

Cisco Nexus 7000 Series NX-OS Quality of Service Commands

This chapter describes the Cisco NX-OS quality of service (QoS) commands.

bandwidth (QoS)

To allocate a minimum percentage of the interface bandwidth to a queue and configure the bandwidth on both ingress and egress queues, use the **bandwidth** command. To remove a bandwidth configuration, use the **no** form of this command.

bandwidth {*rate* [**bps** | **kbps** | **mbps** | **gbps**] | **percent** *percent*}

no bandwidth {*rate* [**bps** | **kbps** | **mbps** | **gbps**] | **percent** *percent*}

Syntax Description

<i>rate</i>	Bandwidth rate. The range is from 1 to 10000000000.
bps	(Optional) Specifies the units of bits per second.
kbps	(Optional) Specifies the units of 1000 bits per second.
mbps	(Optional) Specifies the units of megabits per second.
gbps	(Optional) Specifies the units of gigabits per second.
percent	Specifies the percentage of bandwidth of the underlying link rate.
<i>percent</i>	Percent value in the range from 1 to 100.

Defaults

None

Command Modes

Policy map type queuing class configuration

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
4.0	This command was introduced.

Usage Guidelines

You can use the system-defined ingress or egress queue class for the type of module to which you want to apply the policy map. For more information about system-defined type queuing class maps, see [Table 1](#).

Table 1 System-Defined Type queuing Class Maps

Class Map Queue Name	Description	Default CoS Values
1 Gigabit Module Ingress: 2 queues with 4 thresholds per queue		
2q4t-in-q1	Ingress queue 1 of 2q4t type	5-7
2q4t-in-q-default	Ingress default queue of 2q4t type	0-4
1 Gigabit Module Egress: 1 strict priority queue and 3 normal queues with 4 thresholds per queue		

Table 1 System-Defined Type queuing Class Maps (continued)

Class Map Queue Name	Description	Default CoS Values
1p3q4t-out-pq1 ¹	Egress priority queue of 1p3q4t type	5-7
1p3q4t-out-q2	Egress queue 2 of 1p3q4t type	—
1p3q4t-out-q3	Egress queue 3 of 1p3q4t type	—
1p3q4t-out-q-default	Egress default queue of 1p3q4t type	0-4
10 Gigabit Module Ingress: 8 queues with 2 thresholds per queue		
8q2t-in-q1	Ingress queue 1 of 8q2t type	5-7
8q2t-in-q2	Ingress queue 2 of 8q2t type	—
8q2t-in-q3	Ingress queue 3 of 8q2t type	—
8q2t-in-q4	Ingress queue 4 of 8q2t type	—
8q2t-in-q5	Ingress queue 5 of 8q2t type	—
8q2t-in-q6	Ingress queue 6 of 8q2t type	—
8q2t-in-q7	Ingress queue 7 of 8q2t type	—
8q2t-in-q-default	Ingress default queue of 8q2t type	0-4
10 Gigabit Module Egress: 1 strict priority queue and 7 normal queues with 4 thresholds per queue		
1p7q4t-out-pq1 ¹	Egress priority queue of 1p7q4t type	5-7
1p7q4t-out-q2	Egress queue 2 of 1p7q4t type	—
1p7q4t-out-q3	Egress queue 3 of 1p7q4t type	—
1p7q4t-out-q4	Egress queue 4 of 1p7q4t type	—
1p7q4t-out-q5	Egress queue 5 of 1p7q4t type	—
1p7q4t-out-q6	Egress queue 6 of 1p7q4t type	—
1p7q4t-out-q7	Egress queue 7 of 1p7q4t type	—
1p7q4t-out-q-default	Egress default queue of 1p7q4t type	0-4

1. These are either priority or normal queues. If you use the priority keyword in your configuration, these are used as priority queues. Otherwise, they are used as normal queues.

**Note**

After you use this command in a specified policy map, you cannot use the **priority** or **shape** command in the same policy map.

This command does not require a license.

Examples

This example shows how to specify a bandwidth rate for a queue:

```
switch(config)# policy-map type queuing my_policy1
switch(config-pmap-que)# class type queuing 1p7q4t-out-pq1
switch(config-pmap-c-que)# bandwidth 10 mbps
```

This example shows how to remove a bandwidth rate for a queue:

```
switch(config)# policy-map type queuing my_policy1
```

bandwidth (QoS)

```
switch(config-pmap-que)# class type queuing 1p7q4t-out-pq1  
switch(config-pmap-c-que)# no bandwidth 10 mbps
```

Related Commands

Command	Description
bandwidth remaining	Configures the bandwidth remaining on the interface in a queue.
show class-map	Displays class maps.
show policy-map	Displays policy maps and statistics.

bandwidth remaining

To configure the percentage of the bandwidth remaining on the interface after other allocations are configured on both ingress and egress queues, use the **bandwidth remaining** command. To remove the remaining bandwidth allocation, use the **no** form of this command.

bandwidth remaining percent {*percent*}

no bandwidth remaining percent {*percent*}

Syntax Description	<i>percent</i>	Percentage of remaining bandwidth on the underlying link. Valid values are from 0 to 100.
---------------------------	----------------	---

Defaults	None
-----------------	------

Command Modes	Policy map type queuing class configuration
----------------------	---

Supported User Roles	network-admin vdc-admin
-----------------------------	----------------------------

Command History	Release	Modification
	4.0	This command was introduced.

Usage Guidelines	You can use the system-defined ingress or egress queue class for the type of module to which you want to apply the policy map. For more information about system-defined type queuing class maps, see Table 1 . You can use this command with the priority command.
-------------------------	--

For more information on using this command, see the *Cisco Nexus 7000 Series NX-OS Quality of Service Configuration Guide, Release 5.0*.

This command does not require a license.

Examples	This example shows how to set the bandwidth remaining for the specified queue:
-----------------	--

```
switch(config)# policy-map type queuing my_policy1
switch(config-pmap-que)# class type queuing 1p7q4t-out-pq1
switch(config-pmap-c-que)# bandwidth remaining percent 25
```

This example shows how to remove the bandwidth remaining for the specified queue:

```
switch(config)# policy-map type queuing my_policy1
switch(config-pmap-que)# class type queuing 1p7q4t-out-pq1
switch(config-pmap-c-que)# no bandwidth remaining percent 25
```

 bandwidth remaining**Related Commands**

Command	Description
bandwidth	Allocates a minimum percentage of the interface bandwidth to a queue.
show class-map	Displays class maps.
show policy-map	Displays policy maps and statistics.

class (policy map type qos)

To add a reference to an existing qos class map in a policy map and enter the class mode, use the **class** command. To remove a class from the policy map, use the **no** form of this command.

```
class [type qos] { class-map-name | class-default } [insert-before [type qos]
before-class-map-name]
```

```
no class { class-map-name | class-default }
```

Syntax Description	type qos	(Optional) Specifies the component type, which is qos for this class. By default, the type is qos.
	<i>class-map-name</i>	Reference to a class map.
	class-default	Specifies the reserved class name that matches all traffic not classified in other classes in a policy map.
	insert-before <i>before-class-map-name</i>	(Optional) Specifies the position of this class in the policy. If not specified, the class is placed at the end of the classes in the policy. Policy actions in the first class that matches the traffic type are performed.

Defaults	None
----------	------

Command Modes	Policy map type qos configuration
---------------	-----------------------------------

Supported User Roles	network-admin vdc-admin
----------------------	----------------------------

Command History	Release	Modification
	4.0	This command was introduced.

Usage Guidelines	Policy actions in the first class that matches the traffic type are performed. This command does not require a license.
------------------	--

Examples	This example shows how to add a reference to a class map at the end of a policy map:
----------	--

```
switch(config)# policy-map my_policy1
switch(config-pmap)# class traffic_class2
switch(config-pmap-c-qos)#
```

This example shows how to add a reference to a class map before an existing class map reference in a policy map:

```
switch(config)# policy-map my_policy1
```

■ class (policy map type qos)

```
switch(config-pmap-qos)# class insert-before traffic_class2 traffic_class1
switch(config-pmap-c-qos)#
```

This example shows how to add a reference to the class-default class map in a policy map:

```
switch(config)# policy-map my_policy1
switch(config-pmap-qos)# class class-default
switch(config-pmap-c-qos)#
```

This example shows how to remove a class map reference in a policy map:

```
switch(config)# policy-map my_policy1
switch(config-pmap)# no class traffic_class1
switch(config-pmap)#
```

Related Commands

Command	Description
show class-map qos	Displays class maps.
show policy-map	Displays policy maps and statistics.

class type queuing (policy map type queuing)

To add a reference to an existing queuing class map in a policy map and enter the class mode, use the **class type queuing** command. To remove a class from the policy map, use the **no** form of this command.

class type queuing *class-map-name*

no class type queuing *class-map-name*

Syntax Description	<i>class-map-name</i> Reference to a system-defined class map. For a list of the system-defined type queuing class maps, see Table 1 .	
Defaults	None	
Command Modes	policy map type queuing configuration	
Supported User Roles	network-admin vdc-admin	
Command History	Release	Modification
	4.0	This command was introduced.
Usage Guidelines	Policy actions in the first class that matches the traffic type are performed. This command does not require a license.	

Examples

This example shows how to add a reference to a class map at the end of a type queuing policy map:

```
switch(config)# policy-map type queuing my_policy1
switch(config-pmap-que)# class type queuing 8q2t-in-q4
switch(config-pmap-c-que)#
```

This example shows how to add a reference to a class map before an existing class map reference in a type queuing policy map:

```
switch(config)# policy-map type queuing my_policy1
switch(config-pmap-que)# class type queuing 8q2t-in-q4 insert-before type queuing
8q2t-in-q2
switch(config-pmap-c-que)#
```

This example shows how to remove a class map reference in a type queuing policy map:

```
switch(config)# policy-map type queuing my_policy1
switch(config-pmap-que)# no class type queuing 8q2t-in-q4
switch(config-pmap-c-que)#
```

 class type queuing (policy map type queuing)

Related Commands	Command	Description
	show class-map queuing	Displays class maps.
	show policy-map	Displays policy maps and statistics.

class-map type network-qos match-any

To configure a class map and enter the type network qos configuration mode, use the **class-map type network-qos** command. To remove the class map of the type network qos, use the **no** form of this command.

```
class-map type network-qos match-any {class-map-name} {c-nq-4e-drop | c-nq-4e-ndrop |
c-nq-4e-ndrop-fcoe | c-nq-6e-drop | c-nq-6e-ndrop | c-nq-6e-ndrop-fcoe | c-nq-7e-drop |
c-nq-7e-ndrop-fcoe | c-nq-8e | eth}
```

```
no class-map type network-qos match-any {class-map-name} {c-nq-4e-drop | c-nq-4e-ndrop |
c-nq-4e-ndrop-fcoe | c-nq-6e-drop | c-nq-6e-ndrop | c-nq-6e-ndrop-fcoe | c-nq-7e-drop |
c-nq-7e-ndrop-fcoe | c-nq-8e | eth}
```

Syntax Description	<i>class-map-name</i>	Class-map name. The policy map names can contain alphabetic, hyphen, or underscore characters, are case sensitive, and can be up to 40 characters.
	c-nq-4e-drop	Specifies the default 4e drop class.
	c-nq-4e-ndrop	Specifies the default 4e no-drop class.
	c-nq-4e-ndrop-fcoe	Specifies the default 4e no-drop Fibre Channel over Ethernet (FCoE) class.
	c-nq-6e-drop	Specifies the default 6e drop class.
	c-nq-6e-ndrop	Specifies the default 6e no-drop class.
	c-nq-6e-ndrop-fcoe	Specifies the default 6e no-drop FCoE class.
	c-nq-7e-drop	Specifies the default 6e drop class.
	c-nq-7e-ndrop-fcoe	Specifies the default 7e no-drop FCoE class.
	c-nq-8e	Specifies the default 8e drop class.
	eth	Specifies the class map name of the type network qos.

Defaults	type—qos
-----------------	----------

Command Modes	Global configuration
----------------------	----------------------

Supported User Roles	network-admin vdc-admin
-----------------------------	----------------------------

Command History	Release	Modification
	5.1(1)	This command was introduced.

Usage Guidelines	This command does not require a license.
-------------------------	--

Examples

This example shows how to configure the class map of the type network qos:

```
switch# configure terminal  
switch(config)# class-map type network-qos match-any eth  
switch(config)#
```

This example shows how to remove the class map of the type network qos:

```
switch# configure terminal  
switch(config)# no class-map type network-qos match-any eth  
switch(config)#
```

Related Commands

Command	Description
show class-map network-qos	Display type network-qos class maps.
match cos (class map type network-qos)	Defines the class of traffic in type network-qos class maps.

class-map

To create or modify a class map that defines a class of traffic and enter the class-map configuration mode, use the **class-map** command. To remove a class map, use the **no** form of this command.

```
class-map [type qos] {[match-any | match-all] class-map-name | conform-color-in |
conform-color-out | exceed-color-in | exceed-color-out}
```

```
no class-map [type qos] {class-map-name | [match-any | match-all]}
```

Syntax Description		
type qos	(Optional) Specifies the component type qos for the class map. By default, the class map type is qos.	
match-any	Specifies that if the packet matches any of the criteria configured for this class map with the match command, then this class map is applied to the packet.	
match-all	Specifies that if the packet matches all the criteria configured for this class map with the match command, then this class map is applied to the packet. This is the default action if match-any is not specified.	
	Note This option does not work. The match criteria is always treated as <i>match-any</i> .	
<i>class-map-name</i>	Name assigned to the class map. The name class-default is reserved.	
conform-color-in	Specifies the type qos conform color class map in the input direction. This color-aware class map makes a policer color-aware for conform action.	
conform-color-out	Specifies the type qos conform color class map in the output direction. This color-aware class map makes a policer color-aware for conform action.	
exceed-color-in	Specifies the type qos exceed color class map in the input direction. This color-aware class map makes a policer color-aware for exceed action.	
exceed-color-out	Specifies the type qos exceed color class map in the output direction. This color-aware class map makes a policer color-aware for exceed action.	

Defaults	type—qos
-----------------	----------

Command Modes	Global configuration
----------------------	----------------------

Supported User Roles	network-admin vdc-admin
-----------------------------	----------------------------

Command History	Release	Modification
	4.0	This command was introduced.

Usage Guidelines

You cannot delete the system-defined queuing class map names. For more information about the **class-map** command, see the *Cisco Nexus 7000 Series NX-OS Quality of Service Configuration Guide, Release 5.0*.

**Note**

When you configure match all for a qos class map by entering the **class-map type qos match-all** command, the match-all option does not work. Instead, the match criteria is always treated as match any.

This command does not require a license.

Examples

This example shows how to create or modify a qos class map:

```
switch(config)# class-map my_class1
switch(config-cmap-qos)#
```

This example shows how to remove a qos class map:

```
switch(config)# no class-map my_class1
switch(config)#
```

This example shows how to modify a qos color class map:

```
switch(config)# class-map conform-color-in
switch(config-color-map)#
```

Related Commands

Command	Description
show class-map qos	Displays class maps.

class-map type queuing match-any

To modify a type queuing class map and enter the class-map configuration mode, use the **class-map type queuing match-any** command.

class-map type queuing match-any {*queuing-class-map-name* | *WORD*}

Syntax Description

<i>queuing-class-map-name</i>	System-defined queuing class map name. For the list of system-defined queuing class maps, see Table 1 .
<i>WORD</i>	Hierarchical class-map name. It can be a string of 40 alphanumeric characters.

Defaults

None

Command Modes

Global configuration

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
5.1(1)	Added the <i>WORD</i> argument.
4.0	This command was introduced.

Usage Guidelines

The argument *WORD* is supported only on the F-Series Modules.

When a non-8e template is active, it allows you to specify a hierarchical queuing (both ingress and egress) policy.

If the packet matches any of the criteria configured for this class map with the **match** command, this class map is applied to the packet. Class maps of type queuing support only this option.

Any modification made to the class maps type queuing changes the configuration for all ports of the specified port type on all VDCs.

You cannot delete system-defined queuing class map names. For more information on using the **class-map type queuing match-any** command, see the *Cisco Nexus 7000 Series NX-OS Quality of Service Configuration Guide, Release 5.0*.

This command does not require a license.

Examples

This example shows how to modify a queuing class map:

```
switch(config)# class-map type queuing match-any 2q4t-in-q1
switch(config-cmap-que)#
```

Related Commands	Command	Description
	show class-map queuing	Displays class maps.
	match cos	Defines the class of traffic in type queuing class maps.

clear qos statistics

To clear the quality of service (QoS) statistics, use the **clear qos statistics** command.

```
clear qos statistics [{ interface [ethernet type/slot | port-channel number] | [vlan [vlan-id]] } [input
| output] [type { qos | queuing } ]]
```

Syntax Description

interface	(Optional) Specifies which interface to clear.
ethernet	(Optional) Specifies the statistics that are assigned to the Ethernet interface.
port-channel	(Optional) Specifies the statistics that are assigned to the port channel.
vlan <i>vlan-id</i>	(Optional) Specifies a VLAN to clear. Valid values are from 1 to 4094.
input	(Optional) Clears only input statistics.
output	(Optional) Clears only output statistics.
type	(Optional) Specifies the type of statistics to clear.
qos	Specifies to clear QoS statistics.
queuing	Specifies to clear queuing statistics.

Defaults

None

Command Modes

Any command mode

Supported User Roles

network-admin
network-operator
vdc-admin
vdc-operator

Command History

Release	Modification
4.0	This command was introduced.

Usage Guidelines

If you do not specify the interface or VLAN, the device clears the counters for all VLANs and interfaces. This command does not require a license.

Examples

This example shows how to clear all the QoS statistics:

```
switch# clear qos statistics
switch#
```

This example shows how to clear all input QoS statistics for VLAN 1:

```
switch# clear qos statistics vlan 1 input
switch#
```

**Related Commands**

Command	Description
qos statistics	Enables or disables QoS statistics.
show qos statistics	Displays QoS statistics.

clear qos policies

To clear the default quality of service (QoS) policies, use the **clear qos policies** command.

clear qos policies

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Defaults	None
-----------------	------

Command Modes	EXEC mode
----------------------	-----------

Supported User Roles	network-admin network-operator vdc-admin vdc-operator
-----------------------------	--

Command History	Release	Modification
	5.1(1)	This command was introduced.

Usage Guidelines	Before you downgrade from Cisco NX-OS Release 5.2(x) or 5.1(x) or higher version to Cisco NX-OS Release 5.0(x) or an earlier release, remove all the user defined network-qos and queuing policies configured on F series modules. Use the clear qos policies command to remove the defaults for F series modules. An internal process failure can result if the QoS policies are not removed prior to the downgrade. Downgrade should be done after running this CLI command.
-------------------------	--

This command does not require a license.

Examples	This example shows how to clear the default qos policies:
-----------------	---

```
switch# clear qos policies
This will clear up all default qos configs from all the VDCs, Are you sure you
want to continue(yes/no)? [no] y
switch#
```

clear qos policies 8e4q4q

To clear default 8e-4q4q template network-qos and queuing policies from all the VDCs, use the **clear qos policies 8e-4q4q** command.

clear qos policies 8e-4q4q

Syntax Description This command has no arguments or keywords.

Defaults VDC

Command Modes EXEC mode

Supported User Roles network-admin
vdc-admin

Command History	Release	Modification
	6.1(3)	This command was introduced.

Usage Guidelines

To make software downgrades non-disruptive from the version 6.1(3) and higher version to lower version, the following steps are required before the software downgrade:

- All the user defined and cloned 8e-4q4q template queuing policies should be detached manually from all the interfaces in each VDC
- The default-nq-8e-4q4q-policy or the user defined or the cloned 8e-4q4q template network-qos policy should be detached from the system qos
- All the user defined and cloned 8e-4q4q template network-qos policies should be removed manually from the default VDC
- All the user defined 8e-4q4q template queuing policies should be removed manually from all the VDCs
- Use the CLI command **clear qos policies 8e-4q4q** in default VDC to clear the default 8e-4q4q template policies. This command clears PPF (Portability Policy Format) nodes of 8e-4q4q template policies.
- After executing **clear qos policies 8e-4q4q** command, the user MUST do downgrade. Otherwise the behavior will be unexpected. This command does not require a license.

Note Reloading a F series module will bring up the default 8e-4q4q template policies.

Examples

This example shows how to clear the 8e-4q4q template network-qos and queuing policies from all the VDC:

```
switch # conf t
switch# clear qos policies 8e-4q4q
This will clear up 8e-4q4q template configs from all the VDCs, Are you sure you
want to continue(yes/no)? [no] y
switch#
```

Related Commands

Command	Description
clear qos policies	Clears the default QoS policies.

congestion-control

To configure congestion control, use the **congestion-control** command. To remove the congestion control configuration, use the **no** form of this command.

```
congestion-control [random-detect {threshold [burst-optimized | mesh-optimized]} | tail-drop
{threshold [burst-optimized | mesh-optimized]}]
```

```
no congestion-control [random-detect {threshold [burst-optimized | mesh-optimized]} |
tail-drop {threshold [burst-optimized | mesh-optimized]}]
```

Syntax Description

random-detect	(Optional) Specifies the weighted random early detection (WRED).
threshold	Specifies the threshold for the optimized traffic.
burst-optimized	(Optional) Specifies the burst-optimized traffic.
mesh-optimized	(Optional) Specifies the mesh-optimized traffic.
tail-drop	(Optional) Specifies the tail-drop algorithm for queue management.

Defaults

None

Command Modes

Policy-map type network qos configuration

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
5.1(1)	This command was introduced.

Usage Guidelines

This command does not require a license.

Examples

This example shows how to configure congestion control:

```
switch# config t
switch(config)# policy-map type network-qos my_template
switch(config-pmap-nqos)# class type network-qos eth
switch(config-pmap-nqos-c)# congestion-control tail-drop threshold mesh-optimized
switch(config-pmap-nqos-c)#
```

This example shows how to configure congestion control:

```
switch# config t
switch(config)# policy-map type network-qos my_template
switch(config-pmap-nqos)# class type network-qos eth
switch(config-pmap-nqos-c)# no congestion-control tail-drop threshold mesh-optimized
```

```
switch(config-pmap-nqos-c) #
```

Related Commands	Command	Description
	mtu	Configures the maximum transmission unit (MTU) size in a network qos policy.
	pause	Configure no-drop per CoS.
	priority	Marks the priority level in a traffic queue.
	shape	Configures the traffic rate for a given traffic profile.

default (table map)

To specify the default action for mapping input field values to output field values in a table map, use the **default** command.

default { *value* | **copy** }

no default { *value* | **copy** }

Syntax Description

<i>value</i>	Default value to use for the output value in the range from 0 to 63.
copy	Specifies that the default action is to copy all equal values to an equal output value.

Defaults

Copies the input value to the output value.

Command Modes

Table map configuration
Default table map configuration

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
4.0	This command was introduced.
4.0(2)	The <i>ignore</i> variable for this command is no longer supported.

Usage Guidelines

The **copy** keyword is available only in the table map configuration mode. In the default table map configuration mode, the **copy** keyword is not available because all values must be assigned a mapping. This command does not require a license.

Examples

This example shows how to remove the default mapping action copy. The resulting default action is ignore:

```
switch(config)# table-map my_table1
switch(config-tmap)# no default copy
switch(config-tmap)#
```

Related Commands

Command	Description
from	Specifies the input field to output field mappings in table maps.
show table-map	Displays table maps.

description

To add a description to a class map, policy map, or table map, use the **description** command. To remove the description, use the **no description** form of this command.

description *text*

no description *text*

Syntax Description

<i>text</i>	Description for the class map, policy map, or table map. The description has a maximum of 200 characters.
-------------	---

Defaults

None

Command Modes

Class map type qos configuration
Policy map type qos configuration
Policy map type queuing configuration
Table map configuration

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
4.0	This command was introduced.

Usage Guidelines

This command does not require a license.

Examples

This example shows how to add a description to a policy map:

```
switch(config)# policy-map my_policy1
switch(config-pmap)# description this policy applies to input packets
switch(config-pmap)#
```

Related Commands

Command	Description
class-map	Creates or modifies a class map.
policy-map	Creates or modifies a policy map.
table-map	Creates or modifies a table map.

feature pbr

To enable the Policy Based Routing (PBR) feature, use the **feature pbr** command. To disable the PBR feature use the **no** form of this command.

feature pbr

no feature pbr

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Defaults	None
-----------------	------

Command Modes	Global configuration mode
----------------------	---------------------------

Supported User Roles	network-admin vdc-admin
-----------------------------	----------------------------

Command History	Release	Modification
	6.2(2)	This command was introduced.

Usage Guidelines	This command does not require a license.
-------------------------	--

Examples	This example shows how to enable the policy-based routing feature: <pre>switch(config)# feature pbr switch(config)#</pre>
-----------------	---

Related Commands	Command	Description
	class-map	Creates or modifies a class map.

from (table map)

To specify a set of mappings of input field values to output field values in a table map, use the **from** command.

from *source-value* **to** *dest-value*

Syntax Description	<i>source-value</i>	Source value in the range from 0 to 63.
	<i>dest-value</i>	Destination value in the range from 0 to 63.
Defaults	To configure the default mapping action for table maps, see the default (table map) command.	
Command Modes	Table map configuration Default table map configuration	
Supported User Roles	network-admin vdc-admin	
Command History	Release	Modification
	4.0	This command was introduced.
Usage Guidelines	This command does not require a license.	
Examples	This example shows how to create a mapping from three source values to the corresponding destination values: <pre>switch(config)# table-map my_table1 switch(config-tmap)# from 0 to 7 switch(config-tmap)# from 1 to 6 switch(config-tmap)# from 2 to 5</pre>	
Related Commands	Command	Description
	default (table map)	Specifies the default action for mapping of the input field value to the output field value in a table map.
	show table-map	Displays table maps.

hardware qos dscp-to-queue ingress module-type

To enable dscp based queuing on ingress and controls which type of modules dscp queuing is enabled , use the **hardware qos dscp-to-queue ingress module-type** command. To return to the default settings, use the **no** form of this command.

hardware qos dscp-to-queue ingress module-type [all | f-series | m-series]

no hardware qos dscp-to-queue

Syntax Description

all	Enables the dscp based queuing for all cards.
f-series	Enables the dscp based queuing for f-series cards.
m-series	Enables the dscp based queuing for m-series cards.

Defaults

None

Command Modes

Global configuration mode

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
6.2(2)	This command was introduced.

Usage Guidelines

This command does not require a license.

Examples

This example shows how to enable the dscp based queuing for all cards:

```
switch(config)# hardware qos dscp-to-queue ingress module-type all
switch(config)#
```

Related Commands

Command	Description
show class-map	Displays class maps.

hardware access-list allow deny ace

To configure the deny ace support for seq based features, use the **hardware access-list allow deny ace** command. To turn off deny ace support, use the **no** form of this command.

hardware access-list allow deny ace

no hardware access-list allow deny ace

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Defaults	None
-----------------	------

Command Modes	Global configuration mode
----------------------	---------------------------

Supported User Roles	network-admin vdc-admin
-----------------------------	----------------------------

Command History	Release	Modification
	6.1(3)	This command was introduced.

Usage Guidelines	If an access-list matched inside a qos class-map has “deny” entry, we skip the qos action for that class-map. If any subsequent class-maps has the same acl entry but with permit action, then the qos action of the class-map having permit acl entry is applied. If not, no action is applied on the packets that matched the qos class-map having deny acl entry. The customers can use this feature to selectively not apply qos to traffic from specific hosts (IP addresses) and to apply qos to all other hosts in that subnet/network. Before this deny ace support, the permit or deny actions in an access-list are ignored by qos and only the classification criteria (src-ip/dst-ip/protocol/src-port/dst-port) of an acl is used for classification. This command does not require a license.
-------------------------	---

Examples	This example shows how to configure the deny ace support for seq based features:
-----------------	--

```
switch(config)# hardware access-list allow deny ace
switch(config)#
```

Related Commands	Command	Description
	show class-map	Displays class maps.

ipv6 local policy route-map

To assign a route map for local Policy Based Routing (PBR) to the interface, use the **ipv6 local policy route-map** command. To disable the feature use the **no** form of this command.

ipv6 local policy route-map *map-name*

no ipv6 local policy route-map *map-name*

Syntax Description	<i>map-name</i> Specifies the route map name. The maximum size is 63 characters.	
Defaults	None	
Command Modes	Global Configuration mode	
Supported User Roles	network-admin vdc-admin	
Command History	Release	Modification
	6.2(2)	This command was introduced.
Usage Guidelines	To use this command, Policy Based Routing (PBR) feature must be enabled. This command does not require a license.	
Examples	This example shows how to assign a route map for local Policy Based Routing (PBR) to the interface: switch# config t switch(config)# feature pbr switch(config)# ipv6 local policy route-map testmap switch(config)#	
Related Commands	Command	Description
	show ipv6 local policy	Displays the information about the policy.

match access-group

To identify a specified access control list (ACL) group as a match criteria for a class map, use the **match access-group** command in the class map configuration mode. To remove ACL match criteria from a class map, use the **no** form of this command.

match access-group name *acl-name*

no match access-group name *acl-name*

Syntax Description

acl-name Name of the ACL.

Defaults

None

Command Modes

Class-map type qos configuration

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
4.0	This command was introduced.
4.1(2)	This command was updated to allow matching on IPv6 ACLs and IPv4 ACLs.

Usage Guidelines

Note

The **permit** and **deny** ACL keywords do not affect the matching of packets.

This command does not require a license.

Examples

This example shows how to create a qos class map that matches characteristics of the ACL my_acl:

```
switch(config)# class-map class_acl
switch(config-cmap-qos)# match access-group name my_acl
```

Related Commands

Command	Description
show class-map	Displays class maps.

match class-map

To match on the **match** commands in a specified class map, use the **match class-map** command in the class map configuration mode. To remove the match on the specified class map, use the **no** form of this command.

match [**not**] **class-map** *class-map-name*

no match [**not**] **class-map** *class-map-name*

Syntax Description	not	(Optional) Negates the specified match result.
	<i>class-map-name</i>	Specified class-map name where the match commands need to be matched.

Defaults	None
-----------------	------

Command Modes	Class-map type qos configuration
----------------------	----------------------------------

Supported User Roles	network-admin vdc-admin
-----------------------------	----------------------------

Command History	Release	Modification
	4.0	This command was introduced.

Usage Guidelines	This command does not require a license.
-------------------------	--

Examples	This example shows how to match on the matches specified in class map named my_test:
-----------------	--

```
switch(config)# class-map my_test
switch(config-cmap-qos)# match class-name my_test
```

Related Commands	Command	Description
	show class-map	Displays class maps.

match cos (class map type network-qos)

To define the class of traffic in a type network qos class map, use the **match cos** command. To remove the match configuration, use the **no** form of this command.

match cos *cos-list*

no match cos *cos-list*

Syntax Description	<i>cos-list</i> CoS value or list of specified CoS values. Valid values are from 0 to 7.	
Defaults	None	
Command Modes	Class-map type qos configuration	
Supported User Roles	network-admin vdc-admin	
Command History	Release	Modification
	5.1(1)	This command was introduced.
Usage Guidelines	To specify a list of values, use one of the following options: - Specify a range of values by separating each value with a dash. - Specify a noncontiguous list of values by separating each value by a comma. This command does not require a license.	
Examples	This example shows how to match on the CoS value for a type network qos class map: <pre>switch(config)# class-map type network-qos match-any eth switch(config-cmap-nqos)# match cos 3-5 switch(config-cmap-nqos)#</pre>	
Related Commands	Command	Description
	show class-map	Displays class maps.

match cos (class map type qos)

To define the class of traffic using the class of service (CoS) value in a type qos class map, use the **match cos** command. To remove the match on the CoS value, use the **no** form of this command.

match [**not**] **cos** *cos-list*

no match [**not**] **cos** *cos-list*

Syntax Description	not	(Optional) Negates the specified match result.
	<i>cos-list</i>	Specified CoS value or list of specified CoS values. Valid values are from 0 to 7.

Defaults	None
-----------------	------

Command Modes	Class-map type qos configuration
----------------------	----------------------------------

Supported User Roles	network-admin vdc-admin
-----------------------------	----------------------------

Command History	Release	Modification
	4.0	This command was introduced.

Usage Guidelines	To specify a list of values, use one of the following options: - Specify a range of values by separating each value with a dash. - Specify a noncontiguous list of values by separating each value by a comma.
-------------------------	--

Note

Only class maps of type qos support the optional **not** keyword form of this command. Class maps of type queuing do not support the **not** keyword.

This command does not require a license.

Examples	This example shows how to match on the CoS value for a type qos class map:
-----------------	--

```
switch(config)# class-map class_acl
switch(config-cmap-qos)# match cos 5-7
```

Related Commands

Command	Description
show class-map	Displays class maps.

match cos (class map type queuing)

To define the class of traffic in a type queuing class map, use the **match cos** command. To remove the **match** configuration, use the **no** form of these commands.

match cos *cos-list*

no match cos *cos-list*

Syntax Description	<i>cos-list</i>	Specified class of service (CoS) value or list of specified CoS values. Valid values are from 0 to 7.
---------------------------	-----------------	---

Defaults	None
-----------------	------

Command Modes	Class-map type queuing configuration
----------------------	--------------------------------------

Supported User Roles	network-admin vdc-admin
-----------------------------	----------------------------

Command History	Release	Modification
	4.0	This command was introduced.

Usage Guidelines	To specify a list of values, use one of the following options: - Specify a range of values by separating each value with a dash. - Specify a noncontiguous list of values by separating each value by a comma. Any modifications that you make to the class map type queuing changes the configuration for all ports of the specified port type on all VDCs.
-------------------------	--

Note

Only class maps of type qos support the optional **not** keyword form of this command.

This command does not require a license.

Examples	This example shows how to modify a type queuing class map to match on CoS:
-----------------	--

```
switch(config)# class-map type queuing match-any 8q2t-in-q4
switch(config-cmap-que)# match cos 3
switch(config-cmap-que)#
```

Related Commands

Command	Description
show class-map	Displays class maps.

match discard-class

To identify specific discard class values as a match criteria, use the **match discard-class** command. To remove specified discard class values as a match criteria, use the **no** form of this command.

match [**not**] **discard-class** *discard-class-list*

no match [**not**] **discard-class** *discard-class-list*

Syntax Description	not	(Optional) Negates the specified match result.
	<i>discard-class-list</i>	Specified discard class value or list of discard class values. Valid values are from 0 to 63.
Defaults	None	
Command Modes	Class-map type qos configuration	
Supported User Roles	network-admin vdc-admin	
Command History	Release	Modification
	4.0	This command was introduced.
Usage Guidelines	The discard-class value is an internal label and is not part of the packet payload or any packet header. The discard-class values have no mathematical significance.	
	To specify a list of values, use one of the following options: - Specify a range of values by separating each value with a dash. - Specify a noncontiguous list of values by separating each value by a comma. This command does not require a license.	
Examples	This example shows how to match on the discard class value 5:	
	<pre>switch(config)# class-map my_test switch(config-cmap-qos)# match discard-class 5</pre>	
Related Commands	Command	Description
	show class-map	Displays class maps.

match dscp

To identify specific Differentiated Services Code Point (DSCP) values as classification criteria to specify range of DSCP values under class-map, use the **match dscp** command. To remove specified DSCP values under class-map, use the **no** form of this command. The CLI is available for QoS policy and for Ingress queuing policy under class-maps "2q4t-8e-in-q1" and "2q4t-8e-in-q-default".

match dscp *value*

no match dscp *value*

Syntax Description	<i>value</i>	Specifies the list of DSCP values. The range is from 0 to 63.
Defaults	Disabled by default	
Command Modes	Class-map mode	
Supported User Roles	network-admin to change predefined queuing class-maps "2q4t-8e-in-q1" and "2q4t-8e-in-q-default" network-admin, vdc-admin for qos policy	
Command History	Release	Modification
	6.1(2)	Starting with the Cisco NX-OS 6.1(2) release, DSCP to IVL is supported on IPV6 using F2E modules.
	6.1(1)	Starting from 6.1(1) release DSCP to IVL is supported on ingress direction on F2 modules using match dscp <i>value</i> command with Class-maps "2q4t-8e-in-q1" and "2q4t-8e-in-q-default".
	4.0	This command was introduced.

Usage Guidelines **match dscp** command is only applicable to queues which have at least one cos value associated with it. Default queue should always have cos value associated with it if not all DSCP value are mapped to non-default ingress queue.

The dscp queuing is automatically disabled when the user removes all the match dscp's (using "no match" statements).

If match dscp values is used under 2q4t-8e-in-q1 with a few DSCP values, all remaining values get mapped to the default queue.

Below are some of the restrictions for this command:

Only supports ingress queues for F2 modules for 8E template. (It does not support egress queues, M1 queues, or fabric-qos queues.)

– Ingress queues must have at least one cos value associated with it without restriction which Cos value is used.

- Cannot be used in user defined class-maps.
- Cannot be used in a user configuration session.
- Command must be disabled for ISSD otherwise the ISSD will be disruptive.
- By default DSCP to IVL is disabled.
- Queue-limit command cannot be specified based on COS or DSCP value. The configured queue-limit sizes are applicable for both DSCP and COS values.
- There are no additional statistics generated to differentiate how many packets are matched on DSCP or COS.
- When DSCP to IVL is enabled an interface will use DSCP value as trusted for IP packets and COS value will be trusted for NON-IP packets.
- Fabric Path Interface and FEX Port-channel interfaces do not support DSCP to IVL mapping.
- DSCP to IVL is not supported for IPv6 packets.

DSCP to IVL mapping change is disruptive operation and might cause BFD/Routing protocols to Flap.
This command does not require a license.

Examples

This example shows how to match the DSCP value:

```
switch(config)# class-map type queuing match-any q4t-8e-in-q1
switch(config-cmap-que)# match dscp 1
switch(config-cmap-que)#
```

Related Commands

match ip rtp

To configure a class map to use the Real-Time Protocol (RTP) port as a match criteria, use the **match ip rtp** command. To remove the RTP port as a match criteria, use the **no** form of this command.

match [**not**] **ip rtp** *port-list*

no match [**not**] **ip rtp** *port-list*

Syntax Description	<table> <tr> <td>not</td><td>(Optional) Negates the specified match result.</td></tr> <tr> <td><i>port-list</i></td><td>Specified User Datagram Protocol (UDP) or list of UDP ports that are using RTP. Valid values are from 2000 to 65535.</td></tr> </table>	not	(Optional) Negates the specified match result.	<i>port-list</i>	Specified User Datagram Protocol (UDP) or list of UDP ports that are using RTP. Valid values are from 2000 to 65535.
not	(Optional) Negates the specified match result.				
<i>port-list</i>	Specified User Datagram Protocol (UDP) or list of UDP ports that are using RTP. Valid values are from 2000 to 65535.				
Defaults	None				
Command Modes	Class-map type qos configuration				
Supported User Roles	network-admin vdc-admin				
Command History	<table> <tr> <th>Release</th><th>Modification</th></tr> <tr> <td>4.0</td><td>This command was introduced.</td></tr> </table>	Release	Modification	4.0	This command was introduced.
Release	Modification				
4.0	This command was introduced.				
Usage Guidelines	To specify a list of values, use one of the following options: - Specify a range of values by separating each value with a dash. - Specify a noncontiguous list of values by separating each value by a comma. This command does not require a license.				
Examples	This example shows how to match on a port using RTP: <pre>switch(config)# class-map my_test switch(config-cmap-qos)# match ip rtp 2300</pre>				
Related Commands	<table> <tr> <th>Command</th><th>Description</th></tr> <tr> <td>show class-map</td><td>Displays class maps.</td></tr> </table>	Command	Description	show class-map	Displays class maps.
Command	Description

match packet length

To configure a class map to use Layer 3 packet length in the IP header as a match criteria, use the **match packet length** command. To remove a previously specified Layer 3 packet length as a match criteria, use the **no** form of this command.

match [**not**] **packet length** *packet-length-list*

no match [**not**] **packet length** *packet-length-list*

Syntax Description

not	(Optional) Negates the specified match result.
<i>packet-length-list</i>	Specified Layer 3 packet length or list of packets lengths specified in bytes. Valid values are from 1 to 9198.

Defaults

None

Command Modes

Class-map type qos configuration

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
4.0	This command was introduced.

Usage Guidelines

To specify a list of values, use one of the following options:

- Specify a range of values by separating each value with a dash.
- Specify a noncontiguous list of values by separating each value by a comma.

This command does not require a license.

Examples

This example shows how to match on a Layer 3 packet length of 600 to 660:

```
switch(config)# class-map my_test
switch(config-cmap-qos)# match packet length 600-660
```

Related Commands

Command	Description
show class-map	Displays class maps.

match precedence

To configure a class map to use the precedence value in the Type of Service (ToS) byte field of the IP header as a match criteria, use the **match precedence** command. To remove the precedence values as a match criteria, use the **no** form of this command.

match [**not**] **precedence** *precedence-list*

no match [**not**] **precedence** *precedence-list*

Syntax Description	<table> <tr> <td>not</td><td>(Optional) Negates the specified match result.</td></tr> <tr> <td><i>precedence-list</i></td><td>Specified IP precedence value or list of IP precedence values specified in bytes. Valid values are shown in Table 2.</td></tr> </table>	not	(Optional) Negates the specified match result.	<i>precedence-list</i>	Specified IP precedence value or list of IP precedence values specified in bytes. Valid values are shown in Table 2 .
not	(Optional) Negates the specified match result.				
<i>precedence-list</i>	Specified IP precedence value or list of IP precedence values specified in bytes. Valid values are shown in Table 2 .				
Defaults	None				
Command Modes	Class-map type qos configuration				
Supported User Roles	network-admin vdc-admin				
Command History	<table> <tr> <th>Release</th><th>Modification</th></tr> <tr> <td>4.0</td><td>This command was introduced.</td></tr> </table>	Release	Modification	4.0	This command was introduced.
Release	Modification				
4.0	This command was introduced.				
Usage Guidelines	For a list of precedence values, see Table 2 .				

Table 2 *Precedence Values*

Precedence Value	List of Precedence Values
<0-7>	IP precedence value
critical	Critical precedence (5)
flash	Flash precedence (3)
flash-override	Flash override precedence (4)
immediate	Immediate precedence (2)
internet	Internetwork control precedence (6)
network	Network control precedence (7)
priority	Priority precedence (1)
routine	Routine precedence (0)

To specify a list of values, use one of the following options:

- Specify a range of values by separating each value with a dash.
- Specify a noncontiguous list of values by separating each value by a comma.

This command does not require a license.

Examples

This example shows how to match on an IP precedence value:

```
switch(config)# class-map my_test
switch(config-cmap-qos)# match precedence 7
```

Related Commands

Command	Description
show class-map	Displays class maps.

match protocol

To configure a class map to use a specific protocol as a match criterion, use the **match protocol** command. To remove the specified protocol as a match criteria, use the **no** form of this command.

match [**not**] **protocol** *protocol-name*

no match [**not**] **protocol** *protocol-name*

Syntax Description	not	(Optional) Negates the specified match result.
	<i>protocol-name</i>	Specified protocol name. Valid values are shown in Table 3 .
Defaults	None	
Command Modes	Class-map type qos configuration	
Supported User Roles	network-admin vdc-admin	
Command History	Release	Modification
	4.0	This command was introduced.
Usage Guidelines	The list of valid protocol names is shown in Table 3 .	

Table 3 Protocol Names

Argument	Description
arp	Address Resolution Protocol (ARP)
bridging	Bridging
cdp	Cisco Discovery Protocol (CDP)
clns	Connectionless Network Service (CLNS)
clns_es	CLNS End Systems
clns_is	CLNS Intermediate System
dhcp	Dynamic Host Configuration (DHCP)
isis	Intermediate system to intermediate system (IS-IS)
ldp	Label Distribution Protocol (LDP)
netbios	NetBIOS Extended User Interface (NetBEUI)

**Note**

A maximum of eight different protocols can be matched at a time.

To specify more than one protocol, enter the **match protocol** command with the desired protocol value each time.

This command does not require a license.

Examples

This example shows how to match on a specified protocol:

```
switch(config)# class-map my_test  
switch(config-cmap-qos)# match protocol ldp
```

Related Commands

Command	Description
show class-map	Displays class maps.

match qos-group

To configure a class map to use a specific qos group value as a match criterion, use the **match qos-group** command. To remove the specified protocol as a match criteria, use the **no** form of this command.

match [**not**] **qos-group** *qos-group-list*

no match [**not**] **qos-group** *qos-group-list*

Syntax Description	not	(Optional) Negates the specified match result.
	<i>qos-group-list</i>	Specified qos group value or list of qos group values specified in bytes. Valid values are from 0 to 126.

Defaults	None
-----------------	------

Command Modes	Class-map type qos configuration
----------------------	----------------------------------

Supported User Roles	network-admin vdc-admin
-----------------------------	----------------------------

Command History	Release	Modification
	4.0	This command was introduced.

Usage Guidelines	The qos group is an internal label and is not part of the packet payload or any packet header. The qos group values have no mathematical significance. For example, a qos group value of 2 is not greater than 1; the values are used only to internally differentiate qos groups. As such, this value has local significance only.
-------------------------	---

You can match on the qos group only in egress policies because its value is undefined until you set it in an ingress policy.

To specify a list of values, use one of the following options:

- Specify a range of values by separating each value with a dash.
- Specify a noncontiguous list of values by separating each value by a comma.

This command does not require a license.

Examples	This example shows how to match on a specified qos group value:
-----------------	---

```
switch(config)# class-map my_test
switch(config-cmap-qos)# match qos-group 6
```

■ match qos-group

Related Commands

Command	Description
show class-map	Displays class maps.

mtu

To configure the maximum transmission unit (MTU) size in a network qos policy, use the **mtu** command.

mtu [*mtu_size*]

Syntax Description	<i>mtu_size</i> (Optional) MTU size. The range is from 1500 to 9216.	
Defaults	None	
Command Modes	Policy-map type network qos configuration	
Supported User Roles	network-admin vdc-admin	
Command History	Release	Modification
	6.1(1)	Added the usage guidelines and the command output.
	5.1(1)	This command was introduced.
Usage Guidelines	This command does not require a license. The Fabric Extender(FEX) port channel requires a minimum MTU setting of 1058 for traffic with CoS 5-7. The FEX fails when the MTU is less than 1058 and does not register with the switch.	
Examples	This example shows how to configure the MTU size in a network policy: <pre>switch# config t switch(config)# policy-map type queuing my-4q-4e-drop-out switch(config-pmap-que)# class type queuing 1p3qlt-8e-out-pql switch(config-pmap-que)# priority level 2 switch(config-pmap-que)# mtu 1500 switch(config-pmap-que)# switch(config)# policy-map type network-qos neng-7e switch(config-pmap-nqos)# class type network-qos c-nq-7e-drop switch(config-pmap-nqos-c)# mtu 1057 MTU less than 1058 for CoS 5-7 can bring down FEX port-channels. Do you want to continue? (yes/no) [no]</pre>	
Related Commands	Command	Description
	congestion-control	Configures congestion control in a network qos policy.
	pause	Configure no-drop per CoS.

Command	Description
priority	Marks the priority level in a traffic queue.
shape	Configures the traffic rate for a given traffic profile.

pause

To configure no-drop per class of service (CoS), use the **pause** command. To remove the no-drop configuration, use the **no** form of this command.

pause

no pause

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Defaults	no pause
-----------------	----------

Command Modes	Class-map type qos configuration
----------------------	----------------------------------

Supported User Roles	network-admin vdc-admin
-----------------------------	----------------------------

Command History	Release	Modification
	5.1(1)	This command was introduced.

Usage Guidelines	This command does not require a license.
-------------------------	--

Examples	This example shows how to configure no-drop CoS:
-----------------	--

```
switch# config t
switch(config)# class-map type network-qos match-any eth
switch(config-cmap-nqos)# match cos 0,5-7
switch(config)# class-map type network-qos match-any fc1
switch(config-cmap-nqos)# match protocol fcoe
switch(config-cmap-nqos)# match cos 3
Switch(config)# class-map type network-qos match-any fc2
Switch(config-cmap-nqos)# match cos 1,2,4
switch(config)# policy-map type network-qos my_template
switch(config-pmap-nqos)# class type network-qos eth
switch(config-pmap-nqos-c)# pause
switch(config-pmap-nqos-c)#
```

Related Commands	Command	Description
	congestion-control	Configures congestion control in a network qos policy.

Command	Description
mtu	Configures the maximum transmission unit (MTU) size in a network qos policy.
priority	Marks the priority level in a traffic queue.

police (QoS)

To configure policing of the data rates for a particular class of traffic, use the **police** command. To remove a policing configuration, use the **no** form of this command.

```
police [cir] {cir-value [bps | kbps | mbps | gbps] | percent percent} | [[bc] bc-value [bytes | kbytes | mbytes | ms | us]] | [pir {pir-value [bps | kbps | mbps | gbps] | percent percent} | [be] be-value [bytes | kbytes | mbytes | ms | us]] | [conform {transmit | set-prec-transmit precedence-value | set-dscp-transmit dscp-value | set-cos-transmit cos-val | set-discard-class-transmit discard-class-value | set-qos-transmit qos-group-value} | exceed {drop | set dscp dscp table cir-markdown-map}] | violate {drop | set dscp dscp table pir-markdown-map}}]]]
```

```
no police [cir] {cir-value [bps | kbps | mbps | gbps] | percent percent} | [[bc] bc-value [bytes | kbytes | mbytes | ms | us]] | [pir {pir-value [bps | kbps | mbps | gbps] | percent percent} | [be] be-value [bytes | kbytes | mbytes | ms | us]] | [conform {transmit | set-prec-transmit precedence-value | set-dscp-transmit dscp-value | set-cos-transmit cos-val | set-discard-class-transmit discard-class-value | set-qos-transmit qos-group-value} | exceed {drop | set dscp dscp table cir-markdown-map}] | violate {drop | set dscp dscp table pir-markdown-map}}]]]
```

Syntax Description

cir	(Optional) Sets the committed information rate as a bit rate or a percentage of the link rate.
<i>cir-value</i>	Committed information rate. The range of values is from 1 to 80000000000; the range of policing values that are mathematically significant is 8000 to 80 Gbps.
bps	(Optional) Specifies the units of bits per second.
kbps	(Optional) Specifies the units of kilobits per second.
mbps	(Optional) Specifies the units of megabits per second.
gbps	(Optional) Specifies the units of gigabits per second.
percent	Specifies the percentage of the related parameter.
<i>percent</i>	Specifies percent. Valid values are from 1 to 100.
bc	Sets the committed burst rate, which is how much the cir can be exceeded, either as a bit rate or an amount of time at cir.
<i>bc-value</i>	Committed burst rate. Valid values are from 1 to 536870912. The default value is 200.
bytes	(Optional) Specifies the units of bytes per second.
kbytes	(Optional) Specifies the units of kilobytes per second.
mbytes	(Optional) Specifies the units of megabytes per second.
ms	(Optional) Specifies the units of milliseconds.
us	(Optional) Specifies the units of microseconds.
pir	Sets the peak information rate.
<i>pir-value</i>	Peak information rate. Valid values are from 1 to 80000000000; the range of policing values that are mathematically significant is 8000 to 80 Gbps.
be	Specifies the extended burst rate. Valid values are from 1 to 536870912.

<i>be-value</i>	Extended burst rate. If the bc value is not specified, the default is 200 milliseconds of traffic at the configured rate. The default data rate units are bytes.
conform	Sets the action to take when the data rate is within bounds.
transmit	Specifies the action of transmitting packets.
set-prec-transmit <i>precedence-value</i>	Sets the IP precedence field to the specified value and transmits the packet. Valid values are from 0 to 7.
set-dscp-transmit <i>dscp-value</i>	Sets the Differentiated Service Code Point (DSCP) field to the specified value and transmits the packet. For a list of valid values for this field, see Table 1 .
set-cos-transmit <i>cos-val</i>	Sets the class of service (CoS) field to the specified value and transmits the packet. Valid values are from 0 to 7.
set-discard-class-transmit <i>discard-class-value</i>	Sets the discard class field to the specified value and transmits the packet. Valid values are from 0 to 63.
set-qos-transmit <i>qos-group-value</i>	Sets the qos group field to the specified value and transmits the packet. Valid values are from 0 to 126.
exceed	Sets the action to take when the data rate is exceeded. The default is drop.
drop	Specifies the action of dropping packets.
set dscp dscp table cir-markdown-map	Sets the DSCP field to the corresponding value in the system-defined table map and transmits the packet.
violate	Sets the action to take when the data rate violates the configured rate values. The default is drop.
set dscp dscp table pir-markdown-map	Sets the DSCP field to the corresponding value in the system-defined table map and transmits the packet.

Defaults

bc default value is 200 milliseconds of traffic at the configured rate. The default data rate units are bytes.

be default value is 200 milliseconds of traffic at the configured rate. The default data rate units are bytes.

exceed default action is drop.

violate default action is drop.

Command Modes

Policy map type qos class configuration

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
4.0	This command was introduced.

Usage Guidelines

This command does not require a license.

Examples

This example shows a 1-rate, 2-color policer that transmits if the data rate is within 200 milliseconds of traffic at 256000 bps and marks the DSCP value based on the system-defined table map pir-markdown-map if the data rate is violated:

```
switch(config)# policy-map my_policy1
switch(config-pmap-qos)# class default-class
switch(config-pmap-c-qos)# police cir 256000 conform transmit violate drop
switch(config-pmap-c-qos)#
```

This example shows a 1-rate, 3-color policer that transmits if the data rate is within 200 milliseconds of traffic at 256000 bps, marks DSCP based on the system-defined table map cir-markdown-map if the data rate is within 300 milliseconds of traffic at 256000 bps, and drops packets otherwise (pir must equal cir):

```
switch(config)# policy-map my_policy1
switch(config-pmap-qos)# class default-class
switch(config-pmap-c-qos)# police cir 256000 pir 256000 conform transmit exceed set dscp
dscp table cir-markdown-map violate drop
switch(config-pmap-c-qos)#
```

This example shows a 2-rate, 3-color policer that transmits and sets CoS to 5 if the data rate is within 200 milliseconds of traffic at 256000 bps, marks DSCP based on the system-defined table map cir-markdown-map if the data rate exceeds 200 milliseconds of traffic at 512 bps, and drops packets otherwise:

```
switch(config)# policy-map my_policy1
switch(config-pmap-qos)# class default-class
switch(config-pmap-c-qos)# police cir 256000 pir 512000 conform set-cos-transmit 5 exceed
set dscp dscp table cir-markdown-map violate drop
switch(config-pmap-c-qos)#
```

Related Commands

Command	Description
show policy-map	Displays policy maps and statistics.

police aggregate

To apply an aggregate policer to a particular class of traffic across multiple interfaces, use the **police aggregate** command. To remove an aggregate policer configuration, use the **no** form of this command.

```
police aggregate policer-name

no police aggregate policer-name
```

Syntax Description	<i>policer-name</i> Name of a shared aggregate policer to use.
--------------------	--

Defaults	None
----------	------

Command Modes	Policy map type qos class configuration
---------------	---

SupportedUserRoles	network-admin vdc-admin
--------------------	----------------------------

Command History	Release	Modification
	4.0	This command was introduced.

Usage Guidelines	Shared policers can only be applied to interfaces on the same module.
------------------	---

Note For information about configuring a shared policer, see the [qos shared-policer](#) command.

This command does not require a license.

Examples	This example shows how to configure a shared policer for the class-default class of traffic:
----------	--

```
switch(config)# policy-map my_policy1
switch(config-pmap-qos)# class default-class
switch(config-pmap-c-qos)# police aggregate my_aggregate_policer
switch(config-pmap-c-qos)#
```

This example shows how to remove the configuration of a shared policer from the class-default class of traffic:

```
switch(config)# policy-map my_policy1
switch(config-pmap-qos)# class default-class
switch(config-pmap-c-qos)# no police aggregate my_aggregate_policer
switch(config-pmap-c-qos)#
```

Related Commands	Command	Description
	qos shared-policer	Configures simultaneous policing across multiple interfaces for a specified class of traffic.
	show policy-map	Displays policy maps and statistics.

policy-map type network-qos

To configure a policy map and enter the policy map type network qos configuration mode, use the **policy-map type network-qos** command. To remove a class map, use the **no** form of this command.

policy-map type network-qos *pmap-name-nq* [**template** 8e|6e|7e|4e|8e-4q4q]

no policy-map type network-qos *pmap-name-nq* [**template** 8e|6e|7e|4e|8e-4q4q]

Syntax Description

template	Specifies the template type.
8e	Specifies the 4e template.
6e	Specifies the 6e template.
7e	Specifies the 7e template.
4e	Specifies the 4e template.
8e-4q4q	Specifies the 8e-4q4q template.

Defaults

qos

Command Modes

Global configuration

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
6.1(3)	Added a template option.
5.1(1)	This command was introduced.

Usage Guidelines

- Creates user-defined network-qos policy-map <pmap-name-nq> with the given template-type
- The properties of 8e template and 8e-4q4q template network-qos policy-maps are same. Thus this command explicitly says the type of the template
- If the template type is not mentioned then it will be considered as 8e or 7e or 6e or 4e based on the number of drop CoS and no-drop CoS

This command does not require a license.

Examples

This example shows how to configure a policy map of the type network qos:

```
switch# configure terminal
switch(config)# policy-map type network-qos my_template
switch(config-pmap-nqos)#
```

This example shows how to remove a policy map of the type network qos:

```
switch# configure terminal
switch(config)# no policy-map type network-qos my_template
```

This example shows how to configure a policy map of the type network qos with template type as 8e-4q4q:

```
switch # conf t
switch(config)# policy-map type network-qos my-8e-4q4q-nq template 8e-4q4q
switch(config-pmap-nqos)#
```

Related Commands

Command	Description
service-policy	Attaches a policy map to an interface.
show policy-map	Displays policy maps and statistics.

policy-map type qos

To create or modify a policy map and enter the policy map type qos configuration mode, use the **policy-map type qos** command. To remove a policy map, use the **no** form of this command.

policy-map [**type qos**] [**match-first**] {*qos-policy-map-name*}

no policy-map [**type qos**] [**match-first**] {*qos-policy-map-name*}

Syntax Description

match-first	(Optional) Specifies the policies associated with the first class that matches the packet characteristics are executed. This is the default action if this option is not specified.
	Note Because this is the default action, you do not need to enter this variable; it is there to ensure compatibility with other systems.
<i>qos-policy-map-name</i>	Name assigned to a type qos policy map.

Defaults

The software enters the policy map type qos configuration mode if you enter the **policy-map** command without specifying a type.

Command Modes

Global configuration

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
4.0	This command was introduced.

Usage Guidelines

Use the [service-policy](#) command to assign policy maps to interfaces.
This command does not require a license.

Examples

This example shows how to create or modify a type qos policy map:

```
switch(config)# policy-map my_policy1
switch(config-pmap-qos)#
```

This example shows how to remove a type qos policy map:

```
switch(config)# no policy-map my_policy1
```

Related Commands

Command	Description
service-policy	Attaches a policy map to an interface.

policy-map type queuing

To create or modify a policy map and enter the policy map type queuing configuration mode, use the **policy-map type queuing** command. To remove a policy map, use the **no** form of this command.

policy-map type queuing [**match-first**] {*queuing-policy-map-name* | **que-dynamic**}

no policy-map type queuing [**match-first**] {*queuing-policy-map-name* | **que-dynamic**}

Syntax Description	match-first	(Optional) Specifies the policies associated with the first class that matches the packet characteristics are executed. This is the default action if this option is not specified.
	Note	Because this is the default action, you do not need to enter this variable; it is there to ensure compatibility with other systems.
	<i>queuing-policy-map-name</i>	Name assigned to a type queuing policy map.
	que-dynamic	Specifies already configured policy maps.

Defaults None

Command Modes Global configuration

Supported User Roles network-admin
vdc-admin

Command History	Release	Modification
	4.0	This command was introduced.
	4.2(1)	The que-dynamic variable was added.

Usage Guidelines Use the [service-policy](#) command to assign policy maps to interfaces.
This command does not require a license.

Examples This example shows how to create or modify a queuing policy map:

```
switch(config)# policy-map type queuing my_policy1
switch(config-pmap-que)#
```

This example shows how to remove a type queuing policy map:

```
switch(config)# no policy-map type queuing my_policy1
switch(config)#
```

Related Commands	Command	Description
	service-policy	Attaches a policy map to an interface.
	show policy-map	Displays policy maps and statistics.

policy-map type queuing

To configure the policy map of a type queuing and to enter the policy-map mode for a specified policy map, use the **policy-map queuing** command. To remove a policy map use the **no** form of this command.

```
policy-map queuing [policy-map-name]
no policy-map queuing [policy-map-name]
```

Syntax Description	policy-map-name Policy map of a type queuing.
	 Note The policy map names can contain alphabetical, hyphen, or underscore characters , are case sensitive, and can be up to 40 characters.

Defaults	None
----------	------

Release	Modification				
6.2(2)	This command was introduced.				

Usage Guidelines	This command does not require a license.
------------------	--

Examples	This example shows how to configure the policy map of a type queuing: <pre>switch# config t switch(config)# policy-map type queuing test switch(config-pmap-que)#</pre> This example shows how to remove a type queuing policy map: <pre>switch(config)# no policy-map type queuing test switch(config)#</pre>
----------	--

Related Commands

Command	Description
<code>show policy-map type queuing [policy-map-name]</code>	Displays the queuing policy that you copied and renamed.

priority (queuing)

To configure a single output queuing class as the priority queue, use the **priority** command. To remove the priority queue selection, use the **no** form of this command.

priority [*level priority-value*]

no priority [*level priority-value*]

Syntax Description

level <i>priority-value</i>	(Optional) Specifies the priority level for an output queuing class. Only one priority level is supported. The priority value can only be 1.
------------------------------------	--

Defaults

The software distributes the bandwidth among the output queues, when you do not specify the priority.

Command Modes

Policy map type queuing configuration

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
4.0	This command was introduced.

Usage Guidelines

The priority level can only be 1.

Use the **bandwidth remaining** command to allocate the remaining bandwidth among the nonpriority output queues. By default, the software evenly distributes the remaining bandwidth among the nonpriority output queues.

You can also use the **police** command to explicitly configure the priority for specified classes of traffic.

Note

After you use this command in a specified policy map, you cannot use the **bandwidth** or **shape** command in the same policy map.

This command does not require a license.

Examples

This example shows how to assign a priority queue:

```
switch(config)# policy-map type queuing match-first my_queue
switch(config-pmap-que)# class type queuing 1p3q4t-out-pq1
switch(config-pmap-c-que)# priority level 1
switch(config-pmap-c-que)#
```

This example shows how to remove a priority queue:

```
switch(config)# policy-map type queuing match-first my_queue
switch(config-pmap-que)# class type queuing 1p3q4t-out-pq1
switch(config-pmap-c-que)# no priority level 1
switch(config-pmap-c-que)#
```

Related Commands

Command	Description
bandwidth remaining	Configures the bandwidth remaining on the interface in a queue.
police	Configures policing for specified classes of traffic.
show policy-map	Displays policy maps and statistics.

priority-flow-control mode

To configure priority flow control (PFC) on an interface, use the **priority-flow-control mode** command.

priority-flow-control mode {auto | off | on}

Syntax Description	auto	Sets the PFC mode to automatic.
	off	Sets the PFC mode to off.
	on	Sets the PFC mode to on.

Defaults auto

Command Modes Global configuration

Supported User Roles network-admin
network-operator
vdc-admin
vdc-operator

Command History	Release	Modification
	5.1(1)	This command was introduced.

Usage Guidelines This command does not require a license.

Examples This example shows how to set the PFC mode to on:

```
switch# configure terminal
switch(config)# interface ethernet 2/5
switch(config-if)# priority-flow-control mode on
switch(config-if)#
```

This example shows how to set the PFC mode to off:

```
switch# configure terminal
switch(config)# interface ethernet 2/5
switch(config-if)# priority-flow-control mode off
switch(config-if)#
```

Related Commands

Command	Description
<code>show interface priority-flow-control</code>	Displays the status of priority flow control (PFC) on all interfaces.

qos copy policy-map

To copy a system-defined network-qos policy and modify it for use, use the **qos copy policy-map** command.

```
qos copy policy-map type {network-qos [default-nq-4e-policy {prefix prefix | suffix suffix} |
default-nq-6e-policy {prefix prefix | suffix suffix} | default-nq-7e-policy {prefix prefix |
suffix suffix} | default-nq-8e-policy {prefix prefix | suffix suffix}] | queuing
[default-4q-4e-in-policy {prefix prefix | suffix suffix} | default-4q-4e-out-policy {prefix
prefix | suffix suffix}]}
```

Syntax Description

type	Specifies the component type.
network-qos	Specifies a network qos policy.
default-nq-4e-policy	(Optional) Specifies the 4-Ethernet template.
prefix prefix	Specifies a prefix for the policy name. A prefix can be any alphanumeric character string.
suffix suffix	Specifies a suffix for the policy name. A prefix can be any alphanumeric character string.
default-nq-6e-policy	(Optional) Specifies the 6-Ethernet template.
default-nq-7e-policy	(Optional) Specifies the 7-Ethernet template.
default-nq-8e-policy	(Optional) Specifies the 8-Ethernet template.
queuing	(Optional) Specifies a queuing policy.
default-4q-4e-in-policy	(Optional) Specifies the default 4-Ethernet input queuing policy.
default-4q-4e-out-policy	(Optional) Specifies the default 4-Ethernet output queuing policy.

Defaults

None

Command Modes

Global configuration

Supported User Roles

network-admin
network-operator
vdc-admin
vdc-operator

Command History

Release	Modification
5.1(1)	This command was introduced.

Usage Guidelines

This command does not require a license.

Examples

This example shows how to copy a system-defined network qos policy and modify it for use:

```
switch# configure terminal
switch(config)# qos copy policy-map type network-qos default-nq-4e-policy prefix my_
switch(config)#
```

Related Commands

Command	Description
policy-map type network-qos	Configure a policy map and enter the policy map type network qos configuration mode.

qos shared-policer

To configure simultaneous policing of the data rates for a particular class of traffic across multiple interfaces, use the **qos shared-policer** command. To remove a shared policer configuration, use the **no** form of this command.

```
qos shared-policer [type qos] policer-name [cir] {cir-value [bps | kbps | mbps | gbps] | percent
percent} | [[bc] bc-value [bytes | kbytes | mbytes | ms | us]] | [pir {pir-value [bps | kbps | mbps
| gbps] | percent -percent} | [be] be-value [bytes | kbytes | mbytes | ms | us]]] | [conform
{transmit | set-prec-transmit precedence-value | set-dscp-transmit dscp-value |
set-cos-transmit cos-val | set-discard-class-transmit discard-class-value | set-qos-transmit
qos-group-value} | exceed {drop | set dscp dscp table cir-markdown-map}] [violate {drop |
set dscp dscp table pir-markdown-map}}]
```

```
no qos shared-policer [type qos] policer-name
```

Syntax Description

type qos	(Optional) Specifies the component type, which is quality of service (QoS) for this class.
<i>policer-name</i>	Name of a shared policer.
cir	(Optional) Sets the committed information rate as a bit rate or a percentage of the link rate.
<i>cir-value</i>	Committed information rate. Valid values are from 1 to 80000000000; the range of policing values that are mathematically significant is 8000 to 80 Gbps.
bps	(Optional) Specifies the units of bits per second.
kbps	(Optional) Specifies the units of kilobits per second.
mbps	(Optional) Specifies the units of megabits per second.
gbps	(Optional) Specifies the units of gigabits per second.
percent	Specifies the percentage of the related parameter.
<i>percent</i>	Specifies percent. Valid values are from 1 to 100.
bc	Sets the committed burst rate, which is how much the cir can be exceeded, either as a bit rate or an amount of time at cir.
<i>bc-value</i>	Committed burst rate. Valid values are from 1 to 536870912. The default value is 200.
bytes	(Optional) Specifies the units of bytes per second.
kbytes	(Optional) Specifies the units of kilobytes per second.
mbytes	(Optional) Specifies the units of megabytes per second.
ms	(Optional) Specifies the units of milliseconds.
us	(Optional) Specifies the units of microseconds.
pir	Sets the peak information rate.
<i>pir-value</i>	Peak information rate. Valid values are from 1 to 80000000000; the range of policing values that are mathematically significant is from 8000 to 80 Gbps.
be	Specifies the extended burst rate. Valid values are from 1 to 536870912.

<i>be-value</i>	Extended burst rate. If the bc value is not specified, the default is 200 milliseconds of traffic at the configured rate. The default data rate units are bytes.
conform	Sets the action to take when the data rate is within bounds.
transmit	Specifies the action of transmitting packets.
set-prec-transmit <i>precedence-value</i>	Sets the IP precedence field to the specified value and transmits the packet. Valid values are from 0 to 7.
set-dscp-transmit <i>dscp-value</i>	Sets the Differentiated Services Code Point (DSCP) field to the specified value and transmits the packet.
set-cos-transmit <i>cos-val</i>	Sets the class of service (CoS) field to the specified value and transmits the packet. Valid values are from 0 to 7.
set-discard-class-transmit <i>discard-class-value</i>	Sets the discard class field to the specified value and transmits the packet. Valid values are from 0 to 63.
set-qos-transmit <i>qos-group-value</i>	Sets the qos group field to the specified value and transmits the packet. Valid values are from 0 to 126.
exceed	Sets the action to take when the data rate is exceeded. The default is drop.
drop	Specifies the action of dropping packets.
set dscp dscp table cir-markdown-map	Sets the DSCP field to the corresponding value in the system-defined table map and transmits the packet.
violate	Sets the action to take when the data rate violates the configured rate values. The default is drop.
set dscp dscp table pir-markdown-map	Sets the DSCP field to the corresponding value in the system-defined table map and transmits the packet.

Defaults

type default value is qos.

bc default value is 200 milliseconds of traffic at the configured rate. The default data rate units are bytes.

be default value is 200 milliseconds of traffic at the configured rate. The default data rate units are bytes.

exceed default action is drop.

violate default action is drop.

Command Modes

Global configuration

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
4.0	This command was introduced.

Usage Guidelines

The interfaces that are attached to the shared policer must be on the same module. For an example of using a shared policer, see the [police aggregate](#) command.

This command does not require a license.

Examples

This example shows configuration of a 2-rate, 3-color shared policer that transmits and sets CoS to 5 if the data rate is within 200 milliseconds of traffic at 256000 bps, marks DSCP based on the system-defined table map cir-markdown-map if the data rate exceeds 200 milliseconds of traffic at 512 bps, and drops packets otherwise:

```
switch(config)# qos shared-policer my_shared_policer cir 256000 pir 512000 conform
set-cos-transmit 5 exceed set dscp dscp table cir-markdown-map violate drop
switch(config)#
```

Related Commands

Command	Description
police aggregate	Configures simultaneous policing of the data rates for a particular class of traffic across multiple interfaces.
show policy-map	Displays policy maps and statistics.

qos statistics

To enable Quality of Service (QoS) statistics, use the **qos statistics** command. To disable QoS statistics, use the **no** form of this command.

qos statistics

no qos statistics

Syntax Description	This command has no arguments or keywords.
---------------------------	--

Defaults	Enabled
-----------------	---------

Command Modes	Global configuration
----------------------	----------------------

Supported User Roles	network-admin vdc-admin
-----------------------------	----------------------------

Command History	Release	Modification
	4.0	This command was introduced.

Usage Guidelines	This command does not require a license.
-------------------------	--

Examples	This example shows how to enable QoS statistics:
-----------------	--

```
switch(config)# qos statistics
switch(config)#
```

This example shows how to disable QoS statistics:

```
switch(config)# no qos statistics
switch(config)#
```

Related Commands	Command	Description
	show policy-map	Displays policy maps and statistics.

queue-limit (Tail drop threshold)

To configure tail drop by setting queue limits on both ingress and egress queues, use the **queue-limit** command. To remove a queue limit, use the **no** form of this command.

queue-limit { **cos** *cos-value* [**packets** | **bytes** | **kbytes** | **mbytes** | **ms** | **us**] | **percent** *percent-queue-size* }

no queue-limit { **cos** *cos-value* [**packets** | **bytes** | **kbytes** | **mbytes** | **ms** | **us**] | **percent** *percent-queue-size* }

Syntax Description

cos <i>cos-value</i>	Applies the queue limit to packets with the specified CoS value. Valid values are from 0 to 7.
packets	(Optional) Specifies that queue size is in packets. If not specified, packets is the default units.
bytes	(Optional) Specifies that the queue size is in bytes.
kbytes	(Optional) Specifies that the queue size is in kilobytes.
mbytes	(Optional) Specifies that the queue size is in megabytes.
ms	(Optional) Specifies that the queue size is in milliseconds at the underlying interface minimum guaranteed link rate.
us	(Optional) Specifies that queue size is in microseconds at the underlying interface minimum guaranteed link rate.
percent	(Optional) Specifies the percentage of queue limit.
<i>percent-queue-size</i>	(Optional) Specifies the percentage of the buffer memory used by the queue. Valid values are from 1 to 100.

Defaults

queue-size is in packets by default.

Command Modes

Policy map type queuing class configuration

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
5.1(1)	Modified the queue-limit command to include Tail drop threshold.
4.0	This command was introduced.

Usage Guidelines

The system drops packets that exceed the configured queue-size threshold.

By default, the queue limit is applied to all packets with a class of service (CoS) value that is not assigned a queue limit.

The queue limit is not supported on ingress policies on the Cisco Nexus 7000 M1-Series 32-Port 10Gb Ethernet modules (N7K-M132XP-12 and N7K-M132XP-12L).

Tail drop and weighted random early detection (WRED) cannot be configured in the same class. For information about configuring WRED, see the [random-detect](#) command.

This command does not require a license.

Examples

This example shows how to assign a queue limit to a policy map queuing class that applies only to the specified CoS value:

```
switch(config)# policy-map type queuing match-first my_queue
switch(config-pmap-que)# class type queuing lp3q4t-out-pq1
switch(config-pmap-c-que)# queue-limit cos 3 10 mbytes
switch(config-pmap-c-que)#
```

This example shows how to remove a queue limit from a policy map queuing class:

```
switch(config)# policy-map type queuing match-first my_queue
switch(config-pmap-que)# class type queuing lp3q4t-out-pq1
switch(config-pmap-c-que)# no queue-limit cos 3 10 mbytes
switch(config-pmap-c-que)#
```

Related Commands

Command	Description
random-detect	Configures weighted random early detection (WRED).
show policy-map	Displays policy maps and statistics.

queue-limit (queue-size)

To configure queue size on both ingress and egress queues, use the **queue-limit** command. To remove a queue limit, use the **no** form of this command.

queue-limit { *queue-size* [**packets** | **bytes** | **kbytes** | **mbytes** | **ms** | **us**] | **percent** *percent-queue-size* }

no queue-limit { *queue-size* [**packets** | **bytes** | **kbytes** | **mbytes** | **ms** | **us**] | **percent** *percent-queue-size* }

Syntax Description

<i>queue-size</i>	Queue size. Valid values are from 1 to 83886080.
packets	(Optional) Specifies that queue size is in packets. If not specified, packets is the default units.
bytes	(Optional) Specifies that the queue size is in bytes.
kbytes	(Optional) Specifies that the queue size is in kilobytes.
mbytes	(Optional) Specifies that the queue size is in megabytes.
ms	(Optional) Specifies that the queue size is in milliseconds at the underlying interface minimum guaranteed link rate.
us	(Optional) Specifies that queue size is in microseconds at the underlying interface minimum guaranteed link rate.
percent	(Optional) Specifies the percentage of queue limit.
<i>percent-queue-size</i>	(Optional) Specifies the percentage of the buffer memory used by the queue. Valid values are from 1 to 100.

Defaults

queue-size is in packets by default.

Command Modes

Policy map type queuing class configuration

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
5.1(1)	Modified the queue-limit command to include queue size.
4.0	This command was introduced.

Usage Guidelines

The system drops packets that exceed the configured queue-size threshold.

By default, the queue limit is applied to all packets with a class of service (CoS) value that is not assigned a queue limit.

The queue limit is not supported on ingress policies on the Cisco Nexus 7000 M1-Series 32-Port 10Gb Ethernet modules (N7K-M132XP-12 and N7K-M132XP-12L).

Tail drop and weighted random early detection (WRED) cannot be configured in the same class. For information about configuring WRED, see the [random-detect](#) command.

This command does not require a license.

Examples

This example shows how to assign a queue limit to a policy map queuing class that applies only to the specified CoS value:

```
switch(config)# policy-map type queuing match-first my_queue
switch(config-pmap-que)# class type queuing 1p3q4t-out-pq1
switch(config-pmap-c-que)# queue-limit cos 3 10 mbytes
switch(config-pmap-c-que)#
```

This example shows how to remove a queue limit from a policy map queuing class:

```
switch(config)# policy-map type queuing match-first my_queue
switch(config-pmap-que)# class type queuing 1p3q4t-out-pq1
switch(config-pmap-c-que)# no queue-limit cos 3 10 mbytes
switch(config-pmap-c-que)#
```

Related Commands

Command	Description
random-detect	Configures weighted random early detection (WRED).
show policy-map	Displays policy maps and statistics.

random-detect

To configure weighted random early detection (WRED) on both ingress and egress queues by setting aggregate minimum and maximum packet drop threshold default values for specific class of service (CoS) values, use the **random-detect** command. To remove a WRED configuration, use the **no** form of this command.

```
random-detect {cos cos-list [minimum-threshold] {min-threshold [packets | bytes | kbytes | mbytes | ms | us] | percent min-percent-of-qsize} [maximum-threshold] {max-threshold [packets | bytes | kbytes | mbytes | ms | us] | percent max-percent-of-qsize}
```

```
no random-detect {cos cos-list [minimum-threshold] {min-threshold [packets | bytes | kbytes | mbytes | ms | us] | percent min-percent-of-qsize} [maximum-threshold] {max-threshold [packets | bytes | kbytes | mbytes | ms | us] | percent max-percent-of-qsize}
```

Syntax Description

cos <i>cos-list</i>	Specifies the CoS values where the software applies thresholds. Valid values are from 0 to 7.
minimum-threshold	(Optional) Specifies the minimum threshold.
<i>min-threshold</i>	Minimum threshold. Valid values are from 1 to 52428800.
packets	(Optional) Specifies that thresholds are in packets.
bytes	(Optional) Specifies that thresholds are in bytes.
kbytes	(Optional) Specifies that thresholds are in kilobytes.
mbytes	(Optional) Specifies that thresholds are in megabytes.
ms	(Optional) Specifies that thresholds are in milliseconds at the underlying interface minimum guaranteed link rate
us	(Optional) Specifies that thresholds are in microseconds at the underlying interface minimum guaranteed link rate.
percent	Specifies the percentage of the threshold.
<i>min-percent-of-qsize</i>	Minimum percentage of the buffer memory used by the queue. Valid values are from 1 to 100.
maximum-threshold	(Optional) Specifies the maximum threshold.
<i>max-threshold</i>	Maximum threshold. Valid values are from 1 to 52428800.
<i>max-percent-of-qsize</i>	(Optional) Maximum percentage of the buffer memory used by the queue. Valid values are from 1 to 100.

Defaults

Thresholds are in packets by default.

The **random-detect cos-based** command must be specified for a queue to establish default thresholds for any CoS values that are not specified in **random-detect** commands for the same queue.

Command Modes

Policy map type queuing class configuration

SupportedUserRoles network-admin
vdc-admin

Command History	Release	Modification
	4.0	This command was introduced.

Usage Guidelines

Note

You must enter the **random-detect cos-based** command before you enter the **random-detect** command.

The minimum and maximum threshold units must match.

The system drops packets that exceed the minimum threshold at an increasing rate as the maximum threshold is reached. By default, the units are in packets,

WRED and tail drop cannot be configured in the same class. For information about configuring tail drop, see the **queue-limit** command.

You cannot configure WRED on ingress on the 10-Gigabit Ethernet ports.

For CoS lists, you can use the following:

- Specify only one value—**cos 1**
- Specify a range of values—**cos 1-3**
- Specify a comma-separated list of values—**cos 1, 4-6**

This command does not require a license.

Examples

This example shows how to configure WRED for a queue by setting the default WRED thresholds followed by thresholds that apply to CoS values 5 and 7:

```
switch(config)# policy-map type queuing match-first my_queue
switch(config-pmap-que)# class type queuing lp3q4t-out-pq1
switch(config-pmap-c-que)# random-detect cos-based aggregate 10 mbytes 20 mbytes
switch(config-pmap-c-que)# random-detect cos 5,7 15 mbytes 20 mbytes
switch(config-pmap-c-que)#
```

This example shows how to configure WRED for a queue by setting the default WRED thresholds followed by queue buffer size thresholds that apply to CoS value 5:

```
switch(config)# policy-map type queuing match-first my_queue
switch(config-pmap-que)# class type queuing lp3q4t-out-pq1
switch(config-pmap-c-que)# random-detect cos-based aggregate 10 mbytes 20 mbytes
switch(config-pmap-c-que)# random-detect cos 5 percent 5 percent 15
switch(config-pmap-c-que)#
```

This example shows how to remove a WRED configuration from a policy map queuing class:

```
switch(config)# policy-map type queuing match-first my_queue
switch(config-pmap-que)# class type queuing lp3q4t-out-pq1
switch(config-pmap-c-que)# no random-detect cos-based aggregate 10 mbytes 20 mbytes
switch(config-pmap-c-que)# no random-detect cos 5 percent 5 percent 15
switch(config-pmap-c-que)#
```

Related Commands

Command	Description
random-detect cos-based	Configures WRED.
queue limit	Configures tail drop.
show policy-map	Displays policy maps and statistics.

random-detect cos-based

To configure weighted random early detection (WRED) on both ingress and egress queues by setting minimum and maximum packet drop thresholds, use the **random-detect cos-based** command. To remove a WRED configuration, use the **no** form of this command.

```
random-detect cos-based [aggregate [minimum-threshold] {min-threshold [packets | bytes | kbytes | mbytes | ms | us] | percent min-percent-of-qsize} [maximum-threshold] {max-threshold [packets | bytes | kbytes | mbytes | ms | us] | percent max-percent-of-qsize}]
```

```
no random-detect cos-based [aggregate [minimum-threshold] {min-threshold [packets | bytes | kbytes | mbytes | ms | us] | percent min-percent-of-qsize} [maximum-threshold] {max-threshold [packets | bytes | kbytes | mbytes | ms | us] | percent max-percent-of-qsize}]
```

Syntax Description	
aggregate	(Optional) Specifies where the software applies aggregate thresholds for CoS values that are not specified in the random-detect command.
minimum-threshold	(Optional) Specifies the minimum threshold.
<i>min-threshold</i>	Minimum threshold. Valid values are from 1 to 52428800.
packets	(Optional) Specifies that thresholds are in packets.
bytes	(Optional) Specifies that thresholds are in bytes.
kbytes	(Optional) Specifies that thresholds are in kilobytes.
mbytes	(Optional) Specifies that thresholds are in megabytes.
ms	(Optional) Specifies that thresholds are in milliseconds at the underlying interface minimum guaranteed link rate
us	(Optional) Specifies that thresholds are in microseconds at the underlying interface minimum guaranteed link rate.
percent	Specifies the percentage of the threshold.
<i>min-percent-of-qsize</i>	(Optional) Minimum percentage of the buffer memory used by the queue. Valid values are from 1 to 100.
maximum-threshold	Specifies the maximum threshold.
<i>max-threshold</i>	Maximum threshold. Valid values are from 1 to 52428800.
<i>max-percent-of-qsize</i>	(Optional) Maximum percentage of the buffer memory used by the queue. Valid values are from 1 to 100.

Defaults Thresholds are in packets by default.

Command Modes Policy map type queuing class configuration

Supported User Roles network-admin
vdc-admin

Command History

Release	Modification
4.0	This command was introduced.

Usage Guidelines

The **random-detect cos-based** command is required when you configure WRED to establish default thresholds for class of service (CoS) values for which you do not define specific thresholds.

The minimum and maximum threshold units must match.

The system drops packets that exceed the minimum threshold at an increasing rate as the maximum threshold is reached. By default, the units are in packets,

WRED and tail drop cannot be configured in the same class. For information about configuring tail drop, see the **queue-limit** command.

**Note**

You cannot configure WRED on ingress 10-Gigabit Ethernet ports.

This command does not require a license.

Examples

This example shows how to configure WRED for a queue by setting the default WRED thresholds followed by thresholds that apply to CoS values 5 and 7:

```
switch(config)# policy-map type queuing match-first my_queue
switch(config-pmap-que)# class type queuing 1p3q4t-out-pq1
switch(config-pmap-c-que)# random-detect cos-based aggregate 10 mbytes 20 mbytes
switch(config-pmap-c-que)# random-detect cos 5,7 15 mbytes 20 mbytes
switch(config-pmap-c-que)#
```

This example shows how to configure WRED for a queue by setting the default WRED thresholds followed by queue buffer size thresholds that apply to CoS value 5:

```
switch(config)# policy-map type queuing match-first my_queue
switch(config-pmap-que)# class type queuing 1p3q4t-out-pq1
switch(config-pmap-c-que)# random-detect cos-based aggregate 10 mbytes 20 mbytes
switch(config-pmap-c-que)# random-detect cos 5 percent 5 percent 15
switch(config-pmap-c-que)#
```

This example shows how to remove a WRED configuration from a policy map queuing class:

```
switch(config)# policy-map type queuing match-first my_queue
switch(config-pmap-que)# class type queuing 1p3q4t-out-pq1
switch(config-pmap-c-que)# no random-detect cos-based aggregate 10 mbytes 20 mbytes
switch(config-pmap-c-que)# no random-detect cos 5 percent 5 percent 15
switch(config-pmap-c-que)#
```

Related Commands

Command	Description
random-detect	Configures WRED.
queue limit	Configures tail drop.
show policy-map	Displays policy maps and statistics.

service-policy

To attach a policy map to an interface, VLAN, or tunnel, use the **service-policy** command. To remove a service-policy from an interface, VLAN or tunnel, use the **no** form of this command.

service-policy [**type** {**qos** | **queuing**}] [**input** | **output**] {*policy-map-name*} [**no-stats**]

no service-policy [**type** {**qos** | **queuing**}] [**input** | **output**] {*policy-map-name*} [**no-stats**]

Syntax Description	
type	(Optional) Specifies whether the policy map is of type qos or queuing.
qos	Specifies a policy map of type qos.
queuing	Specifies a policy map of type queuing.
input	Applies this policy map to packets coming into this interface.
output	Applies this policy map to packets going out of this interface.
<i>policy-map-name</i>	Name of the policy map to attach to this interface. Only one policy map can be attached to the input and one to the output of a given interface for each of the policy type qos and queuing.
no-stats	(Optional) Disables generation of statistics for this policy map.

Defaults

type default is qos.

No policies of type qos are active on an interface until the **service-policy** command is entered. The system-defined type queuing class maps are attached to each interface unless you specifically attach a different class map. For a list of the system-defined type queuing class maps, see [Table 1](#).

Command Modes

Interface configuration
VLAN configuration

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
5.x	changed the command output.
4.0	This command was introduced.
4.0(3)	Support for tunnel interfaces is added.

Usage Guidelines

No policies of type qos are active on an interface until you enter the **service-policy** command. The system-defined type queuing class maps are attached to each interface unless you specifically attach a different class map.

You can attach one ingress and one egress type qos policy map to a port, port channel, tunnel, or VLAN. You can attach one ingress and one egress type queuing policy map to an interface of type port, port channel, tunnel, or VLAN.

Only one policy map can be attached to the input and one to the output of a given interface for each of the policy type qos and queuing.

**Note**

For more information on using service policies, see the *Cisco Nexus 7000 Series NX-OS Quality of Service Configuration Guide, Release 5.0*.

This command does not require a license.

Examples

This example shows how to attach qos type policy maps to the ingress and egress packets of a VLAN:

```
switch(config)# vlan configuration 111
switch(config-vlan)# service-policy input my_input_policy
switch(config-vlan)# service-policy output my_output_policy
switch(config-vlan)#
```

This example shows how to attach a queuing policy map to the ingress packets of a port interface:

```
switch(config)# interface ethernet 2/1
switch(config-if)# service-policy type queuing input my_input_q_policy
switch(config-if)#
```

This example shows how to remove a policy map from a VLAN:

```
switch(config)# vlan 1
switch(config-vlan)# no service-policy input my_input_policy
switch(config-vlan)#
```

Related Commands

Command	Description
show policy-map interface brief	Displays all interfaces and VLANs with attached service policies in a brief format.

set cos (policy map type qos)

To assign a class of service (CoS) value for a class of traffic in a type qos policy map, use the **set** command. To remove the assigned value from the class, use the **no** form of this command.

set cos *cos-value*

no set cos *cos-value*

Syntax Description	<i>cos-value</i> CoS value to assign for this class of traffic. Valid values are from 0 to 7.	
Defaults	None	
Command Modes	Policy map type qos class configuration	
Supported User Roles	network-admin vdc-admin	
Command History	Release	Modification
	4.0	This command was introduced.
Usage Guidelines	You can use the set cos (policy map type qos) command only on type qos policies that are attached to egress ports. This command does not require a license.	
Examples	This example shows how to remove an assignment of CoS for a class of traffic in a type qos policy map: <pre>switch(config)# policy-map my_policy1 switch(config-pmap-qos)# class traffic_class2 switch(config-pmap-c-qos)# no set cos 3 switch(config-pmap-c-qos)#</pre>	
Related Commands	Command	Description
	show policy-map	Displays policy maps and statistics.

set cos (policy map type queuing)

To assign a class of service (CoS) value for untrusted ports in a type queuing policy map, use the **set cos** command. To remove the assigned value from the class, use the **no** form of this command.

set cos *cos-value-queuing*

no set cos *cos-value-queuing*

Syntax Description	cos <i>cos-value-queuing</i> Specifies the CoS value to assign for this class of traffic. Valid values are from 0 to 7.
---------------------------	--

Defaults	None
-----------------	------

Command Modes	Policy map type queuing class configuration
----------------------	---

Supported User Roles	network-admin vdc-admin
-----------------------------	----------------------------

Command History	Release	Modification
	4.0	This command was introduced.

Usage Guidelines	You can only use this form of the set cos (policy map type queuing) command for ingress default type queuing classes. For a table of system-defined queuing class maps, see Table 1 .
-------------------------	--

Note

The CoS values that you set by using the **set cos** command apply to all packets that ingress the specified interfaces (not just to the class-default packets that ingress the interfaces).

If you set the CoS value, the device modifies the value before ingress queuing and scheduling so that the CoS-modified packets are classified differently.

This command does not require a license.

Examples	This example shows how to assign a CoS value for a class of traffic in a queuing policy map:
-----------------	--

```
switch(config)# policy-map type queuing match-first my_queuing_policy1
switch(config-pmap-que)# class type queuing 2q4t-in-q-default
switch(config-pmap-c-que)# set cos 3
switch(config-pmap-c-que)#
```

This example shows how to remove a CoS assignment for a class of traffic in a queuing policy map:

```
switch(config)# policy-map type queuing match-first my_queuing_policy1
```

```
switch(config-pmap-que)# class type queuing 2q4t-in-q-default  
switch(config-pmap-c-que)# no set cos 3  
switch(config-pmap-c-que)#
```

Related Commands

Command	Description
show policy-map	Displays policy maps and statistics.

set discard-class

To assign a discard-class value for a class of traffic in a type qos policy map, use the **set discard-class** command. To leave the discard-class values unchanged, use the **no** form of this command.

set discard-class *discard-value*

no set discard-class *discard-value*

Syntax Description	<i>discard-value</i>	Discard-class value to assign for this class of traffic. Valid values are from 0 to 63.
---------------------------	----------------------	---

Defaults	None
-----------------	------

Command Modes	Policy map type qos class configuration
----------------------	---

Supported User Roles	network-admin vdc-admin
-----------------------------	----------------------------

Command History	Release	Modification
	4.0	This command was introduced.

Usage Guidelines	You can set the discard-class value only in ingress policies.
-------------------------	---

Note

If you configure this value, you cannot configure a value by using the **set dscp** or the **set precedence** command.

This command does not require a license.

Examples	This example shows how to assign the discard-class value for a class of traffic in a type qos policy map:
-----------------	---

```
switch(config)# policy-map my_policy1
switch(config-pmap-qos)# class traffic_class2
switch(config-pmap-c-qos)# set discard-class 40
switch(config-pmap-c-qos)#
```

Related Commands	Command	Description
	show policy-map	Displays policy maps and statistics.

set dscp (QoS)

To assign a Differentiated Services Code Point (DSCP) value for a class of traffic in a type qos policy map, use the **set dscp** command. To remove a previously set DSCP value, use the **no** form of this command.

set dscp [**tunnel**] *dscp-value*

no set dscp [**tunnel**] *dscp-value*

Syntax Description	tunnel	Sets the DSCP value in the tunnel encapsulation. This keyword is not supported in Release 4.0.1.
	<i>dscp-value</i>	DSCP value or parameter to assign for this class of traffic. Valid values are from 0 to 63.

Defaults	None
-----------------	------

Command Modes	Policy map type qos class configuration
----------------------	---

Supported User Roles	network-admin vdc-admin
-----------------------------	----------------------------

Command History	Release	Modification
	4.0	This command was introduced.
	4.0.3	The tunnel keyword is supported.

Usage Guidelines

Note

If you configure this value, you cannot configure a value by the **set discard-class** or **set precedence** command. If QoS policy is applied on Vlan Configuration Level the DSCP value will Also derive the Cos value for Bridged and Routed Traffic from the three Most Significant DSCP bits

This command does not require a license.

Examples

This example shows how to assign DSCP for a class of traffic in a type qos policy map:

```
switch(config)# policy-map my_policy1
switch(config-pmap-qos)# class traffic_class2
switch(config-pmap-c-qos)# set cos 3
switch(config-pmap-c-qos)#
```

■ set dscp (QoS)

Related Commands

Command	Description
show policy-map	Displays policy maps and statistics.

set precedence (QoS)

To set precedence value in an IP header for a class of traffic in a type qos policy map, use the **set precedence** command. To leave the precedence value unchanged for the class, use the **no** form of this command.

set precedence [**tunnel**] *precedence-value*

no set precedence [**tunnel**] *precedence-value*

Syntax Description	tunnel	(Optional) Sets the IP precedence value in the tunnel encapsulation. This keyword is not supported in Release 4.0.1.
	<i>precedence-value</i>	IP precedence value to assign for this class of traffic. Valid values are from 0 to 7.

Defaults None

Command Modes Policy map type qos class configuration

Supported User Roles network-admin
vdc-admin

Command History	Release	Modification
	4.0	This command was introduced.
	4.0.3	The tunnel keyword is supported.

Usage Guidelines For a list of the IP precedence values, see [Table 2](#).

The device rewrites the last 3 bits of the Type of Service (ToS) field in the IP header to 0 for packets that match this class.

Note If you configure this value, you cannot configure a value by using the **set discard-class** or **set dscp** command.

This command does not require a license.

Examples This example shows how to set the IP precedence value for a class of traffic in a type qos policy map:

```
switch(config)# policy-map policy1
switch(config-pmap-qos)# class class2
switch(config-pmap-c-qos)# set precedence 3
switch(config-pmap-c-qos)#
```

Related Commands

Command	Description
show policy-map	Displays policy maps and statistics.

set qos-group

To assign the QoS group identifier for a class of traffic in a type qos policy map, use the **set qos-group** command. To remove the assigned value from the class, use the **no** form of this command.

set qos-group *qos-group-value*

no set qos-group *qos-group-value*

Syntax Description	<i>qos-group-value</i>	QoS group value to assign for this class of traffic. Valid values are from 0 to 126.
Defaults	None	
Command Modes	Policy map type qos class configuration	
Supported User Roles	network-admin vdc-admin	
Command History	Release	Modification
	4.0	This command was introduced.
Usage Guidelines	You can set the QoS group identifier value only in ingress policies. This command does not require a license.	
Examples	This example shows how to assign a QoS group identifier for a class of traffic in a type qos policy map: switch(config)# policy-map my_policy1 switch(config-pmap-qos)# class traffic_class2 switch(config-pmap-c-qos)# set qos-group 100 switch(config-pmap-c-qos)#	
Related Commands	Command	Description
	show policy-map	Displays policy maps and statistics.

set table

To define a mapping between two fields for a class of traffic in a type qos policy map, use the **set table** command. To remove the assigned mapping from the class, use the **no** form of this command.

set *header-parameter* {*same-header-parameter* | *output-header-parameter*} **table**
 {*table-map-name* | *mutation-map*}

no set *header-parameter* {*same-header-parameter* | *output-header-parameter*} **table**
 {*table-map-name* | *mutation-map*}

Syntax Description

<i>header-parameter</i>	Header parameters. For example, cos , dscp , precedence , or discard-class .
<i>same-header-parameter</i>	Header parameter that is the same as the first header parameter in the command line.
<i>output-header-parameter</i>	Output header parameter that is different from the first header parameter in the command line. This parameter is used in mutation mapping.
<i>table-map-name</i>	User-defined table map name to use for mapping the specified header parameter.
<i>mutation-map</i>	System-defined table map name to use for mutation mapping of the input parameter to the output parameter.

Defaults

None

Command Modes

Policy map type qos class configuration

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
4.0	This command was introduced.
4.1(2)	You can set only similar values when you create a mutation map. For example, you can set cos-cos or dscp-dscp; you cannot set cos-dscp or dscp-precedence.

Usage Guidelines

The system-defined table maps used in the **set table** command are shown in [Table 4](#).

Table 4 System-Defined Table Maps Used in the set table Command

Table Map Name	Description
cos-discard-class-map	Table map used to map the CoS value to the discard-class value.
cos-dscp-map	Table map used to map the CoS value to the DSCP value.
cos-precedence-map	Table map used to map the CoS value to the precedence value.
dscp-cos-map	Table map used to map the DSCP value to the CoS value.
dscp-precedence-map	Table map used to map the DSCP value to the precedence value.
dscp-discard-class-map	Table map used to map the DSCP value to the discard-class value.
precedence-dscp-map	Table map used to map the precedence value to the DSCP value.
precedence-cos-map	Table map used to map the precedence value to the CoS value.
precedence-discard-class-map	Table map used to map the precedence value to the discard-class value.
discard-class-cos-map	Table map used to map the discard-class value to the CoS value.
discard-class-prec-map	Table map used to map the discard-class value to the precedence value.
discard-class-dscp-map	Table map used to map the discard-class value to the DSCP value.

**Note**

You can set only similar values when you create a mutation map. For example, you can set cos-cos or dscp-dscp; you cannot set cos-dscp or dscp-precedence.

This command does not require a license.

Examples

This example shows how to perform mutation mapping for a class of traffic in a type qos policy map based on input DSCP, and output IP precedence using a system-defined table map:

```
switch(config)# policy-map my_policy1
switch(config-pmap-qos)# class traffic_class2
switch(config-pmap-c-qos)# set dscp precedence table dscp-precedence-map
switch(config-pmap-c-qos)#
```

This example shows how to perform mutation mapping for a class of traffic in a type qos policy map based on input DSCP and output IP precedence by using a user-defined table map:

```
switch(config)# policy-map my_policy1
switch(config-pmap-qos)# class class_default
switch(config-pmap-c-qos)# set dscp dscp table my_table
switch(config-pmap-c-qos)#
```

Related Commands

Command	Description
show policy-map	Displays policy maps and statistics.

shape

To configure shaping on an egress queue to impose a maximum rate on it, use the **shape** command. To remove a shaping configuration, use the **no** form of this command.

shape [**average**] { *average-rate* [**bps** | **kbps** | **mbps** | **gbps**] | **percent** *percent-rate* }

no shape [**average**] { *average-rate* [**bps** | **kbps** | **mbps** | **gbps**] | **percent** *percent-rate* }

Syntax Description

average	(Optional) Specifies an optional keyword. Shaping is based on an average rate.
<i>average-rate</i>	Average rate for shaping. The range of values is from 1 to 80000000000; the range of policing values that are mathematically significant is from 8000 to 80 Gbps.
bps	(Optional) Specifies the units of bits per second.
kbps	(Optional) Specifies the units of 1000 bits per second.
mbps	(Optional) Specifies the units of megabits per second.
gbps	(Optional) Specifies the units of gigabits per second.
percent	Specifies the percentage of the underlying interface link rate.
Note You can use the percent keyword only for interfaces that are set to autonegotiate.	
<i>percent-rate</i>	Percentage from 1 to 100.

Defaults

bps is default data rate.

Command Modes

Global configuration

Supported User Roles

network-admin
vdc-admin

Command History

Release	Modification
4.0	This command was introduced.

Usage Guidelines

You can use the system-defined egress queue class for the type of module to which you want to apply the policy map. For a list of the system-defined type queuing class maps, see [Table 1](#).

The device forces the shape rate to the closest value in the following percentage intervals: 100, 50, 33, 25, 12.5, 6.25, 3.13, or 1.07.

Note

If you configure shaping, you cannot configure **bandwidth** or **priority** in the same policy map.

This command does not require a license.

Examples

This example shows how to apply shaping based on a percentage rate to a policy map type queuing class:

```
switch(config)# policy-map type queuing match-first my_queue
switch(config-pmap-que)# class type queuing 1p3q4t-out-pq1
switch(config-pmap-c-que)# shape percent 25
switch(config-pmap-c-que)#
```

This example shows how to apply shaping based on an average rate to a policy map type queuing class:

```
switch(config)# policy-map type queuing match-first my_queue
switch(config-pmap-que)# class type queuing 1p3q4t-out-pq1
switch(config-pmap-c-que)# shape 500 mbps
switch(config-pmap-c-que)#
```

This example shows how to remove a shaping configuration from a policy map type queuing class:

```
switch(config)# policy-map type queuing match-first my_queue
switch(config-pmap-que)# class type queuing 1p3q4t-out-pq1
switch(config-pmap-c-que)# no shape percent 25
switch(config-pmap-c-que)#
```

Related Commands

Command	Description
class-map	Creates or modifies a class map.

show class-map type qos

To display type qos class maps, use the **show class-map type qos** command.

show class-map type qos [*class-map-name* | *color-class-map-name*]

Syntax Description	<i>class-map-name</i>	(Optional) Named class map. The name <i>class-default</i> is reserved.
	<i>color-class-map-name</i>	(Optional) System-defined color class map.

Defaults Displays all type qos class maps if no class map name is specified.

Command Modes Any command mode

Supported User Roles network-admin
network-operator
vdc-admin
vdc-operator

Command History	Release	Modification
	4.0	This command was introduced.

Usage Guidelines [Table 5](#) displays the list of system-defined class maps that display with this command.

Table 5 System-Defined Type QoS Class Maps That Display with This Command

Class Map Name	Description
conform-color-in	Type qos conform color class map in the input direction. This color-aware class map makes a policer color-aware for conform action.
conform-color-out	Type qos conform color class map in the output direction. This color-aware class map makes a policer color-aware for conform action.
exceed-color-in	Type qos exceed color class map in the input direction. This color-aware class map makes a policer color-aware for exceed action.
exceed-color-out	Type qos exceed color class map in the output direction. This color-aware class map makes a policer color-aware for exceed action.

When you enter the command **show class-map** with no arguments or keywords, the system also displays the Control Plane Policing (CoPP) configuration.

This command does not require a license.

Examples

This example shows how to display all type qos class maps:

```
switch(config)# show class-map type qos
```

```
Type qos class-maps
=====

class-map type qos match-all abc
  match dscp 0-3

class-map type qos conform-color-in
  Description: Conform color map in input direction

class-map type qos conform-color-out
  Description: Conform color map in output direction

class-map type qos exceed-color-in
  Description: Exceed color map in input direction

class-map type qos exceed-color-out
  Description: exceed color map in output direction
```

Related Commands

Command	Description
show policy-map	Displays policy maps and statistics.

show policy-map type queuing

To display the queuing policy that you copied and renamed, use the **show policy-map type queuing** command.

show policy-map type queuing [*policy-map-name*]

Syntax Description	<i>policy-map-name</i> The queuing policy that you copied and renamed.	
Defaults	None	
Command Modes	Global configuration mode	
Supported User Roles	network-admin network-operator vdc-admin vdc-operator	
Command History	Release	Modification
	6.2(2)	This command was introduced.
Usage Guidelines	This command does not require a license.	
Examples	This example shows how to display the queuing policy that you copied and renamed: <pre>switch# config t switch# show policy-map type queuing test Type queuing policy-maps ===== policy-map type queuing test class type queuing 8q2t-in-q2 class type queuing 8q2t-in-q3 queue-limit dscp 12 percent 50 class type queuing 8q2t-in-q4 switch(config-pmap-que)#</pre>	
Related Commands	Command	Description
	show policy-map	Displays policy maps and statistics.

show policy-map vlan

To display policy maps for the VLANs, use the **show policy-map vlan** command.

show policy-map vlan [*vlan-id*] [**input** | **output**] [**type** {**qos** | **queuing**}]

Syntax Description	<i>vlan-id</i>	(Optional) Policy maps assigned to specified VLAN.
	input	(Optional) Displays policy maps that are assigned to input traffic only.
	output	(Optional) Displays policy maps that are assigned to output traffic only.
	type	(Optional) Specifies the component type to display.
	qos	Specifies the policy maps of type qos only.
	queuing	Specifies the policy maps of type queuing only. This keyword is not supported in Release 4.0.1.

Defaults	None
-----------------	------

Command Modes	Any command mode
----------------------	------------------

Supported User Roles	network-admin network-operator vdc-admin vdc-operator
-----------------------------	--

Command History	Release	Modification
	4.0	This command was introduced.

Usage Guidelines	This command does not require a license.
-------------------------	--

Examples	This example shows how to display policy maps that are assigned to all VLANs:
-----------------	---

```
switch(config)# show policy-map vlan

Global statistics status :   enabled

Vlan 1

  Service-policy (qos) input:   abc
    policy statistics status:   enabled

  Class-map (qos):   abc (match-all)
    Match: dscp 0-3
    set dscp 3
    set qos-group 3
```

■ show policy-map vlan

```
set cos dscp table cos-dscp-map

Class-map (qos):  class-default (match-any)

Service-policy (qos) output:  def
policy statistics status:  enabled
```

Related Commands

Command	Description
class-map	Creates or modifies a class map.

show qos dcbxp

To display the Data Center Bridging Capability Exchange Protocol (DCBXP) information on all interfaces, use the **show qos dcbxp** command.

show qos dcbxp {**incompatibility** [**interface** {**ethernet** *slot/port-number*} | **info**}

Syntax Description	incompatibility	(Optional) Specifies the DCBXP incompatibility.
	interface	(Optional) Specifies the Ethernet interface.
	<i>slot/port-number</i>	Module number and the port number for which you want to display the incompatibility information.
	info	(Optional) Specifies the DCBXP information.

Command Default None

Command Modes Any

Supported User Roles network-admin
network-operator
vdc-admin
vdc-operator

Command History	Release	Modification
	6.1(2)	Modified the command output to include iSCSI information.
	5.1(1)	This command was introduced.

Usage Guidelines This command does not require a license.

Examples This example shows how to display the status of DCBXP on all interfaces:

```
switch# show qos dcbxp info
Interface      PFC_rcvd/cmptble PG_rcvd/cmptble MTU_rcvd/cmptble FCOE_rcvd/cmptble
iSCSI_rcvd/cmptbl
-----
Ethernet8/1    No/No           No/No           No/No           No/No           No/No
Ethernet8/2    No/No           No/No           No/No           No/No           No/No
Ethernet8/3    No/No           No/No           No/No           No/No           Yes/Yes
Ethernet8/4    No/No           No/No           No/No           No/No           No/No
switch#
```

■ show qos dcbxp

Related Commands

Command	Description
show interface priority-flow-control	Displays the status of priority flow control (PFC) on all interfaces.

show qos shared-policer

To display qos shared policers, use the **show qos shared-policer** command.

show qos shared policer [**type qos**] [*policer-name*]

Syntax Description	type qos	(Optional) Specifies the type qos policers.
	<i>policer-name</i>	(Optional) Specified policer name.
Defaults	None	
Command Modes	Any command mode	
Supported User Roles	network-admin network-operator vdc-admin vdc-operator	
Command History	Release	Modification
	4.0	This command was introduced.
Usage Guidelines	This command does not require a license.	
Examples	This example shows how to display all type qos policers: switch(config)# show qos shared-policer switch(config)# qos shared-policer foo cir 300 mbps bc 200 ms conform transmit violate drop	
Related Commands	Command	Description
	class-map	Creates or modifies a class map.

show queuing interface

To display queuing information on a specified interface, use the **show queuing interface** command.

show queuing interface {**ethernet** *slot/port*} **summary**

Syntax Description	ethernet	Specifies the Ethernet interface.
	<i>slot/port</i>	Module number and the port number for which you want to display the queuing information.
	summary	Specifies the summary.

Defaults	None
-----------------	------

Command Modes	Any command mode
----------------------	------------------

Supported User Roles	network-admin network-operator vdc-admin vdc-operator
-----------------------------	--

Command History	Release	Modification
	6.1(2)	Modified the command output to include DSP Queuing is not enabled for IPv6 packets.
	6.1(1)	Added DSCPMAP column to track DSCP to IVL changes.
		Added DSCP to IVL tracking status: Enabled or Disabled.
	4.0	This command was introduced.

Usage Guidelines	This command does not require a license.
	- On F cards we see HW related configuration (show queuing interface <X>) and (show queuing interface <X> summary)) will show the same output. - On M cards “show queuing interface <X> summary” we see reference to SW configuration from User policy Applied. If Customer has to review the HW settings on M cards have to use “show queuing <X>” (or without summary keyword at the End)

Examples	This example shows how to display the queuing information for a specified interface:
-----------------	--

```
switch# show queuing interface ethernet 2/9
Egress Queuing for Ethernet2/9 [System]
-----
Template: 4Q8E
```

```

-----
Que# Group Bandwidth% PrioLevel Shape% CoSMap
-----

 `show running-config ipqos`**Related Commands**

Command	Description
<code>show class-map</code>	Displays information about class maps.
<code>show policy-map</code>	Displays statistics and information about policy maps.

show table-map

To display table maps, use the **show table-map** command.

show table-map [*table-map-name* | *default-table-map-name*]

Syntax Description	<i>table-map-name</i>	(Optional) User-defined named table map.
	<i>default-table-map-name</i>	(Optional) System-defined default table map.
Defaults	None	
Command Modes	Global configuration	
Supported User Roles	network-admin vdc-admin	
Command History	Release	Modification
	4.0	This command was introduced.
	4.0.2	Display was changed

Usage Guidelines

For a list of the system-defined table maps, see [Table 4](#).

In Cisco NX-OS Release 4.0.2 and later releases, the display shows only one of the following:

- The default copy if you have not configured any changes to the table map.
- The changes you configured to the table map.

This command does not require a license.

Examples

In the Cisco NX-OS Release 4.0.2 and later releases, the following example shows how to display a system-defined table map:

```
switch(config-pmap-c-qos)# show table-map cos-dscp-map
```

```
Table-map cos-dscp-map
default copy
```

This example shows how to display a system-defined table map:

```
switch(config)# show table-map cos-dscp-map
```

```
Table-map cos-dscp-map
from 0 to 0
from 1 to 1
from 2 to 2
```

show table-map

```
from 3 to 3
from 4 to 4
from 5 to 5
from 6 to 6
from 7 to 7
```

Related Commands

Command	Description
table-map	Creates or modifies a table map.

table-map

To create or modify a table map and enter the table map configuration mode, use the **table-map** command. To remove a table map, use the **no** form of this command.

table-map { *table-map-name* | *default-table-map-name* }

no table-map { *table-map-name* | *default-table-map-name* }

Syntax Description	<i>table-map-name</i>	Name of an existing or new user-defined table map.
	<i>default-table-map-name</i>	Name of a system-defined table map.

Defaults	None
-----------------	------

Command Modes	Global configuration
----------------------	----------------------

Supported User Roles	network-admin vdc-admin
-----------------------------	----------------------------

Command History	Release	Modification
	4.0	This command was introduced.

Usage Guidelines

Note

You cannot modify the system-defined table maps. For a list of the system-defined table maps, see [Table 4](#).

This command does not require a license.

Examples

This example shows how to create or modify a table map:

```
switch(config)# table-map my_table1
switch(config-tmap)#
```

This example shows how to remove a table map:

```
switch(config)# no table-map my_table1
switch(config)#
```

Related Commands	Command	Description
	show table-map	Displays table maps.
