

Show Commands

This chapter describes the Cisco NX-OS Routing Information Protocol (RIP) show commands.

show ip rip

To display the configuration and status of the Routing Information Protocol (RIP), use the **show ip rip** command in any mode.

show ip rip [instance-tag] [vrf vrf-name]

Syntax Description	÷ .	Optional) RIP instance. The instance tag can be a maximum of 20 phanumeric characters.
	ir al	Optional) Specifies the name of the virtual routing and forwarding (VRF) astance. The <i>vrf-name</i> argument can be specified as any case-sensitive, phanumeric string up to 32 characters. The strings "default" and "all" are eserved VRF names.
Command Default	No default behavior or valu	es
Command Modes	Any command mode	
Command History	Release M	odification
	5.2(1)N1(1) T	nis command was introduced.
Examples	This example shows how to display the RIP configuration information: switch(config-if)# show ip rip	
Related Commands	Command	Description
	show ip rip interface	Displays RIP information for an interface.
	show ip rip neighbor	Displays RIP neighbor information.
	show ip rip policy statistic	cs Displays RIP policy statistics.
	show ip rip route	Displays RIP route information.
	show ip rip statistics	Displays RIP statistics.

show ip rip interface

To display interface entry information from the Routing Information Protocol (RIP) topology table, use the **show ip rip interface** command in any mode.

show ip rip interface [type slot/[QSFP-module/]port] [vrf vrf-name]

Syntax Description	interface type slot/[QSFP-module/]port	(Optional) Specifies the interface. The <i>slot</i> number is from 1 to 255. The <i>QSFP-module</i> number is from 1 to 4. The <i>port</i> number is from 1 to 128.
		Note The <i>QSFP-module</i> number applies only to the QSFP+ Generic Expansion Module (GEM).
	vrf vrf-name	(Optional) Specifies the name of the virtual routing and forwarding (VRF) instance. The <i>vrf-name</i> argument can be specified as any case-sensitive, alphanumeric string up to 32 characters. The strings "default" and "all" are reserved VRF names.
	This command has no default settings.	
Command Modes	Any command mode	
Command History	Release M	lodification
	6.0(2)N1(2) St	upport for the QSFP+ GEM was added.
	5.2(1)N1(1) T	his command was introduced.
Examples	topology table:	o display the neighbor information for a specified interface from the RIP ip rip interface ethernet 1/2
Examples Related Commands	topology table:	
	<pre>topology table: switch(config-if)# show</pre>	ip rip interface ethernet 1/2
	topology table: switch(config-if)# show Command	ip rip interface ethernet 1/2 Description
	topology table: switch(config-if)# show Command show ip rip	<pre>ip rip interface ethernet 1/2 Description Displays RIP information. Displays RIP neighbor information.</pre>
	topology table: switch(config-if)# show Command show ip rip show ip rip neighbor	<pre>ip rip interface ethernet 1/2 Description Displays RIP information. Displays RIP neighbor information.</pre>

show ip rip neighbor

To display the neighbor information from the Routing Information Protocol (RIP) topology table, use the **show ip rip neighbor** command in any mode.

show ip rip neighbor [interface-type instance] [vrf vrf-name]

Syntax Description	<i>v v v v v v v v v v</i>	Optional) Interface type. For more information, use the question mark (?) line help function.
		Optional) Either a physical interface instance or a virtual interface stance.
	in al	Optional) Specifies the name of the virtual routing and forwarding (VRF) stance. The <i>vrf-name</i> argument can be specified as any case-sensitive, phanumeric string up to 32 characters. The strings "default" and "all" are served VRF names.
Command Default	No default behavior or value	28
Command Modes	Any command mode	
Command History	Release M	odification
	5.2(1)N1(1) Th	is command was introduced.
Examples	The following is sample output from the show rip neighbor command: switch(config-if)# show ip rip neighbor	
Related Commands	Command	Description
	show ip rip	Displays RIP information.
	show ip rip interface	Displays RIP information for an interface.
	show ip rip policy statistic	
	show ip rip route	Displays RIP route information.
	show ip rip statistics	Displays RIP statistics.
	r r	

show ip rip policy statistics

To display the policy statistics for the Routing Information Protocol (RIP), use the **show ip rip policy statistics** command in any mode.

show ip rip policy statistics redistribute {**bgp** *id* | **direct** | **eigrp** *id* | **ospf** *id* | **static**} [**vrf** *vrf*-*name*]

Syntax Description	bgp	Displays policy statistics for the Border Gateway Protocol (BGP).
	direct	Displays policy statistics for directly connected routes only.
	eigrp	Displays policy statistics for Enhanced Interior Gateway Routing Protocol (EIGRP).
	ospf	Displays policy statistics for Open Shortest Path First (OSPF) protocol.
	static	Displays policy statistics for IP static routes.
	id	For the bgp keyword, an autonomous system number. The range for 2-byte numbers is from 1 to 65535. The range for 4-byte numbers is from 1.0 to 65535.65535.
		For the eigrp keyword, an EIGRP instance name from which routes are to be redistributed. The value takes the form of a string. You can enter a decimal number, but Cisco Nexus 5500 stores it internally as a string.
		For the ospf keyword, an OSPF instance name from which routes are to be redistributed. The value takes the form of a string. You can enter a decimal number, but Cisco Nexus 5500 stores it internally as a string.
	vrf vrf-name	(Optional) Specifies the name of the virtual routing and forwarding (VRF) instance. The <i>vrf-name</i> argument can be specified as any case-sensitive, alphanumeric string up to 32 characters. The strings "default" and "all" are reserved VRF names.
Command Default	No default behav	rior or values.
Command Modes	Any command m	iode
Command History	Release	Modification
	5.2(1)N1(1)	This command was introduced.
Evomploo	This example she	ows how to show policy statistics for EIGRP:
Examples	This chample she	Jws now to show poncy statistics for LIGKL.

Command	Description
clear ip rip policy statistics	Clears policy statistics for RIP.
show ip rip	Displays RIP information.
show ip rip interface	Displays RIP information for an interface.
show ip rip neighbor	Displays RIP information for a neighbor.
show ip rip route	Displays RIP route information.
show ip rip statistics	Displays RIP statistics.

show ip rip route

To display route information from the Routing Information Protocol (RIP) topology table, use the **show ip rip route** command in any mode.

show ip rip route [prefix/length] [summary] [vrf vrf-name]

summary (Optional) Displays information about summary routes.			
vrf vrf-name (Optional) Specifies the name of the virtual routing and forwarding (VR instance. The vrf-name argument can be specified as any case-sensitive, alphanumeric string up to 32 characters. The strings "default" and "all" a reserved VRF names. Command Default No default behavior or values Command Modes Any command mode Command History Release Modification 5.2(1)N1(1) This command was introduced. Examples This example shows how to display route information from the RIP topology table: switch# show ip rip route Related Commands Command Show ip rip Displays RIP information. show ip rip neighbor Displays RIP information for a neighbor. show ip rip policy statistics Displays policy statistics for RIP.	Syntax Description	prefix/length (O	ptional) IP prefix about which routing information should be displayed.
instance. The vrf-name argument can be specified as any case-sensitive, alphanumeric string up to 32 characters. The strings "default" and "all" a reserved VRF names. Command Default No default behavior or values Command Modes Any command mode Command History Release Modification 5.2(1)N1(1) This example shows how to display route information from the RIP topology table: switch# show ip rip route Related Commands Command Description show ip rip Show ip rip Displays RIP information. show ip rip neighbor Show ip rip neighbor Displays RIP information for a neighbor. show ip rip policy statistics		summary (C	ptional) Displays information about summary routes.

		show ip rip statistics	Displays RIP statistics.

show ip rip statistics

To display statistical entry information from the Routing Information Protocol (RIP) topology table, use the **show ip rip statistics** command in any mode.

show ip rip statistics [interface-type instance] [vrf vrf-name]

Syntax Description	0 01	(Optional) Interface type. For more information, use the question mark (?) online help function.
		(Optional) Either a physical interface instance or a virtual interface instance.
	·	(Optional) Specifies the name of the virtual routing and forwarding (VRF) instance. The <i>vrf-name</i> argument can be specified as any case-sensitive, alphanumeric string up to 32 characters. The strings "default" and "all" are reserved VRF names.
Command Default	No default behavior or val	lues.
Command Modes	Any command mode	
Command History	Release	Modification
	5.2(1)N1(1)	This command was introduced.
Examples	This example shows how to display the RIP statistics: switch# show ip rip statistics	
Related Commands	Command	Description
	show ip rip	Displays RIP information.
	show ip rip interface	Displays RIP information for an interface.
	show ip rip neighbor	Displays RIP information for a neighbor.
	show ip rip policy statist	tics Displays policy statistics for RIP.
	show ip rip route	Displays RIP route information.
