

# A Commands

---

This chapter describes the Cisco NX-OS FabricPath commands that begin with A.

---

 authentication-check (FabricPath)

## authentication-check (FabricPath)

To enable an authentication check on received protocol data units (PDUs), use the **authentication-check** command. To return to the default setting, use the **no** form of this command.

**authentication-check**

**no authentication-check**

---

**Syntax Description** This command has no arguments or keywords.

---

**Command Default** Enabled

---

**Command Modes** FabricPath IS-IS configuration mode

---

Command History	Release	Modification
	5.2(1)N1(1)	This command was introduced.

---

---

**Usage Guidelines** This command requires an Enhanced Layer 2 license.

---

**Examples** This example shows how to enable an authentication check on received PDUs:

```
switch# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
switch(config)# fabricpath domain default
switch(config-fabricpath-isis)# authentication-check
switch(config-fabricpath-isis)#

```

---

Related Commands	Command	Description
	show fabricpath isis	Displays FabricPath IS-IS information.

---

# authentication key-chain (FabricPath)

To configure an authentication keychain between FabricPath devices, use the **authentication key-chain** command. To return to the default setting, use the **no** form of this command.

**authentication key-chain *auth-key-chain-name***

**no authentication key-chain *auth-key-chain-name***

<b>Syntax Description</b>	<i>keychain-name</i> Authentication keychain. The maximum size is 63 alphanumeric characters.	
<b>Defaults</b>	None	
<b>Command Modes</b>	FabricPath IS-IS configuration mode	
<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	5.2(1)N1(1)	This command was introduced.
<b>Usage Guidelines</b>	<p>Use the <b>authentication key-chain</b> command to assign a password in the authentication of a hello protocol data unit. Only one authentication key-chain is applied to an IS-IS interface at one time. If you configure a second <b>authentication</b> command, the first is overridden. You can specify authentication for an entire instance of IS-IS instead of at the interface level by using the <b>authentication</b> command.</p> <p>See the <i>Cisco Nexus NX-OS Security Configuration Guide</i> for your platform for information about keychains.</p> <p>This command requires an Enhanced Layer 2 license.</p>	
<b>Examples</b>	<p>This example shows how to configure an authentication keychain string for edge device authentication:</p> <pre>switch# configure terminal Enter configuration commands, one per line. End with CNTL/Z. switch(config)# fabricpath domain default switch(config-fabricpath-isis)# authentication key-chain fabrickeys switch(config-fabricpath-isis)# </pre>	
<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<b>show fabricpath isis</b>	Displays FabricPath IS-IS information.

**■ authentication-type (FabricPath)**

# authentication-type (FabricPath)

To configure an authentication type, use the **authentication-type** command. To return to the default setting, use the **no** form of this command.

**authentication-type { cleartext | md5 }**

**no authentication-type { cleartext | md5 }**

<b>Syntax Description</b>	<b>cleartext</b>	Specifies the cleartext authentication method.
	<b>md5</b>	Specifies the Message Digest (MD5) authentication.

<b>Command Default</b>	Enabled
------------------------	---------

<b>Command Modes</b>	FabricPath IS-IS configuration mode
----------------------	-------------------------------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	5.2(1)N1(1)	This command was introduced.

**Usage Guidelines** Use the **authentication-type** command to configure the authentication type for hello protocol data units (PDUs) on an interface.

This command requires an Enhanced Layer 2 license.

<b>Examples</b>	This example shows how to specify cleartext authentication:
-----------------	---

```
switch# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
switch(config)# fabricpath domain default
switch(config-fabricpath-isis)# authentication-type cleartext
switch(config-fabricpath-isis)#

```

This example shows how to specify Message Digest (MD5) authentication:

```
switch# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
switch(config)# fabricpath domain default
switch(config-fabricpath-isis)# authentication-type md5
switch(config-fabricpath-isis)#

```

<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<b>show fabricpath isis</b>	Displays FabricPath IS-IS information.
