Contents

Preface

This preface describes the audience, organization, and conventions of the *Cisco Nexus 6000 Series* NX-OS Fundamentals Command Reference. It also provides information on how to obtain related documentation.

This preface includes the following sections:

- Audience, page ix
- Document Conventions, page ix
- Related Documentation, page x
- Obtaining Documentation and Submitting a Service Request, page xi

Audience

This publication is for experienced users who configure and maintain Cisco NX-OS devices.

Document Conventions

Command descriptions use these conventions:

Convention Description		
boldface font	Commands and keywords are in boldface.	
italic font	Arguments for which you supply values are in italics.	
[]	Elements in square brackets are optional.	
$\{x \mid y \mid z\}$	Alternative keywords are grouped in braces and separated by vertical bars.	
[x y z] Optional alternative keywords are grouped in brackets and separated by bars.		
string	A nonquoted set of characters. Do not use quotation marks around the string or the string will include the quotation marks.	

screen font Terminal sessions and information that the switch displays are in scre		
boldface screen Information you must enter is in boldface screen font.		
italic screen font	Arguments for which you supply values are in italic screen font.	
< >	Nonprinting characters, such as passwords, are in angle brackets.	
[]	Default responses to system prompts are in square brackets.	
!, # An exclamation point (!) or a pound sign (#) at the beginning of a l indicates a comment line.		

Screen examples use these conventions:

This document uses the following conventions:

Means reader *take note*. Notes contain helpful suggestions or references to material not covered in the manual.

Means reader be careful. In this situation, you might do something that could result in equipment damage or loss of data.

Related Documentation

Documentation for the Cisco Nexus 6000 Series Switch is available at the following URL: http://www.cisco.com/en/US/products/ps12806/tsd_products_support_series_home.html The documentation set is divided into the following categories:

Release Notes

The release notes are available at the follwing URL: http://www.cisco.com/en/US/products/ps12806/prod_release_notes_list.html

Installation and Upgrade Guides

The installation and upgrade guides are available at the following URL: http://www.cisco.com/en/US/products/ps12806/prod_installation_guides_list.html

Command References

The command references are available at the following URL: http://www.cisco.com/en/US/products/ps12806/prod_command_reference_list.html

Technical References

The technical references are available at the following URL: http://www.cisco.com/en/US/products/ps12806/prod_technical_reference_list.html L

Configuration Guides

The configuration guides are available at the following URL:

 $http://www.cisco.com/en/US/products/ps12806/products_installation_and_configuration_guides_list.html$

Error and System Messages

The system message reference guide is available at the following URL:

http://www.cisco.com/en/US/products/ps12806/products_system_message_guides_list.html

Documentation Feedback

To provide technical feedback on this document, or to report an error or omission, please send your comments to nexus6k-docfeedback@cisco.com. We appreciate your feedback.

Obtaining Documentation and Submitting a Service Request

For information on obtaining documentation, submitting a service request, and gathering additional information, see the monthly *What's New in Cisco Product Documentation*, which also lists all new and revised Cisco technical documentation:

http://www.cisco.com/en/US/docs/general/whatsnew/whatsnew.html

Subscribe to the *What's New in Cisco Product Documentation* as an RSS feed and set content to be delivered directly to your desktop using a reader application. The RSS feeds are a free service. Cisco currently supports RSS Version 2.0.

B Commands

This chapter describes the basic Cisco NX-OS system commands that begin with B.

banner motd

To configure the message-of-the-day (MOTD) banner that displays when the user logs in to a Cisco Nexus 5000 Series switch, use the **banner motd** command. To revert to the default, use the **no** form of this command.

banner motd delimiter message delimiter

no banner motd

Syntax Description	delimiter	Delimiter character that indicates the start and end of the message and is not a character that you use in the message. Do not use " or % as a delimiting	
		character. White space characters will not work.	
	message	Message text. The text is alphanumeric, case sensitive, and can contain special characters. It cannot contain the delimiter character you have chosen. The text has a maximum length of 80 characters and a maximum of 40 lines.	
Command Default	"Nexus 6000 Switch"	is the default MOTD string.	
Command Modes	Interface configuratio	n mode	
Command History	Release	Modification	
-	6.0(2)N1(1)	This command was introduced.	
Usage Guidelines	line. You can enter up	ne MOTD banner, press Enter before typing the delimiting character to start a new to 40 lines of text.	
Examples	-	now to configure a single-line MOTD banner:	
		ner motd #Unauthorized access to this device is prohibited!#	
	This example shows how to configure a multiple-line MOTD banner:		
	<pre>switch(config)# banner motd #Welcome Authorized Users Unauthorized access prohibited!#</pre>		
	This example shows how to revert to the default MOTD banner:		
	<pre>switch(config)# no</pre>	banner motd	
Related Commands	Command	Description	
	show banner motd	Displays the MOTD banner.	
		1 0	

boot

To configure the boot variable for the Cisco Nexus 5000 Series kickstart or system software image, use the **boot** command. To clear the boot variable, use the **no** form of this command.

boot {kickstart | system} [bootflash:] [//server/] [directory] filename

no boot {kickstart | system}

Syntax Description	kickstart	Configures the kickstart image.		
	system	Configures the system image.		
	bootflash:	(Optional) Specifies the name of the bootflash file system.		
	server	(Optional) Name of the server. Valid values are ///, //module-1/, //sup-1/, //sup-active/, or //sup-local/. The double slash (//) is required.		
	directory	(Optional) Name of a directory. The directory name is case sensitive.		
	filename	Name of the kickstart or system image file. The filename is case sensitive.		
<u>Note</u>	-	aces in the <i>bootflash://server/directory/filename</i> string. Individual elements of this d by colons (:) and slashes (/).		
Command Default	None			
Command Modes	Global configuration	on mode		
Command History	Release	Modification		
	6.0(2)N1(1)	This command was introduced.		
Usage Guidelines		software uses the boot variable for loading images when booting up. You must copy o the switch before you reload.		
Examples	This example show	rs how to configure the system boot variable:		
	<pre>switch(config) # boot system bootflash:n5000.bin</pre>			
	This example show	This example shows how to configure the kickstart boot variable:		
	-	poot kickstart bootflash:n5000-kickstart.bin		
	This example show	s how to clear the system boot variable:		
	-	s how to clear the system boot variable:		
	switch(config)# n	10 DOOT SYSTEM		

This example shows how to clear the kickstart boot variable: switch(config)# no boot kickstart

Related Commands

 Command	Description	
сору	Copies files.	
show boot	Displays boot variable configuration information.	

C Commands

This chapter describes the basic Cisco NX-OS system commands that begin with C.

cd

To change the current working directory in the device file system, use the **cd** command.

cd [filesystem:] [//server/] directory

Syntax Description	filesystem:	(Optional) Name of the file system. Valid values are bootflash or volatile .
	server	(Optional) Name of the server. Valid values are ///, //module-1/, //sup-1/, //sup-active/, or //sup-local/. The double slash (//) is required.
	directory	Name of the destination directory. The directory name is case sensitive.
Note		aces in the <i>filesystem://server/directory</i> string. Individual elements of this string are s (:) and slashes (/).
ommand Default	None	
ommand Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
lsage Guidelines	Use the pwd comm	nand to verify the current working directory.
-	-	vs how to change the current working directory on the current file system:
Jsage Guidelines Examples	This example show	vs how to change the current working directory on the current file system: ripts vs how to change the current working directory to another file system:
-	This example show switch# cd my-sc This example show	vs how to change the current working directory on the current file system: ripts vs how to change the current working directory to another file system:

clear cli history

To clear the command history, use the clear cli history command.

clear cli history

Syntax Description	This command has no	o arguments or keywords.
Command Default	None	
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Usage Guidelines	Use the show cli hist command-line interfa	ory command to display the history of the commands that you entered at the ace (CLI).
Examples	This example shows h	how to clear the command history:
	switch# clear cli h	listory
Related Commands	Command	Description
	show cli history	Displays the command history.

clear cores

To clear the core files, use the **clear cores** command.

clear cores

Syntax Description	This command has no arguments or keywords.
--------------------	--

Command Default None

Command Modes EXEC mode

 Release
 Modification

 6.0(2)N1(1)
 This command was introduced.

Usage Guidelines Use the **show system cores** command to display information about the core files.

Examples This example shows how to clear the core file: switch# clear cores

Related Commands	Command	Description
	show system cores	Displays the core filename.
	system cores	Configures the core filename.

clear debug-logfile

To clear the contents of the debug log file, use the **clear debug-logfile** command.

clear debug-logfile filename

show debug logfile

Syntax Description	filename	Name of the debug log file to clear.
Command Default	None	
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Examples	This example shows	how to clear the debug log file:
	switch# clear debug	g-logfile syslogd_debugs
Related Commands	Command	Description
	debug logfile	Configures a debug log file.
	debug logging	Enables debug logging.

Displays the contents of the debug log file.

clear install failure-reason

To clear the reason for software installation failures, use the clear install failure-reason command.

clear install failure-reason

Syntax Description	This command has	no arguments or keywords.
Command Default	None	
Command Modes	EXEC mode	
Command History	Release 6.0(2)N1(1)	Modification This command was introduced.
Examples	This example shows how to clear the reason for software installation failures: switch# clear install failure-reason	
	<u> </u>	

Related Commands	Command	Description
	show install all	Displays status information for the software installation.

clear license

To uninstall a license, use the clear license command.

clear license filename

Syntax Description	filename	Name of the license file to be uninstalled.	
Command Default	None		
Command Modes	EXEC mode		
Command History	Release	Modification	
ooniniana mistory	6.0(2)N1(1)	This command was introduced.	
Examples	This example show	s how to clear a specific license:	
	switch# clear lic	ense fm.lic	
Related Commands	Command	Description	
	show license	Displays license information.	

Displays license information.

clear user

To log out a particular user, use the **clear user** command.

clear user username

Syntax Description	username	Name of the user to be logged out.	
Command Default	None		
Command Modes	EXEC mode		
Command History	Release	Modification	
oonnana motory		This command was introduced.	
	6.0(2)N1(1)	This command was introduced.	
Examples	This example show	s how to log out a specific user:	
	-		
	switch# clear use	r admin	
Related Commands	Command	Description	
	show users	Displays the users currently logged on the switch.	

cli var name

To define a command-line interface (CLI) variable for a terminal session, use the **cli var name** command. To remove the CLI variable, use the **no** form of this command.

cli var name variable-name variable-text

no cli var name variable-name

Syntax Description	variable-name	Name of the variable. The name is alphanumeric, case sensitive, and has a maximum of 31 characters.		
	variable-text	Variable text. The text is alphanumeric, can contain spaces, and has a maximum of 200 characters.		
Command Default	None			
Command Modes	EXEC mode			
Command History	Release	Modification		
	6.0(2)N1(1)	This command was introduced.		
Usage Guidelines	You can reference a CLI variable using the following syntax: \$(variable-name)			
	Instances where you • Command scrip	can use variables include the following: ts		
	• Filenames You cannot reference a variable in the definition of another variable.			
	The Cisco NX-OS so	oftware provides a predefined variable, TIMESTAMP, that you can use to insert the unot change or remove the TIMESTAMP CLI variable.		
	You cannot change the with the new definit	he definition of a CLI variable. You must remove the variable and then create it again ion.		
Examples	This example shows	how to define a CLI variable:		
Examples	_	ame testvar interface ethernet 1/3		
	This example shows	how to reference a CLI variable:		
	switch# show \$(testvar)			

This example shows how to reference the TIMESTAMP variable: switch# copy running-config > bootflash:run-config-\$(TIMESTAMP).cnfg

This example shows how to remove a CLI variable:

switch# cli no var name testvar

Related Commands

Command	Description
run-script	Runs command scripts.
show cli variables	Displays the CLI variables.

clock protocol

To set the synchronization protocol for the clock to a protocol, use the **clock protocol** command. To remove the clock protocol, use the **no** form of this command.

clock protocol {none | ntp}

no clock protocol {none | ntp}

Syntax Description	none	Specifies that the clock can be set manually.
	ntp	Specifies that the clock be set to the Network Time Protocol (NTP).
ommand Default	None	
ommand Modes	Global configuration mo	ode
ommand History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
sage Guidelines	This command does not	require a license.
camples	This example shows how to set the synchronization protocol for the clock to NTP:	
	<pre>switch# configure ter switch(config)# clock switch(config)#</pre>	
Related Commands	Command	Description
	show running-config	Displays the running system configuration information.

clock set

To manually set the clock on a Cisco Nexus 5000 Series switch, use the clock set command.

clock set time day month year

Syntax Description	time	Time of day. The format is <i>HH</i> : <i>MM</i> : <i>SS</i> .
	day	Day of the month. The range is from 1 to 31.
	month	Month of the year. The values are January , February , March , April , May , June , July , August , September , October , November , and December .
	year	Year. The range is from 2000 to 2030.
Command Default	None	
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Usage Guidelines	Use this command w server.	when you cannot synchronize the switch with an outside clock source, such as an NTP
Examples	1	s how to manually configure the clock: 12:00:00 04 July 2008
Related Commands	Command	Description
	show clock	Displays the clock time.
	SHOW CLOCK	Displays the clock time.

clock summer-time

To configure the summer-time (daylight saving time) offset, use the **clock summer-time** command. To revert to the default, use the **no** form of this command.

clock summer-time zone-name start-week start-day start-month start-time end-week end-day end-month end-time offset-minutes

no clock summer-time

Syntax Description	zone-name	Time zone string. The time zone string is a three-character string.
-	start-week	Week of the month to start the summer-time offset. The range is from 1 to 5.
	start-day	Day of the month to start the summer-time offset. Valid values are Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, or Sunday.
	start-month	Month to start the summer-time offset. Valid values are January , February , March , April , May , June , July , August , September , October , November , and December .
	start-time	Time to start the summer-time offset. The format is HH:MM.
	end-week	Week of the month to end the summer-time offset. The range is from 1 to 5.
	end-day	Day of the month to end the summer-time offset. Valid values are Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, or Sunday.
	end-month	Month to end the summer-time offset. Valid values are January , February , March , April , May , June , July , August , September , October , November , and December .
	end-time	Time to end the summer-time offset. The format is HH:MM.
	offset-minutes	Number of minutes to offset the clock. The range is from 1 to 1440.
Command Default	None	
Command Modes	Global configuratio Interface configurat	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Examples	This example show	s how to configure the offset for summer-time or daylight saving time:
	switch(config)# c	lock summer-time PDT 1 Sunday March 02:00 5 Sunday November 02:00 60
	This example show	s how to revert to the default offset for summer-time:
	switch(config)# n	o clock summer-time

Related Commands	Command	Description
	show clock	Displays the clock summer-time offset configuration.

clock timezone

To configure the time zone offset from Coordinated Universal Time (UTC), use the **clock timezone** command. To revert to the default, use the **no** form of this command.

clock timezone zone-name offset-hours offset-minutes

no clock timezone

Syntax Description	zone-name	Zone name. The name is a 3-character string for the time zone acronym (for example, PST or EST).		
	offset-hours	Number of hours offset from UTC. The range is from –23 to 23.		
	offset-minutes	Number of minutes offset from UTC. The range is from 0 to 59.		
Command Default	None			
Command Modes	Global configuratio Interface configurat			
Command History	Release	Modification		
-	6.0(2)N1(1)	This command was introduced.		
Usage Guidelines	Use this command t	to offset the device clock from UTC.		
Examples	This example shows	s how to configure the time zone offset from UTC:		
	switch(config)# c	lock timezone PST -8 0		
	This example shows how to revert the time zone offset to the default:			
	switch(config)# n			
Related Commands	Command	Description		
Related Commands		Description		
	show clock	Displays the clock time.		

configure session

To create or modify a configuration session, use the **configure session** command.

configure session *name*

Syntax Description	name	Name of the session. The name is a case-sensitive, alphanumeric string up to 63 characters.
Command Default	None	
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Examples	This example shows ho	w to create a configuration session:
	<pre>switch# configure set switch(config-s)#</pre>	ssion MySession
Related Commands	Command	Description
	show configuration session	Displays information about the configuration sessions.

configure terminal

To enter configuration mode, use the **configure terminal** command.

configure terminal

Syntax Description	This command has no arguments or keywords.	
Command Default	None	
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Usage Guidelines	configuration file as soc After you enter the conf switch(config)#, indicat return to EXEC mode, t	ter configuration mode. Commands in this mode are written to the running on as you enter them (using the Enter key/ Carriage Return). Figure terminal command, the system prompt changes from switch# to ing that the switch is in configuration mode. To leave configuration mode and ype end or press Ctrl-Z . the configuration that you have made, use the show running-config command.
Examples	This example shows how switch# configure ter switch(config)#	w to enter configuration mode: minal
Related Commands	Command copy running-config	Description Saves the running configuration as the startup configuration file.
	startup-config	Ends your configuration assaint by outting to EVEC mode
	end	Ends your configuration session by exiting to EXEC mode.
	exit (global)	Exits from the current configuration mode to the next highest configuration

mode.

show running-config

Displays the current running configuration.

сору

To copy any file from a source to a destination, use the **copy** command.

copy source-url destination-url

Syntax Description	source-url	Location URL (or variable) of the source file or directory to be copied. The source can be either local or remote, depending upon whether the file is being downloaded or uploaded.		
		For more information, see the "Usage Guidelines" section.		
	destination-url	Destination URL (or variable) of the copied file or directory. The destination can be either local or remote, depending upon whether the file is being downloaded or uploaded.		
	<u> </u>	For more information, see the "Usage Guidelines" section.		
Command Default	The default name f	for the destination file is the source filename.		
Command Modes	EXEC mode			
Command History	Release	Modification		
	6.0(2)N1(1)	This command was introduced.		
Usage Guidelines	location to another file system URL, w	d allows you to copy a file (such as a system image or configuration file) from one location. The source and destination for the file is specified using a Cisco NX-OS which allows you to specify a local or remote file location. The file system being used emory source or a remote server) determines the syntax used in the command.		
	You can enter on the command line all necessary source- and destination-URL information and the username to use, or you can enter the copy command and have the CLI prompt you for any missing information.			
	The entire copying process may take several minutes, depending on the network conditions and the size of the file, and differs from protocol to protocol and from network to network.			
	The colon character (:) is required after the file system URL prefix keywords (such as bootflash).			
	In the URL syntax for ftp:, scp:, sftp:, and tftp:, the server is either an IPv4 address or a hostname.			
	Format of Source and Destination URL			
	enter either a comm	ource and destination URLs varies according to the file or directory location. You can nand-line interface (CLI) variable for a directory or a filename that follows the Cisco a syntax (<i>filesystem</i> :[/ <i>directory</i>][/ <i>filename</i>]).		
		es list URL prefix keywords by the file system type. If you do not specify a URL prefix h looks for a file in the current directory.		

Table 1 lists URL prefix keywords for local writable storage file systems. Table 2 lists the URL prefix keywords for remote file systems. Table 3 lists the URL prefix keywords for nonwritable file systems.

KeywordSource or Destinationbootflash:[//server/]Source or destination URL for boot flash memory. The server argument
value is module-1, sup-1, sup-active, or sup-local.volatile:[//server/]Source or destination URL of the default internal file system. Any files or
directories stored in this file system will be erased when the switch reboots.
The server argument value is module-1, sup-1, sup-active, or sup-local.

 Table 1
 URL Prefix Keywords for Local Writable Storage File Systems

Keyword	Source or Destination
ftp:	Source or destination URL for a FTP network server. The syntax for this alias is as follows:
	ftp:[//server][/path]/filename
scp:	Source or destination URL for a network server that supports Secure Shell (SSH) and accepts copies of files using the secure copy protocol (scp). The syntax for this alias is as follows:
	<pre>scp:[//[username@]server][/path]/filename</pre>
sftp:	Source or destination URL for an SSH FTP (SFTP) network server. The syntax for this alias is as follows:
	sftp: [//[username@]server][/path]/filename
tftp:	Source or destination URL for a TFTP network server. The syntax for this alias is as follows:
	tftp:[//server[:port]][/path]/filename

Table 2 URL Prefix Keywords for Remote File Systems

Table 3 URL Prefix Keywords for Special File Systems

Keyword	Source or Destination
core:	Local memory for core files. You can copy core files from the core file system.
debug:	Local memory for debug files. You can copy core files from the debug file system.
log:	Local memory for log files. You can copy log files from the log file system.
modflash:	External memory for mod files. You can copy mod files from modflash file system.
system:	Local system memory. You can copy the running configuration to or from the system file system. The system file system is optional when referencing the running-config file in a command.

copy

Keyword	Source or Destination
usb1:	Source or destination URL for the external Universal Serial Bus (USB) Flash memory devices. You can copy the kickstart and system image to bootflash.
	Note This is applicable only to the Cisco Nexus 5500 Series switches.
volatile:	Local volatile memory. You can copy files to or from the volatile file system. All files in the volatile memory are lost when the physical device reloads.

Table 3 URL Prefix Keywords for Special File Systems (continued)

This section contains usage guidelines for the following topics:

- Copying Files from a Server to Bootflash Memory, page 24
- Copying a Configuration File from a Server to the Running Configuration, page 24
- Copying a Configuration File from a Server to the Startup Configuration, page 24
- Copying the Running or Startup Configuration on a Server, page 24

Copying Files from a Server to Bootflash Memory

Use the **copy** *source-url* **bootflash:** command (for example, **copy tftp**:*source-url* **bootflash:**) to copy an image from a server to the local bootflash memory.

Copying a Configuration File from a Server to the Running Configuration

Use the **copy** {**ftp:** | **scp:** | **sftp:** | **tftp:** }*source-url* **running-config** command to download a configuration file from a network server to the running configuration of the device. The configuration is added to the running configuration as if the commands were typed in the CLI. The resulting configuration file is a combination of the previous running configuration and the downloaded configuration file. The downloaded configuration file has precedence over the previous running configuration.

You can copy either a host configuration file or a network configuration file. Accept the default value of *host* to copy and load a host configuration file containing commands that apply to one network server in particular. Enter *network* to copy and load a network configuration file that contains commands that apply to all network servers on a network.

Copying a Configuration File from a Server to the Startup Configuration

Use the **copy** {**ftp:** | **scp:** | **sftp:** | **tftp:** }*source-url* **startup-config** command to copy a configuration file from a network server to the switch startup configuration. These commands replace the startup configuration file with the copied configuration file.

Copying the Running or Startup Configuration on a Server

Use the **copy running-config** {**ftp:** | **scp:** | **sftp:** | **tftp:**}*destination-url* command to copy the current configuration file to a network server that uses FTP, scp, SFTP, or TFTP. Use the **copy startup-config** {**ftp:** | **scp:** | **stfp:** | **tftp:**}*destination-url* command to copy the startup configuration file to a network server.

You can use the copied configuration file copy as a backup.

Examples

This example shows how to copy a file within the same directory: switch# copy file1 file2

This example shows how to copy a file to another directory: switch# copy file1 my-scripts/file2
This example shows how to copy a file to another file system:
switch# copy file1 bootflash:
This example shows how to copy a file to another supervisor module:
switch# copy file1 bootflash://sup-1/file1.bak
This example shows how to copy a file from a remote server:
switch# copy scp://192.168.1.1/image-file.bin bootflash:image-file.bin
This example shows how to copy the kickstart and system image to bootflash:

Related Commands	Command	Description
	cd	Changes the current working directory.
	delete	Delete a file or directory.
	dir	Displays the directory contents.
	move	Moves a file.
	pwd	Displays the name of the current working directory.

copy running-config startup-config

To save the running configuration to the startup configuration file so that all current configuration details are available after a reboot, use the **copy running-config startup-config** command.

copy running-config startup-config

Syntax Description	This command has no arguments or keywords.	
Command Default	None	
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Usage Guidelines <u>Note</u>		he configuration that you have made, use the show startup-config command. running-config startup-config command, the running and the startup copies identical.
Examples	This example shows how	v to save the running configuration to the startup configuration:
•	switch# copy running-	
Related Commands	Command	Description
	show running-config	Displays the currently running configuration.
	show startup-config	Displays the startup configuration file.

D Commands

This chapter describes the basic Cisco NX-OS system commands that begin with D.

databits

To configure the number of data bits in a character for the terminal port, use the **databits** command. To revert to the default, use the **no** form of this command.

databits bits

no databits bits

Syntax Description	bits	Number of data bits in a character. The range is from 5 to 8.	
Command Default	8 bits		
Command Modes	Terminal line confi	guration mode	
Command History	Release	Modification	
	6.0(2)N1(1)	This command was introduced.	
Usage Guidelines	You can configure	the console port only from a session on the console port.	
Examples	This example shows how to configure the number of data bits for the console port:		
	<pre>switch# configure terminal switch(config)# line console switch(config-console)# databits 7</pre>		
	This example shows how to revert to the default number of data bits for the console port:		
	<pre>switch# configure terminal switch(config)# line console switch(config-console)# no databits 7</pre>		

Related Commands	Command	Description
	show line	Displays information about the console port configuration.

debug logfile

To direct the output of the **debug** commands to a specified file, use the **debug logfile** command. To revert to the default, use the **no** form of this command.

debug logfile *filename* [**size** *bytes*]

no debug logfile filename [size bytes]

Syntax Description	filename	Name of the file for debug command output. The filename is alphanumeric, case sensitive, and has a maximum of 64 characters.
	size bytes	(Optional) Specifies the size of the log file in bytes. The range is from 4096 to 4194304.
Command Default	None	
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Usage Guidelines	The Cisco NX-OS soft command to display th	tware creates the logfile in the log: file system root directory. Use the dir log: he log files.
Examples	This example shows how to specify a debug log file:	
		to speeng a debug log me.
	switch# debug logfil	
		Le debug_log ow to revert to the default debug log file:
	This example shows ho	Le debug_log ow to revert to the default debug log file:
Related Commands	This example shows ho	Le debug_log ow to revert to the default debug log file:
Related Commands	This example shows ho switch# no debug log	Le debug_log ow to revert to the default debug log file: gfile debug_log

debug logging

To enable **debug** command output logging, use the **debug logging** command. To disable debug logging, use the **no** form of this command.

debug logging

no debug logging

- **Syntax Description** This command has no arguments or keywords.
- **Command Default** Disabled
- Command Modes EXEC mode

 Command History
 Release
 Modification

 6.0(2)N1(1)
 This command was introduced.

 Examples
 This example shows how to enable the output logging for the debug command:

switch# **debug logging**

This example shows how to disable the output logging for the **debug** command: switch# **no debug logging**

Related Commands	Command	Description
	debug logfile	Configures the log file for the debug command output.

delete

To delete a file or directory, use the **delete** command.

delete [filesystem:] [//server/] [directory] filename

Syntax Description	filesystem:	(Optional) Name of the file system. Valid values are bootflash , debug , log , modflash , or volatile .	
	//server/	(Optional) Name of the server. Valid values are ///, //module-1/, //sup-1/, //sup-active/, or //sup-local/. The double slash (//) is required.	
	directory	(Optional) Name of a directory. The directory name is case sensitive.	
	filename	Name of the file to delete. The filename is case sensitive.	
Note	-	aces in the <i>filesystem://server/directory/filename</i> string. Individual elements of this I by colons (:) and slashes (/).	
Command Default	None		
Command Modes	EXEC mode		
Command History	Release	Modification	
	6.0(2)N1(1)	This command was introduced.	
Usage Guidelines	Use the dir comma	and to locate the file you that want to delete.	
	The delete comman to delete directorie	nd will delete a directory and its contents. Exercise caution when using this command s.	
Examples	This example show	vs how to delete a file:	
	switch# delete bootflash:old_config.cfg		
	This example show	ys how to delete a directory:	
	switch# delete my		
	_	pry. Do you want to continue (y/n) ? [y] y	

Related Commands	Command	Description
	dir	Displays the contents of a directory.
	save	Saves the configuration session to a file.

dir

To display the contents of a directory, use the **dir** command.

dir [filesystem:] [//server/] [directory]

Syntax Description	filesystem:	(Optional) Name of the file system. Valid values are bootflash , debug , log , modflash , or volatile .	
	server	(Optional) Name of the server. Valid values are ///, //module-1/, //sup-1/, //sup-active/, or //sup-local/. The double slash (//) is required.	
	directory	(Optional) Name of a directory. The directory name is case sensitive.	
Note	-	baces in the <i>filesystem://server/directory</i> string. Individual elements of this string are as (:) and slashes (/).	
Command Default	Displays the conte	ents of the current working directory.	
Command Modes	EXEC mode		
Command History	Release	Modification	
	6.0(2)N1(1)	This command was introduced.	
Usage Guidelines	of the file in bytes	displays a listing of the files in the specified directory. For each file, it lists the size , the last modified time of the file, and the filename of the file. This command then statistics for the file system.	
	Use the pwd command to verify the current working directory.		
	Use the cd comma	and to change the current working directory.	
Examples	This example show switch# dir boot	ws how to display the contents of the root directory in bootflash:	
	This example show switch# dir	vs how to display the contents of the current working directory:	

Related Commands	lated Commands
------------------	----------------

Command	Description	
cd	Changes the current working directory.	
delete	Deletes a file or directory.	
pwd	Displays the name of the current working directory.	
rmdir	Deletes a directory.	

E Commands

This chapter describes the basic Cisco NX-OS system commands that begin with E.

echo

To display a text string on the terminal, use the echo command.

echo [text]

Syntax Description	text	(Optional) Text string to display. The text string is alphanumeric, case sensitive, can contain spaces, and has a maximum length of 200 characters. The text string can also contain references to CLI variables.	
Command Default	Blank line		
Command Modes	EXEC mode		
Command History	Release	Modification	
	6.0(2)N1(1)	This command was introduced.	
Usage Guidelines	You can use this comm is running.	and in a command script to display status information or prompts while the script	
Examples	This example shows how to display a blank line at the command prompt: switch# echo		
	This example shows how to display a line of text at the command prompt:		
	switch# echo Script run at \$(TIMESTAMP).		
Related Commands	Command	Description	
	run-script	Runs command scripts.	
	show cli variables	Displays the CLI variables.	

end

	To end the current configuration session and return to EXEC mode, use the end command.
	end
Syntax Description	This command has no arguments or keywords.
Command Default	None
Command Modes	Global configuration mode
Command History	Release Modification
	6.0(2)N1(1)This command was introduced.
Usage Guidelines	This command returns you to EXEC mode regardless of which configuration mode you are in. Use this command when you are done configuring the system and you want to return to EXEC mode to perform verification steps.
Examples	This example shows how the end command is used to exit from interface configuration mode and return to EXEC mode. A show command is used to verify the configuration. switch# configure terminal switch(config)# interface ethernet 1/1 switch(config-if)# switchport host switch(config-if)# end switch# show interface ethernet 1/1
Related Commands	Command Description
	exit (EXEC) Terminates the active terminal session by logging off the switch.

Exits from the current configuration mode.

exit (global)

exec-timeout

To configure the inactive session timeout on the console port or the virtual terminal, use the **exec-timeout** command. To revert to the default, use the **no** form of this command.

exec-timeout minutes

no exec-timeout

Syntax Description	minutes	Number of minutes. The range is from 0 to 525600. A setting of 0 minutes disables the timeout.
Command Default	Timeout is disabled	d.
Command Modes	Terminal line confi	iguration mode
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Usage Guidelines	You can configure	the console port only from a session on the console port.
Examples	<pre>switch# configure switch(config)# : switch(config-con This example show switch(config)# : switch(config)# : switch(config-con This example show switch(config)# : switch(config)# : switch(config)# : switch(config)# : switch(config)# :</pre>	<pre>line console nsole) # exec-timeout 30 //s how to revert to the default inactive session timeout for the console port: e terminal line console nsole) # no exec-timeout //s how to configure the inactive session timeout for the virtual terminal: e terminal line vty ne) # exec-timeout 30 //s how to revert to the default inactive session timeout for the virtual terminal: e terminal line vty ne) # exec-timeout 30 //s how to revert to the default inactive session timeout for the virtual terminal: e terminal</pre>

Related Commands	Command	Description
	line console	Enters the console terminal configuration mode.
	line vty	Enters the virtual terminal configuration mode.
	show running-config	Displays the running configuration.

exit (EXEC)

To close an active terminal session by logging off the switch, use the **exit** command.

exit

Syntax Description	This command has no argume	onte or keyworde
Syntax Description	This command has no arguine	ents of keywords.

- Command Default None
- Command Modes EXEC mode

 Release
 Modification

 6.0(2)N1(1)
 This command was introduced.

Examples This example shows how the **exit (global)** command is used to move from configuration mode to EXEC mode and the **exit** (EXEC) command is used to log off (exit the active session):

switch(config)# exit
switch# exit

Related Commands	Command	Description
	end	Ends your configuration session by exiting to EXEC mode.
	exit (global)	Exits from the current configuration mode to the next highest configuration mode.

exit (global)

To exit any configuration mode to the next highest mode in the CLI mode hierarchy, use the **exit** command in any configuration mode.

exit

Syntax Description	This command has no	o arguments or keywords.
Command Default	None	
Command Modes	All configuration mo	odes
Command History	Release	Modification
-	6.0(2)N1(1)	This command was introduced.
Usage Guidelines	interface, VLAN, or EXEC mode, the exi t	nd in configuration mode to return to EXEC mode. Use the exit command in zone configuration mode to return to configuration mode. At the highest level, t command will exit the EXEC mode and disconnect from the switch (see the it (EXEC) command for details).
Examples	This example shows I mode: switch(config-if)# switch(config)#	how to exit from the interface configuration mode and to return to the configuration
Related Commands	Command	Description
	end	Ends your configuration session by exiting to privileged EXEC mode.
	exit (EXEC)	Terminates the active terminal session by logging off the switch.

F Commands

This chapter describes the basic Cisco NX-OS system commands that begin with F.

find

To find filenames beginning with a character string, use the **find** command.

find *filename-prefix*

Syntax Description	filename-prefix	First part or all of a filename. The filename prefix is case sensitive.
Command Default	None	
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Usage Guidelines		earches all subdirectories under the current working directory. You can use the cd to navigate to the starting directory.
Examples	This example shows	how to display filenames beginning with "n5000":
	switch# find n6000	
Related Commands	Command	Description
	cd	Changes the current working directory.
	pwd	Displays the name of the current working directory.

format

To format the bootflash device, which erases its contents and restores it to its factory-shipped state, use the **format** command.

format bootflash:

Syntax Description	bootflash:	Specifies the name of the bootflash file system.
Command Default	None	
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Examples	This example shows switch# format boo	how to format the bootflash device:
Related Commands	Command	Description
	cd	Changes the current working directory.
	dir	Displays the directory contents.
	pwd	Displays the name of the current working directory.

format

G Commands

This chapter describes the basic Cisco NX-OS system commands that begin with G.

gunzip

To uncompress a compressed file, use the **gunzip** command.

gunzip [filesystem:] [//server/] [directory] filename

Syntax Description	filesystem:	(Optional) Name of the file system. Valid values are bootflash , modflash , or volatile .
	server	(Optional) Name of the server. Valid values are ///, //module-1/, //sup-1/, //sup-active/, or //sup-local/. The double slash (//) is required.
	directory	(Optional) Name of a directory. The directory name is case sensitive.
	filename	Name of the file to uncompress. The filename is case sensitive.
Note		paces in the <i>filesystem://server/directory/filename</i> string. Individual elements of this ed by colons (:) and slashes (/).
Command Default	None	
Command Modes	EXEC mode	
Command History	Release	Modification
Command History	Release 6.0(2)N1(1)	Modification This command was introduced.
	6.0(2)N1(1)	
	6.0(2)N1(1) The compressed f	This command was introduced.
Usage Guidelines	6.0(2)N1(1) The compressed f The Cisco NX-OS	This command was introduced. ilename must have the .gz extension.
Command History Usage Guidelines Examples	6.0(2)N1(1) The compressed f The Cisco NX-OS	This command was introduced. ilename must have the .gz extension. S software uses Lempel-Ziv 1977 (LZ77) coding for compression. ws how to uncompress a compressed file:
Usage Guidelines	6.0(2)N1(1) The compressed f The Cisco NX-OS This example show	This command was introduced. ilename must have the .gz extension. S software uses Lempel-Ziv 1977 (LZ77) coding for compression. ws how to uncompress a compressed file:

Compresses a file.

gzip

gzip

To compress a file, use the **gzip** command.

gzip [filesystem:] [//server/] [directory] filename

Syntax Description	filesystem:	(Optional) Name of the file system. Valid values are bootflash , modflash , or volatile .
	server	(Optional) Name of the server. Valid values are ///, //module-1/, //sup-1/, //sup-active/, or //sup-local/. The double slash (//) is required.
	directory	(Optional) Name of a directory. The directory name is case sensitive.
	filename	Name of the file to compress. The filename is case sensitive.
Note		aces in the <i>filesystem://server/directory/filename</i> string. Individual elements of this d by colons (:) and slashes (/).
Command Default	None	
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Usage Guidelines	After you run this c added to its filenan	command, the named file is replaced with a compressed file that has the .gz extension ne.
	The Cisco NX-OS	software uses Lempel-Ziv 1977 (LZ77) coding for compression.
Examples	This example show	vs how to compress a file:
·	switch# gzip run _	-
Related Commands	Command	Description
	dir	Displays the directory contents.
	gunzip	Uncompresses a compressed file.
	8-112-P	

gzip

H Commands

This chapter describes the basic Cisco NX-OS system commands that begin with H.

hostname

To configure the hostname for the switch, use the **hostname** command. To revert to the default, use the **no** form of this command.

hostname name

no hostname

Syntax Description	name	Hostname for the switch. The name is alphanumeric, case sensitive, can contain special characters, and can have a maximum of 32 characters.	
Command Default	"switch" is the default	hostname.	
Command Modes	EXEC mode		
Command History	Release	Modification	
	6.0(2)N1(1)	This command was introduced.	
	configuration filename The hostname comma	es. and performs the same function as the switchname command.	
Examples	This example shows h	ow to configure the hostname for a Cisco Nexus 5000 Series switch:	
	switch# configure terminal switch(config)# hostname Engineering2 Engineering2(config)#		
	This example shows how to revert to the default hostname:		
	Engineering2# config Engineering2(config) switch(config)#		
Related Commands	Command	Description	
	show hostname	Displays the switch hostname.	
	show switchname	Displays the switch hostname.	

Configures the switch hostname.

switchname

I Commands

This chapter describes the basic Cisco NX-OS system commands that begin with I.

install all

To install the kickstart and system images on a Cisco Nexus 5000 Series switch, use the **install all** command.

install all [kickstart kickstart-url] [system system-url]

Syntax Description	kickstart	(Optional) Specifies the kickstart image file.	
	kickstart-url	Full address of the kickstart image file. The name is case sensitive.	
	system	(Optional) Specifies the system image file.	
	system-url	Full address of the system image file. The name is case sensitive.	
Command Default	If you do not enter any	parameters, the boot variable values are used.	
Command Modes	EXEC mode		
Command History	Release	Modification	
	6.0(2)N1(1)	This command was introduced.	
Usage Guidelines	location. The following tables list	tart and system URLs varies according to the file system, directory, and file t URL prefix keywords by the file system type. If you do not specify a URL prefix	
	keyword, the switch loc	oks for a file in the current directory.	
	Table 1 lists URL prefix keywords for local writable storage file systems. Table 2 lists the URL prefix keywords for remote file systems. For remote file systems, if it is not otherwise specified, the path is the default for the user on the remote server.		
	Table 1URL Prefix Keywords for Local Writable Storage File Systems		
	Keyword	Source or Destination	
	<pre>bootflash:[//server/]</pre>	Source URL for boot flash memory. The <i>server</i> argument value is module-1 , sup-1 , sup-active , or sup-local .	

	Source URL of an external flash file system. The <i>server</i> argument value is module-1 , sup-1 , sup-active , or sup-local .
E 3	Source URL of the default internal file system. Any files or directories stored in this file system are erased when the switch reboots. The <i>server</i> argument

value is module-1, sup-1, sup-active, or sup-local.

Keyword	Source or Destination
ftp:	Source URL for a FTP network server. The syntax for this alias is as follows:
	ftp:[//server][/path]/filename
scp:	Source URL for a network server that supports Secure Shell (SSH) and uses the secure copy protocol (scp). The syntax is as follows:
	<pre>scp:[//[username@]server][/path]/filename</pre>
sftp:	Source URL for an SSH FTP (SFTP) network server. The syntax is as follows:
	<pre>sftp:[//[username@]server][/path]/filename</pre>
tftp:	Source URL for a TFTP network server. The syntax is as follows:
	tftp:[//server[:port]][/path]/filename

Table 2 URL Prefix Keywords for Remote File Systems

If you do not enter the information about the server or username when downloading and installing the image files from a remote server, you are prompted for the information.

This command sets the kickstart and system boot variables and copies the image files to the redundant supervisor module.

The **install all** command upgrades the switch software and also upgrades the Fabric Extender software of all attached chassis. The Fabric Extender remains online passing traffic while the software is copied. Once the software images have successfully been installed, the parent switch and the Fabric Extender chassis are rebooted automatically to maintain the software version compatibility between the parent switch and the Fabric Extender.

You can use the **install all** command to downgrade the Cisco NX-OS software on the switch. To determine if the downgrade software is compatible with the current configuration on the switch, use the **show incompatibility system** command and resolve any configuration incompatibilities.

Examples

This example shows how to install the Cisco NX-OS software from the bootflash: directory:

switch# install all kickstart bootflash:nx-os_kick.bin system bootflash:nx-os_sys.bin

This example shows how to install the Cisco NX-OS software using the values configured in the kickstart and system boot variables:

```
switch# configure terminal
switch(config)# boot kickstart bootflash:nx-os_kick.bin
switch(config)# boot system bootflash:nx-os_sys.bin
switch(config)# exit
switch# copy running-config startup-config
switch# install all
```

This example shows how to install the Cisco NX-OS software from an SCP server:

switch# install all kickstart scp://adminuser@192.168.1.1/nx-os_kick.bin system bootflash:scp://adminuser@192.168.1.1/nx-os_sys.bin

Г

ated Commands	Command	Description
	reload	Reloads the device with new Cisco NX-OS software.
	show incompatibility system	Displays configuration incompatibilities between Cisco NX-OS system software images.
	show install all	Displays information related to the install operation.
	show version	Displays information about the software version.

install license

To install a license, use the install license command.

install license [filesystem:] [//server/] [directory] src-filename [target-filename]

Syntax Description	filesystem:	(Optional) Name of the file system. Valid values are bootflash or volatile .	
	/server	(Optional) Name of the server. Valid values are ///, //module-1/, //sup-1/, //sup-active/, or //sup-local/. The double slash (//) is required.	
	directory	(Optional) Name of a directory. The directory name is case sensitive.	
	src-filename	Name of the source license file.	
	target-filename	(Optional) Name of the target license file.	
Note		in the <i>filesystem://server/directory/filename</i> string. Individual elements of this colons (:) and slashes (/).	
Command Default	All licenses for the Cisco Nexus 5000 Series switches are factory installed. Manual installation is not required.		
Command Modes	EXEC mode		
Command History	Release	Modification	
	6.0(2)N1(1)	This command was introduced.	
Usage Guidelines	If a target filename is provided after the source location, the license file is installed with that name. Otherwise, the filename in the source URL is used. This command also verifies the license file before installing it.		
Examples	This example shows how to install a file named license-file that resides in the bootflash: directory:		
	switch# install lice	nse bootflash:license-file	
Related Commands	Command	Description	
	show license	Displays license information.	
	show license host-id	Displays the serial number of the chassis to use for licensing.	

Displays license usage information.

show license usage

L Commands

This chapter describes the basic Cisco NX-OS system commands that begin with L.

line console

To specify the console port and enter console port configuration mode, use the line console command.

line console

- **Syntax Description** This command has no arguments or keywords.
- Command Default None
- **Command Modes** Interface configuration mode

Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.

Usage Guidelines You can configure the console line only from a console port session.

Examples This example shows how to enter console port configuration mode:

switch# configure terminal
switch(config)# line console
switch(config-console)#

Related Commands	Command	Description
	databits	Configures the number of data bits in a character for a port.
	exec-timeout	Configures the inactive terminal timeout for a port.
	modem	Configures the modem settings for a port.
	parity	Configures the parity settings for a port.
	show line	Displays information about the console port configuration.
	speed	Configures the transmit and receive speed for a port.
	stopbits	Configures the stop bits for a port.

line vty

To specify the virtual terminal and enter line configuration mode, use the **line vty** command.

line vty

- **Syntax Description** This command has no arguments or keywords.
- Command Default None
- **Command Modes** Interface configuration mode

Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.

Examples This example shows how to enter console port configuration mode:

switch# configure terminal
switch(config)# line vty
switch(config-line)#

Related Commands	Command	Description
	access-class	Restricts incoming and outgoing connections in VTY configuration mode.
	exec-timeout	Configures the inactive terminal timeout for a port.
	session-limit	Configures the maximum number of the concurrent virtual terminal sessions.
	show line	Displays information about the console port configuration.

line vty

M Commands

This chapter describes the basic Cisco NX-OS system commands that begin with M.

modem in

To enable the modem connection on the console port, use the **modem in** command. To disable the modem connection, use the **no** form of this command.

modem in

no modem in

- Syntax Description This command has no arguments or keywords.
- **Command Default** Timeout is disabled.
- **Command Modes** Terminal line configuration mode

Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.

Usage Guidelines You can configure the console port only from a session on the console port.

Examples This example shows how to enable a modem connection on the console port:

switch# configure terminal
switch(config)# line console
switch(config-console)# modem in

This example shows how to disable a modem connection on the console port:

switch# configure terminal
switch(config)# line console
switch(config-console)# no modem in

Related Commands	Command	Description
	line console	Enters console port configuration mode.
	show line	Displays information about the console port configuration.

modem init-string

To download the initialization string to a modem connected to the console port, use the **modem init-string** command. To revert to the default, use the **no** form of this command.

modem init-string {default | user-input}

no modem init-string

Syntax Description	default	Downloads the default initialization string.	
	user-input	Downloads the user-input initialization string.	
Command Default	The default initializ	zation string is ATE0Q1&D2&C1S0=1\015.	
Command Modes	Terminal line config	guration mode	
Command History	Release	Modification	
	6.0(2)N1(1)	This command was introduced.	
Usage Guidelines	You can configure the console port only from a session on the console port. The default initialization string ATE0Q1&D2&C1S0=1\015 is defined as follows: • AT—Attention		
	• E0 (required)—No echo		
	• Q1—Result code on		
	• &D2—Normal data terminal ready (DTR) option		
	• &C1—Enable tracking the state of the data carrier		
	• S0=1—Pick up after one ring		
	• \015 (required)—Carriage return in octal		
	Use the modem set	-string command to configure the user-input initialization string.	
Examples	This example show console port:	s how to download the default initialization string to the modem connected to the	
	<pre>switch# configure terminal switch(config)# line console switch(config-console)# modem init-string default</pre>		
	This example shows how to download the user-input initialization string to the modem connected to the console port:		
	switch# configure terminal		

switch(config)# line console
switch(config-console)# modem init-string user-input

This example shows how to remove the initialization string to the modem connected to the console port:

switch# configure terminal
switch(config)# line console
switch(config-console)# no modem init-string

Related Commands

Description
Enters console port configuration mode.
Configures the user-input initialization string for a modem.
Displays information about the console port configuration.

modem set-string user-input

To configure the user-input initialization string to download to a modem connected to the console port, use the **modem set-string user-input** command. To revert to the default, use the **no** form of this command.

modem set-string user-input string

no modem set-string

Syntax Description	string	User-input string. This string is alphanumeric and case sensitive, can contain special characters, and has a maximum of 100 characters.	
Command Default	None		
Command Modes	Terminal line configur	ation mode	
Command History	Release	Modification	
	6.0(2)N1(1)	This command was introduced.	
Usage Guidelines	You can configure the	console port only from a session on the console port.	
Examples	This example shows how to configure the user-input initialization string for the modem connected to the console port:		
	<pre>switch# configure terminal switch(config)# line console switch(config-console)# modem set-string user-input ATE0Q1&D2&C1S0=3\015</pre>		
	This example shows how to revert to the default user-input initialization string for the modem connected to the console port:		
	<pre>switch# configure te switch(config)# line switch(config-consol</pre>		
Related Commands	Command line console	Description Enters consols part configuration mode	
		Enters console port configuration mode.	
	modem init-string show line	Downloads the user-input initialization string to a modem.Displays information about the console port configuration.	
	SHOW HILE	Displays mormation about the console port configuration.	

move

To move a file from one directory to another, use the **move** command.

move {[*filesystem*:] [*//server/*] [*directory*] *source-filename*} [*filesystem*:] [*//server/*] [*directory*] [*destination-filename*]

Syntax Description	filesystem:	(Optional) Name of the file system. Valid values are bootflash , debug , modflash , or volatile .
	server	(Optional) Name of the server. Valid values are ///, //module-1/, //sup-1/, //sup-active/, or //sup-local/. The double slash (//) is required.
	directory	(Optional) Name of a directory. The directory name is case sensitive.
	source-filename	Name of the file to move. The filename is case sensitive.
	destination-filename	(Optional) Name of the destination file. The filename is alphanumeric, case sensitive, and has a maximum of 64 characters.
Command Default	The default filename for	or the destination file is the same as the source file.
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Usage Guidelines	You can make a copy o	f a file by using the copy command.
Q		
<u>rip</u>	You can rename a file b	by moving it within the same directory.
Examples	This example shows ho	w to move a file to another directory:
	<pre>switch# move file1 my_files/file2</pre>	
	This example shows how to move a file to another file system:	
	switch# move file1 volatile:	
	This successly shows how to make a file to successive method and held.	
	This example shows how to move a file to another supervisor module: switch# move file1 bootflash://sup-1/file1.bak	
	SWIUCH# move file1 b	COTTASN://Sup-1/Illel.Dak

Related Commands	Command	Description
	cd	Changes the current working directory.
	сору	Makes a copy of a file.
	delete	Deletes a file or directory.
	dir	Displays the directory contents.
	pwd	Displays the name of the current working directory.

move

P Commands

This chapter describes the basic Cisco NX-OS system commands that begin with P.

parity

To configure the parity for the console port, use the **parity** command. To revert to the default, use the **no** form of this command.

parity {even | none | odd }

no parity {even | none | odd}

Syntax Description	even	Specifies even parity.	
	none	Specifies no parity.	
	odd	Specifies odd parity.	
Command Default	The none keyword	is the default.	
Command Modes	Terminal line config	guration mode	
Command History	Release	Modification	
	6.0(2)N1(1)	This command was introduced.	
Usage Guidelines	You can configure t	he console port only from a session on the console port.	
Examples	This example show	s how to configure the parity for the console port:	
	<pre>switch# configure terminal switch(config)# line console switch(config-console)# parity even</pre>		
	This example shows how to revert to the default parity for the console port:		
	<pre>switch# configure terminal switch(config)# line console switch(config-console)# no parity even</pre>		
Related Commands	Command	Description	

Displays information about the console port configuration.

show line

ping

To determine the network connectivity to another network device, use the **ping** command.

ping {dest-address | hostname } [count {number | unlimited }] [df-bit] [interval seconds]
[packet-size bytes] [source src-address] [timeout seconds] [vrf {vrf-name | default |
management }]

Syntax Description	dest-address	IPv4 address of the destination device. The format is A.B.C.D.
-,	hostname	Hostname of the destination device. The hostname is case sensitive.
	count	(Optional) Specifies the number of transmissions to send.
	number	Number of pings. The range is from 1 to 655350. The default is 5.
	unlimited	Allows an unlimited number of pings.
	df-bit	(Optional) Enables the do-not-fragment bit in the IPv4 header. The default is disabled.
	interval seconds	(Optional) Specifies the interval in seconds between transmissions. The range is from 0 to 60. The default is 1 second.
	packet-size bytes	(Optional) Specifies the packet size in bytes to transmit. The range is from 1 to 65468. The default is 56 bytes.
	source scr-address	(Optional) Specifies the source IPv4 address to use. The format is <i>A.B.C.D</i> . The default is the IPv4 address for the management interface of the device.
	timeout seconds	(Optional) Specifies the nonresponse timeout interval in seconds. The range is from 1 to 60. The default is 2 seconds.
	vrf vrf-name	(Optional) Specifies the virtual routing and forwarding (VRF) to use. The name is case sensitive and can be a maximum of 32 characters.
	default	(Optional) Specifies the default VRF.
	management	(Optional) Specifies the management VRF.
Command Default	For the default values,	see the "Syntax Description" section for this command.
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.

Related Commands	Command	Description
	ping6	Determines connectivity to another device using IPv6 addressing.
	traceroute	Displays the routes that packets take when traveling to an IP address.

ping6

To determine the network connectivity to another device using IPv6 addressing, use the **ping6** command.

ping6 {dest-address | hostname } [count {number | unlimited }] [interface intf-id] [interval
 seconds] [packet-size bytes] [source address] [timeout seconds] [vrf {vrf-name | default |
 management }]

	dest-address	Destination IPv6 address. The format is A:B::C:D.
	hostname	Hostname of destination device. The hostname is case sensitive.
	count	(Optional) Specifies the number of transmissions to send.
	number	Number of pings. The range is from 1 to 655350. The default is 5.
	unlimited	Allows an unlimited number of pings.
	interface intf-id	(Optional) Specifies the interface to send the IPv6 packet. The valid interface types are Ethernet, loopback, EtherChannel, and VLAN.
	interval seconds	(Optional) Specifies the interval in seconds between transmissions. The range is from 0 to 60. The default is 1 second.
	packet-size bytes	(Optional) Specifies the packet size in bytes to transmit. The range is from 1 to 65468.
	source address	(Optional) Specifies the source IPv6 address to use. The format is <i>A</i> : <i>B</i> :: <i>C</i> : <i>D</i> . The default is the IPv6 address for the management interface of the device.
	timeout seconds	(Optional) Specifies the nonresponse timeout interval in seconds. The range is from 1 to 60. The default is 2 seconds.
	vrf vrf-name	(Optional) Specifies the virtual routing and forwarding (VRF) to use. The name is case sensitive and can be a maximum of 32 alphanumeric characters.
	default	(Optional) Specifies the default VRF.
	monogomont	(Ontional) Specifics the management VDE
	management	(Optional) Specifies the management VRF.
Command Default		, see the "Syntax Description" section for this command.
Command Default		
Command Default Command Modes		
	For the default values	
Command Modes	For the default values.	, see the "Syntax Description" section for this command.

Related Commands	Command	Description
	ping	Determines connectivity to another device using IPv4 addressing.
	traceroute6	Displays the routes that packets take when traveling to an IPv6 address.

R Commands

This chapter describes the basic Cisco NX-OS system commands that begin with R.

reload

To reload the switch and all attached Fabric Extender chassis or a specific Fabric Extender, use the **reload** command.

reload {all | fex chassis_ID}

Syntax Description	all	Reboots the entire Cisco Nexus 5000 Series switch and all attached Fabric Extender chassis.	
	fex chassis_ID	Reboots a specific Fabric Extender chassis. The chassis ID is from 100 to 199.	
Command Default	Reloads the Cisco Nexu	as 5000 Series switch.	
command Modes	EXEC mode		
Command History	Release	Modification	
-	6.0(2)N1(1)	This command was introduced.	
Examples	This example shows how to reload the Cisco Nexus 5000 Series switch:		
	switch# copy running-config startup-config switch# reload This command will reboot the system. (y/n)? [n] y		
	This example shows how to reload a Fabric Extender:		
	switch# reload fex 101 WARNING: This command will reboot FEX 101 Do you want to continue? (y/n) [n] y		
Related Commands	Command	Description	
neidleu collillidiidS	command copy running-config	Copies the current running configuration to the startup configuration.	
	startup-config		
	show version	Displays information about the software version.	

rmdir

To remove a directory, use the **rmdir** command.

rmdir [filesystem: [//server/]] directory

Syntax Description	filesystem:	(Optional) Name of the file system. Valid values are bootflash , modflash , or volatile .
	server	(Optional) Name of the server. Valid values are ///, //module-1/, //sup-1/, //sup-active/, or //sup-local/. The double slash (//) is required.
	directory	Name of a directory to delete. The directory name is case sensitive.
Note	separated by colons	aces in the <i>filesystem://server/directory</i> string. Individual elements of this string are s (:) and slashes (/).
Command Default	None	
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Examples	This example show switch# rmdir my _	s how to remove a directory: files
Related Commands	Command	Description
nonatou ooninaliuo	cd	Changes the current working directory.
	delete	Deletes a file or directory.
	dir	Displays the directory contents.
	pwd	Displays the name of the current working directory.
	hun	Displays the name of the current working uncetory.

run-script

To run a command script file at the command-line interface (CLI), use the **run-script** command.

run-script [filesystem:[//module/]][directory/]filename

Syntax Description	filesystem:	(Optional) Name of a file system. The name is case sensitive.
	llmodule/	(Optional) Identifier for a supervisor module. Valid values are sup-active ,
		sup-local, sup-remote, or sup-standby. The identifiers are case sensitive.
	directoryl	(Optional) Name of a directory. The name is case sensitive.
	filename	Name of the command file. The name is case sensitive.
Note	There can be no sp	aces in the <i>filesystem://server/directory/filename</i> string. Individual elements of this
	-	d by colons (:) and slashes (/).
0	N	
Command Default	None	
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Usage Guidelines	You must create the switch using the co	e command file on a remote device and download it to the Cisco Nexus 5000 Series opy command.
Examples	This example show	vs how to run a command script file:
	switch# run-scrig	pt script-file
Related Commands	Command	Description
	cd	Changes the current working directory.
	copy	Copies files.
	dir	Displays the directory contents.
	echo	Displays a test string on the terminal.
	pwd	Displays the name of the current working directory.
	sleep	Causes the CLI to pause for a defined number of seconds.

run-script

S Commands

This chapter describes the basic Cisco NX-OS system commands that begin with S.

save

To save the current configuration session to a file, use the **save** command.

save location

Syntax Description	location	Location of the file. The location can be in bootflash or volatile. The file name can be any alphanumeric string up to 63 characters.
Command Default	None	
command Modes	Session configuration	mode
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
zamples	This example shows how to save a configuration session to a file in bootflash: switch# configure session MySession switch(config-s)# save bootflash:sessions/MySession	
Related Commands	Command	Description
Related Commands	Command configure session delete	Description Creates or modifies a configuration session. Deletes a file from a location.

send

To send a message to the active user sessions, use the send command.

send [session line] text

Syntax Description	session line	(Optional) Specifies a user session.	
-,	text	Text string. The text string can be up to 80 alphanumeric characters and is case sensitive.	
Command Default	Sends a message to	all active user sessions.	
Command Modes	EXEC mode		
Command History	Release	Modification	
	6.0(2)N1(1)	This command was introduced.	
Usage Guidelines	You can use the sh	ow users command to display information about the active user sessions.	
Examples	This example show	vs how to send a message to all active user sessions on the switch:	
	switch# send The system will reload in 15 minutes! The system will reload in 15 minutes!		
	This example shows how to send a message to a specific user session:		
	switch# send session pts/0 You must log off the switch.		
	Command	Description	
Related Commands			

session-limit

To configure the maximum number of the concurrent virtual terminal sessions on a device, use the **session-limit** command. To revert to the default, use the **no** form of this command.

session-limit sessions

no session-limit sessions

Syntax Description	sessions	Maximum number of sessions. The range is from 1 to 64.
ommand Default	32 sessions	
mmand Modes	Terminal line confi	guration mode
ommand History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Examples	switch# configure switch(config)# 1	
	This example shows how to revert to the default maximum number of concurrent virtual terminal sessions:	
	sessions:	

Related Commands	Command	Description
	line vty	Enters the virtual terminal configuration mode.
	show running-config	Displays the running configuration.

setup

To enter the basic device setup dialog, use the **setup** command.

setup [ficon]

Syntax Description	ficon	(Optional) Runs the basic ficon setup command facility.
Command Default	None	
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Usage Guidelines	The setup script uses the the dialog at any point	the factory-default values, not the values that you have configured. You can exit by pressing Ctrl-C .
Examples	This example shows ho switch# setup	w to enter the basic device setup script:
Related Commands	Command	Description
	show running-config	Displays the running configuration.

sleep

To cause the command-line interface (CLI) to pause before displaying the prompt, use the **sleep** command.

sleep seconds

Syntax Description	seconds	Number of seconds. The range is from 0 to 2147483647.
Command Default	None	
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Usage Guidelines	You can use this co	mmand in command scripts to delay the execution of the script.
Examples	This example show switch# sleep 5	s how to cause the CLI to pause for 5 seconds before displaying the prompt:
Related Commands	Command	Description
	run-script	Runs command scripts.

speed

To configure the transmit and receive speed for the console port, use the **speed** command. To revert to the default, use the **no** form of this command.

speed speed

no speed speed

Syntax Description	speed	Speed in bits per second. Valid speeds are 300, 1200, 2400, 4800, 9600, 19200, 38400, 57600, or 115200.	
Command Default	The default consol	e port speed is 9600 bits per second.	
Command Modes	Terminal line conf	iguration mode	
Command History	Release	Modification	
	6.0(2)N1(1)	This command was introduced.	
Usage Guidelines	You can configure	the console port only from a session on the console port.	
Examples	This example shows how to configure the speed for the console port:		
	<pre>switch# configure terminal switch(config)# line console switch(config-console)# speed 57600</pre>		
	This example shows how to revert to the default speed for the console port:		
	<pre>switch# configur switch(config)# : switch(config-config)</pre>		
Related Commands	Command	Description	

Related Commands	Command	Description
	line console	Enters the console terminal configuration mode.
	show running-config	Displays the running configuration.

stopbits

To configure the stop bits for the console port, use the **stopbits** command. To revert to the default, use the **no** form of this command.

stopbits {1 | 2}

no stopbits {1 | 2}

Syntax Description	1	Specifies one stop bit.	
	2	Specifies two stop bits.	
Command Default	1 stop bit		
Command Modes	Terminal line configuration mode		
Command History	Release	Modification	
	6.0(2)N1(1)	This command was introduced.	
Examples	This axample show	to how to configure the number of stop hits for the console port.	
Examples	This example shows how to configure the number of stop bits for the console port:		
	<pre>switch# configure terminal switch(config)# line console switch(config-console)# stopbits 2</pre>		
	This example shows how to revert to the default number of stop bits for the console port:		
	<pre>switch# configure terminal switch(config)# line console switch(config-console)# no stopbits 2</pre>		
Related Commands	Command	Description	

Enters the console terminal configuration mode.

Displays the running configuration.

line console

show running-config

switchname

To configure the hostname for the device, use the **switchname** command. To revert to the default, use the **no** form of this command.

switchname name

no switchname

Syntax Description	name	Hostname for the switch. The name is alphanumeric, case sensitive, can contain special characters, and can have a maximum of 32 characters.	
Command Default	"switch" is the default hostname.		
Command Modes	EXEC mode		
Command History	Release	Modification	
	6.0(2)N1(1)	This command was introduced.	
Usage Guidelines	The Cisco NX-OS software uses the hostname in command-line interface (CLI) prompts and in default configuration filenames.		
	The switchname command performs the same function as the hostname command.		
Examples	This example shows h	ow to configure the hostname for a Cisco Nexus 5000 Series switch:	
	<pre>switch# configure terminal switch(config)# switchname Engineering2 Engineering2(config)#</pre>		
	This example shows how to revert to the default hostname:		
	Engineering2# configure terminal Engineering2(config)# no switchname switch(config)#		
Related Commands	Command	Description	
	hostname	Configures the switch hostname.	
	show hostname	Displays the switch hostname.	
	show switchname	Displays the switch hostname.	

system cores

To configure the destination for the system core, use the **system cores** command. To revert to the default, use the **no** form of this command.

system cores tftp:tftp_URL [vrf management]

no system cores

Syntax Description	tftp:	Specifies a TFTP server.
	tftp_URL	URL for the destination file system and file. Use the following format:
		[//server[:port]][/path/]filename
	vrf management	(Optional) Specifies to use the management virtual routing and forwarding (VRF).
Command Default	None	
Command Modes	Interface configuratio	n mode
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Examples	This example shows how to configure a core file:	
	<pre>switch# configure terminal switch(config)# system cores tftp://serverA:69/core_file</pre>	
	This example shows how to disable system core logging:	
	<pre>switch# configure terminal switch(config)# no system cores</pre>	
Related Commands	Command	Description

Related Commands	Command	Description
	show system cores	Displays the core filename.

system startup-config unlock

To unlock the startup configuration file, use the system startup-config unlock command.

system startup-config unlock process-id

Syntax Description	process-id	Identifier of the process that has locked the startup-configuration file.
Command Default	None	
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Usage Guidelines	Use the show system in configuration file.	ternal sysmgr startup-config locks command to display the locks on the startup
Examples	This example shows how to unlock the startup-configuration file: switch# system startup-config unlock 10	
Related Commands	Command	Description
	show startup-config	Displays the startup configuration information.

Show Commands

This chapter describes the basic Cisco NX-OS system show commands.

show banner motd

To display the message-of-the-day (MOTD) banner, use the **show banner motd** command.

show banner motd

Syntax Description This cor	nmand has no arguments or keywords.

- Command Default None
- **Command Modes** EXEC mode

 Release
 Modification

 6.0(2)N1(1)
 This command was introduced.

Examples This example shows how to display the MOTD banner: switch# show banner motd Unauthorized access is prohibited!

Related Commands	Command	Description
	banner motd	Configures the MOTD banner.

show boot

To display the boot variable configuration, use the **show boot** command.

show boot [variables]

Syntax Description	variables	(Optional) Displays a list of boot variables.	
Command Default	Displays all config	ured boot variables.	
Command Modes	EXEC mode		
Command History	Release	Modification	
	6.0(2)N1(1)	This command was introduced.	
Examples	This example show switch# show boot	rs how to display all configured boot variables:	
	This example shows how to display the list of boot variable names:		
	switch# show boot	: variables	
Related Commands	Command	Description	
	boot	Configures the boot variable for the kickstart or system image.	

show cli alias

To display the command alias configuration, use the show cli alias command.

show cli alias [name alias-name]

Syntax Description	name alias-name	(Optional) Specifies the name of a command alias. The alias name is not case sensitive.			
Command Default	Displays all configure	d command alias variables.			
Command Modes	EXEC mode				
Command History	Release	Modification			
	6.0(2)N1(1)	This command was introduced.			
Examples	This example shows how to display all configured command aliases: switch# show cli alias				
	This example shows h	ow to display a specific command alias:			
	switch# show cli al :	ias name ethint			
Related Commands	Command	Description			
	cli alias name	Configures command aliases.			

show cli history

To display the command history, use the **show cli history** command.

show cli history [lines] [unformatted]

Syntax Description	lines	(Optional) Last number of lines from the end of the command history.			
Syntax Description	unformatted	(Optional) Displays the commands without line numbers or time stamps.			
	uniormaticu	(Optional) Displays the commands without file numbers of time stamps.			
ommand Default	Displays the entire	formatted history.			
ommand Modes	EXEC mode				
Command History	Release	Modification			
	6.0(2)N1(1)	This command was introduced.			
xamples	This example shows how to display all of the command history:				
	This example shows	s how to display the last 10 lines of the command history:			
	switch# show cli 1				
	This example shows how to display unformatted command history:				
	-	history unformatted			
Related Commands	Command	Description			
	clear cli history	Clears the command history.			

show cli variables

To display the configuration of the command-line interface (CLI) variables, use the **show cli variables** command.

show cli variables

Syntax Description	This command has	no arguments or keywords.
Command Default	None	
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Examples	This example shows switch# show cli	s how to display the CLI variables:
Related Commands	Command	Description
	cli var name	Configures CLI variables.

show clock

To display the current date and time, use the **show clock** command.

show clock [detail]

Syntax Description	detail	(Optional) Displays the summer-time (daylight saving time) offset configuration.
Command Default	None	
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Examples	This example shows ho	w to display the current clock setting:
	switch# show clock	
	This example shows how configuration:	w to display the current clock setting and the summer-time (daylight saving time)
	switch# show clock de	etail
Related Commands	Command	Description
	clock set	Sets the clock time.
	clock summer-time	Configures the summer-time (daylight saving time) offset.

show configuration session

To display information about configuration sessions, use the **show configuration session** command.

show configuration session [session-name | status | summary]

Syntax Description	session-name	(Optional) Configuration session name. The name can be a maximum of 6- alphanumeric characters.
	status	(Optional) Displays the status of the configuration session.
	summar	(Optional) Displays summary information of the active configuration sessions.
Command Default	None	
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)

	//server/ directory filename There can be no sp string are separated None EXEC mode Release 6.0(2)N1(1) This example show switch# show file If the file that you switch# show file /bin/showfile:

Displays the directory contents.

Displays the name of the current working directory.

dir

pwd

show hardware internal

To display information about the physical device hardware, use the **show hardware internal** command.

show hardware internal

Syntax Description	This command has no as	rguments or keywords.
Command Default	None	
Command Modes	EXEC mode	
Command History	Release 6.0(2)N1(1)	Modification This command was introduced.
Examples	This example shows how switch# show hardware	w to display information about the physical device hardware:
Related Commands	Command	Description

u commanus	Commanu	Description
	show inventory	Displays hardware inventory information.
	show module	Displays information about the modules.

show hostname

To display the hostname for the switch, use the show hostname command.

show hostname

Syntax Description This command has no arguments or keywords	s.
--	----

Command Default None

Command Modes EXEC mode

 Release
 Modification

 6.0(2)N1(1)
 This command was introduced.

Usage Guidelines The **show switchname** command also displays the switch hostname.

Examples This example shows how to display the hostname for the switch: switch# show hostname switch

switch#

Related Commands	Command	Description
	hostname	Configures the hostname for the switch.
	show switchname	Displays the hostname.
	switchname	Configures the hostname for the switch.

show incompatibility system

To display the configuration incompatibilities between the running system image and an earlier system image prior to downgrading the Cisco NX-OS software, use the **show incompatibility system** command.

show incompatibility system {filesystem: //server/ [directory] filename}

Syntax Description	filesystem:	Name of the file system. Valid values are bootflash or volatile .
	server	Name of the server. Valid values are ///, //module-1/, //sup-1/, //sup-active/, or //sup-local/. The double slash (//) is required.
	directory	(Optional) Name of a directory. The directory name is case sensitive.
	filename	Name of the file to compare with the loaded software image. The filename is case sensitive.
Note		ces in the <i>filesystem://server/directory/filename</i> string. Individual elements of this by colons (:) and slashes (/).
Command Default	None

show install all

To display information related to the operation of the **install all** command, use the **show install all** command.

show install all {failure-reason | impact [kickstart | system] | status}

Syntax Description	failure-reason	Displays the software installation failure reason.
	impact	Displays the impact of installing the images referred to in the boot variables.
	kickstart	(Optional) Displays the impact of installing the kickstart image referred to in the kickstart boot variable.
	system	(Optional) Displays the impact of installing the system image referred to in the kickstart boot variable.
	status	Displays the status of the software installation process.
Command Default	None	
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Examples	-	how to display the installation failure reason: all all failure-reason lure-reason

switch#

Table 1 describes the columns used in the show license usage command output.

Table 1	show license usage Columns
---------	----------------------------

Column	Description			
Feature	Name of the license package.			
Ins	License installation status. "No" indicates that the license is not installe "Yes" indicates that the license is installed.			
Lic Count	License count. "-" indicates that the count is not used for this license package. A number in this field indicates that number of current usages of the license by features. This field is not supported.			
Status	License status. "Unused" indicates that no features that require the license are enabled. "In use" indicates that one or more features are using the license.			

Column	Description		
Expiry Date	License expiry date. The field is blank if the license is not installed. If the license is installed, the field displays "Never" to indicate that the license has no time limit or displays the date of expiry for the license.		
Comments	Additional information. "Grace" with a time period remaining in days ("D") and hours (:H") indicates that the grace license is in use and "license missing" indicates that an error has occurred.		

Table 1 show license usage Columns (continued)

This example shows how to display a list of features in use for a specific license:

```
switch# show license usage FC_FEATURES_PKG
Application
-----
PFM
------
switch#
```

Related Commands	Command	Description
	install license	Installs a license.
	show license	Displays license information.
	show license host-id	Displays the serial number of the chassis to use for licensing.

show line

To display terminal port configuration information, use the **show line** command.

show line [console [user-input-string]]

Syntax Description	console	(Optional) Displays only information about the console port configuration.				
	user-input-string	(Optional) Displays the user-input initialization string.				
Command Default	Displays information	about the terminal port configuration.				
ommand Modes	EXEC mode					
Command History	Release	Modification				
,	6.0(2)N1(1)	This command was introduced.				
xamples	This example shows	how to display information about the terminal port configuration information:				
	switch# show line line Console:					
	Speed:	115200 baud				
		8 bits per byte				
	Stopbits: 2 bit(s)					
	Parity: none					
	Modem In: Disable Modem Init-String -					
		ATE0Q1&D2&C1S0=1\015				
	line Aux:					
	-	9600 baud

	Modem In: Disa					
	Modem Init-Str					
	default : Hardware Flowc	ATE0Q1&D2&C1S0=1\015 ontrol: ON				
	switch#					
	This example shows how to display only the information about the console port configuration:					
	switch# show line	console				
	line Console: Speed:	115200 baud				
	-	8 bits per byte				
		2 bit(s)				
		none				
	Modem In: Disa	ble				

Modem Init-String -

default : ATE0Q1&D2&C1S0=1\015

switch#

This example shows how to display the user-input initialization string for a modem:

```
switch# show line console user-input-string
Console's user-input string is ATE0Q1&D2&C1S0=3\015
switch#
```

Related Commands	Command	Description
	line console	Enters the console port configuration mode.

show module

To display module information, use the **show module** command.

show module [module-number | fex [chassis_ID | all]]

Syntax Description	<i>module-number</i> (Optional) Number of the module. The valid range is from 1 to 3.							
	fex	(Optional) Displays information about the attached Fabric Extender units.						
	chassis_ID	(Optional) Fabric Extender chassis ID. The chassis ID is from 100 to 199.						
	all	(Optional) Displays in	nformation about all the att	tached Fabric Extender units.				
Command Default	Displays module infor	mation for all modules in	the switch chassis.					
Command Modes	EXEC mode							
Command History	Release	Modification						
	6.0(2)N1(1)	This command was in	troduced.					
Examples	switch# show module Mod Ports Module-Typ	pe	n for all modules in the chassis: Model Status

Related Commands

Command	Description
show processes	Displays the process information for the switch.
show processes cpu	Displays the CPU utilization information for processes.
show processes memory	Displays the memory allocation information for processes.

show processes memory

To display the memory allocation information for processes, use the show processes memory command.

show processes memory [shared [detail]]

tax Description	shared		(0	ptional) D	isplays th	e shared memory all	ocation.

Related Commands

Command	Description
copy running-config startup-config	Copies the running configuration to the startup configuration.
show running-config diff	Displays the differences between the running configuration and the startup configuration.
show startup-config	Displays the startup configuration.

show running-config diff

To display the differences between the running configuration and the startup configuration, use the **show running-config diff** command.

show running-config diff

- **Syntax Description** This command has no arguments or keywords.
- **Command Default** None

Command Modes EXEC mode

Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.

Usage Guidelines Table 2 describes the notations used in the command output.

Table 2show running-config diff Notations

Notation	Description
**************************************	Indicates ranges of lines where differences occur. The range of lines indicated with asterisks (*) is for the startup configuration and the range indicated with dashes (–) is for the startup configuration.
+ text	Indicates that the line is in the running configuration but is not in the startup configuration.
- text	Indicates that the line is not in the running configuration but it is in the startup configuration.
! text	Indicates that the line exists in both configurations but in different orders.

Examples

This example shows how to display the difference between the running configuration and the startup configuration:

Related Commands	Command	Description
	copy running-config startup-config	Copies the running configuration to the startup configuration.
	show running-config	Displays the differences between the running configuration and the startup configuration.
	show startup-config	Displays the startup configuration.

show sprom

To display the contents of the serial PROM (SPROM) on the switch, use the show sprom command.

show sprom {all | backplane | fex {chassis_ID {all | backplane | powersupply ps-num} | all} |
module module-number | powersupply ps-num | sup}

Syntax Description	all	Displays the SPROM contents for all components on the physical device.
	backplane	Displays the SPROM contents for the backplane.
	fex	Displays information about the attached Fabric Extender units.
	chassis_ID	(Optional) Fabric Extender chassis ID. The chassis ID is from 100 to 199.
	module module-number	Displays the SPROM contents for an I/O module. The module number range is from 1 to 3.
	powersupply ps-num	Displays the SPROM contents for a power supply module number. The power supply module number is 1 or 2.
	sup	Displays the SPROM contents for the active supervisor module.
Command Default	None	
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Usage Guidelines	revision numbers. If you	ch contains detailed information about the hardware, including serial, part, and need to report a problem with a system component, you can extract serial g the show sprom command.
Examples	This example shows how	to display SPROM information for all components on the physical device:

show switchname

To display the hostname for the device, use the **show switchname** command.

show switchname

Syntax Description	This command has no ar	rguments or keywords.
Command Default	None	
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Usage Guidelines Examples		mmand also displays the switch hostname.
Examples	switch# show switchname	
	<u>-</u>	Description
Related Commands	Command	Description Configures the bestneme for the switch
	hostname show hostname	Configures the hostname for the switch. Displays the hostname.
	switchname	
	switchname	Configures the hostname for the switch.

show system cores

To display the core filename, use the show system cores command.

show system cores

Syntax Description	This command has no arguments or keywords.
--------------------	--

Command Default None

Command Modes EXEC mode

 Release
 Modification

 6.0(2)N1(1)
 This command was introduced.

Use the system cores command to configure the system core filename.

Examples This example shows how to display destination information for the system core files: switch# show system cores Cores are transferred to tftp://192.168.2.5/tftpboot/ switch#

Related Commands	Command	Description
	system cores	Configures the system core filename.

show system reset-reason

To display the reset history for the switch, use the show system reset-reason command.

show system reset-reason [fex chassis_ID]

Syntax Description	fex chassis_ID	(Optional) Specifies the Fabric Extender chassis ID. The chassis ID is from 100 to 199.	
Command Default	None		
Command Modes	EXEC mode		
Command History	Release	Modification	
	6.0(2)N1(1)	This command was introduced.	
Examples	This example shows	how to display the reset-reason history for the switch:	
-	switch# show system reset-reason		
	 reset reason for Supervisor-module 1 (from Supervisor in slot 1) 1) At 907240 usecs after Mon Jan 7 20:55:27 2013 Reason: Reset Requested by CLI command reload Service: Version: 6.0(2)N1(1)

	<pre>switch(config)#</pre>	
Related Commands	Command	Description
	show processes cpu	Displays the CPU utilization information for processes on the device.

show system uptime

To display the amount of time since the last system restart, use the **show system uptime** command.

	show system uptime	
Syntax Description	This command has no argun	nents or keywords.
Command Default	None	
Command Modes	EXEC mode	
Command History		lodification his command was introduced.
Examples	This example shows how to switch# show system uptin System start time: System uptime: Kernel uptime:	display the amount of time since the last system restart: me Mon Jul 12 01:37:08 2010 1 days, 4 hours, 42 minutes, 19 seconds 1 days, 4 hours, 44 minutes, 19 seconds

show tech-support

To display information for Cisco technical support, use the show tech-support command.

show tech-support [brief | commands | feature]

Syntax Description	brief	(Optional) Displays information only about the status of the device.	
	commands	(Optional) Displays the complete list of commands that are executed by the show tech-support command.	
	feature	(Optional) Specific feature name. Use the command-line interface (CLI) context-sensitive help (for example, show tech-support ?) for the list of features.	
Command Default	Displays information for	all features.	
Command Modes	EXEC mode		
Command History	Release	Modification	
	6.0(2)N1(1)	This command was introduced.	
Usage Guidelines	-	w tech-support command is very long. To better manage this output, you can ile (for example, show tech-support > <i>filename</i>) in the local writable storage e file system.	
	You can use one of the following redirection methods:		
	• > <i>filename</i> —Redirects the output to a file.		
	• >> <i>filename</i> —Redire	ects the output to a file in append mode.	
Examples	This example shows how	v to display technical support information:	
	<pre>switch# show tech-supp show tech-support `show switchname` switch `show system uptime`</pre>		
	System start time:	Mon Jul 12 01:37:08 2010	
	System uptime: Kernel uptime: Active supervisor upti `show interface mgmt0` mgmt0 is up	-	
	Hardware: GigabitEth Internet Address is MTU 1500 bytes, BW 1	nernet, address: 000d.ece7.df40 (bia 000d.ece7.df40) 192.168.1.215/24 1000000 Kbit, DLY 10 usec, 255, txload 1/255, rxload 1/255	

```
Encapsulation ARPA

--More-switch#

This example shows how to display the commands used to generate the technical support information: switch# show tech-support commands

Syntax Description

show terminal

To display information about the terminal configuration for a session, use the show terminal command.

show terminal

This command has no arguments or keywords.

Command Default	None	
Command Modes	EXEC mode	
Command History	Release 6.0(2)N1(1)	Modification This command was introduced.

Examples This example shows how to display information about the terminal configuration for a session:

switch# show terminal
TTY: /dev/pts/1 Type: "ansi"
Length: 29 lines, Width: 80 columns
Session Timeout: 0 minutes
Event Manager CLI event bypass: no
Redirection mode: ascii
switch#

Related Commands	Command	Description
	terminal length	Configures the terminal display length for the session.
	terminal session-timeout	Configures the terminal inactive session timeout for a session.
	terminal type	Configures the terminal type for a session.
	terminal width	Configures the terminal display width for a session.

show version

To display information about the software version, use the show version command.

show version [fex chassis_ID | image filename]

Syntax Description	fex chassis_ID	(Optional) Specifies the Fabric Extender chassis ID. The chassis ID is from 100 to 199.
	image filename	(Optional) Displays the version information for a system or kickstart image file.
Command Default	Displays software ve	ersion information for the running kickstart and system images.
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.

T Commands

This chapter describes the basic Cisco NX-OS system commands that begin with T.

tail

To display the last lines of a file, use the **tail** command.

tail [filesystem: [//server/]] [directory] filename [lines]

Syntax Description	filesystem:	(Optional) Name of the file system. Valid values are bootflash , modflash , or volatile .	
	server	(Optional) Name of the server. Valid values are ///, //module-1/, //sup-1/, //sup-active/, or //sup-local/. The double slash (//) is required.	
	directory	(Optional) Name of a directory. The directory name is case sensitive.	
	filename	Name of the file to display. The filename is case sensitive.	
	lines	(Optional) Number of lines to display. The range is from 0 to 80.	
Note	-	baces in the <i>filesystem://server/directory/filename</i> string. Individual elements of this d by colons (:) and slashes (/).	
Command Default	Displays the last 10	0 lines.	
command Modes	EXEC mode		
Command History	Release	Modification	
	6.0(2)N1(1)	This command was introduced.	
Examples	This example show	vs how to display the last 10 lines of a file:	
	switch# tail bootflash:startup.cfg		
	This example shows how to display the last 20 lines of a file:		
	-	tflash:startup.cfg 20	
	-		
Related Commands	Command	Description	
	cd	Changes the current working directory.	

	сору	Copies files.
-	dir	Displays the directory contents.
-	pwd	Displays the name of the current working directory.

terminal length

To set the number of lines of output to display on the terminal screen for the current session before pausing, use the **terminal length** command. To revert to the default, use the **no** form of this command.

terminal length lines

terminal no length

Syntax Description	lines	Number of lines to display. The range is from 0 to 511. Use 0 to not pause while displaying output.	
Command Default	The initial default for the console is 0 (do not pause output). The initial default for virtual terminal sessions is defined by the client software. The default for the no form is 24 lines.		
Command Modes	EXEC mode		
Command History	Release	Modification	
	6.0(2)N1(1)	This command was introduced.	
	display another screen of lines or press the Enter key to display another line. To return to the command prompt, press Ctrl-C.The terminal length setting applies only to the current session.		
Examples	The terminal length		
	pausing:		
	switch# terminal length 28		
	This example shows how to revert to the default number of lines:		
	switch# terminal n	o length	
Related Commands	Command	Description	
	show terminal	Displays the terminal session configuration.	

terminal session-timeout

To set the terminal inactivity timeout for the current session, use the **terminal session-timeout** command. To revert to the default, use the **no** form of this command.

terminal session-timeout minutes

terminal no session-timeout

Syntax Description	minutes	Number of minutes. The range is from 0 to 525600 minutes (8760 hours). Use 0 to disable the terminal inactivity timeout.	
Command Default	Terminal session time	eout is disabled (0 minutes).	
Command Modes	EXEC mode		
Command History	Release	Modification	
	6.0(2)N1(1)	This command was introduced.	
Usage Guidelines	The terminal session	inactivity timeout setting applies only to the current session.	
Examples	This example shows how to set the terminal inactivity timeout for the session to 10 minutes: switch# terminal session-timeout 10		
	This example shows how to revert to the default terminal inactivity timeout for the session: switch# terminal no session-timeout		
Related Commands	Command	Description	
	show terminal	Displays the terminal session configuration.	

terminal terminal-type

To set the terminal type for the current session, use the **terminal terminal-type** command. To revert to the default, use the **no** form of this command.

terminal terminal-type type

terminal no terminal-type

Syntax Description	type	Type of terminal. The type string is case sensitive, must be a valid type (for example, ansi, vt100, or xterm), and has a maximum of 80 characters.	
Command Default	For a virtual termina vt100 is the default.	l, the terminal type is set during negotiation with the client software. Otherwise,	
Command Modes	EXEC mode		
Command History	Release	Modification	
	6.0(2)N1(1)	This command was introduced.	
Usage Guidelines	The terminal type setting applies only to the current session.		
Examples	This example shows how to set the terminal type: switch# terminal terminal-type xterm		
	This example shows how to revert to the default terminal type:		
	switch# terminal n	o terminal-type	
Related Commands	Command	Description	
	show terminal	Displays the terminal session configuration.	

terminal width

To set the number of character columns on the terminal screen for the current line for a session, use the **terminal width** command. To revert to the default, use the **no** form of this command.

terminal width columns

terminal no width

Syntax Description	columns	Number of columns. The range is from 24 to 511.
Command Default	For a virtual termina is the default.	l, the width is set during negotiation with the client software. Otherwise, 80 columns
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Usage Guidelines	The terminal width s	setting applies only to the current session.
Examples	This example shows switch# terminal w	how to set the number of columns to display on the terminal:
	This example shows	how to revert to the default number of columns:
	switch# terminal n	o width
Related Commands	Command	Description
	show terminal	Displays the terminal session configuration.

traceroute

To discover the routes that packets take when traveling to an IP address, use the traceroute command.

traceroute {dest-addr | hostname} [vrf {vrf-name | default | management}] [source src-addr]

Syntax Description	dest-addr	IP address of the destination device. The format is A.B.C.D.
	hostname	Name of the destination device. The name is case sensitive.
	vrf vrf-name	(Optional) Specifies the virtual routing and forwarding (VRF) to use. The name is case sensitive.
	default	(Optional) Specifies the default VRF.
	management	(Optional) Specifies the management VRF.
	source src-addr	(Optional) Specifies a source IP address. The format is <i>A.B.C.D</i> . The default is the IPv4 address for the management interface of the switch.
Command Default	None	
Command Modes	EXEC mode	
	EXEC mode	Modification
		Modification This command was introduced.
Command Modes Command History Examples	Release 6.0(2)N1(1)	
Command History	Release 6.0(2)N1(1) This example shows	This command was introduced.
Command History	Release 6.0(2)N1(1) This example shows	This command was introduced. how to discover a route to a network device:
Command History Examples	Release 6.0(2)N1(1) This example shows switch# traceroute	This command was introduced. how to discover a route to a network device: 192.0.255.18 vrf management

traceroute6

To discover the routes that packets take when traveling to an IPv6 address, use the **traceroute6** command.

traceroute6 {dest-addr | hostname} [vrf {vrf-name | default | management}] [source src-addr]

Syntax Description	dest-addr	IPv6 address of the destination device. The format is A:B::C:D.
	hostname	Name of the destination device. The name is case sensitive.
	vrf vrf-name	(Optional) Specifies the virtual routing and forwarding (VRF) instance. The name is case sensitive and can be a maximum of 32 alphanumeric characters.
	default	(Optional) Specifies the default VRF.
	management	(Optional) Specifies the management VRF.
	source src-addr	(Optional) Specifies a source IPv6 address. The format is A:B::C:D. The default is the IPv6 address for the management interface of the switch.
Command Default	None	
Command Modes	EXEC mode	
Command History	Release	Modification
	6.0(2)N1(1)	This command was introduced.
Examples	This example shows	how to discover a route to a device:
	<pre>switch# traceroute6 2001:0DB8::200C:417A vrf management</pre>	
Related Commands	Command	Description
	ping6	Determines connectivity to another device using IPv6 addressing.
	traceroute	Discovers the route to a device using IPv4 addressing.

U Commands

This chapter describes the basic Cisco NX-OS system commands that begin with U.

update license

To update an existing license, use the **update license** command.

update license [filesystem: [//server/]] [directory] src-filename [target-filename]

011	
filesystem:	(Optional) Name of the file system. Valid values are bootflash or volatile .
server	(Optional) Name of the server. Valid values are ///, //module-1/, //sup-1/, //sup-active/, or //sup-local/. The double slash (//) is required.
directory	(Optional) Name of a directory. The directory name is case sensitive.
src-filename	Name of the source license file.
target-filename	(Optional) Name of the target license file.
There can be no spaces in the <i>filesystem://server/directory/filename</i> string. Individual elements string are separated by colons (:) and slashes (/).	
None	
EXEC mode	
Release	Modification
6.0(2)N1(1)	This command was introduced.
This example shows	how to update a license:
switch# update lic	cense bootflash:fm.lic fm-update.lic
Command	Description
	directory src-filename target-filename There can be no spa string are separated None EXEC mode Release 6.0(2)N1(1) This example shows

W Commands

This chapter describes the basic Cisco NX-OS system commands that begin with W.

write erase

To erase configurations in persistent memory areas, use the write erase command.

write erase [boot | debug]

Syntax Description	boot	(Optional) Erases only the boot configuration.	
	debug	(Optional) Erases only the debug configuration.	
Command Default	Erases all configuration	in persistent memory.	
Command Modes	EXEC mode		
Command History	Release	Modification	
	6.0(2)N1(1)	This command was introduced.	
Usage Guidelines		and to erase the startup configuration in the persistent memory when information e unusable. Erasing the startup configuration returns the switch to its initial state.	
Examples	This example shows how to erase the startup configuration:		
	switch# write erase		
	This example shows how to erase the debug configuration in the persistent memory: switch# write erase debug		
Related Commands		Description	
Related Commands	Command	Description	
Related Commands	Command copy running-config startup-config	Copies the running configuration to the startup configuration.	

1
