

I Commands

This chapter describes the Cisco NX-OS Fibre Channel, virtual Fibre Channel, and Fibre Channel over Ethernet (FCoE) commands that begin with I.

in-order-guarantee

in-order-guarantee

To enable in-order delivery, use the **in-order-guarantee** command. To disable in-order delivery, use the **no** form of this command.

in-order-guarantee [vsan *vsan-id*]

no in-order-guarantee [vsan *vsan-id*] [,] [-]

Syntax Description	vsan <i>vsan-id</i> (Optional) Specifies a VSAN ID. The range is from 1 to 4093. [,] [-] (Optional) Allows you to enter multiple VSANS separated by commas, or a range of VSANS separated by a dash.
---------------------------	--

Command Default	Disabled
------------------------	----------

Command Modes	Global configuration mode
----------------------	---------------------------

Command History	Release	Modification
	5.0(2)N1(1)	This command was introduced.

Usage Guidelines	In-order delivery of data frames guarantees frame delivery to a destination in the same order that they were sent by the originator.
-------------------------	--

Examples	This example shows how to enable in-order delivery for the entire switch:
-----------------	---

```
switch(config) # in-order-guarantee
```

This example shows how to disable in-order delivery for the entire switch:

```
switch(config)# no in-order-guarantee
```

This example shows how to enable in-order delivery for a specific VSAN:

```
switch(config)# in-order-guarantee vsan 3452
```

This example shows how to disable in-order delivery for a specific VSAN:

```
switch(config)# no in-order-guarantee vsan 101
```

Related Commands	Command	Description
	show	Displays the in-order-guarantee status.
	in-order-guarantee	

install feature-set virtualization

To install the Cisco virtual machine feature set on the switch, use the **install feature-set virtualization** command. To remove the Cisco virtual machine feature set, use the **no** form of this command.

install feature-set virtualization

no install feature-set virtualization

Syntax Description This command has no arguments or keywords.

Command Default Disabled

Command Modes Global configuration mode

Command History

Release	Modification
5.1(3)N1(1)	This command was introduced.

Usage Guidelines

Note The Cisco virtual machine feature is supported only on the Cisco Nexus 5500 Series switches.

This command requires an Enhanced Layer 2 license.

Examples

This example shows how to install the Cisco virtual machine feature set on the switch:

```
switch# configure terminal
switch(config)# install feature-set virtualization
switch(config)#
```

Related Commands

Command	Description
feature-set virtualization	Enables the Cisco Virtual Machine feature set on the switch.
show feature-set	Displays the status of the virtualization feature set.
show running-config	Displays the running system configuration information.

interface fc

interface fc

To configure a Fibre Channel interface on a Cisco Nexus 5500 Series switch, use the **interface fc** command. To revert to defaults, use the **no** form of this command.

```
interface fc slot/port
  channel-group {group-id [force] | auto}
  fcdomain rcf-reject vsan vsan-id
  fesp {auto-active | auto-passive | on | off} [timeout-period]
  fspf {cost link-cost vsan vsan-id | dead-interval seconds vsan vsan-id | hello-interval seconds vsan vsan-id | passive vsan vsan-id | retransmit-interval seconds vsan vsan-id}
  switchport

no interface fc slot/port
  no channel-group {group-id [force] | auto}
  no fcdomain rcf-reject vsan vsan-id
  no fesp {auto-active | auto-passive | on | off}
  no fspf {cost link-cost vsan vsan-id | dead-interval seconds vsan vsan-id | hello-interval seconds vsan vsan-id | passive vsan vsan-id | retransmit-interval seconds vsan vsan-id}
  switchport
```

Syntax Description

slot/port	Slot number and port number of the interface.
channel-group	Adds to or removes from a port channel.
<i>group-id</i>	Port channel group number from 1 to 128.
force	(Optional) Forcefully adds a port.
auto	Enables autocreation of port channels.
fcdomain	Enters the interface mode.
rcf-reject	Configures the rcf-reject flag.
vsan <i>vsan-id</i>	Specifies the VSAN ID. The range is from 1 to 4093.
fesp	Configures Fibre Channel Security Protocol (FC-SP) parameters for a specific interface.
auto-active	Configures the auto-active mode to authenticate the specified interface.
auto-passive	Configures the auto-passive mode to authenticate the specified interface.
on	Configures the on mode to authenticate the specified interface.
off	Configures the off mode to authenticate the specified interface.
<i>timeout-period</i>	(Optional) Timeout period to reauthenticate the interface. The time ranges from 0 (default—no authentication is performed) to 100,000 minutes.
fspf	Configures the FSPF parameters.
cost <i>link-cost</i>	Configures the FSPF link cost. The range is from 1 to 65535.
dead-interval <i>seconds</i>	Configures the FSPF dead interval in seconds. The range is from 2 to 65535.
hello-interval <i>seconds</i>	Configures the FSPF hello-interval. The range is from 1 to 65535.
passive	Enables or disables FSPF on the interface.
retransmit-interval <i>seconds</i>	Configures the FSPF retransmit interface in seconds. The range is from 1 to 65535.
switchport	Configures switchport parameters.

Command Default	Disabled
------------------------	----------

Command Modes	Global configuration mode
----------------------	---------------------------

Command History	Release	Modification
	5.0(2)N1(1)	This command was introduced.

Usage Guidelines	You can specify a range of interfaces by entering a command with the following example format:
-------------------------	--

`interface fc 1/1 - 5 , fc 2/5 - 7`

Use the **no shutdown** command to enable the interface.

The **interface fc** command enters interface configuration mode, which includes five commands (each with a no form). These five commands can only be used in the interface configuration mode.

The **channel-group auto** command enables autocreation of port channels. If autocreation of port channels is enabled for an interface, you must first disable this configuration before downgrading to earlier software versions or before configuring the interface in a manually configured channel group.

Examples	This example shows how to configure ports 1 to 4 in Fibre Channel interface 3:
-----------------	--

`switch(config)# interface fc 3/1 - 4`

This example shows how to enable the Fibre Channel interface in port 1 of slot 3:

`switch(config)# interface fc 3/1
switch(config-if)# no shutdown`

Related Commands	Command	Description
	show interface	Displays an interface configuration for a specified interface.
	shutdown	Disables and enables an interface.

 interface san-port-channel

interface san-port-channel

To configure a SAN port channel interface on a Cisco Nexus 5500 Series switch, use the **interface san-port-channel** command. To revert to the defaults, use the **no** form of this command.

interface san-port-channel *port*

no interface san-port-channel *port*

Syntax Description	<i>port</i>	SAN port channel interface ID. The range is from 1 to 256.						
Command Default	None							
Command Modes	Global configuration mode							
Command History	<table border="1"> <thead> <tr> <th>Release</th><th>Modification</th></tr> </thead> <tbody> <tr> <td>5.0(2)N1(1)</td><td>This command was introduced.</td></tr> <tr> <td>5.1(3)N1(1)</td><td>The description, shutdown, and switchport keywords were separated from the interface san-port-channel command. They are documented as separate commands.</td></tr> </tbody> </table>	Release	Modification	5.0(2)N1(1)	This command was introduced.	5.1(3)N1(1)	The description , shutdown , and switchport keywords were separated from the interface san-port-channel command. They are documented as separate commands.	
Release	Modification							
5.0(2)N1(1)	This command was introduced.							
5.1(3)N1(1)	The description , shutdown , and switchport keywords were separated from the interface san-port-channel command. They are documented as separate commands.							
Usage Guidelines	This command does not require a license.							
Examples	<p>This example shows how to configure SAN port channel interface 3:</p> <pre>switch# configure terminal switch(config)# interface san-port-channel 3 switch(config-if)#</pre>							
Related Commands	Command	Description						
	channel mode active	Configures a SAN port channel interface as an active port channel port. (SAN PortChannel)						
	show interface	Displays an interface configuration for a specified interface.						
	shutdown	Disables and enables an interface.						
	switchport (SAN PortChannel)	Configures switch port parameters on a SAN port channel interface.						

interface vethernet

To enter interface configuration mode for a virtual Ethernet (vEth) interface, use the **interface vethernet** command. To remove a virtual Ethernet interface, use the **no** form of this command.

interface vethernet veth-id[, vethernet veth-id, ...]

no interface vethernet veth-id[, vethernet veth-id, ...]

Syntax Description	<i>veth-id</i>	Virtual Ethernet interface number. The range is from 1 to 1,048,575. You can specify more than one virtual Ethernet interface. Make sure you use the comma (,) separator.
---------------------------	----------------	--

Command Default	None
------------------------	------

Command Modes	Global configuration mode
----------------------	---------------------------

Command History	Release	Modification
	5.1(3)N1(1)	This command was introduced.

Usage Guidelines	Before you use a virtual Ethernet interface, you must enable Cisco virtual machine feature on the switch by using the feature-set virtualization command.
-------------------------	--

You can create a maximum of 1000 virtual Ethernet interfaces on a Cisco Nexus 5548 switch. Before you disable the Cisco Adapter Fabric Extender (Adapter-FEX) on the switch, make sure that you delete these interfaces. After you delete a virtual Ethernet interface, make sure that you save the running configuration of the switch to the startup configuration file.

Examples	This example shows how to enter configuration mode for virtual Ethernet interface 10:
	<pre>switch# configure terminal switch(config)# interface vethernet 10 switch(config-if)# </pre>

This example shows how to remove a virtual Ethernet interface:

```
switch# configure terminal
switch(config)# no interface vethernet 2
switch(config)#

```

interface vethernet

Related Commands	Command	Description
	bind	Binds an interface to a virtual Ethernet interface.
	feature-set virtualization	Enables Cisco virtual machine features on the switch.
	show interface vethernet	Displays various parameters of a virtual Ethernet interface.
	show running-config interface	Displays the running configuration of an interface.

interface vfc

To configure a virtual Fibre Channel interface on a Cisco Nexus 5500 Series switch, use the **interface vfc** command. To remove a virtual Fibre Channel interface, use the **no** form of this command.

interface vfc *vfc-id*

no interface vfc *vfc-id*

Syntax Description	<i>vfc-id</i> Virtual interface ID. The range is from 1 to 8192.										
Command Default	Disabled										
Command Modes	Global configuration mode										
Command History	<table border="1"> <thead> <tr> <th>Release</th><th>Modification</th></tr> </thead> <tbody> <tr> <td>5.0(2)N1(1)</td><td>This command was introduced.</td></tr> <tr> <td>5.0(2)N1(1)</td><td>The bind, description, and shutdown commands were separated from the interface vfc command.</td></tr> <tr> <td>5.0(2)N2(1)</td><td>Support for virtual E (VE) port was added.</td></tr> </tbody> </table>	Release	Modification	5.0(2)N1(1)	This command was introduced.	5.0(2)N1(1)	The bind , description , and shutdown commands were separated from the interface vfc command.	5.0(2)N2(1)	Support for virtual E (VE) port was added.		
Release	Modification										
5.0(2)N1(1)	This command was introduced.										
5.0(2)N1(1)	The bind , description , and shutdown commands were separated from the interface vfc command.										
5.0(2)N2(1)	Support for virtual E (VE) port was added.										
Usage Guidelines	You can specify a range of interfaces by entering a command with the following example format: interface vfc 1 - 3, vfc 5 - 7										
Examples	This example shows how to enter interface configuration mode for virtual Fibre Channel interface 3: switch(config)# interface vfc 3 switch(config-if)#										
Related Commands	<table border="1"> <thead> <tr> <th>Command</th><th>Description</th></tr> </thead> <tbody> <tr> <td>bind</td><td>Binds the virtual Fibre Channel interface to an interface.</td></tr> <tr> <td>description</td><td>Enters a summary purpose of the virtual Fibre Channel interface.</td></tr> <tr> <td>show interface vfc</td><td>Displays the specified VFC interface, attributes, and status.</td></tr> <tr> <td>shutdown</td><td>Disables and enables an interface.</td></tr> </tbody> </table>	Command	Description	bind	Binds the virtual Fibre Channel interface to an interface.	description	Enters a summary purpose of the virtual Fibre Channel interface.	show interface vfc	Displays the specified VFC interface, attributes, and status.	shutdown	Disables and enables an interface.
Command	Description										
bind	Binds the virtual Fibre Channel interface to an interface.										
description	Enters a summary purpose of the virtual Fibre Channel interface.										
show interface vfc	Displays the specified VFC interface, attributes, and status.										
shutdown	Disables and enables an interface.										

interface vfc

Command	Description
switchport (virtual Fibre Channel interface)	Configures a virtual Fibre Channel interface as a virtual E (VE) port.
switchport mode trunk	Configures an Ethernet interface as a trunk port.
