P Commands

This chapter describes the Cisco NX-OS TrustSec commands that begin with P.

permit

Send comments to nexus5k-docfeedback@cisco.com

permit

To configure a permit action in a security group access control list (SGACL), use the **permit** command. To remove the action, use the **no** form of this command.

```
permit {all | icmp | igmp | ip | {{tcp | udp} [{dest | dst | src} {{eq | gt | lt | neq} port-number} | range port-number1 port-number2]} } [log]
```

```
no permit {all | icmp | igmp | ip | {{tcp | udp} [{dest | dst | src} {{eq | gt | lt | neq} port-number} | range port-number1 port-number2]} } [log]
```

Syntax Description	
all	Specifies all traffic.
icmp	Specifies Internet Control Message Protocol (ICMP) traffic.
igmp	Specifies Internet Group Management Protocol (IGMP) traffic.
ip	Specifies IP traffic.
tcp	Specifies TCP traffic.
udp	Specifies User Datagram Protocol (UDP) traffic.
dest	Specifies the destination port number.
dst	Specifies the destination port number.
src	Specifies the source port number.
eq	Specifies equal to the port number.
gt	Specifies greater than the port number.
lt	Specifies less than the port number.
neq	Specifies not equal to the port number.
port-number	Port number for TCP or UDP. The range is from 0 to 65535.
range	Specifies a port range for TCP or UDP.
port-number1	First port in the range. The range is from 0 to 65535.
port-number2	Last port in the range. The range is from 0 to 65535.
log	(Optional) Specifies that packets matching this configuration be logged.

Defaults	None
Command Modes	role-based access control list (RBACL)

Send comments to nexus5k-docfeedback@cisco.com

Command History	Release	Modification
	5.1(3)N1(1)	This command was introduced.

Usage Guidelines To use this command, you must first enable the 802.1X feature by using the **feature dot1x** command and then enable the Cisco TrustSec feature using the **feature cts** command.

To enable RBACL logging, you must enable RBACL policy enforcement on the VLAN. You must also enable Cisco TrustSec counters using the **cts role-based counters enable** command.

This command does not require a license.

Examples This example shows how to add a permit action to an SGACL and enable RBACL logging:

```
switch# configure terminal
switch(config)# cts role-based access-list MySGACL
switch(config-rbacl)# permit icmp log
switch(config-rbacl)#

```

This example shows how to remove a permit action from an SGACL:

```
switch# configure terminal
switch(config)# cts role-based access-list MySGACL
switch(config-rbacl)# no permit icmp log
switch(config-rbacl)#

```

Related Commands	Command	Description
	cts role-based access-list	Configures Cisco TrustSec SGACLs.
	cts role-based counters	Enables RBACL counters.
	deny	Configures deny actions in an SGACL.
	feature cts	Enables the Cisco TrustSec feature.
	feature dot1x	Enables the 802.1X feature on the switch.
	show cts role-based access-list	Displays the Cisco TrustSec SGACL configuration.

policy

To manually configure a Cisco TrustSec authentication policy on an interface with either a Cisco TrustSec device identifier or security group tag (SGT), use the **policy** command. To revert to the default, use the **no** form of this command.

policy {dynamic identity device-id | static sgt sgt-value [trusted]}

no policy {dynamic | static}

Syntax Description		
dynamic identity		Specifies a dynamic policy using a Cisco TrustSec device identifier.
<i>device-id</i>		Cisco TrustSec device identifier. The device identifier is case sensitive.
static sgt		Specifies a static policy using an SGT.
<i>sgt-value</i>		Cisco TrustSec SGT. The format is 0xhhhh . The range is 0x2 to 0xffef.
trusted		(Optional) Specifies that traffic coming on the interface with the SGT should not have its tag overridden.

Command Default	None
-----------------	------

Command Modes	Cisco TrustSec manual configuration mode
---------------	--

Command History	Release	Modification
	5.1(3)N1(1)	This command was introduced.

Usage Guidelines	To use this command, you must first enable the 802.1X feature by using the feature dot1x command and then enable the Cisco TrustSec feature using the feature cts command. After using this command, you must enable and disable the interface using the shutdown and no shutdown command sequence for the configuration to take effect. This command does not require a license.
------------------	---

Examples	This example shows how to manually configure a dynamic Cisco TrustSec policy on an interface:
	<pre>switch# configure terminal switch(config)# interface ethernet 2/3 switch(config-if)# cts manual switch(config-if-cts-manual)# policy dynamic identity DeviceB switch(config-if-cts-manual)# exit switch(config-if)# shutdown switch(config-if)# no shutdown switch(config-if)# </pre>

Send comments to nexus5k-docfeedback@cisco.com

This example shows how to remove a manually configured dynamic Cisco TrustSec policy from an interface:

```
switch# configure terminal
switch(config)# interface ethernet 2/3
switch(config-if)# cts manual
switch(config-if-cts-manual)# no policy dynamic
switch(config-if-cts-manual)# exit
switch(config-if)# shutdown
switch(config-if)# no shutdown
switch(config-if)#

```

This example shows how to manually configure a static Cisco TrustSec policy on an interface:

```
switch# configure terminal
switch(config)# interface ethernet 2/4
switch(config-if)# cts manual
switch(config-if-cts-manual)# policy static sgt 0x100
switch(config-if-cts-manual)# exit
switch(config-if)# shutdown
switch(config-if)# no shutdown
switch(config-if)#

```

This example shows how to remove a manually configured static Cisco TrustSec policy on an interface:

```
switch# configure terminal
switch(config)# interface ethernet 2/4
switch(config-if)# cts manual
switch(config-if-cts-manual)# no policy static
switch(config-if-cts-manual)# exit
switch(config-if)# shutdown
switch(config-if)# no shutdown
switch(config-if)#

```

Related Commands

Command	Description
cts manual	Enters Cisco TrustSec manual configuration mode for an interface.
feature cts	Enables the Cisco TrustSec feature.
feature dot1x	Enables the 802.1X feature on the switch.
show cts interface	Displays the Cisco TrustSec configuration for interfaces.

■ propagate-sgt

Send comments to nexus5k-docfeedback@cisco.com

propagate-sgt

To enable security group tag (SGT) propagation on Layer 2 Cisco TrustSec interfaces, use the **propagate-sgt** command. To disable SGT propagation, use the **no** form of this command.

propagate-sgt

no propagate-sgt

Syntax Description This command has no arguments or keywords.

Command Default Enabled if manual configuration is enabled on the interface.
Disabled if manual configuration is disabled on the interface.

Command Modes Global configuration mode

Command History	Release	Modification
	5.1(3)N1(1)	This command was introduced.

Usage Guidelines To use this command, you must first enable the 802.1X feature by using the **feature dot1x** command and then enable the Cisco TrustSec feature using the **feature cts** command.

You can disable the SGT propagation feature on an interface if the peer device connected to the interface can not handle Cisco TrustSec packets tagged with an SGT.

After using this command, you must enable and disable the interface using the **shutdown** and **no shutdown** command sequence for the configuration to take effect.

This command does not require a license.

Examples This example shows how to disable SGT propagation:

```
switch# configure terminal
switch(config)# interface ethernet 2/1
switch(config-if)# cts manual
switch(config-if-cts-manual)# no propagate-sgt
switch(config-if-cts-manual)# exit
switch(config-if)# shutdown
switch(config-if)# no shutdown
switch(config-if)#
```

This example shows how to enable SGT propagation:

```
switch# configure terminal
switch(config)# interface ethernet 2/1
switch(config-if)# cts manual
switch(config-if-cts-manual)# propagate-sgt
switch(config-if-cts-manual)# exit
```

Send comments to nexus5k-docfeedback@cisco.com

```
switch(config-if)# shutdown
switch(config-if)# no shutdown
switch(config-if)#{/pre>
```

Related Commands

Command	Description
cts manual	Enables Cisco TrustSec manual configuration on an interface.
feature cts	Enables the Cisco TrustSec feature.
feature dot1x	Enables the 802.1X feature on the switch.
show cts interface	Displays the Cisco TrustSec configuration for interfaces.
