

## B Commands

---

This chapter describes the Cisco NX-OS Fibre Channel, virtual Fibre Channel, and Fibre Channel over Ethernet (FCoE) commands that begin with B.

# bind

To bind an interface to a virtual Fibre Channel interface, use the **bind** command. To remove the binding of an interface, use the **no** form of this command.

```
bind interface {ethernet chassis-id/slot/port | port-channel channel-no | vethernet veth-num}
no bind interface {ethernet chassis-id/slot/port | port-channel channel-no | vethernet veth-num}
```

Syntax Description	<b>interface</b> Specifies the interface to bind the virtual Fibre Channel interface. <b>ethernet</b> Specifies that the virtual Fibre Channel interface be bound to a specified Ethernet interface. <b>chassis-id</b> Fabric Extender chassis ID. The chassis ID range is from 100 to 199. <b>slot/port</b> Ethernet interface slot number and port number. The slot number is from 1 to 255 and the port number is from 1 to 128. <b>Note</b> When you bind an interface to a virtual Fibre Channel interface to enable Fibre Channel over Ethernet (FCoE) traffic on a Cisco Nexus 2232P Fabric Extender, the slot number is 1 and the port number is from 1 to 32.
<b>port-channel</b>	Specifies that the virtual Fibre Channel interface be bound to a specified EtherChannel interface. The EtherChannel number is from 1 to 4096.
<b>vethernet veth-num</b>	Specifies that the virtual Fibre Channel interface be bound to a specified virtual Ethernet interface. The virtual Ethernet interface number is from 1 to 1048575.

<b>Command Default</b>	Disabled				
<b>Command Modes</b>	Virtual Fibre Channel interface configuration mode				
<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>6.0(2)N1(1)</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	6.0(2)N1(1)	This command was introduced.
Release	Modification				
6.0(2)N1(1)	This command was introduced.				

<b>Usage Guidelines</b>	The Ethernet or EtherChannel interface that you bind to the virtual Fibre Channel interface must be a trunk port.  Before you bind a virtual Fibre Channel interface to a virtual Ethernet interface, you must enable the Cisco Adapter Fabric Extender (Adapter-FEX) on the switch by using the <b>feature-set virtualization</b> command.
-------------------------	---

<b>Examples</b>	This example shows how to bind a virtual Fibre Channel interface 3 to an Ethernet interface:  switch# <b>configure terminal</b> switch(config)# <b>interface ethernet 1/1</b>
-----------------	--

```

switch(config-if)# switchport mode trunk
switch(config-if)# exit
switch(config)# interface vfc 3
switch(config-if)# bind interface ethernet 1/1
switch(config-if)#

```

This example shows how to bind a virtual Fibre Channel interface 2 to a virtual Ethernet interface:

```

switch# configure terminal
switch(config)# interface vfc 2
switch(config-if)# bind interface vethernet 100
switch(config-if)# exit
switch(config)# interface vethernet 100
switch(config-if)# bind interface ethernet 101/1/1 channel 5
switch(config-if)#

```

## Related Commands

Command	Description
<b>bind (virtual Ethernet interface)</b>	Binds an interface to a virtual Ethernet.
<b>fcoe</b>	Enables FCoE traffic on a Fabric Extender.
<b>feature-set virtualization</b>	Enables the Cisco Virtual Machine features on the switch.
<b>interface vfc</b>	Configures a virtual Fibre Channel interface.
<b>show interface vfc</b>	Displays the specified VFC interface, attributes, and status.

**bind mac-address**

# bind mac-address

To bind a virtual Fibre Channel interface to a MAC address, use the **bind mac-address** command. To remove the binding of an interface, use the **no** form of this command.

**bind mac-address** *mac-address*

**no bind mac-address** *mac-address*

<b>Syntax Description</b>	<i>mac-address</i>	MAC address. Use the format EEEE.EEEE.EEEE.
<b>Command Default</b>	Disabled	
<b>Command Modes</b>	Virtual Fibre Channel interface configuration mode	
<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	6.0(2)N1(1)	This command was introduced.
<b>Usage Guidelines</b>	Before you use this command, make sure you enable Fibre Channel over Ethernet (FCoE) N-Port Virtualizer (NPV) on the switch by using the <b>feature fcoe-npv</b> command. This command requires the FCoE NPV license.	
<b>Examples</b>	This example shows how to bind a virtual Fibre Channel interface 3 to a MAC address:  <pre>switch# configure terminal switch(config)# interface vfc 3 switch(config-if)# bind mac-address 0050.3e8d.6400 switch(config-if)# </pre>	
<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<b>interface vfc</b>	Configures a virtual Fibre Channel interface.
	<b>show interface vfc</b>	Displays the specified VFC interface, attributes, and status.
