

## R Commands

---

This chapter describes the Cisco NX-OS FabricPath commands that begin with R.

**■ reference-bandwidth (FabricPath)**

# reference-bandwidth (FabricPath)

To change the reference bandwidth used for setting an interface, use the **reference bandwidth** command. To return to the default setting, use the **no** form of this command.

**reference-bandwidth bandwidth {Mbps | Gbps}**

**no reference-bandwidth bandwidth {Mbps | Gbps}**

<b>Syntax Description</b>	<b>bandwidth</b> Specifies the bandwidth in Mbps and Gbps. The range is from 1 to 400000 in Mbps and from 1 to 400 in Gbps. <b>Mbps</b> Specifies the bandwidth in Mbps. <b>Gbps</b> Specifies the bandwidth in Gbps.
---------------------------	---

**Command Default**      The defaults are as follows:

- Gbps: 400
- Mbps: 400000

**Command Modes**      FabricPath IS-IS configuration mode

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	5.2(1)N1(1)	This command was introduced.

**Usage Guidelines**      This command requires an Enhanced Layer 2 license.

**Examples**      This example shows how to change the reference bandwidth for a Gbps interface:

```
switch# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
switch(config)# fabricpath domain default
switch(config-fabricpath-isis)# topology 1
switch(config-fabricpath-isis-topo)# reference-bandwidth 500 Gbps
switch(config-fabricpath-isis-topo)#

```

<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<b>show fabricpath isis</b>	Displays FabricPath Layer 2 IS-IS.

# root-priority (FabricPath)

To set the priority for which node becomes the root, use the **root-priority** command. To return to the default setting, use the **no** form of this command.

**root-priority** *value*

**no root-priority** *value*

<b>Syntax Description</b>	<i>value</i>	Root priority value per topology. The range is from 1 to 255. The default is 64.
---------------------------	--------------	--

<b>Command Default</b>	The default value is 64.
------------------------	--------------------------

<b>Command Modes</b>	FabricPath IS-IS configuration mode
----------------------	-------------------------------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	5.2(1)N1(1)	This command was introduced.

<b>Usage Guidelines</b>	The highest numerical value for the priority is likely to become root. This command requires an Enhanced Layer 2 license.
-------------------------	--

<b>Examples</b>	This example shows how to set the priority for which node becomes the root:
<pre>switch# configure terminal Enter configuration commands, one per line. End with CNTL/Z. switch(config)# fabricpath domain default switch(config-fabricpath-isis)# topology 1 switch(config-fabricpath-isis-topo)# root-priority 1 switch(config-fabricpath-isis-topo)# </pre>	

<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<b>show fabricpath isis</b>	Displays FabricPath IS-IS information.

■ root-priority (FabricPath)
