# rmon collection stats

Use the **rmon collection stats** interface configuration command on the switch stack or on a standalone switch to collect Ethernet group statistics, which include usage statistics about broadcast and multicast packets, and error statistics about cyclic redundancy check (CRC) alignment errors and collisions. Use the **no** form of this command to return to the default setting.

rmon collection stats index [owner name]

**no rmon collection stats** *index* [**owner** *name*]

| Syntax Description                               | index   | Remote Network Monitoring (RMON) collection control index. The range is 1 to 65535.  |
|--|---|--|
|  | owner name  | (Optional) Owner of the RMON collection.   |
| Defaults   | The RMON statistics co  | ollection is disabled.   |
| Command Modes                                    | Interface configuration   |  |
| Command History                                  | Release   | Modification   |
|  | 12.2(40)EX1   | This command was introduced.   |
| Suge durachines                                  |   | ollection command is based on hardware counters.   |
| -  | This example shows ho   |  |
| -  | -   | w to collect RMON statistics for the owner <i>root</i> :   |

# sdm prefer

Use the **sdm prefer** global configuration command on the switch stack or on a standalone switch to configure the template used in Switch Database Management (SDM) resource allocation. You can use a template to allocate system resources to best support the features being used in your application. Use a template to provide maximum system usage for unicast routing or for VLAN configuration or to select the dual IPv4 and IPv6 template to support IPv6 forwarding. Use the **no** form of this command to return to the default template.

sdm prefer {access | default | dual-ipv4-and-ipv6 {default | routing | vlan} | routing | vlan}

### no sdm prefer

| Syntax Description | access                        | Provide maximum system usage for access control lists (ACLs). Use this template if you have a large number of ACLs.   |  |  |
|--------------------|-------------------------------|---|--|--|
|                    | default                       | Give balance to all functions.  |  |  |
|                    | dual-ipv4-and-ipv6            | Select a template that supports both IPv4 and IPv6 routing.   |  |  |
|                    | {default   routing  <br>vlan} | • <b>default</b> —Provide balance to IPv4 and IPv6 Layer 2 and Layer 3 functionality.   |  |  |
|                    |                               | • <b>routing</b> —Provide maximum system usage for IPv4 and IPv6 routing, including IPv4 policy-based routing.  |  |  |
|                    |                               | • vlan—Provide maximum system usage for IPv4 and IPv6 VLANs.  |  |  |
|                    | routing                       | Provide maximum system usage for unicast routing. You would typically use<br>this template for a router in the middle of a network.                                     |  |  |
|                    | vlan                          | Provide maximum system usage for VLANs. This template maximizes system resources for use as a Layer 2 switch with no routing.   |  |  |
| Command Modes      | Global configuration          | Modification  |  |  |
| ooniniana mistory  | 12.2(40)EX1                   | This command was introduced.  |  |  |
| Usage Guidelines   |                               | witch for the configuration to take effect. If you enter the <b>show sdm prefer</b> enter the <b>reload</b> privileged EXEC command, the <b>show sdm prefer</b> command |  |  |
|                    |                               | irrently in use and the template that will become active after a reload.  |  |  |

- If a stack member cannot support the template that is running on the master switch, the switch goes into SDM mismatch mode, the master switch does not attempt to change the SDM template, and the switch cannot be a functioning member of the stack.
  - For more information about stacking, see the "Managing Switch Stacks" chapter in the software configuration guide.

Use the no sdm prefer command to set the switch to the default desktop template.

The access template maximizes system resources for access control lists (ACLs) as required to accommodate a large number of ACLs.

The default templates balances the use of system resources.

Use the **sdm prefer vlan** global configuration command only on switches intended for Layer 2 switching with no routing. When you use the VLAN template, no system resources are reserved for routing entries, and any routing is done through software. This overloads the CPU and severely degrades routing performance.

Do not use the routing template if you do not have routing enabled on your switch. Entering the **sdm prefer routing** global configuration command prevents other features from using the memory allocated to unicast routing in the routing template.

Do not use the ipv4-and-ipv6 templates if you do not plan to enable IPv6 routing on the switch. Entering the sdm prefer ipv4-and-ipv6 {default | routing | vlan} global configuration command divides resources between IPv4 and IPv6, limiting those allocated to IPv4 forwarding.

Table 2-15 lists the approximate number of each resource that is supported in each of the IPv4-only templates for a desktop switch. The values in the template are based on 8 routed interfaces and 1024 VLANs and represent the approximate hardware boundaries set when a template is selected. If a section of a hardware resource is full, all processing overflow is sent to the CPU, seriously impacting switch performance.

| Resource   | Access | Default | Routing | VLAN  |
|--|--------|---------|---------|-------|
| Unicast MAC addresses  | 4 K    | 6 K     | 3 K     | 12 K  |
| Internet Group Management Protocol<br>(IGMP) groups and multicast routes | 1 K    | 1 K     | 1 K     | 1 K   |
| Unicast routes   | 6 K    | 8 K     | 11 K    | 0     |
| Directly connected hosts   | 4 K    | 6 K     | 3 K     | 0     |
| Indirect routes  | 2 K    | 2 K     | 8 K     | 0     |
| Policy-based routing access control entries (ACEs)                       | 0.5 K  | 0       | 0.5 K   | 0     |
| Quality of service (QoS) classification ACEs                             | 0.5 K  | 0.5 K   | 0.5 K   | 0.5 K |
| Security ACEs  | 2 K    | 1 K     | 1 K     | 1 K   |
| VLANs  | 1 K    | 1 K     | 1 K     | 1 K   |

### Table 2-15 Approximate Number of Feature Resources Allowed by IPv4 Templates

Table 2-16 lists the approximate number of each resource supported in each of the dual IPv4-and IPv6 templates for a desktop switch.

| Resource                              | Default | Routing | VLAN  |
|---------------------------------------|---------|---------|---|
| Unicast MAC addresses                 | 2 K     | 1.5 K   | 8 K   |
| IPv4 IGMP groups and multicast routes | 1 K     | 1 K     | 1 K for IGMP groups<br>0 for multicast routes |
| Total IPv4 unicast routes:            | 3 K     | 2.75 K  | 0   |
| • Directly connected IPv4 hosts       | 2 K     | 1.5 K   | 0   |
| • Indirect IPv4 routes                | 1 K     | 1.25 K  | 0   |
| IPv6 multicast groups                 | 1 K     | 1 K     | 1 K   |
| Directly connected IPv6 addresses     | 2 K     | 1.5 K   | 0   |
| Indirect IPv6 unicast routes          | 1 K     | 1.25 K  | 0   |
| IPv4 policy-based routing ACEs        | 0       | 0.25 K  | 0   |
| IPv4 or MAC QoS ACEs (total)          | 0.5 K   | 0.5 K   | 0.5 K   |
| IPv4 or MAC security ACEs (total)     | 1 K     | 0.5 K   | 1 K   |
| IPv6 security ACEs                    | 1 K     | 1 K     | 0.5 K   |

Table 2-16 Approximate Feature Resources Allowed by Dual IPv4-IPv6 Templates

### Examples

This example shows how to configure the access template on a switch:

Switch(config)# sdm prefer access
Switch(config)# exit
Switch# reload

This example shows how to configure the routing template on a switch:

Switch(config)# sdm prefer routing
Switch(config)# exit
Switch# reload

This example shows how to configure the dual IPv4-and-IPv6 default template on a switch:

Switch(config)# sdm prefer dual-ipv4-and-ipv6 default
Switch(config)# exit
Switch# reload

This example shows how to change a switch template to the default template.

```
Switch(config)# no sdm prefer
Switch(config)# exit
Switch# reload
```

You can verify your settings by entering the show sdm prefer privileged EXEC command.

| <b>Related Commands</b> | Command         | Description   |
|-------------------------|-----------------|---|
|                         | show sdm prefer | Displays the current SDM template in use or displays the templates that can |
|                         |                 | be used, with approximate resource allocation per feature.                  |

# service password-recovery

Use the **service password-recovery** global configuration command on the switch stack or on a standalone switch to enable the password-recovery mechanism (the default). This mechanism allows an end user with physical access to the switch to hold down the **Mode** button and interrupt the boot process while the switch is powering up and to assign a new password. Use the **no** form of this command to disable part of the password-recovery functionality. When the password-recovery mechanism is disabled, interrupting the boot process is allowed only if the user agrees to set the system back to the default configuration.

service password-recovery

no service password-recovery

**Syntax Description** This command has no arguments or keywords.

The password-recovery mechanism is enabled.

**Command Modes** Global configuration

Defaults

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | 12.2(40)EX1 | This command was introduced. |

**Usage Guidelines** As a system administrator, you can use the **no service password-recovery** command to disable some of the functionality of the password recovery feature by allowing an end user to reset a password only by agreeing to return to the default configuration.

To use the password-recovery procedure, a user with physical access to the switch holds down the **Mode** button while the unit powers up and for a second or two after the LED above port 1X turns off. When the button is released, the system continues with initialization.

If the password-recovery mechanism is disabled, this message appears:

The password-recovery mechanism has been triggered, but is currently disabled. Access to the boot loader prompt through the password-recovery mechanism is disallowed at this point. However, if you agree to let the system be reset back to the default system configuration, access to the boot loader prompt can still be allowed.

Would you like to reset the system back to the default configuration (y/n)?

If the user chooses not to reset the system to the default configuration, the normal boot process continues, as if the **Mode** button had not been pressed. If you choose to reset the system to the default configuration, the configuration file in flash memory is deleted, and the VLAN database file, *flash:vlan.dat* (if present), is deleted.

|                 | <b>x</b>   |  |
|-----------------|--|--|
| Not             | recommend that you save a cop  | <b>word-recovery</b> command to control end user access to passwords, we by of the config file in a location away from the switch in case the end user ocedure and sets the system back to default values. Do not keep a backup witch. |
|                 | If the switch is operating in VT<br>vlan.dat file in a location away | TP transparent mode, we recommend that you also save a copy of the from the switch.  |
|                 | •  | <b>assword-recovery</b> or <b>no service password-recovery</b> command on the hroughout the stack and applied to all switches in the stack.  |
|                 | You can verify if password rec EXEC command.                         | overy is enabled or disabled by entering the <b>show version</b> privileged  |
| Examples        | -  | able password recovery on a switch or switch stack so that a user can only o return to the default configuration.  |
|                 | Switch(config)# no service-<br>Switch(config)# exit                  | password recovery  |
| Related Command | s Command  | Description  |
|                 | show version   | Displays version information for the hardware and firmware.  |

# service-policy

Use the **service-policy** interface configuration command on the switch stack or on a standalone switch to apply a policy map defined by the **policy-map** command to the input of a physical port or a switch virtual interface (SVI). Use the **no** form of this command to remove the policy map and port association.

service-policy input policy-map-name

no service-policy input policy-map-name

| Syntax Description | <b>input</b> <i>policy-map-name</i> Apply the specified policy map to the input of a physical port or an SVI.  |
|--------------------|--|
| Note               | Though visible in the command-line help strings, the <b>history</b> keyword is not supported, and you should ignore the statistics that it gathers. The <b>output</b> keyword is also not supported.   |
| Defaults           | No policy maps are attached to the port.   |
| Command Modes      | Interface configuration  |
| Command History    | Release Modification   |
|                    | 12.2(40)EX1This command was introduced.  |
| Usage Guidelines   | Only one policy map per ingress port is supported.   |
|                    | Policy maps can be configured on physical ports or on SVIs. When VLAN-based quality of service (QoS) is disabled by using the <b>no mls qos vlan-based</b> interface configuration command on a physical port, you can configure a port-based policy map on the port. If VLAN-based QoS is enabled by using the <b>mls qos vlan-based</b> interface configuration command on a physical port, the switch removes the previously configured port-based policy map. After a hierarchical policy map is configured and applied on an SVI, the interface-level policy map takes effect on the interface. |
|                    | You can apply a policy map to incoming traffic on a physical port or on an SVI. You can configure different interface-level policy maps for each class defined in the VLAN-level policy map. For more information about hierarchical policy maps, see the "Configuring QoS" chapter in the software configuration guide for this release.  |
|                    |  |

### Examples

This example shows how to apply *plcmap1* to an physical ingress port:

```
Switch(config)# interface gigabitethernet2/0/1
Switch(config-if)# service-policy input plcmap1
```

This example shows how to remove *plcmap2* from a physical port:

```
Switch(config)# interface gigabitethernet2/0/2
Switch(config-if)# no service-policy input plcmap2
```

This example shows how to apply *plcmap1* to an ingress SVI when VLAN-based QoS is enabled:

```
Switch(config)# interface vlan 10
Switch(config-if)# service-policy input plcmap1
```

This example shows how to create a hierarchical policy map and attach it to an SVI:

```
Switch> enable
Switch# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Switch(config)# access-list 101 permit ip any any
Switch(config) # class-map cm-1
Switch(config-cmap)# match access 101
Switch(config-cmap) # exit
Switch(config)# exit
Switch#
Switch#
Switch# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Switch(config) # class-map cm-interface-1
Switch(config-cmap)# match input gigabitethernet3/0/1 - gigabitethernet3/0/2
Switch(config-cmap)# exit
Switch(config) # policy-map port-plcmap
Switch(config-pmap)# class-map cm-interface-1
Switch(config-pmap-c)# police 900000 9000 exc policed-dscp-transmit
Switch(config-pmap-c)# exit
Switch(config-pmap)# exit
Switch(config) # policy-map vlan-plcmap
Switch(config-pmap)# class-map cm-1
Switch(config-pmap-c)# set dscp 7
Switch(config-pmap-c)# service-policy port-plcmap-1
Switch(config-pmap-c)# exit
Switch(config-pmap)# class-map cm-2
Switch(config-pmap-c)# match ip dscp 2
Switch(config-pmap-c)# service-policy port-plcmap-1
Switch(config-pmap)# exit
Switch(config-pmap) # class-map cm-3
Switch(config-pmap-c)# match ip dscp 3
Switch(config-pmap-c)# service-policy port-plcmap-2
Switch(config-pmap)# exit
Switch(config-pmap) # class-map cm-4
Switch(config-pmap-c) # trust dscp
Switch(config-pmap) # exit
Switch(config)# int vlan 10
Switch(config-if)#
Switch(config-if)# ser input vlan-plcmap
Switch(config-if) # exit
Switch(config) # exit
Switch#
```

You can verify your settings by entering the show running-config privileged EXEC command.

| Related Commands | Command             | Description   |
|------------------|---------------------|---|
|                  | policy-map          | Creates or modifies a policy map that can be attached to multiple ports to specify a service policy.  |
|                  | show policy-map     | Displays QoS policy maps.   |
|                  | show running-config | Displays the operating configuration. # session

Use the session privileged EXEC command on the stack master to access a specific stack member.

**session** *stack-member-number* 

| Syntax Description | stack-member-number                       | Specify the stack member number. The range is 1 to 9.                 |
|--------------------|---|---|
| Defaults           | No default is defined.                    |   |
| Command Modes      | Global configuration                      |   |
| Command History    | Release                                   | Modification  |
|                    | 12.2(40)EX1                               | This command was introduced.  |
| Usage Guidelines   | When you access the sta                   | ack member, its stack member number is appended to the system prompt. |
| Examples           | This example shows ho                     | w to access stack member 6:   |
|                    | Switch(config)# <b>sessi</b><br>Switch-6# | lon 6   |
| Related Commands   | Command                                   | Description   |
|                    | reload                                    | Reloads the stack member and puts a configuration change into effect. |
|                    | switch priority                           | Changes the stack member priority value.                              |
|                    | switch renumber                           | Changes the stack member number.                                      |

Displays information about the switch stack and its stack members.

show switch

Use the **set** policy-map class configuration command on the switch stack or on a standalone switch to classify IP traffic by setting a Differentiated Services Code Point (DSCP) or an IP-precedence value in the packet. Use the **no** form of this command to remove traffic classification.

set {dscp new-dscp | [ip] precedence new-precedence}

**no set** {**dscp** *new-dscp* | [**ip**] **precedence** *new-precedence*}

| Syntax Description | dscp new-dscp  | New DSCP value assigned to the classified traffic. The range<br>is 0 to 63. You also can enter a mnemonic name for a commonly<br>used value.   |  |  |
|--------------------|--|--|--|--|
|                    | [ip] precedence new-precedence   | New IP-precedence value assigned to the classified traffic. The range is 0 to 7. You also can enter a mnemonic name for a commonly used value.   |  |  |
| Defaults           | No traffic classification is defined   |  |  |  |
| Command Modes      | Policy-map class configuration   |  |  |  |
| Command History    | Release Modific  | ation  |  |  |
|                    | 12.2(40)EX1 This con   | mmand was introduced.  |  |  |
| Usage Guidelines   | command to set dscp in the switch  | olicy-map class configuration command, the switch changes this<br>a configuration. If you enter the <b>set ip dscp</b> policy-map class<br>and appears as <b>set dscp</b> in the switch configuration. |  |  |
|                    | You can use the <b>set ip precedence</b> policy-map class configuration command or the <b>set precedence</b> policy-map class configuration command. This setting appears as <b>set ip precedence</b> in the switch configuration.   |  |  |  |
|                    | The <b>set</b> command is mutually exclusive with the <b>trust</b> policy-map class configuration command within the same policy map.  |  |  |  |
|                    | For the <b>set dscp</b> <i>new-dscp</i> or the <b>set ip precedence</b> <i>new-precedence</i> command, you can enter a mnemonic name for a commonly used value. For example, you can enter the <b>set dscp af11</b> command, which is the same as entering the <b>set dscp 10</b> command. You can enter the <b>set ip precedence critical</b> command, which is the same as entering the <b>set ip precedence 5</b> command. For a list of supported mnemonics, enter the <b>set dscp ?</b> or the <b>set ip precedence ?</b> command to see the command-line help strings. |  |  |  |
|                    | To return to policy-map configurat<br>use the <b>end</b> command.  | ion mode, use the <b>exit</b> command. To return to privileged EXEC mode,  |  |  |

### set

### Examples

This example shows how to assign DSCP 10 to all FTP traffic without any policers:

Switch(config)# policy-map policy\_ftp Switch(config-pmap)# class ftp\_class Switch(config-pmap-c)# set dscp 10 Switch(config-pmap)# exit

You can verify your settings by entering the show policy-map privileged EXEC command.

| <b>Related Commands</b> | Command         | Description   |
|-------------------------|-----------------|---|
|                         | class           | Defines a traffic classification match criteria (through the <b>police</b> , <b>set</b> , and <b>trust</b> policy-map class configuration commands) for the specified class-map name. |
|                         | police          | Defines a policer for classified traffic.   |
|                         | policy-map      | Creates or modifies a policy map that can be attached to multiple ports to specify a service policy.  |
|                         | show policy-map | Displays QoS policy maps.   |
|                         | trust           | Defines a trust state for traffic classified through the <b>class</b> policy-map configuration command or the <b>class-map</b> global configuration command.                          |

### setup

Use the **setup** privileged EXEC command to configure the switch with its initial configuration.

setup

| Syntax Description | This command has no arguments or key | ywords. |
|--------------------|--------------------------------------|---------|
|--------------------|--------------------------------------|---------|

Command Modes Privileged EXEC

| Command History | Release | Modification                 |
|-----------------|---------|------------------------------|
| 12.2(40)EX1     |         | This command was introduced. |

### Usage Guidelines

When you use the setup command, make sure that you have this information:

- IP address and network mask
- Password strategy for your environment

When you enter the **setup** command, an interactive dialog, called the System Configuration Dialog, appears. It guides you through the configuration process and prompts you for information. The values shown in brackets next to each prompt are the default values last set by using either the **setup** command facility or the **configure** privileged EXEC command.

Help text is provided for each prompt. To access help text, press the question mark (?) key at a prompt.

To return to the privileged EXEC prompt without making changes and without running through the entire System Configuration Dialog, press **Ctrl-C**.

When you complete your changes, the setup program shows you the configuration command script that was created during the setup session. You can save the configuration in NVRAM or return to the setup program or the command-line prompt without saving it.

| Examples | This is an example of output from the <b>setup</b> command:   |
|----------|---|
|          | Switch# <b>setup</b><br>System Configuration Dialog   |
|          | Continue with configuration dialog? [yes/no]: <b>yes</b>  |
|          | At any point you may enter a question mark '?' for help.<br>Use ctrl-c to abort configuration dialog at any prompt.<br>Default settings are in square brackets '[]'.  |
|          | Basic management setup configures only enough connectivity<br>for management of the system, extended setup will ask you<br>to configure each interface on the system. |
|          | Would you like to enter basic management setup? [yes/no]: <b>yes</b><br>Configuring global parameters:  |

Enter host name [Switch]: host-name The enable secret is a password used to protect access to privileged EXEC and configuration modes. This password, after entered, becomes encrypted in the configuration. Enter enable secret: enable-secret-password The enable password is used when you do not specify an enable secret password, with some older software versions, and some boot images. Enter enable password: enable-password The virtual terminal password is used to protect access to the router over a network interface. Enter virtual terminal password: terminal-password Configure SNMP Network Management? ## setup express

Use the **setup express** global configuration command to enable Express Setup mode on the switch stack or on a standalone switch. Use the **no** form of this command to disable Express Setup mode.

setup express

no setup express

- Syntax Description This command has no arguments or keywords.
- **Defaults** Express Setup is enabled.
- **Command Modes** Global configuration

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | 12.2(40)EX1 | This command was introduced. |

### **Usage Guidelines**

When Express Setup is enabled on a new (unconfigured) switch, pressing the Mode button for 2 seconds activates Express Setup. You can access the switch through an Ethernet port by using the IP address 10.0.0.1 and then can configure the switch with the web-based Express Setup program or the command-line interface (CLI)-based setup program.

When you press the Mode button for 2 seconds on a configured switch, the LEDs above the Mode button start blinking. If you press the Mode button for a total of 10 seconds, the switch configuration is deleted, and the switch reboots. The switch can then be configured like a new switch, either through the web-based Express Setup program or the CLI-based setup program.

Note

As soon as you make any change to the switch configuration (including entering *no* at the beginning of the CLI-based setup program), configuration by Express Setup is no longer available. You can only run Express Setup again by pressing the Mode button for 10 seconds. This deletes the switch configuration and reboots the switch.

If Express Setup is active on the switch, entering the **write memory** or **copy running-configuration** startup-configuration privileged EXEC commands deactivates Express Setup. The IP address 10.0.0.1 is no longer valid on the switch, and your connection using this IP address ends.

The primary purpose of the **no setup express** command is to prevent someone from deleting the switch configuration by pressing the Mode button for 10 seconds.

# Examples This example shows how to enable Express Setup mode: Switch(config)# setup express You can verify that Express Setup mode is enabled by pressing the Mode button: • On an unconfigured switch, the LEDs above the Mode button turn solid green after 3 seconds. • On a configured switch, the mode LEDs begin blinking after 2 seconds and turn solid green after 10 seconds. • Caution If you hold the Mode button down for a total of 10 seconds, the configuration is deleted, and the switch reboots. This example shows how to disable Express Setup mode: Switch(config)# no setup express You can verify that Express Setup mode is disabled by pressing the Mode button. The mode LEDs do not turn solid green or begin blinking green if Express Setup mode is not enabled on the switch. Related Commands Command Description

# show access-lists

Use the **show access-lists** privileged EXEC command to display access control lists (ACLs) configured on the switch.

show access-lists [name | number | hardware counters | ipc] [ | {begin | exclude | include}
expression]

| Syntax Description |  |   |
|--------------------|--|---|
| Syntax Description | name   | (Optional) Name of the ACL.   |
|                    | number   | (Optional) ACL number. The range is 1 to 2699.  |
|                    | hardware counters  | (Optional) Display global hardware ACL statistics for switched and routed packets.                                |
|                    | ірс  | (Optional) Display Interprocess Communication (IPC) protocol access-list configuration download information.      |
|                    | begin  | (Optional) Display begins with the line that matches the <i>expression</i> .                                      |
|                    | exclude  | (Optional) Display excludes lines that match the <i>expression</i> .  |
|                    | include  | (Optional) Display includes lines that match the specified expression.  |
|                    | expression   | Expression in the output to use as a reference point.   |
|                    |  |   |
| Note               | Though visible in the c  | command-line help strings, the <b>rate-limit</b> keywords are not supported.                                      |

### Examples

This is an example of output from the **show access-lists** command:

```
Switch# show access-lists
Standard IP access list 1
   10 permit 1.1.1.1
   20 permit 2.2.2.2
    30 permit any
    40 permit 0.255.255.255, wildcard bits 12.0.0.0
Standard IP access list videowizard_1-1-1-1
    10 permit 1.1.1.1
Standard IP access list videowizard_10-10-10-10
    10 permit 10.10.10.10
Extended IP access list 121
   10 permit ahp host 10.10.10.10 host 20.20.10.10 precedence routine
Extended IP access list CMP-NAT-ACL
    Dynamic Cluster-HSRP deny ip any any
    10 deny ip any host 19.19.11.11
    20 deny ip any host 10.11.12.13
   Dynamic Cluster-NAT permit ip any any
    10 permit ip host 10.99.100.128 any
    20 permit ip host 10.46.22.128 any
    30 permit ip host 10.45.101.64 any
    40 permit ip host 10.45.20.64 any
    50 permit ip host 10.213.43.128 any
    60 permit ip host 10.91.28.64 any
    70 permit ip host 10.99.75.128 any
    80 permit ip host 10.38.49.0 any
```

This is an example of output from the show access-lists hardware counters command:

```
Switch# show access-lists hardware counters

|                  | archive download-sw | Downloads a new image from a TFTP server to the switch. |

# show arp access-list

Use the **show arp access-list** user EXEC command to display detailed information about Address Resolution Protocol (ARP) access control (lists).

show arp access-list [acl-name] [ | {begin | exclude | include} expression]

This command is supported only if your switch is running the IP services feature set.

| Syntax Description      |   |  |   |  |  |
|-------------------------|---|--|---|--|--|
|                         | begin   | (Optional) Disp  | play begins with the line that matches the <i>expression</i> .  |  |  |
|                         | l <b>exclude</b> (Optional) Display excludes lines that match the <i>expression</i> . |  |   |  |  |
|                         | include   | (Optional) Display includes lines that match the specified <i>expression</i> . |   |  |  |
|                         | expression  | Expression in tl   | he output to use as a reference point.  |  |  |
| Command Modes           | User EXEC   |  |   |  |  |
| Command History         | Release   | Mod  | ification   |  |  |
|                         | 12.2(40)EX1   | This   | command was introduced.   |  |  |
| Examples                | This is an exa<br>Switch> <b>show</b><br>ARP access 1<br>permit i<br>permit i         | mple of output fr<br>arp access-lis<br>ist rose                                | 0.0.255 mac any<br>0.255 mac any  |  |  |
| <b>Related Commands</b> | Command   |  | Description   |  |  |
|                         | arp access-lis  |  | Defines an ARP ACL.   |  |  |
|                         | deny (ARP a configuration   |  | Denies an ARP packet based on matches against the Dynamic Host<br>Configuration Protocol (DHCP) bindings. |  |  |
|                         | ip arp inspec   | tion filter vlan   | Permits ARP requests and responses from a host configured with a static IP address.                       |  |  |
|                         | permit (ARP<br>configuration  |  | Permits an ARP packet based on matches against the DHCP bindings.   |  |  |

# show auto qos

Use the **show auto qos** user EXEC command to display the quality of service (QoS) commands entered on the interfaces on which automatic QoS (auto-QoS) is enabled.

show auto qos [interface [interface-id]]

| Syntax Description | interface [interface-id](Optional) Display auto-QoS information for the specified por<br>for all ports. Valid interfaces include physical ports.   |                              |  |  |  |
|--------------------|--|------------------------------|--|--|--|
| Command Modes      | User EXEC  |                              |  |  |  |
| Command History    | Release  | Modification                 |  |  |  |
|                    | 12.2(40)EX1  | This command was introduced. |  |  |  |
| Usage Guidelines   | The <b>show auto qos</b> command output shows only the auto-QoS command entered on each interface. The <b>show auto qos interface</b> <i>interface-id</i> command output shows the auto-QoS command entered on a specific interface. |                              |  |  |  |
|                    | Use the <b>show running-config</b> privileged EXEC command to display the auto-QoS configuration and the user modifications.   |                              |  |  |  |
|                    | To display information about the QoS configuration that might be affected by auto-QoS, use one of these commands:  |                              |  |  |  |
|                    | • show mls qos   |                              |  |  |  |
|                    | <ul> <li>show mls qos maps cos-dscp</li> </ul>   |                              |  |  |  |
|                    | • show mls qos interface [interface-id] [buffers   queueing]   |                              |  |  |  |
|                    | <ul> <li>show mls qos maps [cos-dscp   cos-input-q   cos-output-q   dscp-cos   dscp-input-q  <br/>dscp-output-q]</li> </ul>  |                              |  |  |  |
|                    | • show mls qos input-queue   |                              |  |  |  |
|                    | • show running-con   | fig                          |  |  |  |
| Examples           | This is an example of output from the <b>show auto qos</b> command after the <b>auto qos voip cisco-phone</b> and the <b>auto qos voip cisco-softphone</b> interface configuration commands are entered:                             |                              |  |  |  |
|                    | Switch> <b>show auto qos</b><br>GigabitEthernet2/0/4<br>auto qos voip cisco-softphone  |                              |  |  |  |
|                    | GigabitEthernet2/0/5<br>auto qos voip cisco-phone  |                              |  |  |  |
|                    | GigabitEthernet2/0/6<br>auto qos voip cisco-p  | phone                        |  |  |  |

This is an example of output from the **show auto qos interface** *interface-id* command when the **auto qos voip cisco-phone** interface configuration command is entered:

```
Switch> show auto qos interface gigabitethernet 2/0/5
GigabitEthernet2/0/5
auto qos voip cisco-phone
```

This is an example of output from the **show running-config** privileged EXEC command when the **auto qos voip cisco-phone** and the **auto qos voip cisco-softphone** interface configuration commands are entered:

```
Switch# show running-config

This is an example of output from the **show auto qos interface** *interface-id* command when the **auto qos voip cisco-phone** interface configuration command is entered:

```
Switch> show auto gos interface gigabitethernet1/0/2
GigabitEthernet1/0/2
auto gos voip cisco-phone
```

These are examples of output from the **show auto qos** command when auto-QoS is disabled on the switch:

Switch> **show auto qos** AutoQoS not enabled on any interface

These are examples of output from the **show auto qos** interface *interface-id* command when auto-QoS is disabled on an interface:

Switch> show auto gos interface gigabitethernet3/0/1 AutoQoS is disabled

### **Related Commands**

| Command        | Description  |
|----------------|--|
| auto qos voip  | Automatically configures QoS for VoIP within a QoS domain. |
| debug auto qos | Enables debugging of the auto-QoS feature.                 |

# show boot

Use the show boot privileged EXEC command to display the settings of the boot environment variables.

show boot [ | {begin | exclude | include} expression]

| Syntax Description | begin  | (Optional) Display begins with the line that matches the expression.  |
|--------------------|--|---|
|                    | exclude  | (Optional) Display excludes lines that match the <i>expression</i> .  |
|                    | include  | (Optional) Display includes lines that match the specified expression.  |
|                    | expression   | Expression in the output to use as a reference point.   |
| Command Modes      | Privileged EXEC  |   |
| Command History    | Release  | Modification  |
|                    | 12.2(40)EX1  | This command was introduced.  |
| Usage Guidelines   | -  | nsitive. For example, if you enter   <b>exclude output</b> , the lines that contain <i>output</i> he lines that contain <i>Output</i> are displayed.  |
|                    |  |   |

Table 2-17 describes each field in the display.

| lable 2-17 show boot Field Descriptions | Table 2-17 | show boot Field Descriptions |
|---|------------|------------------------------|
|---|------------|------------------------------|

| Field                         | Description  |
|-------------------------------|--|
| BOOT path-list                | Displays a semicolon separated list of executable files to try to load and execute when automatically booting.   |
|                               | If the BOOT environment variable is not set, the system attempts to load and execute<br>the first executable image it can find by using a recursive, depth-first search through the<br>flash file system. In a depth-first search of a directory, each encountered subdirectory<br>is completely searched before continuing the search in the original directory.  |
|                               | If the BOOT variable is set but the specified images cannot be loaded, the system attempts to boot the first bootable file that it can find in the flash file system.  |
| Config file                   | Displays the filename that Cisco IOS uses to read and write a nonvolatile copy of the system configuration.  |
| Private Config file           | Displays the filename that Cisco IOS uses to read and write a nonvolatile copy of the system configuration.  |
| Enable Break                  | Displays whether a break during booting is enabled or disabled. If it is set to yes, on, or 1, you can interrupt the automatic boot process by pressing the Break key on the console after the flash file system is initialized.   |
| Manual Boot                   | Displays whether the switch automatically or manually boots. If it is set to no or 0, the boot loader attempts to automatically boot up the system. If it is set to anything else, you must manually boot up the switch from the boot loader mode.   |
| Helper path-list              | Displays a semicolon separated list of loadable files to dynamically load during the boot loader initialization. Helper files extend or patch the functionality of the boot loader.  |
| Auto upgrade                  |  |
|                               | A switch in version-mismatch (VM) mode is a switch that has a different stack protocol version than the version on the switch stack. Switches in VM mode cannot join the switch stack. If the switch stack has an image that can be copied to a switch in VM mode, and if the <b>boot auto-copy-sw</b> feature is enabled, the switch stack automatically copies the image from another stack member to the switch in VM mode. The switch then exits VM mode, reboots, and joins the switch stack. |
| NVRAM/Config file buffer size |  |

| <b>Related Commands</b> | Command                     | Description   |
|-------------------------|-----------------------------|---|
|                         | boot auto-copy-sw           | Enables the automatic upgrade (auto-upgrade) process to automatically upgrade a switch in version-mismatch (VM) mode. |
|                         | boot<br>auto-download-sw    | Specifies the software image to use in the auto-upgrade process.  |
|                         | boot config-file            | Specifies the filename that Cisco IOS uses to read and write a nonvolatile copy of the system configuration.          |
|                         | boot enable-break           | Enables interrupting the automatic boot process.  |
|                         | boot manual                 | Enables manually booting the switch during the next boot cycle.   |
|                         | boot<br>private-config-file | Specifies the filename that Cisco IOS uses to read and write a nonvolatile copy of the private configuration.         |
|                         | boot system                 | Specifies the Cisco IOS image to load during the next boot cycle.   |

# show cable-diagnostics tdr

Use the **show cable-diagnostics tdr** privileged EXEC command to display the Time Domain Reflector (TDR) results.

**show cable-diagnostics tdr interface** *interface-id* [ | {**begin** | **exclude** | **include**} *expression*]

It is not supported on 10-Gigs ports and small form-factor pluggable (SFP) module ports. For more information about TI software configuration guide for this release.         Expressions are case sensitive. For example, if you enter   exclude output, the lines that cord on tappear, but the lines that contain Output appear.         This is an example of output from the show cable-diagnostics tdr interface interface-id of Switch# show cable-diagnostics tdr interface gigabitethernet0/2         TR test last run on: March 01 00:04:08         Interface Speed Local pair Pair length       Remote pair Pair status         Gil/0/2       1000M Pair A 1 +/- 1 meters Pair A Normal Pair C 1 +/- 1 meters Pair C Normal Pair C 1 +/- 1 meters Pair C Normal Pair D 1 +/- 1 meters Pair D Normal         Table 2-18       Fields Descriptions for the show cable-diagnostics tdr command Output |

| Field Description          |   |
|----------------------------|---|
| Interface                  | Interface on which TDR was run.                                       |
| Speed Speed of connection. |   |
| Local pair                 | Name of the pair of wires that TDR is testing on the local interface. |

| Field       | Description   |  |  |  |
|-------------|---|--|--|--|
| Pair length | Location on the cable where the problem is, with respect to your switch. TDR can only find the location in one of these cases:                                    |  |  |  |
|             | • The cable is properly connected, the link is up, and the interface speed is 1000 Mb/s.  |  |  |  |
|             | • The cable is open.  |  |  |  |
|             | • The cable has a short.  |  |  |  |
| Remote pair | Name of the pair of wires to which the local pair is connected. TDR can learn about the remote pair only when the cable is properly connected and the link is up. |  |  |  |
| Pair status | The status of the pair of wires on which TDR is running:  |  |  |  |
|             | • Normal—The pair of wires is properly connected.   |  |  |  |
|             | • Not completed—The test is running and is not completed.   |  |  |  |
|             | • Not supported—The interface does not support TDR.   |  |  |  |
|             | • Open—The pair of wires is open.   |  |  |  |
|             | • Shorted—The pair of wires is shorted.   |  |  |  |
|             | • ImpedanceMis—The impedance is mismatched.   |  |  |  |
|             | • Short/Impedance Mismatched—The impedance mismatched or the cable is short.  |  |  |  |
|             | • InProgress—The diagnostic test is in progress   |  |  |  |

| Table 2-18 Fields Descriptions for the show cable-diagnostics tdr Command Output (contin |
|--|
|--|

This is an example of output from the show interface interface-id command when TDR is running:

```
Switch# show interface gigabitethernet1/0/2 gigabitethernet1/0/2 is up, line protocol is up (connected: TDR in Progress)
```

This is an example of output from the **show cable-diagnostics tdr interface** *interface-id* command when TDR is not running:

Switch# show cable-diagnostics tdr interface gigabitethernet1/0/2 % TDR test was never issued on Gi1/0/2

If an interface does not support TDR, this message appears:

% TDR test is not supported on switch 1

CommandDescriptiontest cable-diagnostics tdrEnables and runs TDR on an interface.

# show class-map

Use the **show class-map** user EXEC command to display quality of service (QoS) class maps, which define the match criteria to classify traffic.

show class-map [class-map-name] [ | {begin | exclude | include} expression]

| Syntax Description | class-map-name  | (Optional) Display the contents of the specified class map.                  |  |  |  |
|--------------------|---|--|--|--|--|
|                    | begin   | (Optional) Display begins with the line that matches the <i>expression</i> . |  |  |  |
|                    | exclude   | (Optional) Display excludes lines that match the <i>expression</i> .         |  |  |  |
|                    | <b>include</b> (Optional) Display includes lines that match the specified <i>expression</i> .                                       |  |  |  |  |
|                    | expression  | Expression in the output to use as a reference point.                        |  |  |  |
| Command Modes      | User EXEC   |  |  |  |  |
| Command History    | Release   | Modification   |  |  |  |
|                    | 12.2(40)EX1   | This command was introduced.   |  |  |  |
| Examples           | This is an anomala  | of output from the show along man commands                                   |  |  |  |

| <b>Related Commands</b> | Command                                 | Description  |
|-------------------------|---|--|
|                         | show controllers<br>ethernet-controller | Displays per-interface send and receive statistics read from the hardware or the interface internal registers. |
|                         | show interfaces                         | Displays the administrative and operational status of all interfaces or a specified interface.                 |

# show controllers ethernet-controller

Use the **show controllers ethernet-controller** privileged EXEC command without keywords to display per-interface send and receive statistics read from the hardware. Use with the **phy** keyword to display the interface internal registers or the **port-asic** keyword to display information about the port ASIC.

show controllers ethernet-controller [interface-id] [phy [detail]] [port-asic {configuration |
 statistics}] [ | {begin | exclude | include} expression]

| Syntax Description | interface-id  | The physical interface (including type, stack member, module, and port number).  |  |  |  |
|--------------------|---|--|--|--|--|
|                    | phy   | (Optional) Display the status of the internal registers on the switch physical layer<br>device (PHY) for the device or the interface. This display includes the operational<br>state of the automatic medium-dependent interface crossover (auto-MDIX)<br>feature on an interface. |  |  |  |
|                    | detail  | (Optional) Display details about the PHY internal registers.   |  |  |  |
|                    | port-asic   | (Optional) Display information about the port ASIC internal registers.   |  |  |  |
|                    | configuration   | Display port ASIC internal register configuration.   |  |  |  |
|                    | statistics  | Display port ASIC statistics, including the Rx/Sup Queue and miscellaneous statistics.   |  |  |  |
|                    | begin   | (Optional) Display begins with the line that matches the <i>expression</i> .   |  |  |  |
|                    | <b>l exclude</b> (Optional) Display excludes lines that match the <i>expression</i> .   |  |  |  |  |
|                    | include   | (Optional) Display includes lines that match the specified expression.   |  |  |  |
|                    | <i>expression</i> Expression in the output to use as a reference point.   |  |  |  |  |
| Command Modes      | Privileged EXEC (only supported with the <i>interface-id</i> keywords in user EXEC mode)  |  |  |  |  |
| Command History    | Release   | Modification   |  |  |  |
|                    | 12.2(40)EX1   | This command was introduced.   |  |  |  |
| Usage Guidelines   | This display without keywords provides traffic statistics, basically the RMON statistics for all interfaces or for the specified interface.                                       |  |  |  |  |
|                    | When you enter the <b>phy</b> or <b>port-asic</b> keywords, the displayed information is useful primarily for Cisco technical support representatives troubleshooting the switch. |  |  |  |  |
|                    | -   | ase sensitive. For example, if you enter l <b>exclude output</b> , the lines that contain <i>output</i> but the lines that contain <i>Output</i> are displayed.  |  |  |  |

### Examples

This is an example of output from the **show controllers ethernet-controller** command for an interface. Table 2-19 describes the *Transmit* fields, and Table 2-20 describes the *Receive* fields.

### Switch# show controllers ethernet-controller gigabitethernet6/0/1

| Switch# show controllers ethernet-control |                             |
|---|-----------------------------|
| Transmit GigabitEthernet6/0/1             | Receive                     |

| 0 1518 byte frames                        | 0 RxPortFifoFull drop frame |
| 0 Too large frames                        |                             |
| 0 Good (1 coll) frames                    |                             |
|   |                             |

### Table 2-19Transmit Field Descriptions

| Field  | Description   |  |
|--|---|--|
| Bytes  | The total number of bytes sent on an interface.   |  |
| Unicast Frames   | The total number of frames sent to unicast addresses.   |  |
| Multicast frames   | t frames The total number of frames sent to multicast addresses.                              |  |
| Broadcast frames   | The total number of frames sent to broadcast addresses.                                       |  |
| Too old frames   | The number of frames dropped on the egress port because the packet aged out.                  |  |
| Deferred frames  | The number of frames that are not sent after the time exceeds 2*maximum-packet time.          |  |
| MTU exceeded frames  | The number of frames that are larger than the maximum allowed frame size.                     |  |
| 1 collision frames   | The number of frames that are successfully sent on an interface after one collision occurs.   |  |
| 2 collision frames   | The number of frames that are successfully sent on an interface after two collisions occur.   |  |
| 3 collision frames   | The number of frames that are successfully sent on an interface after three collisions occur. |  |
| 4 collision frames The number of frames that are successfully sent on an interface after four collisions occur |   |  |

| Field                | Description   |
|----------------------|---|
| 5 collision frames   | The number of frames that are successfully sent on an interface after five collisions occur.  |
| 6 collision frames   | The number of frames that are successfully sent on an interface after six collisions occur.   |
| 7 collision frames   | The number of frames that are successfully sent on an interface after seven collisions occur.   |
| 8 collision frames   | The number of frames that are successfully sent on an interface after eight collisions occur.   |
| 9 collision frames   | The number of frames that are successfully sent on an interface after nine collisions occur.  |
| 10 collision frames  | The number of frames that are successfully sent on an interface after ten collisions occur.   |
| 11 collision frames  | The number of frames that are successfully sent on an interface after 11 collisions occur.  |
| 12 collision frames  | The number of frames that are successfully sent on an interface after 12 collisions occur.  |
| 13 collision frames  | The number of frames that are successfully sent on an interface after 13 collisions occur.  |
| 14 collision frames  | The number of frames that are successfully sent on an interface after 14 collisions occur.  |
| 15 collision frames  | The number of frames that are successfully sent on an interface after 15 collisions occur.  |
| Excessive collisions | The number of frames that could not be sent on an interface after 16 collisions occur.  |
| Late collisions      | After a frame is sent, the number of frames dropped because late collisions were detected while the frame was sent.   |
| VLAN discard frames  | The number of frames dropped on an interface because the CFI <sup>1</sup> bit is set.   |
| Excess defer frames  | The number of frames that are not sent after the time exceeds the maximum-packet time.  |
| 64 byte frames       | The total number of frames sent on an interface that are 64 bytes.  |
| 127 byte frames      | The total number of frames sent on an interface that are from 65 to 127 bytes.  |
| 255 byte frames      | The total number of frames sent on an interface that are from 128 to 255 bytes.   |
| 511 byte frames      | The total number of frames sent on an interface that are from 256 to 511 bytes.   |
| 1023 byte frames     | The total number of frames sent on an interface that are from 512 to 1023 bytes.  |
| 1518 byte frames     | The total number of frames sent on an interface that are from 1024 to 1518 bytes.   |
| Too large frames     | The number of frames sent on an interface that are larger than the maximum allowed frame size.  |
| Good (1 coll) frames | The number of frames that are successfully sent on an interface after one collision occurs. This value does not include the number of frames that are not successfully sent after one collision occurs. |

| <i>Table 2-19 Transmit Field Descriptions (continued)</i> | Table 2-19 | Transmit Field Descriptions (co | ontinued) |
|---|------------|---------------------------------|-----------|
|---|------------|---------------------------------|-----------|

1. CFI = Canonical Format Indicator

### Table 2-20 Receive Field Descriptions

| Field            | Description  |
|------------------|--|
| Bytes            | The total amount of memory (in bytes) used by frames received on an interface, including the $FCS^1$ value and the incorrectly formed frames. This value excludes the frame header bits. |
| Unicast frames   | The total number of frames successfully received on the interface that are directed to unicast addresses.  |
| Multicast frames | The total number of frames successfully received on the interface that are directed to multicast addresses.  |
| Broadcast frames | The total number of frames successfully received on an interface that are directed to broadcast addresses.   |

| Field                     | Description  |
|---------------------------|--|
| Unicast bytes             | The total amount of memory (in bytes) used by unicast frames received on an interface, including the FCS value and the incorrectly formed frames. This value excludes the frame header bits.                               |
| Multicast bytes           | The total amount of memory (in bytes) used by multicast frames received on an interface, including the FCS value and the incorrectly formed frames. This value excludes the frame header bits.                             |
| Broadcast bytes           | The total amount of memory (in bytes) used by broadcast frames received on an interface, including the FCS value and the incorrectly formed frames. This value excludes the frame header bits.                             |
| Alignment errors          | The total number of frames received on an interface that have alignment errors.  |
| FCS errors                | The total number of frames received on an interface that have a valid length (in bytes) but do not have the correct FCS values.  |
| Oversize frames           | The number of frames received on an interface that are larger than the maximum allowed frame size.   |
| Undersize frames          | The number of frames received on an interface that are smaller than 64 bytes.  |
| Collision fragments       | The number of collision fragments received on an interface.  |
| Minimum size frames       | The total number of frames that are the minimum frame size.  |
| 65 to 127 byte frames     | The total number of frames that are from 65 to 127 bytes.  |
| 128 to 255 byte frames    | The total number of frames that are from 128 to 255 bytes.   |
| 256 to 511 byte frames    | The total number of frames that are from 256 to 511 bytes.   |
| 512 to 1023 byte frames   | The total number of frames that are from 512 to 1023 bytes.  |
| 1024 to 1518 byte frames  | The total number of frames that are from 1024 to 1518 bytes.   |
| Overrun frames            | The total number of overrun frames received on an interface.   |
| Pause frames              | The number of pause frames received on an interface.   |
| Symbol error frames       | The number of frames received on an interface that have symbol errors.   |
| Invalid frames, too large | The number of frames received that were larger than maximum allowed $MTU^2$ size (including the FCS bits and excluding the frame header) and that have either an FCS error or an alignment error.                          |
| Valid frames, too large   | The number of frames received on an interface that are larger than the maximum allowed frame size.   |
| Invalid frames, too small | The number of frames received that are smaller than 64 bytes (including the FCS bits and excluding the frame header) and that have either an FCS error or an alignment error.  |
| Valid frames, too small   | The number of frames received on an interface that are smaller than 64 bytes (or 68 bytes for VLAN-tagged frames) and that have valid FCS values. The frame size includes the FCS bits but excludes the frame header bits. |
| Too old frames            | The number of frames dropped on the ingress port because the packet aged out.  |
| Valid oversize frames     | The number of frames received on an interface that are larger than the maximum allowed frame size and have valid FCS values. The frame size includes the FCS value but does not include the VLAN tag.                      |

### Table 2-20 Receive Field Descriptions (continued)

| Field                         | Description  |
|-------------------------------|--|
| System FCS error frames       | The total number of frames received on an interface that have a valid length (in bytes) but that do not have the correct FCS values. |
| RxPortFifoFull drop<br>frames | The total number of frames received on an interface that are dropped because the ingress queue is full.                              |

#### Table 2-20 Receive Field Descriptions (continued)

1. FCS = frame check sequence

2. MTU = maximum transmission unit

This is an example of output from the **show controllers ethernet-controller phy** command for a specific interface:

### show controllers ethernet-controller fastethernet

Use the **show controllers ethernet-controller fastethernet** privileged EXEC command to display information about the Ethernet management port, including the port status and the per-interface send and receive statistics read from the hardware.

show controllers ethernet-controller fastethernet 0 [phy [detail] | stack] [ | {begin | exclude |
include} expression]

| Syntax Description | phy [detail] | (Optional) Display the status of the internal registers on the switch physical layer<br>device (PHY) for the Ethernet management port on the switch when the command<br>is entered on a switch. Display the status of the internal registers on the switch<br>PHYs for all the Ethernet management ports in the switch stack when the<br>command is entered on a stack master or member. |
|--------------------|--------------|--|
|                    |              | Use the detail keyword to display details about the PHY internal registers.  |
|                    |              | This display includes the operational state of the automatic medium-dependent interface crossover (auto-MDIX) feature on an interface.   |
|                    | stack        | (Optional) Display the speed, duplex mode, and link states of the Ethernet<br>management ports in the switch stack when the command is entered on a stack<br>master or member.   |
|                    | begin        | (Optional) Display begins with the line that matches the <i>expression</i> .   |
|                    | exclude      | (Optional) Display excludes lines that match the <i>expression</i> .   |
|                    | include      | (Optional) Display includes lines that match the specified expression.   |
|                    | expression   | Expression in the output to use as a reference point.  |

**Command Modes** Privileged EXEC (only supported with the **fastethernet 0** keywords in user EXEC mode)

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | 12.2(40)EX1 | This command was introduced. |

**Usage Guidelines** The output display provides information that might be useful for Cisco technical support representatives troubleshooting the switch.

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

## show controllers tcam

Use the **show controllers tcam** privileged EXEC command to display the state of the registers for all hardware memory in the system and for all hardware interface ASICs that are content-addressable memory-controllers.

show controllers tcam [asic [number]] [detail] [ | {begin | exclude | include} expression]

| Syntax Description | asic            | (Optional) Display port ASIC hardware information.  |
|--------------------|-----------------|---|
|                    | number          | (Optional) Display information for the specified port ASIC number. The range is from 0 to 15. |
|                    | detail          | (Optional) Display detailed hardware register information.                                    |
|                    | begin           | (Optional) Display begins with the line that matches the <i>expression</i> .                  |
|                    | exclude         | (Optional) Display excludes lines that match the expression.                                  |
|                    | include         | (Optional) Display includes lines that match the specified expression.                        |
| Command Modes      | expression      | Expression in the output to use as a reference point.   |
|                    | Privileged EXEC |   |
|                    |                 |   |
| Command History    | Release         | Modification  |

**Usage Guidelines** This display provides information that might be useful for Cisco technical support representatives troubleshooting the switch.

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

### show diagnostic

Use the **show diagnostic** user EXEC command to display the online diagnostic test results and the supported test suites.

show diagnostic content switch [number | all] [ | {begin | exclude | include} expression]

show diagnostic post [ |{begin | exclude | include} expression]

show diagnostic result switch [number | all] [detail | test {name | test-id | test-id-range | all}
[detail]] [ | {begin | exclude | include} expression]

show diagnostic schedule switch [number | all] [ | {begin | exclude | include} expression]

show diagnostic status [ | {begin | exclude | include} expression]

show diagnostic switch [number | all] [detail] [ | {begin | exclude | include} expression]

| Syntax Description | content               | Display test information including the test ID, the test attributes, and the supported coverage test levels for specific tests and for switches.  |
|--------------------|-----------------------|---|
|                    | switch [number   all] | When entering the <b>content</b> , <b>result</b> , <b>schedule</b> , and <b>switch</b> keywords, you can specify the switches by using one of these options.  |
|                    |                       | • (Optional) Use the <i>number</i> parameter to display test information for a specific switch. The switch number is the stack member. If the switch is a standalone switch, the switch number is 1. If the switch is a stack master or a stack member, the range is 1 to 9, depending on the switch member numbers in the stack. |
|                    |                       | • (Optional) Use the <b>all</b> keyword to display all the test information for the switch or the switch stack.   |
|                    |                       | <i>number</i> and <b>all</b> options are supported only on stacking-capable switches.   |
|                    |                       | Use the <b>show diagnostic switch</b> [ <i>number</i>   <b>all</b> ] command to display the diagnostic test results for the switch or the switch stack. For information about this parameter and the <b>result</b> keyword, see the "Usage Guidelines" section.   |
|                    | post                  | Display the power-on self-test (POST) results.  |
|                    | result                | Display the diagnostic test results.  |
|                    | detail                | (Optional) Display the detailed test results.   |
|                    | test                  | (Optional) Specify the test results to display:   |
|                    |                       | • <i>name</i> —Enter the name of the diagnostic test to display results only for this test.   |
|                    |                       | • <i>test-id</i> —Enter the test ID number to display results only for this test.   |
|                    |                       | • <i>test-id-range</i> —Enter the range of test ID numbers to display results only for these tests.   |
|                    |                       | • <b>all</b> —Enter this keyword to display results for all the tests.  |
|                    | schedule              | Display the scheduled diagnostic tests.   |

|                 | status   | Display the running diagnostic tests.   |
|-----------------|--|---|
|                 | begin  | (Optional) Display begins with the line that matches the expression.  |
|                 | exclude  | (Optional) Display excludes lines that match the expression.  |
|                 | include  | (Optional) Display includes lines that match the specified expression.  |
|                 | expression   | Expression in the output to use as a reference point.   |
|                 |  |   |
| Defaults        | This command I   | has no default setting.   |
| Command Modes   | User EXEC  |   |
| Command History | Release  | Modification  |
|                 | 12.2(40)EX1  | This command was introduced.  |
|                 | <ul> <li>In switch stacks, if you do not enter the switch <i>number</i> parameter with the content, result, schedule, and switch keywords, information for all stack members is displayed.</li> <li>show diagnostic result switch [number   all] [detail] command output is the same as the show diagnostic switch [number   all] [detail] command output.</li> <li>show diagnostic result [detail] command output is the same as the show diagnostic switch [detail]</li> </ul> |   |
|                 | -  | at.<br>case sensitive. For example, if you enter   <b>exclude output</b> , the lines that contain <i>output</i><br>but the lines that contain <i>Output</i> appear.   |
| Examples        | This example sh  | nows how to display the online diagnostics that are configured on all the switches in a stack   |

<output truncated>

This example shows how to display the online diagnostic test schedule for a nonstacking-capable switch:

```
Switch> show diagnostic schedule
Current Time = 14:39:49 PST Tue Jul 5 2005
Diagnostic for Switch 1:
Schedule #1:
To be run daily 12:00
Test ID(s) to be executed: 1.
```

This example shows how to display the detailed switch results for all the switches in stack. You can also use the **show diagnostic result switch all detail** command to display these results.

```
Switch> show diagnostic switch all detail
Switch 1: SerialNo : CAT1007R044
Overall diagnostic result: PASS
Test results: (. = Pass, F = Fail, U = Untested)
```

1) TestPortAsicStackPortLoopback ---> .

```
Error code -----> 0 (DIAG_SUCCESS)
Total run count -----> 19

### **Related Commands**

| Command             | Description  |
|---------------------|--|
| diagnostic monitor  | Configures teh health-monitoring diagnostic test.            |
| diagnostic schedule | Sets the scheduling of test-based online diagnostic testing. |
| diagnostic start    | Starts the online diagnostic test.                           |

# show dot1q-tunnel

Use the **show dot1q-tunnel** user EXEC command to display information about IEEE 802.1Q tunnel ports.

show dot1q-tunnel [interface interface-id] [ | {begin | exclude | include} expression]

| Syntax Description | interface interface-id  | (Optional) Specify the interface for which to display IEEE 802.1Q tunneling information. Valid interfaces include physical ports and port channels. |  |
|--------------------|---|---|--|
|                    | begin   | (Optional) Display begins with the line that matches the <i>expression</i> .  |  |
|                    | exclude   | (Optional) Display excludes lines that match the <i>expression</i> .  |  |
|                    | include   | (Optional) Display includes lines that match the specified <i>expression</i> .  |  |
|                    | expression  | Expression in the output to use as a reference point.   |  |
| Command Modes      | User EXEC   |   |  |
| Command History    | Release   | Modification  |  |
|                    | 12.2(40)EX1   | This command was introduced.  |  |

### show dot1x

L

Use the **show dot1x** user EXEC command to display IEEE 802.1x statistics, administrative status, and operational status for the switch or for the specified port.

show dot1x [{all [summary] | interface interface-id} [details | statistics]] [ | {begin | exclude |
include} expression]

| Syntax Description | all [summary]          | (Optional) Display the IEEE 802.1x status for all ports.  |
|--------------------|------------------------|---|
|                    | interface interface-id | (Optional) Display the IEEE 802.1x status for the specified port (including type, stack member, module, and port number). |
|                    | details                | (Optional) Display the IEEE 802.1x interface details.   |
|                    | statistics             | (Optional) Display IEEE 802.1x statistics for the specified port.   |
|                    | begin                  | (Optional) Display begins with the line that matches the <i>expression</i> .  |
|                    | exclude                | (Optional) Display excludes lines that match the <i>expression</i> .  |
|                    | include                | (Optional) Display includes lines that match the specified <i>expression</i> .  |
|                    | expression             | Expression in the output to use as a reference point.   |

Command Modes User EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | 12.2(40)EX1 | This command was introduced. |

**Usage Guidelines** If you do not specify a port, global parameters and a summary appear. If you specify a port, details for that port appear.

If the port control is configured as unidirectional or bidirectional control and this setting conflicts with the switch configuration, the **show dot1x** {**all** | **interface** *interface-id*} privileged EXEC command output has this information:

ControlDirection = In (Inactive)

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain *output* are not displayed, but the lines that contain *Output* appear.

#### **Examples**

This is an example of output from the **show dot1x** user EXEC command:

| Switch> <b>show dot1x</b> |          |
|---------------------------|----------|
| Sysauthcontrol            | Enabled  |
| Dot1x Protocol Version    | 2        |
| Critical Recovery Delay   | 100      |
| Critical EAPOL            | Disabled |

This is an example of output from the show dot1x all user EXEC command:

Switch> show dot1x all

| Sysauthcontrol<br>Dot1x Protocol Version<br>Critical Recovery Delay<br>Critical EAPOL | Enabled<br>2<br>100<br>Disabled |
|---|---------------------------------|
| Dot1x Info for GigabitEthe  | ernet1/0/1                      |
| PAE   | = AUTHENTICATOR                 |
| PortControl   | = AUTO                          |
| ControlDirection  | = Both                          |
| HostMode  | = SINGLE_HOST                   |
| ReAuthentication  | = Disabled                      |
| QuietPeriod   | = 60                            |
| ServerTimeout   | = 30                            |
| SuppTimeout   | = 30                            |
| ReAuthPeriod  | = 3600 (Locally configured)     |
| ReAuthMax   | = 2                             |
| MaxReq  | = 2                             |
| TxPeriod  | = 30                            |
| RateLimitPeriod   | = 0                             |
|   |                                 |

<output truncated>

This is an example of output from the **show dot1x all summary** user EXEC command:

| Switch> <b>show do</b> | t1x all | <b>summary</b> | Status       |
|------------------------|---------|----------------|--------------|
| Interface              | PAE     | Client         |              |
| Gi2/0/1                | AUTH    | none           | UNAUTHORIZED |
| Gi2/0/2                | AUTH    | 00a0.c9b8.0072 | AUTHORIZED   |
| Gi2/0/3                | AUTH    | none           | UNAUTHORIZED |

This is an example of output from the **show dot1x interface** *interface-id* user EXEC command:

| Dot1x Info for GigabitEthernet1/0/2 |                             |  |
|-------------------------------------|-----------------------------|--|
|                                     |                             |  |
| PAE                                 | = AUTHENTICATOR             |  |

CommandDescriptionshow interfaces trunkDisplays interface trunking information.

### show eap

Use the **show eap** privileged EXEC command to display Extensible Authentication Protocol (EAP) registration and session information for the switch or for the specified port.

show eap {{registrations [method [name] | transport [name]]} | {sessions [credentials name
[interface interface-id] | interface interface-id | method name | transport name]}}
[credentials name | interface interface-id | transport name] [ | {begin | exclude | include}
expression]

| Syntax Description | registrations   | Display EAP registration information.  |  |  |  |  |
|--------------------|---|--|--|--|--|--|
|                    | method name   | (Optional) Display EAP method registration information.  |  |  |  |  |
|                    | transport name  | (Optional) Display EAP transport registration information.   |  |  |  |  |
|                    | sessions  | Display EAP session information.   |  |  |  |  |
|                    | credentials name  |  |  |  |  |  |
|                    | interface interface-id  | (Optional) Display the EAP information for the specified port (including type, stack member, module, and port number). |  |  |  |  |
|                    | <b>begin</b> (Optional) Display begins with the line that matches the <i>expression</i> .   |  |  |  |  |  |
|                    | exclude   | (Optional) Display excludes lines that match the <i>expression</i> .   |  |  |  |  |
|                    | include   | (Optional) Display includes lines that match the specified expression.   |  |  |  |  |
|                    | expression  | Expression in the output to use as a reference point.  |  |  |  |  |
| Command Modes      | Privileged EXEC   |  |  |  |  |  |
| Command History    | Release   | Modification   |  |  |  |  |
|                    | 12.2(40)EX1   | This command was introduced.   |  |  |  |  |
| Usage Guidelines   | When you use the <b>show eap registrations</b> privileged EXEC command with these keywords, the                                   |  |  |  |  |  |
|                    | command output shows this information:  |  |  |  |  |  |
|                    | • None—All the lower levels used by EAP and the registered EAP methods.   |  |  |  |  |  |
|                    | • <b>method</b> <i>name</i> keyword—The specified method registrations.   |  |  |  |  |  |
|                    | • <b>transport</b> <i>name</i> keyword—The specific lower-level registrations.  |  |  |  |  |  |
|                    | When you use the <b>show eap sessions</b> privileged EXEC command with these keywords, the command output shows this information: |  |  |  |  |  |
|                    | • None—All active EAP sessions.   |  |  |  |  |  |
|                    | • credentials <i>name</i> keyword—The specified credentials profile.  |  |  |  |  |  |
|                    | • interface interface   | <i>-id</i> keyword—The parameters for the specified interface.   |  |  |  |  |
|                    | • <b>method</b> <i>name</i> keyv  | word—The specified EAP method.   |  |  |  |  |
|                    | • <b>transport</b> <i>name</i> ke   | wword—The specified lower layer.   |  |  |  |  |
|                    |   |  |  |  |  |  |

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain *output* are not displayed, but the lines that contain *Output* appear.

### **Examples**

This is an example of output from the **show eap registrations** privileged EXEC command:

| Switch> <b>s</b> | how eap registra | tions               |
|------------------|------------------|---------------------|
| Registere        | d EAP Methods:   |                     |
| Method           | Туре             | Name                |
| 4                | Peer             | MD5                 |
|                  |                  |                     |
| Registere        | d EAP Lower Laye | rs:                 |
| Handle           | Туре             | Name                |
| 2                | Authenticator    | Dot1x-Authenticator |
| 1                | Authenticator    | MAB                 |

This is an example of output from the **show eap registrations transport** privileged user EXEC command:

```
Switch> show eap registrations transport all
Registered EAP Lower Layers:
Handle Type Name
2 Authenticator Dot1x-Authenticator
1 Authenticator MAB
```

#### This is an example of output from the show eap sessions privileged EXEC command:

| Switch> show eap sessions |                  |                          |               |  |
|---------------------------|------------------|--------------------------|---------------|--|

| <b>Related Commands</b> | Command   | Description  |  |
|-------------------------|-----------|--|--|
|                         | clear eap | Clears EAP session information for the switch or for the specified port. |  |

### show env

Use the **show env** user EXEC command to display fan, temperature, and power information for the switch or the switch stack.

show env {all | | stack [switch-number] | temperature [status]} [ | {begin | exclude | include}
expression]

| Syntax Description | all                      | Display the fan and temperature environmental status and the status of the internal power supplies.  |
|--------------------|--------------------------|--|
|                    | stack<br>[switch-number] | Display all environmental status for each switch in the stack or for the specified switch. The range is 1 to 9, depending on the switch member numbers in the stack. |
|                    | temperature              | Display the switch temperature status.   |
|                    | temperature              | (Optional) Display the switch internal temperature (not the external temperature)  |
|                    | status                   | and the threshold values.  |
|                    | begin                    | (Optional) Display begins with the line that matches the <i>expression</i> .   |
|                    | exclude                  | (Optional) Display excludes lines that match the <i>expression</i> .   |
|                    | include                  | (Optional) Display includes lines that match the specified <i>expression</i> .   |
|                    | expression               | Expression in the output to use as a reference point.  |
|                    |                          |  |

Though visible in the command-line help strings, the **rps** keyword is not supported.

| User EXEC |
|-----------|
|           |

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | 12.2(40)EX1 | This command was introduced. |

**Usage Guidelines** show env user EXEC command to display the information for the switch being accessed—a standalone switch or the stack master. Use this command with the **stack** and **switch** keywords to display all information for the stack or for the specified stack member.

If you enter the **show env temperature status** command, the command output shows the switch temperature state and the threshold level.

You can also use the **show env temperature** command to display the switch temperature status. The command output shows the green and yellow states as *OK* and the red state as *FAULTY*. If you enter the **show env all** command, the command output is the same as the **show env temperature status** command output.

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain *output* are not displayed, but the lines that contain *Output* are displayed.

### **Examples**

This is an example of output from the **show env all** command on a standalone switch:

Switch> show env all

This is an example of output from the show env stack command:

Switch> **show env stack** SWITCH: 1 FAN is OK TEMPERATURE is OK Temperature Value: 33 Degree Celsius Temperature State: GREEN Yellow Threshold : 65 Degree Celsius Red Threshold : 75 Degree Celsius POWER is OK RPS is AVAILABLE

<output truncated>

This example shows how to display information about stack member 3 from the master switch:

Switch> **show env stack 3** SWITCH: 3 FAN is OK TEMPERATURE is OK Temperature Value: 33 Degree Celsius Temperature State: GREEN Yellow Threshold : 65 Degree Celsius Red Threshold : 75 Degree Celsius POWER is OK RPS is AVAILABLE

This example shows how to display the temperature value, state, and the threshold values on a standalone switch. Table 2-23 describes the temperature states in the command output.

Switch> show env temperature status

#### Table 2-23States in the show env temperature status Command Output

| State  | Description   |
|--------|---|
| Green  | The switch temperature is in the <i>normal</i> operating range.   |
| Yellow | The temperature is in the <i>warning</i> range. You should check the external temperature around the switch.            |
| Red    | The temperature is in the <i>critical</i> range. The switch might not run properly if the temperature is in this range. |

## show errdisable detect

Use the **show errdisable detect** user EXEC command to display error-disabled detection status.

show errdisable detect [ | {begin | exclude | include} expression]

| Syntax Description | begin  | (Optional) Display begins with the line that matches the <i>expression</i> .   |
|--------------------|--|--|
| of max booonphon   | exclude  | (Optional) Display excludes lines that match the <i>expression</i> .   |
|                    |  |  |
|                    | include  | (Optional) Display includes lines that match the specified <i>expression</i> .   |
|                    | expression   | Expression in the output to use as a reference point.  |
| Command Modes      | User EXEC  |  |

## show errdisable recovery

Use the **show errdisable recovery** user EXEC command to display the error-disabled recovery timer information.

show errdisable recovery [ | {begin | exclude | include} expression]

| Syntax Description | begin ()  | Optional) Display begins with the line that matches the <i>expression</i> .       |  |
|--------------------|---|---|--|
|                    |   | Optional) Display excludes lines that match the <i>expression</i> .               |  |
|                    |   | Optional) Display includes lines that match the specified <i>expression</i> .     |  |
|                    |   |   |  |
|                    | <i>expression</i> E   | Expression in the output to use as a reference point.                             |  |
| Command Modes      | User EXEC   |   |  |
| Command History    | Release   | Modification  |  |
|                    | 12.2(40)EX1   | This command was introduced.  |  |
| Usage Guidelines   | A gbic-invalid er interface.  | rror-disable reason refers to an invalid small form-factor pluggable (SFP) module |  |
|                    | Expressions are case sensitive. For example, if you enter   <b>exclude output</b> , the lines that contain <i>output</i> are not displayed, but the lines that contain <i>Output</i> are displayed. |   |  |
| Examples           | This is an examp  | ble of output from the show errdisable recovery command:                          |  |
|                    | ErrDisable Reas   |   |  |
|                    | udld  | Disabled  |  |
|                    | bpduguard   | Disabled  |  |
|                    | security-violat   |   |  |
|                    | channel-misconf   |   |  |
|                    | vmps  | Disabled  |  |
|                    | pagp-flap   | Disabled  |  |
|                    | dtp-flap  | Disabled  |  |
|                    | link-flap   | Enabled   |  |
|                    | 12ptguard   | Disabled  |  |
|                    | psecure-violati   | ion Disabled  |  |
|                    | gbic-invalid  | Disabled  |  |
|                    | dhcp-rate-limit   |   |  |
|                    | unicast-flood   | Disabled  |  |
|                    | storm-control   | Disabled  |  |
|                    | arp-inspection  | Disabled  |  |
|                    | loopback  | Disabled  |  |
|                    | Timer interval:   | :300 seconds  |  |

Interfaces that will be enabled at the next timeout: Interface Errdisable reason Time left(sec) Gil/0/2 link-flap 279

Though visible in the output, the unicast-flood field is not valid.

### **Related Commands**

| Command                     | Description  |

# show fallback profile

Use the **show fallback profile** privileged EXEC command to display the fallback profiles that are configured on a switch.

show fallback profile [append | begin | exclude | include | {[redirect | tee] url} expression]

| Syntax Description | append  | (Optional) Append redirected output to a specified URL                       |  |  |
|--------------------|---|--|--|--|
|                    | begin   | (Optional) Display begins with the line that matches the <i>expression</i> . |  |  |
|                    | exclude   | (Optional) Display excludes lines that match the <i>expression</i> .         |  |  |
|                    | include   | (Optional) Display includes lines that match the specified expression.       |  |  |
|                    | redirect  | (Optional) Copy output to a specified URL.                                   |  |  |
|                    | l tee   | (Optional) Copy output to a specified URL.                                   |  |  |
|                    | expression  | Expression in the output to use as a reference point.                        |  |  |
|                    | url   | Specified URL where output is directed.                                      |  |  |
|                    |   |  |  |  |

| <b>Related Commands</b> | Command   | Description   |
|-------------------------|---|---|
|                         | dot1x fallback  | Configure a port to use web authentication as a fallback method for clients that do not support IEEE 802.1x authentication. |
|                         | fallback profile  | Create a web authentication fallback profile.   |
|                         | ip admission  | Enable web authentication on a switch port  |
|                         | ip admission name proxy<br>http                               | Enable web authentication globally on a switch  |
|                         | <b>show dot1x</b> [ <b>interface</b><br><i>interface-id</i> ] | Displays IEEE 802.1x status for the specified port.   |

## show flowcontrol

Use the show flowcontrol user EXEC command to display the flow control status and statistics.

show flowcontrol [interface interface-id | module number] [ | {begin | exclude | include}
expression]

| Syntax Description | interface interface-id  | (Optional) Display the flow control status and statistics for a specific interface.                                   |  |
|--------------------|---|---|--|
|                    | module number   | (Optional) Display the flow control status and statistics for all interfaces on the switch or specified stack member. |  |
|                    |   | This option is not available if you have entered a specific interface ID.   |  |
|                    | begin   | (Optional) Display begins with the line that matches the <i>expression</i> .  |  |
|                    | exclude   | (Optional) Display excludes lines that match the expression.  |  |
|                    | include   | (Optional) Display includes lines that match the specified <i>expression</i> .  |  |
|                    | expression  | Expression in the output to use as a reference point.   |  |
|                    |   |   |  |
|                    |   |   |  |
| Command Modes      | User EXEC   |   |  |
|                    | -   |   |  |
| Command History    | Release   | Modification  |  |
|                    | 12.2(40)EX1   | This command was introduced.  |  |
|                    |   |   |  |
| Usage Guidelines   | Use this command to dis   | play the flow control status and statistics on the switch or for a specific interface.                                |  |
|                    | Use the <b>show flowcontrol</b> command to display information about all the switch interfaces. For a standalone switch, the output from the <b>show flowcontrol</b> command is the same as the output from the <b>show flowcontrol module</b> <i>number</i> command. |   |  |
|                    | show nowcontrol mout  | ine number command.   |  |
|                    |   | rol interface interface-id command to display information about a specific  |  |

flowcontrol

**Examples** 

#### Switch> show flowcontrol Port Send FlowControl Receive FlowControl RxPause TxPause admin oper admin oper ----- ------ ------ -------\_\_\_\_\_ Gi2/0/1 Unsupp. Unsupp. off off Gi2/0/2 desired off off off 0 0 0 0 desired off Gi2/0/3 off off 0 0 <output truncated> This is an example of output from the **show flowcontrol interface** interface-id command: Switch> show flowcontrol gigabitethernet2/0/2 Send FlowControl Receive FlowControl RxPause TxPause Port admin oper admin oper \_\_\_\_\_ -----Gi2/0/2 desired off off off 0 0 **Related Commands** Command Description

This is an example of output from the show flowcontrol command.

Sets the receive flow-control state for an interface.

# show idprom

Use the **show idprom** user EXEC command to display the IDPROM information for the specified interface.

show idprom {interface interface-id} [detail] [ | {begin | exclude | include} expression]

| Syntax Description | interface interface-id                              | Display the IDPROM information for the specified interface.  |
|--------------------|---|--|
|                    | detail  | (Optional) Display detailed hexidecimal IDPROM information.  |
|                    | begin   | (Optional) Display begins with the line that matches the <i>expression</i> .   |
|                    | exclude   | (Optional) Display excludes lines that match the <i>expression</i> .   |
|                    | include   | (Optional) Display includes lines that match the specified expression.   |
|                    | expression  | Expression in the output to use as a reference point.  |
| Command Modes      | User EXEC   |  |
| Command History    | Release   | Modification   |
|                    | 12.2(40)EX1   | This command was introduced.   |
| Usage Guidelines   | This command applies of                             | only to 10-Gigabit Ethernet interfaces and to the SFP module interfaces.   |
|                    | -   | nsitive. For example, if you enter   <b>exclude output</b> , the lines that contain <i>output</i> nes that contain <i>Output</i> appear.             |
| Examples           | This is an example of ou<br>the 10-Gigabit Ethernet | atput from the <b>show idprom interface tengigabitethernet1/0/1</b> command for interface.   |

|                         | show controllers    | Displays per-interface send and receive statistics read from the  |  |  |
|                         | ethernet-controller | hardware, interface internal registers, or port ASIC information. |  |  |

### show interfaces

Use the **show interfaces** privileged EXEC command to display the administrative and operational status of all interfaces or a specified interface.

show interfaces [interface-id | vlan vlan-id] [accounting | capabilities [module number] |
 counters | description | etherchannel | flowcontrol | private-vlan mapping | pruning | stats
 | status [err-disabled] | switchport [backup | module number] | transceiver [properties |
 detail] [module number] | transceiver { tengigabitethernet interface-id } | properties | detail
 [module number] | trunk] [ | {begin | exclude | include} expression]

| Syntax Description | interface-id            | (Optional) Valid interfaces include physical ports (including type, stack member , module, and port number) and port channels. The port-channel range is 1 to 48.   |
|--------------------|-------------------------|---|
|                    | vlan vlan-id            | (Optional) VLAN identification. The range is 1 to 4094.   |
|                    | accounting              | (Optional) Display accounting information on the interface, including active protocols and input and output packets and octets.   |
|                    |                         | <b>Note</b> The display shows only packets processed in software; hardware-switched packets do not appear.  |
|                    | capabilities            | (Optional) Display the capabilities of all interfaces or the specified interface, including the features and options that you can configure on the interface. Though visible in the command line help, this option is not available for VLAN IDs. |
|                    | module number           | (Optional) Display <b>capabilities</b> , <b>switchport</b> configuration, or <b>transceiver</b> characteristics (depending on preceding keyword) of all interfaces on the switch or specified stack member.                                       |
|                    |                         | This option is not available if you entered a specific interface ID.  |
|                    | counters                | (Optional) See the <b>show interfaces counters</b> command.   |
|                    | description             | (Optional) Display the administrative status and description set for an interface.  |
|                    | etherchannel            | (Optional) Display interface EtherChannel information.  |
|                    | flowcontrol             | (Optional) Display interface flowcontrol information  |
|                    | private-vlan<br>mapping | (Optional) Display private-VLAN mapping information for the VLAN switch virtual interfaces (SVIs). This keyword is available only if your switch is running the IP services feature set.  |
|                    | pruning                 | (Optional) Display interface trunk VTP pruning information.   |
|                    | stats                   | (Optional) Display the input and output packets by switching path for the interface.  |
|                    | status                  | (Optional) Display the status of the interface. A status of <i>unsupported</i> in the Type field means that a non-Cisco small form-factor pluggable (SFP) module is inserted in the module slot.  |
|                    | err-disabled            | (Optional) Display interfaces in error-disabled state.  |
|                    | switchport              | (Optional) Display the administrative and operational status of a switching (nonrouting) port, including port blocking and port protection settings.  |
|                    | backup                  | (Optional) Display Flex Link backup interface configuration and status for the specified interface or all interfaces on the switch or the stack.  |

| transceiver<br>[detail  <br>properties] | (Optional) Display the physical properties of a coarse wavelength-division<br>multiplexer (CWDM) or dense wavelength-division multiplexer (DWDM) small<br>form-factor (SFP) module interface. The keywords have these meanings: |  |  |
|---|---|--|--|
|   | • <b>detail</b> —(Optional) Display calibration properties, including high and low numbers and any alarm information.   |  |  |
|   | • <b>properties</b> —(Optional) Display speed, duplex, and inline power settings on an interface.   |  |  |
| trunk                                   | Display interface trunk information. If you do not specify an interface, only information for active trunking ports appears.  |  |  |
| begin                                   | (Optional) Display begins with the line that matches the expression.  |  |  |
| exclude                                 | (Optional) Display excludes lines that match the <i>expression</i> .  |  |  |
| include                                 | (Optional) Display includes lines that match the specified expression.  |  |  |
| expression                              | Expression in the output to use as a reference point.   |  |  |

Though visible in the command-line help strings, the **crb**, **fair-queue**, **irb**, **mac-accounting**, **precedence**, **random-detect**, **rate-limit**, and **shape** keywords are not supported.

| Command History  | Release  | Modification   |  |
|------------------|--|--|--|
|                  | 12.2(46)SE   | The tengigabitethernet interface-id transceiver detail keywords were   |  |
|                  |  | added.   |  |
|                  | 12.2(40)EX1  | This command was introduced.   |  |
|                  |  |  |  |
| Usage Guidelines | The show interface   | es capabilities command with different keywords has these results:   |  |
|                  | • Use the <b>show interface capabilities module</b> <i>number</i> command to display the capabilities of all interfaces on that switch in the stack. If there is no switch with that module number in the stack, there is no output. |  |  |
|                  |  | <b>nterface capabilities module 1</b> command to display the capabilities of all interfaces Any other number is invalid. |  |
|                  | • Use the <b>show i</b> interface.   | nterfaces interface-id capabilities to display the capabilities of the specified   |  |
|                  |  | <b>nterfaces capabilities</b> (with no module number or interface ID) to display the all interfaces in the stack.        |  |
|                  | • Use the <b>show interfaces capabilities</b> (with no module number or interface ID) to display the capabilities of all interfaces on the switch.   |  |  |

**Examples** 

- Use the **show interface switchport module** *number* command to display the switch port characteristics of all interfaces on that switch in the stack. If there is no switch with that module number in the stack, there is no output.
- Use the **show interface switchport module 1** to display the switch port characteristics of all interfaces on the switch. Any other number is invalid.

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain *output* are not displayed, but the lines that contain *Output* are displayed.

This is an example of output from the **show interfaces** command for an interface on stack member 3:

| Switch# show interfaces gigabitethernet3/0/2   |
|--|
| GigabitEthernet3/0/2 is down, line protocol is down                                    |
| Hardware is Gigabit Ethernet, address is 0009.43a7.d085 (bia 0009.43a7.d085)           |
| MTU 1500 bytes, BW 10000 Kbit, DLY 1000 usec,  |
| reliability 255/255, txload 1/255, rxload 1/255  |
| Encapsulation ARPA, loopback not set   |
| Keepalive set (10 sec)   |
| Auto-duplex, Auto-speed  |
| input flow-control is off, output flow-control is off                                  |
| ARP type: ARPA, ARP Timeout 04:00:00 Last input never, output never, output hang never |
| Last clearing of "show interface" counters never                                       |

Input queue: 0/75/0/0 (size/max/drops/flushes); Total output drops: 0

Queueing strategy: fifo

Output queue :0/40 (size/max)

5 minute input rate 0 bits/sec, 0 packets/sec 5 minute output rate 0 bits/sec, 0 packets/sec

2 packets input, 1040 bytes, 0 no buffer Received 0 broadcasts, 0 runts, 0 giants, 0 throttles 0 input errors, 0 CRC, 0 frame, 0 overrun, 0 ignored 0 watchdog, 0 multicast, 0 pause input 0 input packets with dribble condition detected 4 packets output, 1040 bytes, 0 underruns 0 output errors, 0 collisions, 3 interface resets

- 0 babbles, 0 late collision, 0 deferred
- 0 lost carrier, 0 no carrier, 0 PAUSE output
- 0 output buffer failures, 0 output buffers swapped out

This is an example of output from the **show interfaces accounting** command.

| Gi1/0/6   |           | connected  | 122,11 | a-full | a-1000 | 10/100/1000BaseTX |
|   |           |            |        |        |        |                   |
| <output t<="" td=""><td>runcated&gt;</td><td></td><td></td><td></td><td></td><td></td></output> | runcated> |            |        |        |        |                   |
| Gi2/0/1   |           | notconnect | 1      | auto   | auto   | 10/100/1000BaseTX |
| Gi2/0/2   |           | notconnect | 1      | auto   | auto   | unsupported       |
|   |           |            |        |        |        |                   |

<output truncated>

These are examples of output from the **show interfaces status** command for a specific interface when private VLANs are configured. Port 12 is configured as a private-VLAN host port. It is associated with primary VLAN 20 and secondary VLAN 25.

| Switch#  | show interfaces | gigabitethernet1/ | 0/12 status |        |                    |
|----------|-----------------|-------------------|-------------|--------|--------------------|
| Port     | Name            | Status            | Vlan        | Duplex | Speed Type         |
| Gi1/0/12 |                 | connected         | 20,25       | a-full | a-100 10/100BaseTX |

In this example, port 10 is configured as a private-VLAN promiscuous port. The display shows only the primary VLAN 20.

| Switch#  | show interfaces | gigabitethernet1/ | /0/10 status | 5      |                    |
|----------|-----------------|-------------------|--------------|--------|--------------------|
| Port     | Name            | Status            | Vlan         | Duplex | Speed Type         |
| Gi1/0/10 | )               | connected         | 20           | a-full | a-100 10/100BaseTX |

This is an example of output from the **show interfaces status err-disabled** command. It displays the status of interfaces in the error-disabled state.

| Switch# | show interfaces | status err-disable | eđ           |
|---------|-----------------|--------------------|--------------|
| Port    | Name            | Status             | Reason       |
| Gi1/0/2 |                 | err-disabled       | gbic-invalid |
| Gi2/0/3 |                 | err-disabled       | dtp-flap     |

This is an example of output from the **show interfaces switchport** command for a port. Table 2-24 describes the fields in the display.

```
<u>Note</u>
```

Private VLAN trunks are not supported in this release, so those fields are not applicable.

```
Switch# show interfaces gigabitethernet1/0/1 switchport
Name: Gi1/0/1
Switchport: Enabled
Administrative Mode: dynamic auto
Operational Mode: static access
Administrative Trunking Encapsulation: negotiate

Capture VLANs Allowed: ALL
```

Protected: false Unknown unicast blocked: disabled Unknown multicast blocked: disabled

Voice VLAN: none (Inactive) Appliance trust: none

| Field                                    | Description   |
|--|---|
| Name                                     | Displays the port name.   |
| Switchport                               | Displays the administrative and operational status of the port.<br>In this display, the port is in switchport mode. |
| Administrative Mode                      | Displays the administrative and operational modes.  |
| Operational Mode                         |   |
| Administrative Trunking<br>Encapsulation | Displays the administrative and operational encapsulation method and whether trunking negotiation is enabled.       |
| Operational Trunking Encapsulation       |   |
| Negotiation of Trunking                  |   |

#### Table 2-24 show interfaces switchport Field Descriptions

| Field   | Description   |
|---|---|
| Access Mode VLAN                                    | Displays the VLAN ID to which the port is configured.   |
| Trunking Native Mode VLAN<br>Trunking VLANs Enabled | Lists the VLAN ID of the trunk that is in native mode. Lists the allowed VLANs on the trunk. Lists the active VLANs on the trunk. |
| Trunking VLANs Active                               | uunk.   |
| Pruning VLANs Enabled                               | Lists the VLANs that are pruning-eligible.  |
| Protected   | Displays whether or not protected port is enabled (True) or disabled (False) on the interface.                                    |
| Unknown unicast blocked                             | Displays whether or not unknown multicast and unknown   |
| Unknown multicast blocked                           | unicast traffic is blocked on the interface.  |
| Voice VLAN  | Displays the VLAN ID on which voice VLAN is enabled.  |
| Administrative private-vlan host-association        | Displays the administrative VLAN association for private-VLAN host ports.   |
| Administrative private-vlan mapping                 | Displays the administrative VLAN mapping for private-VLAN promiscuous ports.  |
| Operational private-vlan                            | Displays the operational private-VLAN status.   |
| Appliance trust                                     | Displays the class of service (CoS) setting of the data packets of the IP phone.  |

This is an example of output from the **show interfaces switchport** command for a port configured as a private VLAN promiscuous port. The primary VLAN 20 is mapped to secondary VLANs 25, 30 and 35:

```
Switch# show interface gigabitethernet1/0/2 switchport
Name: Gi1/0/2
Switchport: Enabled
Administrative Mode: private-vlan promiscuous
Operational Mode: private-vlan promiscuous
Administrative Trunking Encapsulation: negotiate
Operational Trunking Encapsulation: native
Negotiation of Trunking: Off
Access Mode VLAN: 1 (default)
Trunking Native Mode VLAN: 1 (default)
Administrative Native VLAN tagging: enabled
Voice VLAN: none
Administrative private-vlan host-association: none
Administrative private-vlan mapping: 20 (VLAN0020) 25 (VLAN0025) 30 (VLAN0030) 35
(VLAN0035)
Administrative private-vlan trunk native VLAN: none
Administrative private-vlan trunk Native VLAN tagging: enabled
Administrative private-vlan trunk encapsulation: dot1q
Administrative private-vlan trunk normal VLANs: none
Administrative private-vlan trunk private VLANs: none
Operational private-vlan:
20 (VLAN0020) 25 (VLAN0025)
30 (VLAN0030)
35 (VLAN0035)
```

<output truncated>

This is an example of output from the show interfaces switchport backup command:

| Switch# show interfaces | switchport backup |                          |
|-------------------------|-------------------|--------------------------|
| Switch Backup Interface | Pairs:            |                          |
| Active Interface        | Backup Interface  | State                    |
|                         |                   |                          |
| Gi1/0/1                 | Gi1/0/2           | Active Up/Backup Standby |
| Gi3/0/3                 | Gi4/0/5           | Active Down/Backup Up    |
| Pol                     | Po2               | Active Standby/Backup Up |

This is an example of output from the **show interfaces** interface-id **pruning** command:

```
Switch# show interfaces gigibitethernet1/0/2 pruning
Port Vlans pruned for lack of request by neighbor
```

This is an example of output from the **show interfaces** *switchport* **backup** command. In this example, VLANs 1 to 50, 60, and 100 to 120 are configured on the switch:

```
Switch(config) # interface gigabitethernet 2/0/6
Switch(config-if) # switchport backup interface gigabitethernet 2/0/8 prefer vlan
60,100-120
```

When both interfaces are up, Gi2/0/8 forwards traffic for VLANs 60, 100 to 120, and Gi2/0/6 will forward traffic for VLANs 1 to 50.

Switch# show interfaces switchport backup Switch Backup Interface Pairs:

```
    Active Interface
    Backup Interface
    State

    GigabitEthernet2/0/6
    GigabitEthernet2/0/8
    Active Up/Backup Up
```

```
Vlans on Interface Gi 2/0/6: 1-50
Vlans on Interface Gi 2/0/8: 60, 100-120
```

When a Flex Link interface goes down (LINK\_DOWN), VLANs preferred on this interface are moved to the peer interface of the Flex Link pair. In this example, if interface Gi2/0/6 goes down, Gi2/0/8 carries all VLANs of the Flex Link pair.

```
Switch# show interfaces switchport backup
Switch Backup Interface Pairs:
Active Interface Backup Interface State
GigabitEthernet2/0/6 GigabitEthernet2/0/8 Active Down/Backup Up
Vlans on Interface Gi 2/0/6:
Vlans on Interface Gi 2/0/8: 1-50, 60, 100-120
```

When a Flex Link interface comes up, VLANs preferred on this interface are blocked on the peer interface and moved to the forwarding state on the interface that has just come up. In this example, if interface Gi2/0/6 comes up, then VLANs preferred on this interface are blocked on the peer interface Gi2/0/8 and forwarded on Gi2/0/6.

```
Switch# show interfaces switchport backup
Switch Backup Interface Pairs:
Active Interface Backup Interface State
GigabitEthernet2/0/6 GigabitEthernet2/0/8 Active Up/Backup Up
Vlans on Interface Gi 2/0/6: 1-50
Vlans on Interface Gi 2/0/8: 60, 100-120
```

This is an example of out put from the **show interfaces switchport backup** command when a Flex Link interface goes down (LINK\_DOWN), and VLANs preferred on this interface are moved to the peer interface of the Flex Link pair. In this example, if interface Gi2/0/6 goes down, Gi2/0/8 carries all VLANs of the Flex Link pair.

Switch# show interfaces switchport backup Switch Backup Interface Pairs:

 Active Interface
 Backup Interface
 State

 GigabitEthernet2/0/6
 GigabitEthernet2/0/8
 Active Down/Backup Up

Vlans Preferred on Active Interface: 1-50 Vlans Preferred on Backup Interface: 60, 100-120

This is an example of output from the **show interfaces** *interface-id* **trunk** command. It displays trunking information for the port.

Switch# show interfaces gigabitethernet1/0/1 trunk Native vlan Port Mode Encapsulation Status Gi1/0/1 auto negotiate trunking 1 Port Vlans allowed on trunk Gi1/0/1 1-4094 Vlans allowed and active in management domain Port Gi1/0/1 1-4 Port Vlans in spanning tree forwarding state and not pruned Gi1/0/1 1-4

This is an example of output from the **show interfaces** interface-id **transceiver properties** command:

```
Switch# show interfaces gigabitethernet1/0/1 transceiver properties
Name : Gi1/0/1
Administrative Speed: auto
Operational Speed: auto
Administrative Duplex: auto
Administrative Power Inline: enable
Operational Duplex: auto
Administrative Auto-MDIX: off
Operational Auto-MDIX: off
```

This is an example of output from the **show interfaces** *interface-id* **transceiver detail** command:

```
Switch# show interfaces gigabitethernet2/0/3 transceiver detail
ITU Channel not available (Wavelength not available),
Transceiver is externally calibrated.
mA:milliamperes, dBm:decibels (milliwatts), N/A:not applicable.
++:high alarm, +:high warning, -:low warning, -- :low alarm.
A2D readouts (if they differ), are reported in parentheses.
The threshold values are uncalibrated.
```

|         |             | High Alarm | High Warn | Low Warn  | Low Alarm |
|---------|-------------|------------|-----------|-----------|-----------|
|         | Temperature | Threshold  | Threshold | Threshold | Threshold |
| Port    | (Celsius)   | (Celsius)  | (Celsius) | (Celsius) | (Celsius) |
|         |             |            |           |           |           |
| Gi2/0/3 | 41.5        | 110.0      | 103.0     | -8.0      | -12.0     |

| Port    | Voltage<br>(Volts)                 | High Alarm<br>Threshold<br>(Volts) | Threshold          | Threshold<br>(Volts) | Threshold<br>(Volts) |
|---------|------------------------------------|------------------------------------|--------------------|----------------------|----------------------|

### Related Commands

| Command                         | Description  |
|---------------------------------|--|
| switchport access               | Configures a port as a static-access or a dynamic-access port.   |
| switchport block                | Blocks unknown unicast or multicast traffic on an interface.   |
| switchport backup interface     | Configures Flex Links, a pair of Layer 2 interfaces that provide mutual backup.                              |
| switchport mode                 | Configures the VLAN membership mode of a port.   |
| switchport mode<br>private-vlan | Configures a port as a private-VLAN host or a promiscuous port.  |
| switchport private-vlan         | Defines private-VLAN association for a host port or private-VLAN mapping for a promiscuous port.             |
| switchport protected            | Isolates unicast, multicast, and broadcast traffic at Layer 2 from other protected ports on the same switch. |
| switchport trunk pruning        | Configures the VLAN pruning-eligible list for ports in trunking mode.  |

### show interfaces counters

Use the **show interfaces counters** privileged EXEC command to display various counters for the switch or for a specific interface.

**show interfaces** [*interface-id* | **vlan** *vlan-id*] **counters** [**errors** | **etherchannel** | **module** *switchnumber* | **protocol status** | **trunk**] [ | {**begin** | **exclude** | **include**} *expression*]

| Syntax Description | interface-id                 | (Optional) ID of the physical interface, including type, stack member (stacking-capable switch only), module, and port number.                            |
|--------------------|------------------------------|---|
|                    | errors                       | (Optional) Display error counters.  |
|                    | etherchannel                 | (Optional) Display EtherChannel counters, including octets, broadcast packets, multicast packets, and unicast packets received and sent.                  |
|                    | module switch- number        | (Optional) Display counters for the specified stack member. The range is from 1 to 9, depending upon the switch numbers in the stack.                     |
|                    |                              | This keyword is supported only on stacking-capable switches.  |
|                    |                              | In this command, the <b>module</b> keyword refers to the stack member number (1 to 9). The module number that is part of the interface ID is always zero. |
|                    | protocol status              | (Optional) Display status of protocols enabled on interfaces.   |
|                    | trunk                        | (Optional) Display trunk counters.  |
|                    | begin                        | (Optional) Display begins with the line that matches the <i>expression</i> .  |
|                    | exclude                      | (Optional) Display excludes lines that match the <i>expression</i> .  |
|                    | include                      | (Optional) Display includes lines that match the specified <i>expression</i> .  |
|                    | expression                   | Expression in the output to use as a reference point.   |
|                    |                              |   |
| Note               | Though visible in the cor    | nmand-line help string, the <b>vlan</b> <i>vlan-id</i> keyword is not supported.  |
| Command Modes      | Privileged EXEC              |   |
| Command History    | Release                      | Modification  |
|                    | 12.2(40)EX1                  | This command was introduced.  |
|                    |                              |   |
| Usage Guidelines   | If you do not enter any keep | eywords, all counters for all interfaces are included.  |
|                    | -                            | sitive. For example, if you enter   <b>exclude output</b> , the lines that contain <i>output</i> e lines that contain <i>Output</i> are displayed.        |
|                    |                              |   |

### **Examples** This is an example of partial output from the **show interfaces counters** command. It displays all counters for the switch.

| Switch# <b>show</b> | interfaces co | ounters     |             |             |
|---------------------|---------------|-------------|-------------|-------------|
| Port                | InOctets      | InUcastPkts | InMcastPkts | InBcastPkts |
| Gi1/0/1             | 0             | 0           | 0           | 0           |
| Gi1/0/2             | 0             | 0           | 0           | 0           |

<output truncated>

This is an example of partial output from the **show interfaces counters module** command for stack member 2. It displays all counters for the specified switch in the stack.

| Switch# <b>shc</b> | ow interfaces c | ounters module | 2           |             |
|--------------------|-----------------|----------------|-------------|-------------|
| Port               | InOctets        | InUcastPkts    | InMcastPkts | InBcastPkts |
| Gi2/0/1            | 520             | 2              | 0           | 0           |
| Gi2/0/2            | 520             | 2              | 0           | 0           |
| Gi2/0/3            | 520             | 2              | 0           | 0           |
| Gi2/0/4            | 520             | 2              | 0           | 0           |
| Gi2/0/5            | 520             | 2              | 0           | 0           |
| Gi2/0/6            | 520             | 2              | 0           | 0           |
| Gi2/0/7            | 520             | 2              | 0           | 0           |
| Gi2/0/8            | 520             | 2              | 0           | 0           |

<output truncated>

This is an example of partial output from the **show interfaces counters protocol status** command for all interfaces.

```
Switch# show interfaces counters protocol status
Protocols allocated:
Vlan1: Other, IP
Vlan20: Other, IP, ARP
Vlan30: Other, IP, ARP
Vlan40: Other, IP, ARP
Vlan50: Other, IP, ARP
Vlan60: Other, IP, ARP
Vlan70: Other, IP, ARP
Vlan80: Other, IP, ARP

<output truncated>

### This is an example of output from the **show interfaces counters trunk** command. It displays trunk counters for all interfaces.

#### Switch# show interfaces counters trunk

| Port    | TrunkFramesTx | TrunkFramesRx | WrongEncap |
|---------|---------------|---------------|------------|
| Gi1/0/1 | 0             | 0             | 0          |
| Gi1/0/2 | 0             | 0             | 0          |
| Gi1/0/3 | 80678         | 4155          | 0          |
| Gi1/0/4 | 82320         | 126           | 0          |
| Gi1/0/5 | 0             | 0             | 0          |
|         |               |               |            |

<output truncated>

| <b>Related Commands</b> | Command | Description                                    |
|-------------------------|---------|--|
| show interfaces         |         | Displays additional interface characteristics. |

## show inventory

Use the **show inventory** user EXEC command to display product identification (PID) information for the hardware.

show inventory [entity-name | raw] [ | {begin | exclude | include} expression]

| 0 / D · /          |   |  |
|--------------------|---|--|
| Syntax Description | entity-name   | (Optional) Display the specified entity. For example, enter the interface (such as gigabitethernet1/0/1) into which a small form-factor pluggable (SFP) module is installed. |
|                    | raw   | (Optional) Display every entity in the device.   |
|                    | begin   | (Optional) Display begins with the line that matches the <i>expression</i> .   |
|                    | exclude   | (Optional) Display excludes lines that match the <i>expression</i> .   |
|                    | include   | (Optional) Display includes lines that match the specified <i>expression</i> .   |
|                    | expression  | Expression in the output to use as a reference point.  |
| Command Modes      | User EXEC   |  |
| Command History    | Release   | Modification   |
|                    | 12.2(40)EX1   | This command was introduced.   |
| Note               | If there is no PID, r   | no output appears when you enter the <b>show inventory</b> command.  |
|                    |   | e sensitive. For example, if you enter l <b>exclude output</b> , the lines that contain <i>output</i> but the lines that contain <i>Output</i> are displayed.                |
| Examples           |   |  |
|                    | This is example out   | put from the <b>show inventory</b> command on a switch stack:  |
|                    | Switch> <b>show inve</b><br>NAME: ''1'', DESC   |  |
|                    | Switch> <b>show inve</b><br>NAME: ''1'', DESC<br>PID: WS-CBS3130G-<br>NAME: ''Switch 1                      | ntory<br>R: ''WS-CBS3130G-S-F''  |
|                    | Switch> <b>show inve</b><br>NAME: ''1'', DESC<br>PID: WS-CBS3130G-<br>NAME: ''Switch 1<br>PID: 800-27645-01 | ntory<br>R: ''WS-CBS3130G-S-F''<br>S-F , VID: V01, SN: FOC1143H02U<br>- Slot 1'', DESCR: ''TwinGig Converter Module''  |

NAME: ''Switch 2 - Slot 1'', DESCR: ''TwinGig Converter Module''
PID: 800-27645-01 A , VID: A0 , SN: CAT1113545M
NAME: ''Switch 2 - Slot 2'', DESCR: ''TwinGig Converter Module''
PID: 800-27645-01 A , VID: A0 , SN: CAT1115UVM

This is example output from the **show inventory** command on a nonstacking-capable switch:

Switch> show inventory NAME: ''1'', DESCR: ''WS-CBS3032-DEL'' PID: WS-CBS3032-DEL , VID: V01, SN: FOC1132HZUJ

NAME: ''Switch 1 - Slot 1'', DESCR: ''TwinGig Converter Module'' PID: 800-27645-01 A , VID: A0 , SN: CAT111163WT

NAME: ''Switch 1 - Slot 2'', DESCR: ''TwinGig Converter Module'' PID: 800-27645-01 A , VID: A0 , SN: CAT111353TB

### show ip arp inspection

Use the **show ip arp inspection** privileged EXEC command to display the configuration and the operating state of dynamic Address Resolution Protocol (ARP) inspection or the status of this feature for all VLANs or for the specified interface or VLAN.

show ip arp inspection [interfaces [interface-id] | log | statistics [vlan vlan-range] | vlan
vlan-range] [ | {begin | exclude | include} expression]

This command is supported only if your switch is running the IP services feature set.

| Syntax Description | <b>interfaces</b> [interface-id] | (Optional) Display the trust state and the rate limit of ARP packets for<br>the specified interface or all interfaces. Valid interfaces include<br>physical ports and port channels.   |
|--------------------|----------------------------------|--|
|                    | log                              | (Optional) Display the configuration and contents of the dynamic ARP inspection log buffer.  |
|                    | statistics [vlan vlan-range]     | (Optional) Display statistics for forwarded, dropped, MAC validation<br>failure, IP validation failure, access control list (ACL) permitted and<br>denied, and DHCP permitted and denied packets for the specified<br>VLAN. If no VLANs are specified or if a range is specified, display<br>information only for VLANs with dynamic ARP inspection enabled<br>(active). |
|                    |                                  | You can specify a single VLAN identified by VLAN ID number, a range of VLANs separated by a hyphen, or a series of VLANs separated by a comma. The range is 1 to 4094.   |
|                    | vlan vlan-range                  | (Optional) Display the configuration and the operating state of<br>dynamic ARP inspection for the specified VLAN. If no VLANs are<br>specified or if a range is specified, display information only for<br>VLANs with dynamic ARP inspection enabled (active).   |
|                    |                                  | You can specify a single VLAN identified by VLAN ID number, a range of VLANs separated by a hyphen, or a series of VLANs separated by a comma. The range is 1 to 4094.   |
|                    | begin                            | (Optional) Display begins with the line that matches the <i>expression</i> .   |
|                    | exclude                          | (Optional) Display excludes lines that match the <i>expression</i> .   |
|                    | include                          | (Optional) Display includes lines that match the specified expression.   |
|                    | expression                       | Expression in the output to use as a reference point.  |

Command Modes

Privileged EXEC

**Command History** 

ReleaseModification12.2(40)EX1This command

This command was introduced.

**Usage Guidelines** Expressions are case sensitive. For example, if you enter | **exclude output**, the lines that contain *output* are not displayed, but the lines that contain *Output* are displayed.

#### **Examples**

This is an example of output from the show ip arp inspection command

| Source Mac<br>Destinatio | now ip arp inspect<br>C Validation<br>on Mac Validation<br>S Validation | : Disabled<br>: Disabled |                |                       |
|--------------------------|---|--------------------------|----------------|-----------------------|

| Mon Mar 1 | 1993 |                |            |          |           |              |
| Gi1/0/1   | 5    | 0001.c940.1115 | 173.1.1.2  | 11       | DHCP Deny | 19:39:07 UTC |
| Mon Mar 1 | 1993 |                |            |          |           |              |
| Gi1/0/1   | 5    | 0001.c940.1116 | 173.1.1.3  | 12       | DHCP Deny | 19:39:08 UTC |
| Mon Mar 1 | 1993 |                |            |          |           |              |

If the log buffer overflows, it means that a log event does not fit into the log buffer, and the display for the **show ip arp inspection log** privileged EXEC command is affected. A -- in the display appears in place of all data except the packet count and the time. No other statistics are provided for the entry. If you see this entry in the display, increase the number of entries in the log buffer, or increase the logging rate in the **ip arp inspection log-buffer** global configuration command.

This is an example of output from the **show ip arp inspection statistics** command. It shows the statistics for packets that have been processed by dynamic ARP inspection for all active VLANs.

| Switch# | show ip arp inspect: | ion statis | tics              |           |
|---------|----------------------|------------|-------------------|-----------|
| Vlan    | Forwarded            | Dropped    | DHCP Drops        | ACL Drops |
|         |                      |            |                   |           |
| 5       | 3                    | 4618       | 4605              | 4         |
| 2000    | 0                    | 0          | 0                 | 0         |
| Vlan    | DHCP Permits ACL     | Permits    | Source MAC Failur | es        |
|         |                      |            |                   |           |
| 5       | 0                    | 12         |                   | 0         |
| 2000    | 0                    | 0          |                   | 0         |
| Vlan    | Dest MAC Failures    | IP Valida  | tion Failures     |           |
|         |                      |            |                   |           |
| 5       | 0                    |            | 9                 |           |
| 2000    | 0                    |            | 0                 |           |

For the **show ip arp inspection statistics** command, the switch increments the number of forwarded packets for each ARP request and response packet on a trusted dynamic ARP inspection port. The switch increments the number of ACL or DHCP permitted packets for each packet that is denied by source MAC, destination MAC, or IP validation checks, and the switch increments the appropriate failure count.

This is an example of output from the **show ip arp inspection statistics vlan 5** command. It shows statistics for packets that have been processed by dynamic ARP for VLAN 5.

| Switch# | show ip arp ins | spection statis | stics vlan 5    |                       |
|---------|-----------------|-----------------|-----------------|-----------------------|
| Vlan    | Forwarded       | Dropped         | DHCP Drops      | ACL Drops             |
| 5       | 3               | 4618            | 4605            | 4                     |
| Vlan    | DHCP Permits    | ACL Permits     | Source MAC Fail | lures                 |
| <br>5   | 0               | 12              |                 | 0                     |
| Vlan    | Dest MAC Failu  | res IP Valida   | ation Failures  | Invalid Protocol Data |
| 5       |                 | 0               | 9               | 3                     |

This is an example of output from the **show ip arp inspection vlan 5** command. It shows the configuration and the operating state of dynamic ARP inspection for VLAN 5.

| Source Ma<br>Destinati | how ip arp inspec<br>c Validation<br>on Mac Validation<br>s Validation | :Enabled                |                         |                      |

This example shows how to display the DHCP snooping binding entries for a specific IP address:

#### Switch> show ip dhcp snooping binding 10.1.2.150

| MacAddress          | IpAddress  | Lease(sec) | Туре          | VLAN | Interface            |
|---------------------|------------|------------|---------------|------|----------------------|
|                     |            |            |               |      |                      |
| 01:02:03:04:05:06   | 10.1.2.150 | 9810       | dhcp-snooping | 20   | GigabitEthernet2/0/1 |
| Total number of bin | dings: 1   |            |               |      |                      |

#### This example shows how to display the DHCP snooping binding entries for a specific MAC address:

| Switch> show ip dhc | p snooping bindin | g 0102.0304. | 0506          |      |                      |
|---------------------|-------------------|--------------|---------------|------|----------------------|
| MacAddress          | IpAddress         | Lease(sec)   | Туре          | VLAN | Interface            |
|                     |                   |              |               |      |                      |
| 01:02:03:04:05:06   | 10.1.2.150        | 9788         | dhcp-snooping | 20   | GigabitEthernet2/0/2 |
| Total number of bin | dings: 1          |              |               |      |                      |

This example shows how to display the DHCP snooping binding entries on a port:

| Switch> show ip dhc | p snooping bindin | g interface | gigabitethernet | 2/0/2 |                      |
|---------------------|-------------------|-------------|-----------------|-------|----------------------|
| MacAddress          | IpAddress         | Lease(sec)  | Туре            | VLAN  | Interface            |
|                     |                   |             |                 |       |                      |
| 00:30:94:C2:EF:35   | 10.1.2.151        | 290         | dhcp-snooping   | 20    | GigabitEthernet2/0/2 |
| Total number of bin | dings: 1          |             |                 |       |                      |

This example shows how to display the DHCP snooping binding entries on VLAN 20:

| Switch> show ip dhcp snooping binding vlan 20 |            |            |               |      |                      |  |
|---|------------|------------|---------------|------|----------------------|--|
| MacAddress                                    | IpAddress  | Lease(sec) | Туре          | VLAN | Interface            |  |
|   |            |            |               |      |                      |  |
| 01:02:03:04:05:06                             | 10.1.2.150 | 9747       | dhcp-snooping | 20   | GigabitEthernet2/0/1 |  |
| 00:00:00:00:00:02                             | 10.1.2.151 | 65         | dhcp-snooping | 20   | GigabitEthernet2/0/2 |  |
| Total number of bindings: 2                   |            |            |               |      |                      |  |

Table 2-25 describes the fields in the show ip dhcp snooping binding command output:

#### Table 2-25show ip dhcp snooping binding Command Output

| Field                    | Description  |  |
|--------------------------|--|--|
| MacAddress               | Client hardware MAC address  |  |
| IpAddress                | Client IP address assigned from the DHCP server  |  |
| Lease(sec)               | Remaining lease time for the IP address  |  |
| Туре                     | Binding type   |  |
| VLAN                     | VLAN number of the client interface  |  |
| Interface                | Interface that connects to the DHCP client host  |  |
| Total number of bindings | Total number of bindings configured on the switch  |  |
|                          | <b>Note</b> The command output might not show the total number of bindings. For example, if 200 bindings are configured on the switch and you stop the display before all the bindings appear, the total number does not change. |  |

#### **Related Commands**

| Command                  | Description                                   |

| ip dhcp snooping binding | Configures the DHCP snooping binding database |
| show ip dhcp snooping    | Displays the DHCP snooping configuration.     |

## show ip dhcp snooping database

Use the **show ip dhcp snooping database** user EXEC command to display the status of the DHCP snooping binding database agent.

show ip dhcp snooping database [detail] [ | {begin | exclude | include} expression]

This command is supported only if your switch is running the IP services feature set.

| Syntax Description  | detail  | (Optional) Display detailed status and statistics information.                 |  |
|---|---|--|--|
|   | begin   | (Optional) Display begins with the line that matches the <i>expression</i> .   |  |
|   | exclude   | (Optional) Display excludes lines that match the <i>expression</i> .           |  |
| <b>  include</b> (Optional) Display includes lines that match the specified |   | (Optional) Display includes lines that match the specified <i>expression</i> . |  |
|   | <i>expression</i> Expression in the output to use as a reference point. |  |  |

Command Modes User EXEC

#### **Related Commands**

| Command                   | Description  |  |
|---------------------------|--|--|
| ip dhcp snooping          | Enables DHCP snooping on a VLAN.   |  |
| ip dhcp snooping database | Configures the DHCP snooping binding database agent or the binding file. |  |
| show ip dhcp snooping     | Displays DHCP snooping information.                                      |  |

## show ip dhcp snooping statistics

Use the **show ip dhcp snooping statistics** user EXEC command to display DHCP snooping statistics in summary or detail form.

show ip dhcp snooping statistics [detail] [ | {begin | exclude | include} expression]

| Syntax Description | detail  | (Optional) Display detailed statistic  | es information.  |  |  |  |
|--------------------|---|--|--|--|--|--|
|                    | begin   | (Optional) Display begins with the line that matches the <i>expression</i> .             |  |  |  |  |
|                    | exclude   | (Optional) Display excludes lines that match the <i>expression</i> .                     |  |  |  |  |
|                    | include   | (Optional) Display includes lines th   | nat match the specified <i>expression</i> .                                |  |  |  |
|                    | expression  | Expression in the output to use as a   | reference point.   |  |  |  |
|                    |   |  |  |  |  |  |
| Command Modes      | User EXEC   |  |  |  |  |  |
| Command History    | Release   | Modification   |  |  |  |  |
|                    | 12.2(40)EX1   | This command was intro   | duced.   |  |  |  |
| Usage Guidelines   | -   | re case sensitive. For example, if you<br>, but the lines that contain <i>Output</i> app | enter   <b>exclude output</b> , the lines that contain <i>output</i> bear. |  |  |  |
|                    | In a switch stack, all statistics are generated on the stack master. If a new stack master is elected, the statistics counters reset. |  |  |  |  |  |
| Examples           | This is an exa  | mple of output from the <b>show ip dhc</b>   | <b>p</b> snooping statistics command:                                      |  |  |  |
| •                  |   | ip dhcp snooping statistics  |  |  |  |  |
|                    | Packets For   |  | = 0  |  |  |  |
|                    | Packets Dro   | pped   | = 0  |  |  |  |
|                    |   | pped From untrusted ports  | = 0  |  |  |  |
|                    | This is an example of output from the show ip dhcp snooping statistics detail command:  |  |  |  |  |  |
|                    |   | ip dhcp snooping statistics deta   |  |  |  |  |
|                    |   | cessed by DHCP Snooping<br>pped Because  | = 0  |  |  |  |
|                    | IDB not k   | nown   | = 0  |  |  |  |

|                    | Binding m   | _  | = 0  |  |  |  |
|                    | 5   |  | = 0  |  |  |  |
|                    |   | of opt82 fail  | -  |  |  |  |
|                    | Interface   |  | = 0  |  |  |  |
|                    |   | utput interface  | = 0  |  |  |  |
|                    |   | put port equal to input port<br>nied by platform   | = 0<br>= 0   |  |  |  |
|                    |   |  |  |  |  |  |

Table 2-26 shows the DHCP snooping statistics and their descriptions:

| DHCP Snooping Statistic               | Description   |
|---------------------------------------|---|
| Packets Processed by DHCP Snooping    | Total number of packets handled by DHCP snooping, including forwarded and dropped packets.  |
| Packets Dropped Because IDB not known | Number of errors when the input interface of the packet cannot be determined.   |
| Queue full                            | Number of errors when an internal queue used to<br>process the packets is full. This might happen if<br>DHCP packets are received at an excessively high<br>rate and rate limiting is not enabled on the ingress<br>ports.                                  |
| Interface is in errdisabled           | Number of times a packet was received on a port<br>that has been marked as error disabled. This might<br>happen if packets are in the processing queue<br>when a port is put into the error-disabled state and<br>those packets are subsequently processed. |
| Rate limit exceeded                   | Number of times the rate limit configured on the<br>port was exceeded and the interface was put into<br>the error-disabled state.   |
| Received on untrusted ports           | Number of times a DHCP server packet (OFFER, ACK, NAK, or LEASEQUERY) was received on an untrusted port and was dropped.  |
| Nonzero giaddr                        | Number of times the relay agent address field   |

Table 2-26DHCP Snooping Statistics

Source mac not equal to chaddr

Binding mismatch

in the Ethernet header.

(giaddr) in the DHCP packet received on an untrusted port was not zero, or the **no ip dhcp snooping information option allow-untrusted** global configuration command is not configured and a packet received on an untrusted port

Number of times the client MAC address field of the DHCP packet (chaddr) does not match the packet source MAC address and the **ip dhcp snooping verify mac-address** global configuration command is configured.

Number of times a RELEASE or DECLINE packet was received on a port that is different than

address-VLAN pair. This indicates someone might be trying to spoof the real client, or it could mean that the client has moved to another port on the switch and issued a RELEASE or DECLINE. The MAC address is taken from the chaddr field of the DHCP packet, not the source MAC address

the port in the binding for that MAC

contained option-82 data.

| DHCP Snooping Statistic               | Description   |
|---------------------------------------|---|
| Insertion of opt82 fail               | Number of times the option-82 insertion into a packet failed. The insertion might fail if the packet with the option-82 data exceeds the size of a single physical packet on the internet.  |
| Interface Down                        | Number of times the packet is a reply to the<br>DHCP relay agent, but the SVI interface for the<br>relay agent is down. This is an unlikely error that<br>occurs if the SVI goes down between sending the<br>client request to the DHCP server and receiving<br>the response.   |
| Unknown output interface              | Number of times the output interface for a DHCP<br>reply packet cannot be determined by either<br>option-82 data or a lookup in the MAC address<br>table. The packet is dropped. This can happen if<br>option 82 is not used and the client MAC address<br>has aged out. If IPSG is enabled with the<br>port-security option and option 82 is not enabled,<br>the MAC address of the client is not learned, and<br>the reply packets will be dropped. |
| Reply output port equal to input port | Number of times the output port for a DHCP reply<br>packet is the same as the input port, causing a<br>possible loop. Indicates a possible network<br>misconfiguration or misuse of trust settings on<br>ports.   |
| Packet denied by platform             | Number of times the packet has been denied by a platform-specific registry.   |

| <b>Related Commands</b> | Command                | Description   |
|-------------------------|------------------------|---|
|                         | clear ip dhcp snooping | Clears the DHCP snooping binding database, the DHCP snooping binding database agent statistics, or the DHCP snooping statistics counters. |

## show ip igmp profile

Use the **show ip igmp profile** privileged EXEC command to display all configured Internet Group Management Protocol (IGMP) profiles or a specified IGMP profile.

show ip igmp profile [profile number] [ | {begin | exclude | include} expression]

| Syntax Description | profile number   | (Optional) The IGMP profile number to be displayed. The range is 1 to 4294967295. If no profile number is entered, all IGMP profiles are displayed.                                   |
|--------------------|--|---|
|                    | begin  | (Optional) Display begins with the line that matches the <i>expression</i> .  |
|                    | exclude  | (Optional) Display excludes lines that match the <i>expression</i> .  |
|                    | include  | (Optional) Display includes lines that match the specified expression.  |
|                    | expression   | Expression in the output to use as a reference point.   |
| Command Modes      | Privileged EXEC  |   |
| Command History    | Release  | Modification  |
|                    | 12.2(40)EX1  | This command was introduced.  |
| Examples           | -  | s of output from the <b>show ip igmp profile</b> privileged EXEC command, with and<br>a profile number. If no profile number is entered, the display includes all profiles<br>switch. |
|                    | Switch# <b>show ip</b> :<br>IGMP Profile 40<br>permit<br>range 233.1.: | igmp profile 40   |
|                    | IGMP Profile 4 permit  | igmp profile<br>9.0 230.9.9.0<br>9.0 229.255.255.255  |
| Related Commands   | Command  | Description   |
|                    |  |   |
|                    | ip igmp profile  | Configures the specified IGMP profile number.   |

## show ip igmp snooping

Use the **show ip igmp snooping** user EXEC command to display the Internet Group Management Protocol (IGMP) snooping configuration of the switch or the VLAN.

show ip igmp snooping [groups | mrouter | querier] [vlan vlan-id] [ | {begin | exclude | include}
expression]

| Syntax Description | groups       | (Optional) See the show ip igmp snooping groups command.   |
|--------------------|--------------|--|
|                    | mrouter      | (Optional) See the <b>show ip igmp snooping mrouter</b> command.   |
|                    | querier      | (Optional) See the <b>show ip igmp snooping querier</b> command.   |
|                    | vlan vlan-id | (Optional) Specify a VLAN; the range is 1 to 1001 and 1006 to 4094 (available only in privileged EXEC mode). |
|                    | begin        | (Optional) Display begins with the line that matches the <i>expression</i> .                                 |
|                    | exclude      | (Optional) Display excludes lines that match the <i>expression</i> .   |
|                    | include      | (Optional) Display includes lines that match the specified <i>expression</i> .                               |
|                    | expression   | Expression in the output to use as a reference point.  |
|                    |              |  |

### **Command Modes** User EXEC

| <b>Command History</b> | Release   | Modification  |
|------------------------|---|---|
|                        | 12.2(40)EX1                                     | This command was introduced.  |
|                        |   |   |
| Usage Guidelines       | Use this command t                              | o display snooping configuration for the switch or for a specific VLAN.   |
|                        | VLAN IDs 1002 to snooping.                      | 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in IGMP  |

# show ip igmp snooping groups

Use the **show ip igmp snooping groups** privileged EXEC command to display the Internet Group Management Protocol (IGMP) snooping multicast table for the switch or the multicast information. Use with the **vlan** keyword to display the multicast table for a specified multicast VLAN or specific multicast information.

show ip igmp snooping groups [count | dynamic [count] | user [count]] [ | {begin | exclude |
 include} expression]

show ip igmp snooping groups vlan vlan-id [ip\_address | count | dynamic [count] | user [count]]
 [ | {begin | exclude | include} expression]

| Syntax Description | count  | (Optional) Display the total number of entries for the specified command options instead of the actual entries.  |  |  |  |
|--------------------|--|--|--|--|--|
|                    | dynamic  | (Optional) Display entries learned by IGMP snooping.   |  |  |  |
|                    | user   | Optional) Display only the user-configured multicast entries.  |  |  |  |
|                    | ip_address   | (Optional) Display characteristics of the multicast group with the specified group IP address.   |  |  |  |
|                    | vlan vlan-id   | (Optional) Specify a VLAN; the range is 1 to 1001 and 1006 to 4094.  |  |  |  |
|                    | begin  | (Optional) Display begins with the line that matches the expression.   |  |  |  |
|                    | exclude  | (Optional) Display excludes lines that match the <i>expression</i> .   |  |  |  |
|                    | l include (Optional) Display includes lines that match the specified <i>expression</i> . |  |  |  |  |
|                    | expression   | Expression in the output to use as a reference point.  |  |  |  |
| Command Modes      | Privileged EXE   | C  |  |  |  |
| Command History    | Release  | Modification   |  |  |  |
|                    | 12.2(40)EX1  | This command was introduced.   |  |  |  |
| Usage Guidelines   | Use this comma   | nd to display multicast information or the multicast table.  |  |  |  |
|                    |  | 2 to 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in IGMP  |  |  |  |
|                    |  | case sensitive. For example, if you enter <b>  exclude output</b> , the lines that contain <i>output</i> ut the lines that contain <i>Output</i> appear. |  |  |  |

### Examples

This is an example of output from the **show ip igmp snooping groups** command without any keywords. It displays the multicast table for the switch.

Switch# show ip igmp snooping groups

| Vlan | Group                   | Туре         | Version | Port List            |
|------|-------------------------|--------------|---------|----------------------|
| 1    | 224.1.4.4               | igmp         |         | Gi1/0/11<br>Gi1/0/11 |
| 2    | 224.1.4.5<br>224.0.1.40 | igmp<br>igmp | v2      | Gi1/0/11<br>Gi1/0/14 |
| 104  | 224.1.4.2               | igmp         | v2      | Gi2/0/1, Gi2/0/2     |
| 104  | 224.1.4.3               | igmp         | v2      | Gi2/0/1, Gi2/0/2     |

This is an example of output from the **show ip igmp snooping groups count** command. It displays the total number of multicast groups on the switch.

Switch# **show ip igmp snooping groups count** Total number of multicast groups: 2

This is an example of output from the **show ip igmp snooping groups dynamic** command. It shows only the entries learned by IGMP snooping.

| Switch# | show ip igmp | snooping groups | vlan 1 dyna | mic               |
|---------|--------------|-----------------|-------------|-------------------|
| Vlan    | Group        | Туре            | Version     | Port List         |
|         |              |                 |             |                   |
| 104     | 224.1.4.2    | igmp            | v2          | Gi2/0/1, Gi1/0/14 |
| 104     | 224.1.4.3    | igmp            | v2          | Gi2/0/1, Gi1/0/14 |

This is an example of output from the **show ip igmp snooping groups vlan** *vlan-id ip-address* command. It shows the entries for the group with the specified IP address.

| Switch# | show ip igmp | snooping groups | vlan 104 | 224.1.4.2         |
|---------|--------------|-----------------|----------|-------------------|
| Vlan    | Group        | Туре            | Version  | Port List         |
| 104     | 224.1.4.2    | igmp            | v2       | Gi2/0/1, Gi1/0/14 |

|                         | show ip igmp snooping mrouter | Displays IGMP snooping multicast router ports for the switch or for the specified multicast VLAN. |  |

## show ip igmp snooping mrouter

Use the **show ip igmp snooping mrouter** privileged EXEC command to display the Internet Group Management Protocol (IGMP) snooping dynamically learned and manually configured multicast router ports for the switch or for the specified multicast VLAN.

show ip igmp snooping mrouter [vlan vlan-id] [ | {begin | exclude | include} expression]

| Syntax Description | vlan vlan-id                                       | (Optional) Specify a VLAN; the range is 1 to 1001 and 1006 to 4094.  |  |  |  |  |
|--------------------|--|--|--|--|--|--|
|                    | begin  | (Optional) Display begins with the line that matches the <i>expression</i> .   |  |  |  |  |
|                    | exclude  | (Optional) Display excludes lines that match the <i>expression</i> .   |  |  |  |  |
|                    | include  | (Optional) Display includes lines that match the specified <i>expression</i> .   |  |  |  |  |
|                    | expression   | Expression in the output to use as a reference point.  |  |  |  |  |
| Command Modes      | Privileged EXEC                                    |  |  |  |  |  |
| Command History    | Release  | Modification   |  |  |  |  |
|                    | 12.2(40)EX1  | This command was introduced.   |  |  |  |  |
| Usage Guidelines   | VLAN IDs 1002 to<br>snooping.<br>When multicast VL | to display multicast router ports on the switch or for a specific VLAN.<br>1005 are reserved for Token Ring and FDDI VLANs and cannot be used in IGMP<br>AN registration (MVR) is enabled, the <b>show ip igmp snooping mrouter</b> command<br>icast router information and IGMP snooping information. |  |  |  |  |
|                    | -  | e sensitive. For example, if you enter l <b>exclude output</b> , the lines that contain <i>output</i> he lines that contain <i>Output</i> appear.  |  |  |  |  |
| Examples           | -  | of output from the <b>show ip igmp snooping mrouter</b> command. It shows how to outer ports on the switch.  |  |  |  |  |

|                    | 1 Gi2/0/1(d  | ynamic)  |  |  |  |  |

### **Related Commands**

| Command                       | Description   |
|-------------------------------|---|
| ip igmp snooping              | Enables IGMP snooping on the switch or on a VLAN.   |
| ip igmp snooping vlan mrouter | Adds a multicast router port.   |
| ip igmp snooping vlan static  | Statically adds a Layer 2 port as a member of a multicast group.                            |
| show ip igmp snooping         | Displays the IGMP snooping configuration of the switch or the VLAN                          |
| show ip igmp snooping groups  | Displays IGMP snooping multicast information for the switch or for the specified parameter. |

## show ip igmp snooping querier

Use the **show ip igmp snooping querier detail** user EXEC command to display the configuration and operation information for the IGMP querier configured on a switch.

show ip igmp snooping querier [detail | vlan vlan-id [detail]] [ | {begin | exclude | include}
expression]

| Syntax Description | detail   | Optional) Display detailed IGMP querier information.   |  |  |
|--------------------|--|--|--|--|
|                    | vlan vlan-id [detail]  | Optional) Display IGMP querier information for the specified VLAN. The range is 1 to 1001 and 1006 to 4094. Use the <b>detail</b> keyword to display detailed information.   |  |  |
|                    | begin  | (Optional) Display begins with the line that matches the expression.   |  |  |
|                    | exclude  | (Optional) Display excludes lines that match the expression.   |  |  |
|                    | include  | (Optional) Display includes lines that match the specified expression.   |  |  |
|                    | expression   | Expression in the output to use as a reference point.  |  |  |
| Command Modes      | User EXEC  |  |  |  |
| Command History    | Release  | Modification   |  |  |
|                    | 12.2(40)EX1  | This command was introduced.   |  |  |
| Jsage Guidelines   | detected device, also cal<br>multicast routers but has   | <b>nooping querier</b> command to display the IGMP version and the IP address of a led a <i>querier</i> , that sends IGMP query messages. A subnet can have multiple s only one IGMP querier. In a subnet running IGMPv2, one of the multicast querier. The querier can be a Layer 3 switch. |  |  |
|                    | the querier was detected   | <b>ping querier</b> command output also shows the VLAN and the interface on which<br>I. If the querier is the switch, the output shows the <i>Port</i> field as <i>Router</i> . If the<br>utput shows the port number on which the querier is learned in the <i>Port</i> field.              |  |  |
|                    | snooping querier comm  | <b>ping querier detail</b> user EXEC command is similar to the <b>show ip igmp</b><br>nand. However, the <b>show ip igmp snooping querier</b> command displays only the<br>recently detected by the switch querier.  |  |  |
|                    | The <b>show ip igmp snooping querier detail</b> command displays the device IP address most recently detected by the switch querier and this additional information: |  |  |  |
|                    | • The elected IGMP querier in the VLAN   |  |  |  |
|                    | • The configuration and operational information pertaining to the switch querier (if any) that is configured in the VLAN   |  |  |  |
|                    | 8  |  |  |  |

| Examples | This is an example of output from the <b>show ip igmp snooping querier</b> command: |                              |                                  |  |  |  |

# show ip source binding

Use the show ip source binding user EXEC command to display the IP source bindings on the switch.

show ip source binding [ip-address] [mac-address] [dhcp-snooping | static] [interface interface-id] [vlan vlan-id] [ | {begin | exclude | include} expression]

This command is supported only if your switch is running the IP services feature set.

| Syntax Description                  | ip-address   | (Optional) Display IP sou   | rce bindings for a  | specific           | c IP address.              |
|-------------------------------------|--|---|---|--------------------|----------------------------|
|                                     | mac-address  | (Optional) Display IP sou   | rce bindings for a  | specific           | e MAC address.             |
|                                     | dhcp-snooping  | (Optional) Display IP sou snooping.   | rce bindings that v   | vere lea           | arned by DHCP              |
|                                     | static   | (Optional) Display static   | IP source bindings  |                    |                            |
|                                     | interface interface-id   | (Optional) Display IP sou   | rce bindings on a s   | specific           | interface.                 |
|                                     | vlan vlan-id   | (Optional) Display IP sou   | rce bindings on a s   | specific           | VLAN.                      |
|                                     | begin  | (Optional) Display begins   | with the line that  | matche             | es the <i>expression</i> . |
|                                     | exclude  | (Optional) Display exclud   | les lines that match  | the ex             | pression.                  |
|                                     | include  | (Optional) Display includ   | es lines that match   | the sp             | ecified expression.        |
|                                     | expression   | Expression in the output  | o use as a referenc   | e point            | •                          |
|                                     |  |   |   |                    |                            |

|                    | • On the O<br>VLAN 1<br>exists or | Gigabit Ethern<br>0, IP source<br>the interface | net 1/0/1 interfa<br>guard with IP a<br>. For VLANs 11 | ce, DHCP snoop<br>ddress filtering i<br>to 20, the second | guration:<br>bing is enabled on VLA<br>s configured on the into<br>d entry shows that a defa<br>Is on which IP source g | erface, and a bindi<br>ault port access cor |

- The Gigabit Ethernet 1/0/2 interface is configured as trusted for DHCP snooping.
- On the Gigabit Ethernet 1/0/3 interface, DHCP snooping is not enabled on the VLANs to which the interface belongs.

- On the Gigabit Ethernet 1/0/4 interface, IP source guard with source IP and MAC address filtering is enabled, and static IP source bindings are configured on VLANs 10 and 11. For VLANs 12 to 20, the default port ACL is applied on the interface for the VLANs on which IP source guard is not configured.
- On the Gigabit Ethernet 1/0/5 interface, IP source guard with source IP and MAC address filtering is enabled and configured with a static IP binding, but port security is disabled. The switch cannot filter source MAC addresses.

This is an example of output on an interface on which IP source guard is disabled:

Switch> show ip verify source gigabitethernet1/0/6 IP source guard is not configured on the interface gi1/0/6.

## show ipc

Use the **show ipc** user EXEC command to display Interprocess Communications Protocol (IPC) configuration, status, and statistics on a switch stack or a standalone switch.

show ipc {mcast {appclass | groups | status } | nodes | ports [open] | queue | rpc | session {all |
 rx | tx } [verbose] | status [cumlulative] | zones } [ | {begin | exclude | include } expression]

| Syntax Description | mcast {appclass  <br>groups   status} | Display the IPC multicast routing information. The keywords have these meanings:                                       |
|--------------------|---------------------------------------|--|
|                    |                                       | • <b>appclass</b> —Display the IPC multicast application classes.  |
|                    |                                       | • groups—Display the IPC multicast groups.   |
|                    |                                       | • <b>status</b> —Display the IPC multicast routing status.   |
|                    | nodes                                 | Display participating nodes.   |
|                    | ports [open]                          | Display local IPC ports. The keyword has this meaning:   |
|                    |                                       | • <b>open</b> —(Optional) Display only the open ports.   |
|                    | queue                                 | Display the contents of the IPC transmission queue.  |
|                    | rpc                                   | Display the IPC remote-procedure statistics.   |
|                    | session {all   rx   tx}               | Display the IPC session statistics (available only in privileged EXEC mode).<br>The keywords have these meanings:      |
|                    |                                       | • <b>all</b> —Display all the session statistics.  |
|                    |                                       | • <b>rx</b> —Display the sessions statistics for traffic that the switch receives                                      |
|                    |                                       | • <b>tx</b> —Display the sessions statistics for traffic that the switch forwards.                                     |
|                    | verbose                               | (Optional) Display detailed statistics (available only in privileged EXEC mode).                                       |
|                    | status [cumlulative]                  | Display the status of the local IPC server. The keyword has this meaning:  |
|                    |                                       | • <b>cumlulative</b> —(Optional) Display the status of the local IPC server since the switch was started or restarted. |
|                    | zones                                 | Display the participating IPC zones. The switch supports a single IPC zone.  |
|                    | begin                                 | (Optional) Display begins with the line that matches the <i>expression</i> .   |
|                    | exclude                               | (Optional) Display excludes lines that match the <i>expression</i> .   |
|                    | include                               | (Optional) Display includes lines that match the specified expression.   |
|                    | expression                            | Expression in the output to use as a reference point.  |
| Command Modes      | User EXEC                             |  |
|                    |                                       |  |
| 0 1111 1           |                                       |  |

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | 12.2(40)EX1 | This command was introduced. |

**Usage Guidelines** Expressions are case sensitive. For example, if you enter | **exclude output**, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

| Examples | This example shows how to display the IPC routing status: |
|----------|---|
|          | Switch> show ipc mcast status                             |

IPC Mcast Status

|                                 |       |                | Tx   | Rx |   |
|---------------------------------|-------|----------------|------|----|---|
| _                               |       |                |      |    |   |
| Total Frames                    |       |                | 0    | 0  |   |
| Total control Frames            |       |                | 0    | 0  |   |

 Command
 Description

 clear ipc
 Clears the IPC multicast routing statistics.

## show ipv6 access-list

Use the **show ipv6 access-list** user EXEC command to display the contents of all current IPv6 access lists.

show ipv6 access-list [access-list-name]

This command is supported only if you have configured a dual IPv4 and IPv6 Switch Database Management (SDM) template on the switch.

| Syntax Description | access-list-name   | (Optional) Name of access list.  |
|--------------------|--|--|
| Command Modes      | User EXEC  |  |
| Command History    | Release  | Modification   |
|                    | 12.2(40)EX1  | This command was introduced.   |
| Usage Guidelines   | The <b>show ipv6 access-list</b> that it is IPv6-specific. | command provides output similar to the <b>show ip access-list</b> command, except  |
|                    | -  | and IPv6 template, enter the <b>sdm prefer dual-ipv4-and-ipv6</b> { <b>default</b>   <b>vlan</b> ) mand and reload the switch. |
| Examples           | The following output from and outbound:                    | n the <b>show ipv6 access-list</b> command shows IPv6 access lists named inbound   |
|                    |  | nd<br>eq bgp (8 matches) sequence 10<br>eq telnet (15 matches) sequence 20   |
|                    | Table 2-27 describes the s                                 | significant fields shown in the display.   |
|                    | Table 2-27 show ipv  | 6 access-list Field Descriptions   |
|                    | Field  | Description  |
|                    | IPv6 access list inbound                                   | Name of the IPv6 access list, for example, inbound.  |
|                    | permit   | Permits any packet that matches the specified protocol type.   |

that the packet must match.

Equal to ::/0.

Transmission Control Protocol. The higher-level (Layer 4) protocol type

tcp

any

| Field         | Description   |
|---------------|---|
| eq            | An equal operand that compares the source or destination ports of TCP or UDP packets.   |
| bgp (matches) | Border Gateway Protocol. The protocol type that the packet is equal to and the number of matches.   |
| sequence 10   | Sequence in which an incoming packet is compared to lines in an access<br>list. Access list lines are ordered from first priority (lowest number, for<br>example, 10) to last priority (highest number, for example, 80). |

| Table 2-27 | show ipv6 access-list Field Descriptions (continued) |

| Related Commands   | Command  | Description   |
|                    | ipv6 dhcp pool   | Configures a DHCPv6 pool and enters DHCPv6 pool configuration mode.   |
|                    | clear ipv6 dhcp<br>conflict                                      | Clears an address conflict from the DHCPv6 server database.   |

## show ipv6 mld snooping

Use the **show ipv6 mld snooping** user EXEC command to display IP version 6 (IPv6) Multicast Listener Discovery (MLD) snooping configuration of the switch or the VLAN.

show ipv6 mld snooping [vlan vlan-id] [ | {begin | exclude | include} expression]

٩, Note

This command is supported only if you have configured a dual IPv4 and IPv6 Switch Database Management (SDM) template on the switch.

| Syntax Description | vlan vlan-id   | (Optional) Specify a VLAN; the range is 1 to 1001 and 1006 to 4094.  |
|--------------------|--|--|
|                    | begin  | (Optional) Display begins with the line that matches the <i>expression</i> .   |
|                    | exclude  | (Optional) Display excludes lines that match the expression.   |
|                    | include  | (Optional) Display includes lines that match the specified expression.   |
|                    | expression   | Expression in the output to use as a reference point.  |
| Command Modes      | User EXEC  |  |
| Command History    | Release  | Modification   |
|                    | 12.2(40)EX1  | This command was introduced.   |
|                    | global configuration c<br>Expressions are case s   | Pv4 and IPv6 template, enter the <b>sdm prefer dual-ipv4-and-ipv6</b> { <b>default</b>   <b>vlan</b> ommand and reload the switch.<br>ensitive. For example, if you enter   <b>exclude output</b> , the lines that contain <i>outpu</i> lines that contain <i>Output</i> appear. |
| Examples           | This is an example of characteristics for a sp   | output from the <b>show ipv6 mld snooping vlan</b> command. It shows snooping becific VLAN.  |
|                    | Global MLD Snooping  | -  |
|                    | MLD snooping<br>MLDv2 snooping (min:<br>Listener message sup<br>TCN solicit query<br>TCN flood query cour<br>Robustness variable<br>Last listener query<br>Last listener query | : Enabled<br>imal) : Enabled<br>ppression : Enabled<br>: Disabled<br>nt : 2<br>: 3<br>count : 2  |

| Vlan 100:                      |             |
|--------------------------------|-------------|
|                                |             |
| MLD snooping                   | : Disabled  |
| MLDv1 immediate leave          | : Disabled  |
| Explicit host tracking         | : Enabled   |
| Multicast router learning mode | : pim-dvmrp |
| Robustness variable            | : 3         |
| Last listener query count      | : 2         |
| Last listener query interval   | : 1000      |
|                                |             |

This is an example of output from the **show ipv6 mld snooping** command. It displays snooping characteristics for all VLANs on the switch.

| Switch> <b>show ipv6 mld snooping</b><br>Global MLD Snooping configurat  |  |
|--|--|
| TCN flood query count  | : Enabled<br>: Disabled<br>: 2<br>: 3<br>: 2                                 |

### **Related Commands**

| Command           | Description  |
|-------------------|--|
| ipv6 mld snooping | Enables and configures MLD snooping on the switch or on a VLAN.                                |
| sdm prefer        | Configures an SDM template to optimize system resources based on how the switch is being used. |

### show ipv6 mld snooping address

Use the **show ipv6 mld snooping address** user EXEC command to display all or specified IP Version 6 (IPv6) multicast address information maintained by Multicast Listener Discovery (MLD) snooping.

۵, Note

This command is supported only if you have configured a dual IPv4 and IPv6 Switch Database Management (SDM) template on the switch.

### Syntax Description

| vlan vlan-id           | (Optional) Specify a VLAN about which to show MLD snooping multicast address information. The VLAN ID range is 1 to 1001 and 1006 to 4094. |  |
|------------------------|--|--|
| ipv6-multicast-address | (Optional) Display information about the specified IPv6 multicast address.<br>This keyword is only available when a VLAN ID is entered.    |  |
| count                  | (Optional) Display the number of multicast groups on the switch or in the specified VLAN.  |  |
| dynamic                | (Optional) Display MLD snooping learned group information.   |  |
| user                   | (Optional) Display MLD snooping user-configured group information.   |  |
| begin                  | (Optional) Display begins with the line that matches the <i>expression</i> .   |  |
| exclude                | (Optional) Display excludes lines that match the <i>expression</i> .   |  |
| include                | (Optional) Display includes lines that match the specified <i>expression</i> .   |  |
| expression             | Expression in the output to use as a reference point.  |  |
|                        |  |  |

#### **Command Modes** User EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | 12.2(40)EX1 | This command was introduced. |

#### **Usage Guidelines**

**ines** Use this command to display IPv6 multicast address information.

You can enter an IPv6 multicast address only after you enter a VLAN ID.

VLAN numbers 1002 through 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in MLD snooping.

Use the **dynamic** keyword to display information only about groups that are learned. Use the **user** keyword to display information only about groups that have been configured.

To configure the dual IPv4 and IPv6 template, enter the **sdm prefer dual-ipv4-and-ipv6** {**default** | **vlan**) global configuration command and reload the switch.

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

| Examples | This is an example of output from the show snooping address user EXEC command:             |  |  |  |
|----------|--|--|--|--|
|          | Switch> show ipv6 mld snooping address   |  |  |  |
|          | Vlan Group Type Version Port List  |  |  |  |
|          | 2 FF12::3 user Gi1/0/2, Gi2/0/2, Gi3/0/1,Gi3/0/3   |  |  |  |
|          | This is an example of output from the show snooping address count user EXEC command:       |  |  |  |
|          | Switch> <b>show ipv6 mld snooping address count</b><br>Total number of multicast groups: 2 |  |  |  |
|          | This is an example of output from the show snooping address user user EXEC command:        |  |  |  |
|          | Switch> <b>show ipv6 mld snooping address user</b><br>Vlan Group Type Version Port List    |  |  |  |

### show ipv6 mld snooping mrouter

Use the **show ipv6 mld snooping mrouter** user EXEC command to display dynamically learned and manually configured IP version 6 (IPv6) Multicast Listener Discovery (MLD) router ports for the switch or a VLAN.

**show ipv6 mld snooping mrouter** [vlan vlan-id] [ | {begin | exclude | include} expression]

S, Note

This command is supported only if you have configured a dual IPv4 and IPv6 Switch Database Management (SDM) template on the switch.

| Syntax Description | vlan vlan-id | (Optional) Specify a VLAN; the range is 1 to 1001 and 1006 to 4094.            |
|--------------------|--------------|--|
|                    | begin        | (Optional) Display begins with the line that matches the <i>expression</i> .   |
|                    | exclude      | (Optional) Display excludes lines that match the <i>expression</i> .           |
|                    | include      | (Optional) Display includes lines that match the specified <i>expression</i> . |
|                    | expression   | Expression in the output to use as a reference point.                          |

### Command Modes User EXEC

|-----------------|-------------|------------------------------|
|                 | 12.2(40)EX1 | This command was introduced. |
|                 |             |                              |

#### **Usage Guidelines** Use this command to display MLD snooping router ports for the switch or for a specific VLAN.

VLAN numbers 1002 through 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in MLD snooping.

To configure the dual IPv4 and IPv6 template, enter the **sdm prefer dual-ipv4-and-ipv6** {**default** | **vlan**) global configuration command and reload the switch.

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

#### **Examples**

This is an example of output from the **show ipv6 mld snooping mrouter** command. It displays snooping characteristics for all VLANs on the switch that are participating in MLD snooping.

Switch> show ipv6 mld snooping mrouter Vlan ports

| VICILI | Porco             |
|--------|-------------------|
|        |                   |
| 2      | Gi1/0/11(dynamic) |
| 72     | Gi1/0/11(dynamic) |
| 200    | Gi1/0/11(dynamic) |

This is an example of output from the **show ipv6 mld snooping mrouter vlan** command. It shows multicast router ports for a specific VLAN.

## show ipv6 mld snooping querier

Use the **show ipv6 mld snooping querier** user EXEC command to display IP version 6 (IPv6) Multicast Listener Discovery (MLD) snooping querier-related information most recently received by the switch or the VLAN.

show ipv6 mld snooping querier [vlan vlan-id] [detail] [ | {begin | exclude | include} expression]

```
<u>Note</u>
```

This command is supported only if you have configured a dual IPv4 and IPv6 Switch Database Management (SDM) template on the switch.

| Syntax Description | vlan vlan-id  | (Optional) Specify a VLAN; the range is 1 to 1001 and 1006 to 4094.  |  |
|--------------------|---|--|--|
|                    | detail  | (Optional) Display MLD snooping detailed querier information for the switch or for the VLAN.   |  |
|                    | begin   | (Optional) Display begins with the line that matches the <i>expression</i> .   |  |
|                    | exclude   | (Optional) Display excludes lines that match the <i>expression</i> .   |  |
|                    | include   | (Optional) Display includes lines that match the specified expression.   |  |
|                    | expression  | Expression in the output to use as a reference point.  |  |
| Command Modes      | User EXEC   |  |  |
|                    |   |  |  |
| Command History    | Release   | Modification   |  |
|                    | 12.2(40)EX1   | This command was introduced.   |  |
| Usage Guidelines   | detected device that  | <b>mld snooping querier</b> command to display the MLD version and IPv6 address of a t sends MLD query messages, which is also called a <i>querier</i> . A subnet can have routers but has only one MLD querier. The querier can be a Layer 3 switch.  |  |
|                    | the querier was dete  | <b>snooping querier</b> command output also shows the VLAN and interface on which ected. If the querier is the switch, the output shows the <i>Port</i> field as <i>Router</i> . If the output shows the port number on which the querier is learned in the <i>Port</i> field.   |  |
|                    | response to a query<br>VLAN values, such<br>information is used   | <b>now ipv6 mld snoop querier vlan</b> command displays the information received in<br>message from an external or internal querier. It does not display user-configured<br>as the snooping robustness variable on the particular VLAN. This querier<br>only on the MASQ message that is sent by the switch. It does not override the<br>ustness variable that is used for aging out a member that does not respond to query |  |
|                    | VLAN numbers 1002 through 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in MLD snooping. |  |  |
|                    |   |  |  |

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

#### Examples

This is an example of output from the **show ipv6 mld snooping querier** command:

```
      Switch> show ipv6 mld snooping querier

      Vlan
      IP Address
      MLD Version Port

      2
      FE80::201:C9FF:FE40:6000 v1
      Gi3/0/1
```

This is an example of output from the **show ipv6 mld snooping querier detail** command:

```
      Switch>
      show ipv6 mld snooping querier detail

      Vlan
      IP Address
      MLD Version Port

      2
      FE80::201:C9FF:FE40:6000 v1
      Gi3/0/1
```

This is an example of output from the show ipv6 mld snooping querier vlan command:

```
Switch> show ipv6 mld snooping querier vlan 2
IP address : FE80::201:C9FF:FE40:6000
MLD version : v1
Port : Gi3/0/1
Max response time : 1000s
```

| Related Commands | Command   | Description   |
|------------------|---|---|
|                  | ipv6 mld snooping                                     | Enables and configures IPv6 MLD snooping on the switch or on a VLAN.  |
|                  | ipv6 mld snooping<br>last-listener-query-count        | Configures the maximum number of queries that the switch sends before aging out an MLD client.  |
|                  | ipv6 mld snooping<br>last-listener-query-interv<br>al | Configures the maximum response time after sending out a query that the switch waits before deleting a port from the multicast group. |
|                  | ipv6 mld snooping<br>robustness-variable              | Configures the maximum number of queries that the switch sends before aging out a multicast address when there is no response.        |

|                  | ipv6 mld snooping                                     | Enables and configures IPv6 MLD snooping on the switch or on a VLAN.  |

## show ipv6 route updated

Use the **show ipv6 route updated command in** user EXEC command to display the current contents of the IPv6 routing table.

| Syntax Description | protocol   | (Optional) Displays routes for the specified routing protocol using any of these keywords:   |
|--------------------|------------|--|
|                    |            | • bgp  |
|                    |            | • isis   |
|                    |            | • ospf   |
|                    |            | • rip  |
|                    |            | or displays routes for the specified type of route using any of these keywords:  |
|                    |            | • connected  |
|                    |            | • local  |
|                    |            | • static   |
|                    |            | • interface interface id   |
|                    | boot-up    | Display the current contents of the IPv6 routing table.  |
|                    | hh:mm      | Enter the time as a 2-digit number for a 24-hour clock. Make sure to use the colons (:). For example, enter <b>13:32</b>   |
|                    | day        | Enter the day of the month. The range is from 1 to 31.   |
|                    | month      | Enter the month in upper case or lower case letters. You can enter the full name of the month, such as <b>January</b> or <b>august</b> , or the first three letters of the month, such as <b>jan</b> or <b>Aug</b> . |
|                    | begin      | (Optional) Display begins with the line that matches the expression.   |
|                    | exclude    | (Optional) Display excludes lines that match the <i>expression</i> .   |
|                    | include    | (Optional) Display includes lines that match the specified expression.   |
|                    | expression | Expression in the output to use as a reference point.  |

Table 2-28 describes the fields in the display.

Table 2-28show lacp counters Field Descriptions

| Field                         | Description   |
|-------------------------------|---|
| LACPDUs Sent and Recv         | The number of LACP packets sent and received by a port.                 |
| Marker Sent and Recv          | The number of LACP marker packets sent and received by a port.          |
| Marker Response Sent and Recv | The number of LACP marker response packets sent and received by a port. |
| LACPDUs Pkts and Err          | The number of unknown and illegal packets received by LACP for a port.  |

This is an example of output from the show lacp internal command:

Switch> show lacp 1 internal

```

Table 2-29 describes the fields in the display:

| Table 2-29 | show lacp internal Field Descriptions |
|------------|---------------------------------------|
|            |                                       |

| Field              | Description  |  |  |
|--------------------|--|--|--|
| State              | State of the specific port. These are the allowed values:  |  |  |
|                    | • – —Port is in an unknown state.  |  |  |
|                    | • <b>bndl</b> —Port is attached to an aggregator and bundled with other ports.   |  |  |
|                    | • <b>susp</b> —Port is in a suspended state; it is not attached to any aggregator.   |  |  |
|                    | • <b>hot-sby</b> —Port is in a hot-standby state.  |  |  |
|                    | • <b>indiv</b> —Port is incapable of bundling with any other port.   |  |  |
|                    | • <b>indep</b> —Port is in an independent state (not bundled but able to switch data traffic. In this case, LACP is not running on the partner port).                            |  |  |
|                    | • <b>down</b> —Port is down.   |  |  |
| LACP Port Priority | Port priority setting. LACP uses the port priority to put ports s<br>in standby mode when there is a hardware limitation that<br>prevents all compatible ports from aggregating. |  |  |

| Field       | Description   |
|-------------|---|
| Admin Key   | Administrative key assigned to this port. LACP automatically<br>generates an administrative key value as a hexadecimal number.<br>The administrative key defines the ability of a port to aggregate<br>with other ports. A port's ability to aggregate with other ports is<br>determined by the port physical characteristics (for example,<br>data rate and duplex capability) and configuration restrictions<br>that you establish. |
| Oper Key    | Runtime operational key that is being used by this port. LACP automatically generates this value as a hexadecimal number.   |
| Port Number | Port number.  |
| Port State  | State variables for the port, encoded as individual bits within a single octet with these meanings:   |
|             | • bit0: LACP_Activity   |
|             | • bit1: LACP_Timeout  |
|             | • bit2: Aggregation   |
|             | • bit3: Synchronization   |
|             | • bit4: Collecting  |
|             | • bit5: Distributing  |
|             | • bit6: Defaulted   |
|             | • bit7: Expired   |
|             | <b>Note</b> In the list above, bit7 is the MSB and bit0 is the LSB.   |

| Table 2-29 | show lacp internal Field Descri | ntions (continued) |

                              Oper Key
                                               Port State
          32768
                              0x3
                                               0x3C
```

This is an example of output from the **show lacp sys-id** command:

Switch> **show lacp sys-id** 32765,0002.4b29.3a00

The system identification is made up of the system priority and the system MAC address. The first two bytes are the system priority, and the last six bytes are the globally administered individual MAC address associated to the system.

### **Related Commands**

| Command              | Description                                |
|----------------------|--|
| clear lacp           | Clears the LACP channel-group information. |
| lacp port-priority   | Configures the LACP port priority.         |
| lacp system-priority | Configures the LACP system priority.       |

# show link state group

Use the **show link state group** privileged EXEC command to display the link-state group information.

show link state group [number] [detail] [ | {begin | exclude | include} expression]

| Syntax Description | number  | (Optional) Number of the link-state group.   |
|--------------------|---|--|
|                    | detail  | (Optional) Specify that detailed information appears.  |
|                    | begin   | (Optional) Display begins with the line that matches the <i>expression</i> .   |
|                    | exclude   | (Optional) Display excludes lines that match the expression.   |
|                    | include   | (Optional) Display includes lines that match the specified <i>expression</i> .   |
|                    | expression  | Expression in the output to use as a reference point.  |
| Defaults           | There is no default.  |  |

|                       | (Optional) Display includes lines that match the specified <i>expression</i> .   |
|                       |  |
|                       | Expression in the output to use as a reference point.  |
|                       |  |
|                       |  |
| Мо                    | odification  |
| 1 Thi                 | is command was introduced.   |
|                       |  |

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

### Examples

This is an example of output from the **show location civic-location** command that displays location information for an interface:

```
Switch> show location civic interface gigabitethernet2/0/1
Civic location information
_____
                    : 1
Identifier
County
Street number
                  : Santa Clara
County
                   : 3550
Building
                    : 19
Room
                    : C6
Primary road name
                   : Cisco Way
City
                    : San Jose
State
                    : CA
Country
                     : US
```

This is an example of output from the **show location civic-location** command that displays all the civic location information:

Switch> show location civic-location static

| Civic location informat | ion<br>              |
|-------------------------|----------------------|
| Identifier              | : 1                  |
| County                  | : Santa Clara        |
| Street number           | : 3550               |
| Building                | : 19                 |
| Room                    | : C6                 |
| Primary road name       | : Cisco Way          |
| City                    | : San Jose           |
| State                   | : CA                 |
| Country                 | : US                 |
| Ports                   | : Gi2/0/1            |
| Identifier              | : 2                  |
| Street number           | : 24568              |
| Street number suffix    | : West               |
| Landmark                | : Golden Gate Bridge |
| Primary road name       | : 19th Ave           |
| City                    | : San Francisco      |
| Country                 | : US                 |

This is an example of output from the **show location elin-location** command that displays the emergency location information:

 ${\tt Switch}{\texttt{>}}$  show location elin-location identifier 1

This is an example of output from the **show location elin static** command that displays all emergency location information:

Switch> show location elin static Elin location information ------Identifier : 1 Elin : 14085553881 Ports : Gi2/0/2 ------Identifier : 2 Elin : 18002228999

### **Related Commands**

| ands | Command                            | Description   |
|------|------------------------------------|---|
|      | location (global configuration)    | Configures the global location information for an endpoint. |
|      | location (interface configuration) | Configures the location information for an interface.       |

## show logging

Use the **show logging** privileged EXEC command to display the on-board failure logging (OBFL) information.

| Syntax Description | <pre>module [switch-number]</pre>           | (Optional) Display OBFL information about the specified switches.   |
|--------------------|---|---|
|                    |   | On stacking-capable switches, use the <i>switch-number</i> parameter to specify the switch number, which is the stack member number. If the switch is a standalone switch, the switch number is 1. If the switch is in a stack, the range is 1 to 9, depending on the switch member numbers in the stack. |
|                    |   | On nonstacking-capable switches, the <i>switch-number</i> parameter is always <b>1</b> .  |
|                    |   | For more information about this parameter, see the "Usage Guidelines" section for this command.   |
|                    | clilog                                      | Display the OBFL CLI commands that were entered on the standalone switch or specified stack members.  |
|                    | environment                                 | Display the unique device identifier (UDI) information for the<br>standalone switch or specified stack members and for all the connected<br>FRU devices: the product identification (PID), the version<br>identification (VID), and the serial number.  |
|                    | message                                     | Display the hardware-related system messages generated by the standalone switch or specified stack members.   |
|                    | temperature                                 | Display the temperature of the standalone switch or specified stack members.  |
|                    | uptime                                      | Display the time when the standalone switch or specified stack<br>members start, the reason the switch or specified members restart, and<br>the length of time the standalone switch or specified stack members<br>have been running since they last restarted.   |
|                    | voltage                                     | Display the system voltages of the standalone switch or the specified switch stack members.   |
|                    | continuous                                  | (Optional) Display the data in the <i>continuous</i> file.  |
|                    | summary                                     | (Optional) Display the data in the <i>summary</i> file.   |
|                    | <b>start</b> <i>hh:mm:ss day month year</i> | (Optional) Display the data from the specified time and date. For more information, see the "Usage Guidelines" section.   |
|                    | end hh:mm:ss day month year                 | (Optional) Display the data up to the specified time and date. For more information, see the "Usage Guidelines" section.  |
|                    | detail                                      | (Optional) Display both the continuous and summary data.  |
|                    | begin                                       | (Optional) Display begins with the line that matches the <i>expression</i> .  |
|                    | exclude                                     | (Optional) Display excludes lines that match the <i>expression</i> .  |
|                    |   |   |

|                  | include   | (Optional) Display includes lines that match the specified <i>expression</i> .  |
|------------------|---|---|
|                  | expression  | Expression in the output to use as a reference point.   |
|                  |   |   |
| Note             | Though visible in th  | e command-line help strings, the <b>poe</b> keyword is not supported.   |
|                  |   |   |
| Defaults         | There is no default.  |   |

## show mac access-group

Use the **show mac access-group** user EXEC command to display the MAC access control lists (ACLs) configured for an interface or a switch.

show mac access-group [interface interface-id] [ | {begin | exclude | include} expression]

| Syntax Description | interface interface-id  | (Optional) Display the MAC ACLs configured on a specific interface. Valid interfaces are physical ports and port channels; the port-channel range is 1 to 48 (available only in privileged EXEC mode). |  |  |  |  |  |
|--------------------|---|--|--|--|--|--|--|
|                    | begin   | (Optional) Display begins with the line that matches the <i>expression</i> .   |  |  |  |  |  |
|                    | exclude   | (Optional) Display excludes lines that match the <i>expression</i> .   |  |  |  |  |  |
|                    | include   | (Optional) Display includes lines that match the specified expression.   |  |  |  |  |  |
|                    | expression  | Expression in the output to use as a reference point.  |  |  |  |  |  |
| Command Modes      | User EXEC   |  |  |  |  |  |  |
| Command History    | Release   | Modification   |  |  |  |  |  |
|                    | 12.2(40)EX1   | This command was introduced.   |  |  |  |  |  |
| Examples           |   | utput from the <b>show mac-access group</b> user EXEC command. In this display, ess list <i>macl_e1</i> applied; no MAC ACLs are applied to other interfaces.  |  |  |  |  |  |
|                    | Switch> show mac acce<br>Interface GigabitEthe<br>Inbound access-lis<br>Interface GigabitEthe<br>Inbound access-lis<br>Interface GigabitEthe<br>Inbound access-lis<br>Interface GigabitEthe<br>Inbound access-lis | ernet1/0/1:<br>st is not set<br>ernet1/0/2:<br>st is macl_e1<br>ernet1/0/3:<br>st is not set<br>ernet1/0/4:  |  |  |  |  |  |

|                    | This is an example of or command:   | utput from the <b>show mac access-group interface gigabitethernet1/0/1</b>   |  |  |  |  |  |
|                    | Switch# <b>show mac acce</b><br>Interface GigabitEthe<br>Inbound access-lis   |  |  |  |  |  |  |

| Related Commands | Command          | Description                                 |
|------------------|------------------|---|
|                  | mac access-group | Applies a MAC access group to an interface. |

### show mac address-table

Use the **show mac address-table** user EXEC command to display a specific MAC address table static and dynamic entry or the MAC address table static and dynamic entries on a specific interface or VLAN.

show mac address-table [ | {begin | exclude | include} expression]

| Syntax Description           | begiı  | n  | (Optional) Di  | isplay begins with the line that matches the expression.   |
|------------------------------|--|--|--|--|
|                              | exclu  | ıde  | (Optional) Di  | isplay excludes lines that match the <i>expression</i> .   |
|                              | inclu  | ıde  | (Optional) Di  | isplay includes lines that match the specified expression.   |
|                              | expres   | sion   | Expression in  | n the output to use as a reference point.  |
| Command Modes                | User E   | XEC  |  |  |
| Command History              | Releas   |  | Modification   |  |
|                              | 12.2(4   | 0)EX1  | This comman  | nd was introduced.   |

|                  | show mac address-table static          | Displays static MAC address table entries only.   |
|                  | show mac address-table vlan            | Displays the MAC address table information for the specified VLAN.                            |

## show mac address-table dynamic

Use the **show mac address-table dynamic** user EXEC command to display only dynamic MAC address table entries.

show mac address-table dynamic [address mac-address] [interface interface-id] [vlan vlan-id]
 [ | { begin | exclude | include } expression]

| Syntax Description | address mac-address    | (Optional) Specify a 48-bit MAC address; the valid format is H.H.H (available in privileged EXEC mode only). |
|--------------------|------------------------|--|
|                    | interface interface-id | (Optional) Specify an interface to match; valid <i>interfaces</i> include physical ports and port channels.  |
|                    | vlan vlan-id           | (Optional) Display entries for a specific VLAN; the range is 1 to 4094.                                      |
|                    | begin                  | (Optional) Display begins with the line that matches the <i>expression</i> .                                 |
|                    | exclude                | (Optional) Display excludes lines that match the <i>expression</i> .   |
|                    | include                | (Optional) Display includes lines that match the specified <i>expression</i> .                               |
|                    | expression             | Expression in the output to use as a reference point.  |

Command Modes User EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | 12.2(40)EX1 | This command was introduced. |

**Usage Guidelines** Expressions are case sensitive. For example, if you enter | **exclude output**, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

Examples

This is an example of output from the **show mac address-table dynamic** command:

| Switch>  | show mac address | s-table d | lynamic    |
|----------|------------------|-----------|------------|
|          | Mac Address Ta   | able      |            |
|          |                  |           |            |
|          |                  |           |            |

## show mac address-table notification

Use the **show mac address-table notification** user EXEC command to display the MAC address notification settings for all interfaces or the specified interface.

show mac address-table notification [interface [interface-id]] [ | {begin | exclude | include}
expression]

| Syntax Description | interface  | (Optional) Display information for all interfaces. Valid interfaces include physical ports and port channels.          |
|--------------------|--|--|
|                    | interface-id   | (Optional) Display information for the specified interface. Valid interfaces include physical ports and port channels. |
|                    | begin  | (Optional) Display begins with the line that matches the <i>expression</i> .   |
|                    | exclude  | (Optional) Display excludes lines that match the <i>expression</i> .   |
|                    | include  | (Optional) Display includes lines that match the specified <i>expression</i> .   |
|                    | expression   | Expression in the output to use as a reference point.  |
| Command History    | Release  | Modification   |
| Command History    | Release  | Modification   |
|                    | 12.2(40)EX1  | This command was introduced.   |
| Usage Guidelines   | feature is enabled of<br>in the history table,<br>Use the <b>interface</b> k<br>flags for that interface |  |
|                    | Expressions are cas<br>do not appear, but t  | se sensitive. For example, if you enter   exclude output, the lines that contain output                                |

### show mac address-table static

Use the show mac address-table static user EXEC command to display only static MAC address table entries.

show mac address-table static [address mac-address] [interface interface-id] [vlan vlan-id] [ | { **begin** | **exclude** | **include** } *expression*]

| Syntax Description | address mac-address    | (Optional) Specify a 48-bit MAC address; the valid format is H.H.H (available in privileged EXEC mode only). |
|--------------------|------------------------|--|
|                    | interface interface-id | (Optional) Specify an interface to match; valid <i>interfaces</i> include physical ports and port channels.  |
|                    | vlan vlan-id           | (Optional) Display addresses for a specific VLAN. The range is 1 to 4094.                                    |
|                    | begin                  | (Optional) Display begins with the line that matches the <i>expression</i> .                                 |
|                    | exclude                | (Optional) Display excludes lines that match the <i>expression</i> .   |
|                    | include                | (Optional) Display includes lines that match the specified <i>expression</i> .                               |
|                    | expression             | Expression in the output to use as a reference point.  |

# show mls qos aggregate-policer

Use the **show mls qos aggregate-policer** user EXEC command to display the quality of service (QoS) aggregate policer configuration. A policer defines a maximum permissible rate of transmission, a maximum burst size for transmissions, and an action to take if either maximum is exceeded.

show mls qos aggregate-policer [aggregate-policer-name] [ | {begin | exclude | include}
expression]

| Syntax Description | aggregate-policer-name     | (Optional) Display the policer configuration for the specified name.  |
|--------------------|----------------------------|---|
|                    | begin                      | (Optional) Display begins with the line that matches the <i>expression</i> .  |
|                    | exclude                    | (Optional) Display excludes lines that match the <i>expression</i> .  |
|                    | include                    | (Optional) Display includes lines that match the specified <i>expression</i> .  |
|                    | expression                 | Expression in the output to use as a reference point.   |
| Command Modes      | User EXEC                  |   |
| Command History    | Release                    | Modification  |
|                    | 12.2(40)EX1                | This command was introduced.  |
| Usage Guidelines   | -                          | itive. For example, if you enter <b>  exclude output</b> , the lines that contain <i>output</i> as that contain <i>Output</i> appear. |
| Examples           | This is an example of outp | put from the show mls qos aggregate-policer command:  |
|                    |                            | ggregate-policer policer1<br>cer1 1000000 2000000 exceed-action drop<br>map   |
| Related Commands   | Command                    | Description   |
|                    |                            |   |

## show mls qos input-queue

Use the **show mls qos input-queue** user EXEC command to display quality of service (QoS) settings for the ingress queues.

show mls qos input-queue [ | {begin | exclude | include} expression]

| Syntax Description                              | begin  | (Opti  | ional) Display begins with the line that matches the <i>expression</i> .  |
|---|--|--|---|
|   | exclude  | (Opti  | ional) Display excludes lines that match the <i>expression</i> .  |
|   | include  | (Opti  | ional) Display includes lines that match the specified <i>expression</i> .  |
|   | expression   | Expre  | ession in the output to use as a reference point.   |
| Command Modes                                   | User EXEC  |  |   |
|   |  |  |   |
| Command History                                 | Release  |  | Modification  |
|   | 12.2(40)EX1  |  | This command was introduced.  |

| heidleu Commanus | Commanu                                   | Description  |
|                  | mls qos srr-queue input bandwidth         | Assigns shaped round robin (SRR) weights to an ingress   |
|                  |   | queue.   |
|                  | mls qos srr-queue input buffers           | Allocates the buffers between the ingress queues.  |
|                  | mls qos srr-queue input cos-map           | Maps assigned class of service (CoS) values to an ingress<br>queue and assigns CoS values to a queue and to a threshold<br>ID.               |
|                  | mls qos srr-queue input dscp-map          | Maps assigned Differentiated Services Code Point (DSCP) values to an ingress queue and assigns DSCP values to a queue and to a threshold ID. |
|                  | mls qos srr-queue input<br>priority-queue | Configures the ingress priority queue and guarantees bandwidth.  |
|                  | mls qos srr-queue input threshold         | Assigns weighted tail-drop (WTD) threshold percentages to an ingress queue.  |

## show mls qos interface

Use the **show mls qos interface** user EXEC command to display quality of service (QoS) information at the port level.

show mls qos interface [interface-id] [buffers | queueing | statistics]
 [ | {begin | exclude | include} expression]

| Syntax Description | interface-id | (Optional) Display QoS information for the specified port. Valid interfaces include physical ports.   |
|--------------------|--------------|---|
|                    | buffers      | (Optional) Display the buffer allocation among the queues.  |
|                    | queueing     | (Optional) Display the queueing strategy (shared or shaped) and the weights corresponding to the queues.  |
|                    | statistics   | (Optional) Display statistics for sent and received Differentiated Services Code<br>Points (DSCPs) and class of service (CoS) values, the number of packets<br>enqueued or dropped per egress queue, and the number of in-profile and<br>out-of-profile packets for each policer. |
|                    | begin        | (Optional) Display begins with the line that matches the <i>expression</i> .  |
|                    | exclude      | (Optional) Display excludes lines that match the expression.  |
|                    | include      | (Optional) Display includes lines that match the specified expression.  |
|                    | expression   | Expression in the output to use as a reference point.   |
|                    |              |   |

Note

Though visible in the command-line help string, the **policers** keyword is not supported.

**Command Modes** User EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | 12.2(40)EX1 | This command was introduced. |

**Usage Guidelines** Expressions are case sensitive. For example, if you enter | **exclude output**, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

Trust device:none

#### Examples

This is an example of output from the **show mls qos interface** *interface-id* command when VLAN-based QoS is enabled:

```
Switch> show mls qos interface gigabitethernet1/0/1
GigabitEthernet1/0/1
trust state:not trusted
trust mode:not trusted
trust enabled flag:ena
COS override:dis
default COS:0
DSCP Mutation Map:Default DSCP Mutation Map
```

This is an example of output from the **show mls qos interface** *interface-id* command when VLAN-based OoS is disabled:

```
Switch> show mls qos interface gigabitethernet1/0/2
GigabitEthernet1/0/2
trust state:not trusted
trust mode:not trusted
trust enabled flag:ena
COS override:dis
default COS:0
DSCP Mutation Map:Default DSCP Mutation Map
Trust device:none
gos mode:port-based
```

This is an example of output from the **show mls gos interface** *interface-id* **buffers** command:

```
Switch> show mls qos interface gigabitethernet1/0/2 buffers
GigabitEthernet1/0/2
The port is mapped to qset : 1
The allocations between the queues are : 25 25 25 25
```

This is an example of output from the **show mls qos interface** *interface-id* **queueing** command. The egress expedite queue overrides the configured shaped round robin (SRR) weights.

```
Switch> show mls qos interface gigabitethernet1/0/2 queueing
GigabitEthernet1/0/2
Egress Priority Queue :enabled
Shaped queue weights (absolute) : 25 0 0 0
Shared queue weights : 25 25 25
The port bandwidth limit : 100 (Operational Bandwidth:100.0)
The port is mapped to qset : 1
```

This is an example of output from the **show mls qos interface** *interface-id* **statistics** command. Table 2-30 describes the fields in this display.

Switch> show mls qos interface gigabitethernet1/0/2 statistics GigabitEthernet1/0/2

Table 2-30show mls qos interface statistics Field Descriptions

| Field   |              | Description  |
|---------|--------------|--|
| DSCP    | incoming     | Number of packets received for each DSCP value.    |
|         | outgoing     | Number of packets sent for each DSCP value.        |
| CoS     | incoming     | Number of packets received for each CoS value.     |
|         | outgoing     | Number of packets sent for each CoS value.         |
| Policer | Inprofile    | Number of in profile packets for each policer.     |
|         | Outofprofile | Number of out-of-profile packets for each policer. |

| <b>Related Commands</b> | Command                                | Description  |
|-------------------------|--|--|
|                         | mls qos queue-set output buffers       | Allocates buffers to a queue-set.  |
|                         | mls qos queue-set output threshold     | Configures the weighted tail-drop (WTD) thresholds,<br>guarantees the availability of buffers, and configures the<br>maximum memory allocation to a queue-set. |
|                         | mls qos srr-queue input bandwidth      | Assigns SRR weights to an ingress queue.   |
|                         | mls qos srr-queue input buffers        | Allocates the buffers between the ingress queues.  |
|                         | mls qos srr-queue input cos-map        | Maps CoS values to an ingress queue or maps CoS values to a queue and to a threshold ID.   |
|                         | mls qos srr-queue input dscp-map       | Maps DSCP values to an ingress queue or maps DSCP values to a queue and to a threshold ID.   |
|                         | mls qos srr-queue input priority-queue | Configures the ingress priority queue and guarantees bandwidth.  |
|                         | mls qos srr-queue input threshold      | Assigns WTD threshold percentages to an ingress queue.   |
|                         | mls qos srr-queue output cos-map       | Maps CoS values to an egress queue or maps CoS values to a queue and to a threshold ID.  |
|                         | mls qos srr-queue output dscp-map      | Maps DSCP values to an egress queue or maps DSCP values to a queue and to a threshold ID.  |
|                         | policy-map                             | Creates or modifies a policy map.  |
|                         | priority-queue                         | Enables the egress expedite queue on a port.   |
|                         | queue-set                              | Maps a port to a queue-set.  |
|                         | srr-queue bandwidth limit              | Limits the maximum output on a port.   |
|                         | srr-queue bandwidth shape              | Assigns the shaped weights and enables bandwidth shaping<br>on the four egress queues mapped to a port.  |
|                         | srr-queue bandwidth share              | Assigns the shared weights and enables bandwidth sharing<br>on the four egress queues mapped to a port.  |

### show mls qos maps

Use the **show mls qos maps** user EXEC command to display quality of service (QoS) mapping information. During classification, QoS uses the mapping tables to represent the priority of the traffic and to derive a corresponding class of service (CoS) or Differentiated Services Code Point (DSCP) value from the received CoS, DSCP, or IP precedence value.

| Syntax Description | cos-dscp                         | (Optional) Display class of service (CoS)-to-DSCP map.                         |  |  |  |  |  |  |
|--------------------|----------------------------------|--|--|--|--|--|--|--|
|                    | cos-input-q                      | (Optional) Display the CoS input queue threshold map.                          |  |  |  |  |  |  |
|                    | cos-output-q                     | (Optional) Display the CoS output queue threshold map.                         |  |  |  |  |  |  |
|                    | dscp-cos                         | (Optional) Display DSCP-to-CoS map.  |  |  |  |  |  |  |
|                    | dscp-input-q                     | (Optional) Display the DSCP input queue threshold map.                         |  |  |  |  |  |  |
|                    | dscp-mutation dscp-mutation-name | (Optional) Display the specified DSCP-to-DSCP-mutation map.                    |  |  |  |  |  |  |
|                    | dscp-output-q                    | (Optional) Display the DSCP output queue threshold map.                        |  |  |  |  |  |  |
|                    | ip-prec-dscp                     | (Optional) Display the IP-precedence-to-DSCP map.                              |  |  |  |  |  |  |
|                    | policed-dscp                     | (Optional) Display the policed-DSCP map.                                       |  |  |  |  |  |  |
|                    | begin                            | (Optional) Display begins with the line that matches the <i>expression</i> .   |  |  |  |  |  |  |
|                    | exclude                          | (Optional) Display excludes lines that match the expression                    |  |  |  |  |  |  |
|                    | include                          | (Optional) Display includes lines that match the specified <i>expression</i> . |  |  |  |  |  |  |
|                    | expression                       | Expression in the output to use as a reference point.                          |  |  |  |  |  |  |

#### Command Modes User EXEC

| <b>Command History</b> | Release     | Modification                 |
|------------------------|-------------|------------------------------|
|                        | 12.2(40)EX1 | This command was introduced. |

**Usage Guidelines** 

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

The policed-DSCP, DSCP-to-CoS, and the DSCP-to-DSCP-mutation maps appear as a matrix. The d1 column specifies the most-significant digit in the DSCP. The d2 row specifies the least-significant digit in the DSCP. The intersection of the d1 and d2 values provides the policed-DSCP, the CoS, or the mutated-DSCP value. For example, in the DSCP-to-CoS map, a DSCP value of 43 corresponds to a CoS value of 5.

The DSCP input queue threshold and the DSCP output queue threshold maps appear as a matrix. The d1 column specifies the most-significant digit of the DSCP number. The d2 row specifies the least-significant digit in the DSCP number. The intersection of the d1 and the d2 values provides the queue ID and threshold ID. For example, in the DSCP input queue threshold map, a DSCP value of 43 corresponds to queue 2 and threshold 1 (02-01).

The CoS input queue threshold and the CoS output queue threshold maps show the CoS value in the top row and the corresponding queue ID and threshold ID in the second row. For example, in the CoS input queue threshold map, a CoS value of 5 corresponds to queue 2 and threshold 1 (2-1).

|-------------------------|-----------------------------------|---|
|                         | mls qos map                       | Defines the CoS-to-DSCP map, DSCP-to-CoS map,<br>DSCP-to-DSCP-mutation map, IP-precedence-to-DSCP map,<br>and the policed-DSCP map. |
|                         | mls qos srr-queue input cos-map   | Maps CoS values to an ingress queue or maps CoS values to a queue and to a threshold ID.  |
|                         | mls qos srr-queue input dscp-map  | Maps DSCP values to an ingress queue or maps DSCP values to a queue and to a threshold ID.  |
|                         | mls qos srr-queue output cos-map  | Maps CoS values to an egress queue or maps CoS values to a queue and to a threshold ID.   |
|                         | mls qos srr-queue output dscp-map | Maps DSCP values to an egress queue or maps DSCP values to a queue and to a threshold ID.   |

## show mls qos queue-set

Use the **show mls qos queue-set** user EXEC command to display quality of service (QoS) settings for the egress queues.

show mls qos queue-set [qset-id] [ | {begin | exclude | include} expression]

| Syntax Description           | qset-id   | · 1   | (Optional) ID of the queue-set. Each port belongs to a queue-set, which defines all the characteristics of the four egress queues per port. The range is 1 to 2.                        |   |  |  |  |  |
|------------------------------|---|---|---|---|--|--|--|--|
|                              | <b>begin</b> (Optional) Display begins with the line that matches the <i>expression</i> .                                       |   |   |   |  |  |  |  |
|                              | I exclude(Optional) Display excludes lines that match the <i>expression</i> .   |   |   |   |  |  |  |  |
|                              | l <b>include</b> (Optional) Display includes lines that match the specified <i>expression</i> .                                 |   |   |   |  |  |  |  |
|                              | expression  | Expre   | ession in the out   | put to use as a reference point.  |  |  |  |  |

| <b>Related Commands</b> | Command                            | Description  |
|-------------------------|------------------------------------|--|
|                         | mls qos queue-set output buffers   | Allocates buffers to the queue-set.  |
|                         | mls qos queue-set output threshold | Configures the weighted tail-drop (WTD) thresholds,<br>guarantees the availability of buffers, and configures the<br>maximum memory allocation of the queue-set. |

## show mls qos vlan

Use the **show mls qos vlan** user EXEC command to display the policy maps attached to a switch virtual interface (SVI).

show mls qos vlan vlan-id [ | {begin | exclude | include} expression]

| Syntax Description | vlan-id   | Specify the VLAN ID of the SVI to display the policy maps. The range is 1 to 4094.                                       |  |  |  |
|--------------------|---|--|--|--|--|
|                    | begin   | (Optional) Display begins with the line that matches the <i>expression</i> .   |  |  |  |
|                    | I exclude(Optional) Display excludes lines that match the <i>expression</i> .   |  |  |  |  |
|                    | l include (Optional) Display includes lines that match the specified <i>expression</i> .  |  |  |  |  |
|                    | expression  | Expression in the output to use as a reference point.  |  |  |  |
| Command Modes      | User EXEC   |  |  |  |  |
| Command History    | Release   | Modification   |  |  |  |
|                    | 12.2(40)EX1   | This command was introduced.   |  |  |  |
| Usage Guidelines   | The output from the <b>show mls qos vlan</b> command is meaningful only when VLAN-based quality of service (QoS) is enabled and when hierarchical policy maps are configured.<br>Expressions are case sensitive. For example, if you enter l <b>exclude output</b> , the lines that contain <i>output</i> do not appear, but the lines that contain <i>Output</i> appear. |  |  |  |  |
| Examples           | This is an examp  | le of output from the show mls qos vlan command:   |  |  |  |
|                    | Switch> <b>show mls qos vlan 10</b><br>Vlan10<br>Attached policy-map for Ingress:pm-test-pm-2   |  |  |  |  |
| Related Commands   | Command   | Description  |  |  |  |
|                    | policy-map  | <b>Creates or modifies a policy map that can be attached to multiple ports and enters policy-map configuration mode.</b> |  |  |  |

## show monitor

Use the **show monitor** user EXEC command to display information about all Switched Port Analyzer (SPAN) and Remote SPAN (RSPAN) sessions on the switch. Use the command with keywords to show a specific session, all sessions, all local sessions, or all remote sessions.

show monitor [session {session\_number | all | local | range list | remote } [detail]] [ | {begin |
 exclude | include } expression]

| Syntax Description | session        | (Optional) Display information about specified SPAN sessions.  |  |  |
|--------------------|----------------|--|--|--|
|                    | session_number | Specify the number of the SPAN or RSPAN session. The range is 1 to 66.   |  |  |
|                    | all            | Display all SPAN sessions.   |  |  |
|                    | local          | Display only local SPAN sessions.  |  |  |
|                    | range list     | Display a range of SPAN sessions, where <i>list</i> is the range of valid sessions, either a single session or a range of sessions described by two numbers, the lower one first, separated by a hyphen. Do not enter any spaces between comma-separated parameters or in hyphen-specified ranges. |  |  |
|                    |                | <b>Note</b> This keyword is supported only in privileged EXEC mode.  |  |  |
|                    | remote         | Display only remote SPAN sessions.   |  |  |
|                    | detail         | (Optional) Display detailed information about the specified sessions.  |  |  |
|                    | begin          | Display begins with the line that matches the <i>expression</i> .  |  |  |
|                    | exclude        | Display excludes lines that match the <i>expression</i> .  |  |  |
|                    | include        | Display includes lines that match the specified expression.  |  |  |
|                    | expression     | Expression in the output to use as a reference point.  |  |  |
| Command Modes      | User EXEC      |  |  |  |
| Command History    | Release        | Modification   |  |  |
|                    | 12.2(40)EX1    | This command was introduced.   |  |  |
| Usage Guidelines   | -              | sensitive. For example, if you enter I <b>exclude output</b> , the lines that contain <i>outpu</i> e lines that contain <i>Output</i> appear.  |  |  |

The output is the same for the show monitor command and the show monitor session all command.

#### Examples

This is an example of output for the **show monitor** user EXEC command:

```
Switch# show monitor
Session 1
------
Type : Local Session
Source Ports :
RX Only : Gi4/0/1
Both : Gi4/0/2-3,Gi4/0/5-6
Destination Ports : Gi4/0/10
Encapsulation : Replicate
Ingress : Disabled
```

Type : Remote Source Session Source VLANs : TX Only : 10 Both : 1-9 Dest RSPAN VLAN : 105

Session 2

This is an example of output for the **show monitor** user EXEC command for local SPAN source session 1:

```
Switch# show monitor session 1
Session 1
------
Type : Local Session
Source Ports :
RX Only : Gi4/0/1
Both : Gi4/0/2-3,Gi4/0/5-6
Destination Ports : Gi4/0/10
Encapsulation : Replicate
Ingress : Disabled
```

This is an example of output for the **show monitor session all** user EXEC command when ingress traffic forwarding is enabled:

Switch# show monitor session all
Session 1
----Type : Local Session
Source Ports :
Both : Gi4/0/2
Destination Ports : Gi4/0/3
Encapsulation : Native
Ingress : Enabled, default VLAN = 5
Ingress encap : DOT1Q
Session 2

```
Type : Local Session
Source Ports :
Both : Gi4/0/8
Destination Ports : Gi4/012
Encapsulation : Replicate
Ingress : Enabled, default VLAN = 4
Ingress encap : Untagged
```

| Related Commands | Command         | Description                                 |
|------------------|-----------------|---|
|                  | monitor session | Starts or modifies a SPAN or RSPAN session. |

### show mvr

Use the **show mvr** privileged EXEC command without keywords to display the current Multicast VLAN Registration (MVR) global parameter values, including whether or not MVR is enabled, the MVR multicast VLAN, the maximum query response time, the number of multicast groups, and the MVR mode (dynamic or compatible).

show mvr [ | {begin | exclude | include} expression]

| Syntax Description           | begin  | (Optional) Display begins with the line that matches the expression.  |
|------------------------------|--|---|
|                              | exclude  | (Optional) Display excludes lines that match the <i>expression</i> .  |
|                              | l include (Optional) Display includes lines that match the specified <i>express</i>  |   |
|                              | expression   | Expression in the output to use as a reference point.   |
| Command Modes                | Privileged EXEC  |   |
| Command History              | Release  | Modification  |
|                              | 12.2(40)EX1  | This command was introduced.  |
| Usage Guidelines             | -  | e sensitive. For example, if you enter <b>  exclude output</b> , the lines that contain <i>output</i> he lines that contain <i>Output</i> appear.                         |
|                              | do not appear, but th  | e lines that contain <i>Output</i> appear.  |
| Usage Guidelines<br>Examples | do not appear, but th<br>This is an example of<br>Switch# show mvr<br>MVR Running: TRUE<br>MVR multicast VLAN<br>MVR Max Multicast<br>MVR Current multic | The lines that contain <i>Output</i> appear.<br>If output from the <b>show mvr</b> command:<br>If: 1<br>Groups: 256<br>cast groups: 0<br>response time: 5 (tenths of sec) |

| <b>Related Commands</b> | Command                       | Description  |
|-------------------------|-------------------------------|--|
|                         | mvr (global configuration)    | Enables and configures multicast VLAN registration on the switch.  |
|                         | mvr (interface configuration) | Configures MVR ports.  |
|                         | show mvr interface            | Displays the configured MVR interfaces, status of the specified interface, or all multicast groups to which the interface belongs when the <b>interface</b> and <b>members</b> keywords are appended to the command. |
|                         | show mvr members              | Displays all ports that are members of an MVR multicast group or, if there are no members, means the group is inactive.  |

# show mvr interface

Use the **show mvr interface** privileged EXEC command without keywords to display the Multicast VLAN Registration (MVR) receiver and source ports. Use the command with keywords to display MVR parameters for a specific receiver port.

show mvr interface [interface-id [members [vlan vlan-id]]] [ | {begin | exclude | include}
expression]

| Syntax Description | interface-id  | (Optional) Display MVR type, status, and Immediate Leave setting for the interface.  |  |  |  |
|--------------------|---|--|--|--|--|
|                    |   | Valid interfaces include physical ports (including type, stack member, module, and port number.  |  |  |  |
|                    | members   | (Optional) Display all MVR groups to which the specified interface belongs.  |  |  |  |
|                    | vlan vlan-id  | (Optional) Display all MVR group members on this VLAN. The range is 1 to 4094.   |  |  |  |
|                    | begin   | (Optional) Display begins with the line that matches the <i>expression</i> .   |  |  |  |
|                    | exclude   | (Optional) Display excludes lines that match the <i>expression</i> .   |  |  |  |
|                    | include   | (Optional) Display includes lines that match the specified expression.   |  |  |  |
|                    | expression  | Expression in the output to use as a reference point.  |  |  |  |
|                    |   |  |  |  |  |
| Command Modes      | Privileged EXEC   |  |  |  |  |
| Command History    | Release   | Modification   |  |  |  |
|                    | 12.2(40)EX1   | This command was introduced.   |  |  |  |
| Usage Guidelines   | -   | identification is a non-MVR port or a source port, the command returns an error iver ports, it displays the port type, per port status, and Immediate-Leave setting. |  |  |  |
|                    | If you enter the <b>members</b> keyword, all MVR group members on the interface appear. If you enter a VLAN ID, all MVR group members in the VLAN appear. |  |  |  |  |
|                    |   | ase sensitive. For example, if you enter l <b>exclude output</b> , the lines that contain <i>output</i> the lines that contain <i>Output</i> appear.                 |  |  |  |
| Examples           | This is an example of output from the <b>show mvr interface</b> command:  |  |  |  |  |
|                    | Switch# <b>show mvr</b><br>Port Type  | e Status Immediate Leave   |  |  |  |
|                    | Gi1/0/1 SOURCE<br>Gi1/0/2 RECEIV  | ACTIVE/UP DISABLED   |  |  |  |

In the preceding display, Status is defined as follows:

- Active means the port is part of a VLAN.
- Up/Down means that the port is forwarding/nonforwarding.
- Inactive means that the port is not yet part of any VLAN.

This is an example of output from the **show mvr interface** command for a specified port:

```
Switch# show mvr interface gigabitethernet1/0/2
Type: RECEIVER Status: ACTIVE Immediate Leave: DISABLED
```

This is an example of output from the **show mvr interface** interface-id **members** command:

Switch# show mvr interface gigabitethernet1/0/2 members DYNAMIC ACTIVE 239.255.0.0 239.255.0.1 DYNAMIC ACTIVE 239.255.0.2 DYNAMIC ACTIVE 239.255.0.3 DYNAMIC ACTIVE 239.255.0.4 DYNAMIC ACTIVE 239.255.0.5 DYNAMIC ACTIVE 239.255.0.6 DYNAMIC ACTIVE 239.255.0.7 DYNAMIC ACTIVE 239.255.0.8 DYNAMIC ACTIVE 239.255.0.9 DYNAMIC ACTIVE

#### **Related Commands**

| Command                       | Description   |
|-------------------------------|---|
| mvr (global configuration)    | Enables and configures multicast VLAN registration on the switch.       |
| mvr (interface configuration) | Configures MVR ports.   |
| show mvr                      | Displays the global MVR configuration on the switch.                    |
| show mvr members              | Displays all receiver ports that are members of an MVR multicast group. |

## show mvr members

Use the **show mvr members** privileged EXEC command to display all receiver and source ports that are currently members of an IP multicast group.

show mvr members [ip-address] [ | {begin | exclude | include} expression]

| Syntax Description | sourc<br>entere<br>listed             |                      | ptional) The IP multicast address. If the address is entered, all receiver and urce ports that are members of the multicast group appear. If no address is tered, all members of all Multicast VLAN Registration (MVR) groups are ted. If a group has no members, the group is listed as Inactive. |  |  |
|--------------------|---------------------------------------|----------------------|--|--|--|
|                    | begin                                 | (Opti                | onal) Display begins with the line that matches the <i>expression</i> .  |  |  |
|                    | exclude                               | (Opti                | onal) Display excludes lines that match the <i>expression</i> .  |  |  |
|                    |                                       |                      | onal) Display includes lines that match the specified <i>expression</i> .  |  |  |
|                    |                                       |                      |  |  |  |
|                    | expression                            | Expre                | ession in the output to use as a reference point.  |  |  |

|                    | 239.255.0.2                           | INACTIVE             | None   |  |  |
|                    | 239.255.0.3                           | INACTIVE             | None   |  |  |
|                    | 239.255.0.4                           | INACTIVE             | None   |  |  |
|                    | 239.255.0.5<br>239.255.0.6            | INACTIVE<br>INACTIVE | None<br>None   |  |  |
|                    | 239.255.0.6                           | INACTIVE             | None<br>None   |  |  |
|                    | 239.255.0.7                           | INACTIVE             | None   |  |  |
|                    | 239.255.0.9                           | INACTIVE             | None   |  |  |
|                    | 239.255.0.10                          | INACTIVE             | None   |  |  |
|                    | <output truncated=""></output>        |                      |  |  |  |

This is an example of output from the **show mvr members** *ip-address* command. It displays the members of the IP multicast group with that address:

```
Switch# show mvr members 239.255.002
239.255.003.--22 ACTIVE Gi1//1(d), Gi1/0/2(d), Gi1/0/3(d),
Gi1/0/4(d), Gi1/0/5(s)
```

#### Related Commands

| Command                       | Description   |
|-------------------------------|---|
| mvr (global configuration)    | Enables and configures multicast VLAN registration on the switch.   |
| mvr (interface configuration) | Configures MVR ports.   |
| show mvr                      | Displays the global MVR configuration on the switch.  |
| show mvr interface            | Displays the configured MVR interfaces, status of the specified interface, or all multicast groups to which the interface belongs when the <b>members</b> keyword is appended to the command. |

## show pagp

Use the **show pagp** user EXEC command to display Port Aggregation Protocol (PAgP) channel-group information.

show pagp [channel-group-number] {counters | dual-active | internal | neighbor} [ | {begin |
 exclude | include} expression]]

| Syntax Description | channel-group-number | (Optional) Number of the channel group. The range is 1 to 48.                  |  |
|--------------------|----------------------|--|--|
|                    | counters             | Display traffic information.   |  |
|                    | dual-active          | Display the dual-active status.  |  |
|                    | internal             | Display internal information.  |  |
|                    | neighbor             | Display neighbor information.  |  |
|                    | begin                | (Optional) Display begins with the line that matches the <i>expression</i> .   |  |
|                    | exclude              | (Optional) Display excludes lines that match the <i>expression</i> .           |  |
|                    | include              | (Optional) Display includes lines that match the specified <i>expression</i> . |  |
|                    | expression           | Expression in the output to use as a reference point.                          |  |

### Command Modes User EXEC

| <b>Command History</b> | Release     | Modification                              |
|------------------------|-------------|---|
|                        | 12.2(40)EX1 | This command was introduced.              |
|                        | 12.2(46)SE  | The <b>dual-active</b> keyword was added. |

**Usage Guidelines** You can enter any **show pagp** command to display the active channel-group information. To display the nonactive information, enter the **show pagp** command with a channel-group number.

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain *output* do not appear, but the lines that contain *Output* are appear.

#### Examples

This is an example of output from the **show pagp 1 counters** command:

| Switch> | show | pagp 1 | L counters |      |      |
|---------|------|--------|------------|------|------|
|         |      | Inform | nation     | Flu  | ısh  |
| Port    |      | Sent   | Recv       | Sent | Recv |
|         |      |        |            |      |      |
| Channel | grou | p: 1   |            |      |      |
| Gi1/0/  | 1    | 45     | 42         | 0    | 0    |
| Gi1/0/  | 2    | 45     | 41         | 0    | 0    |

This is an example of output from the **show pagp 1 internal** command:

| Switch> | show page | 1 inter  | nal      |          |          |            |           |          |

### show parser macro

Use the **show parser macro** user EXEC command to display the parameters for all configured macros or for one macro on the switch.

| Syntax Description | brief   | (Optional) Display the name of each macro.  |  |  |  |
|--------------------|---|---|--|--|--|
|                    | <b>description</b> [interface interface-id]   | (Optional) Display all macro descriptions or the description of a specific interface.   |  |  |  |
|                    | name macro-name   | (Optional) Display information about a single macro identified by the macro name.   |  |  |  |
|                    | begin   | (Optional) Display begins with the line that matches the <i>expression</i> .  |  |  |  |
|                    | exclude   | (Optional) Display excludes lines that match the <i>expression</i> .  |  |  |  |
|                    | include   | (Optional) Display includes lines that match the specified <i>expression</i> .  |  |  |  |
|                    | expression  | Expression in the output to use as a reference point.   |  |  |  |
| Command Modes      | User EXEC   | Modification  |  |  |  |

## show policy-map

Use the **show policy-map** user EXEC command to display quality of service (QoS) policy maps, which define classification criteria for incoming traffic. Policy maps can include policers that specify the bandwidth limitations and the action to take if the limits are exceeded.

show policy-map [policy-map-name [class class-map-name]] [ | {begin | exclude | include}
expression]

| Syntax Description | policy-map-name   | (Optional) Display the specified policy-map name.   |
|--------------------|---|---|
|                    | class class-map-name  | (Optional) Display QoS policy actions for a individual class.   |
|                    | begin   | (Optional) Display begins with the line that matches the expression.  |
|                    | exclude   | (Optional) Display excludes lines that match the <i>expression</i> .  |
|                    | include   | (Optional) Display includes lines that match the specified expression.  |
|                    | expression  | Expression in the output to use as a reference point.   |
|                    |   |   |
| Note               |   | mmand-line help string, the <b>control-plane</b> and <b>interface</b> keywords are not tics shown in the display should be ignored.     |
| Command Modes      | User EXEC   |   |
| Command History    | Release   | Modification  |
|                    | 12.2(40)EX1   | This command was introduced.  |
| Usage Guidelines   | -   | sitive. For example, if you enter   <b>exclude output</b> , the lines that contain <i>output</i> hes that contain <i>Output</i> appear. |
| Examples           | This is an example of ou  | tput from the <b>show policy-map</b> command:   |
|                    | Switch> <b>show policy-ma</b><br>Policy Map videowizard<br>class videowizard_1<br>set dscp 34 | d_policy2   |

| <b>Related Commands</b> | Command    | Description  |
|-------------------------|------------|--|
|                         | policy-map | Creates or modifies a policy map that can be attached to multiple ports to specify a service policy. |

### show port-security

Use the **show port-security** privileged EXEC command to display port-security settings for an interface or for the switch.

show port-security [interface interface-id] [address | vlan] [ | {begin | exclude | include}
expression]

| Syntax Description | <b>interface</b> interface-id | (Optional) Display port security settings for the specified interface. Valid interfaces include physical ports (including type, stack member, module, and port number).            |
|--------------------|-------------------------------|--|
|                    | address                       | (Optional) Display all secure MAC addresses on all ports or a specified port.  |
|                    | vlan                          | (Optional) Display port security settings for all VLANs on the specified interface. This keyword is visible only on interfaces that have the switchport mode set to <b>trunk</b> . |
|                    | begin                         | (Optional) Display begins with the line that matches the <i>expression</i> .   |
|                    | exclude                       | (Optional) Display excludes lines that match the <i>expression</i> .   |
|                    | include                       | (Optional) Display includes lines that match the specified <i>expression</i> .   |
|                    | expression                    | Expression in the output to use as a reference point.  |

### Command Modes Privileged EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | 12.2(40)EX1 | This command was introduced. |

#### Usage Guidelines

If you enter the command without keywords, the output includes the administrative and operational status of all secure ports on the switch.

If you enter an *interface-id*, the command displays port security settings for the interface.

If you enter the **address** keyword, the command displays the secure MAC addresses for all interfaces and the aging information for each secure address.

If you enter an *interface-id* and the **address** keyword, the command displays all the MAC addresses for the interface with aging information for each secure address. You can also use this command to display all the MAC addresses for an interface even if you have not enabled port security on it.

If you enter the **vlan** keyword, the command displays the configured maximum and the current number of secure MAC addresses for all VLANs on the interface. This option is visible only on interfaces that have the switchport mode set to **trunk**.

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

#### Examples

This is an example of the output from the **show port-security** command:

Switch# show port-security

| Secure Port     | MaxSecureAddr<br>(Count) | CurrentAddr<br>(Count) | -           | n Security Action |
|-----------------|--------------------------|------------------------|-------------|-------------------|
| Gi1/0/1         | 1                        | 0                      | 0           | Shutdown          |
| Total Addresses | in System (excl          | uding one mac          | per port) : | 1                 |

Max Addresses limit in System (excluding one mac per port) : 6272

This is an example of output from the **show port-security interface** *interface-id* command:

Switch# show port-security interface gigabitethernet1/0/1

```
Port Security : Enabled
Port status : SecureUp
Violation mode : Shutdown
Maximum MAC Addresses : 1
Total MAC Addresses : 0
Configured MAC Addresses : 0
Aging time : 0 mins
Aging type : Absolute
SecureStatic address aging : Disabled
Security Violation count : 0
```

This is an example of output from the **show port-security address** command:

#### Switch# show port-security address

Secure Mac Address Table

| Vlan | Mac Address         | Туре               | Ports    | Remaining Age<br>(mins) |
|------|---------------------|--------------------|----------|-------------------------|
|      |                     |                    |          |                         |
| 1    | 0006.0700.0800      | SecureConfigured   | Gi1/0/2  | 1                       |
|      | Addroggog in System | (ovaluding one mag | nor port | · · · 1                 |

Total Addresses in System (excluding one mac per port) : 1 Max Addresses limit in System (excluding one mac per port) : 6272

This is an example of output from the **show port-security interface gigabitethernet1/0/2 address** command:

Switch# show port-security interface gigabitethernet1/0/2 address Secure Mac Address Table

| Vlan    | Mac Address    | Туре             | Ports   | Remaining Age<br>(mins) |
|---------|----------------|------------------|---------|-------------------------|
|         |                |                  |         |                         |
| 1       | 0006.0700.0800 | SecureConfigured | Gi1/0/2 | 1                       |
| Total A | .ddresses: 1   |                  |         |                         |

This is an example of output from the **show port-security interface** *interface-id* **vlan** command:

Switch# show port-security interface gigabitethernet1/0/2 vlan Default maximum:not set, using 5120 VLAN Maximum Current

| /LAN | Maximum | Current |    |
|------|---------|---------|----|
| 5    | default |         | 1  |
| 10   | default |         | 54 |

| 11 | default | 101 |
|----|---------|-----|
| 12 | default | 101 |
| 13 | default | 201 |
| 14 | default | 501 |

| <b>Related Commands</b> | Command                  | Description  |
|-------------------------|--------------------------|--|
|                         | clear port-security      | Deletes from the MAC address table a specific type of secure address<br>or all the secure addresses on the switch or an interface.       |
|                         | switchport port-security | Enables port security on a port, restricts the use of the port to a user-defined group of stations, and configures secure MAC addresses. |

## show sdm prefer

Use the **show sdm prefer** privileged EXEC command to display information about the Switch Database Management (SDM) templates that can be used to maximize used for allocating system resources for a particular feature, or use the command without a keyword to display the template in use.

show sdm prefer [access | default | dual-ipv4-and-ipv6 {default | routing | vlan} | routing | vlan]
[ | {begin | exclude | include} expression]

| Syntax Description | access  | (Optional) Display the template that maximizes system resources for ACLs.   |  |  |
|--------------------|---|---|--|--|
|                    | default   | (Optional) Display the template that balances system resources among features.  |  |  |
|                    | dual-ipv4-and-ipv6                                      | (Optional) Display the dual templates that support both IPv4 and IPv6.  |  |  |
|                    | {default   routing  <br>vlan)                           | • <b>default</b> —Display the default dual template configuration.  |  |  |
|                    | vian)   | • <b>routing</b> —Display the routing dual template configuration.  |  |  |
|                    |   | • <b>vlan</b> —Display the VLAN dual template configuration.  |  |  |
|                    | routing   | (Optional) Display the template that maximizes system resources for routing.  |  |  |
|                    | vlan  | (Optional) Display the template that maximizes system resources for Layer 2 VLANs.  |  |  |
|                    | begin   | (Optional) Display begins with the line that matches the <i>expression</i> .  |  |  |
|                    | exclude   | (Optional) Display excludes lines that match the <i>expression</i> .  |  |  |
|                    | include   | (Optional) Display includes lines that match the specified <i>expression</i> .  |  |  |
|                    | expression  | <i>expression</i> Expression in the output to use as a reference point.   |  |  |
| Command Modes      | Privileged EXEC   |   |  |  |
| Command History    | Release   | Modification  |  |  |
|                    | 12.2(40)EX1   | This command was introduced.  |  |  |
| Usage Guidelines   | reload the switch for the you enter the <b>reload</b> p | SDM template by using the <b>sdm prefer</b> global configuration command, you must<br>be configuration to take effect. If you enter the <b>show sdm prefer</b> command before<br>privileged EXEC command, the <b>show sdm prefer</b> command shows the template<br>template that will become active after a reload. |  |  |
|                    |   | d for each template represent an approximate maximum number for each feature<br>umber might vary, depending on the actual number of other features configured.  |  |  |
|                    |   |   |  |  |

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

#### Examples

This is an example of output from the **show sdm prefer** command, which displays the template in use:

```
Switch# show sdm prefer
```

| "default" template:<br>The selected template optimizes the resources<br>the switch to support this level of features<br>8 routed interfaces and 1024 VLANs. |                        |
|---|------------------------|
| number of unicast mac addresses:<br>number of igmp groups + multicast routes:<br>number of unicast routes:<br>number of gos aces:                           | 12K<br>1K<br>0<br>0.5K |
| number of security aces:  | 1K                     |

This is an example of output from the **show sdm prefer** command:

#### Switch# show sdm prefer

```
The current template is "desktop default" template.
The selected template optimizes the resources in
the switch to support this level of features for
8 routed interfaces and 1024 VLANS.
number of unicast mac addresses: 6K
number of igmm groups + multicast routes: 1K
```

| number of igmp groups + multicast routes: | ΙK   |
|---|------|
| number of unicast routes:                 | 8K   |
| number of directly connected hosts:       | 6K   |
| number of indirect routes:                | 2K   |
| number of policy based routing aces:      | 0    |
| number of qos aces:                       | 0.5K |
| number of security aces:                  | 1K   |
|   |      |

This is an example of output from the show sdm prefer routing command:

#### Switch# show sdm prefer routing

"desktop routing" template: The selected template optimizes the resources in the switch to support this level of features for 8 routed interfaces and 1024 VLANs.

| number of unicast mac addresses:          | 3 K  |
|---|------|
| number of igmp groups + multicast routes: | 1K   |
| number of unicast routes:                 | 11K  |
| number of directly connected hosts:       | 3 K  |
| number of indirect routes:                | 8K   |
| number of policy based routing aces:      | 0.5K |
| number of qos aces:                       | 0.5K |
| number of security aces:                  | 1K   |

#### This is an example of output from the show sdm prefer dual-ipv4-and-ipv6 vlan command:

Switch# show sdm prefer dual-ipv4-and-ipv6 vlan The current template is "desktop IPv4 and IPv6 vlan" template. The selected template optimizes the resources in the switch to support this level of features for 8 routed interfaces and 1024 VLANs.

| number of | unicast mac addresses:             | 8K.  |
|-----------|------------------------------------|------|
| number of | IPv4 IGMP groups:                  | 1K   |
| number of | IPv4 multicast routes:             | 0    |
| number of | IPv4 unicast routes:               | 0    |
| number of | IPv6 multicast groups:             | 1K   |
| number of | directly-connected IPv6 addresses: | 0    |
| number of | indirect IPv6 unicast routes:      | 0    |
| number of | IPv4 policy based routing aces:    | 0    |
| number of | IPv4/MAC qos aces:                 | 0.5K |
| number of | IPv4/MAC security aces:            | 1K   |
| number of | IPv6 policy based routing aces:    | 0    |
| number of | IPv6 qos aces:                     | 0.5K |
| number of | IPv6 security aces:                | 0.5K |

#### This is an example of output from the show sdm prefer vlan command:

#### Switch# show sdm prefer vlan

"desktop vlan" template: The selected template optimizes the resources in the switch to support this level of features for 8 routed interfaces and 1024 VLANs. number of unicast mac addresses: number of LEV4 JGMP groups:

| number | of | IPv4 IGMP groups:               | 1K   |
|--------|----|---------------------------------|------|
| number | of | IPv4 multicast routes:          | 0    |
| number | of | IPv4 unicast routes:            | 0    |
| number | of | IPv4 policy based routing aces: | 0    |
| number | of | IPv4/MAC qos aces:              | 0.5K |
| number | of | IPv4/MAC security aces:         | 1K   |

This is an example of output from the **show sdm prefer** command when you have configured a new template but have not reloaded the switch:

12K

#### Switch# show sdm prefer

```
The current template is "desktop routing" template.
The selected template optimizes the resources in
the switch to support this level of features for
8 routed interfaces and 1024 VLANS.
number of unicast mac addresses: 3K
```

| number of igmp groups + multicast routes: | 1K   |
|---|------|
| number of unicast routes:                 | 11K  |
| number of directly connected hosts:       | 3K   |
| number of indirect routes:                | 8K   |
| number of qos aces:                       | 0.5K |
| number of security aces:                  | 1K   |

On next reload, template will be "desktop vlan" template.

| <b>Related Commands</b> | Command    | Description   |
|-------------------------|------------|---|
|                         | sdm prefer | Sets the SDM template to maximize resources for routing or VLANs or to the default template, to select a dual IPv4 and IPv6 template, or to select the desktop templates. |

### show setup express

Use the **show setup express** privileged EXEC command to display if Express Setup mode is active on the switch.

show setup express [ | {begin | exclude | include} expression]

| Syntax Description | begin   | (Optional) Display begins with the line that matches the expression.   |  |
|--------------------|---|--|--|
|                    | exclude   | (Optional) Display excludes lines that match the <i>expression</i> .   |  |
|                    | include   | (Optional) Display includes lines that match the specified expression. |  |
|                    | expression  | Expression in the output to use as a reference point.                  |  |
| Defaults           | No default is defi  | ned.   |  |
| Command Modes      | Privileged EXEC   |  |  |
| Command History    | Release   | Modification   |  |
|                    | 12.2(40)EX1   | This command was introduced.   |  |
| Examples           | This is an exampl   | e of output from the <b>show setup express co</b> mmand:               |  |
|                    | Switch# <b>show setup express</b><br>express setup mode is active |  |  |

# show spanning-tree

Use the **show spanning-tree** user EXEC command to display spanning-tree state information.

- show spanning-tree [bridge-group | active [detail] | backbonefast | blockedports | bridge | detail
  [active] | inconsistentports | interface interface-id | mst | pathcost method | root | summary
  [totals] | uplinkfast | vlan vlan-id] [ | {begin | exclude | include} expression]
- show spanning-tree bridge-group [active [detail] | blockedports | bridge | detail [active] |
  inconsistentports | interface interface-id | root | summary] [ | {begin | exclude | include}
  expression]
- show spanning-tree vlan vlan-id [active [detail] | blockedports | bridge | detail [active] |
  inconsistentports | interface interface-id | root | summary] [ | {begin | exclude | include}
  expression]
- show spanning-tree {vlan vlan-id | bridge-group} bridge [address | detail | forward-time |
  hello-time | id | max-age | priority [system-id] | protocol] [ | {begin | exclude | include}
  expression]
- show spanning-tree {vlan vlan-id | bridge-group} root [address | cost | detail | forward-time | hello-time | id | max-age | port | priority [system-id] [ | {begin | exclude | include} expression]
- show spanning-tree interface interface-id [active [detail] | cost | detail [active] | inconsistency |
   portfast | priority | rootcost | state] [ | {begin | exclude | include} expression]
- show spanning-tree mst [configuration [digest]] | [instance-id [detail | interface interface-id
   [detail]] [ | {begin | exclude | include} expression]

| Syntax Description | bridge-group   | (Optional) Specify the bridge group number. The range is 1 to 255.  |
|--------------------|--|---|
|                    | active [detail]  | (Optional) Display spanning-tree information only on active interfaces (available only in privileged EXEC mode).  |
|                    | backbonefast   | (Optional) Display spanning-tree BackboneFast status.   |
|                    | blockedports   | (Optional) Display blocked port information (available only in privileged EXEC mode).   |
|                    | bridge [address   detail  <br>forward-time   hello-time  <br>id   max-age   priority<br>[system-id]   protocol]                        | (Optional) Display status and configuration of this switch (optional keywords available only in privileged EXEC mode).  |
|                    | detail [active]  | (Optional) Display a detailed summary of interface information ( <b>active</b> keyword available only in privileged EXEC mode).   |
|                    | inconsistentports  | (Optional) Display inconsistent port information (available only in privileged EXEC mode).  |
|                    | interface interface-id<br>[active [detail]   cost  <br>detail [active]  <br>inconsistency   portfast  <br>priority   rootcost   state] | (Optional) Display spanning-tree information for the specified interface<br>(all options except <b>portfast</b> and <b>state</b> available only in privileged EXEC<br>mode). Enter each interface separated by a space. Ranges are not<br>supported. Valid interfaces include physical ports, VLANs, and port<br>channels. The VLAN range is 1 to 4094. The port-channel range is 1<br>to 48. |

| (Optional) Display the multiple spanning-tree (MST) region<br>configuration and status (available only in privileged EXEC mode).  |  |  |  |
|---|--|--|--|
| The keywords have these meanings:   |  |  |  |
| • <b>digest</b> —(Optional) Display the MD5 digest included in the current MST configuration identifier (MSTCI). Two separate digests, one for standard and one for prestandard switches, appear (available only in privileged EXEC mode).  |  |  |  |
| The terminology was updated for the implementation of the IEEE standard, and the <i>txholdcount</i> field was added.  |  |  |  |
| The new master role appears for boundary ports.   |  |  |  |
| The word <i>pre-standard</i> or <i>Pre-STD</i> appears when an IEEE standard bridge sends prestandard BPDUs on a port.  |  |  |  |
| The word <i>pre-standard</i> ( <i>config</i> ) or <i>Pre-STD-Cf</i> appears when a port has been configured to transmit prestandard BPDUs and no prestandard BPDU has been received on that port.   |  |  |  |
| The word <i>pre-standard</i> ( <i>rcvd</i> ) or <i>Pre-STD-Rx</i> appears when a prestandard BPDU has been received on a port that has not been configured to transmit prestandard BPDUs.   |  |  |  |
| A <i>dispute</i> flag appears when a designated port receives inferior designated information until the port returns to the forwarding state or ceases to be designated.  |  |  |  |
| • <i>instance-id</i> —You can specify a single instance ID, a range of IDs separated by a hyphen, or a series of IDs separated by a comma. The range is 1 to 4094. The display shows the number of currently configured instances.  |  |  |  |
| • <b>interface</b> <i>interface-id</i> —(Optional) Valid interfaces include physical ports, VLANs, and port channels. The VLAN range is 1 to 4094. The port-channel range is 1 to 48.   |  |  |  |
| • <b>detail</b> —(Optional) Display detailed information for the instance or interface.   |  |  |  |
| (Optional) Display the default path cost method (available only in privileged EXEC mode).   |  |  |  |
| (Optional) Display root switch status and configuration (all keywords available only in privileged EXEC mode).  |  |  |  |
| (Optional) Display a summary of port states or the total lines of the spanning-tree state section. The words <i>IEEE Standard</i> identify the MST version running on a switch.   |  |  |  |
| (Optional) Display spanning-tree UplinkFast status.   |  |  |  |
| <ul> <li>(Optional) Display spanning-tree information for the specified VLAN (some keywords available only in privileged EXEC mode). You can specify a single VLAN identified by VLAN ID number, a range of VLANs separated by a hyphen, or a series of VLANs separated by a</li> <li>comma. The range is 1 to 4094.</li> </ul> |  |  |  |
|   |  |  |  |

|                  | begin  | (Optional) Display begins with the line that matches the <i>expression</i> .   |  |  |
|------------------|--|--|--|--|
|                  | exclude  | (Optional) Display excludes lines that match the <i>expression</i> .   |  |  |
|                  | include  | (Optional) Display includes lines that match the specified expression.   |  |  |
|                  | expression   | Expression in the output to use as a reference point.  |  |  |
| Command Modes    | User EXEC  |  |  |  |
| Command History  | Release  | Modification   |  |  |
|                  | 12.2(40)EX1  | This command was introduced.   |  |  |
| Usage Guidelines |  | variable is omitted, the command applies to the spanning-tree instance for all VLANs.  |  |  |
|                  | -  | re case sensitive. For example, if you enter l <b>exclude output</b> , the lines that contain <i>output</i> , but the lines that contain <i>Output</i> appear.   |  |  |
| Examples         | This is an exa   | mple of output from the show spanning-tree active command:   |  |  |
|                  | VLAN0001   | <pre>ree enabled protocol ieee Priority 32768 Address 0001.42e2.cdd0 Cost 3038 Port 24 (GigabitEthernet2/0/1) Hello Time 2 sec Max Age 20 sec Forward Delay 15 sec</pre>   |  |  |
|                  | Bridge ID<br>Uplinkfast  | Priority 49153 (priority 49152 sys-id-ext 1)<br>Address 0003.fd63.9580<br>Hello Time 2 sec Max Age 20 sec Forward Delay 15 sec<br>Aging Time 300<br>enabled  |  |  |

|------------------|--|---|
|                  | clear spanning-tree counters                     | Clears the spanning-tree counters.  |
|                  | clear spanning-tree detected-protocols           | Restarts the protocol migration process.  |
|                  | spanning-tree backbonefast                       | Enables the BackboneFast feature.   |
|                  | spanning-tree bpdufilter                         | Prevents an interface from sending or receiving bridge protocol data units (BPDUs).   |
|                  | spanning-tree bpduguard                          | Puts an interface in the error-disabled state when it receives a BPDU.  |
|                  | spanning-tree cost                               | Sets the path cost for spanning-tree calculations.  |
|                  | spanning-tree extend system-id                   | Enables the extended system ID feature.   |
|                  | spanning-tree guard                              | Enables the root guard or the loop guard feature for all the VLANs associated with the selected interface.  |
|                  | spanning-tree link-type                          | Overrides the default link-type setting for rapid spanning-tree transitions to the forwarding state.  |
|                  | spanning-tree loopguard default                  | Prevents alternate or root ports from becoming the designated port because of a failure that leads to a unidirectional link.  |
|                  | spanning-tree mst configuration                  | Enters multiple spanning-tree (MST) configuration mode through which the MST region configuration occurs.   |
|                  | spanning-tree mst cost                           | Sets the path cost for MST calculations.  |
|                  | spanning-tree mst forward-time                   | Sets the forward-delay time for all MST instances.  |
|                  | spanning-tree mst hello-time                     | Sets the interval between hello BPDUs sent by root switch configuration messages.   |
|                  | spanning-tree mst max-age                        | Sets the interval between messages that the spanning tree receives from the root switch.  |
|                  | spanning-tree mst max-hops                       | Sets the number of hops in an MST region before the BPDU is discarded and the information held for an interface is aged.  |
|                  | spanning-tree mst port-priority                  | Configures an interface priority.   |
|                  | spanning-tree mst priority                       | Configures the switch priority for the specified spanning-tree instance.  |
|                  | spanning-tree mst root                           | Configures the MST root switch priority and timers based on the network diameter.   |
|                  | spanning-tree port-priority                      | Configures an interface priority.   |
|                  | spanning-tree portfast (global configuration)    | Globally enables the BPDU filtering or the BPDU guard<br>feature on Port Fast-enabled interfaces or enables the Port<br>Fast feature on all nontrunking interfaces. |
|                  | spanning-tree portfast (interface configuration) | Enables the Port Fast feature on an interface and all its associated VLANs.   |
|                  | spanning-tree uplinkfast                         | Accelerates the choice of a new root port when a link or switch fails or when the spanning tree reconfigures itself.  |
|                  | spanning-tree vlan                               | Configures spanning tree on a per-VLAN basis.   |

### show storm-control

Use the **show storm-control** user EXEC command to display broadcast, multicast, or unicast storm control settings on the switch or on the specified interface or to display storm-control history.

show storm-control [interface-id] [broadcast | multicast | unicast] [ | {begin | exclude | include}
expression]

| Constant Description | • • • • • •  |  |
|----------------------|--------------|--|
| Syntax Description   | interface-id | (Optional) Interface ID for the physical port (including type, stack member, module, and port number). |
|                      | broadcast    | (Optional) Display broadcast storm threshold setting.  |
|                      | multicast    | (Optional) Display multicast storm threshold setting.  |
|                      | unicast      | (Optional) Display unicast storm threshold setting.  |
|                      | begin        | (Optional) Display begins with the line that matches the <i>expression</i> .                           |
|                      | exclude      | (Optional) Display excludes lines that match the expression.   |
|                      | include      | (Optional) Display includes lines that match the specified expression.                                 |
|                      | expression   | Expression in the output to use as a reference point.  |

#### Command Modes User EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | 12.2(40)EX1 | This command was introduced. |

Usage Guidelines Who

**s** When you enter an *interface-id*, the storm control thresholds appear for the specified interface.

If you do not enter an *interface-id*, settings appear for one traffic type for all ports on the switch.

If you do not enter a traffic type, settings appear for broadcast storm control.

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

#### Examples

This is an example of a partial output from the **show storm-control** command when no keywords are entered. Because no traffic-type keyword was entered, the broadcast storm control settings appear.

#### Switch> show storm-control

| Interface   | Filter State | Upper  | Lower  | Current |
|---|--------------|--------|--------|---------|
|   |              |        |        |         |
| Gi1/0/1   | Forwarding   | 20 pps | 10 pps | 5 pps   |
| Gi1/0/2   | Forwarding   | 50.00% | 40.00% | 0.00%   |
| <output td="" trun<=""><td>cated&gt;</td><td></td><td></td><td></td></output> | cated>       |        |        |         |

This is an example of output from the **show storm-control** command for a specified interface. Because no traffic-type keyword was entered, the broadcast storm control settings appear.

| Switch> <b>show</b> | storm-control | gigabitether | net 1/0/1 |         |
|---------------------|---------------|--------------|-----------|---------|
| Interface           | Filter State  | Upper        | Lower     | Current |
|                     |               |              |           |         |
| Gi1/0/1             | Forwarding    | 20 pps       | 10 pps    | 5 pps   |

Table 2-31 describes the fields in the **show storm-control** display.

Table 2-31show storm-control Field Descriptions

| Field        | Description  |  |
|--------------|--|--|
| Interface    | Displays the ID of the interface.  |  |
| Filter State | Displays the status of the filter:   |  |
|              | • Blocking—Storm control is enabled, and a storm has occurred.   |  |
|              | • Forwarding—Storm control is enabled, and no storms have occurred.  |  |
|              | • Inactive—Storm control is disabled.  |  |
| Upper        | Displays the rising suppression level as a percentage of total available bandwidth in packets per second or in bits per second.  |  |
| Lower        | Displays the falling suppression level as a percentage of total available bandwidth in packets per second or in bits per second.   |  |
| Current      | Displays the bandwidth usage of broadcast traffic or the specified traffic type (broadcast, multicast, or unicast) as a percentage of total available bandwidth. This field is only valid when storm control is enabled. |  |

#### **Related Commands**

| Command       | Description  |
|---------------|--|
| storm-control | Sets the broadcast, multicast, or unicast storm control levels for the switch. |

## show switch

Use the **show switch** user EXEC command to display information related to the stack member or the switch stack.

show switch [stack-member-number | chassis-mgmt | detail | neighbors | stack-ports | stack-ring
activity [detail]] [ | {begin | exclude | include} expression]

| Syntax Description | stack-member-number             | (Optional) Display information for the specified stack member. The range is 1 to 9.   |
|--------------------|---------------------------------|---|
|                    | chassis-mgmt                    | (Optional) Display information about the enclosures in which the stack members are installed.   |
|                    | detail                          | (Optional) Display detailed information about the stack ring.   |
|                    | neighbors                       | (Optional) Display the neighbors for the entire switch stack.   |
|                    | stack-ports                     | (Optional) Display port information for the entire switch stack.  |
|                    | stack-ring activity<br>[detail] | (Optional) Display the number of frames per stack member that are sent to the stack ring. Use the <b>detail</b> keyword to display the ASIC, the receive queues, and the number of frames per stack member that are sent to the stack ring. |
|                    | begin                           | (Optional) Display begins with the line that matches the expression.  |
|                    | exclude                         | (Optional) Display excludes lines that match the expression.  |
|                    | include                         | (Optional) Display includes lines that match the specified expression.  |
|                    | expression                      | Expression in the output to use as a reference point.   |
| Command Modes      | User EXEC                       |   |
| Command History    | Release                         | Modification  |
|                    | 12.2(40)EX1                     | This command was introduced.  |
| Usage Guidelines   | -                               | sitive. For example, if you enter I <b>exclude output</b> , the lines that contain <i>output</i> nes that contain <i>Output</i> appear.   |

These are the states displayed from this command:

• Waiting—The state when a switch is booting up and waiting for communication from other switches in the stack. The switch has not yet determined whether it is a stack master or not.

Stack members not participating in a stack master election remain in the waiting state until the stack master is elected and ready.

- Initializing—The state when a switch has determined whether it is the stack master or not. If the switch is not the stack master, it is receiving its system- and interface-level configuration from the stack master and loading it.
- Ready—The state when the stack member has completed loading the system- and interface-level configuration and is ready to forward traffic.

| • Master Re-Init—The state immediately after a stack master re-election and a different stack member is elected stack master. The new stack master is re-initializing its configuration. This state applies only to the new stack master.                                  |
|--|
| • Ver Mismatch—The state of a switch in version mismatch (VM) mode. VM mode is when a switch joining the switch stack has a different stack protocol minor version number than the stack master.   |
| • SDM Mismatch—The state of a switch in Switch Database Management (SDM) mismatch mode.<br>SDM mismatch is when a stack member does not support the SDM template running on the stack master.  |
| • Provisioned—The state of a preconfigured switch before it becomes an active member of a switch stack, or the state of a stack member after it has left the switch stack. The MAC address and the priority number in the display are always 0 for the provisioned switch. |
| A typical state transition for a stack member (including a stack master) booting up is Waiting -> Initializing -> Ready.   |
| A typical state transition for a stack member becoming a stack master after a stack master election is Ready -> Master Re-Init -> Ready.   |
| A typical state transition for a stack member in version mismatch (VM) mode is Waiting -> Ver Mismatch.  |
| You can use the <b>show switch</b> command to identify whether the provisioned switch exists in the switch stack. The <b>show running-config</b> and the <b>show startup-config</b> privileged EXEC commands do not provide this information.                              |
| This example shows how to display summary information about a switch stack:<br>Switch> <b>show switch</b>  |
|  |

Examples

#### Related Commands C

| Command          | Description   |
|------------------|---|
| reload           | Reloads the stack member and puts a configuration change into effect. |
| remote command   | Monitors all or specified stack members.                              |
| session          | Accesses a specific stack member.                                     |
| switch priority  | Changes the stack member priority value.                              |
| switch provision | Provisions a new switch before it joins the switch stack.             |
| switch renumber  | Changes the stack member number.                                      |

# show system mtu

Use the **show system mtu** privileged EXEC command to display the global maximum transmission unit (MTU) or maximum packet size set for the switch.

show system mtu [ | {begin | exclude | include} expression]

| Syntax Description | begin               | (Optional) Display begins with the line that matches the <i>expression</i> .  |  |
|--------------------|---------------------|---|--|
|                    | exclude             | (Optional) Display excludes lines that match the <i>expression</i> .  |  |
|                    | include             | (Optional) Display includes lines that match the specified expression.  |  |
|                    | expression          | Expression in the output to use as a reference point.   |  |
| Command Modes      | Privileged EXEC     |   |  |
| Command History    | Release             | Modification  |  |
|                    | 12.2(40)EX1         | This command was introduced.  |  |
| Usage Guidelines   | MTU setting, the n  | e <b>system mtu</b> or <b>system mtu jumbo</b> global configuration command to change the<br>ew setting does not take effect until you reset the switch.<br>out the MTU values and the stack configurations that affect the MTU values, see the |  |
|                    | system mtu command. |   |  |
|                    | -                   | se sensitive. For example, if you enter l <b>exclude output</b> , the lines that contain <i>output</i> the lines that contain <i>Output</i> appear.   |  |
| Examples           | This is an example  | of output from the <b>show system mtu</b> command:  |  |
|                    | -                   | is 1500 bytes<br>size is 1500 bytes<br>System Jumbo MTU will be 9198 bytes  |  |

# show udld

Use the **show udld** user EXEC command to display UniDirectional Link Detection (UDLD) administrative and operational status for all ports or the specified port.

show udld [interface-id] [ | {begin | exclude | include} expression]

| Syntax Description           | interface-id                                | (Optional) ID of the interface and port number. Valid interfaces include physical ports and VLANs. The VLAN range is 1 to 4094.   |
|------------------------------|---|---|
|                              | begin                                       | (Optional) Display begins with the line that matches the <i>expression</i> .  |
|                              | exclude                                     | (Optional) Display excludes lines that match the <i>expression</i> .  |
|                              | include                                     | (Optional) Display includes lines that match the specified expression.  |
|                              | expression                                  | Expression in the output to use as a reference point.   |
| Command Modes                | User EXEC                                   |   |
| Command History              | Release                                     | Modification  |
|                              | 12.2(40)EX1                                 | This command was introduced.  |
| Usage Guidelines<br>Examples | Expressions are cas<br>do not appear, but t | an <i>interface-id</i> , administrative and operational UDLD status for all interfaces appear.<br>e sensitive. For example, if you enter l <b>exclude output</b> , the lines that contain <i>output</i> he lines that contain <i>Output</i> appear. |
|                              |   | of output from the <b>show udld</b> <i>interface-id</i> command. For this display, UDLD is Is of the link, and UDLD detects that the link is bidirectional.   |

| Table 2-32 | show udld Field Descriptions |
|------------|------------------------------|
|------------|------------------------------|

| Field  | Description  |
|--|--|
| Interface  | The interface on the local device configured for UDLD.   |
| Port enable administrative configuration setting | How UDLD is configured on the port. If UDLD is enabled or<br>disabled, the port enable configuration setting is the same as the<br>operational enable state. Otherwise, the enable operational setting<br>depends on the global enable setting.                          |
| Port enable operational state                    | Operational state that shows whether UDLD is actually running on this port.  |
| Current bidirectional state                      | The bidirectional state of the link. An unknown state appears if the link is down or if it is connected to an UDLD-incapable device. A bidirectional state appears if the link is a normal two-way connection to a UDLD-capable device. All other values mean miswiring. |
| Current operational state                        | The current phase of the UDLD state machine. For a normal bidirectional link, the state machine is most often in the Advertisement phase.  |
| Message interval                                 | How often advertisement messages are sent from the local device.<br>Measured in seconds.   |
| Time out interval                                | The time period, in seconds, that UDLD waits for echoes from a neighbor device during the detection window.  |
| Entry 1  | Information from the first cache entry, which contains a copy of echo information received from the neighbor.  |
| Expiration time                                  | The amount of time in seconds remaining before this cache entry is aged out.   |
| Device ID  | The neighbor device identification.  |
| Current neighbor state                           | The neighbor's current state. If both the local and neighbor devices<br>are running UDLD normally, the neighbor state and local state<br>should be bidirectional. If the link is down or the neighbor is not<br>UDLD-capable, no cache entries appear.                   |
| Device name                                      | The device name or the system serial number of the neighbor. The system serial number appears if the device name is not set or is set to the default (Switch).   |
| Port ID  | The neighbor port ID enabled for UDLD.   |
| Neighbor echo 1 device                           | The device name of the neighbors' neighbor from which the echo originated.   |
| Neighbor echo 1 port                             | The port number ID of the neighbor from which the echo originated.   |
| Message interval                                 | The rate, in seconds, at which the neighbor is sending advertisement messages.   |
| CDP device name                                  | The CDP device name or the system serial number. The system serial number appears if the device name is not set or is set to the default (Switch).   |

| Related Commands | Command    | Description   |
|------------------|------------|---|
|                  | udld       | Enables aggressive or normal mode in UDLD or sets the configurable message timer time.  |
|                  | udld port  | Enables UDLD on an individual interface or prevents a fiber-optic interface from being enabled by the <b>udld</b> global configuration command. |
|                  | udld reset | Resets all interfaces shutdown by UDLD and permits traffic to begin passing through them again.   |

# show version

Use the **show version** user EXEC command to display version information for the hardware and firmware and software license information.

show version [ | {begin | exclude | include} expression]

| Syntax Description | begin   | (Optional) Display begins with the line that matches the expression.   |
|--------------------|---|--|
|                    | exclude   | (Optional) Display excludes lines that match the <i>expression</i> .   |
|                    | include   | (Optional) Display includes lines that match the specified expression.   |
|                    | expression  | Expression in the output to use as a reference point.  |
|                    |   |  |
| Command Modes      | User EXEC   |  |
| Command History    | Release   | Modification   |
|                    | 12.2(40)EX1   | This command was introduced.   |
|                    |   |  |
| Usage Guidelines   | -   | se sensitive. For example, if you enter l <b>exclude output</b> , the lines that contain <i>output</i> the lines that contain <i>Output</i> appear.                            |
| Examples           | This is an example  | of output from the <b>show version</b> command that shows the software licenses installed  |
|                    | on the switch:  |  |

# show vlan

Use the **show vlan** user EXEC command to display the parameters for all configured VLANs or one VLAN (if the VLAN ID or name is specified) on the switch.

show vlan [brief | dot1q tag native | id vlan-id | internal usage | mtu | name vlan-name |
private-vlan [type] | remote-span | summary] [ | {begin | exclude | include} expression]

| Syntax Description | brief            | (Optional) Display one line for each VLAN with the VLAN name, status, and its ports.   |
|--------------------|------------------|--|
|                    | dot1q tag native | (Optional) Display the IEEE 802.1Q native VLAN tagging status.   |
|                    | id vlan-id       | (Optional) Display information about a single VLAN identified by VLAN ID number. For <i>vlan-id</i> , the range is 1 to 4094.  |
|                    | internal usage   | (Optional) Display a list of VLANs being used internally by the switch.<br>These VLANs are always from the extended range (VLAN IDs 1006 to<br>4094), and you cannot create VLANs with these IDS by using the <b>vlan</b><br>global configuration command until you remove them from internal use. |
|                    | mtu              | (Optional) Display a list of VLANs and the minimum and maximum transmission unit (MTU) sizes configured on ports in the VLAN.  |
|                    | name vlan-name   | (Optional) Display information about a single VLAN identified by VLAN name. The VLAN name is an ASCII string from 1 to 32 characters.  |
|                    | private-vlan     | (Optional) Display information about configured private VLANs, including<br>primary and secondary VLAN IDs, type (community, isolated, or primary)<br>and ports belonging to the private VLAN. This keyword is only supported if<br>your switch is running the IP services feature set.            |
|                    | type             | (Optional) Display only private VLAN ID and type.  |
|                    | remote-span      | (Optional) Display information about Remote SPAN (RSPAN) VLANs.  |
|                    | summary          | (Optional) Display VLAN summary information.   |
|                    | begin            | (Optional) Display begins with the line that matches the <i>expression</i> .   |
|                    | exclude          | (Optional) Display excludes lines that match the <i>expression</i> .   |
|                    | include          | (Optional) Display includes lines that match the specified <i>expression</i> .   |
|                    | expression       | Expression in the output to use as a reference point.  |

Though visible in the command-line help string, the **ifindex** keyword is not supported.

#### Command Modes

User EXEC

| Command History | Release     | Modification                 |
|-----------------|-------------|------------------------------|
|                 | 12.2(40)EX1 | This command was introduced. |

#### Usage Guidelines

In the **show vlan mtu** command output, the MTU\_Mismatch column shows whether all the ports in the VLAN have the same MTU. When *yes* appears in this column, it means that the VLAN has ports with different MTUs, and packets that are switched from a port with a larger MTU to a port with a smaller MTU might be dropped. If the VLAN does not have an SVI, the hyphen (-) symbol appears in the SVI\_MTU column. If the MTU-Mismatch column displays *yes*, the names of the port with the MinMTU and the port with the MaxMTU appear.

If you try to associate a private VLAN secondary VLAN with a primary VLAN before you define the secondary VLAN, the secondary VLAN is not included in the **show vlan private-vlan** command output.

In the **show vlan private-vlan type** command output, a type displayed as *normal* means a VLAN that has a private VLAN association but is not part of the private VLAN. For example, if you define and associate two VLANs as primary and secondary VLANs and then delete the secondary VLAN configuration without removing the association from the primary VLAN, the VLAN that was the secondary VLAN is shown as *normal* in the display. In the **show vlan private-vlan** output, the primary and secondary VLAN pair is shown as *non-operational*.

Expressions are case sensitive. For example, if you enter | **exclude output**, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

#### Examples

This is an example of output from the **show vlan** command. Table 2-33 describes the fields in the display.

|   | ch> <b>sh</b> o<br>Name | ow vlan   |      |   | Sta                                  | tus Po            | orts                    |   |                               |  |

Table 2-33show vlan Command Output Fields

| Field                            | Description  |
|----------------------------------|--|
| VLAN                             | VLAN number.   |
| Name                             | Name, if configured, of the VLAN.  |
| Status                           | Status of the VLAN (active or suspend).  |
| Ports                            | Ports that belong to the VLAN.   |
| Туре                             | Media type of the VLAN.  |
| SAID                             | Security association ID value for the VLAN.  |
| MTU                              | Maximum transmission unit size for the VLAN.   |
| Parent                           | Parent VLAN, if one exists.  |
| RingNo                           | Ring number for the VLAN, if applicable.   |
| BrdgNo                           | Bridge number for the VLAN, if applicable.   |
| Stp                              | Spanning Tree Protocol type used on the VLAN.  |
| BrdgMode                         | Bridging mode for this VLAN—possible values are source-route bridging (SRB) and source-route transparent (SRT); the default is SRB.  |
| Trans1                           | Translation bridge 1.  |
| Trans2                           | Translation bridge 2.  |
| Remote SPAN VLANs                | Identifies any RSPAN VLANs that have been configured.  |
| Primary/Secondary/<br>Type/Ports | Includes any private VLANs that have been configured, including the primary VLAN ID, the secondary VLAN ID, the type of secondary VLAN (community or isolated), and the ports that belong to it. |

This is an example of output from the **show vlan dot1q tag native** command:

Switch> **show vlan dotlq tag native** dotlq native vlan tagging is disabled

This is an example of output from the show vlan private-vlan command:

| Switch> | show vlan | private-vlan     |                              |
|---------|-----------|------------------|------------------------------|
| Primary | Secondary | Туре             | Ports                        |
|         |           |                  |                              |
| 10      | 501       | isolated         | Gi3/0/3                      |
| 10      | 502       | community        | Gi2/0/11                     |
| 10      | 503       | non-operational3 | -                            |
| 20      | 25        | isolated         | Gi1/0/13, Gi1/0/1, Gi2/0/13, |
|         |           |                  | Gi3/0/13, Gi3/0/14, Gi3/0/1  |
| 20      | 30        | community        | Gi1/0/13, Gi1/0/1, Gi2/0/13, |
|         |           |                  | Gi3/0/14, Gi3/0/1            |

| 20   | 35   | community       | Gi1/0/13, Gi1/0/1,<br>Gi2/0/13, Gi3/0/14, Gi3/0/1 |
|------|------|-----------------|---|
| 20   | 55   | non-operational | Gi1/0/5, Gi1/0/10, Gi2/0/5, Gi2/0/10              |
| 2000 | 2500 | isolated        |   |

This is an example of output from the **show vlan private-vlan type** command:

Switch> show vlan private-vlan type Vlan Type ---- ------10 primary 501 isolated 502 community 503 normal

This is an example of output from the show vlan summary command:

```
Switch> show vlan summary
Number of existing VLANs : 45
Number of existing VTP VLANs : 45
Number of existing extended VLANs : 0
```

This is an example of output from the show vlan id command.

|             | ch# <b>sh</b><br>Name | ow vlan id | 2    |        | Stat   | tus    | Por | ts  |                        |        |        |

| Disa        | bled                  |            |      |        |        |        |     |     |                        |        |        |

This is an example of output from the **show vlan internal usage** command. It shows that VLANs 1025 and 1026 are being used as internal VLANs for Gigabit Ethernet routed ports 7 and 8 on stack member 1. If you want to use one of these VLAN IDs, you must first shut down the routed port, which releases the internal VLAN, and then create the extended-range VLAN. When you start up the routed port, another internal VLAN number is assigned to it.

```
Switch> show vlan internal usage
VLAN Usage
---- ------
1025 GigabitEthernet1/0/7
1026 GigabitEthernet1/0/8
```

| <b>Related Commands</b> | Command                        | Description   |
|-------------------------|--------------------------------|---|
|                         | private-vlan                   | Configures a VLAN as a community, isolated, or primary VLAN or associates a primary VLAN with secondary VLANs.                                |
|                         | switchport mode                | Configures the VLAN membership mode of a port.  |
|                         | vlan (global<br>configuration) | Enables VLAN configuration mode where you can configure VLANs 1 to 4094.  |
|                         | vlan (VLAN<br>configuration)   | Configures VLAN characteristics in the VLAN database. Only available for normal-range VLANs (VLAN IDs 1 to 1005). Do not enter leading zeros. |

# show vlan access-map

Use the **show vlan access-map** privileged EXEC command to display information about a particular VLAN access map or for all VLAN access maps.

show vlan access-map [mapname] [ | {begin | exclude | include} expression]

| Syntax Description | mapname   | (Optional) Name of a specific VLAN access map.   |
|--------------------|---|--|
|                    | begin   | (Optional) Display begins with the line that matches the <i>expression</i> .               |
|                    | exclude   | (Optional) Display excludes lines that match the <i>expression</i> .                       |
|                    | include   | (Optional) Display includes lines that match the specified expression.                     |
|                    | expression  | Expression in the output to use as a reference point.                                      |
| Command Modes      | Privileged EXEC   |  |
| Command History    | Release   | Modification   |
|                    | 12.2(40)EX1   | This command was introduced.   |
| Examples           | This is an example of   | of output from the <b>show vlan access-map</b> command:                                    |
| ·                  | Switch# <b>show vlan</b><br>Vlan access-map "{<br>Match clauses:<br>ip address: S | access-map   |
|                    | Action:<br>forward  |  |
| Related Commands   | Command   | Description  |
|                    | show vlan filter  | Displays information about all VLAN filters or about a particular VLAN or VLAN access map. |
|                    | vlan access-map   | Creates a VLAN map entry for VLAN packet filtering.  |

Applies a VLAN map to one or more VLANs.

vlan filter

# show vlan filter

Use the **show vlan filter** privileged EXEC command to display information about all VLAN filters or about a particular VLAN or VLAN access map.

show vlan filter [access-map name | vlan vlan-id] [ | {begin | exclude | include} expression]

| Syntax Description | access-map name  | (Optional) Display filtering information for the specified VLAN access map.  |  |  |  |  |
|--------------------|--|--|--|--|--|--|
|                    | vlan vlan-id   | (Optional) Display filtering information for the specified VLAN. The range is 1 to 4094.   |  |  |  |  |
|                    | begin  | tional) Display begins with the line that matches the <i>expression</i> .  |  |  |  |  |
|                    | exclude  | (Optional) Display excludes lines that match the expression.   |  |  |  |  |
|                    | include  | (Optional) Display includes lines that match the specified expression.   |  |  |  |  |
|                    | expression   | Expression in the output to use as a reference point.  |  |  |  |  |
| Command Modes      | Privileged EXEC  |  |  |  |  |  |
| Command History    | Release  | Modification   |  |  |  |  |
|                    | 12.2(40)EX1  | This command was introduced.   |  |  |  |  |
| Usage Guidelines   | 1  | sensitive. For example, if you enter   <b>exclude output</b> , the lines that contain <i>output</i> lines that contain <i>Output</i> appear. |  |  |  |  |
| Examples           | This is an example of                                      | output from the <b>show vlan filter</b> command:   |  |  |  |  |
|                    | Switch# <b>show vlan f</b><br>VLAN Map map_1 is f<br>20-22 |  |  |  |  |  |
| Related Commands   | Command  | Description  |  |  |  |  |

|                    | vlan access-map  | Creates a VLAN map entry for VLAN packet filtering.  |  |  |  |  |
|                    | vlan filter  | Applies a VLAN map to one or more VLANs.   |  |  |  |  |
|                    |  |  |  |  |  |  |

## show vmps

Use the **show vmps** user EXEC command without keywords to display the VLAN Query Protocol (VQP) version, reconfirmation interval, retry count, VLAN Membership Policy Server (VMPS) IP addresses, and the current and primary servers, or use the **statistics** keyword to display client-side statistics.

show vmps [statistics] [ | {begin | exclude | include} expression]

| Syntax Description | statistics   | (Optional) Display VQP client-side statistics and counters.  |
|--------------------|--|--|
|                    | begin  | (Optional) Display begins with the line that matches the <i>expression</i> .   |
|                    | exclude  | (Optional) Display excludes lines that match the <i>expression</i> .   |
|                    | include  | (Optional) Display includes lines that match the specified expression.   |
|                    | expression   | Expression in the output to use as a reference point.  |
| Command Modes      | User EXEC  |  |
| Command History    | Release  | Modification   |
|                    | 12.2(40)EX1  | This command was introduced.   |
|                    | 1 1 1.   |  |
|                    | do not appear, but the   | e lines that contain <i>Output</i> appear.   |
|                    |  |  |

VQP Insufficient Resource: 0
```

| Table 2-34 sho | w vmps statistics | Field Descriptions |
|----------------|-------------------|--------------------|
|----------------|-------------------|--------------------|

| Field                        | Description  |
|------------------------------|--|
| VQP Queries                  | Number of queries sent by the client to the VMPS.  |
| VQP Responses                | Number of responses sent to the client from the VMPS.  |
| VMPS Changes                 | Number of times that the VMPS changed from one server to another.  |
| VQP Shutdowns                | Number of times the VMPS sent a response to shut down the port. The client disables the port and removes all dynamic addresses on this port from the address table. You must administratively re-enable the port to restore connectivity.  |
| VQP Denied                   | Number of times the VMPS denied the client request for security reasons. When<br>the VMPS response denies an address, no frame is forwarded to or from the<br>workstation with that address (broadcast or multicast frames are delivered to the<br>workstation if the port has been assigned to a VLAN). The client keeps the<br>denied address in the address table as a blocked address to prevent more queries<br>from being sent to the VMPS for each new packet received from this<br>workstation. The client ages the address if no new packets are received from this<br>workstation on this port within the aging time period. |
| VQP Wrong Domain             | Number of times the management domain in the request does not match the one<br>for the VMPS. Any previous VLAN assignments of the port are not changed.<br>This response means that the server and the client have not been configured with<br>the same VTP management domain.   |
| VQP Wrong Version            | Number of times the version field in the query packet contains a value that is higher than the version supported by the VMPS. The VLAN assignment of the port is not changed. The switches send only VMPS Version 1 requests.  |
| VQP Insufficient<br>Resource | Number of times the VMPS is unable to answer the request because of a resource availability problem. If the retry limit has not yet been reached, the client repeats the request with the same server or with the next alternate server depending on whether the per-server retry count has been reached.  |

| <b>Related Commands</b> | Command                             | Description  |
|-------------------------|-------------------------------------|--|
|                         | clear vmps statistics               | Clears the statistics maintained by the VQP client.                        |
|                         | vmps reconfirm<br>(privileged EXEC) | Sends VQP queries to reconfirm all dynamic VLAN assignments with the VMPS. |
|                         | vmps retry                          | Configures the per-server retry count for the VQP client.                  |
|                         | vmps server                         | Configures the primary VMPS and up to three secondary servers.             |

## show vtp

Use the **show vtp** user EXEC command to display general information about the VLAN Trunking Protocol (VTP) management domain, status, and counters.

show vtp {counters | password | status} [ | {begin | exclude | include} expression]

|                    |   |   | r the switch  |
|--------------------|---|---|---|
| Syntax Description | counters  | Display the VTP statistics for  | T the Switch.   |
|                    | password Display the configured VTP password.   |   |   |
|                    | status  | Display general information   | about the VTP management domain status.                                   |
|                    | begin   | (Optional) Display begins wi  | th the line that matches the <i>expression</i> .                          |
|                    | exclude   | (Optional) Display excludes   | lines that match the <i>expression</i> .                                  |
|                    | include   | (Optional) Display includes l   | ines that match the specified expression.                                 |
|                    | expression  | Expression in the output to u   | se as a reference point.  |
| ommand Modes       | User EXEC   |   |   |
| ommand History     | Release   | Modification  |   |
| -                  | 12.2(40)EX1   | This command was introduce  | ed.   |

 Table 2-35 describes each field in the display.

Table 2-35show vtp counters Field Descriptions

| Field                                 | Description   |  |
|---------------------------------------|---|--|
| Summary advertisements received       | Number of summary advertisements received by this switch on its trunk<br>ports. Summary advertisements contain the management domain name,<br>the configuration revision number, the update timestamp and identity, the<br>authentication checksum, and the number of subset advertisements to<br>follow.                                 |  |
| Subset advertisements received        | Number of subset advertisements received by this switch on its trunk ports. Subset advertisements contain all the information for one or more VLANs.  |  |
| Request advertisements received       | Number of advertisement requests received by this switch on its trunk<br>ports. Advertisement requests normally request information on all<br>VLANs. They can also request information on a subset of VLANs.  |  |
| Summary advertisements<br>transmitted | Number of summary advertisements sent by this switch on its trunk<br>ports. Summary advertisements contain the management domain name,<br>the configuration revision number, the update timestamp and identity, the<br>authentication checksum, and the number of subset advertisements to<br>follow.                                     |  |
| Subset advertisements transmitted     | Number of subset advertisements sent by this switch on its trunk ports.<br>Subset advertisements contain all the information for one or more<br>VLANs.  |  |
| Request advertisements transmitted    | Number of advertisement requests sent by this switch on its trunk ports.<br>Advertisement requests normally request information on all VLANs.<br>They can also request information on a subset of VLANs.  |  |
| Number of configuration               | Number of revision errors.  |  |
| revision errors                       | Whenever you define a new VLAN, delete an existing one, suspend or resume an existing VLAN, or modify the parameters on an existing VLAN, the configuration revision number of the switch increments.   |  |
|                                       | Revision errors increment whenever the switch receives an<br>advertisement whose revision number matches the revision number of<br>the switch, but the MD5 digest values do not match. This error means<br>that the VTP password in the two switches is different or that the<br>switches have different configurations.                  |  |
|                                       | These errors means that the switch is filtering incoming advertisements, which causes the VTP database to become unsynchronized across the network.   |  |
| Number of configuration               | Number of MD5 digest errors.  |  |
| digest errors                         | Digest errors increment whenever the MD5 digest in the summary packet<br>and the MD5 digest of the received advertisement calculated by the<br>switch do not match. This error usually means that the VTP password in<br>the two switches is different. To solve this problem, make sure the VTP<br>password on all switches is the same. |  |
|                                       | These errors mean that the switch is filtering incoming advertisements, which causes the VTP database to become unsynchronized across the network.  |  |

| eld Description  |  |  |
|--|--|--|
| Number of V1 summary   | Number of Version 1 errors.  |  |
| errors   | Version 1 summary errors increment whenever a switch in VTP V2 mode receives a VTP Version 1 frame. These errors mean that at least one neighboring switch is either running VTP Version 1 or VTP Version 2 with V2-mode disabled. To solve this problem, change the configuration of the switches in VTP V2-mode to disabled. |  |
| Join Transmitted   | Number of VTP pruning messages sent on the trunk.  |  |
| Join Received  | Number of VTP pruning messages received on the trunk.  |  |
| Summary Advts Received<br>from non-pruning-capable<br>device | Number of VTP summary messages received on the trunk from devices that do not support pruning.   |  |

This is an example of output from the **show vtp status** command. Table 2-36 describes each field in the display.

| Switch> show vtp status         |   |
|---------------------------------|---|
| VTP Version                     | : 2                                       |

| MD5 digest                      | : 0x3A 0x29 0x86 0x39 0xB4 0x5D 0x58 0xD7 |

| Table 2-36 | show vtp status Field Descriptions |
|------------|------------------------------------|
|------------|------------------------------------|

| Field                              | Description  |
|------------------------------------|--|
| VTP Version                        | Displays the VTP version operating on the switch. By default, the switch implements Version 1 but can be set to Version 2. |
| Configuration Revision             | Current configuration revision number on this switch.  |
| Maximum VLANs<br>Supported Locally | Maximum number of VLANs supported locally.   |
| Number of Existing<br>VLANs        | Number of existing VLANs.  |

| Field                          | Description   |  |
|--------------------------------|---|--|
| VTP Operating Mode             | Displays the VTP operating mode, which can be server, client, or transparent.   |  |
|                                | Server: a switch in VTP server mode is enabled for VTP and sends<br>advertisements. You can configure VLANs on it. The switch guarantees<br>that it can recover all the VLAN information in the current VTP database<br>from NVRAM after reboot. By default, every switch is a VTP server.  |  |
|                                | <b>Note</b> The switch automatically changes from VTP server mode to VTP client mode if it detects a failure while writing the configuration to NVRAM and cannot return to server mode until the NVRAM is functioning.  |  |
|                                | Client: a switch in VTP client mode is enabled for VTP, can send<br>advertisements, but does not have enough nonvolatile storage to store<br>VLAN configurations. You cannot configure VLANs on it. When a VTP<br>client starts up, it does not send VTP advertisements until it receives<br>advertisements to initialize its VLAN database.                |  |
|                                | Transparent: a switch in VTP transparent mode is disabled for VTP, does<br>not send or learn from advertisements sent by other devices, and cannot<br>affect VLAN configurations on other devices in the network. The switch<br>receives VTP advertisements and forwards them on all trunk ports except<br>the one on which the advertisement was received. |  |
| VTP Domain Name                | Name that identifies the administrative domain for the switch.  |  |
| VTP Pruning Mode               | Displays whether pruning is enabled or disabled. Enabling pruning on a VTP server enables pruning for the entire management domain. Pruning restricts flooded traffic to those trunk links that the traffic must use to access the appropriate network devices.   |  |
| VTP V2 Mode                    | Displays if VTP Version 2 mode is enabled. All VTP Version 2 switches<br>operate in Version 1 mode by default. Each VTP switch automatically<br>detects the capabilities of all the other VTP devices. A network of VTP<br>devices should be configured to Version 2 only if all VTP switches in the<br>network can operate in Version 2 mode.              |  |
| VTP Traps Generation           | Displays whether VTP traps are sent to a network management station.  |  |
| MD5 Digest                     | A 16-byte checksum of the VTP configuration.  |  |
| Configuration Last<br>Modified | Displays the date and time of the last configuration modification.<br>Displays the IP address of the switch that caused the configuration change to the database.   |  |
