

## D Commands

---

This chapter describes the Cisco Nexus 1000V commands that begin with the letter D.

### **deadtime**

To configure the duration of time for which a non-reachable RADIUS or TACACS+ server is skipped, use the **deadtime** command. To revert to the default, use the **no** form of this command.

**deadtime** *minutes*

**no deadtime** *minutes*

<b>Syntax Description</b>	<i>minutes</i>	Number of minutes, from 0 to 1440, for the interval.
<b>Defaults</b>	0 minutes	
<b>Command Modes</b>	RADIUS server group configuration ( <b>config-radius</b> ) TACACS+ server group configuration ( <b>config-tacacs+</b> ) Global Configuration ( <b>config</b> )	
<b>SupportedUserRoles</b>	network-admin	
<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.0(4)SV1(1)	This command was introduced.

**Usage Guidelines** Before you can configure it, you must enable TACACS+ using the **tacacs+ enable** command. The dead-time can be configured either globally and applied to all RADIUS or TACACS+ servers; or per server group.

**deadtime**

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

If the dead-time interval for a RADIUS or TACACS+ server group is greater than zero (0), that value takes precedence over the global dead-time value.

Setting the dead-time interval to 0 disables the timer.

When the dead-time interval is 0 minutes, RADIUS and TACACS+ servers are not marked as dead even if they are not responding.

**Examples**

This example shows how to set the dead-time interval to 2 minutes for a RADIUS server group:

```
n1000v# config t
n1000v(config)# aaa group server radius RadServer
n1000v(config-radius)# deadtime 2
```

This example shows how to set a global dead-time interval to 5 minutes for all TACACS+ servers and server groups:

```
n1000v# config t
n1000v(config)# tacacs-server deadtime 5
n1000v(config)#
```

This example shows how to set the dead-time interval to 5 minutes for a TACACS+ server group:

```
n1000v# config t
n1000v(config)# aaa group server tacacs+ TacServer
n1000v(config-tacacs+)# deadtime 5
```

This example shows how to revert to the dead-time interval default:

```
n1000v# config t
n1000v(config)# feature tacacs+
n1000v(config)# aaa group server tacacs+ TacServer
n1000v(config-tacacs+)# no deadtime 5
```

**Related Commands**

Command	Description
<b>aaa group server</b>	Configures AAA server groups.
<b>radius-server host</b>	Configures a RADIUS server.
<b>show radius-server groups</b>	Displays RADIUS server group information.
<b>show tacacs-server groups</b>	Displays TACACS+ server group information.
<b>tacacs+ enable</b>	Enables TACACS+.
<b>tacacs-server host</b>	Configures a TACACS+ server.

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

## debug logfile

To direct the output of the **debug** commands to a specified file, use the **debug logfile** command. To revert to the default, use the **no** form of this command.

```
debug logfile filename [size bytes]
no debug logfile filename [size bytes]
```

<b>Syntax Description</b>	<table border="0"> <tr> <td><i>filename</i></td><td>Name of the file for <b>debug</b> command output. The filename is alphanumeric, case sensitive, and has a maximum of 64 characters.</td></tr> <tr> <td><i>size bytes</i></td><td>(Optional) Specifies the size of the logfile in bytes. The range is from 4096 to 4194304.</td></tr> </table>	<i>filename</i>	Name of the file for <b>debug</b> command output. The filename is alphanumeric, case sensitive, and has a maximum of 64 characters.	<i>size bytes</i>	(Optional) Specifies the size of the logfile in bytes. The range is from 4096 to 4194304.
<i>filename</i>	Name of the file for <b>debug</b> command output. The filename is alphanumeric, case sensitive, and has a maximum of 64 characters.				
<i>size bytes</i>	(Optional) Specifies the size of the logfile in bytes. The range is from 4096 to 4194304.				

<b>Defaults</b>	Default filename: syslogd_debugs Default file size: 4194304 bytes
-----------------	--

<b>Command Modes</b>	Any
----------------------	-----

<b>SupportedUserRoles</b>	network-admin
---------------------------	---------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.0(4)SV1(1)	This command was introduced.

<b>Usage Guidelines</b>	The logfile is created in the log: file system root directory. Use the <b>dir log:</b> command to display the log files.
-------------------------	---

<b>Examples</b>	This example shows how to specify a debug logfile:
	n1000v# <b>debug logfile debug_log</b>

This example shows how to revert to the default debug logfile:

```
n1000v# no debug logfile debug_log
```

<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<b>dir</b>	Displays the contents of a directory.
	<b>show debug</b>	Displays the debug configuration.
	<b>show debug logfile</b>	Displays the debug logfile contents.

■ **debug logging**

**Send document comments to nexus1k-docfeedback@cisco.com.**

## debug logging

To enable **debug** command output logging, use the **debug logging** command. To disable debug logging, use the **no** form of this command.

**debug logging**

**no debug logging**

---

**Syntax Description** This command has no arguments or keywords.

---

**Defaults** Disabled

---

**Command Modes** Any

---

**SupportedUserRoles** network-admin

---

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

---

### Usage Guidelines

---

**Examples** This example shows how to enable the output logging for the **debug** command:

```
n1000v# debug logging
```

This example shows how to disable the output logging for the **debug** command:

```
n1000v# no debug logging
```

---

Related Commands	Command	Description
	<b>debug logfile</b>	Configures the logfile for the <b>debug</b> command output.

---

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

## default switchport (port profile)

To remove a particular switchport characteristic from a port profile, use the **default switchport** command.

```
default switchport {mode | access vlan | trunk {native | allowed} vlan | private-vlan
                   {host-association | mapping [trunk]} | port-security}
```

Syntax Description	<b>mode</b>	Removes the port mode characteristic from a port profile, which causes the port mode to revert to global or interface defaults (access mode). This is equivalent to executing the <b>no switchport mode port-profile</b> command.
	<b>access vlan</b>	Removes an access VLAN configuration.
	<b>trunk allowedvlan</b>	Removes trunking allowed VLAN characteristics.
	<b>trunk native vlan</b>	Removes trunking native VLAN characteristics.
	<b>private-vlan</b>	Removes PVLAN host-association.
	<b>host-association</b>	
	<b>private-vlan mapping</b>	Removes PVLAN mapping.
	<b>port-security</b>	Removes port-security characteristics.

Defaults	None
----------	------

Command Modes	Port Profile Configuration (config-port-prof)
---------------	---

SupportedUserRoles	network-admin
--------------------	---------------

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

Usage Guidelines	The functionality of this command is equivalent to using the no form of a specific switchport command. For example, the effect of the following commands is the same:
------------------	---

- **default switchport mode** command = **no switchport mode** command
- **default switchport access vlan** command = **no switchport access vlan** command
- **default switchport trunk native vlan** command= **no switchport trunk native vlan** command

Examples	This example shows how to revert port profile ports to switch access ports.
----------	---

```
n1000v(config-port-prof)# default switchport mode
```

**default switchport (port profile)**

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

This example shows how to remove the trunking allowed VLAN characteristics of a port profile.

```
n1000v(config-port-prof)# default switchport trunk allowed vlan
```

This example shows how to remove the private VLAN host association of a port profile.

```
n1000v(config-port-prof)# default switchport private-vlan host-association
```

This example shows how to remove port security characteristics of a port profile.

```
n1000v(config-port-prof)# default switchport port-security
```

**Related Commands**

Command	Description
<b>show port-profile</b>	Displays information about port profile(s).

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

## default shutdown (port profile)

To remove the admin status characteristic (config attribute) from a port-profile, use the **default shutdown** command. This will set the admin status of the interfaces inheriting this port-profile to the global or interface default (usually, the default admin status is shutdown).

### default shutdown

**Syntax Description** This command has no arguments or keywords.

**Defaults** None

**Command Modes** Port Profile Configuration (**config- port-prof**)

**SupportedUserRoles** network-admin

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

### Usage Guidelines

**Examples** This example shows how to change the ports in a port profile to the shutdown state:

```
n1000v# config t
n1000v# port-profile DataProfile
n1000v(config-port-prof)# default shutdown
n1000v(config-port-prof)# show port-profile name DataProfile
port-profile DataProfile
  description:
  status: enabled
  capability uplink: no
  capability l3control: no
  system vlans: none
  port-group: DataProfile
  max-ports: 32
  inherit:
  config attributes:
    switchport mode access
  evaluated config attributes:
    switchport mode access
  assigned interfaces:
    Vethernet1switch(config-port-prof)#

```

■ default shutdown (port profile)

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

Related Commands	Command	Description
	<b>show port-profile</b>	Displays the configuration for a port profile.

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

## default shutdown (interface)

To remove any interface-level override for the admin status, use the **default shutdown** command. This command removes any configuration for admin status entered previously. This allows the port-profile config to take effect.

### default shutdown

**Syntax Description** This command has no arguments or keywords.

**Defaults** None

**Command Modes** Interface Configuration (config- if)

**SupportedUserRoles** network-admin

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

### Usage Guidelines

**Examples** This example shows how to change the ports to the shutdown state:

```
n1000v# config t
n1000v(config)# interface ethernet 3/2
n1000v(config-if)# default shutdown
n1000v(config-if)#
```

Related Commands	Command	Description
	<b>show running-config interface</b>	Displays the configuration of an interface.

---

 default switchport port-security (VEthernet)

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

## default switchport port-security (VEthernet)

To remove any user configuration for the switchport port-security characteristic from a VEthernet interface, use the **default switchport port-security** command. This has the effect of setting the default (disabled) for port-security for that interface.

**default switchport port-security**

---

**Syntax Description** This command has no arguments or keywords.

---

**Defaults** Disabled

---

**Command Modes** Interface Configuration (**config-if**)

---

**SupportedUserRoles** network-admin

---

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

---

### Usage Guidelines

---

#### Examples

This example shows how to disable port security on VEthernet 2:

```
n1000v# config t
n1000v(config)# interface veth 2
n1000v(config-if)# default switchport port-security
n1000v(config-if)#
```

---

#### Related Commands

Command	Description
<b>show running-config port-security</b>	Displays the port security configuration.
<b>show port-security</b>	Displays the port security status.

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

## delay

To assign an informational throughput delay value to an Ethernet interface, use the **delay** command. To remove delay value, use the **no** form of this command.

**delay** *value*

**no delay** [*value*]

<b>Syntax Description</b>	<i>delay_val</i> Specifies the throughput delay time in tens of microseconds. Allowable values are between 1 and 16777215.				
<b>Defaults</b>	None				
<b>Command Modes</b>	Interface Configuration ( <b>config-if</b> )				
<b>SupportedUserRoles</b>	network-admin				
<b>Command History</b>	<table border="1"> <thead> <tr> <th><b>Release</b></th><th><b>Modification</b></th></tr> </thead> <tbody> <tr> <td>4.0(4)SV1(1)</td><td>This command was introduced.</td></tr> </tbody> </table>	<b>Release</b>	<b>Modification</b>	4.0(4)SV1(1)	This command was introduced.
<b>Release</b>	<b>Modification</b>				
4.0(4)SV1(1)	This command was introduced.				
<b>Usage Guidelines</b>	The actual Ethernet interface throughput delay time does not change when you set this value—the setting is for informational purposes only.				
<b>Examples</b>	<p>This example shows how to assign the delay time to an Ethernet slot 3 port 1 interface:</p> <pre>n1000v# config t n1000v(config)# interface ethernet 3/1 n1000v(config-if)# delay 10000 n1000v(config-if)#</pre> <p>This example shows how to remove the delay time configuration:</p> <pre>n1000v# config t n1000v(config)# interface ethernet 3/1 n1000v(config-if)# no delay 10000 n1000v(config-if)#</pre>				
<b>Related Commands</b>	<table border="1"> <thead> <tr> <th><b>Command</b></th><th><b>Description</b></th></tr> </thead> <tbody> <tr> <td><b>show interface</b></td><td>Displays configuration information for an interface.</td></tr> </tbody> </table>	<b>Command</b>	<b>Description</b>	<b>show interface</b>	Displays configuration information for an interface.
<b>Command</b>	<b>Description</b>				
<b>show interface</b>	Displays configuration information for an interface.				

**delete**

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

## delete

To delete a file, use the **delete** command.

**delete [filesystem://directory/]filename**

Syntax Description	<i>filesystem:</i> (Optional) Name of the file system. Valid values are <b>bootflash</b> or <b>volatile</b> . <i>//directory/</i> (Optional) Name of the directory. The directory name is case sensitive. <i>filename</i> Name of the file. The name is case sensitive.
--------------------	---

<b>Defaults</b>	None
-----------------	------

<b>Command Modes</b>	Any
----------------------	-----

<b>SupportedUserRoles</b>	network-admin
---------------------------	---------------

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

<b>Usage Guidelines</b>	Use the <b>dir</b> command to locate the file you want to delete.
-------------------------	---

<b>Examples</b>	This example shows how to delete a file:
	n1000v# <b>delete bootflash:old_config.cfg</b>

Related Commands	Command	Description
	<b>dir</b>	Displays the contents of a directory.

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

## deny (IPv4)

To create an IPv4 ACL rule that denies traffic matching its conditions, use the **deny** command. To remove a rule, use the **no** form of this command.

### General Syntax

```
[sequence-number] deny protocol source destination [dscp dscp | precedence precedence]
no deny protocol source destination [dscp dscp | precedence precedence]
no sequence-number
```

### Internet Control Message Protocol

```
[sequence-number] deny icmp source destination [icmp-message] [dscp dscp | precedence precedence]
```

### Internet Group Management Protocol

```
[sequence-number] deny igmp source destination [igmp-message] [dscp dscp | precedence precedence]
```

### Internet Protocol v4

```
[sequence-number] deny ip source destination [dscp dscp | precedence precedence]
```

### Transmission Control Protocol

```
[sequence-number] deny tcp source [operator port [port] | portgroup portgroup] destination
[operator port [port] | portgroup portgroup] [dscp dscp | precedence precedence] [fragments]
[log] [time-range time-range-name] [flags] [established]
```

### User Datagram Protocol

```
[sequence-number] deny udp source operator port [port] destination [operator port [port] [dscp
dscp | precedence precedence]]
```

■ deny (IPv4)

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

<b>Syntax Description</b>	<i>sequence-number</i>	(Optional) Sequence number of the <b>deny</b> command, which causes the device to insert the command in that numbered position in the access list. Sequence numbers maintain the order of rules within an ACL.
		A sequence number can be any integer between 1 and 4294967295.
		By default, the first rule in an ACL has a sequence number of 10.
		If you do not specify a sequence number, the device adds the rule to the end of the ACL and assigns a sequence number that is 10 greater than the sequence number of the preceding rule.
		Use the <b>resequence</b> command to reassign sequence numbers to rules.
<i>protocol</i>		Name or number of the protocol of packets that the rule matches. Valid numbers are from 0 to 255. Valid protocol names are the following keywords:
		<ul style="list-style-type: none"> <li>• <b>icmp</b>—Specifies that the rule applies to ICMP traffic only. When you use this keyword, the <i>icmp-message</i> argument is available, in addition to the keywords that are available for all valid values of the <i>protocol</i> argument.</li> <li>• <b>igmp</b>—Specifies that the rule applies to IGMP traffic only. When you use this keyword, the <i>igmp-type</i> argument is available, in addition to the keywords that are available for all valid values of the <i>protocol</i> argument.</li> <li>• <b>ip</b>—Specifies that the rule applies to all IPv4 traffic. When you use this keyword, only the other keywords and arguments that apply to all IPv4 protocols are available. They include the following: <ul style="list-style-type: none"> <li>– <b>dscp</b></li> <li>– <b>precedence</b></li> </ul> </li> <li>• <b>tcp</b>—Specifies that the rule applies to TCP traffic only. When you use this keyword, the <i>flags</i> and <i>operator</i> arguments are available, in addition to the keywords that are available for all valid values of the <i>protocol</i> argument.</li> <li>• <b>udp</b>—Specifies that the rule applies to UDP traffic only. When you use this keyword, the <i>operator</i> argument is available, in addition to the keywords that are available for all valid values of the <i>protocol</i> argument.</li> </ul>
<i>source</i>		Source IPv4 addresses that the rule matches. For details about the methods that you can use to specify this argument, see “Source and Destination” in the “Usage Guidelines” section.
<i>destination</i>		Destination IPv4 addresses that the rule matches. For details about the methods that you can use to specify this argument, see “Source and Destination” in the “Usage Guidelines” section.

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

---

<b>dsdp <i>dscp</i></b>	(Optional) Specifies that the rule matches only those packets with the specified 6-bit differentiated services value in the DSCP field of the IP header. The <i>dscp</i> argument can be one of the following numbers or keywords:
	<ul style="list-style-type: none"> <li>• 0–63—The decimal equivalent of the 6 bits of the DSCP field. For example, if you specify 10, the rule matches only those packets that have the following bits in the DSCP field: 001010.</li> <li>• <b>af11</b>—Assured Forwarding (AF) class 1, low drop probability (001010)</li> <li>• <b>af12</b>—AF class 1, medium drop probability (001100)</li> <li>• <b>af13</b>—AF class 1, high drop probability (001110)</li> <li>• <b>af21</b>—AF class 2, low drop probability (010010)</li> <li>• <b>af22</b>—AF class 2, medium drop probability (010100)</li> <li>• <b>af23</b>—AF class 2, high drop probability (010110)</li> <li>• <b>af31</b>—AF class 3, low drop probability (011010)</li> <li>• <b>af32</b>—AF class 3, medium drop probability (011100)</li> <li>• <b>af33</b>—AF class 3, high drop probability (011110)</li> <li>• <b>af41</b>—AF class 4, low drop probability (100010)</li> <li>• <b>af42</b>—AF class 4, medium drop probability (100100)</li> <li>• <b>af43</b>—AF class 4, high drop probability (100110)</li> <li>• <b>cs1</b>—Class-selector (CS) 1, precedence 1 (001000)</li> <li>• <b>cs2</b>—CS2, precedence 2 (010000)</li> <li>• <b>cs3</b>—CS3, precedence 3 (011000)</li> <li>• <b>cs4</b>—CS4, precedence 4 (100000)</li> <li>• <b>cs5</b>—CS5, precedence 5 (101000)</li> <li>• <b>cs6</b>—CS6, precedence 6 (110000)</li> <li>• <b>cs7</b>—CS7, precedence 7 (111000)</li> <li>• <b>default</b>—Default DSCP value (000000)</li> <li>• <b>ef</b>—Expedited Forwarding (101110)</li> </ul>

---

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

<b>precedence</b> <i>precedence</i>	(Optional) Specifies that the rule matches only packets that have an IP Precedence field with the value specified by the <i>precedence</i> argument. The <i>precedence</i> argument can be a number or a keyword, as follows: <ul style="list-style-type: none"> <li>• 0–7—Decimal equivalent of the 3 bits of the IP Precedence field. For example, if you specify 3, the rule matches only packets that have the following bits in the DSCP field: 011.</li> <li>• <b>critical</b>—Precedence 5 (101)</li> <li>• <b>flash</b>—Precedence 3 (011)</li> <li>• <b>flash-override</b>—Precedence 4 (100)</li> <li>• <b>immediate</b>—Precedence 2 (010)</li> <li>• <b>internet</b>—Precedence 6 (110)</li> <li>• <b>network</b>—Precedence 7 (111)</li> <li>• <b>priority</b>—Precedence 1 (001)</li> <li>• <b>routine</b>—Precedence 0 (000)</li> </ul>
<i>icmp-message</i>	(ICMP only: Optional) ICMP message type that the rule matches. This argument can be an integer from 0 to 255 or one of the keywords listed under “ICMP Message Types” in the “Usage Guidelines” section.
<i>igmp-message</i>	(IGMP only: Optional) IGMP message type that the rule matches. The <i>igmp-message</i> argument can be the IGMP message number, which is an integer from 0 to 15. It can also be one of the following keywords: <ul style="list-style-type: none"> <li>• <b>dvmrp</b>—Distance Vector Multicast Routing Protocol</li> <li>• <b>host-query</b>—Host query</li> <li>• <b>host-report</b>—Host report</li> <li>• <b>pim</b>—Protocol Independent Multicast</li> <li>• <b>trace</b>—Multicast trace</li> </ul>

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

---

<i>operator port</i> [ <i>port</i> ]	(Optional; TCP and UDP only) Rule matches only packets that are from a source port or sent to a destination port that satisfies the conditions of the <i>operator</i> and <i>port</i> arguments. Whether these arguments apply to a source port or a destination port depends upon whether you specify them after the <i>source</i> argument or after the <i>destination</i> argument.  The <i>port</i> argument can be the name or the number of a TCP or UDP port. Valid numbers are integers from 0 to 65535. For listings of valid port names, see “TCP Port Names” and “UDP Port Names” in the “Usage Guidelines” section.  A second <i>port</i> argument is required only when the <i>operator</i> argument is a range. The <i>operator</i> argument must be one of the following keywords:
<i>flags</i>	(TCP only; Optional) TCP control bit flags that the rule matches. The value of the <i>flags</i> argument must be one or more of the following keywords: <ul style="list-style-type: none"><li>• <b>ack</b></li><li>• <b>fin</b></li><li>• <b>psh</b></li><li>• <b>rst</b></li><li>• <b>syn</b></li><li>• <b>urg</b></li></ul>

---

**Defaults**

A newly created IPv4 ACL contains no rules.

If you do not specify a sequence number, the device assigns the rule a sequence number that is 10 greater than the last rule in the ACL.

**Command Modes**

IPv4 ACL configuration (**config-acl**)

**SupportedUserRoles**

network-admin

**Command History**

---

<b>Release</b>	<b>Modification</b>
4.0(4)SV1(1)	This command was introduced.

---

**■ deny (IPv4)**

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

## Usage Guidelines

When the device applies an IPv4 ACL to a packet, it evaluates the packet with every rule in the ACL. The device enforces the first rule that has conditions that are satisfied by the packet. When the conditions of more than one rule are satisfied, the device enforces the rule with the lowest sequence number.

### Source and Destination

You can specify the *source* and *destination* arguments in one of several ways. In each rule, the method that you use to specify one of these arguments does not affect how you specify the other argument. When you configure a rule, use the following methods to specify the *source* and *destination* arguments:

- Address and network wildcard—You can use an IPv4 address followed by a network wildcard to specify a host or a network as a source or destination. The syntax is as follows:

*IPv4-address network-wildcard*

The following example shows how to specify the *source* argument with the IPv4 address and network wildcard for the 192.168.67.0 subnet:

```
switch(config-acl)# deny tcp 192.168.67.0 0.0.0.255 any
```

- Address and variable-length subnet mask—You can use an IPv4 address followed by a variable-length subnet mask (VLSM) to specify a host or a network as a source or destination. The syntax is as follows:

*IPv4-address/prefix-len*

The following example shows how to specify the *source* argument with the IPv4 address and VLSM for the 192.168.67.0 subnet:

```
switch(config-acl)# deny udp 192.168.67.0/24 any
```

- Host address—You can use the **host** keyword and an IPv4 address to specify a host as a source or destination. The syntax is as follows:

**host** *IPv4-address*

This syntax is equivalent to *IPv4-address/32* and *IPv4-address 0.0.0.0*.

The following example shows how to specify the *source* argument with the **host** keyword and the 192.168.67.132 IPv4 address:

```
switch(config-acl)# deny icmp host 192.168.67.132 any
```

- Any address—You can use the **any** keyword to specify that a source or destination is any IPv4 address. For examples of the use of the **any** keyword, see the examples in this section. Each example shows how to specify a source or destination by using the **any** keyword.

### ICMP Message Types

The *icmp-message* argument can be the ICMP message number, which is an integer from 0 to 255. It can also be one of the following keywords:

- **administratively-prohibited**—Administratively prohibited
- **alternate-address**—Alternate address
- **conversion-error**—Datagram conversion
- **dod-host-prohibited**—Host prohibited
- **dod-net-prohibited**—Net prohibited
- **echo**—Echo (ping)
- **echo-reply**—Echo reply

### TCP Port Names

When you specify the *protocol* argument as **tcp**, the *port* argument can be a TCP port number, which is an integer from 0 to 65535. It can also be one of the following keywords:

- bgp**—Border Gateway Protocol (179)
- chargen**—Character generator (19)
- cmd**—Remote commands (rcmd, 514)
- daytime**—Daytime (13)
- discard**—Discard (9)
- domain**—Domain Name Service (53)
- drip**—Dynamic Routing Information Protocol (3949)
- echo**—Echo (7)
- exec**—EXEC (rsh, 512)
- finger**—Finger (79)
- ftp**—File Transfer Protocol (21)
- ftp-data**—FTP data connections (2)
- gopher**—Gopher (7)
- hostname**—NIC hostname server (11)
- ident**—Ident Protocol (113)
- irc**—Internet Relay Chat (194)
- klogin**—Kerberos login (543)
- kshell**—Kerberos shell (544)
- login**—Login (rlogin, 513)
- lpd**—Printer service (515)
- nntp**—Network News Transport Protocol (119)
- pim-auto-rp**—PIM Auto-RP (496)
- pop2**—Post Office Protocol v2 (19)
- pop3**—Post Office Protocol v3 (11)
- smtp**—Simple Mail Transport Protocol (25)
- sunrpc**—Sun Remote Procedure Call (111)
- tacacs**—TAC Access Control System (49)
- talk**—Talk (517)
- telnet**—Telnet (23)
- time**—Time (37)
- uucp**—UNIX-to-UNIX Copy Program (54)
- whois**—WHOIS/NICNAME (43)
- www**—World Wide Web (HTTP, 8)

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

### UDP Port Names

When you specify the *protocol* argument as **udp**, the *port* argument can be a UDP port number, which is an integer from 0 to 65535. It can also be one of the following keywords:

**biff**—Biff (mail notification, comsat, 512)  
**bootpc**—Bootstrap Protocol (BOOTP) client (68)  
**bootps**—Bootstrap Protocol (BOOTP) server (67)  
**discard**—Discard (9)  
**dnsix**—DNSIX security protocol auditing (195)  
**domain**—Domain Name Service (DNS, 53)  
**echo**—Echo (7)  
**isakmp**—Internet Security Association and Key Management Protocol (5)  
**mobile-ip**—Mobile IP registration (434)  
**nameserver**—IEN116 name service (obsolete, 42)  
**netbios-dgm**—NetBIOS datagram service (138)  
**netbios-ns**—NetBIOS name service (137)  
**netbios-ss**—NetBIOS session service (139)  
**non500-isakmp**—Internet Security Association and Key Management Protocol (45)  
**ntp**—Network Time Protocol (123)  
**pim-auto-rp**—PIM Auto-RP (496)  
**rip**—Routing Information Protocol (router, in.routed, 52)  
**snmp**—Simple Network Management Protocol (161)  
**snmptrap**—SNMP Traps (162)  
**sunrpc**—Sun Remote Procedure Call (111)  
**syslog**—System Logger (514)  
**tacacs**—TAC Access Control System (49)  
**talk**—Talk (517)  
**tftp**—Trivial File Transfer Protocol (69)  
**time**—Time (37)  
**who**—Who service (rwho, 513)  
**xdmcp**—X Display Manager Control Protocol (177)

---

### Examples

This example shows how to configure an IPv4 ACL named **acl-lab-01** with rules that deny all TCP and UDP traffic from the 10.23.0.0 and 192.168.37.0 networks to the 10.176.0.0 network and a final rule that permits all other IPv4 traffic:

```
n1000v# config t
n1000v(config)# ip access-list acl-lab-01
n1000v(config-acl)# deny tcp 10.23.0.0/16 10.176.0.0/16
n1000v(config-acl)# deny udp 10.23.0.0/16 10.176.0.0/16
n1000v(config-acl)# deny tcp 192.168.37.0/16 10.176.0.0/16
n1000v(config-acl)# deny udp 192.168.37.0/16 10.176.0.0/16
```

**■ deny (IPv4)**

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

```
n1000v(config-acl)# permit ip any any
```

**Related Commands**

Command	Description
<b>ip access-list</b>	Configures an IPv4 ACL.
<b>permit (IPv4)</b>	Configures a permit rule in an IPv4 ACL.
<b>remark</b>	Configures a remark in an IPv4 ACL.
<b>show ip access-list</b>	Displays all IPv4 ACLs or one IPv4 ACL.
<b>statistics per-entry</b>	Enables collection of statistics for each entry in an ACL.

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

## deny (MAC)

To create a MAC access control list (ACL)+ rule that denies traffic matching its conditions, use the **deny** command. To remove a rule, use the **no** form of this command.

```
[sequence-number] deny source destination [protocol] [cos cos-value] [vlan VLAN-ID]
no deny source destination [protocol] [cos cos-value] [vlan VLAN-ID]
no sequence-number
```

<b>Syntax Description</b>	<p><i>sequence-number</i> (Optional) Sequence number of the <b>deny</b> command, which causes the device to insert the command in that numbered position in the access list. Sequence numbers maintain the order of rules within an ACL.</p> <p>A sequence number can be any integer between 1 and 4294967295.</p> <p>By default, the first rule in an ACL has a sequence number of 10.</p> <p>If you do not specify a sequence number, the device adds the rule to the end of the ACL and assigns a sequence number that is 10 greater than the sequence number of the preceding rule.</p> <p>Use the <b>resequence</b> command to reassign sequence numbers to rules.</p>
<i>source</i>	Source MAC addresses that the rule matches. For details about the methods that you can use to specify this argument, see “Source and Destination” in the “Usage Guidelines” section.
<i>destination</i>	Destination MAC addresses that the rule matches. For details about the methods that you can use to specify this argument, see “Source and Destination” in the “Usage Guidelines” section.
<i>protocol</i>	(Optional) Protocol number that the rule matches. Valid protocol numbers are 0x0 to 0xffff. For listings of valid protocol names, see “MAC Protocols” in the “Usage Guidelines” section.
<b>cos</b> <i>cos-value</i>	(Optional) Specifies that the rule matches only packets with an IEEE 802.1Q header that contains the Class of Service (CoS) value given in the <i>cos-value</i> argument. The <i>cos-value</i> argument can be an integer from 0 to 7.
<b>vlan</b> <i>VLAN-ID</i>	(Optional) Specifies that the rule matches only packets with an IEEE 802.1Q header that contains the VLAN ID given. The <i>VLAN-ID</i> argument can be an integer from 1 to 4094.

### Defaults

A newly created MAC ACL contains no rules.

If you do not specify a sequence number, the device assigns the rule a sequence number that is 10 greater than the last rule in the ACL.

### Command Modes

MAC ACL Configuration (**config-mac-acl**)

### Supported User Roles

network-admin

■ deny (MAC)

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

Command History	Release	Modification
	4.0(4)SV1(1)	This command was introduced.

## Usage Guidelines

When the device applies a MAC ACL to a packet, it evaluates the packet with every rule in the ACL. The device enforces the first rule that has conditions that are satisfied by the packet. When the conditions of more than one rule are satisfied, the device enforces the rule with the lowest sequence number.

### Source and Destination

You can specify the *source* and *destination* arguments in one of two ways. In each rule, the method that you use to specify one of these arguments does not affect how you specify the other argument. When you configure a rule, use the following methods to specify the *source* and *destination* arguments:

- Address and mask—You can use a MAC address followed by a mask to specify a single address or a group of addresses. The syntax is as follows:

*MAC-address MAC-mask*

The following example specifies the *source* argument with the MAC address 00c0.4f03.0a72:

```
n1000v(config-acl)# deny 00c0.4f03.0a72 0000.0000.0000 any
```

The following example specifies the *destination* argument with a MAC address for all hosts with a MAC vendor code of 00603e:

```
n1000v(config-acl)# deny any 0060.3e00.0000 0000.0000.0000
```

- Any address—You can use the **any** keyword to specify that a source or destination is any MAC address. For examples of the use of the **any** keyword, see the examples in this section. Each of the examples shows how to specify a source or destination by using the **any** keyword.

### MAC Protocols

The *protocol* argument can be the MAC protocol number or a keyword. The protocol number is a four-byte hexadecimal number prefixed with 0x. Valid protocol numbers are from 0x0 to 0xffff. Valid keywords are the following:

- **aarp**—Appletalk ARP (0x80f3)
- **appletalk**—Appletalk (0x809b)
- **decnet-iv**—DECnet Phase IV (0x6003)
- **diagnostic**—DEC Diagnostic Protocol (0x6005)
- **etype-6000**—EtherType 0x6000 (0x6000)
- **etype-8042**—EtherType 0x8042 (0x8042)
- **ip**—Internet Protocol v4 (0x0800)
- **lat**—DEC LAT (0x6004)
- **lavc-sca**—DEC LAVC, SCA (0x6007)
- **mop-console**—DEC MOP Remote console (0x6002)
- **mop-dump**—DEC MOP dump (0x6001)
- **vines-echo**—VINES Echo (0x0baf)

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

**Examples**

This example shows how to configure a MAC ACL named mac-ip-filter with rules that permit any non-IPv4 traffic between two groups of MAC addresses:

```
n1000v# config t
n1000v(config)# mac access-list mac-ip-filter
n1000v(config-mac-acl)# deny 00c0.4f00.0000 0000.00ff.ffff 0060.3e00.0000 0000.00ff.ffff
ip
n1000v(config-mac-acl)# permit any any
```

**Related Commands**

Command	Description
<b>mac access-list</b>	Configures a MAC ACL.
<b>permit (MAC)</b>	Configures a deny rule in a MAC ACL.
<b>remark</b>	Configures a remark in an ACL.
<b>show mac access-list</b>	Displays all MAC ACLs or one MAC ACL.
<b>statistics per-entry</b>	Enables collection of statistics for each entry in an ACL.

**description (interface)**

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

## description (interface)

To do add a description for the interface and save it in the running configuration, use the **description** command. To remove the interface description, use the **no** form of this command.

**description** *text*

**no description**

<b>Syntax Description</b>	<i>text</i>	Describes the interface. The maximum number of characters is 80.
---------------------------	-------------	--

<b>Defaults</b>	None
-----------------	------

<b>Command Modes</b>	interface configuration (config-if)
----------------------	-------------------------------------

<b>Supported User Roles</b>	network-admin
-----------------------------	---------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.0(4)SV1(1)	This command was introduced.

<b>Usage Guidelines</b>	.
-------------------------	---

<b>Examples</b>	This example shows how to add the description for the interface and save it in the running configuration.:  n1000v(config-if)# <b>description Ethernet port 3 on module 1</b>
	This example shows how to remove the interface description.  n1000v(config-if)# <b>no description Ethernet port 3 on module 1</b>

<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<b>show interface</b>	Displays the interface status, including the description.

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

## description (NetFlow)

To add a description to a flow record, flow monitor, or flow exporter, use the **description** command. To remove the description, use the **no** form of this command.

**description** *line*

**no description**

<b>Syntax Description</b>	<i>line</i> Description of up to 63 characters.				
<b>Defaults</b>	None				
<b>Command Modes</b>	NetFlow flow record (config-flow-record) NetFlow flow exporter (config-flow-exporter) Netflow flow monitor (config-flow-monitor)				
<b>SupportedUserRoles</b>	network-admin				
<b>Command History</b>	<table border="1"> <thead> <tr> <th><b>Release</b></th><th><b>Modification</b></th></tr> </thead> <tbody> <tr> <td>4.0(4)SV1(1)</td><td>This command was introduced.</td></tr> </tbody> </table>	<b>Release</b>	<b>Modification</b>	4.0(4)SV1(1)	This command was introduced.
<b>Release</b>	<b>Modification</b>				
4.0(4)SV1(1)	This command was introduced.				

### Usage Guidelines

#### Examples

This example shows how to add a description to a flow record:

```
n1000v# config t
n1000v(config)# flow record RecordTest
n1000v(config-flow-record)# description Ipv4flow
```

This example shows how to add a description to a flow exporter:

```
n1000v# config t
n1000v(config)# flow exporter ExportTest
n1000v(config-flow-exporter)# description ExportHamilton
```

This example shows how to add a description to a flow monitor:

```
n1000v# config t
n1000v(config)# flow monitor MonitorTest
n1000v(config-flow-monitor)# description Ipv4Monitor
```

■ **description (NetFlow)**

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

Related Commands	Command	Description
	<b>flow exporter</b>	Creates a Flexible NetFlow flow exporter.
	<b>flow record</b>	Creates a Flexible NetFlow flow record.
	<b>flow monitor</b>	Creates a Flexible NetFlow flow monitor.
	<b>show flow exporter</b>	Displays information about the NetFlow flow exporter.
	<b>show flow record</b>	Displays information about NetFlow flow records.
	<b>show flow monitor</b>	Displays information about the NetFlow flow monitor.

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

## description (QoS)

To add a description to a QoS class map, policy map, use the **description** command. To remove the description, use the **no** form of this command.

**description** *text*

**no description** *text*

<b>Syntax Description</b>	<i>text</i>	Description, of up to 200 characters, for the class map or policy map.
<b>Defaults</b>	None	
<b>Command Modes</b>	QoS Class Map Configuration ( <b>config-cmap-qos</b> ) QoS Policy Map Configuration ( <b>config-pmap-qos</b> )	
<b>SupportedUserRoles</b>	network-admin	
<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.0(4)SV1(1)	This command was introduced.

### Usage Guidelines

#### Examples

This example shows how to add a description to a policy map:

```
n1000v(config)# policy-map my_policy1
n1000v(config-pmap)# description this policy applies to input packets
n1000v(config-pmap) #
```

Related Commands	Command	Description
	<b>class-map</b>	Creates or modifies a class map.
	<b>policy-map</b>	Creates or modifies a policy map.

**description (role)**

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

## description (role)

To add a description for a role, use the **description** command. To remove a description of a role, use the **no** form of this command.

**description** *string*

**no description**

<b>Syntax Description</b>	<i>string</i>	Describes the role. The string can include spaces.
---------------------------	---------------	--

<b>Defaults</b>	None
-----------------	------

<b>Command Modes</b>	Role Configuration ( <b>config-role</b> )
----------------------	---

<b>SupportedUserRoles</b>	network-admin
---------------------------	---------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.0(4)SV1(1)	This command was introduced.

<b>Usage Guidelines</b>	
-------------------------	--

<b>Examples</b>	This example shows how to add a description to a role:
-----------------	--

```
n1000v(config-role)# description admin
```

This example shows how to remove the role description:

```
n1000v(config-role)# no description admin
```

<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<b>show role</b>	Displays a role configuration.

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

## description (SPAN)

To add a description to a SPAN session, use the **description** command. To remove the description, use the **no** form of this command.

**description string**

**no description**

<b>Syntax Description</b>	<i>string</i>	Specifies a description of up to 32 alphanumeric characters.				
<b>Defaults</b>	Blank (no description)					
<b>Command Modes</b>	SPAN Monitor Configuration ( <b>config-monitor</b> )					
<b>SupportedUserRoles</b>	network-admin					
<b>Command History</b>	<table border="1"> <thead> <tr> <th><b>Release</b></th> <th><b>Modification</b></th> </tr> </thead> <tbody> <tr> <td>4.0(4)SV1(1)</td> <td>This command was introduced.</td> </tr> </tbody> </table>		<b>Release</b>	<b>Modification</b>	4.0(4)SV1(1)	This command was introduced.
<b>Release</b>	<b>Modification</b>					
4.0(4)SV1(1)	This command was introduced.					

### Usage Guidelines

#### Examples

This example shows how to add a description to a SPAN session:

```
n1000v# config t
n1000v(config)# monitor session 8
n1000v(config-monitor)# description span_session_8a
n1000v(config-monitor)#+
```

This example shows how to remove a description from a SPAN session:

```
n1000v# config t
n1000v(config)# monitor session 8
n1000v(config)# no description span_session_8a
n1000v(config-monitor)#+
```

### Related Commands

<b>Command</b>	<b>Description</b>
<b>show monitor session</b>	Displays session information.

**destination (NetFlow)**

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

## destination (NetFlow)

To add a destination IP address or VRF to a NetFlow flow exporter, use the **destination** command. To remove the IP address or VRF, use the **no** form of this command.

**destination {ipaddr | ipv6addr} [use-vrf vrf\_name]**

**no destination**

<b>Syntax Description</b>	<i>ipaddr</i> Destination IP address for collector. <i>ipv6addr</i> Destination IPv6 address for collector. <b>use-vrf</b> <i>vrf_name</i> (Optional) Optional VRF label + VRF Label.
---------------------------	---

<b>Defaults</b>	None
-----------------	------

<b>Command Modes</b>	NetFlow Flow Exporter Configuration ( <b>config-flow-exporter</b> )
----------------------	---

<b>SupportedUserRoles</b>	network-admin
---------------------------	---------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.0(4)SV1(1)	This command was introduced.

<b>Usage Guidelines</b>	
-------------------------	--

<b>Examples</b>	This example shows how to add a destination IP address to a Netflow flow exporter:
-----------------	--

```
n1000v# config t
n1000v(config)# flow exporter ExportTest
n1000v(config-flow-exporter)# destination 192.0.2.1
```

This example shows how to remove the IP address from a flow exporter:

```
n1000v# config t
n1000v(config)# flow exporter ExportTest
n1000v(config-flow-exporter)# no destination 192.0.2.1
```

<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<b>flow exporter</b>	Creates a Flexible NetFlow flow exporter.
	<b>flow record</b>	Creates a Flexible NetFlow flow record.
	<b>flow monitor</b>	Creates a Flexible NetFlow flow monitor.

***Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).***

Command	Description
<b>show flow exporter</b>	Displays information about the NetFlow flow exporter.
<b>show flow record</b>	Displays information about NetFlow flow records.
<b>show flow monitor</b>	Displays information about the NetFlow flow monitor.

**destination interface (SPAN)**

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

## destination interface (SPAN)

To configures the port(s) in a SPAN session to act as destination(s) for copied source packets, use the **destination interface** command. To remove the destination interface, use the **no** form of this command.

**destination interface** *type number(s)\_or\_range*

**no destination interface** *type number(s)\_or\_range*

<b>Syntax Description</b>	<b>ethernet</b> Designates the SPAN destination(s) Ethernet interface(s). <i>slot/port_or_range</i>
	<b>port-channel</b> Designates the SPAN destination(s) port channel(s). <i>number(s)_or_range</i>
	<b>vethernet</b> Designates the SPAN destination(s) virtual Ethernet interface(s). <i>number(s)_or_range</i>

**Defaults** None

**Command Modes** SPAN Monitor Configuration (**config-monitor**)

**SupportedUserRoles** network-admin

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.0(4)SV1(1)	This command was introduced.

**Usage Guidelines** SPAN destination ports must already be configured as either access or trunk ports.

SPAN sessions are created in the shut state by default.

When you create a SPAN session that already exists, any additional configuration is added to that session. To make sure the session is cleared of any previous configuration, you can delete the session first using the command, **no monitor session**.

**Examples** This example shows how to configure ethernet interfaces 2/5 and 3/7 in a SPAN session to act as destination(s) for copied source packets:

```
n1000v# config t
n1000v(config)# monitor session 8
n1000v(config-monitor)# destination interface ethernet 2/5, ethernet 3/7
```

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

This example shows how to remove the SPAN configuration from destination interface ethernet 2/5:

```
n1000v# config t  
n1000v(config)# monitor session 8  
n1000v(config-monitor)# no destination interface ethernet 2/5
```

Related Commands	Command	Description
	<b>show interface</b>	Displays the interface trunking configuration for the specified destination interface.
	<b>show monitor</b>	Displays Ethernet SPAN information.
	<b>monitor session</b>	Starts the specified SPAN monitor session(s).

■ dir

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

## dir

To display the contents of a directory or file, use the **dir** command.

```
dir [bootflash: | debug: | log: | volatile:]
```

---

### Syntax Description

<b>bootflash:</b>	(Optional) Directory or filename.
<b>debug:</b>	(Optional) Directory or filename on expansion flash.
<b>log:</b>	(Optional) Directory or filename on log flash.
<b>volatile:</b>	(Optional) Directory or filename on volatile flash.

---

---

### Defaults

None

---

### Command Modes

Any

---

### SupportedUserRoles

network-admin  
network-operator

---

### Command History

Release	Modification
4.0(4)SV1(1)	This command was introduced.

---

---

### Usage Guidelines

Use the **pwd** command to identify the directory you are currently working in.  
Use the **cd** command to change the directory you are currently working in.

---

### Examples

This example shows how to display the contents of the bootflash: directory

```
n1000v# dir bootflash:
```

---

### Related Commands

Command	Description
<b>cd</b>	Changes the current working directory.
<b>pwd</b>	Displays the current working directory.

---

**Send document comments to [nexus1k-docfeedback@cisco.com](mailto:nexus1k-docfeedback@cisco.com).**

## domain id

To assign a domain-id, use the **domain id** command. To remove a domain-id, use the **no** form of this command.

**domain id** *number*

**no domain id**

<b>Syntax Description</b>	<i>number</i>	Specifies the domain-id number. The allowable domain IDs are 1 to 4095.				
<b>Defaults</b>	None					
<b>Command Modes</b>	Domain Configuration ( <b>config-svs-domain</b> )					
<b>SupportedUserRoles</b>	network-admin					
<b>Command History</b>	<table border="1"> <thead> <tr> <th><b>Release</b></th><th><b>Modification</b></th></tr> </thead> <tbody> <tr> <td>4.0(4)SV1(1)</td><td>This command was introduced.</td></tr> </tbody> </table>		<b>Release</b>	<b>Modification</b>	4.0(4)SV1(1)	This command was introduced.
<b>Release</b>	<b>Modification</b>					
4.0(4)SV1(1)	This command was introduced.					
<b>Usage Guidelines</b>	During installation of the Cisco Nexus 1000V the setup utility prompts you to configure a domain, including the domain ID and control and packet VLANs.					
<b>Examples</b>	<p>This example shows how to assign a domain id:</p> <pre>n1000v# config t n1000v(config)# sve-domain n1000v(config-svs-domain)# domain-id number 32 n1000v(config-svs-domain)# </pre> <p>This example shows how to remove the domain-id:</p> <pre>n1000v# config t n1000v(config)# sve-domain n1000v(config-svs-domain)# no domain-id number 32 n1000v(config-svs-domain)# </pre>					
<b>Related Commands</b>	<table border="1"> <thead> <tr> <th><b>Command</b></th><th><b>Description</b></th></tr> </thead> <tbody> <tr> <td><b>show svs domain</b></td><td>Displays domain configuration.</td></tr> </tbody> </table>		<b>Command</b>	<b>Description</b>	<b>show svs domain</b>	Displays domain configuration.
<b>Command</b>	<b>Description</b>					
<b>show svs domain</b>	Displays domain configuration.

## dscp (NetFlow)

To add a differentiated services codepoint (DSCP) to a NetFlow flow exporter, use the **dscp** command. To remove the DSCP, use the **no** form of this command.

**dscp value**

**no dscp**

<b>Syntax Description</b>	<b>value</b> Specifies a DSCP between 0 and 63.				
<b>Defaults</b>	None				
<b>Command Modes</b>	Netflow Flow Exporter Configuration ( <b>config-flow-exporter</b> )				
<b>SupportedUserRoles</b>	network-admin				
<b>Command History</b>	<table border="1"> <thead> <tr> <th><b>Release</b></th> <th><b>Modification</b></th> </tr> </thead> <tbody> <tr> <td>4.0(4)SV1(1)</td> <td>This command was introduced.</td> </tr> </tbody> </table>	<b>Release</b>	<b>Modification</b>	4.0(4)SV1(1)	This command was introduced.
<b>Release</b>	<b>Modification</b>				
4.0(4)SV1(1)	This command was introduced.				

### Usage Guidelines

#### Examples

This example shows how to configure DSCP for a Netflow flow exporter:

```
n1000v# config t
n1000v(config)# flow exporter ExportTest
n1000v(config-flow-exporter)# dscp 2
n1000v(config-flow-exporter)#

```

This example shows how to remove DSCP from the Netflow flow exporter:

```
n1000v# config t
n1000v(config)# flow exporter ExportTest
n1000v(config-flow-exporter)# no dscp 2
n1000v(config-flow-exporter)#

```

### Related Commands

<b>Command</b>	<b>Description</b>
<b>flow exporter</b>	Creates a Flexible NetFlow flow exporter.
<b>flow record</b>	Creates a Flexible NetFlow flow record.
<b>flow monitor</b>	Creates a Flexible NetFlow flow monitor.
<b>show flow exporter</b>	Displays information about the NetFlow flow exporter.
