

Show Commands

This chapter describes the system management **show** commands.

show diagnostic bootup level

To display the current bootup diagnostic level on the switch, use the **show diagnostic bootup level** command.

show diagnostic bootup level

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the current bootup diagnostic level:

switch# show diagnostic bootup level

Current bootup diagnostic level: complete

switch#

Command	Description
diagnostic bootup level	Configures the bootup diagnostic level for a faster module bootup time.
show diagnostic result	Displays the results of the diagnostics tests.

show diagnostic result

To display the results of the diagnostic tests, use the show diagnostic result command.

show diagnostic result module {module-no | all}

Syntax Description

module	Specifies the module for which diagnostic results are displayed.
module-no	Module number. Valid values are 1 to 3.
all	Displays the diagnostic results for all modules.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the diagnostic results for a specific module:

```
Current bootup diagnostic level: complete

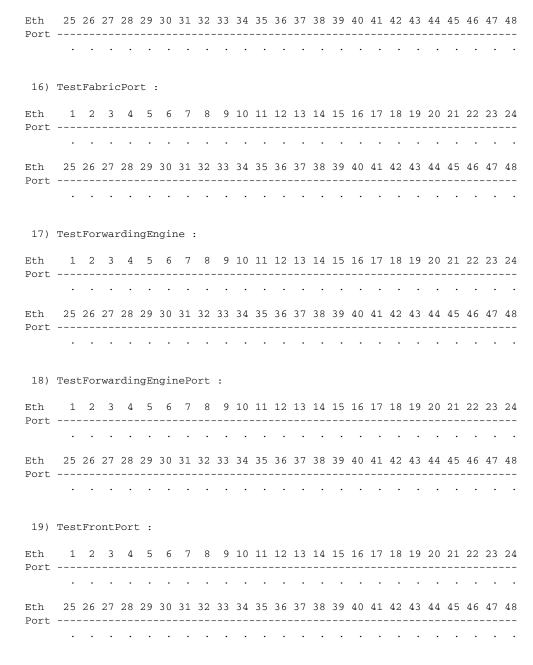

Module 1: 48X10GE/Supervisor SerialNo : JAF1339ANGH

Overall Diagnostic Result for Module 1 : PASS
Diagnostic level at card bootup: complete
```

switch# show diagnostic result module 1

1) TestUSBFlash -----> .

- 8) TestTemperatureSensor -----> .
 9) TestFan -----> .
- 10) TestVoltage ----->
 11) TestGPIO ----->
 12) TestInbandPort ---->
- 13) TestManagementPort ----->
- 14) TestMemory ----->
- 15) TestFabricEngine :

switch#

Command	Description
diagnostic bootup level	Configures the bootup diagnostic level for a faster module bootup time.
show diagnostic bootup level	Displays the bootup diagnostics level.

show hosts

To display the Domain Name Server (DNS) name servers and domain names, use the **show hosts** command.

show hosts

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the IP addresses of the DNS servers that are used to resolve host names:

switch# show hosts

DNS lookup enabled

Default domain for vrf:default is mysite.com Name/address lookup uses domain service

Name servers are 255.255.255.255

Vrf Use-vrf Token Config

default management domain mysite.com default management add. domain(s) mysite2.com

Host Address

switch#

Command	Description
ip domain-list	Defines a list of domains.
ip domain lookup	Enables DNS-based host name-to-address translation.
ip domain-name	Configures a name server.

show ip dns source-interface

To display the source interfaces configured for Domain Name Server (DNS) domain lookup, use the **show ip dns source-interface** command.

show ip dns source-interface [vrf {vrf-name | all | default | management}]

Syntax Description

vrf	(Optional) Displays information about the virtual routing and forwarding (VRF) instance.
vrf-name	(Optional) VRF name. The name is case sensitive and can be a maximum of 32 characters.
all	(Optional) Displays all VRF instances.
default	(Optional) Displays the default VRF information.
management	(Optional) Displays the management VRF information.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Usage Guidelines

This command does not require a license.

Examples

This example shows how to display the source interfaces configured for DNS domain lookup:

switch# show ip dns source-interface

VRF Name default switch# Interface
Ethernet1/5

Command	Description
ip domain-lookup	Enables the DNS lookup feature.
ip dns source-interface	Configures interfaces for DNS domain lookup.

show logging console

To display the console logging configuration, use the **show logging console** command.

show logging console

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the console logging configuration:

switch# show logging console

Command	Description
logging console	Configures logging to the console.

show logging info

To display the logging configuration, use the **show logging info** command.

show logging info

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the logging configuration:

switch# show logging info

Command	Description
logging level	Enables logging messages from a defined facility.

show logging last

To display the last number of lines of the logfile, use the **show logging last** command.

show logging last number

	/ntax	11000	-	ntion
-71	/IIIAX	11626	ш	

ıumber	Enters the number of lines to display from	1 to 9999.
--------	--	------------

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the last 42 lines of the log file:

switch# show logging last 42

Command	Description
logging level	Enables logging messages from a defined facility.

show logging level

To display the facility logging severity level configuration, use the **show logging level** command.

show logging level [facility]

Syntax Description

facility	(Optional) Logging facility. The facilities are listed in Table 1-1 of
	Appendix 1, "System Message Logging Facilities."

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the EtherChannel logging severity level configuration:

switch# show logging level port-channel

This example shows how to display the Flex Links logging severity level configuration:

switch# show logging level flexlink

Facility	Default Severity	Current Session Severity
Flexlink	2	5
0 (emergencies) 3 (errors) 6 (information)	1(alerts) 4(warnings) 7(debugging)	2(critical) 5(notifications)

switch#

switch#

This example shows how to display the FCoE NPV logging severity level configuration:

switch# show logging level fcoe_mgr

Facility	Default Severity	Current Session Severity
fcoe_mgr	2	3
0 (emergencies) 3 (errors) 6 (information)	1(alerts) 4(warnings) 7(debugging)	2(critical) 5(notifications)

Command	Description
logging level	Configures the facility logging level.

show logging logfile

To display the messages in the log file that were timestamped within the span entered, use the **show logging logfile** command.

show logging logfile [start-time yyyy mmm dd hh:mm:ss] [end-time yyyy mmm dd hh:mm:ss]

Syntax Description

start-time yyyy mmm dd hh:mm:ss	(Optional) Specifies a start time in the format <i>yyyy mmm dd hh:mm:ss</i> . Use three characters for the month (<i>mmm</i>) field, digits for the year (<i>yyyy</i>) and day (<i>dd</i>) fields, and digits separated by colons for the time (<i>hh:mm:ss</i>) field.
end-time yyyy mmm dd hh:mm:ss	(Optional) Specifies an end time in the format yyyy mmm dd hh:mm:ss. Use three characters for the month (mmm) field, digits for the year (yyyy) and day (dd) fields, and digits separated by colons for the time (hh:mm:ss) field.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Usage Guidelines

If you do not enter an end time, the current time is used.

Examples

This example shows how to display the messages in the log file that were timestamped within the span shown:

switch# show logging logfile start-time 2008 mar 11 12:10:00

Command	Description
logging logfile	Configures logging to a log file.

show logging module

To display the module logging configuration, use the **show logging module** command.

show logging module

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the module logging configuration:

switch# show logging module

Command	Description	
logging module	Configures module logging.	

show logging monitor

To display the monitor logging configuration, use the **show logging monitor** command.

show logging monitor

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the monitor logging configuration:

switch# show logging monitor

Command	Description
logging monitor	Configures logging on the monitor.

show logging nvram

To display the messages in the nonvolatile random access memory (NVRAM) log, use the **show logging nvram** command.

show logging nvram [last number-lines]

Cumtan	Daga		4: a m
Syntax	Desc	rid	tion

last number-lines	(Optional) Specifies the number of lines to display. The number of lines is from
	1 to 100.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the last 20 messages in the NVRAM log:

switch# show logging nvram last 20

Command	Description
logging level	Enables logging messages from a defined facility.

show logging onboard

To display the onboard logging information based on the error type, use the **show logging onboard** command.

show logging onboard {boot-uptime | device-version | endtime | environmental-history | exception-log | kernel-trace | obfl-history | obfl-logs | stack-trace | starttime | status } [> file | | type]

Syntax Description

boot-uptime	Displays the onboard failure logging (OBFL) boot and uptime information.
device-version	Displays the OBFL device version information.
endtime	Displays the OBFL logs until the specified end time in the following format: <i>mmlddlyy-HH:MM:SS</i>
environmental-history	Displays the OBFL environmental history.
exception-log	Displays the OBFL exception log.
kernel-trace	Displays the OBFL kernel trace information.
obfl-history	Displays the OBFL history information.
obfl-logs	Displays the OBFL technical support log information.
stack-trace	Displays the OBFL kernel stack trace information.
starttime	Displays the OBFL logs from the specified start time in the following format: mmlddlyy-HH:MM:SS
status	Displays the OBFL status enable or disable.
> file	(Optional) Redirects the output to a file. See the "Usage Guidelines" section for additional information.
l type	(Optional) Filters the output. See the "Usage Guidelines" section for additional information.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Usage Guidelines

The date and time arguments for the **starttime** and **endtime** keywords are entered as the date month/day/year (*mmlddlyy*), followed by a hyphen, and the time in 24-hour format in hours:minutes:seconds (*HH:MM:SS*). For example:

- starttime 01/30/13-15:01:57
- endtime 01/30/13-15:04:57

The valid values for file are as follows:

- bootflash:
- ftp:
- scp:
- sftp:
- tftp:

volatile:

The valid values for *type* are as follows:

- **begin** [-i] [-x] [word]—Begin with the line that matches the text.
 - -i—Ignores the case difference when comparing the strings.
 - -x—Prints only the lines where the match is a whole line.
 - word—Specifies for the expression.
- **count** [> *file* | | *type*]—Counts number of lines.
- **egrep** | **grep** *print-match*—Egrep or Grep. Egrep searches for lines of text that match more sophisticated regular expression syntax than grep. Grep searches for lines of text that match one or many regular expressions, and outputs only the matching lines.
 - A num—Prints the specifies number of lines of context after every matching line. Range: 1 to 999.
 - B num—Prints the specifies number of lines of context before every matching line. Range: 1 to 999.
 - -c—Prints a total count of matching lines only.
 - -i—Ignores the case difference when comparing the strings.
 - -n—Prints each match preceded by its line number.
 - -v—Prints only the lines that contain no matches for the *word* argument.
 - -w—Prints only lines where the match is a complete word.
 - -x—Prints only the lines where the match is a whole line.
 - word—Specifies for the expression.
- **exclude** [-i] [-x] [word]—Excludes the lines that match.
 - -i—Ignores the case difference when comparing the strings.
 - -x—Prints only the lines where the match is a whole line.
 - word—Specifies for the expression.
- **head** [-**n** *num*]—Stream Editor. The optional -**n** *num* keyword and argument allow you to specify the number of lines to print. Range: 0 to 2147483647.
- **include** [-i] [-x] [word]—Include the lines that match.
 - -i—Ignores the case difference when comparing the strings.
 - -x—Prints only the lines where the match is a whole line.
 - word—Specifies for the expression.
- **last** [num]—Displays the last lines to print. The optional num specifies the number of lines to print. Range: 0 to 9999.
- less [-E | -d]—Quits at the end of the file.

- - E—(Optional) Quits at the end of the file.
- -d—(Optional) Specifies a dumb terminal.
- **no-more**—Turns-off pagination for command output.
- sed command—Stream Editor
- wc—Counts words, lines, and characters.
 - -c—(Optional) Specifies the output character count.
 - -l—(Optional) Specifies the output line count.
 - -w—(Optional) Specifies the output word count.
 - >—Redirects it to a file.
 - I—Pipes command output to filter.

Use this command to view OBFL data from the system hardware. The OBFL feature is enabled by default and records operating temperatures, hardware uptime, interrupts, and other important events and messages that can assist with diagnosing problems with hardware cards or modules installed in a Cisco router or switch. Data is logged to files stored in nonvolatile memory. When the onboard hardware is started up, a first record is made for each area monitored and becomes a base value for subsequent records.

The OBFL feature provides a circular updating scheme for collecting continuous records and archiving older (historical) records, ensuring accurate data about the system. Data is recorded in one of two formats: continuous information that displays a snapshot of measurements and samples in a continuous file, and summary information that provides details about the data being collected. The message "No historical data to display" is seen when historical data is not available.

Examples

This example shows how to display the OBFL boot and uptime information:

Table 1 describes the significant fields shown in the display.

Table 1	show logging onboard boot-uptime Command Output	
i avie i	SHOW IOUUINU ONDOAIU DOOL-UDUNE COMMINANU OULDUL	

Field	Description
Boot Time	Time boot occurred.
Slot Number	Slot number.
Serial Number	Serial number of the module.
Bios Version	Primary binary input and output system (BIOS) version.
Firmware Version	Firmware version.

This example shows how to display the OBFL logging device information:

switch# show logging onboard device-version
----OBFL Data for
 Module: 1

Device Version Record

Time	stamp			Device N	Name	Instance Num	Hardware Version	Software Version
							version	version
Wed	Jan 30	07:07:00	2013	GATOS		2	2	0
Wed	Jan 30	07:07:00	2013	GATOS		3	2	0
Wed	Jan 30	07:07:00	2013	GATOS		4	2	0
Wed	Jan 30	07:07:00	2013	GATOS		5	2	0
Wed	Jan 30	07:07:00	2013	GATOS		6	2	0
Wed	Jan 30	07:07:00	2013	GATOS		7	2	0
Wed	Jan 30	07:07:00	2013	GATOS		8	2	0
Wed	Jan 30	07:07:00	2013	GATOS		9	2	0
Wed	Jan 30	07:07:00	2013	GATOS		10	2	0
Wed	Jan 30	07:07:00	2013	GATOS		11	2	0
Wed	Jan 30	07:07:00	2013	GATOS		12	2	0
Wed	Jan 30	07:07:00	2013	GATOS		13	2	0
Wed	Jan 30	07:07:00	2013	ALTOS		0	2	0
Wed	Jan 30	07:07:00	2013	GATOS		0	2	0
Wed	Jan 30	07:07:00	2013	GATOS		1	2	0
Wed	Jan 30	07:07:00	2013	GATOS		2	2	0

Table 2 describes the significant fields shown in the display.

Table 2 show logging onboard device-version Command Output

Field	Description
Timestamp	Day, date, and time.
Device Name	Device name.
Instance Num	Number of instances.
Hardware Version	Hardware device version.
Software Version	Software device version.

This example shows how to display the OBFL history information:

switch# show logging onboard obfl-history

The **show logging onboard obfl-history** command displays the following information:

- Timestamp when OBFL is manually disabled.
- Timestamp when OBFL is manually enabled.
- Timestamp when OBFL data is manually cleared.

This example shows how to display the OBFL kernel stack trace information:

switch# show logging onboard stack-trace

The **show logging onboard stack-trace** command displays the following information:

• Time in seconds

- Time in microseconds
- Error description string
- Current process name and identification
- Kernel jiffies
- Stack trace

Command	Description
clear logging onboard	Clears the OBFL entries in the persistent log.
hw-module logging onboard	Enables or disabled OBFL entries based on the error type.

show logging pending

To display the pending changes to the syslog server configuration, use the **show logging pending** command.

show logging pending

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the pending changes to the syslog server configuration:

switch# show logging pending
switch#

Command	Description
logging abort	Cancels the pending changes to the syslog server configuration.

show logging pending-diff

To display the differences from the current syslog server configuration to the pending changes of the syslog server configuration, use the **show logging pending-diff** command.

show logging pending-diff

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the pending differences of the syslog server configuration:

switch# show logging pending-diff
switch#

Command	Description
logging abort	Cancels the pending changes to the syslog server configuration.

show logging session status

To display the logging session status, use the **show logging session status** command.

show logging session status

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the logging session status:

switch# show logging session status

Command	Description
logging level	Enables logging messages from a defined facility.

show logging server

To display the syslog server configuration, use the **show logging server** command.

show logging server

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the syslog server configuration:

switch# show logging server

Command	Description
logging server	Configures a remote syslog server.

show logging status

To display the logging status, use the **show logging status** command.

show logging status

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the logging status:

switch# show logging status
Fabric Distribute : Enabled
Session State : IDLE
switch#

Command	Description
logging distribute	Enables the distribution of the syslog server configuration to network
	switches using the Cisco Fabric Services (CFS) infrastructure.

show logging timestamp

To display the logging time-stamp configuration, use the show logging timestamp command.

show logging timestamp

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the logging time-stamp configuration:

switch# show logging timestamp

Command	Description
logging timestamp	Configures the logging time stamp granularity.

show monitor session

To display information about the Switched Port Analyzer (SPAN) or Encapsulated Remote Switched Port Analyzer (ERSPAN) sessions, use the **show monitor session** command.

show monitor session [session | all [brief] | range range [brief] | status]

Syntax Description

session	(Optional) Number of the session. The range is from 1 to 18.
all	(Optional) Displays all sessions.
brief	(Optional) Displays a brief summary of the information.
range range	(Optional) Displays a range of sessions. The range is from 1 to 18.
status	(Optional) Displays the operational state of all sessions.
	Note This keyword applies only to SPAN sessions.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display information about SPAN session 1:

description : A Local SPAN session

type : local

destination ports : Eth1/21

state : down (No operational src/dst)

source intf

rx : Eth1/5
tx : Eth1/5
both : Eth1/5
source VLANs :
rx :
source VSANs :
rx :

Legend: f = forwarding enabled, l = learning enabled

switch#

This example shows how to display a brief information about a SPAN session:

```
description
              : A Local SPAN session
type
               : local
               : down (No operational src/dst)
state
source intf
              : Eth1/5
   rx
   tx
              : Eth1/5
             : Eth1/5
   both
source VSANs
destination ports : Eth1/21
Legend: f = forwarding enabled, 1 = learning enabled
switch#
```

This example shows how to display the information about an ERSPAN session on a switch:

```
switch# show monitor session 1
session 1
description
                : ERSPAN Source configuration
type
state
                : erspan-source
                 : down (No valid global IP Address)
flow-id : 1
vrf-name : default
destination-ip : 192.0.2.1
                 : 255
ip-ttl
ip-dscp
                 : 0
origin-ip
                : origin-ip not specified
source intf
                 : Eth1/5
   rx
    tx
                 : Eth1/5
                 : Eth1/5
   both
source VLANs
                 : 5
   rx
```

Related Commands

switch#

Command	Description
monitor session	Creates a new Switched Port Analyzer (SPAN) session configuration.
show running-config monitor	Displays the running configuration information about SPAN sessions.

show ntp authentication-status

To display the status of the Network Time Protocol (NTP) authentication, use the **show ntp** authentication-status command.

show ntp authentication-status

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command Modes

Any command mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the authentication status for NTP:

switch(config)# show ntp authentication-status

Command	Description
[no] ntp authenticate	Displays information about NTP peers.

show ntp peer-status

To display the status of the Network Time Protocol (NTP) peers, use the **show ntp peer-status** command.

show ntp peer-status

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the peer status for NTP:

switch(config)# show ntp peer-status

Command	Description
show ntp peers	Displays information about NTP peers.

show ntp peers

To display information about Network Time Protocol (NTP) peers, use the show ntp peers command.

show ntp peers

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display information about NTP peers:

switch(config) # show ntp peers

Command	Description
show ntp peer-status	Displays status information about NTP peers.

show ntp statistics

To display Network Time Protocol (NTP) statistics, use the **show ntp statistics** command.

show ntp statistics {io | local | memory | peer {ipaddr address | name name1 [..nameN]}

Syntax Description

io	Displays the input-output statistics.
local	Displays the counters maintained by the local NTP.
memory	Displays the statistics counters related to the memory code.
peer	Displays the per-peer statistics counter of a peer.
ipaddr address	Displays statistics for the peer with the configured IPv4 or IPv6 address. The IPv4 address format is dotted decimal, x.x.x.x. The IPv6 address format is hexadecimal A:B::C:D.
name name1	Displays statistics for a named peer.
nameN	(Optional) Displays statistics for one or more named peers.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the statistics for NTP:

switch(config)# show ntp statistics local

Command	Description
clear ntp statistics	Clears NTP statistics

show ntp timestamp-status

To display the Network Time Protocol (NTP) time-stamp information, use the **show ntp timestamp-status** command.

show ntp timestamp-status

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the NTP time-stamp status:

switch(config)# show ntp timestamp-status

Command	Description
clear ntp statistics	Clears NTP statistics
ntp	Configures NTP peers and servers on the switch.

show ptp brief

To display the PTP information, use the **show ptp brief** command.

show ptp brief

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command Modes

Global configuration mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the PTP status:

switch(config)# show ptp brief

Command	Description
show ptp clock	Displays the properties of the local clock.
show ptp clocks foreign-masters-recor d	Displays the state of foreign masters known to the PTP process.
show ptp corrections	Displays the last few PTP corrections.
show ptp parent	Displays the properties of the PTP parent and grandmaster clock.
show ptp port interface	Displays the status of the PTP port.
show ptp time-property	Displays the PTP clock time properties.

show ptp clock

To display the properties of the local PTP clock including clock identity, use the **show ptp clock** command.

show ptp clock

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command Modes

Global configuration mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the properties of the local clock:

switch(config)# show ptp clock

Command	Description
show ptp brief	Displays the PTP status.
show ptp clocks foreign-masters-recor d	Displays the state of foreign masters known to the PTP process.
show ptp corrections	Displays the last few PTP corrections.
show ptp parent	Displays the properties of the PTP parent and grandmaster clock.
show ptp port interface	Displays the status of the PTP port.
show ptp time-property	Displays the PTP clock time properties.

show ptp clocks foreign-masters-record

To display the state of the foreign masters known to the PTP process, use the **show ptp clocks foreign-masters-record** command.

show ptp clocks foreign-masters-record [ethernet *slot/[QSFP-module/]port]*

Syntax Description

ethernet	Specifies an Ethernet interface.
slot/[QSFP-module/]port	The <i>slot</i> number is from 1 to 255. The <i>QSFP-module</i> number is from 1 to 199. The <i>port</i> number is from 1 to 128.

Command Modes

Global configuration mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Usage Guidelines

For each foreign master, the output displays the clock identity, basic clock properties, and whether the clock is being used as a grandmaster.

Examples

This example shows how to display the foreign masters known to the PTP process:

switch(config)# show ptp foreign-masters-record

Command	Description
show ptp brief	Displays the PTP status.
show ptp clock	Displays the properties of the local clock.
show ptp corrections	Displays the last few PTP corrections.
show ptp port interface	Displays the status of the PTP port.
show ptp parent	Displays the properties of the PTP parent and grandmaster clock.
show ptp time-property	Displays the PTP clock time properties.

show ptp corrections

To display the last few PTP corrections, use the show ptp corrections command.

show ptp corrections

Syntax Description

There are no arguments or keywords for this command.

Command Default

None

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the most recent PTP corrections on the switch:

switch(config)# show ptp corrections

Command	Description
show ptp brief	Displays the PTP status.
show ptp clock	Displays the properties of the local clock.
show ptp clocks foreign-masters-recor d	Displays the state of foreign masters known to the PTP process.
show ptp port interface	Displays the status of the PTP port.
show ptp parent	Displays the properties of the PTP parent and grandmaster clock.
show ptp time-property	Displays the PTP clock time properties.

show ptp parent

To display the properties of the PTP parent and grandmaster clock, use the **show ptp parent** command.

show ptp parent

Syntax Description

There are no arguments or keywords for this command.

Command Default

None

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the properties of the PTP parent and grandmaster clock: switch(config)# show ptp parent

Command	Description
show ptp brief	Displays the PTP status.
show ptp clock	Displays the properties of the local clock.
show ptp clocks foreign-masters-recor d	Displays the state of foreign masters known to the PTP process.
show ptp corrections	Displays the last few PTP corrections.
show ptp port interface	Displays the status of the PTP port.
show ptp time-property	Displays the PTP clock time properties.

show ptp port interface

To display the status of the PTP port, use the **show ptp port interface ethernet** command.

show ptp port interface [ethernet slot/[QSFP-module/]port]

Syntax Description

ethernet	Specifies an Ethernet interface.
slot/[QSFP-module/]port	The <i>slot</i> number is from 1 to 255. The <i>QSFP-module</i> number is from 1 to 199. The <i>port</i> number is from 1 to 128.

Command Default

None

Command Modes

Global configuration mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the status of the PTP port on the switch:

switch(config) # show ptp port interface ethernet 5/1

Description
Displays the PTP status.
Displays the properties of the local clock.
Displays the state of foreign masters known to the PTP process.
Displays the last few PTP corrections.
Displays the status of the PTP port.
Displays the properties of the PTP parent and grandmaster clock.
Displays the PTP clock time properties.

show ptp time-property

To display the PTP clock time properties, use the show ptp time-property command.

show ptp time-property

Syntax Description

There are no arguments or keywords for this command.

Command Default

None

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the PTP clock time properties:

switch(config)# show ptp time-property

Command	Description
show ptp brief	Displays the PTP status.
show ptp clock	Displays the properties of the local clock.
show ptp clocks foreign-masters-recor d	Displays the state of foreign masters known to the PTP process.
show ptp corrections	Displays the last few PTP corrections.
show ptp parent	Displays the properties of the PTP parent and grandmaster clock.
show ptp port interface	Displays the status of the PTP port.

show running-config monitor

To display the running configuration for the Switched Port Analyzer (SPAN) or Encapsulated Remote Switched Port Analyzer (ERSPAN) session, use the **show running-config monitor** command.

show running-config monitor [all]

Syntax Description

all	(Optional) Displays current SPAN configuration information including
	default settings.

Command Default

None

Command Modes

EXEC mode

switch#

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display information on the running SPAN configuration:

switch# show running-config monitor

```
!Command: show running-config monitor
!Time: Wed Jan 30 07:07:00 2013
version 6.0(2)N1(1)
monitor session 1
description A Local SPAN session
source interface Ethernet1/5 both
destination interface Ethernet1/21
no shut
```

This example shows how to display detailed information on the running SPAN configuration:

 $\verb|switch#| \textbf{show running-config monitor all}|\\$

```
!Command: show running-config monitor all
!Time: Wed Jan 30 07:07:00 2013

version 6.0(2)N1(1)
monitor session 1 type local
  description A Local SPAN session
  source interface Ethernet1/5 both
  destination interface Ethernet1/21
  no shut

switch#
```

Command	Description
monitor session	Configures SPAN or ERSPAN sessions.
show monitor session	Displays information about SPAN or ERSPAN sessions.

show running-config port-security

To display the running system configuration information about secure ports, use the **show running-config port-security** command.

show running-config port-security [all]

Syntax Description

all	(Optional) Displays detailed information about secure ports, including
	default settings.

Command Default

None

Command Modes

EXEC mode

switch#

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Usage Guidelines

This command does not require a license.

Examples

This example shows how to display the running system configuration of all secure ports on an interface:

switch# show running-config port-security

```
!Command: show running-config port-security
!Time: Wed Jan 30 07:07:00 2013

version 5.1(3)N1(1)
feature port-security

interface Ethernet1/5
   switchport port-security
   switchport port-security aging time 3
   switchport port-security maximum 10
   switchport port-security mac-address sticky
```

Command	Description
clear port-security dynamic	Clears the dynamically secured addresses on a port.
show startup-config port-security	Displays the configuration information in the startup file.

show snmp community

To display the Simple Network Management Protocol (SNMP) community strings configured on the switch, use the **show snmp community** command.

show snmp community

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the SNMP community strings:

switch# show snmp community

Community	Group / Access	context	acl_filter
public	network-admin		
switch#			

Command	Description
snmp-server	Configures the community access string to permit access to the SNMP
community	protocol.

show snmp context

To display the Simple Network Management Protocol (SNMP) contexts configured on the switch, use the **show snmp context** command.

show snmp context

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the SNMP contexts:

switch# show snmp context

Command	Description
snmp-server context	Configures an SNMP context.

show snmp engineID

To display the identification of the local Simple Network Management Protocol (SNMP) engine, use the **show snmp engineID** command.

show snmp engineID

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Usage Guidelines

An SNMP engine is a copy of SNMP that can reside on a local or remote device. SNMP passwords are localized using the SNMP engine ID of the authoritative SNMP engine.

Examples

This example shows how to display the SNMP engine ID:

```
switch# show snmp engineID
```

Local SNMP engineID: [Hex] 8000000903000DECB230C0

[Dec] 128:000:000:009:003:000:013:236:178:048:192

switch#

Related Commands

Command	Description
show running-config	Displays the running configuration information about SNMP.
snmp	

SM-152

show snmp group

To display the names of the Simple Network Management Protocol (SNMP) groups configured on the switch, use the **show snmp group** command.

show snmp group

•	_	_	-	
V-1	/ntav	Desci	rın	tınn
J	/IILAA	DESCI	uр	uvu

This command has no arguments or keywords.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the SNMP groups:

```
switch# show snmp group
```

Command	Description	
show running-config	Displays the running configuration information about SNMP.	
snmp		

show snmp host

To display the Simple Network Management Protocol (SNMP) host information, use the **show snmp host** command.

show snmp host

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the SNMP host:

switch# show snmp host

Command	Description	
snmp-server host	Configures an SNMP host.	

show snmp sessions

To display the current Simple Network Management Protocol (SNMP) sessions, use the **show snmp** sessions command.

show snmp sessions

•			
~ 1	/ntav	Descri	ntınn
•	IIIUA	DUSUII	puon

This command has no arguments or keywords.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the SNMP sessions:

switch# show snmp sessions

Command	Description
show running-config	Displays the running configuration information about SNMP.
snmp	

show snmp trap

To display the Simple Network Management Protocol (SNMP) link trap generation information, use the **show snmp trap** command.

show snmp trap

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the SNMP traps:

switch# show snmp trap

Trap type	Description	Enabled	
entity	: entity_mib_change	Yes	
entity	: entity_module_status_change	Yes	
entity	: entity_power_status_change	Yes

stpx	: loop-inconsistency	No
stpx	: root-inconsistency	No
switch#		

Command	Description
snmp trap link-status	Enables SNMP link trap generation.

show snmp user

To display information on each Simple Network Management Protocol (SNMP) user, use the **show snmp user** command.

show snmp user

Syntax Description

This command has no arguments or keywords.

Command Default

None

Command Modes

EXEC mode

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display the SNMP users configured on the switch:

switch# show snmp user

SNMP	USERS		
User	Auth	Priv(enfor	ce) Groups
admin	 md5	des(no)	network-admin
NOTIFICATION TARGET US	ERS (configu	red for se	nding V3 Inform)
User	Auth	Priv	
 switch#			

This example shows how to display information about a specific SNMP user:

switch# show snmp user admin
switch#

Command	Description
snmp-server user	Configures a new user to an SNMP group.

show monitor session

To display information about the Switched Port Analyzer (SPAN) or Encapsulated Remote Switched Port Analyzer (ERSPAN) sessions, use the **show monitor session** command.

show monitor session [session | all [brief] | range range [brief] | status]

Syntax Description

session	(Optional) Number of the session. The range is from 1 to 18.
all	(Optional) Displays all sessions.
brief	(Optional) Displays a brief summary of the information.
range range	(Optional) Displays a range of sessions. The range is from 1 to 18.
status	(Optional) Displays the operational state of all sessions.
	Note This keyword applies only to SPAN sessions.

Command Default

None

Command Modes

EXEC mode

switch#

Command History

Release	Modification
6.0(2)N1(1)	This command was introduced.

Examples

This example shows how to display information about SPAN session 1:

```
switch# show monitor session 1
session 1
```

description : A Local SPAN session : local : down (No operational src/dst) state source intf rx : Eth1/5 tx : Eth1/5 : Eth1/5 both source VLANs rx source VSANs destination ports : Eth1/21 Legend: f = forwarding enabled, 1 = learning enabled

This example shows how to display a brief information about a SPAN session:

switch# show monitor session range 1 brief
session 1

```
description
               : A Local SPAN session
                : local
type
state
                : down (No operational src/dst)
source intf
               : Eth1/5
   rx
   tx
               : Eth1/5
             : Eth1/5
   both
source VSANs
destination ports : Eth1/21
Legend: f = forwarding enabled, 1 = learning enabled
switch#
```

This example shows how to display the information about an ERSPAN session:

```
switch# show monitor session 1
session 1
description
                : ERSPAN Source configuration
type
                : erspan-source
                : down (No valid global IP Address)
flow-id : 1
vrf-name : default
destination-ip : 192.0.2.1
ip-ttl
                 : 255
ip-dscp

origin-ip
                : origin-ip not specified
source intf
                 : Eth1/5
   rx
                 : Eth1/5
    tx
    both
                 : Eth1/5
source VLANs
   rx
switch#
```

Command	Description
monitor session	Creates a new Switched Port Analyzer (SPAN) session configuration.
show running-config monitor	Displays the running configuration information about SPAN sessions.

show monitor session
