# CHAPTER 9

## H Commands

---

The commands in this chapter apply to the Cisco MDS 9000 Family of multilayer directors and fabric switches. All commands are shown here in alphabetical order regardless of command mode. See “[About the CLI Command Modes](#)” section on page 1-3 to determine the appropriate mode for each command.

hash

**Send documentation comments to [mdsfeedback-doc@cisco.com](mailto:mdsfeedback-doc@cisco.com)**

## hash

To configure a hash algorithm for an IKE protocol policy, use the **hash** command in IKE policy configuration submode. To revert to the default, use the **no** form of the command.

**hash {md5 | sha}**

**no hash**

<b>Syntax Description</b>	<b>md5</b> Specifies the MD5 <sup>1</sup> hash algorithm. <b>sha</b> Specifies the SHA <sup>2</sup> . 1. MD5 = Message-Digest 2. SHA = Secure Hash Algorithm										
<b>Defaults</b>	SHA.										
<b>Command Modes</b>	IKE policy configuration submode.										
<b>Command History</b>	<table border="1"> <thead> <tr> <th><b>Release</b></th><th><b>Modification</b></th></tr> </thead> <tbody> <tr> <td>2.0(x)</td><td>This command was introduced.</td></tr> </tbody> </table>	<b>Release</b>	<b>Modification</b>	2.0(x)	This command was introduced.						
<b>Release</b>	<b>Modification</b>										
2.0(x)	This command was introduced.										
<b>Usage Guidelines</b>	To use this command, the IKE protocol must be enabled using the <b>crypto ike enable</b> command.										
<b>Examples</b>	The following example shows how to configure the hash algorithm for the IKE protocol:  <pre>switch# config terminal switch(config)# crypto ike domain ipsec switch(config-ike-ipsec)# policy 1 switch(config-ike-ipsec-policy)# hash md5</pre>										
<b>Related Commands</b>	<table border="1"> <thead> <tr> <th><b>Command</b></th><th><b>Description</b></th></tr> </thead> <tbody> <tr> <td><b>crypto ike domain ipsec</b></td><td>Enters IKE configuration mode.</td></tr> <tr> <td><b>crypto ike enable</b></td><td>Enables the IKE protocol.</td></tr> <tr> <td><b>policy</b></td><td>Configures IKE policy parameters.</td></tr> <tr> <td><b>show crypto ike domain ipsec</b></td><td>Displays IKE information for the IPsec domain.</td></tr> </tbody> </table>	<b>Command</b>	<b>Description</b>	<b>crypto ike domain ipsec</b>	Enters IKE configuration mode.	<b>crypto ike enable</b>	Enables the IKE protocol.	<b>policy</b>	Configures IKE policy parameters.	<b>show crypto ike domain ipsec</b>	Displays IKE information for the IPsec domain.
<b>Command</b>	<b>Description</b>										
<b>crypto ike domain ipsec</b>	Enters IKE configuration mode.										
<b>crypto ike enable</b>	Enables the IKE protocol.										
<b>policy</b>	Configures IKE policy parameters.										
<b>show crypto ike domain ipsec</b>	Displays IKE information for the IPsec domain.

## host

To configure the host PWWN for the flow, use the **host** command. To delete a flow from a given flowgroup, use the **no** form of the command.

**host {pwwn target pwwn vsan vsan id [tape] [compression]}**

**no host {pwwn target pwwn vsan vsan id [tape] [compression]}**

<b>Syntax Description</b>	<p><b>pwwn</b> Specifies the host and target pwwn for the flow.</p> <p><b>vsan</b> Specifies the VSAN where this flow is accelerated.</p> <p><b>vsan id</b> Specifies the vsan ID where this flow is accelerated. The range is from 1 to 4093.</p> <p><b>tape</b> Enables tape acceleration.</p> <p><b>compression</b> Enables compression.</p>
---------------------------	---

<b>Defaults</b>	None.
-----------------	-------

<b>Command Modes</b>	Configuration submode.
----------------------	------------------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	NX-OS 4.2(1)	This command was introduced.

<b>Usage Guidelines</b>	None.
-------------------------	-------

<b>Examples</b>	The following example shows how to add a flow from a given flowgroup:
	<pre>switch# conf t Enter configuration commands, one per line. End with CNTL/Z. switch(config)# ioa cluster tape_vault switch(config-ioa-cl)# flowgroup tsm switch(config-ioa-cl-flgrp)# host 10:0:0:0:0:0:0:1 target 11:0:0:0:0:0:0:1 vsan 100 tape switch(config-ioa-cl-flgrp)# host 10:0:0:0:0:0:0:1 target 11:0:0:0:0:0:0:1 vsan 100 compression switch(config-ioa-cl-flgrp)# host 10:0:0:0:0:0:0:2 target 11:0:0:0:0:0:0:2 vsan 100 tape compression sjc-sw2(config-ioa-cl-flgrp)# end</pre>

<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<b>flowgroup</b>	Configures IOA flowgroup.

**Send documentation comments to [mdsfeedback-doc@cisco.com](mailto:mdsfeedback-doc@cisco.com)**

## host

Use the **host** command to configure the switch offline state, the mainframe access control parameters, and the mainframe time stamp parameters. To disable the configuration or to revert to factory defaults, use the **no** form of the command.

**host { control [switch offline] | port control | set-timestamp }**

**no host {control [switch offline] | port control | set-timestamp}**

Syntax Description	<b>control</b> Allows the host control of FICON.
<b>switch offline</b>	(Optional) Allows the host to move the switch to an offline state and shut down the ports (default).
<b>port control</b>	Enables the host to configure FICON parameters.
<b>set-timestamp</b>	Allows the host to set the director clock.

**Defaults** Host offline control enabled.

**Command Modes** FICON configuration mode.

Command History	Release	Modification
	1.3(1)	This command was introduced.

**Usage Guidelines** By default, the clock in each VSAN is the same as the switch hardware clock. Mainframe users are allowed to change the VSAN-clock.

**Examples** The following example prohibits mainframe users from moving the switch to an offline state:

```
switch# config terminal
switch(config)# ficon vsan 2
switch(config-ficon)# no host control switch offline
```

The following example allows the host to move the switch to an offline state and shut down the ports:

```
switch(config-ficon)# host control switch offline
```

The following example prohibits mainframe users to configure FICON parameters in the Cisco MDS switch (default):

```
switch(config-ficon)# no host port control
```

The following example allows mainframe users to configure FICON parameters in the Cisco MDS switch:

```
switch(config-ficon)# host port control
```

**Send documentation comments to [mdsfeedback-doc@cisco.com](mailto:mdsfeedback-doc@cisco.com)**

The following example prohibits mainframe users from changing the VSAN-specific clock:

```
switch(config-ficon)# no host set-timestamp
```

The following example allows the host to set the clock on this switch (default):

```
switch(config-ficon)# host set-timestamp
```

---

**Related Commands**

Command	Description
<b>ficon vsan vsan-id</b>	Enables FICON on the specified VSAN.
<b>show ficon</b>	Displays configured FICON details.

---

hw-module logging onboard

**Send documentation comments to mdsfeedback-doc@cisco.com**

## hw-module logging onboard

To configure on-board failure logging (OBFL), use the **hw-module logging onboard** command. To disable this feature, use the **no** form of the command.

**hw-module logging onboard [module slot] [log-type]**

**no hw-module logging onboard [module slot] [log-type]**

Syntax Description	module slot	Configures OBFL for a specified module.
	log-type	Specifies the type of events for on-board failure logging.
	cpu-hog	Specifies CPU hog events.
	environmental-history	Specifies environmental history events.
	error-stats	Specifies error statistics events.
	interrupt-stats	Specifies interrupt statistics events.
	mem-leak	Specifies memory leak events.
	miscellaneous-error	Specifies miscellaneous information events.
	obfl-log	Specifies boot uptime, device version, and OBFL history.

Defaults	Enabled.
----------	----------

Command Modes	Configuration mode.
---------------	---------------------

Command History	Release	Modification
	3.0(1)	This command was introduced.

Usage Guidelines	OBFL data uses the module's persistent logging facility to store data in its CompactFlash memory. When OBFL is disabled, the persistent logging facility discards all entries sent to it for logging.
------------------	---

Examples	The following example configures on-board failure logging of memory leak events on module 2:
	<pre>switch# config terminal switch(config)# hw-module logging onboard module 2 mem-leak</pre>

Related Commands	Command	Description
	<b>clear logging onboard</b>	Clears OBFL information.
	<b>show logging onboard</b>	Displays OBFL information.
