

## **L** Commands

This chapter describes the Cisco NX-OS Open Shortest Path First (OSPF) commands that begin with L.

## log-adjacency-changes (OSPF)

To configure the router to send a syslog message when the state of an Open Shortest Path First (OSPF) neighbor changes, use the **log-adjacency-changes** command. To turn off this function, use the **no** form of this command.

log adjacency changes [detail]

Syntax Description		Optional) Provides all (DOWN, INIT, 2WAY, EXSTART, EXCHANGE, OADING, FULL) adjacency state changes.
Command Default	The router sends a system message when the state of an OSPF neighbor changes.	
Command Modes	Router configuration m	ode
	VRF configuration mode	
Command History	Release N	Adification
	5.2(1)N1(1) T	This command was introduced.
Usage Guidelines	Use the <b>log-adjacency-changes</b> command to display high-level changes to the state of the OSPF neighbor relationship. This command is on by default but only reports the up/down (full/down) events if you do not use the <b>detail</b> keyword. This command requires the LAN Base Services license.
