## U Commands

---

This chapter describes the Cisco NX-OS quality of service (QoS) commands that begin with U.

**untagged cos**

**Send comments to [nexus5k-docfeedback@cisco.com](mailto:nexus5k-docfeedback@cisco.com)**

## untagged cos

To override the class of service (CoS) value for the selected interface, use the **untagged cos** command. To revert to the defaults, use the **no** form of this command.

**untagged cos cos-value**

**no untagged cos cos-value**

<b>Syntax Description</b>	<i>cos-value</i>	Class of service (CoS) value for untagged frames. Values can range from 1 to 7.
---------------------------	------------------	---

<b>Command Default</b>	None
------------------------	------

<b>Command Modes</b>	Interface configuration mode Subinterface configuration mode Virtual Ethernet interface configuration mode
----------------------	--

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	4.0(1a)N1(1)	This command was introduced.
	5.0(2)N1(1)	Support to configure a type qos policy map and untagged cos on the same interface was added for Cisco Nexus 5548 switches.
	5.0(3)N1(1)	Support for Layer 3 interfaces was added.
	5.1(3)N1(1)	Support for virtual Ethernet interfaces was added.

<b>Usage Guidelines</b>	You can use this command on the following interfaces:
-------------------------	---

- Layer 2 interface
- Layer 3 interface

**Note** Use the **no switchport** command to configure an interface as a Layer 3 interface.

- Virtual Ethernet interface

**Note** Use the **feature-set virtualization** command to enable the Cisco Adapter Fabric Extender (Adapter-FEX) on the switch. Use the **interface vethernet** command to configure a virtual Ethernet interface.

Ethernet frames received with no CoS value are given a CoS value of 0.

On a Cisco Nexus 5548 switch that runs Cisco NX-OS 5.0(2)N1(1), you can configure a type qos policy map and untagged CoS on the same interface.

**Examples**

This example shows how to set the CoS value to 4 for untagged frames received on an interface:

```
switch# configure terminal
switch(config)# interface ethernet 1/2
switch(config-if)# untagged cos 4
```

This example shows how to set the CoS value to 3 for untagged frames received on a Layer 3 interface:

```
switch# configure terminal
switch(config)# interface ethernet 1/5
switch(config-if)# no switchport
switch(config-if)# untagged cos 3
switch(config-if)#
```

This example shows how to set the CoS value to 5 for untagged frames received on a virtual Ethernet interface:

```
switch# configure terminal
switch(config)# feature adapter-fex
Virtualization Plugin license checked out successfully
Virtualization Plugin extracted successfully
All Virtualization processes enabled successfully
switch(config)# interface vethernet 10
switch(config-if)# untagged cos 5
switch(config-if)#
```

**Related Commands**

Command	Description
<b>feature-set virtualization</b>	Enables the Cisco Virtual Machine features on the switch.
<b>interface vethernet</b>	Configures a virtual Ethernet interface.
<b>match cos</b>	Sets the CoS value to match for the selected class.
<b>no switchport</b>	Configures an interface as a Layer 3 routed interface.
<b>show interface untagged-cos</b>	Displays the untagged CoS values for interfaces.

■ untagged cos
