pagp
```

This is an example of output from the show parser macro brief command:

```
Switch# show parser macro brief
```

```
default global : cisco-global
default interface: cisco-desktop
default interface: cisco-phone
default interface: cisco-switch
```

default interface: cisco-router
customizable : snmp

This is an example of output from the **show parser description** command:

${\tt Switch\#\ show\ parser\ macro\ description}$

Global Macro(s): cisco-global
Interface Macro Description(s)
----Gi0/1 standard-switch10
Gi0/2 this is test macro

This is an example of output from the **show parser description interface** command:

${\tt Switch\#\ show\ parser\ macro\ description\ interface\ gigabitethernet0/2}$

Interface Macro Description

Gi0/2 this is test macro

Command	Description
macro apply	Applies a macro on an interface or applies and traces a macro on an interface.
macro description	Adds a description about the macros that are applied to an interface.
macro global	Applies a macro on a switch or applies and traces a macro on a switch.
macro global	Adds a description about the macros that are applied to the switch.
description	
macro name	Creates a macro.
show running-config	Displays the current operating configuration, including defined macros.

show policy-map

Use the **show policy-map** user EXEC command to display quality of service (QoS) policy maps, which define classification criteria for incoming traffic. Policy maps can include policers that specify the bandwidth limitations and the action to take if the limits are exceeded.

show policy-map [policy-map-name [class class-map-name]]

Syntax Description

policy-map-name	(Optional) Display the specified policy-map name.
class class-map-name	(Optional) Display QoS policy actions for a individual class.

Though visible in the command-line help string, the **control-plane** and **interface** keywords are not supported, and the statistics shown in the display should be ignored.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Examples

This is an example of output from the **show policy-map** command:

```
Switch> show policy-map
Policy Map videowizard_policy2
  class videowizard_10-10-10-10
  set dscp 34
  police 100000000 2000000 exceed-action drop

Policy Map mypolicy
  class dscp5
  set dscp 6
```

Command	Description	
policy-map	Creates or modifies a policy map that can be attached to multiple ports to	
	specify a service policy.	

show port-security

Use the **show port-security** privileged EXEC command to display port-security settings for an interface or for the switch.

show port-security [interface interface-id] [address | vlan]

Syntax Description

interface interface-id	(Optional) Display port security settings for the specified interface. Valid interfaces include physical ports (including type, module, and port number).	
address	(Optional) Display all secure MAC addresses on all ports or a specified port.	
vlan	(Optional) Display port security settings for all VLANs on the specified interface. This keyword is visible only on interfaces that have the switchport mode set to trunk .	

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

If you enter the command without keywords, the output includes the administrative and operational status of all secure ports on the switch.

If you enter an *interface-id*, the command displays port security settings for the interface.

If you enter the **address** keyword, the command displays the secure MAC addresses for all interfaces and the aging information for each secure address.

If you enter an *interface-id* and the **address** keyword, the command displays all the MAC addresses for the interface with aging information for each secure address. You can also use this command to display all the MAC addresses for an interface even if you have not enabled port security on it.

If you enter the **vlan** keyword, the command displays the configured maximum and the current number of secure MAC addresses for all VLANs on the interface. This option is visible only on interfaces that have the switchport mode set to **trunk**.

Examples

This is an example of the output from the **show port-security** command:

Max Addresses limit in System (excluding one mac per port) : 6272

Switch# show por	rt-security			
Secure Port	MaxSecureAddr (Count)	CurrentAddr (Count)	SecurityViolation (Count)	Security Action
Gi0/1	1	0	0	Shutdown
Total Addresses	in System (excl	uding one mac	per port) : 1	

This is an example of output from the **show port-security interface** *interface-id* command:

```
Switch# show port-security interface gigabitethernet0/1
Port Security : Enabled
Port status : SecureUp
Violation mode : Shutdown
Maximum MAC Addresses : 1
Total MAC Addresses : 0
Configured MAC Addresses : 0
Aging time : 0 mins
Aging type : Absolute
SecureStatic address aging : Disabled
Security Violation count : 0
```

This is an example of output from the **show port-security address** command:

Switch# show port-security address

This is an example of output from the **show port-security interface gigabitethernet0/2 address** command:

Switch# show port-security interface gigabitethernet0/2 address

	Secure Mac Add	ress Table		
Vlan	Mac Address	Type	Ports	Remaining Age (mins)
1	0006.0700.0800	SecureConfigured	Gi0/2	1
Total A	Addresses: 1			

This is an example of output from the **show port-security interface** interface-id **vlan** command:

Switch# show port-security interface gigabitethernet0/2 vlan

```
Default maximum:not set, using 5120
VLAN Maximum Current
  5 default
  10 default
                  54
  11 default
                 101
  12
     default
                 101
      default
  13
                  201
  14
      default
                  501
```

Command	Description
clear port-security	Deletes from the MAC address table a specific type of secure address or all the secure addresses on the switch or an interface.
switchport port-security	Enables port security on a port, restricts the use of the port to a user-defined group of stations, and configures secure MAC addresses.

show psp config

To display the status of protocol storm protection configured for a specific protocol on a VLAN, use the **show psp config** privileged EXEC command.

show psp config {arp | dhcp | igmp}

Syntax Description

arp	Show protocol storm protection status for ARP and ARP snooping.
dhcp	Show protocol storm protection status for DHCP and DHCP snooping.
igmp	Show protocol storm protection status for IGMP and IGMP snooping.

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(58)SE	This command was introduced.

Examples

This is an example of output from the **show psp config dhcp** command with protocol storm protection configured to drop packets when the incoming rate exceeds 35 packets per second.

Switch# show psp config dhcp

PSP Protocol Configuration Summary:

DHCP Rate Limit : 35 packets/sec PSP Action : Packet Drop

Command	Description
psp {arp dhcp igmp} pps value	Configures protocol storm protection for ARP, DHCP, or IGMP.
show psp statistics	Displays the number of dropped packets when protocol storm protection is configured.
clear psp counter	Clears the counter of dropped packets.

show psp statistics

To display the number of packets dropped for all protocols when protocol storm protection is configured, use the **show psp statistics** privileged EXEC command.

show psp statistics [arp | dhcp | igmp]

Syntax Description

arp	(Optional) Show the number of packets dropped for ARP and ARP snooping.
dhcp	(Optional) Show the number of packets dropped for DHCP and DHCP snooping.
igmp	(Optional) Show the number of packets dropped for IGMP and IGMP snooping.

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(58)SE	This command was introduced.

Examples

This is an example of output from the **show psp statistics dhcp** command when protocol storm protection is configured for DHCP. The output shows that 13 packets were dropped.

Switch# show psp statistics dhcp

PSP Protocol Drop Counter Summary:
----DHCP Drop Counter: 13

Command	Description
psp {arp dhcp igmp} pps value	Configures protocol storm protection for ARP, DHCP, or IGMP.
show psp config	Displays the protocol storm protection configuration.
clear psp counter	Clears the counter of dropped packets.

show sdm prefer

Use the **show sdm prefer** privileged EXEC command to display information about the Switch Database Management (SDM) templates that can be used to maximize used for allocating system resources for a particular feature, or use the command without a keyword to display the template in use.

show sdm prefer [access | default | dual-ipv4-and-ipv6 {default | routing | vlan } | routing | vlan]

Syntax Description

access	(Optional) Display the template that maximizes system resources for ACLs.	
default	(Optional) Display the template that balances system resources among features.	
dual-ipv4-and-ipv6 (Optional) Display the dual templates that support both IPv4 and		
{default routing vlan)	• default —Display the default dual template configuration.	
	• routing—Display the routing dual template configuration.	
	• vlan—Display the VLAN dual template configuration.	
routing	(Optional) Display the template that maximizes system resources for routing.	
vlan	(Optional) Display the template that maximizes system resources for Layer 2 VLANs.	

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(44)SE	This command was introduced.

Usage Guidelines

When you change the SDM template by using the **sdm prefer** global configuration command, you must reload the switch for the configuration to take effect. If you enter the **show sdm prefer** command before you enter the **reload** privileged EXEC command, the **show sdm prefer** command shows the template currently in use and the template that will become active after a reload.

The numbers displayed for each template represent an approximate maximum number for each feature resource. The actual number might vary, depending on the actual number of other features configured.

Although these features are visible in the template in the CLI, the switch does not support IPv4 or IPv6 policy-based routing or IPv6 Qos ACLs.

Examples

This is an example of output from the **show sdm prefer** command, displaying the template in use:

Switch# show sdm prefer

```
The current template is "desktop default" template. The selected template optimizes the resources in the switch to support this level of features for 8 routed interfaces and 1024 VLANs.
```

number of unicast mac addresses: 6K number of IPv4 IGMP groups + multicast routes: 1K

```
number of IPv4 unicast routes:

number of directly-connected IPv4 hosts:

number of indirect IPv4 routes:

2K

number of IPv4 policy based routing aces:

number of IPv4/MAC qos aces:

0.75K

number of IPv4/MAC security aces:

1K
```

This is an example of output from the **show sdm prefer routing** command:

Switch# show sdm prefer routing "desktop routing" template: The selected template optimizes the resources in the switch to support this level of features for 8 routed interfaces and 1024 VLANs. number of unicast mac addresses: 3 K number of IPv4 IGMP groups + multicast routes: 1 K number of IPv4 unicast routes: 11K number of directly-connected IPv4 hosts: 3K number of indirect IPv4 routes: 8K number of IPv4 policy based routing aces: 0.5K number of IPv4/MAC gos aces: 0.75K number of IPv4/MAC security aces: 1 K

This is an example of output from the **show sdm prefer dual-ipv4-and-ipv6 default** command:

```
"desktop IPv4 and IPv6 default" template:
The selected template optimizes the resources in
the switch to support this level of features for
8 routed interfaces and 1024 VLANs.
 number of unicast mac addresses:
                                                    2K
 number of IPv4 IGMP groups + multicast routes:
                                                    1 K
 number of IPv4 unicast routes:
                                                    3 K
   number of directly-connected IPv4 hosts:
   number of indirect IPv4 routes:
                                                    1 K
 number of IPv6 multicast groups:
                                                    1.125k
 number of directly-connected IPv6 addresses:
                                                    2.K
 number of indirect IPv6 unicast routes:
                                                    1 K
 number of IPv4 policy based routing aces:
 number of IPv4/MAC gos aces:
                                                    0.75K
 number of IPv4/MAC security aces:
                                                    1ĸ
 number of IPv6 policy based routing aces:
                                                    0
                                                    0.5K
 number of IPv6 gos aces:
```

Switch# show sdm prefer dual-ipv4-and-ipv6 default

This is an example of an output display when you have changed the template and have not reloaded the switch:

Switch# show sdm prefer

number of IPv6 security aces:

```
The current template is "desktop default" template. The selected template optimizes the resources in the switch to support this level of features for 8 routed interfaces and 1024 VLANs.
```

```
number of unicast mac addresses: 6K
number of IPv4 IGMP groups + multicast routes: 1K
number of IPv4 unicast routes: 8K
number of directly-connected IPv4 hosts: 6K
number of indirect IPv4 routes: 2K
number of IPv4 policy based routing aces: 0
number of IPv4/MAC qos aces: 0.75K
number of IPv4/MAC security aces: 1K
```

On next reload, template will be "desktop vlan" template.

Command	Description	
sdm prefer	Configures the template used in SDM resource allocation.	

show setup express

Use the **show setup express** privileged EXEC command to display if Express Setup mode is active on the switch.

show setup express

Syntax Description

This command has no arguments or keywords.

Defaults

No default is defined.

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Examples

This is an example of output from the **show setup express co**mmand:

Switch# show setup express express setup mode is active

Command	Description
setup express	Enables Express Setup mode.

show spanning-tree

Use the **show spanning-tree** user EXEC command to display spanning-tree state information.

- show spanning-tree [bridge-group | active [detail] | backbonefast | blockedports | bridge | detail [active] | inconsistentports | interface interface-id | mst | pathcost method | root | summary [totals] | uplinkfast | vlan vlan-id]
- show spanning-tree bridge-group [active [detail] | blockedports | bridge | detail [active] | inconsistentports | interface interface-id | root | summary]
- show spanning-tree vlan vlan-id [active [detail] | blockedports | bridge | detail [active] | inconsistentports | interface interface-id | root | summary]]
- show spanning-tree {vlan vlan-id | bridge-group} bridge [address | detail | forward-time | hello-time | id | max-age | priority [system-id] | protocol]
- show spanning-tree {vlan vlan-id | bridge-group} root [address | cost | detail | forward-time | hello-time | id | max-age | port | priority [system-id]
- show spanning-tree interface interface-id [active [detail] | cost | detail [active] | inconsistency | portfast | priority | rootcost | state]
- **show spanning-tree mst** [configuration [digest]] | [instance-id [detail | interface interface-id [detail]]

Syntax Description

bridge-group	(Optional) Specify the bridge group number. The range is 1 to 255.	
active [detail]	(Optional) Display spanning-tree information only on active interfaces (available only in privileged EXEC mode).	
backbonefast	(Optional) Display spanning-tree BackboneFast status.	
blockedports	(Optional) Display blocked port information (available only in privileged EXEC mode).	
bridge [address detail forward-time hello-time id max-age priority [system-id] protocol]		
detail [active]	(Optional) Display a detailed summary of interface information (active keyword available only in privileged EXEC mode).	
inconsistentports	(Optional) Display inconsistent port information (available only in privileged EXEC mode).	
interface interface-id [active [detail] cost detail [active] inconsistency portfast priority rootcost state]	(Optional) Display spanning-tree information for the specified interface (all options except portfast and state available only in privileged EXEC mode). Enter each interface separated by a space. Ranges are not supported. Valid interfaces include physical ports, VLANs, and port channels. The VLAN range is 1 to 4094. The port-channel range is 1 to 12.	

mst [configuration [digest]] [instance-id	(Optional) Display the multiple spanning-tree (MST) region configuration and status (available only in privileged EXEC mode).		
[detail interface	The keywords have these meanings:		
interface-id [detail]]	• digest —(Optional) Display the MD5 digest included in the current MST configuration identifier (MSTCI). Two separate digests, one for standard and one for prestandard switches, appear (available only in privileged EXEC mode).		
	The terminology was updated for the implementation of the IEEE standard, and the <i>txholdcount</i> field was added.		
	The new master role appears for boundary ports.		
	The word <i>pre-standard</i> or <i>Pre-STD</i> appears when an IEEE standard bridge sends prestandard BPDUs on a port.		
	The word <i>pre-standard</i> (<i>config</i>) or <i>Pre-STD-Cf</i> appears when a port has been configured to transmit prestandard BPDUs and no prestandard BPDU has been received on that port.		
	The word <i>pre-standard</i> (<i>rcvd</i>) or <i>Pre-STD-Rx</i> appears when a prestandard BPDU has been received on a port that has not been configured to transmit prestandard BPDUs.		
	A <i>dispute</i> flag appears when a designated port receives inferior designated information until the port returns to the forwarding state or ceases to be designated.		
	• <i>instance-id</i> —You can specify a single instance ID, a range of IDs separated by a hyphen, or a series of IDs separated by a comma. The range is 1 to 4094. The display shows the number of currently configured instances.		
	• interface <i>interface-id</i> —(Optional) Valid interfaces include physical ports, VLANs, and port channels. The VLAN range is 1 to 4094. The port-channel range is 1 to 12.		
	• detail —(Optional) Display detailed information for the instance or interface.		
pathcost method (Optional) Display the default path cost method (available on privileged EXEC mode).			
root [address cost detail forward-time hello-time id max-age port priority [system-id]]			
summary [totals]	(Optional) Display a summary of port states or the total lines of the spanning-tree state section. The words <i>IEEE Standard</i> identify the MST version running on a switch.		
uplinkfast	(Optional) Display spanning-tree UplinkFast status.		
vlan vlan-id [active [detail] backbonefast blockedports bridge [address detail forward-time hello-time id max-age priority [system-id] protocol]	(Optional) Display spanning-tree information for the specified VLAN (some keywords available only in privileged EXEC mode). You can specify a single VLAN identified by VLAN ID number, a range of VLANs separated by a hyphen, or a series of VLANs separated by a comma. The range is 1 to 4094.		

Command Modes

User EXEC

Command History

Release	Modification	
12.2(25)SEF	This command was introduced.	
12.2(50)SE	The <i>channel-group-number</i> range was incorrect. The correct range is from 1 to 12.	

Usage Guidelines

If the *vlan-id* variable is omitted, the command applies to the spanning-tree instance for all VLANs.

Examples

This is an example of output from the **show spanning-tree active** command:

```
Switch# show spanning-tree active
```

Command	Description
clear spanning-tree counters	Clears the spanning-tree counters.
clear spanning-tree detected-protocols	Restarts the protocol migration process.
spanning-tree backbonefast	Enables the BackboneFast feature.
spanning-tree bpdufilter	Prevents an interface from sending or receiving bridge protocol data units (BPDUs).
spanning-tree bpduguard	Puts an interface in the error-disabled state when it receives a BPDU.
spanning-tree cost	Sets the path cost for spanning-tree calculations.
spanning-tree extend system-id	Enables the extended system ID feature.
spanning-tree guard	Enables the root guard or the loop guard feature for all the VLANs associated with the selected interface.
spanning-tree link-type	Overrides the default link-type setting for rapid spanning-tree transitions to the forwarding state.
spanning-tree loopguard default	Prevents alternate or root ports from becoming the designated port because of a failure that leads to a unidirectional link.
spanning-tree mst configuration	Enters multiple spanning-tree (MST) configuration mode through which the MST region configuration occurs.
spanning-tree mst cost	Sets the path cost for MST calculations.
spanning-tree mst forward-time	Sets the forward-delay time for all MST instances.
spanning-tree mst hello-time	Sets the interval between hello BPDUs sent by root switch configuration messages.
spanning-tree mst max-age	Sets the interval between messages that the spanning tree receives from the root switch.
spanning-tree mst max-hops	Sets the number of hops in an MST region before the BPDU is discarded and the information held for an interface is aged.
spanning-tree mst port-priority	Configures an interface priority.
spanning-tree mst priority	Configures the switch priority for the specified spanning-tree instance.
spanning-tree mst root	Configures the MST root switch priority and timers based on the network diameter.
spanning-tree port-priority	Configures an interface priority.
spanning-tree portfast (global configuration)	Globally enables the BPDU filtering or the BPDU guard feature on Port Fast-enabled interfaces or enables the Port Fast feature on all nontrunking interfaces.
spanning-tree portfast (interface configuration)	Enables the Port Fast feature on an interface and all its associated VLANs.
spanning-tree uplinkfast	Accelerates the choice of a new root port when a link or switch fails or when the spanning tree reconfigures itself.
spanning-tree vlan	Configures spanning tree on a per-VLAN basis.

show storm-control

Use the show storm-control user EXEC command to display broadcast, multicast, or unicast storm control settings on the switch or on the specified interface or to display storm-control history.

show storm-control [interface-id] [broadcast | multicast | unicast]

Syntax Description

interface-id	(Optional) Interface ID for the physical port (including type, module, and port number).
broadcast	(Optional) Display broadcast storm threshold setting.
multicast	(Optional) Display multicast storm threshold setting.
unicast	(Optional) Display unicast storm threshold setting.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

When you enter an *interface-id*, the storm control thresholds appear for the specified interface.

If you do not enter an interface-id, settings appear for one traffic type for all ports on the switch.

If you do not enter a traffic type, settings appear for broadcast storm control.

Examples

This is an example of a partial output from the **show storm-control** command when no keywords are entered. Because no traffic-type keyword was entered, the broadcast storm control settings appear.

Switch>	show	storm-	control	
Interfac	ce	Filter	State	Upp

Inccriace	TITCCI DCCCC	OPPCI	HOWCI	CullCiic
Gi0/1	Forwarding	20 pps	10 pps	5 pps
Gi0/2	Forwarding	50.00%	40.00%	0.00%
<output td="" trun<=""><td>cated></td><td></td><td></td><td></td></output>	cated>			

This is an example of output from the **show storm-control** command for a specified interface. Because no traffic-type keyword was entered, the broadcast storm control settings appear.

Switch> show storm-control gigabitethernet	0/21
--	------

Interface	Filter State	Upper	Lower	Current
Gi0/1	Forwarding	20 pps	10 pps	5 pps

Table 2-39 describes the fields in the **show storm-control** display.

Table 2-40 show storm-control Field Descriptions

Field	Description
Interface	Displays the ID of the interface.
Filter State	Displays the status of the filter:
	• Blocking—Storm control is enabled, and a storm has occurred.
	• Forwarding—Storm control is enabled, and no storms have occurred.
	• Inactive—Storm control is disabled.
Upper	Displays the rising suppression level as a percentage of total available bandwidth in packets per second or in bits per second.
Lower	Displays the falling suppression level as a percentage of total available bandwidth in packets per second or in bits per second.
Current	Displays the bandwidth usage of broadcast traffic or the specified traffic type (broadcast, multicast, or unicast) as a percentage of total available bandwidth. This field is only valid when storm control is enabled.

Command	Description
storm-control	Sets the broadcast, multicast, or unicast storm control levels for the switch.

show system mtu

Use the **show system mtu** privileged EXEC command to display the global maximum transmission unit (MTU) or maximum packet size set for the switch.

show system mtu

Syntax Description

This command has no arguments or keywords.

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

If you have used the **system mtu** or **system mtu jumbo** global configuration command to change the MTU setting, the new setting does not take effect until you reset the switch.

The system MTU refers to ports operating at 10/100 Mb/s; the system jumbo MTU refers to Gigabit ports; the system routing MTU refers to routed ports.

Examples

This is an example of output from the show system mtu command:

Switch# show system mtu System MTU size is 1500 bytes System Jumbo MTU size is 1550 bytes Routing MTU size is 1500 bytes.

Command	Description
system mtu	Sets the MTU size for the Fast Ethernet, Gigabit Ethernet, or routed ports.

show udld

Use the **show udld** user EXEC command to display UniDirectional Link Detection (UDLD) administrative and operational status for all ports or the specified port.

show udld [interface-id]

Syntax Description

interface-id	(Optional) ID of the interface and port number. Valid interfaces include
	physical ports and VLANs. The VLAN range is 1 to 4094.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Usage Guidelines

If you do not enter an interface-id, administrative and operational UDLD status for all interfaces appear.

Examples

This is an example of output from the **show udld** *interface-id* command. For this display, UDLD is enabled on both ends of the link, and UDLD detects that the link is bidirectional.

```
Switch> show udld gigabitethernet0/21
Interface gi0/21
Port enable administrative configuration setting: Follows device default
Port enable operational state: Enabled
Current bidirectional state: Bidirectional
Current operational state: Advertisement - Single Neighbor detected
Message interval: 60
Time out interval: 5
   Entry 1
    Expiration time: 146
   Device ID: 1
    Current neighbor state: Bidirectional
    Device name: Switch-A
    Port ID: Gi0/21
   Neighbor echo 1 device: Switch-B
   Neighbor echo 1 port: Gi0/22
   Message interval: 5
   CDP Device name: Switch-A
```

Table 2-40 describes the fields in this display.

Table 2-41 show udld Field Descriptions

Field	Description
Interface	The interface on the local device configured for UDLD.
Port enable administrative configuration setting	How UDLD is configured on the port. If UDLD is enabled or disabled, the port enable configuration setting is the same as the operational enable state. Otherwise, the enable operational setting depends on the global enable setting.
Port enable operational state	Operational state that shows whether UDLD is actually running on this port.
Current bidirectional state	The bidirectional state of the link. An unknown state appears if the link is down or if it is connected to an UDLD-incapable device. A bidirectional state appears if the link is a normal two-way connection to a UDLD-capable device. All other values mean miswiring.
Current operational state	The current phase of the UDLD state machine. For a normal bidirectional link, the state machine is most often in the Advertisement phase.
Message interval	How often advertisement messages are sent from the local device. Measured in seconds.
Time out interval	The time period, in seconds, that UDLD waits for echoes from a neighbor device during the detection window.
Entry 1	Information from the first cache entry, which contains a copy of echo information received from the neighbor.
Expiration time	The amount of time in seconds remaining before this cache entry is aged out.
Device ID	The neighbor device identification.
Current neighbor state	The neighbor's current state. If both the local and neighbor devices are running UDLD normally, the neighbor state and local state should be bidirectional. If the link is down or the neighbor is not UDLD-capable, no cache entries appear.
Device name	The device name or the system serial number of the neighbor. The system serial number appears if the device name is not set or is set to the default (Switch).
Port ID	The neighbor port ID enabled for UDLD.
Neighbor echo 1 device	The device name of the neighbors' neighbor from which the echo originated.
Neighbor echo 1 port	The port number ID of the neighbor from which the echo originated.
Message interval	The rate, in seconds, at which the neighbor is sending advertisement messages.
CDP device name	The CDP device name or the system serial number. The system serial number appears if the device name is not set or is set to the default (Switch).

Command	Description
udld	Enables aggressive or normal mode in UDLD or sets the configurable message timer time.
udld port	Enables UDLD on an individual interface or prevents a fiber-optic interface from being enabled by the udld global configuration command.
udld reset	Resets all interfaces shutdown by UDLD and permits traffic to begin passing through them again.

show version

Use the show version user EXEC command to display version information for the hardware and firmware.

show version

Syntax Description

This command has no arguments or keywords.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Examples

This is an example of output from the **show version** command:

Though visible in the **show version** output, the *configuration register* information is not supported on the switch.

switch#show version

```

Switch#

show vlan

Use the **show vlan** user EXEC command to display the parameters for all configured VLANs or one VLAN (if the VLAN ID or name is specified) on the switch.

show vlan [brief | dot1q tag native | id vlan-id | internal usage | mtu | name vlan-name | private-vlan [type] | remote-span | summary]

Syntax Description

brief	(Optional) Display one line for each VLAN with the VLAN name, status, and its ports.
dot1q tag native	(Optional) Display the IEEE 802.1Q native VLAN tagging status.
id vlan-id	(Optional) Display information about a single VLAN identified by VLAN ID number. For <i>vlan-id</i> , the range is 1 to 4094.
internal usage	(Optional) Display a list of VLANs being used internally by the switch. These VLANs are always from the extended range (VLAN IDs 1006 to 4094), and you cannot create VLANs with these IDS by using the vlan global configuration command until you remove them from internal use.
mtu	(Optional) Display a list of VLANs and the minimum and maximum transmission unit (MTU) sizes configured on ports in the VLAN.
name vlan-name	(Optional) Display information about a single VLAN identified by VLAN name. The VLAN name is an ASCII string from 1 to 32 characters.
private-vlan	(Optional) Display information about configured private VLANs, including primary and secondary VLAN IDs, type (community, isolated, or primary) and ports belonging to the private VLAN. This keyword is only supported if your switch is running the IP services image, formerly known as the enhanced multilayer image (EMI).
type	(Optional) Display only private VLAN ID and type.
remote-span	(Optional) Display information about Remote SPAN (RSPAN) VLANs.
summary	(Optional) Display VLAN summary information.

Though visible in the command-line help string, the **ifindex** keyword is not supported.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.
12.2(44)SE	The private-vlan keywords were added.

Usage Guidelines

In the **show vlan mtu** command output, the MTU_Mismatch column shows whether all the ports in the VLAN have the same MTU. When *yes* appears in this column, it means that the VLAN has ports with different MTUs, and packets that are switched from a port with a larger MTU to a port with a smaller

MTU might be dropped. If the VLAN does not have an SVI, the hyphen (-) symbol appears in the SVI_MTU column. If the MTU-Mismatch column displays *yes*, the names of the port with the MinMTU and the port with the MaxMTU appear.

If you try to associate a private VLAN secondary VLAN with a primary VLAN before you define the secondary VLAN, the secondary VLAN is not included in the **show vlan private-vlan** command output.

In the **show vlan private-vlan type** command output, a type displayed as *normal* means a VLAN that has a private VLAN association but is not part of the private VLAN. For example, if you define and associate two VLANs as primary and secondary VLANs and then delete the secondary VLAN configuration without removing the association from the primary VLAN, the VLAN that was the secondary VLAN is shown as *normal* in the display. In the **show vlan private-vlan** output, the primary and secondary VLAN pair is shown as *non-operational*.

Examples

This is an example of output from the **show vlan** command. Table 2-41 describes the fields in the display.

VLAN	h> show vlan Name	Status	Ports
1	default	active	Gi0/11, Gi0/13, Gi0/14, Gi0/15 Gi0/16
101	VLAN0101	active

Table 2-42 show vlan Command Output Fields

Field	Description
VLAN	VLAN number.
Name	Name, if configured, of the VLAN.
Status	Status of the VLAN (active or suspend).
Ports	Ports that belong to the VLAN.
Туре	Media type of the VLAN.

Table 2-42 show vlan Command Output Fields (continued)

Field	Description
SAID	Security association ID value for the VLAN.
MTU	Maximum transmission unit size for the VLAN.
Parent	Parent VLAN, if one exists.
RingNo	Ring number for the VLAN, if applicable.
BrdgNo	Bridge number for the VLAN, if applicable.
Stp	Spanning Tree Protocol type used on the VLAN.
BrdgMode	Bridging mode for this VLAN—possible values are source-route bridging (SRB) and source-route transparent (SRT); the default is SRB.
Trans1	Translation bridge 1.
Trans2	Translation bridge 2.
Remote SPAN VLANs	Identifies any RSPAN VLANs that have been configured.
Primary/Secondary/ Type/Ports	Includes any private VLANs that have been configured, including the primary VLAN ID, the secondary VLAN ID, the type of secondary VLAN (community or isolated), and the ports that belong to it.

This is an example of output from the **show vlan dot1q tag native** command:

Switch> show vlan dot1q tag native dot1q native vlan tagging is disabled

This is an example of output from the **show vlan private-vlan** command:

	> show vlan / Secondary	private-vlan Type	Ports
10	501	isolated	Gi3/0/3
10	502	community	Fa2/0/11
10	503	non-operational3	-
20	25	isolated	Fa1/0/13, Fa1/0/20, Fa1/0/22, Gi1/0/1, Fa2/0/13,
			Fa2/0/22, Fa3/0/13, Fa3/0/14, Fa3/0/20, Gi3/0/1
20	30	community	Fa1/0/13, Fa1/0/20, Fa1/0/21, Gi1/0/1, Fa2/0/13,
			Fa2/0/20, Fa3/0/14, Fa3/0/20, Fa3/0/21, Gi3/0/1
20	35	community	Fa1/0/13, Fa1/0/20, Fa1/0/23, Fa1/0/33. Gi1/0/1,
			Fa2/0/13, Fa3/0/14, Fa3/0/20. Fa3/0/23, Fa3/0/33,
			Gi3/0/1
20	55	non-operational	
2000	2500	isolated	Fa1/0/5, Fa1/0/10, Fa2/0/5, Fa2/0/10, Fa2/0/15

This is an example of output from the **show vlan private-vlan type** command:

```
Switch> show vlan private-vlan type
Vlan Type
----
10 primary
501 isolated
502 community
503 normal
```

This is an example of output from the **show vlan summary** command:

```
Switch> show vlan summary

Number of existing VLANs : 45

Number of existing VTP VLANs : 45

Number of existing extended VLANs : 0

Number of existing VLANs : 8

Number of existing VTP VLANS : 8

Number of existing extended VLANs : 0
```

This is an example of output from the **show vlan id** command.

Switch# show vlan id 2

	Name	ow vlan id				tus	Ports			
	VLAN0 VLAN0	200			act:	ive	Fa0/7, Gi0/1,	Fa0/8

This is an example of output from the **show vlan internal usage** command. It shows that VLANs 1025 and 1026 are being used as internal VLANs for Fast Ethernet routed ports 23 and 24. If you want to use one of these VLAN IDs, you must first shut down the routed port, which releases the internal VLAN, and then create the extended-range VLAN. When you start up the routed port, another internal VLAN number is assigned to it.

```
Switch> show vlan internal usage
VLAN Usage
---- 1025 FastEthernet0/23
1026 FastEthernet0/24
```

Command	Description
private-vlan	Configures a VLAN as a community, isolated, or primary VLAN or associates a primary VLAN with secondary VLANs.
switchport mode	Configures the VLAN membership mode of a port.
vlan	Enables VLAN configuration mode where you can configure VLANs 1 to 4094.

show vlan access-map

Use the **show vlan access-map** privileged EXEC command to display information about a particular VLAN access map or for all VLAN access maps.

show vlan access-map [mapname]

Syntax Description

mapname (Optional) Name of a specific VLAN access map.	Optional) Name of a specific VLAN access map.
--	---

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Examples

This is an example of output from the **show vlan access-map** command:

```
Switch# show vlan access-map
```

Vlan access-map "SecWiz" 10

Match clauses:

ip address: SecWiz_Gi0_3_in_ip
ip address: SecWiz_Fa10_3_in_ip

Action:

forward

Command	Description
show vlan filter	Displays information about all VLAN filters or about a particular VLAN or VLAN access map.
vlan access-map	Creates a VLAN map entry for VLAN packet filtering.
vlan filter	Applies a VLAN map to one or more VLANs.

show vlan filter

Use the **show vlan filter** privileged EXEC command to display information about all VLAN filters or about a particular VLAN or VLAN access map.

show vlan filter [access-map name | vlan vlan-id]

Syntax Description

access-map name	(Optional) Display filtering information for the specified VLAN access map.
vlan vlan-id	(Optional) Display filtering information for the specified VLAN. The range is
	1 to 4094.

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Examples

This is an example of output from the show vlan filter command:

Switch# **show vlan filter**VLAN Map map_1 is filtering VLANs: 20-22

Command	Description
show vlan access-map	Displays information about a particular VLAN access map or for all VLAN access maps.
vlan access-map	Creates a VLAN map entry for VLAN packet filtering.
vlan filter	Applies a VLAN map to one or more VLANs.

show vmps

Use the **show vmps** user EXEC command without keywords to display the VLAN Query Protocol (VQP) version, reconfirmation interval, retry count, VLAN Membership Policy Server (VMPS) IP addresses, and the current and primary servers, or use the **statistics** keyword to display client-side statistics.

show vmps [statistics]

Syntax Description

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.

Examples

This is an example of output from the **show vmps** command:

This is an example of output from the **show vmps statistics** command. Table 2-42 describes each field in the display.

```
Switch> show vmps statistics
VMPS Client Statistics
______
                         0
VQP Queries:
VQP Responses:
                         0
VMPS Changes:
                         0
VQP Shutdowns:
                         0
VQP Denied:
                         0
VQP Wrong Domain:
                         0
VQP Wrong Version:
VQP Insufficient Resource: 0
```

Table 2-43 show vmps statistics Field Descriptions

Field	Description
VQP Queries	Number of queries sent by the client to the VMPS.
VQP Responses	Number of responses sent to the client from the VMPS.

Table 2-43 show vmps statistics Field Descriptions (continued)

Field	Description
VMPS Changes	Number of times that the VMPS changed from one server to another.
VQP Shutdowns	Number of times the VMPS sent a response to shut down the port. The client disables the port and removes all dynamic addresses on this port from the address table. You must administratively re-enable the port to restore connectivity.
VQP Denied	Number of times the VMPS denied the client request for security reasons. When the VMPS response denies an address, no frame is forwarded to or from the workstation with that address (broadcast or multicast frames are delivered to the workstation if the port has been assigned to a VLAN). The client keeps the denied address in the address table as a blocked address to prevent more queries from being sent to the VMPS for each new packet received from this workstation. The client ages the address if no new packets are received from this workstation on this port within the aging time period.
VQP Wrong Domain	Number of times the management domain in the request does not match the one for the VMPS. Any previous VLAN assignments of the port are not changed. This response means that the server and the client have not been configured with the same VTP management domain.
VQP Wrong Version	Number of times the version field in the query packet contains a value that is higher than the version supported by the VMPS. The VLAN assignment of the port is not changed. The switches send only VMPS Version 1 requests.
VQP Insufficient Resource	Number of times the VMPS is unable to answer the request because of a resource availability problem. If the retry limit has not yet been reached, the client repeats the request with the same server or with the next alternate server, depending on whether the per-server retry count has been reached.

Command	Description
clear vmps statistics	Clears the statistics maintained by the VQP client.
vmps reconfirm (privileged EXEC)	Sends VQP queries to reconfirm all dynamic VLAN assignments with the VMPS.
vmps retry	Configures the per-server retry count for the VQP client.
vmps server	Configures the primary VMPS and up to three secondary servers.

show vtp

Use the **show vtp** user EXEC command to display general information about the VLAN Trunking Protocol (VTP) management domain, status, and counters.

show vtp {counters | devices [conflicts] | interface [interface-id] | password | status}

Syntax Description

counters	Display the VTP statistics for the switch.
password	Display the configured VTP password.
devices	Display information about all VTP version 3 devices in the domain. This keyword applies only if the switch is not running VTP version 3.
conflicts	(Optional) Display information about VTP version 3 devices that have conflicting primary servers. This command is ignored when the switch is in VTP transparent or VPT off mode.
interface [interface-id]	Display VTP status and configuration for all interfaces or the specified interface. The <i>interface-id</i> can be a physical interface or a port channel.
status	Display general information about the VTP management domain status.

Command Modes

User EXEC

Command History

Release	Modification
12.2(25)SEF	This command was introduced.
12.2(52)SE	The devices and interface keywords were added for VTP version 3.

Usage Guidelines

When you enter the **show vtp password** command when the switch is running VTP version 3, the display follows these rules:

- If the **password** password global configuration command did not specify the **hidden** keyword and encryption is not enabled on the switch, the password appears in clear text.
- If the **password** *password* command did not specify the **hidden** keyword and encryption is enabled on the switch, the encrypted password appears.
- If the **password** password command included the **hidden** keyword, the hexadecimal secret key is displayed.

Examples

This is an example of output from the **show vtp devices** command. A Yes in the *Conflict* column means that the responding server is in conflict with the local server for the feature; that is, when two switches in the same domain do not have the same primary server for a database.

Switch# show vtp devices

```
MST No 00b0.8e50.d000 0004.AB45.6000 24 main.cisco.com VLAN Yes 000c.0412.6300=000c.0412.6300 67 qwerty.cisco.com
```

This is an example of output from the **show vtp counters** command. Table 2-43 describes each field in the display.

Switch> show vtp counters

```
VTP statistics:
Summary advertisements received : 0
Subset advertisements received : 0
Request advertisements received : 0
Summary advertisements transmitted : 0
Subset advertisements transmitted : 0
Request advertisements transmitted : 0
Request advertisements transmitted : 0
Number of config revision errors : 0
Number of config digest errors : 0
Number of V1 summary errors : 0
```

VTP pruning statistics:

Trunk	Join Transmitted	Join Received	Summary advts received from non-pruning-capable device
Fa0/47	0	0	0
Fa0/48	0	0	0
Gi0/21	0	0	0
Gi0/22	0	0	0

Table 2-44 show vtp counters Field Descriptions

Field	Description	
Summary advertisements received	Number of summary advertisements received by this switch on its trunk ports. Summary advertisements contain the management domain name, the configuration revision number, the update timestamp and identity, the authentication checksum, and the number of subset advertisements to follow.	
Subset advertisements received	Number of subset advertisements received by this switch on its trunk ports. Subset advertisements contain all the information for one or more VLANs.	
Request advertisements received	Number of advertisement requests received by this switch on its trunk ports. Advertisement requests normally request information on all VLANs. They can also request information on a subset of VLANs.	
Summary advertisements transmitted	Number of summary advertisements sent by this switch on its trunk ports. Summary advertisements contain the management domain name, the configuration revision number, the update timestamp and identity, the authentication checksum, and the number of subset advertisements to follow.	
Subset advertisements transmitted	Number of subset advertisements sent by this switch on its trunk ports. Subset advertisements contain all the information for one or more VLANs.	
Request advertisements transmitted	Number of advertisement requests sent by this switch on its trunk ports. Advertisement requests normally request information on all VLANs. They can also request information on a subset of VLANs.	

Table 2-44 show vtp counters Field Descriptions (continued)

Field	Description	
Number of configuration revision errors	Number of revision errors.	
	Whenever you define a new VLAN, delete an existing one, suspend or resume an existing VLAN, or modify the parameters on an existing VLAN, the configuration revision number of the switch increments.	
	Revision errors increment whenever the switch receives an advertisement whose revision number matches the revision number of the switch, but the MD5 digest values do not match. These errors mean that the VTP password in the two switches is different or that the switches have different configurations.	
	These errors mean that the switch is filtering incoming advertisements, which causes the VTP database to become unsynchronized across the network.	
Number of configuration digest errors	Number of MD5 digest errors.	
	Digest errors increment whenever the MD5 digest in the summary packet and the MD5 digest of the received advertisement calculated by the switch do not match. This error usually means that the VTP password in the two switches is different. To solve this problem, make sure the VTP password on all switches is the same.	
	These errors mean that the switch is filtering incoming advertisements, which causes the VTP database to become unsynchronized across the network.	
Number of V1 summary errors	Number of Version 1 errors.	
	Version 1 summary errors increment whenever a switch in VTP V2 mode receives a VTP Version 1 frame. These errors mean that at least one neighboring switch is either running VTP Version 1 or VTP Version 2 with V2-mode disabled. To solve this problem, change the configuration of the switches in VTP V2-mode to disabled.	
Join Transmitted	Number of VTP pruning messages sent on the trunk.	
Join Received	Number of VTP pruning messages received on the trunk.	
Summary Advts Received from non-pruning-capable device	Number of VTP summary messages received on the trunk from devices that do not support pruning.	

This is an example of output from the **show vtp status** command for a switch running VTP version 2. Table 2-44 describes each field in the display.

Switch> show vtp status

VTP Version : 2

Configuration Revision : 0

Maximum VLANs supported locally : 1005

Number of existing VLANs : 45

VTP Operating Mode : Transparent

VTP Domain Name : shared_testbed1

VTP Domain Name : shared_tes
VTP Pruning Mode : Disabled
VTP V2 Mode : Disabled
VTP Traps Generation : Enabled

MD5 digest : 0x3A 0x29 0x86 0x39 0xB4 0x5D 0x58 0xD7

Table 2-45 show vtp status Field Descriptions

Field	Description	
VTP Version	Displays the VTP version operating on the switch. By default, the switch implements Version 1 but can be set to Version 2.	
Configuration Revision	Current configuration revision number on this switch.	
Maximum VLANs Supported Locally	Maximum number of VLANs supported locally.	
Number of Existing VLANs	Number of existing VLANs.	
VTP Operating Mode	Displays the VTP operating mode, which can be server, client, or transparent.	
	Server: a switch in VTP server mode is enabled for VTP and sends advertisements. You can configure VLANs on it. The switch guarantees that it can recover all the VLAN information in the current VTP database from NVRAM after reboot. By default, every switch is a VTP server.	
	Note The switch automatically changes from VTP server mode to VTP client mode if it detects a failure while writing the configuration to NVRAM and cannot return to server mode until the NVRAM is functioning.	
	Client: a switch in VTP client mode is enabled for VTP, can send advertisements, but does not have enough nonvolatile storage to store VLAN configurations. You cannot configure VLANs on it. When a VTP client starts up, it does not send VTP advertisements until it receives advertisements to initialize its VLAN database.	
	Transparent: a switch in VTP transparent mode is disabled for VTP, does not send or learn from advertisements sent by other devices, and cannot affect VLAN configurations on other devices in the network. The switch receives VTP advertisements and forwards them on all trunk ports except the one on which the advertisement was received.	
VTP Domain Name	Name that identifies the administrative domain for the switch.	

Table 2-45 show vtp status Field Descriptions (continued)

Field	Description
VTP Pruning Mode	Displays whether pruning is enabled or disabled. Enabling pruning on a VTP server enables pruning for the entire management domain. Pruning restricts flooded traffic to those trunk links that the traffic must use to access the appropriate network devices.
VTP V2 Mode	Displays if VTP Version 2 mode is enabled. All VTP Version 2 switches operate in Version 1 mode by default. Each VTP switch automatically detects the capabilities of all the other VTP devices. A network of VTP devices should be configured to Version 2 only if all VTP switches in the network can operate in Version 2 mode.
VTP Traps Generation	Displays whether VTP traps are sent to a network management station.
MD5 Digest	A 16-byte checksum of the VTP configuration.
Configuration Last Modified	Displays the date and time of the last configuration modification. Displays the IP address of the switch that caused the configuration change to the database.

This is an example of output from the **show vtp status** command for a switch running VTP version 3.

Switch> show vtp status VTP Version capable : 1 to 3 VTP version running : 3 : Cisco VTP Domain Name : Disabled VTP Pruning Mode : Disabled VTP Traps Generation Device ID : 0021.1bcd.c700 Feature VLAN: VTP Operating Mode : Server Number of existing VLANs : 7 Number of existing extended VLANs : 0Configuration Revision : 0 Primary ID : 0000.0000.0000 Primary Description MD5 digest Feature MST: VTP Operating Mode : Client Configuration Revision : 0 : 0000.0000.0000 Primary ID Primary Description MD5 digest Feature UNKNOWN: VTP Operating Mode : Transparent

Command	Description
clear vtp counters	Clears the VTP and pruning counters.
vtp (global configuration)	Configures the VTP filename, interface name, domain name, and mode.
