

# **C** Commands

This chapter describes the Cisco NX-OS Layer 3 interfaces commands that begin with C.

# clear ip arp

To clear the Address Resolution Protocol (ARP) information, use the clear ip arp command.

ethernet       (Optional) Specifies the Ethernet interface and the slot number and port number. The slot port slot port slot number is from 1 to 255, and the port number is from 1 to 128.         sub_if       (Optional) Specifies the Ethernet subinterface port number. The range is from 1 48.         loopback       (Optional) Specifies the Ethernet subinterface port number. The range is from 1 to 403.         port-channel       (Optional) Specifies the EtherChannel interface and EtherChannel number. The number range is from 1 to 4096.         sub_if_number       (Optional) Subinterface number. The range is from 1 to 4093.         force-delete       (Optional) Clears the entries from the ARP table without a refresh.         statistics       (Optional) Specifies the virtual routing and forwarding (VRF) context name. The name can be any case-sensitive, alphanumeric string up to 32 characters.         all       (Optional) Clears the ARP information from all VRF entries.         default       (Optional) Clears the ARP information from the default VRF.         management       (Optional) Clears the ARP information from the management VRF.         Command Default       None         Release       Modification         5.0(3)N1(1)       This command was introduced.         Examples       This example shows how to clear the ARP table:         switch# clear ip arp       Story         Related Commands       Command       Description <th></th> <th></th> <th></th>			
slot number is from 1 to 255, and the port number is from 1 to 128.         sub_if       (Optional) Specifies the Ethernet subinterface port number. The range is from 1 48.         loopback       (Optional) Specifies the loopback interface. The loopback interface number is fr          port-channel       (Optional) Specifies the EtherChannel interface and EtherChannel number. The number range is from 1 to 4096.         sub_if_number       (Optional) Specifies the entries from the ARP table without a refresh.         statistics       (Optional) Specifies the virtual routing and forwarding (VRF) context name. The name can be any case-sensitive, alphanumeric string up to 32 characters.         all       (Optional) Clears the ARP information from the default VRF.         management       (Optional) Clears the ARP information from the management VRF.         Command Default       None         Command Modes       Any command mode         Examples       This example shows how to clear the ARP table: avitch# clear ip arp         Related Commands       Command Description	Syntax Description	ip-addr	(Optional) IPv4 source address. The format is x.x.x.x.
sub_if       (Optional) Specifies the Ethernet subinterface port number. The range is from 1 48.         loopback       (Optional) Specifies the loopback interface. The loopback interface number is frig_number         port-channel       (Optional) Specifies the EtherChannel interface and EtherChannel number. The range is from 1 to 4096.         .sub_if_number       (Optional) Subinterface number. The range is from 1 to 4093.         force-delete       (Optional) Clears the entries from the ARP table without a refresh.         statistics       (Optional) Clears the NP statistics.         vf vf-name       (Optional) Clears the ARP statistics.         vf vf-name       (Optional) Clears the ARP information from all VRF entries.         default       (Optional) Clears the ARP information from the default VRF.         management       (Optional) Clears the ARP information from the default VRF.         management       (Optional) Clears the ARP information from the management VRF.         Command Modes       Any command mode         Examples       This example shows how to clear the ARP table:         svitch# clear ip arp       Related Commands         Commands       Command       Description			(Optional) Specifies the Ethernet interface and the slot number and port number. The
48.         loopback       (Optional) Specifies the loopback interface. The loopback interface number is fr         if_number       0 to 1023.         port-channel       (Optional) Specifies the EtherChannel interface and EtherChannel number. The number         number       range is from 1 to 4096.         sub_if_number       (Optional) Subinterface number. The range is from 1 to 4093.         force-delete       (Optional) Specifies the entries from the ARP table without a refresh.         statistics       (Optional) Clears the entries from the ARP table without a refresh.         statistics       (Optional) Clears the entries from the ARP table without a refresh.         statistics       (Optional) Clears the ARP statistics.         vrf vrf-name       (Optional) Clears the ARP information from all VRF entries.         default       (Optional) Clears the ARP information from the default VRF.         management       (Optional) Clears the ARP information from the management VRF.         Command Modes       Any command mode         Command History       Release       Modification         5.0(3)N1(1)       This command was introduced.          Examples       This example shows how to clear the ARP table:       switchit clear ip arp         Related Commands       Command       Description		_	•
if_number       0 to 1023.         port-channel       (Optional) Specifies the EtherChannel interface and EtherChannel number. The range is from 1 to 4096.         .sub_if_number       (Optional) Subinterface number. The range is from 1 to 4093.         force-delete       (Optional) Clears the entries from the ARP table without a refresh.         statistics       (Optional) Clears the entries from the ARP table without a refresh.         statistics       (Optional) Clears the entries from the ARP table without a refresh.         all       (Optional) Clears the ARP information from all VRF entries.         default       (Optional) Clears the ARP information from the default VRF.         management       (Optional) Clears the ARP information from the management VRF.         Command Default       None         Command Modes       Any command mode         Examples       This example shows how to clear the ARP table:         switch# clear ip arp       Kelated Commands         Related Commands       Command Description		sub_if	
number       range is from 1 to 4096.         .sub_if_number       (Optional) Subinterface number. The range is from 1 to 4093.         force-delete       (Optional) Clears the entries from the ARP table without a refresh.         statistics       (Optional) Specifies the virtual routing and forwarding (VRF) context name. The name can be any case-sensitive, alphanumeric string up to 32 characters.         all       (Optional) Clears the ARP information from all VRF entries.         default       (Optional) Clears the ARP information from the default VRF.         management       (Optional) Clears the ARP information from the management VRF.         Command Modes       Any command mode         Command History       Release       Modification         5.0(3)N1(1)       This command was introduced.         Examples       This example shows how to clear the ARP table:         switch# clear ip arp       Releated Commands         Commands       Command		-	(Optional) Specifies the loopback interface. The loopback interface number is from 0 to 1023.
force-delete       (Optional) Clears the entries from the ARP table without a refresh.         statistics       (Optional) Clears ARP statistics.         vrf vrf-name       (Optional) Specifies the virtual routing and forwarding (VRF) context name. The name can be any case-sensitive, alphanumeric string up to 32 characters.         all       (Optional) Clears the ARP information from all VRF entries.         default       (Optional) Clears the ARP information from the default VRF.         management       (Optional) Clears the ARP information from the management VRF.         Command Default       None         Command Modes       Any command mode         Examples       This example shows how to clear the ARP table:         switch# clear ip arp       switch# clear ip arp		-	
statistics       (Optional) Clears ARP statistics.         vrf vrf-name       (Optional) Specifies the virtual routing and forwarding (VRF) context name. The name can be any case-sensitive, alphanumeric string up to 32 characters.         all       (Optional) Clears the ARP information from all VRF entries.         default       (Optional) Clears the ARP information from the default VRF.         management       (Optional) Clears the ARP information from the management VRF.         Command Default       None         Command Modes       Any command mode         Command History       Release       Modification         5.0(3)N1(1)       This command was introduced.         Examples       This example shows how to clear the ARP table:         switch# clear ip arp       Related Commands         Command       Description		.sub_if_number	(Optional) Subinterface number. The range is from 1 to 4093.
vrf vrf-name       (Optional) Specifies the virtual routing and forwarding (VRF) context name. The name can be any case-sensitive, alphanumeric string up to 32 characters.         all       (Optional) Clears the ARP information from all VRF entries.         default       (Optional) Clears the ARP information from the default VRF.         management       (Optional) Clears the ARP information from the default VRF.         management       (Optional) Clears the ARP information from the management VRF.         Command Default       None         Command Modes       Any command mode         Command History       Release         5.0(3)N1(1)       This command was introduced.         Examples       This example shows how to clear the ARP table: switch# clear ip arp         Related Commands       Command       Description		force-delete	(Optional) Clears the entries from the ARP table without a refresh.
name can be any case-sensitive, alphanumeric string up to 32 characters.         all       (Optional) Clears the ARP information from all VRF entries.         default       (Optional) Clears the ARP information from the default VRF.         management       (Optional) Clears the ARP information from the management VRF.         Command Default       None         Command Modes       Any command mode         Command History       Release       Modification         5.0(3)N1(1)       This command was introduced.         Examples       This example shows how to clear the ARP table:         switch# clear ip arp       arp		statistics	(Optional) Clears ARP statistics.
default       (Optional) Clears the ARP information from the default VRF.         management       (Optional) Clears the ARP information from the management VRF.         Command Default       None         Command Modes       Any command mode         Command History       Release       Modification         5.0(3)N1(1)       This command was introduced.         Examples       This example shows how to clear the ARP table:         switch# clear ip arp         Related Commands       Command		vrf vrf-name	(Optional) Specifies the virtual routing and forwarding (VRF) context name. The name can be any case-sensitive, alphanumeric string up to 32 characters.
management       (Optional) Clears the ARP information from the management VRF.         Command Default       None         Command Modes       Any command mode         Command History       Release       Modification         5.0(3)N1(1)       This command was introduced.         Examples       This example shows how to clear the ARP table:         switch# clear ip arp         Related Commands       Command       Description		all	(Optional) Clears the ARP information from all VRF entries.
Command Default     None       Command Modes     Any command mode       Command History     Release     Modification       5.0(3)N1(1)     This command was introduced.       Examples     This example shows how to clear the ARP table:       switch# clear ip arp       Related Commands     Command		default	(Optional) Clears the ARP information from the default VRF.
Command Modes       Any command mode         Command History       Release       Modification         5.0(3)N1(1)       This command was introduced.         Examples       This example shows how to clear the ARP table:         switch# clear ip arp         Related Commands       Command       Description		management	(Optional) Clears the ARP information from the management VRF.
Command History       Release       Modification         5.0(3)N1(1)       This command was introduced.         Examples       This example shows how to clear the ARP table: switch# clear ip arp         Related Commands       Command       Description	Command Default	None	
Examples     This example shows how to clear the ARP table:       switch# clear ip arp       Related Commands     Command	Command Modes	Any command m	node
Examples       This example shows how to clear the ARP table:         switch# clear ip arp         Related Commands       Command       Description	Command History	Release	Modification
switch# clear ip arp Related Commands Command Description		5.0(3)N1(1)	This command was introduced.
Related Commands Command Description	Examples	This example sho	ows how to clear the ARP table:
· ·	·	switch# <b>clear i</b>	lp arp
	Related Commands	Command	Description
show ip arp Displays information about ARP.		show ip arp	Displays information about ARP.

# clear ip interface statistics

To clear IP interface statistics, use the clear ip interface statistics command.

clear ip interface statistics

Syntax Description	This command has	no arguments or keywords.
Command Default	None	
Command Modes	Any command mod	e
Command History	<b>Release</b> 5.0(3)N1(1)	Modification This command was introduced.
Examples	-	s how to clear the IP interface statistics: interface statistics
Related Commands	Command	Description

elated Commands	Command	Description
	show ip interface	Displays IP interface information.

### clear ipv6 icmp interface statistics

To clear statistics about ICMPv6, use the clear ipv6 icmp interface statistics command.

clear ipv6 icmp interface statistics [type number]

Syntax Description	type	(Optional) Interface type. Use ? to see the list of supported interfaces.
	number	(Optional) Interface number. Use ? to see the range.
Defaults	None	
Command Modes	Any comman	d mode
Command History	Release	Modification
	5.2(1)	This command was introduced.
Usage Guidelines	This comman	d does not require a license.
Examples	This example	shows how to clear the ICMPv6 statistics:
	switch(confi	g-if)# clear ipv6 icmp interface statistics
Related Commands	Command	Description
	ipv6 icmp	Configures ICMPv6 on an interface.

# clear ipv6 nd interface statistics

To clear information about Neighbor Discovery (ND), use the **clear ipv6 nd interface statistics** command.

clear ipv6 nd interface statistics [type number]

Syntax Description	type	(Optional) Interface type. Use ? to see the list of supported interfaces.
	number	(Optional) Interface number. Use ? to see the range.
Defaults	None	
Command Modes	Any comman	d mode
Command History	Release	Modification
	5.2(1)	This command was introduced.
Usage Guidelines	This commar	nd does not require a license.
Examples	This example	shows how to clear the ND information:
	switch(conf:	ig-if)# clear <b>ipv6 nd interface statistics</b>
Related Commands	Command	Description
	ipv6 nd	Configures ICMPv6 ND on an interface.

### clear ipv6 neighbor

To clear IPv6 neighbors, use the **clear ipv6 neighbor** command.

clear ipv6 neighbor [type number] [force-clear] [vrf vrf-name]

Syntax Description	type	(Optional) Interface type. Use ? to see the list of supported interfaces.
-,	number	(Optional) Interface number. Use ? to see the range.
	force-clear	(Optional) Clears the IPv6 neighbor cache withouth a refresh.
	vrf vrf-name	(Optional) Specifies the virtual router context (VRF) name. The name can be any case-sensitive, alphanumeric string up to 63 characters.
Defaults	None	
Command Modes	Any command	mode
Command History	Release	Modification
	5.2(1)	This command was introduced.
Usage Guidelines	-	<b>bv6 neighbor</b> command to clear the IPv6 adjacency table. does not require a license.
	This command This example sl	does not require a license.
	This command	does not require a license.
Usage Guidelines Examples Related Commands	This command This example sl	does not require a license.
