# rmon collection stats

Use the **rmon collection stats** interface configuration command to collect Ethernet group statistics, which include usage statistics about broadcast and multicast packets, and error statistics about cyclic redundancy check (CRC) alignment errors and collisions. Use the **no** form of this command to return to the default setting.

rmon collection stats index [owner name]

**no rmon collection stats** *index* [**owner** *name*]

Syntax Description	index	Remote Network Monitoring (RMON) collection control index. The range is 1 to 65535.
	owner name	(Optional) Owner of the RMON collection.
Defaults	The RMON statistics	collection is disabled.
Command Modes	Interface configuratio	n
Command History	Release	Modification
	12.2(25)FX	This command was introduced.
Usage Guidelines	The RMON statistics	collection command is based on hardware counters.
Examples	This example shows h	now to collect RMON statistics for the owner <i>root</i> :
	· · ·	erface gigabitethernet2/0/1 rmon collection stats 2 owner root
	You can verify your so	etting by entering the <b>show rmon statistics</b> privileged EXEC command.
Related Commands	Command	Description
	show rmon statistics	Displays RMON statistics.

### sdm prefer

Use the **sdm prefer** global configuration command to configure the template used in Switch Database Management (SDM) resource allocation. You can use a template to allocate system resources to best support the features being used in your application. Use the **no** form of this command to return to the default template.

For Catalyst 2960 switches and Catalyst 2960-C Fast Ethernet switches:

sdm prefer {default | dual-ipv4-and-ipv6 default | lanbase-routing | qos}

#### no sdm prefer

For Catalyst 2960-S switches:

sdm prefer {default | lanbase-routing}

no sdm prefer

For Catalyst 2960-C Gigabit Ethernet switches:

sdm prefer default

Syntax Description	default	Give balance to all functions.			
	dual-ipv4-and-ipv6 default	Allows the switch to be used in dual stack environments (supporting both IPv4 and IPv6 forwarding). On Catalyst 2960 switches running the LAN base image, you configure this template to enable IPv6 MLD snooping or IPv6 host functions (not required on Catalyst 2960-S or 2060-C switches).			
	lanbase-routing	Supports configuring IPv4 static unicast routes on switch virtual interfaces (SVIs). This template is available only on Catalyst 2960 or 2960-S switches running the LAN base image.			
	<b>qos</b> Provide maximum system usage for quality of service (QoS) access entries (ACEs). This template is not required on Catalyst 2960-C or switches.				
Defaults	The <b>default</b> template	provides a balance to all features.			
Command Modes	Global configuration				
Command History	Release	Modification			
	12.2(25)FX	This command was introduced.			
	12.2(40)SE	The dual-ipv4-and-ipv6 default keywords were added.			
	12.2(55)SE	The <b>lanbase-routing</b> keyword was added to switches running the LAN base image.			
	12.2(55)EX	The Catalyst 2960-C templates were added.			

#### Usage Guidelines

You must reload the switch for the configuration to take effect.

If you enter the **show sdm prefer** command before you enter the **reload** privileged EXEC command, the **show sdm prefer** command shows the template currently in use and the template that will become active after a reload.

Use the no sdm prefer command to set the switch to the default template.

Template resources are based on 0 routed interfaces and 255 VLANs, except for the LAN base routing template, which supports 8 routed interfaces and 255 VLANs.

Template values are different depending on the platforms and Catalyst 2960-C SKUs.

A Catalyst 2960-S switch running the LAN base image uses a default template that includes maximum resources for all supported features; it does not require the dual or qos templates. However, to enable static routing on the Catalyst 2960-S, you must configure the lanbase-routing template.

Catalyst 2960-C Gigabit Ethernet switches support only a default template.

For Catalyst 2960 switches and 2960-C Fast Ethernet switches:

- Do not use the routing template if you are not using static routing on your switch. Entering the **sdm prefer lanbase-routing** global configuration command prevents other features from using the memory allocated to unicast routing in the routing template.
- Do not use the ipv4-and-ipv6 template if you do not plan to enable IPv6 functionality on the switch. Entering the **sdm prefer ipv4-and-ipv6** global configuration command divides resources between IPv4 and IPv6, limiting those allocated to IPv4 forwarding.

Enter the **show sdm prefer** privileged EXEC command to see which template is active on the switch or to see the resource allocations of any template.

Resource	Default	QoS	Dual	LAN base routing
Unicast MAC addresses	8 K	8 K	8 K	4 K
IPv4 IGMP groups	256	256	256	256

#### Table 2-26 Approximate Feature Resources Allowed on 2960-C Giogabit Ethernet Switch Templates

Examples

This example shows how to use the QoS template:

Switch(config)# sdm prefer qos Switch(config)# exit Switch# reload

This example shows how to configure the default template on a switch:

```
Switch(config)# sdm prefer default
Switch(config)# exit
Switch# reload
```

This example shows how to configure the dual IPv4-and-IPv6 default template on a switch:

Switch(config)# sdm prefer dual-ipv4-and-ipv6 default
Switch(config)# exit
Switch# reload

<b>Related Commands</b>	Command	Description	
	show sdm prefer	Displays the current SDM template in use or displays the templates that can	
		be used, with approximate resource allocation per feature.	

### service password-recovery

Use the **service password-recovery** global configuration command to enable the password-recovery mechanism (the default). This mechanism allows an end user with physical access to the switch to hold down the **Mode** button and interrupt the bootup process while the switch is powering up and to assign a new password. Use the **no** form of this command to disable part of the password-recovery functionality. When the password-recovery mechanism is disabled, interrupting the bootup process is allowed only if the user agrees to set the system back to the default configuration.

service password-recovery

no service password-recovery

Syntax Description This command has no arguments or keywords.

**Defaults** The password-recovery mechanism is enabled.

#### **Command Modes** Global configuration

Command History	Release	Modification
	12.2(25)FX	This command was introduced.

# **Usage Guidelines** As a system administrator, you can use the **no service password-recovery** command to disable some of the functionality of the password recovery feature by allowing an end user to reset a password only by agreeing to return to the default configuration.

To use the password-recovery procedure, a user with physical access to the switch holds down the **Mode** button while the unit powers up and for a second or two after the LED above port 1X turns off. When the button is released, the system continues with initialization.

If the password-recovery mechanism is disabled, this message appears:

The password-recovery mechanism has been triggered, but is currently disabled. Access to the boot loader prompt through the password-recovery mechanism is disallowed at this point. However, if you agree to let the system be reset back to the default system configuration, access to the boot loader prompt can still be allowed.

Would you like to reset the system back to the default configuration (y/n)?

Note	continues, as if the <b>Mode bu</b> configuration, the configurat <i>flash:vlan.dat</i> (if present), is end user access to passwords from the switch in case the e	et the system to the default configuration, the normal bootup process <b>tton</b> had not been pressed. If you choose to reset the system to the default ion file in flash memory is deleted, and the VLAN database file, deleted. If you use the <b>no service password-recovery</b> command to control s, we recommend that you save a copy of the config file in a location away nd user uses the password recovery procedure and sets the system back to a backup copy of the config file on the switch.			
	If the switch is operating in vlan.dat file in a location awa	VTP transparent mode, we recommend that you also save a copy of the ay from the switch.			
	When you enter the <b>service password-recovery</b> or <b>no service password-recovery</b> command on the stack master, it is propagated throughout the stack and applied to all switches in the stack.				
	You can verify if password re EXEC command.	ecovery is enabled or disabled by entering the <b>show version</b> privileged			
Examples	-	disable password recovery on a switch so that a user can only reset a rn to the default configuration.			
	Switch(config)# <b>no servic</b> Switch(config)# <b>exit</b>	e-password recovery			
Related Commands	Command	Description			
	show version	Displays version information for the hardware and firmware.			

# service-policy

Use the **service-policy** interface configuration command to apply a policy map defined by the **policy-map** command to the input of a physical port. Use the **no** form of this command to remove the policy map and port association.

service-policy input policy-map-name

no service-policy input policy-map-name

Note	To use this command, the switch must be running the LAN Base image.				
Syntax Description	input policy-map-n	ame	Apply the specified policy map to the input of a physical port.		
Note			nd-line help strings, the <b>history</b> keyword is not supported, and you should thers. The <b>output</b> keyword is also not supported.		
Defaults	No policy maps are	attached	to the port.		
Command Modes	Interface configurat	ion			
Command History	Release	Ma	odification		
	12.2(25)FX	Th	is command was introduced.		
		_			
Usage Guidelines	Policy maps can be configured on physical ports. You can apply a policy map to incoming traffic on a physical port.				
			o incoming traffic on a physical port. ist state (for example, <b>mls qos trust</b> [ <b>cos</b>   <b>dscp</b>   <b>ip-precedence</b> ] and a		
	policy map (for example and the second secon	mple, <b>ser</b>	<b>vice-policy input</b> <i>policy-map-name</i> ) are mutually exclusive. The last one evious configuration.		
Examples	This example shows	how to a	apply <i>plcmap1</i> to an physical ingress port:		
	Switch(config)# interface gigabitethernet2/0/1 Switch(config-if)# service-policy input plcmap1				
	This example shows how to remove <i>plcmap2</i> from a physical port:				
			gigabitethernet2/0/1 vice-policy input plcmap2		
	You can verify your	settings	by entering the <b>show running-config</b> privileged EXEC command.		

<b>Related Commands</b>	Command	Description
	policy-map	Creates or modifies a policy map that can be attached to multiple ports to specify a service policy.
	show policy-map	Displays QoS policy maps.
	show running-config	Displays the running configuration on the switch.

# session

Use the session privileged EXEC command on the stack master to access a specific stack member.

session *stack-member-number* 

Note	This command is supported	ed only on Catalyst 2960-S switches running the LAN base image.
Syntax Description	stack-member-number	Specify the member number. The range is 1 to 4.
Note	Although visible in the co	ommand-line help string, the <b>processor</b> keyword is not supported.
Defaults	No default is defined.	
Command Modes	Global configuration	
Command History	Release	Modification
	12.2(53)SE1	This command was introduced.
Usage Guidelines	-	nber, its member number is appended to the system prompt.
		I from the master to access a member switch. with <b>processor 1</b> from the master or a standalone switch to access the internal
		witch is always member 1.
Examples	This example shows how	to access member 6:
	Switch(config)# <b>session</b> Switch-6#	n 6
	DWICCH 00	

Related Commands Comm	nand	Description
reloa	d	Reloads the member and puts a configuration change into effect.
swite	h	Changes the member priority value.
swite	h renumber	Changes the member number.
show	switch	Displays information about the stack and its members.

### set

Use the **set** policy-map class configuration command to classify IP traffic by setting a Differentiated Services Code Point (DSCP) or an IP-precedence value in the packet. Use the **no** form of this command to remove traffic classification.

set {dscp new-dscp | [ip] precedence new-precedence}

no set {dscp new-dscp | [ip] precedence new-precedence}

Syntax Description	dscp new-dscp	New DSCP value assigned to the classified traffic. The range is 0 to 63. You also can enter a mnemonic name for a commonly used value.
	[ip] precedence new-preceden	<i>ce</i> New IP-precedence value assigned to the classified traffic. The range is 0 to 7. You also can enter a mnemonic name for a commonly used value.
Defaults	No traffic classification is defin	ed.
Command Modes	Policy-map class configuration	
Command History	Release Modi	fication
-	12.2(25)FX This	command was introduced.
	12.2(25)SED The i	<b>p</b> keyword is optional.
Usage Guidelines	command to set dscp in the sw	policy-map class configuration command, the switch changes this itch configuration. If you enter the <b>set ip dscp</b> policy-map class tting appears as <b>set dscp</b> in the switch configuration.
		ace policy-map class configuration command or the set precedence command. This setting appears as set ip precedence in the switch
	The <b>set</b> command is mutually e the same policy map.	xclusive with the <b>trust</b> policy-map class configuration command within
	mnemonic name for a common which is the same as entering th command, which is the same as	e set ip precedence <i>new-precedence</i> command, you can enter a y used value. For example, you can enter the set dscp af11 command, he set dscp 10 command. You can enter the set ip precedence critical entering the set ip precedence 5 command. For a list of supported ? or the set ip precedence ? command to see the command-line help
	To return to policy-map configu use the <b>end</b> command.	ration mode, use the <b>exit</b> command. To return to privileged EXEC mode

#### Examples

This example shows how to assign DSCP 10 to all FTP traffic without any policers:

```
Switch(config)# policy-map policy_ftp
Switch(config-pmap)# class ftp_class
Switch(config-pmap-c)# set dscp 10
Switch(config-pmap)# exit
```

You can verify your settings by entering the show policy-map privileged EXEC command.

<b>Related Commands</b>	Command	Description
	class	Defines a traffic classification match criteria (through the <b>police</b> , <b>set</b> , and <b>trust</b> policy-map class configuration commands) for the specified class-map name.
	police	Defines a policer for classified traffic.
	policy-map	Creates or modifies a policy map that can be attached to multiple ports to specify a service policy.
	show policy-map	Displays QoS policy maps.
	trust	Defines a trust state for traffic classified through the <b>class</b> policy-map configuration command or the <b>class-map</b> global configuration command.

### setup

Use the **setup** privileged EXEC command to configure the switch with its initial configuration. setup Syntax Description This command has no arguments or keywords. **Command Modes** Privileged EXEC **Command History** Release Modification 12.2(25)FX This command was introduced. **Usage Guidelines** When you use the setup command, make sure that you have this information: • IP address and network mask Password strategy for your environment ٠ • Whether the switch will be used as the cluster command switch and the cluster name When you enter the **setup** command, an interactive dialog, called the System Configuration Dialog, appears. It guides you through the configuration process and prompts you for information. The values shown in brackets next to each prompt are the default values last set by using either the setup command facility or the configure privileged EXEC command. Help text is provided for each prompt. To access help text, press the question mark (?) key at a prompt. To return to the privileged EXEC prompt without making changes and without running through the entire System Configuration Dialog, press Ctrl-C. When you complete your changes, the setup program shows you the configuration command script that was created during the setup session. You can save the configuration in NVRAM or return to the setup program or the command-line prompt without saving it. **Examples** This is an example of output from the **setup** command: Switch# setup --- System Configuration Dialog ---Continue with configuration dialog? [yes/no]: yes At any point you may enter a question mark '?' for help. Use ctrl-c to abort configuration dialog at any prompt. Default settings are in square brackets '[]'. Basic management setup configures only enough connectivity for management of the system, extended setup will ask you to configure each interface on the system. Would you like to enter basic management setup? [yes/no]: yes Configuring global parameters:

Enter host name [Switch]: host-name The enable secret is a password used to protect access to privileged EXEC and configuration modes. This password, after entered, becomes encrypted in the configuration. Enter enable secret: enable-secret-password The enable password is used when you do not specify an enable secret password, with some older software versions, and some boot images. Enter enable password: enable-password The virtual terminal password is used to protect access to the router over a network interface. Enter virtual terminal password: terminal-password Configure SNMP Network Management? [no]: yes Community string [public]: Current interface summary Any interface listed with OK? value "NO" does not have a valid configuration Interface IP-Address OK? Method Status Protocol Vlan1 172.20.135.202 YES NVRAM up up GigabitEthernet6/0/1 unassigned YES unset up up GigabitEthernet6/0/2 unassigned YES unset up down <output truncated> Port-channel1 unassigned YES unset. up down Enter interface name used to connect to the management network from the above interface summary: **vlan1** Configuring interface vlan1: Configure IP on this interface? [yes]: yes IP address for this interface: *ip\_address* Subnet mask for this interface [255.0.0.0]: subnet\_mask Would you like to enable as a cluster command switch? [yes/no]: yes Enter cluster name: cluster-name The following configuration command script was created: hostname host-name enable secret 5 \$1\$LiBw\$0Xc1wyT.PXPkuhFwqyhVi0 enable password enable-password line vty 0 15 password terminal-password snmp-server community public Т no ip routing interface GigabitEthernet6/0/1 no ip address interface GigabitEthernet6/0/2 no ip address

!

cluster enable cluster-name
!
end
Use this configuration? [yes/no]: yes
!
[0] Go to the IOS command prompt without saving this config.
[1] Return back to the setup without saving this config.
[2] Save this configuration to nvram and exit.
Enter your selection [2]:

show running-config	Displays the running configuration on the switch.
show version	Displays version information for the hardware and firmware.

### setup express

Use the **setup express** global configuration command to enable Express Setup mode. Use the **no** form of this command to disable Express Setup mode.

setup express

no setup express

- Syntax Description This command has no arguments or keywords.
- **Defaults** Express Setup is enabled.
- **Command Modes** Global configuration

Command History	Release	Modification
	12.2(25)FX	This command was introduced.

#### **Usage Guidelines**

When Express Setup is enabled on a new (unconfigured) switch, pressing the Mode button for 2 seconds activates Express Setup. You can access the switch through an Ethernet port by using the IP address 10.0.0.1 and then can configure the switch with the web-based Express Setup program or the command-line interface (CLI)-based setup program.

When you press the Mode button for 2 seconds on a configured switch, the LEDs above the Mode button start blinking. If you press the Mode button for a total of 10 seconds, the switch configuration is deleted, and the switch reboots. The switch can then be configured like a new switch, either through the web-based Express Setup program or the CLI-based setup program.

As soon as you make any change to the switch configuration (including entering *no* at the beginning of the CLI-based setup program), configuration by Express Setup is no longer available. You can only run Express Setup again by pressing the Mode button for 10 seconds. This deletes the switch configuration and reboots the switch.

If Express Setup is active on the switch, entering the **write memory** or **copy running-configuration** startup-configuration privileged EXEC commands deactivates Express Setup. The IP address 10.0.0.1 is no longer valid on the switch, and your connection using this IP address ends.

The primary purpose of the **no setup express** command is to prevent someone from deleting the switch configuration by pressing the Mode button for 10 seconds.

### Examples This example shows how to enable Express Setup mode: Switch(config) # setup express You can verify that Express Setup mode is enabled by pressing the Mode button: • On an unconfigured switch, the LEDs above the Mode button turn solid green after 3 seconds. On a configured switch, the mode LEDs begin blinking after 2 seconds and turn solid green after 10 ٠ seconds. Caution If you *hold* the Mode button down for a total of 10 seconds, the configuration is deleted, and the switch reboots. This example shows how to disable Express Setup mode: Switch(config) # no setup express You can verify that Express Setup mode is disabled by pressing the Mode button. The mode LEDs do not turn solid green or begin blinking green if Express Setup mode is not enabled on the switch. **Related Commands** Command Description show setup express Displays if Express Setup mode is active.

### show access-lists

Use the **show access-lists** privileged EXEC command to display access control lists (ACLs) configured on the switch.

show access-lists [name | number | hardware counters | ipc]

Syntax DescriptionT		
Syntax Description	name	(Optional) Name of the ACL.
	number	(Optional) ACL number. The range is 1 to 2699.
	hardware counters	(Optional) Display global hardware ACL statistics for switched and routed packets.

<b>Related Commands</b>	Command	Description
	access-list	Configures a standard or extended numbered access list on the switch.
	ip access list	Configures a named IP access list on the switch.
	mac access-list extended	Configures a named or numbered MAC access list on the switch.

### show archive status

Use the **show archive status** privileged EXEC command to display the status of a new image being downloaded to a switch with the HTTP or the TFTP protocol.

show archive status

Syntax Description	This command has no arguments or keywords.
Command Modes	Privileged EXEC
Command History	Release Modification
	12.2(25)FXThis command was introduced.
Usage Guidelines	If you use the <b>archive download-sw</b> privileged EXEC command to download an image to a TFTP server, the output of the <b>archive download-sw</b> command shows the status of the download.
	If you do not have a TFTP server, you can use Network Assistant or the embedded device manager to download the image by using HTTP. The <b>show archive status</b> command shows the progress of the download.
Examples	These are examples of output from the <b>show archive status</b> command:
	Switch# <b>show archive status</b> IDLE: No upgrade in progress
	Switch# <b>show archive status</b> LOADING: Upgrade in progress
	Switch# <b>show archive status</b> EXTRACT: Extracting the image
	Switch# <b>show archive status</b> VERIFY: Verifying software
	Switch# <b>show archive status</b> RELOAD: Upgrade completed. Reload pending
Related Commands	Command Description
	archive download-sw Downloads a new image from a TFTP server to the switch.

# show arp access-list

Use the **show arp access-list** EXEC command to display detailed information about Address Resolution Protocol (ARP) access control (lists).

show arp access-list [acl-name]

Syntax Description	acl-name (Optional) Nat	me of the ACL.
Command Modes	User EXEC Privileged EXEC	
Command History	Release Moo	dification
	12.2(50)SE Thi	s command was introduced.
	ARP access list rose permit ip 10.101.1.1 0 permit ip 20.3.1.0 0.0	
Related Commands	Command	Description
	arp access-list	Defines an ARP ACL.
	deny (ARP access-list configuration)	Denies an ARP packet based on matches against the Dynamic Host Configuration Protocol (DHCP) bindings.
	ip arp inspection filter vlan	Permits ARP requests and responses from a host configured with a static IP address.
	permit (ARP access-list configuration)	Permits an ARP packet based on matches against the DHCP bindings

# show authentication

Use the **show authentication** EXEC command to display information about authentication manager events on the switch.

show authentication {interface interface-id | registrations | sessions [session-id session-id]
[handle handle] [interface interface-id] [mac mac] [method method] | statistics [summary]}

Syntax Description	interface interface-id	<ul> <li>(Optional) Display all of the authentication manager details for the specified interface.</li> <li>(Optional) Displays all clients authorized by a specified authentication method (dot1x, mab, or webauth)</li> </ul>			
	method method				
	registrations	(Optional) Display authentication manager registrations			
	sessions	<ul> <li>(Optional) Display detail of the current authentication manager sessions (for example, client devices). If you do not enter any optional specifiers, all current active sessions are displayed. You can enter the specifiers singly or in combination to display a specific session (or group of sessions).</li> <li>(Optional) Specify an authentication manager session.</li> <li>(Optional) Specify a range from 1 to 4294967295.</li> </ul>			
	session-id session-id handle handle				
	mac mac	(Optional) Display authentication manager information for a specified MAC address.			
	statistics	(Optional) Display authentication statistics in detail.			
	summary	(Optional) Display authentication statistics summary.			
Command Default	This command has no d	efault settings.			
Command Modes	User EXEC Privileged EXEC				
Command History	Release	Modification			
	12.2(50)SE	This command was introduced.			
Usage Guidelines	Table 2-27 describes the	e significant fields shown in the output of the <b>show authentication</b> command.			
<u>Note</u>	-	the status of sessions are shown below. For a session in terminal state, <i>Authz</i> is displayed along with <i>No methods</i> if no method has provided a result.			

Field	Description
Idle	The session has been initialized and no methods have run yet.
Running	A method is running for this session.
No methods	No method has provided a result for this session.
Authc Success	A method has resulted in authentication success for this session.
Authc Failed	A method has resulted in authentication fail for this session.
Authz Success	All features have been successfully applied for this session.
Authz Failed	A feature has failed to be applied for this session.

Table 2-27	show authentication	Command Output
------------	---------------------	----------------

Table 2-28 lists the possible values for the state of methods. For a session in a terminal state, *Authc Success, Authc Failed*, or *Failed over* are displayed. *Failed over* means that an authentication method ran and then failed over to the next method, which did not provide a result. *Not run* appears for sessions that synchronized on standby.

Method State	State Level	Description
Not run	Terminal	The method has not run for this session.
Running	Intermediate	The method is running for this session.
Failed over	Terminal	The method has failed and the next method is expected to provide a result.
Authc Success	Terminal	The method has provided a successful authentication result for the session.
Authc Failed	Terminal	The method has provided a failed authentication result for the session.

#### Table 2-28 State Method Values

#### Examples

This is an example the **show authentication registrations** command: Switch# **show authentication registrations** 

Auth Methods registered with the Auth Manager: Handle Priority Name 3 0 dot1x 2 1 mab 1 2 webauth

#### The is an example of the show authentication interface interface-id command:

Switch# show authentication interface gigabitethernet1/0/23
Client list:
MAC Address Domain Status Handle Interface
000e.84af.59bd DATA Authz Success 0xE0000000 GigabitEthernet1/0/23
Available methods list:
Handle Priority Name
3 0 dot1x
Runnable methods list:
Handle Priority Name
3 0 dot1x

#### This is an example of the show authentication sessions command:

Switch# <b>sh</b>	Switch# show authentication sessions				
Interface	MAC Address	Method	Domain	Status	Session ID
Gi3/45	(unknown)	N/A	DATA	Authz Failed	0908140400000007003651EC
Gi3/46	(unknown)	N/A	DATA	Authz Success	09081404000000080057C274

#### This is an example of the **show authentication sessions** command for a specified interface:

Switch# show authentication sessions int gigabitethernet 3/0/46

Interface: GigabitEthe	ernet3/0/46
MAC Address:	Unknown
IP Address:	Unknown
Status:	Authz Success
Domain:	DATA
Oper host mode:	multi-host
Oper control dir:	both
Authorized By:	Guest Vlan
Vlan Policy:	4094
Session timeout:	N/A
Idle timeout:	N/A
Common Session ID:	09081404000000080057C274
Acct Session ID:	0x000000A
Handle:	0xCC000008
Runnable methods list:	
Method State	
dot1x Failed	over

This is an example of the **show authentication sessions** command for a specified MAC address:

#### Switch# show authentication sessions mac 000e.84af.59bd

Interface: MAC Address: 000e.84af.59bd Status: Authz Success Domain: DATA Oper host mode: single-host Authorized By: Authentication Server Vlan Policy: 10 Handle: 0xE0000000 Runnable methods list: Method State dotlx Authc Success

This is an example of the show authentication session method command for a specified method:

Switch# show authentication sessions method mab No Auth Manager contexts match supplied criteria Switch# show authentication sessions method dot1x MAC Address Domain Status Handle Interface 000e.84af.59bd DATA Authz Success 0xE0000000 GigabitEthernet1/23

<b>Related Commands</b>	Command	Description
	authentication control-direction	Configures the port mode as unidirectional or bidirectional.
	authentication event	Sets the action for specific authentication events.
	authentication event linksec fail action	Configures a port to use web authentication as a fallback method for clients that do not support IEEE 802.1x authentication.
	authentication host-mode	Sets the authorization manager mode on a port.

Command	Description
authentication open	Enables or disables open access on a port.
authentication order	Sets the order of authentication methods used on a port.
authentication periodic	Enables or disables reauthentication on a port.
authentication port-control	Enables manual control of the port authorization state.
authentication priority	Adds an authentication method to the port-priority list.
authentication timer	Configures the timeout and reauthentication parameters for an 802.1x-enabled port.

### show auto qos

To display the quality of service (QoS) commands entered on the interfaces on which automatic QoS (auto-QoS) is enabled, use the **show auto qos** command in EXEC mode.

show auto qos [interface [interface-id]]

Syntax Description	<b>interface</b> [interface-id]	(Optional) Display auto-QoS information for the specified port or for all ports. Valid interfaces include physical ports.
Command Modes	User EXEC Privileged EXEC	
Command History	Release	Modification
	12.2(25)FX	This command was introduced.
	12.2(40)SE	The information in the command output changed.
Usage Guidelines	show auto qos interface specific interface.	mand output shows only the auto-QoS command entered on each interface. The e <i>interface-id</i> command output shows the auto-QoS command entered on a <b>onfig</b> privileged EXEC command to display the auto-QoS configuration and the
	The show auto qos command output also shows the service policy information for the Cisco IP ph	
	To display information a commands:	bout the QoS configuration that might be affected by auto-QoS, use one of these
	• show mls qos	
	• show mls qos maps	s cos-dscp
	<ul> <li>show mls qos interface [interface-id] [buffers   queueing]</li> <li>show mls qos maps [cos-dscp   cos-input-q   cos-output-q   dscp-cos   dscp-input-q   dscp-output-q]</li> <li>show mls qos input-queue</li> </ul>	
<ul> <li>show running-config</li> </ul>		īg
Note	To use this command, th	e switch must be running the LAN Base image.

#### Examples

This is an example of output from the **show auto qos** command after the **auto qos voip cisco-phone** and the **auto qos voip cisco-softphone** interface configuration commands are entered:

Switch# **show auto qos** GigabitEthernet2/0/4 auto qos voip cisco-softphone

GigabitEthernet2/0/5 auto qos voip cisco-phone

GigabitEthernet2/0/6 auto qos voip cisco-phone

This is an example of output from the **show auto qos interface** *interface-id* command when the **auto qos voip cisco-phone** interface configuration command is entered:

```
Switch# show auto qos interface gigabitethernet 2/0/5
GigabitEthernet2/0/5
auto qos voip cisco-phone
```

This is an example of output from the **show running-config** privileged EXEC command when the **auto qos voip cisco-phone** and the **auto qos voip cisco-softphone** interface configuration commands are entered:

```
Switch# show running-config

#### <output truncated>

This is an example of output from the **show auto qos interface** *interface-id* command when the **auto qos voip cisco-phone** interface configuration command is entered:

```
Switch# show auto qos interface Gigabitethernet1/0/2 auto qos voip cisco-softphone
```

This is an example of output from the **show auto qos** command when auto-QoS is disabled on the switch:

Switch# **show auto qos** AutoQoS not enabled on any interface

This is an example of output from the **show auto qos** interface *interface-id* command when auto-QoS is disabled on an interface:

Switch# show auto qos interface gigabitethernet3/0/1 AutoQoS is disabled

<b>Related Commands</b>	Command	Description
	auto qos voip	Automatically configures QoS for VoIP within a QoS domain.
	debug auto qos	Enables debugging of the auto-QoS feature.

### show boot

Use the show boot privileged EXEC command to display the settings of the boot environment variables.

show boot

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(25)FX	This command was introduced.

#### Examples

This is an example of output from the **show boot** command. Table 2-29 describes each field in the display.

Switch# <b>show boot</b>	
BOOT path-list	:flash:/ <i>image</i>
Config file	:flash:/config.text
Private Config file	:flash:/private-config.text
Enable Break	:no
Manual Boot	:yes
HELPER path-list	:
Auto upgrade	:yes

For switch stacks, information is shown for each switch in the stack.

Only Catalyst 2960-S switches running the LAN base image support switch stacks.

Field	Description
BOOT path-list	Displays a semicolon separated list of executable files to try to load and execute when automatically booting up.
	If the BOOT environment variable is not set, the system attempts to load and execute the first executable image it can find by using a recursive, depth-first search through the flash file system. In a depth-first search of a directory, each encountered subdirectory is completely searched before continuing the search in the original directory.
	If the BOOT variable is set but the specified images cannot be loaded, the system attempts to boot up with the first bootable file that it can find in the flash file system.
Config file	Displays the filename that Cisco IOS uses to read and write a nonvolatile copy of the system configuration.
Private Config file	Displays the filename that Cisco IOS uses to read and write a nonvolatile copy of the system configuration.

Field	Description	
Enable Break	Displays whether a break during booting up is enabled or disabled. If it is set to yes, on, or 1, you can interrupt the automatic bootup process by pressing the Break key on the console after the flash file system is initialized.	
Manual Boot	Displays whether the switch automatically or manually boots up. If it is set to no or the bootloader attempts to automatically boot up the system. If it is set to anything els you must manually boot up the switch from the bootloader mode.	
Helper path-list	Displays a semicolon separated list of loadable files to dynamically load during the bootloader initialization. Helper files extend or patch the functionality of the bootloader.	
Auto upgrade	Displays whether the switch stack is set to automatically copy its software version to an incompatible switch so that it can join the stack.	
	A switch in version-mismatch mode is a switch that has a different stack protocol version than the version on the stack. Switches in version-mismatch mode cannot join the stack. If the stack has an image that can be copied to a switch in version-mismatch mode, and if the <b>boot auto-copy-sw</b> feature is enabled, the stack automatically copies the image from another stack member to the switch in version-mismatch mode. The switch then exits version-mismatch mode, reboots, and joins the stack.	
NVRAM/Config file buffer size	Displays the buffer size that Cisco IOS uses to hold a copy of the configuration file in memory. The configuration file cannot be larger than the buffer size allocation.	

Table 2-29 show boot Field Description
--

Related Commands	Command	Description
	boot auto-copy-sw	Enables the automatic upgrade (auto-upgrade) process to automatically upgrade a switch in version-mismatch mode.
	boot config-file	Specifies the filename that Cisco IOS uses to read and write a nonvolatile copy of the system configuration.
	boot enable-break	Enables interrupting the automatic boot process.
	boot manual	Enables manually booting up the switch during the next bootup cycle.
	boot private-config-file	Specifies the filename that Cisco IOS uses to read and write a nonvolatile copy of the private configuration.
	boot system	Specifies the Cisco IOS image to load during the next bootup cycle.

# show cable-diagnostics tdr

Use the **show cable-diagnostics tdr** privileged EXEC command to display the Time Domain Reflector (TDR) results.

show cable-diagnostics tdr interface interface-id

Syntax Description	interface-id	<i>e-id</i> Specify the interface on which TDR was run.		
Command Modes	Privileged EX	EC		
Command History	Release	Modification		
	12.2(25)FX	This command was introduced.		
Usage Guidelines	TDR is supported only on 10/100 and 10/100/1000 copper Ethernet ports. It is not supported on SFP module ports. For more information about TDR, see the software configuration guide for this release			
Examples	This is an exa	mple of output from the <b>show cable-diagnostics tdr interface</b> <i>interface-id</i> command:		
	TDR test las	r <b>cable-diagnostics tdr interface gigabitethernet1/0/2</b> t run on: March 01 20:15:40 eed Local pair Pair length Remote pair Pair status		
		auto Pair A 0 +/- 2 meters N/A Open

	Table 2-30 lists the descriptions of the fields in the show cable-diagnostics tdr command output.			
	Table 2-30	Fields Descriptions for the show cable-diagnostics tdr Command Output		
	Field	Description		
	Interface	Interface on which TDR was run.		
	Speed	Speed of connection.		
	Local pair	Name of the pair of wires that TDR is testing on the local interface.		
	Pair length	Location on the cable where the problem is, with respect to your switch. TDR can only find the location in one of these cases:		
		• The cable is properly connected, the link is up, and the interface speed is 1000 Mb/s.		
		1000 Mb/s.		
		<ul><li>The cable is open.</li></ul>		

Field	Description	
Remote pair	Name of the pair of wires to which the local pair is connected. TDR can learn about the remote pair only when the cable is properly connected and the link is up.	
Pair status	The status of the pair of wires on which TDR is running:	
	• Normal—The pair of wires is properly connected.	
	• Not completed—The test is running and is not completed.	
	• Not supported—The interface does not support TDR.	
	• Open—The pair of wires is open.	
	• Shorted—The pair of wires is shorted.	
	• ImpedanceMis—The impedance is mismatched.	
	• Short/Impedance Mismatched—The impedance mismatched or the cable is short.	
	• InProgress—The diagnostic test is in progress	

#### Table 2-30 Fields Descriptions for the show cable-diagnostics tdr Command Output (continued)

This is an example of output from the show interfaces interface-id command when TDR is running:

Switch# show interfaces gigabitethernet1/01/2 gigabitethernet0/2 is up, line protocol is up (connected: TDR in Progress)

This is an example of output from the **show cable-diagnostics tdr interface** *interface-id* command when TDR is not running:

Switch# show cable-diagnostics tdr interface gigabitethernet1/01/2 % TDR test was never issued on Gi1/0/2

If an interface does not support TDR, this message appears:

% TDR test is not supported on switch 1

<b>Related Commands</b>	Command	Description
	test cable-diagnostics tdr	Enables and runs TDR on an interface.

# show cisp

Use the **show cisp** privileged EXEC command to display CISP information for a specified interface.

show cisp {[interface interface-id] | clients | summary}

Syntax Description	clients	(Optional) Display CISP client details	
	interface interface-id	(Optional) Display CISP information about the specified interface. Valid interfaces include physical ports and port channels.	
	summary	(Optional) Display	
	expression	Expression in the output to use as a reference point.	
Command Modes	Global configuration		
ommand History	Release	Modification	
	12.2(50)SE	This command was introduced.	
Examples	This example shows output from the <b>show cisp interface</b> command: WS-C3750E-48TD#show cisp interface fast 0 CISP not enabled on specified interface		
	This example shows output from the <b>show cisp summary</b> command:		
	1 1		
	This example shows outport CISP is not running on		
Related Commands	1 1	<b>x v</b>	
Related Commands	CISP is not running on	any interface Description	

# show class-map

Use the **show class-map** EXEC command to display quality of service (QoS) class maps, which define the match criteria to classify traffic.

show class-map [class-map-name]

Syntax Description	class-map-name (0	Dptional) Display the contents of the specified class map.	
Command Modes	User EXEC Privileged EXEC		
Command History	Release	Modification	
	12.2(25)FX	This command was introduced.	
Usage Guidelines	To use this command, t	the switch must be running the LAN Base image.	
Examples	This is an example of output from the <b>show class-map</b> command: Switch# <b>show class-map</b> Class Map match-all videowizard_10-10-10 (id 2) Match access-group name videowizard_10-10-10-10		
	-	r class-default (id 0)	
Related Commands	Command	Description	
	class-map	Creates a class map to be used for matching packets to the class whose name you specify.	
	match (class-map cor	<b>figuration</b> ) Defines the match criteria to classify traffic.	

L

## show cluster

Use the **show cluster** EXEC command to display the cluster status and a summary of the cluster to which the switch belongs. This command can be entered on the cluster command switch and cluster member switches.

show cluster

- **Syntax Description** This command has no arguments or keywords.
- Command Modes User EXEC Privileged EXEC

Command History	Release	Modification	
	12.2(25)FX	This command was introduced.	

### **Usage Guidelines**

If you enter this command on a switch that is not a cluster member, the error message Not a management cluster member appears.

On a cluster member switch, this command displays the identity of the cluster command switch, the switch member number, and the state of its connectivity with the cluster command switch.

On a cluster command switch stack or cluster command switch, this command displays the cluster name and the total number of members. It also shows the cluster status and time since the status changed. If redundancy is enabled, it displays the primary and secondary command-switch information.

Note

Stacking is supported only on Catalyst 2960-S switches.

### Examples

This is an example of output when the **show cluster** command is entered on the cluster command switch:

	<b>show cluster</b> switch for cluster "Ajang"	
Command	Total number of members:	7
	Status:	1 members are unreachable
	Time since last status change:	0 days, 0 hours, 2 minutes
	Redundancy:	Enabled
	Standby command switch:	Member 1
	Standby Group:	Ajang_standby
	Standby Group Number:	110
	Heartbeat interval:	8
	Heartbeat hold-time:	80
	Extended discovery hop count:	3

This is an example of output when the **show cluster** command is entered on a cluster member switch:

Switch1> <b>show cluster</b>	
Member switch for cluster "hapuna"	
Member number:	3
Management IP address:	192.192.192.192
Command switch mac address:	0000.0c07.ac14
Heartbeat interval:	8
Heartbeat hold-time:	80

This is an example of output when the **show cluster** command is entered on a cluster member switch that is configured as the standby cluster command switch:

Switch# <b>show cluster</b> Member switch for cluster "hapuna"	
Member number:	3 (Standby command switch)
Management IP address:	192.192.192.192
Command switch mac address:	0000.0c07.ac14
Heartbeat interval:	8
Heartbeat hold-time:	80

This is an example of output when the **show cluster** command is entered on the cluster command switch that has lost connectivity with member 1:

Switch#	show cluster	
Command	switch for cluster "Ajang"	
	Total number of members:	7
	Status:	1 members are unreachable
	Time since last status change:	0 days, 0 hours, 5 minutes
	Redundancy:	Disabled
	Heartbeat interval:	8
	Heartbeat hold-time:	80
	Extended discovery hop count:	3

This is an example of output when the **show cluster** command is entered on a cluster member switch that has lost connectivity with the cluster command switch:

Switch# show cluster	
Member switch for cluster "hapuna"	
Member number:	<unknown></unknown>
Management IP address:	192.192.192.192
Command switch mac address:	0000.0c07.ac14
Heartbeat interval:	8
Heartbeat hold-time:	80

Related Commands Command		Description	
	cluster enable	Enables a command-capable switch as the cluster command switch, assigns a cluster name, and optionally assigns a member number to it.	
	show cluster candidates	Displays a list of candidate switches.	
	show cluster members	Displays information about the cluster members.	

# show cluster candidates

Use the show cluster candidates EXEC command to display a list of candidate switches.

show cluster candidates [detail | mac-address H.H.H.]

Syntax Description	detail	(Optional) D	isplay detailed inf	ormation fo	or all can	didat	es.
-	mac-address H.H.H.	(Optional) M	AC address of the	cluster can	didate.

<b>Related Commands</b>	Command	Description
	show controllers ethernet-controller	Displays per-interface send and receive statistics read from the hardware or the interface internal registers.
	show interfaces	Displays the administrative and operational status of all interfaces or a specified interface.

## show controllers ethernet-controller

Use the **show controllers ethernet-controller** privileged EXEC command without keywords to display per-interface send and receive statistics read from the hardware. Use with the **phy** keyword to display the interface internal registers or the **port-asic** keyword to display information about the port ASIC.

show controllers ethernet-controller [interface-id] [phy [detail]] [port-asic {configuration |
 statistics}] [fastethernet 0]

Syntax Description	interface-id	The physical interface (including type, stack member, module, and port numb
	phy	(Optional) Display the status of the internal registers on the switch physical la
		device (PHY) for the device or the interface. This display includes the operatio
		state of the automatic medium-dependent interface crossover (auto-MDIX)
		feature on an interface.
	detail	(Optional) Display details about the PHY internal registers.
	port-asic	(Optional) Display information about the port ASIC internal registers.
	configuration	Display port ASIC internal register configuration.
	statistics	Display port ASIC statistics, including the Rx/Sup Queue and miscellaneous statistics.

## Table 2-31Transmit Field Descriptions

Field	Description
Bytes	The total number of bytes sent on an interface.
Unicast Frames	The total number of frames sent to unicast addresses.
Multicast frames	The total number of frames sent to multicast addresses.
Broadcast frames	The total number of frames sent to broadcast addresses.
Too old frames	The number of frames dropped on the egress port because the packet aged out.
Deferred frames	The number of frames that are not sent after the time exceeds 2*maximum-packet time.
MTU exceeded frames	The number of frames that are larger than the maximum allowed frame size.
1 collision frames	The number of frames that are successfully sent on an interface after one collision occurs.
2 collision frames	The number of frames that are successfully sent on an interface after two collisions occur.
3 collision frames	The number of frames that are successfully sent on an interface after three collisions occur.
4 collision frames	The number of frames that are successfully sent on an interface after four collisions occur.
5 collision frames	The number of frames that are successfully sent on an interface after five collisions occur.
6 collision frames	The number of frames that are successfully sent on an interface after six collisions occur.
7 collision frames	The number of frames that are successfully sent on an interface after seven collisions occur.
8 collision frames	The number of frames that are successfully sent on an interface after eight collisions occur.
9 collision frames	The number of frames that are successfully sent on an interface after nine collisions occur.
10 collision frames	The number of frames that are successfully sent on an interface after ten collisions occur.
11 collision frames	The number of frames that are successfully sent on an interface after 11 collisions occur.
12 collision frames	The number of frames that are successfully sent on an interface after 12 collisions occur.
13 collision frames	The number of frames that are successfully sent on an interface after 13 collisions occur.
14 collision frames	The number of frames that are successfully sent on an interface after 14 collisions occur.

Field	Description
15 collision frames	The number of frames that are successfully sent on an interface after 15 collisions occur.
Excessive collisions	The number of frames that could not be sent on an interface after 16 collisions occur.
Late collisions	After a frame is sent, the number of frames dropped because late collisions were detected while the frame was sent.
VLAN discard frames	The number of frames dropped on an interface because the CFI <sup>1</sup> bit is set.
Excess defer frames	The number of frames that are not sent after the time exceeds the maximum-packet time.
64 byte frames	The total number of frames sent on an interface that are 64 bytes.
127 byte frames	The total number of frames sent on an interface that are from 65 to 127 bytes.
255 byte frames	The total number of frames sent on an interface that are from 128 to 255 bytes.
511 byte frames	The total number of frames sent on an interface that are from 256 to 511 bytes.
1023 byte frames	The total number of frames sent on an interface that are from 512 to 1023 bytes.
1518 byte frames	The total number of frames sent on an interface that are from 1024 to 1518 bytes.
Too large frames	The number of frames sent on an interface that are larger than the maximum allowed frame size.
Good (1 coll) frames	The number of frames that are successfully sent on an interface after one collision occurs. This value does not include the number of frames that are not successfully sent after one collision occurs.

 Table 2-31
 Transmit Field Descriptions (continued)

1. CFI = Canonical Format Indicator

Table 2-32	<b>Receive Field Descriptions</b>
------------	-----------------------------------

Field	Description
Bytes	The total amount of memory (in bytes) used by frames received on an interface, including the FCS value and the incorrectly formed frames. This value excludes the frame header bits.
Unicast frames	The total number of frames successfully received on the interface that are directed to unicast addresses.
Multicast frames	The total number of frames successfully received on the interface that are directed to multicast addresses.
Broadcast frames	The total number of frames successfully received on an interface that are directed to broadcast addresses.
Unicast bytes	The total amount of memory (in bytes) used by unicast frames received on an interface, including the FCS value and the incorrectly formed frames. This value excludes the frame header bits.
Multicast bytes	The total amount of memory (in bytes) used by multicast frames received on an interface, including the FCS value and the incorrectly formed frames. This value excludes the frame header bits.
Broadcast bytes	The total amount of memory (in bytes) used by broadcast frames received on an interface, including the FCS value and the incorrectly formed frames. This value excludes the frame header bits.
Alignment errors	The total number of frames received on an interface that have alignment errors.
FCS errors	The total number of frames received on an interface that have a valid length (in bytes) but do not have the correct FCS values.

I

Field	Description
Oversize frames	The number of frames received on an interface that are larger than the maximum allowed frame size.
Undersize frames	The number of frames received on an interface that are smaller than 64 bytes.
Collision fragments	The number of collision fragments received on an interface.
Minimum size frames	The total number of frames that are the minimum frame size.
65 to 127 byte frames	The total number of frames that are from 65 to 127 bytes.
128 to 255 byte frames	The total number of frames that are from 128 to 255 bytes.
256 to 511 byte frames	The total number of frames that are from 256 to 511 bytes.
512 to 1023 byte frames	The total number of frames that are from 512 to 1023 bytes.
1024 to 1518 byte frames	The total number of frames that are from 1024 to 1518 bytes.
Overrun frames	The total number of overrun frames received on an interface.
Pause frames	The number of pause frames received on an interface.
Symbol error frames	The number of frames received on an interface that have symbol errors.
Invalid frames, too large	The number of frames received that were larger than maximum allowed MTU size (including the FCS bits and excluding the frame header) and that have either an FCS error or an alignment error.
Valid frames, too large	The number of frames received on an interface that are larger than the maximum allowed frame size.
Invalid frames, too small	The number of frames received that are smaller than 64 bytes (including the FCS bits and excluding the frame header) and that have either an FCS error or an alignment error.
Valid frames, too small	The number of frames received on an interface that are smaller than 64 bytes (or 68 bytes for VLAN-tagged frames) and that have valid FCS values. The frame size includes the FCS bits but excludes the frame header bits.
Too old frames	The number of frames dropped on the ingress port because the packet aged out.
Valid oversize frames	The number of frames received on an interface that are larger than the maximum allowed frame size and have valid FCS values. The frame size includes the FCS value but does not include the VLAN tag.
System FCS error frames	The total number of frames received on an interface that have a valid length (in bytes) but that do not have the correct FCS values.
RxPortFifoFull drop frames	The total number of frames received on an interface that are dropped because the ingress queue is full.

Table 2-33	Transmit FastEthernet and Stack Port Field Descriptions
------------	---

Field	Description	
Bytes	The total number of bytes sent on an interface.	
Unicast Frames	The total number of frames sent to unicast addresses.	
Multicast frames	The total number of frames sent to multicast addresses.	
Broadcast frames	The total number of frames sent to broadcast addresses.	
Too old frames	The number of frames dropped on the egress port because the packet aged out.	
Deferred frames	The number of frames that are not sent after the time exceeds 2*maximum-packet time.	
MTU exceeded frames	The number of frames that are larger than the maximum allowed frame size.	
1 collision frames	The number of frames that are successfully sent on an interface after one collision occurs.	
2 collision frames	The number of frames that are successfully sent on an interface after two collisions occur.	
3 collision frames	The number of frames that are successfully sent on an interface after three collisions occur.	
4 collision frames	The number of frames that are successfully sent on an interface after four collisions occur.	
5 collision frames	The number of frames that are successfully sent on an interface after five collisions occur.	
6 collision frames	The number of frames that are successfully sent on an interface after six collisions occur.	
7 collision frames	The number of frames that are successfully sent on an interface after seven collisions occur.	
8 collision frames	The number of frames that are successfully sent on an interface after eight collisions occur.	
9 collision frames	The number of frames that are successfully sent on an interface after nine collisions occur.	
10 collision frames	The number of frames that are successfully sent on an interface after ten collisions occur.	
11 collision frames	The number of frames that are successfully sent on an interface after 11 collisions occur.	
12 collision frames	The number of frames that are successfully sent on an interface after 12 collisions occur.	
13 collision frames	The number of frames that are successfully sent on an interface after 13 collisions occur.	
14 collision frames	The number of frames that are successfully sent on an interface after 14 collisions occur.	
15 collision frames	The number of frames that are successfully sent on an interface after 15 collisions occur.	
Excessive collisions	The number of frames that could not be sent on an interface after 16 collisions occur.	
Late collisions	After a frame is sent, the number of frames dropped because late collisions were detected while the frame was sent.	
VLAN discard frames	The number of frames dropped on an interface because the CFI bit is set.	

Field	Description		
Excess defer frames	The number of frames that are not sent after the time exceeds the maximum-packet time.		
64 byte frames	The total number of frames sent on an interface that are 64 bytes.		
127 byte frames	The total number of frames sent on an interface that are from 65 to 127 bytes.		
255 byte frames	The total number of frames sent on an interface that are from 128 to 255 bytes.		
511 byte frames	The total number of frames sent on an interface that are from 256 to 511 bytes.		
1023 byte frames	The total number of frames sent on an interface that are from 512 to 1023 bytes.		
1518 byte frames	The total number of frames sent on an interface that are from 1024 to 1518 bytes.		
Too large frames	The number of frames sent on an interface that are larger than the maximum allowed frame size.		
Good (1 coll) frames	The number of frames that are successfully sent on an interface after one collision occurs. This value does not include the number of frames that are not successfully sent after one collision occurs.		
Good (>1 coll) frames	The number of frames that are successfully sent on an interface after more than one collision occurs. This value does not include the number of frames that are not successfully sent after one collision occurs.		

### Table 2-33 Transmit FastEthernet and Stack Port Field Descriptions (continued)

## Table 2-34 Receive Field Descriptions

Field	Description	
Bytes	The total amount of memory (in bytes) used by frames received on an interface, including the FCS value and the incorrectly formed frames. This value excludes the frame header bits.	
Unicast frames	The total number of frames successfully received on the interface that are directed to unicast addresses.	
Multicast frames	The total number of frames successfully received on the interface that are directed to multicast addresses.	
Broadcast frames	The total number of frames successfully received on an interface that are directed to broadcast addresses.	
Unicast bytes	The total amount of memory (in bytes) used by unicast frames received on an interface, including the FCS value and the incorrectly formed frames. This value excludes the frame header bits.	
Multicast bytes	The total amount of memory (in bytes) used by multicast frames received on an interface, including the FCS value and the incorrectly formed frames. This value excludes the frame heade bits.	
Broadcast bytes	The total amount of memory (in bytes) used by broadcast frames received on an interface, including the FCS value and the incorrectly formed frames. This value excludes the frame he bits.	
Alignment errors	The total number of frames received on an interface that have alignment errors.	
FCS errors	The total number of frames received on an interface that have a valid length (in bytes) but do not have the correct FCS values.	
Oversize frames	The number of frames received on an interface that are larger than the maximum allowed frame size.	
Undersize frames	The number of frames received on an interface that are smaller than 64 bytes.	
Collision fragments	The number of collision fragments received on an interface.	

Field	Description	
Minimum size frames	The total number of frames that are the minimum frame size.	
65 to 127 byte frames	The total number of frames that are from 65 to 127 bytes.	
128 to 255 byte frames	The total number of frames that are from 128 to 255 bytes.	
256 to 511 byte frames	The total number of frames that are from 256 to 511 bytes.	
512 to 1023 byte frames	The total number of frames that are from 512 to 1023 bytes.	
1024 to 1518 byte frames	The total number of frames that are from 1024 to 1518 bytes.	
Overrun frames	The total number of overrun frames received on an interface.	
Pause frames	The number of pause frames received on an interface.	
Symbol error frames	The number of frames received on an interface that have symbol errors.	
Invalid frames, too large	The number of frames received that were larger than maximum allowed MTU size (including the FCS bits and excluding the frame header) and that have either an FCS error or an alignment error.	
Valid frames, too large	The number of frames received on an interface that are larger than the maximum allowed frame size.	
Invalid frames, too small	The number of frames received that are smaller than 64 bytes (including the FCS bits and excluding the frame header) and that have either an FCS error or an alignment error.	
Valid frames, too smallThe number of frames received on an interface that are smaller than 64 bytes (or 68 byte VLAN-tagged frames) and that have valid FCS values. The frame size includes the FCS excludes the frame header bits.		
Too old frames	The number of frames dropped on the ingress port because the packet aged out.	
Valid oversize frames	The number of frames received on an interface that are larger than the maximum allowed frame size and have valid FCS values. The frame size includes the FCS value but does not include the VLAN tag.	
System FCS error frames	The total number of frames received on an interface that have a valid length (in bytes) but that do not have the correct FCS values.	
RxPortFifoFull drop frames	The total number of frames received on an interface that are dropped because the ingress queue is full.	

## Table 2-34 Receive Field Descriptions (continued)

<b>Related Commands</b>	Command	Description
	clear controllers ethernet-controllers	Clears the Ethernet controller and stack port counters.
	show controllers ethernet-controller	Displays per-interface send and receive statistics read from the hardware.

# show controllers power inline

Use the **show controllers power inline** command in EXEC mode to display the values in the registers of the specified Power over Ethernet (PoE) controller.

show controllers power inline [instance] [module switch-number]

Syntax Description	instance	(Optional) Power controller instance, where each instance corresponds to four ports. See the "Usage Guidelines" section for more information. If no instance is specified, information for all instances appear.
	<b>module</b> switch number	(Optional) Limit the display to ports on the specified stack member. The switch number is 1 to 4.
		<b>Note</b> Stacking is supported only on Catalyst 2960-S switches.
Command Modes	User EXEC Privileged EXEC	
Command History	Release	Modification
	12.2(44)SE	This command was introduced.
Jsage Guidelines	The instance range	is 0 to 1. For instances other than 0 to 1, the switches provides no output.
	Though visible on a for switches that do	all switches, this command is valid only for PoE switches. It provides no information o not support PoE.
	The output provide troubleshooting the	s information that might be useful for Cisco technical support representatives e switch.
		nd, the switch must be running the LAN Base image.
Note	To use this comma	nd the switch must be running the LAN Rose image

# Examples This is an example of output from the **show controllers power inline** command on a Catalyst 2960 or 2960-S switch:

Detection Status :00 00 00 30 00 00
Current Class :00 00 00 30 00 00
Tweetie debug :00 00 00 00
POE Commands pending at sub:
Command 0 on each port :00 00 00 00 00 00
Command 1 on each port :00 00 00 00 00 00
Command 2 on each port :00 00 00 00 00 00
Command 3 on each port :00 00 00 00 00 00

<b>Related Commands</b>	Command	Description
	logging event power-inline-status	Enables the logging of PoE events.
	power inline	Configures the power management mode for the specified PoE port or for all PoE ports.
	show power inline	Displays the PoE status for the specified PoE port or for all PoE ports.

# show controllers tcam

Use the **show controllers tcam** privileged EXEC command to display the state of the registers for all ternary content addressable memory (TCAM) in the system and for all TCAM interface ASICs that are CAM controllers.

show controllers tcam [asic [number]] [detail]

Syntax Description	asic	(Optional) Display port ASIC TCAM information.
	number	(Optional) Display information for the specified port ASIC number. The range is from 0 to 15.
	detail	(Optional) Display detailed TCAM register information.
Command Modes	Privileged	1 EXEC
Command History	Release	Modification
	12.2(25)F	FX12.2(25)FX This command was introduced.
Usage Guidelines		lay provides information that might be useful for Cisco technical support representatives ooting the switch.

## Commands Command Description show controllers cpu-interface Displays the state of the CPU network ASIC and send and receive statistics for packets reaching the CPU. show controllers ethernet-controller Displays per-interface send and receive statistics read from the hardware or the interface internal registers.

# show controllers utilization

Use the **show controllers utilization command** in EXEC mode to display bandwidth utilization on the switch or specific ports.

show controllers [interface-id] utilization

Syntax Description	<i>interface-id</i> (Optional) ID of the switch interface.		
Command Modes	User EXEC Privileged EXEC		
Command History	Release	Modification	
	12.2(25)FX	This command was introduced.	
Examples	This is an example	of output from the <b>show controllers utilization</b> command.	
	Switch# show controllers utilization		
	Port Receive Utilization Transmit Utilization		
	Fa1/0/1	0 0	
	Fa1/0/2	0 0	
	Fa1/0/3	0	
	Fa1/0/4	0 0	
	Fa1/0/5	0 0	
	Fa1/0/6	0 0	
	Fa1/0/7	0 0	
	<output th="" truncated<=""><th>&gt;</th></output>	>	
	<output truncated=""></output>		
	Switch Receive Bandwidth Percentage Utilization : 0 Switch Transmit Bandwidth Percentage Utilization : 0		
	Switch Fabric Percentage Utilization : 0		
	This is an example of output from the show controllers utilization command on a specific port:		
	Receive Bandwidth	rollers gigabitethernet1/0/1 utilization Percentage Utilization : 0 h Percentage Utilization : 0	

Field	Description
Receive Bandwidth Percentage Utilization	Displays the received bandwidth usage of the switch, which is the sum of the received traffic on all the ports divided by the switch receive capacity.
Transmit Bandwidth Percentage Utilization	Displays the transmitted bandwidth usage of the switch, which is the sum of the transmitted traffic on all the ports divided it by the switch transmit capacity.
Fabric Percentage Utilization	Displays the average of the transmitted and received bandwidth usage of the switch.

### Table 2-35 show controllers utilization Field Descriptions

## **Related Commands**

show controllersDisplays the interface internal registers.	
ethernet-controller (1997)	

# show diagnostic

Use the **show diagnostic** command in EXEC mode to view the test results of the online diagnostics and to list the supported test suites.

show diagnostic content switch [num | all]

show diagnostic post

show diagnostic result switch [num | all] [detail | test {test-id | test-id-range | all} [detail]]

show diagnostic schedule switch [num | all]

show diagnostic status

show diagnostic switch [num | all] [detail]

Command History	Release Mo	dification		
Command Modes	User EXEC Privileged EXEC			
Defaults	This command has no default settings.			
	status	Displays the test status.		
	schedule	Displays the current scheduled diagnostic tasks.		
	all	All the tests.		
	test-id-range	Range of identification numbers for tests; see the "Usage Guidelines" section for additional information.		
	test-id	Identification number for the test; see the "Usage Guidelines" section for additional information.		
	test	Specify a test.		
	detail	(Optional) Displays the all test statistics.		
	result	Displays the test results.		
	post	Display the power-on self-test (POST) results; the command output is the same as the <b>show post</b> command.		
	switch all	Specify all of the switches in the switch stack.		
	switch num	Specify the switch number. The range is from 1 to 4.		
_		coverage test levels for each test and for all modules.		

### Usage Guidelines

If you do not enter a switch *num*, information for all switches is displayed.

In the command output, the possible testing results are as follows:

- Passed (.)
- Failed (F)
- Unknown (U)

This command is supported only on Catalyst 2960-S switches running the LAN base image.

### Examples

This example shows how to display the online diagnostics that are configured on a switch:

```
Switch# show diagnostic content switch 3
```

<pre>Switch 3: Diagnostics test suite attributes: B/* - Basic ondemand test / NA P/V/* - Per port test / Per device te D/N/* - Disruptive test / Non-disrupt S/* - Only applicable to standby un X/* - Not a health monitoring test F/* - Fixed monitoring interval test E/* - Always enabled monitoring test A/I - Monitoring is active / Monitor R/* - Switch will reload after test P/* - will partition stack / NA</pre>	tive test / NA nit / NA / NA st / NA st / NA pring is inact	ive
ID Test Name	attributes	Test Interval Thre- day hh:mm:ss.ms shold
	= ================	
_,	B*N****A**	
<ol> <li>TestPortAsicLoopback</li> </ol>	B*D*X**IR*	
<ol> <li>TestPortAsicCam</li> </ol>	B*D*X**IR*	not configured n/a
<ol> <li>TestPortAsicRingLoopback</li> </ol>	B*D*X**IR*	not configured n/a
5) TestMicRingLoopback	B*D*X**IR*	not configured n/a
6) TestPortAsicMem	B*D*X**IR*	not configured n/a

This example shows how to display the online diagnostic results for a switch:

```
Switch# show diagnostic result switch 1
Switch 1: SerialNo :
Overall diagnostic result: PASS
Test results: (. = Pass, F = Fail, U = Untested)
1) TestPortAsicStackPortLoopback ----> .
2) TestPortAsicLoopback ----> .
3) TestPortAsicCam -----> .
4) TestPortAsicRingLoopback -----> .
5) TestMicRingLoopback ----> .
6) TestPortAsicMem ----> .
```

This example shows how to display the online diagnostic test status:

Switch# <b>show diagnostic status</b> <bu> - Bootup Diagnostics, <hm> - Health <od> - OnDemand Diagnostics, <sch> - Sch</sch></od></hm></bu>	5 5 .	
Card Description	Current Running Test	Run by
1	N/A	N/A
2	TestPortAsicStackPortLoopback	<od></od>
	TestPortAsicLoopback	<od></od>
	TestPortAsicCam	<od></od>
	TestPortAsicRingLoopback	<od></od>
	TestMicRingLoopback	<0D>
	TestPortAsicMem	<0D>
3	N/A	N/A
4	N/A	N/A
===== ================================		=====

This example shows how to display the online diagnostic test schedule for a switch:

```
Switch# show diagnostic schedule switch 1
Current Time = 14:39:49 PST Tue Jul 5 2005
Diagnostic for Switch 1:
Schedule #1:
To be run daily 12:00
Test ID(s) to be executed: 1.
```

<b>Related Commands</b>	Command	Description
	clear ip arp inspection statistics	Configures the health-monitoring diagnostic test.
	diagnostic schedule	Sets the scheduling of test-based online diagnostic testing.
	diagnostic start	Starts the online diagnostic test.

# show dot1x

Use the **show dot1x** command in EXEC mode to display IEEE 802.1x statistics, administrative status, and operational status for the switch or for the specified port.

show dot1x [{all [summary] | interface interface-id} [details | statistics]]

Syntax Description	all [summary]	(Optional) Display the IEEE 802.1x status for all ports.
	interface interface-id	(Optional) Display the IEEE 802.1x status for the specified port (including
		type, stack member, module, and port number).
		<b>Note</b> Stacking is supported only on Catalyst 2960-S switches running the LAN base image.
	details	(Optional) Display the IEEE 802.1x interface details.
	statistics	(Optional) Display IEEE 802.1x statistics for the specified port.
Command Modes	User EXEC Privileged EXEC	
Command History	Release	Modification
ooniniana mistory	12.2(25)FX	This command was introduced.
	12.2(25)SED	The display was expanded to include <b>auth-fail-vlan</b> in the authorization state machine state and port status fields.
	12.2(25)SEE	The command syntax was changed, and the command output was modified.
Usage Guidelines	If you do not specify a p that port appear.	port, global parameters and a summary appear. If you specify a port, details for

This is an example of output from the **show dot1x interface** *interface-id* **statistics** command. Table 2-36 describes the fields in the display.

Field	Description	
RxStart	Number of valid EAPOL-start frames that have been received.	
RxLogoff	Number of EAPOL-logoff frames that have been received.	
RxResp	Number of valid EAP-response frames (other than response/identity frames) that have been received.	
RxRespID	Number of EAP-response/identity frames that have been received.	
RxInvalid	Number of EAPOL frames that have been received and have an unrecognized frame type.	
RxLenError	Number of EAPOL frames that have been received in which the packet body length field is invalid.	
RxTotal	Number of valid EAPOL frames of any type that have been received.	
TxReq	Number of EAP-request frames (other than request/identity frames) that have been sent.	
TxReqId	Number of Extensible Authentication Protocol (EAP)-request/identity frames that have been sent.	
TxTotal	Number of Extensible Authentication Protocol over LAN (EAPOL) frames of any type that have been sent.	
RxVersion	Number of received packets in the IEEE 802.1x Version 1 format.	
LastRxSrcMac	Source MAC address carried in the most recently received EAPOL frame.

## show eap

Use the **show eap** privileged EXEC command to display Extensible Authentication Protocol (EAP) registration and session information for the switch or for the specified port.

show eap {{registrations [method [name] | transport [name]]} | {sessions [credentials name
[interface interface-id] | interface interface-id | method name | transport name]}}
[credentials name | interface interface-id | transport name]

Syntax Description	registrations	Display EAP registration information.
,	method name	(Optional) Display EAP method registration information.
	transport name	(Optional) Display EAP transport registration information.
	sessions	Display EAP session information.
	credentials name	(Optional) Display EAP method registration information.
	interface interface-id	(Optional) Display the EAP information for the specified port (including type, stack member, module, and port number).
		<b>Note</b> Stacking is supported only on Catalyst 2960-S switches running the LAN base image.

Command History	Privileged EXEC          Release         12.2(25)FX         Use the session primaster.         Use the show env s         from any member s	This command was introduced. ileged EXEC command to access information from a specific switch ot <b>ack</b> [ <i>switch-number</i> ] command to display information about any switch witch.	in the stack

Examples

This is an example of output from the **show env all** command entered from the master switch or a standalone switch:

Switch# **show env all** FAN is OK TEMPERATURE is OK POWER is OK RPS is AVAILABLE

This is an example of output from the show env fan command:

Switch# **show env fan** FAN is OK

This is an example of output from the show env stack command:

Switch# show env stack SWITCH: 1 FAN is OK TEMPERATURE is OK POWER is OK RPS is NOT PRESENT SWITCH: 2 FAN is OK TEMPERATURE is OK POWER is OK RPS is NOT PRESENT SWITCH: 3 FAN is OK TEMPERATURE is OK POWER is OK RPS is NOT PRESENT

This is an example of output from the **show env stack** command on a Catalyst 2960-S switch:

Switch# show env stack SWITCH: 1 FAN is OK TEMPERATURE is OK Temperature Value: 32 Degree Celsius Temperature State: GREEN Yellow Threshold : 49 Degree Celsius Red Threshold : 59 Degree Celsius POWER is OK RPS is NOT PRESENT

This example shows how to display information about stack member 3 from the master switch:

Switch# **show env stack 3** SWITCH: 3 FAN is OK TEMPERATURE is OK POWER is OK RPS is NOT PRESENT

### show errdisable detect

Use the show errdisable detect command in EXEC mode to display error-disabled detection status.

show errdisable detect

Syntax Description	This command has no	arguments	s or keywords.
Command Modes	User EXEC Privileged EXEC		
Command History	Release	Modifi	ication
	12.2(25)FX	This c	ommand was introduced.
Usage Guidelines	A displayed gbic-inv	valid error	reason refers to an invalid small form-factor pluggable (SFP) module
Examples	This is an example of	output from	m the show errdisable detect command:
	Switch# <b>show errdis</b> ErrDisable Reason	able detec	on Mode
	arp-inspection	Enabled	port
	bpduguard	Enabled	vlan
	channel-misconfig	Enabled	port
	community-limit	Enabled	port
	dhcp-rate-limit	Enabled	port
	dtp-flap	Enabled	port
	gbic-invalid	Enabled	port
	inline-power	Enabled	port
	invalid-policy	Enabled	port
	link-flap loopback	Enabled Enabled	port
	lsgroup	Enabled	port
	pagp-flap	Enabled	port port
	psecure-violation	Enabled	port/vlan
	security-violatio	Enabled	port
	sfp-config-mismat	Enabled	port
	storm-control	Enabled	port
	udld	Enabled	port
	vmps	Enabled	port
Related Commands	Command		Description
	errdisable detect ca		Enables error-disabled detection for a specific cause or all causes.
	show errdisable flag	o-values	Displays error condition recognition information.
	show errdisable rec	overy	Displays error-disabled recovery timer information.
			<b>T</b>

show interfaces status

Displays interface status or a list of interfaces in error-disabled state.

L

### show errdisable flap-values

Use the **show errdisable flap-values** command in EXEC mode to display conditions that cause an error to be recognized for a cause.

#### show errdisable flap-values

**Syntax Description** This command has no arguments or keywords.

Command Modes User EXEC Privileged EXEC

 Release
 Modification

 12.2(25)FX
 This command was introduced.

**Usage Guidelines** 

The *Flaps* column in the display shows how many changes to the state within the specified time interval will cause an error to be detected and a port to be disabled. For example, the display shows that an error will be assumed and the port shut down if three Dynamic Trunking Protocol (DTP)-state (port mode access/trunk) or Port Aggregation Protocol (PAgP) flap changes occur during a 30-second interval, or if 5 link-state (link up/down) changes occur during a 10-second interval.

ErrDisable Reason	Flaps	Time (sec
pagp-flap	3	30
dtp-flap	3	30
link-flap	5	10

#### **Examples**

This is an example of output from the show errdisable flap-values command:

Switch# show errdisa	ble flap-	values
ErrDisable Reason	Flaps	Time (sec)
pagp-flap	3	30
dtp-flap	3	30
link-flap	5	10

<b>Related Commands</b>	Command	Description
	errdisable detect cause	Enables error-disabled detection for a specific cause or all causes.
	show errdisable detect	Displays error-disabled detection status.
	show errdisable recovery	Displays error-disabled recovery timer information.
	show interfaces status	Displays interface status or a list of interfaces in error-disabled state.

### show errdisable recovery

Use the **show errdisable recovery** command in EXEC mode to display the error-disabled recovery timer information.

show errdisable recovery

**Syntax Description** This command has no arguments or keywords.

Command Modes User EXEC Privileged EXEC

 Release
 Modification

 12.2(25)FX
 This command was introduced.

# **Usage Guidelines** A *gbic-invalid error-disable* reason refers to an invalid small form-factor pluggable (SFP) module interface.

#### Examples

This is an example of output from the show errdisable recovery command:

Switch# <b>show errdis</b> ErrDisable Reason	Timer Status
udld	Disabled
bpduguard	Disabled
security-violatio	Disabled
channel-misconfig	Disabled
vmps	Disabled
pagp-flap	Disabled
dtp-flap	Disabled
link-flap	Enabled
psecure-violation	Disabled
gbic-invalid	
dhcp-rate-limit	
unicast-flood	
storm-control	
arp-inspection	
loopback	Disabled
Timer interval:300	seconds
Interfaces that wil	l be enabled at the next timeou
	able reason Time left(sec)
Gi0/2 link-fla	

```
Note
```

Though visible in the output, the unicast-flood field is not valid.

### Relate

ted Commands	Command	Description
	errdisable recovery	Configures the recover mechanism variables.
	show errdisable detect	Displays error-disabled detection status.
	show errdisable flap-values	Displays error condition recognition information.
	show interfaces status	Displays interface status or a list of interfaces in error-disabled state.

## show etherchannel

Use the **show etherchannel** command in EXEC mode to display EtherChannel information for a channel.

show etherchannel [channel-group-number {detail | port | port-channel | protocol | summary}]
{detail | load-balance | port | port-channel | protocol | summary}

Syntax Description	channel-group-number	(Optional) Number of the channel group. The range is 1 to 6.
	detail	Display detailed EtherChannel information.
	load-balance	Display the load-balance or frame-distribution scheme among ports in the port channel.
	port	Display EtherChannel port information.
	port-channel	Display port-channel information.
	protocol	Display the protocol that is being used in the EtherChannel.
	summary	Display a one-line summary per channel-group.
Command Modes	User EXEC Privileged EXEC	
Command History	Release	Modification
	12.2(25)FX	This command was introduced.
Examples	This is an axample of out	nut from the chew othershannel 1 detail commands
Examples	-	put from the <b>show etherchannel 1 detail</b> command:
	Switch# <b>show etherchan</b> Group state = L2 Ports: 2 Maxports = Port-channels: 1 Max P Protocol: LACP Ports	16

### **Related Commands**

Command	Description
flowcontrol	Sets the receive flow-control state for an interface.

### show interfaces

Use the **show interfaces** privileged EXEC command to display the administrative and operational status of all interfaces or a specified interface.

show interfaces [interface-id | vlan vlan-id] [accounting | capabilities [module number] |
 counters | description | etherchannel | flowcontrol | pruning | stats | status [err-disabled] |
 switchport [backup | module number] | transceiver | properties | detail [module number] |
 trunk]

yntax Description	interface-id	(Optional) Valid interfaces include physical ports (including type, stack member, module, and port number) and port channels. The port-channel range is 1 to 6.
	vlan vlan-id	(Optional) VLAN identification. The range is 1 to 4094.
	accounting	(Optional) Display accounting information on the interface, including active protocols and input and output packets and octets.
		<b>Note</b> The display shows only packets processed in software; hardware-switched packets do not appear.
	capabilities	(Optional) Display the capabilities of all interfaces or the specified interface, including the features and options that you can configure on the interface. Though visible in the command line help, this option is not available for VLAN IDs.
	module number	(Optional) Display <b>capabilities</b> , <b>switchport</b> configuration, or <b>transceiver</b> characteristics (depending on preceding keyword) of all interfaces on the specified stack member or. The range is 1 to 4 This option is not available if you enter a specific interface ID.
		<b>Note</b> Stacking is supported only on Catalyst 2960-S switches running the LAN base image. On all other Catalyst 2960 switches, the only valid module number is 1.
	counters	(Optional) See the show interfaces counters command.
	description	(Optional) Display the administrative status and description set for an interface
	etherchannel	(Optional) Display interface EtherChannel information.
	flowcontrol	(Optional) Display interface flowcontrol information
	pruning	(Optional) Display interface trunk VTP pruning information.
	stats	(Optional) Display the input and output packets by switching path for the interface.
	status	(Optional) Display the status of the interface. A status of <i>unsupported</i> in the Type field means that a non-Cisco small form-factor pluggable (SFP) module is inserted in the module slot.
	err-disabled	(Optional) Display interfaces in error-disabled state.
	switchport	(Optional) Display the administrative and operational status of a switching port, including port blocking and port protection settings.
	backup	(Optional) Display Flex Link backup interface configuration and status for the specified interface or all interfaces on the stack.

	transceiver [detail	
	properties]	form-factor (SFP) module interface. The keywords have these meanings:
		• <b>detail</b> —(Optional) Display calibration properties, including high and low numbers and any alarm information.
		• <b>properties</b> —(Optional) Display speed and duplex settings on an interface.
	trunk	Display interface trunk information. If you do not specify an interface, only information for active trunking ports appears.
Command Modes	Privileged EXEC	
Command History	Release	Modification
Command History	12.2(25)FX	This command was introduced.
Usage Guidelines	The show interfaces	capabilities command with different keywords has these results:
		<b>terfaces capabilities module</b> <i>number</i> command to display the capabilities of all t switch in the stack. If there is no switch with that module number in the stack, it
	Note Stacking is su	upported only on Catalyst 2960-S switches.
	• Use the <b>show int</b> interface.	terfaces interface-id capabilities to display the capabilities of the specified
		<b>terfaces capabilities</b> (with no module number or interface ID) to display the l interfaces or in the stack.
	number command to	witches running the LAN base image, use the <b>show interfaces switchport module</b> display the switch port characteristics of all interfaces on that switch in the stack. with that module number in the stack, there is no output.
Note	•	2960 switches, use Though visible in the command-line help strings, the <b>crb</b> , <b>-accounting</b> , <b>precedence</b> , <b>random-detect</b> , <b>rate-limit</b> , and <b>shape</b> keywords are not
Examples	Switch# show interf	f output from the <b>show interfaces</b> command for an interface on stack member 3: <b>faces gigabitethernet3/0/2</b> s down, line protocol is down

<output truncated>

Gi1/0/1	notconnect	1	auto	auto 10/100/1000BaseTX
Gi1/0/2	notconnect	1	auto	auto unsupported

This is an example of output from the **show interfaces status err-disabled** command. It displays the status of interfaces in the error-disabled state.

Switch# <b>s</b>	how interfaces	status err-disable	ed
Port	Name	Status	Reason
Gi2/0/26		err-disabled	gbic-invalid

This is an example of output from the **show interfaces switchport** command for a port. Table 2-37 describes the fields in the display.

Note

Private VLANs are not supported, so those fields are not applicable.

```
Switch# show interfaces gigabitethernet1/0/1 switchport
Name: Gi1/0/1
Switchport: Enabled
Administrative Mode: dynamic auto
Operational Mode: static access
Administrative Trunking Encapsulation: negotiate
Operational Trunking Encapsulation: native
Negotiation of Trunking: On
Access Mode VLAN: 1 (default)
Trunking Native Mode VLAN: 1 (default)
Voice VLAN: none
Administrative private-vlan host-association:10 (VLAN0010) 502 (VLAN0502)
Administrative private-vlan mapping: none
Administrative private-vlan trunk native VLAN: none
Administrative private-vlan trunk encapsulation: dotlq
Administrative private-vlan trunk normal VLANs: none
Administrative private-vlan trunk private VLANs: none
Operational private-vlan: none
Trunking VLANs Enabled: ALL
Pruning VLANs Enabled: 2-1001
Capture Mode Disabled
Capture VLANs Allowed: ALL
Protected: false
```

Unknown unicast blocked: disabled Unknown multicast blocked: disabled

Voice VLAN: none (Inactive) Appliance trust: none

#### Table 2-37show interfaces switchport Field Descriptions

Field	Description
Name	Displays the port name.
Switchport	Displays the administrative and operational status of the port. In this display, the port is in switchport mode.
Administrative Mode	Displays the administrative and operational modes.
Operational Mode	

L

Field	Description
Administrative Trunking Encapsulation	Displays the administrative and operational encapsulation method and whether trunking negotiation is enabled.
Operational Trunking Encapsulation	
Negotiation of Trunking	
Access Mode VLAN	Displays the VLAN ID to which the port is configured.
Trunking Native Mode VLAN	Lists the VLAN ID of the trunk that is in native mode. Lists the
Trunking VLANs Enabled	allowed VLANs on the trunk. Lists the active VLANs on the trunk.
Trunking VLANs Active	u unx.
Pruning VLANs Enabled	Lists the VLANs that are pruning-eligible.
Protected	Displays whether or not protected port is enabled (True) or disabled (False) on the interface.
Unknown unicast blocked	Displays whether or not unknown multicast and unknown
Unknown multicast blocked	unicast traffic is blocked on the interface.
Voice VLAN	Displays the VLAN ID on which voice VLAN is enabled.
Appliance trust	Displays the class of service (CoS) setting of the data packets of the IP phone.

Table 2-37 show interfaces switchport Field Descriptions (continued)

1This is an example of output from the **show interfaces switchport backup** command:

Switch# show interfaces switchport backup

```
      Switch Backup Interface Pairs:

      Active Interface
      Backup Interface
      State

      Fa1/0/1
      Fa1/0/2
      Active Up/Backup Standby

      Fa3/0/3
      Fa4/0/5
      Active Down/Backup Up

      Po1
      Po2
      Active Standby/Backup Up
```

This is an example of output from the **show interfaces switchport backup** command. In this example, VLANs 1 to 50, 60, and 100 to 120 are configured on the switch:

Switch(config)#interface gigabitEthernet 2/0/6 Switch(config-if)#switchport backup interface gigabitEthernet 2/0/8 prefer vlan 60,100-120

When both interfaces are up, Gi2/0/8 forwards traffic for VLANs 60, 100 to 120, and Gi2/0/6 forwards traffic for VLANs 1 to 50.

Switch#show interfaces switchport backup Switch Backup Interface Pairs:

 Active Interface
 Backup Interface
 State

 GigabitEthernet2/0/6 GigabitEthernet2/0/8 Active Down/Backup Up

Vlans on Interface Gi 2/0/6: 1-50 Vlans on Interface Gi 2/0/8: 60, 100-120

When a Flex Link interface goes down (LINK\_DOWN), VLANs preferred on this interface are moved to the peer interface of the Flex Link pair. In this example, if interface Gi2/0/6 goes down, Gi2/0/8 carries all VLANs of the Flex Link pair.

Switch#show interfaces switchport backup Switch Backup Interface Pairs: Active Interface Backup Interface State GigabitEthernet2/0/6 GigabitEthernet2/0/8 Active Down/Backup Up Vlans on Interface Gi 2/0/6:

```
Vlans on Interface Gi 2/0/8: 1-50, 60, 100-120
```

When a Flex Link interface comes up, VLANs preferred on this interface are blocked on the peer interface and moved to the forwarding state on the interface that has just come up. In this example, if interface Gi2/0/6 comes up, then VLANs preferred on this interface are blocked on the peer interface Gi2/0/8 and forwarded on Gi2/0/6.

 Switch#show interfaces switchport backup

 Switch Backup Interface Pairs:

 Active Interface
 Backup Interface

 SigabitEthernet2/0/6 GigabitEthernet2/0/8 Active Down/Backup Up

Vlans on Interface Gi 2/0/6: 1-50 Vlans on Interface Gi 2/0/8: 60, 100-120

This is an example of output from the **show interfaces** *interface-id* **pruning** command:

Switch# show interfaces gigibitethernet1/0/2 pruning Port Vlans pruned for lack of request by neighbor

This is an example of output from the **show interfaces** *interface-id* **trunk** command. It displays trunking information for the port.

Switch# <b>show</b> Port Gi1/0/1	<b>interfaces gi</b> Mode auto	gabitethernet1/ Encapsulation negotiate	Status	Native vlan 1
Port Gil/0/1	Vlans allowe 1-4094	d on trunk		
Port Gil/0/1	Vlans allowe 1-4	d and active in	management do	main
Port Gi1/0/1	Vlans in spa 1-4	nning tree forw	arding state a	nd not pruned

This is an example of output from the **show interfaces** interface-id **transceiver properties** command:

```
Switch# show interfaces gigabitethernet1/0/2 transceiver properties
Name : Gi1/0/2
Administrative Speed: auto
Operational Speed: auto
Administrative Duplex: auto
Administrative Power Inline: N/A
Operational Duplex: auto
Administrative Auto-MDIX: off
Operational Auto-MDIX: off
Configured Media: sfp
Active Media: sfp
Attached: 10/100/1000BaseTX SFP-10/100/1000BaseTX
```

#### This is an example of output from the show interfaces interface-id transceiver detail command:

Switch# show interfaces gigabitethernet2/0/3 transceiver detail ITU Channel not available (Wavelength not available), Transceiver is externally calibrated. mA:milliamperes, dBm:decibels (milliwatts), N/A:not applicable. ++:high alarm, +:high warning, -:low warning, -- :low alarm. A2D readouts (if they differ), are reported in parentheses. The threshold values are uncalibrated.

Port	Temperature (Celsius)	High Alarm Threshold (Celsius)	Threshold (Celsius)	Threshold (Celsius)	Threshold
Gi2/0/3	41.5	110.0		-8.0	-12.0
Port	Voltage (Volts)	High Alarm Threshold (Volts)	Threshold	Threshold (Volts)	Threshold
Gi2/0/3		4.00			2.95
Port	Current (milliamperes)	High Alarm Threshold (mA)	Threshold		Threshold (mA)
Gi2/0/3		84.0			
Port	Optical Transmit Power (dBm)	Threshold	Threshold	Threshold (dBm)	Threshold
Gi2/0/3	-0.0 ( -0.0)				-0.0
Port	Optical Receive Power (dBm)	(dBm)	Threshold (dBm)	Threshold (dBm)	Threshold (dBm)
Gi2/0/3	N/A (-0.0)				

### Related Commands

Command	Description	
switchport access	Configures a port as a static-access or a dynamic-access port.	
switchport block	Blocks unknown unicast or multicast traffic on an interface.	
switchport backup interface	Configures Flex Links, a pair of Layer 2 interfaces that provide mutual backup.	
switchport mode	Configures the VLAN membership mode of a port.	
switchport protected	Isolates unicast, multicast, and broadcast traffic at Layer 2 from other protected ports on the same switch.	
switchport trunk pruning	Configures the VLAN pruning-eligible list for ports in trunking mode.	

### show interfaces counters

Use the **show interfaces counters** privileged EXEC command to display various counters for the switch or for a specific interface.

**show interfaces** [*interface-id* | **vlan** *vlan-id*] **counters** [**errors** | **etherchannel** | **module** *switch-number* | **protocol status** | **trunk**]

Syntax Description	interface-id	(Optional) ID of the physical interface.			
	errors	(Optional) Display error counters.			
	etherchannel	(Optional) Display EtherChannel counters, including octets, broadcast packets, multicast packets, and unicast packets received and sent.			
	module switch- number	(Optional) Display counters for the specified stack member. The range is from 1 to 4, depending upon the switch numbers in the stack.			
		The <b>module</b> keyword in this command refers to the stack member number (1 to 4). The module number that is part of the interface ID is always zero.			
		<b>Note</b> Stacking is supported only on Catalyst 2960-S switches running the LAN base image.			
	protocol status	(Optional) Display status of protocols enabled on interfaces.			
	trunk	(Optional) Display trunk counters.			
Command History	Release 12.2(25)FX	Modification This command was introduced.

	Switch# <b>show invent</b>	cory
	Switch# <b>show invent</b> NAME: "1", DESCR: ' PID: WS-C2960-24TC-	
	NAME: "1", DESCR: ' PID: WS-C2960-24TC-	
	NAME: "1", DESCR: ' PID: WS-C2960-24TC- NAME: "GigabitEther PID:	cory "WS-C2960-48TC-L" -L , VID: 02 , SN: FHH0923D075 cnet0/1", DESCR: "100BaseBX-10D SFP"

### show ip arp inspection

Use the **show ip arp inspection** privileged EXEC command to display the configuration and the operating state of dynamic Address Resolution Protocol (ARP) inspection or the status of this feature for all VLANs or for the specified interface or VLAN.

**show ip arp inspection** [interfaces [interface-id] | log | statistics [vlan vlan-range] | vlan vlan-range]

Syntax Description	interfaces [interface-id]	(Optional) Display the trust state and the rate limit of ARP packets for the specified interface or all interfaces. Valid interfaces include physical ports and port channels.			
	log	(Optional) Display the configuration and contents of the dynamic ARP inspection log buffer.			
	statistics [vlan vlan-range]	(Optional) Display statistics for forwarded, dropped, MAC validation failure, IP validation failure, access control list (ACL) permitted and denied, and DHCP permitted and denied packets for the specified VLAN. If no VLANs are specified or if a range is specified, display information only for VLANs with dynamic ARP inspection enabled (active).			
		You can specify a single VLAN identified by VLAN ID number, a range of VLANs separated by a hyphen, or a series of VLANs separated by a comma. The range is 1 to 4094.			
	vlan vlan-range	(Optional) Display the configuration and the operating state of dynamic ARP inspection for the specified VLAN. If no VLANs are specified or if a range is specified, display information only for VLANs with dynamic ARP inspection enabled (active).			
		You can specify a single VLAN identified by VLAN ID number, a range of VLANs separated by a hyphen, or a series of VLANs separated by a comma. The range is 1 to 4094.			

### Command Modes Privileg

Examples

#### Chapter

#### This is an example of output from the **show ip arp inspection** command

Switch# show ip arp inspection

```
Source Mac Validation : Disabled
Destination Mac Validation : Disabled
IP Address Validation : Enabled
```

Vlan	Configuration	Operation		Static ACL
1	Enabled		deny-all	 No
Vlan	ACL Logging	DHCP Logg	-	Logging
1	Acl-Match		Permit	
Vlan	Forwarded	Dropped	DHCP Drops	-
1	0	0	0	0
Vlan			Probe Permits	Source MAC Failures
1	0	0	0	0
Vlan	Dest MAC Failures	IP Valid	ation Failures	Invalid Protocol Data
1	0		0	0

This is an example of output from the **show ip arp inspection interfaces** command:

Switch# <b>show ip</b>	arp inspection	interfaces	
Interface	Trust State	Rate (pps)	Burst Interval
Gi1/0/1	Untrusted	15	1
Gi1/0/2	Untrusted	15	1
Gi1/0/3	Untrusted	15	1

This is an example of output from the **show ip arp inspection interfaces** *interface-id* command:

Switch# <b>show ig</b>	arp inspection	interfaces gigabi	tethernet1/0/1
Interface	Trust State	Rate (pps)	Burst Interval
Gi1/0/1	Untrusted	15	1

This is an example of output from the **show ip arp inspection log** command. It shows the contents of the log buffer before the buffers are cleared:

```
Switch# show ip arp inspection log
Total Log Buffer Size : 32
Syslog rate : 10 entries per 300 seconds.
```

Interface	Vlan	Sender MAC S	Sender IP	Num Pkts	R	eason	Time
					-		
Gi1/0/1	5	0003.0000.d673	192.2.10.4		5	DHCP Deny	19:39:01 UTC
Mon Mar 1 1	1993						
Gi1/0/1	5	0001.0000.d774	128.1.9.25		6	DHCP Deny	19:39:02 UTC
Mon Mar 1 1	1993						
Gi1/0/1	5	0001.c940.1111	10.10.10.1		7	DHCP Deny	19:39:03 UTC
Mon Mar 1 1	1993						
Gi1/0/1	5	0001.c940.1112	10.10.10.2		8	DHCP Deny	19:39:04 UTC
Mon Mar 1 1	1993						
Gi1/0/1	5	0001.c940.1114	173.1.1.1		10	DHCP Deny	19:39:06 UTC
Mon Mar 1 1	1993						
Gi1/0/1	5	0001.c940.1115	173.1.1.2		11	DHCP Deny	19:39:07 UTC
Mon Mar 1 1	1993						
Gi1/0/1	5	0001.c940.1116	173.1.1.3		12	DHCP Deny	19:39:08 UTC
Mon Mar 1 2	1993						

If the log buffer overflows, it means that a log event does not fit into the log buffer, and the display for the **show ip arp inspection log** privileged EXEC command is affected. A -- in the display appears in place of all data except the packet count and the time. No other statistics are provided for the entry. If you see this entry in the display, increase the number of entries in the log buffer, or increase the logging rate in the **ip arp inspection log-buffer** global configuration command.

This is an example of output from the **show ip arp inspection statistics** command. It shows the statistics for packets that have been processed by dynamic ARP inspection for all active VLANs.

Switch#	show ip arp inspect	ion statis	stics	
Vlan	Forwarded	Dropped	DHCP Drops	ACL Drops
5	3	4618	4605	4
2000	0	0	0	0
Vlan	DHCP Permits ACL	Permits	Source MAC Failur	res
5	0	12		0
2000	0	0		0
Vlan	Dest MAC Failures	IP Valida	ation Failures	
5	0		9	
2000	0		0	

For the **show ip arp inspection statistics** command, the switch increments the number of forwarded packets for each ARP request and response packet on a trusted dynamic ARP inspection port. The switch increments the number of ACL or DHCP permitted packets for each packet that is denied by source MAC, destination MAC, or IP validation checks, and the switch increments the appropriate failure count.

This is an example of output from the **show ip arp inspection statistics vlan 5** command. It shows statistics for packets that have been processed by dynamic ARP for VLAN 5.

Switch# show ip arp inspection statistics vlan 5

DWICCIIT	snow ip aip ins	pección scacia	cics vian 5		
Vlan	Forwarded	Dropped	DHCP Drops	ACL Drops	
5	3	4618	4605	4	
Vlan	DHCP Permits	ACL Permits	Source MAC Fail	lures	
5	0	12		0	
Vlan	Dest MAC Failur	es IP Valida	tion Failures	Invalid Protoco	l Data
5		0	9		з
5		U	9		2

This is an example of output from the **show ip arp inspection vlan 5** command. It shows the configuration and the operating state of dynamic ARP inspection for VLAN 5.

	<b>show ip arp inspec</b> ac Validation	tion vlan 5 :Enabled		
	ion Mac Validation	:Enabled		
IP Addres	ss Validation	:Enabled		
Vlan	Configuration	Operation	ACL Match	Static ACL
5	Enabled	Active	second	No
Vlan	ACL Logging	DHCP Loggin	g	
			-	
5	Acl-Match	A11		

Related (	Commands	C
-----------	----------	---

Command	Description
arp access-list	Defines an ARP ACL.
clear ip arp inspection log	Clears the dynamic ARP inspection log buffer.
clear ip arp inspection statistics	Clears the dynamic ARP inspection statistics.
ip arp inspection log-buffer	Configures the dynamic ARP inspection logging buffer.
ip arp inspection vlan logging	Controls the type of packets that are logged per VLAN.
show arp access-list	Displays detailed information about ARP access lists.

# show ip dhcp snooping

Use the show ip dhcp snooping command in EXEC mode to display the DHCP snooping configuration.

show ip dhcp snooping

Syntax Description	This command has no arguments or keywords.

This example shows how to display the DHCP snooping binding entries for a specific MAC address:

Switch# show ip dho	p snooping bindin	g 0102.0304.	0506		
MacAddress	IpAddress	Lease(sec)	Туре	VLAN	Interface
01:02:03:04:05:06 Total number of bin		9788	dhcp-snooping	20	GigabitEthernet2/0/2

This example shows how to display the DHCP snooping binding entries on a port:

Switch# show ip dhe	p snooping bindin	g interface	gigabitethernet	2/0/2	
MacAddress	IpAddress	Lease(sec)	Туре	VLAN	Interface
00:30:94:C2:EF:35	10.1.2.151	290	dhcp-snooping	20	GigabitEthernet2/0/2
Total number of bin	dings: 1				

This example shows how to display the DHCP snooping binding entries on VLAN 20:

Switch# show ip dhc	p snooping bindin	g vlan 20			
MacAddress	IpAddress	Lease(sec)	Туре	VLAN	Interface
01:02:03:04:05:06	10.1.2.150	9747	dhcp-snooping	20	GigabitEthernet2/0/1
00:00:00:00:00:02	10.1.2.151	65	dhcp-snooping	20	GigabitEthernet2/0/2
Total number of bin	dings: 2				

Table 2-38 describes the fields in the show ip dhcp snooping binding command output:

Field	Description		
MacAddress	Client hardware MAC address		
IpAddress	Client IP address assigned from the DHCP server		
Lease(sec)	Remaining lease time for the IP address		
Туре	Binding type		
VLAN	VLAN number of the client interface		
Interface	Interface that connects to the DHCP client host		
Total number of bindings	Total number of bindings configured on the switch		
	<b>Note</b> The command output might not show the total number of bindings. For example, if 200 bindings are configured on the switch and you stop the display before all the bindings appear, the total number does not change.		

Table 2-38show ip dhcp snooping binding Command Output

### **Related Commands**

### **Related Commands**

Description	
Enables DHCP snooping on a VLAN.	
Configures the DHCP snooping binding database agent or the binding file.	
Displays DHCP snooping information.	

# show ip dhcp snooping statistics

Use the **show ip dhcp snooping statistics** command in EXEC mode to display DHCP snooping statistics in summary or detail form.

show ip dhcp snooping statistics [detail]

Syntax Description	<b>detail</b> (Optional) Display detailed statistics information.		
Command Modes	User EXEC Privileged EXEC		
Command History	Release	Modification	
	12.2(37)SE	This command was intro	oduced.
Usage Guidelines	In a switch stack, statistics counters	_	e stack master. If a new stack master is elected, the
	Stacking is suppor	ted only on Catalyst 2960-S swi	tches running the LAN base image.
Examples	This is an example	e of output from the show ip dh	<b>cp snooping statistics</b> command:
	Switch# <b>show ip</b> Packets Forward Packets Dropped Packets Dropped	= 0 = 0 = 0	
	This is an example	e of output from the show ip dhe	cp snooping statistics detail command:
	Packets Process Packets Dropped IDB not known Queue full Interface is Rate limit ex Received on u Nonzero giado Source mac no Binding misma Insertion of Interface Dow Unknown outpu	in errdisabled ceeded ntrusted ports r t equal to chaddr tch opt82 fail n	ail = 0 = 0 = 0 = 0 = 0 = 0 = 0 = 0
	Reply output Packet denied		= 0 = 0

Table 2-39 shows the DHCP snooping statistics and their descriptions:

DHCP Snooping Statistic	Description	
Packets Processed by DHCP Snooping	Total number of packets handled by DHCP snooping, including forwarded and dropped packets.	
Packets Dropped Because IDB not known	Number of errors when the input interface of the packet cannot be determined.	
Queue full	Number of errors when an internal queue used to process the packets is full. This might happen if DHCP packets are received at an excessively high rate and rate limiting is not enabled on the ingress ports.	
Interface is in errdisabled	Number of times a packet was received on a port that has been marked as error disabled. This might happen if packets are in the processing queue when a port is put into the error-disabled state and those packets are subsequently processed.	
Rate limit exceeded	Number of times the rate limit configured on the port was exceeded and the interface was put into the error-disabled state.	
Received on untrusted ports	Number of times a DHCP server packet (OFFER, ACK, NAK, or LEASEQUERY) was received on an untrusted port and was dropped.	
Nonzero giaddr	Number of times the relay agent address field (giaddr) in the DHCP packet received on an untrusted port was not zero, or the <b>no ip dhcp snooping information option</b> <b>allow-untrusted</b> global configuration command is not configured and a packet received on an untrusted port contained option-82 data.	
Source mac not equal to chaddr	Number of times the client MAC address field of the DHCP packet (chaddr) does not match the packet source MAC address and the <b>ip dhcp snooping verify</b> <b>mac-address</b> global configuration command is configured.	
Binding mismatch	Number of times a RELEASE or DECLINE packet was received on a port that is different than the port in the binding for that MAC address-VLAN pair. This indicates someone might be trying to spoof the real client, or it could mean that the client has moved to another port on the switch and issued a RELEASE or DECLINE. The MAC address is taken from the chaddr field of the DHCP packet, not the source MAC address in the Ethernet header.	
Insertion of opt82 fail	Number of times the option-82 insertion into a packet failed. The insertion might fail if the packet with the option-82 data exceeds the size of a single physical packet on the internet.	
Interface Down	Number of times the packet is a reply to the DHCP relay agent, but the SVI interface for the relay agent is down. This is an unlikely error that occurs if the SVI goes down between sending the client request to the DHCP server and receiving the response.	
Unknown output interface	Number of times the output interface for a DHCP reply packet cannot be determined by either option-82 data or a lookup in the MAC address table. The packet is dropped. This can happen if option 82 is not used and the client MAC address has aged out. If IPSG is enabled with the port-security option and option 82 is not enabled, the MAC address of the client is not learned, and the reply packets will be dropped.	

Table 2-39	DHCP Snooping Statistics (continued)
------------	--------------------------------------

DHCP Snooping Statistic	Description
Reply output port equal to input port	Number of times the output port for a DHCP reply packet is the same as the input port, causing a possible loop. Indicates a possible network misconfiguration or misuse of trust settings on ports.
Packet denied by platform	Number of times the packet has been denied by a platform-specific registry.

<b>Related Commands</b>	Command	Description
	clear ip dhcp snooping	Clears the DHCP snooping binding database, the DHCP snooping binding database agent statistics, or the DHCP snooping statistics counters.

## show ip igmp profile

Use the **show ip igmp profile** privileged EXEC command to display all configured Internet Group Management Protocol (IGMP) profiles or a specified IGMP profile.

show ip igmp profile [profile number]

Syntax Description	profile number	(Optional) The IGMP profile number to be displayed. The range is 1 to 4294967295. If no profile number is entered, all IGMP profiles are displayed.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(25)FX	This command was introduced.
Examples	-	es of output from the <b>show ip igmp profile</b> privileged EXEC command, with and g a profile number. If no profile number is entered, the display includes all profiles switch.
	IGMP Profile 40 permit	igmp profile 40 .1.1 233.255.255.255
	IGMP Profile 4 permit	.9.0 230.9.9.0
		.9.0 229.255.255.255
Related Commands	Command ip igmp profile	Description           Configures the specified IGMP profile number.

### show ip igmp snooping

Use the **show ip igmp snooping** command in EXEC mode to display the Internet Group Management Protocol (IGMP) snooping configuration of the switch or the VLAN.

show ip igmp snooping [groups | mrouter | querier] [vlan vlan-id]

0					
Syntax Description	groups	(Optional) See the show ip igmp snooping groups command.			
	mrouter	(Optional) See the show ip igmp snooping mrouter command.			
	querier(Optional) See the show ip igmp snooping querier command.				
	vlan vlan-id	(Optional) Specify a VLAN; the range is 1 to 1001 and 1006 to 4094 (available only in privileged EXEC mode).			
Command Modes	User EXEC Privileged EXEC				
Command History	Release	Modification

#### Related Commands

Command	Description
ip igmp snooping	Enables IGMP snooping on the switch or on a VLAN.
ip igmp snooping last-member-query-interval	Enables the IGMP snooping configurable-leave timer.
ip igmp snooping querier	Enables the IGMP querier function in Layer 2 networks.
ip igmp snooping report-suppression	Enables IGMP report suppression.
ip igmp snooping tcn	Configures the IGMP topology change notification behavior.
ip igmp snooping tcn flood	Specifies multicast flooding as the IGMP spanning-tree topology change notification behavior.
ip igmp snooping vlan immediate-leave	Enables IGMP snooping immediate-leave processing on a VLAN.
ip igmp snooping vlan mrouter	Adds a multicast router port or configures the multicast learning method.
ip igmp snooping vlan static	Statically adds a Layer 2 port as a member of a multicast group.
show ip igmp snooping groups	Displays the IGMP snooping multicast table for the switch.

Command	Description
show ip igmp snooping mrouter	Displays IGMP snooping multicast router ports for the switch or for the specified multicast VLAN.
show ip igmp snooping querier	Displays the configuration and operation information for the IGMP querier configured on a switch.

### show ip igmp snooping groups

Use the **show ip igmp snooping groups** privileged EXEC command to display the Internet Group Management Protocol (IGMP) snooping multicast table for the switch or the multicast information. Use with the **vlan** keyword to display the multicast table for a specified multicast VLAN or specific multicast information.

show ip igmp snooping groups [count] [dynamic] [user] [vlan vlan-id [ip\_address]]

Syntax Description	count	(Optional) Display the total number of entries for the specified command options instead of the actual entries.					
	dynamic	<b>dynamic</b> (Optional) Display entries learned by IGMP snooping.					
	user	Optional) Display only the user-configured multicast entries.					
	vlan vlan-id	(Optional) Specify a VLAN; the range is 1 to 1001 and 1006 to 4094.					
	ip_address	(Optional) Display characteristics of the multicast group with the specified group IP address.					
Command Modes	Privileged EXE	EC

#### Related Commands Co

Command	Description
ip igmp snooping	Enables IGMP snooping on the switch or on a VLAN.
ip igmp snooping vlan mrouter	Configures a multicast router port.
ip igmp snooping vlan static	Statically adds a Layer 2 port as a member of a multicast group.
show ip igmp snooping	Displays the IGMP snooping configuration of the switch or the VLAN.
show ip igmp snooping mrouter	Displays IGMP snooping multicast router ports for the switch or for the specified multicast VLAN.

### show ip igmp snooping mrouter

Use the **show ip igmp snooping mrouter** privileged EXEC command to display the Internet Group Management Protocol (IGMP) snooping dynamically learned and manually configured multicast router ports for the switch or for the specified multicast VLAN.

show ip igmp snooping mrouter [vlan vlan-id]

Syntax Description	vlan vlan-id	(Optional) Specify a VLAN; the range is 1 to 1001 and 1006 to 4094.			
Command Modes	Privileged EXEC				
Command History	Release	Modification			
	12.2(25)FX12.2(25)FX	This command was introduced.			
Usage Guidelines	Use this command to display multicast router ports on the switch or for a specific VLAN. VLAN IDs 1002 to 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in IGMP				
	snooping. When multicast VLAN r	egistration (MVR) is enabled, the <b>show ip igmp snooping mrouter</b> command router information and IGMP snooping information.			
Examples	This is an example of ou display multicast router	tput from the <b>show ip igmp snooping mrouter</b> command. It shows how to ports on the switch.			
	Switch# <b>show ip igmp snooping mrouter</b> Vlan ports				
	1 Gi2/0/1(dynami	LC)			

Related Commands	Command	Description
	ip igmp snooping	Enables IGMP snooping on the switch or on a VLAN.
	ip igmp snooping vlan mrouter	Adds a multicast router port.
	ip igmp snooping vlan static	Statically adds a Layer 2 port as a member of a multicast group.
	show ip igmp snooping	Displays the IGMP snooping configuration of the switch or the VLAN
	show ip igmp snooping groups	Displays IGMP snooping multicast information for the switch or for the specified parameter.

### show ip igmp snooping querier

Use the **show ip igmp snooping querier detail** command in EXEC mode to display the configuration and operation information for the IGMP querier configured on a switch.

show ip igmp snooping querier [detail | vlan vlan-id [detail]]

Syntax Description	datail	Ontional) Display	detailed ICMD quarier information		
Syntax Description	detail		detailed IGMP querier information.		
	vlan <i>vlan-id</i> [detail] Optional) Display IGMP querier information for the specified VLAN. The range is 1 to 1001 and 1006 to 4094. Use the detail keyword to display detailed information.				
Command Modes	User EXEC Privileged EXEC				
Command History	Release	Modification			
	12.2(25)FX	This command was	introduced.		
Usage Guidelines	detected device, also ca	lled a <i>querier</i> , that sends only one IGMP queri	hand to display the IGMP version and the IP address of a ds IGMP query messages. A subnet can have multiple er. In a subnet running IGMPv2, one of the multicast n be a Layer 3 switch.		
	The <b>show ip igmp snooping querier</b> command output also shows the VLAN and the interface on which the querier was detected. If the querier is the switch, the output shows the <i>Port</i> field as <i>Router</i> . If the querier is a router, the output shows the port number on which the querier is learned in the <i>Port</i> field.				
	The <b>show ip igmp snooping querier detail</b> command is similar to the <b>show ip igmp snooping querier</b> command. However, the <b>show ip igmp snooping querier</b> command displays only the device IP address most recently detected by the switch querier.				
	The <b>show ip igmp snooping querier detail</b> command displays the device IP address most recently detected by the switch querier and this additional information:				
	• The elected IGMP querier in the VLAN				
	• The configuration and operational information pertaining to the switch querier (if any) that is configured in the VLAN				
Examples	This is an example of o	utput from the <b>show ip</b>	igmp snooping querier command:		
	Switch# <b>show ip igmp</b> Vlan IP Address		Port		
	1 172.20.50.2 2 172.20.40.2	l1 v3	Gil/0/1 Router		

This is an example of output from the show ip igmp snooping querier detail command:

Switch# show ip igmp snooping querier detail

	IP Address			Port
	1.1.1.1			Fa8/0/1
	MP switch queri

#### show ip verify source

Use the **show ip verify source** command in EXEC mode to display the IP source guard configuration on the switch or on a specific interface.

show ip verify source [interface interface-id]

Syntax Description	interface in	iterface-id	(Optional) Di	splay IP source g	uard configuration on a s	specific interface.		
Command Modes	User EXEC Privileged E							
Command History	Release		Modification					
	12.2(50)SE		This command	was introduced.				
Examples	Switch# <b>sh</b> Interface	<b>w ip verify</b> Filter-type	<b>source</b> Filter-mode		Mac-address Vla			
	 gi1/0/1	 ip	active	10.0.0.1		10		
	gi1/0/1	ip	active	deny-all		11-20		
	gi1/0/2	ip		_		11 20		
	gi1/0/2							
	gi1/0/4	ip-mac	active	10.0.0.2	aaaa.bbbb.cccc	10		
	gi1/0/4	ip-mac	active	deny-all	deny-all	12-20		
	gi1/0/4	ip-mac	active	11.0.0.1	aaaa.bbbb.cccd	11		
	gi1/0/4	ip-mac	active	deny-all	deny-all	12-20		
	gi1/0/5	ip-mac	active	10.0.0.3	permit-all	10		
	gi1/0/5	ip-mac	active	deny-all	permit-all	11-20		
	In the previ	In the previous example, this is the IP source guard configuration:						
	• On the Gigabit Ethernet 1 interface, DHCP snooping is enabled on VLANs 10 to 20. For VLAN 10, IP source guard with IP address filtering is configured on the interface, and a binding exists on the interface. For VLANs 11 to 20, the second entry shows that a default port access control lists (ACLs) is applied on the interface for the VLANs on which IP source guard is not configured.							
	• The Gigabit Ethernet 2 interface is configured as trusted for DHCP snooping.							
	• On the Gigabit Ethernet 3 interface, DHCP snooping is not enabled on the VLANs to which the interface belongs.							
	enabled	, and static IP ult port ACL	source binding	s are configured of	with source IP and MAC and VLANs 10 and 11. Fo Prive VLANs on which IP so	or VLANs 12 to 20,		
	0 1					1.1 (21)		

• On the Gigabit Ethernet 5 interface, IP source guard with source IP and MAC address filtering is enabled and configured with a static IP binding, but port security is disabled. The switch cannot filter source MAC addresses.

This is an example of output on an interface on which IP source guard is disabled:

Switch# show ip verify source gigabitethernet1/0/6 IP source guard is not configured on the interface gi1/0/6.

<b>Related Commands</b>	Command	Description
	ip verify source	Enables IP source guard on an interface.

### show ipv6 mld snooping

Use the **show ipv6 mld snooping** command in EXEC mode to display IP version 6 (IPv6) Multicast Listener Discovery (MLD) snooping configuration of the switch or the VLAN.

show ipv6 mld snooping [vlan vlan-id]

Syntax Description	vlan vlan-id	(Optional) Specify a VLAN; the range is 1 to 1001 and 1006 to 4094.
Command Modes	User EXEC Privileged EXEC	
Command History	Release	Modification
	12.2(40)SE	This command was introduced.
Usage Guidelines		o display MLD snooping configuration for the switch or for a specific VLAN. 2 through 1005 are reserved for Token Ring and FDDI VLANs and cannot be used
	To configure the dua	al IPv4 and IPv6 template, enter the <b>sdm prefer dual-ipv4-and-ipv6</b> global and and reload the switch (Catalyst 2960 switches only).
Note		d, the switch must be running the LAN Base image. A Catalyst 2960 switch must Pv4 and IPv6 Switch Database Management (SDM) template configured (not 2960-S switches).
Examples	This is an example of characteristics for a	of output from the <b>show ipv6 mld snooping vlan</b> command. It shows snooping specific VLAN.
	Switch# <b>show ipv6</b> Global MLD Snoopir	<b>mld snooping vlan 100</b> ng configuration:
	TCN solicit query TCN flood query co Robustness variabl Last listener quer	suppression : Enabled : Disabled punt : 2 Le : 3

MLD snooping MLDv1 immediate leave Explicit host tracking Multicast router learning mode Robustness variable Last listener query count Last listener query interval	Ð	: Disabled : Disabled : Enabled : pim-dvmrp : 3 : 2 : 1000

#### **Related Commands**

Command	Description
ipv6 mld snooping	Enables and configures MLD snooping on the switch or on a VLAN.
sdm prefer	Configures an SDM template to optimize system resources based on how the switch is being used.

### show ipv6 mld snooping address

Use the **show ipv6 mld snooping address** command in EXEC mode to display all or specified IP version 6 (IPv6) multicast address information maintained by Multicast Listener Discovery (MLD) snooping.

Syntax Description	vlan vlan-id	(Optional) Specify a VLAN about which to show MLD snooping multicast address information. The VLAN ID range is 1 to 1001 and 1006 to 4094.			
	<i>ipv6-multicast-address</i> (Optional) Display information about the specified IPv6 multic This keyword is only available when a VLAN ID is entered.				
	count	(Optional) Display the number of multicast groups on the switch or in the specified VLAN.			
	dynamic	(Optional) Display MLD snooping learned group information.			
	user	(Optional) Display MLD snooping user-configured group information.			
Command Modes	User EXEC Privileged EXEC				
Command History	Release	Modification			
	12.2(40)SE	This command was introduced.			
Usage Guidelines	Use this command to dis	play IPv6 multicast address information.			
	You can enter an IPv6 multicast address only after you enter a VLAN ID.				
	VLAN numbers 1002 through 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in MLD snooping.				
	Use the <b>dynamic</b> keyword to display information only about groups that are learned. Use the <b>user</b> keyword to display information only about groups that have been configured.				
	To configure the dual IPv4 and IPv6 template, enter the <b>sdm prefer dual-ipv4-and-ipv6</b> global configuration command and reload the switch (Catalyst 2960 switches only).				
Note		e switch must be running the LAN Base image. A Catalyst 2960 switch must and IPv6 Switch Database Management (SDM) template configured (not 0-S switches).			

Examples	This is an example of output from the <b>show snooping address</b> command:				
	Switch# show ipv6 mld snooping address				
	Vlan Group Type Version Port List				
	2 FF12::3 user Fa1/0/2, Gi2/0/2, Gi3/0/1,Gi3/0/3				
	This is an example of output from the <b>show snooping address count</b> command:				
	Switch# <b>show ipv6 mld snooping address count</b> Total number of multicast groups: 2				
	This is an example of output from the <b>show snooping address user</b> command:				
	Switch# <b>show ipv6 mld snooping address user</b> Vlan Group Type Version Port List				
	2 FF12::3 user v2 Fa1/0/2, Gi2/0/2, Gi3/0/1,Gi4/0/3				

Related Commands

### show ipv6 mld snooping querier

Use the **show ipv6 mld snooping querier** command in EXEC mode to display IP version 6 (IPv6) Multicast Listener Discovery (MLD) snooping querier-related information most recently received by the switch or the VLAN.

show ipv6 mld snooping querier [vlan vlan-id] [detail]

Syntax Description	vlan vlan-id	(Optional) Specify a VLAN; the range is 1 to 1001 and 1006 to 4094.			
	detail	(Optional) Display MLD snooping detailed querier information for the switch or for the VLAN.			
Command Modes	User EXEC Privileged EXEC				
Command History	Release	Modification			
	12.2(40)SE	This command was introduced.			
Usage Guidelines	detected device that	<b>mld snooping querier</b> command to display the MLD version and IPv6 address of a t sends MLD query messages, which is also called a <i>querier</i> . A subnet can have routers but has only one MLD querier. The querier can be a Layer 3 switch.			
	the querier was dete	<b>I snooping querier</b> command output also shows the VLAN and interface on which ected. If the querier is the switch, the output shows the <i>Port</i> field as <i>Router</i> . If the the output shows the port number on which the querier is learned in the <i>Port</i> field.			
	response to a query VLAN values, such information is used	how ipv6 mld snoop querier vlan command displays the information received in message from an external or internal querier. It does not display user-configured a st he snooping robustness variable on the particular VLAN. This querier only on the MASQ message that is sent by the switch. It does not override the pustness variable that is used for aging out a member that does not respond to query			
	VLAN numbers 1002 through 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in MLD snooping.				
	-	al IPv4 and IPv6 template, enter the <b>sdm prefer dual-ipv4-and-ipv6</b> global nand and reload the switch (Catalyst 2960 switches only).			
<u>Note</u>		nd, the switch must be running the LAN Base image. A Catalyst 2960 switch must Pv4 and IPv6 Switch Database Management (SDM) template configured (not at 2960-S switches).			

#### Examples

This is an example of output from the show ipv6 mld snooping querier command:

 Switch#
 show ipv6 mld snooping querier

 Vlan
 IP Address
 MLD Version Port

 2
 FE80::201:C9FF:FE40:6000 v1
 Gi0/1

This is an example of output from the show ipv6 mld snooping querier detail command:

```
      Switch# show ipv6 mld snooping querier detail

      Vlan
      IP Address
      MLD Version Port

      2
      FE80::201:C9FF:FE40:6000 v1
      Gi0/1
```

This is an example of output from the show ipv6 mld snooping querier vlan command:

```
Switch# show ipv6 mld snooping querier vlan 2
IP address : FE80::201:C9FF:FE40:6000
MLD version : v1
Port : Gi3/0/1
Max response time : 1000s
```

#### Related Commands

Command	Description
ipv6 mld snooping	Enables and configures IPv6 MLD snooping on the switch or on a VLAN.
ipv6 mld snooping last-listener-query-count	Configures the maximum number of queries that the switch sends before aging out an MLD client.
ipv6 mld snooping last-listener-query-interval	Configures the maximum response time after sending out a query that the switch waits before deleting a port from the multicast group.
ipv6 mld snooping robustness-variable	Configures the maximum number of queries that the switch sends before aging out a multicast address when there is no response.
sdm prefer	Configures an SDM template to optimize system resources based on how the switch is being used.
ipv6 mld snooping	Enables and configures IPv6 MLD snooping on the switch or on a VLAN.

### show ipv6 route updated

Use the **show ipv6 route updated** command in EXEC mode to display the current contents of the IPv6 routing table.

			LACP port	Admin	Oper	Port	Port
Port	Flags	State	Priority	Key	Key	Number	State
Gi2/0/1	SA	bndl	32768	0x3	0x3	0x4	0x3D
Gi2/0/2	SA	bndl	32768	0x3	0x3	0x5	0x3D

Table 2-41 describes the fields in the display:

Table 2-41show lacp internal Field Descriptions

Field	Description
State	State of the specific port. These are the allowed values:
	• – —Port is in an unknown state.
	• <b>bndl</b> —Port is attached to an aggregator and bundled with other ports.
	• <b>susp</b> —Port is in a suspended state; it is not attached to any aggregator.
	• <b>hot-sby</b> —Port is in a hot-standby state.
	• <b>indiv</b> —Port is incapable of bundling with any other port.
	• <b>indep</b> —Port is in an independent state (not bundled but able to switch data traffic. In this case, LACP is not running on the partner port).
	• <b>down</b> —Port is down.
LACP Port Priority	Port priority setting. LACP uses the port priority to put ports s in standby mode when there is a hardware limitation that prevents all compatible ports from aggregating.

Field	Description	
Admin Key	Administrative key assigned to this port. LACP automatically generates an administrative key value as a hexadecimal number. The administrative key defines the ability of a port to aggregate with other ports. A port's ability to aggregate with other ports is determined by the port physical characteristics (for example, data rate and duplex capability) and configuration restrictions that you establish.	
Oper Key	Runtime operational key that is being used by this port. LACP automatically generates this value as a hexadecimal number.	
Port Number	Port number.	
Port State	State variables for the port, encoded as individual bits within a single octet with these meanings:	
	• bit0: LACP_Activity	
	• bit1: LACP_Timeout	
	• bit2: Aggregation	
	• bit3: Synchronization	
	• bit4: Collecting	
	• bit5: Distributing	
	• bit6: Defaulted	
	• bit7: Expired	
	<b>Note</b> In the list above, bit7 is the MSB and bit0 is the LSB.

```

This is an example of output from the **show lacp sys-id** command:

Switch# **show lacp sys-id** 32765,0002.4b29.3a00

The system identification is made up of the system priority and the system MAC address. The first two bytes are the system priority, and the last six bytes are the globally administered individual MAC address associated to the system.

<b>Related Commands</b>	Command	Description
	clear lacp	Clears the LACP channel-group information.
	lacp port-priority	Configures the LACP port priority.
	lacp system-priority	Configures the LACP system priority.

### show link state group

Use the **show link state group** privileged EXEC command to display the link-state group information.

show link state group [number] [detail]

Syntax Description	number	(Optional) Number of the link-state group.
	detail	(Optional) Specify that detailed information appears.
Defaults	There is no default.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(25)SEE	This command was introduced.
Usage Guidelines	command without k	<b>tate group</b> command to display the link-state group information. Enter this eywords to display information about all link-state groups. Enter the group number on specific to the group.
•	state group detail or that have upstream	word to display detailed information about the group. The output for the <b>show link</b> command displays only those link-state groups that have link-state tracking enabled m or downstream interfaces (or both) configured. If there is no link-state group group, it is not shown as enabled or disabled.
<u>Note</u>	To use this comman	d, the switch must be running the LAN Base image.
Examples	This is an example of Switch# <b>show link</b> Link State Group:	
	This is an example of	of output from the show link state group detail command:
	Switch# <b>show link</b> (Up):Interface up	<pre>state group detail  (Dwn):Interface Down (Dis):Interface disabled</pre>
	Upstream Interface	1 Status: Enabled, Down es : Gi1/0/15(Dwn) Gi1/0/16(Dwn) aces : Gi1/0/11(Dis) Gi1/0/12(Dis) Gi1/0/13(Dis) Gi1/0/14(Dis)
	Upstream Interface	2 Status: Enabled, Down es : Gi1/0/15(Dwn) Gi1/0/16(Dwn) Gi1/0/17(Dwn) aces : Gi1/0/11(Dis) Gi1/0/12(Dis) Gi1/0/13(Dis) Gi1/0/14(Dis)
	(Up):Interface up	(Dwn):Interface Down (Dis):Interface disabled

<b>Related Commands</b>	Command	Description
	link state group	Configures an interface as a member of a link-state group.
	link state track	Enables a link-state group.
	show running-config	Displays the current operating configuration.

### show location

Use the show location command in EXEC mode to display location information for an endpoint.

show location admin-tag

show location civic-location {identifier id number | interface interface-id | static}

show location elin-location {identifier id number | interface interface-id | static}

Syntax Description	admin-tag	Display administrative tag or site information.
· ·	civic-location	Display civic location information.
	elin-location	Display emergency location information (ELIN).
	identifier <i>id</i>	Specify the ID for the civic location or the elin location. The id range is 1 to 4095.
	interface interface-id	(Optional) Display location information for the specified interface or all interfaces. Valid interfaces include physical ports.
	static	Display static configuration information.
Command Modes	User EXEC Privileged EXEC	
Command History	Release	Modification
	12.2(25)FX	This command was introduced.
Usage Guidelines	Use the <b>show location</b>	command to display location information for an endpoint.
Examples	This is an example of o information for an inter	output from the <b>show location civic-location</b> command that displays location rface:
	Civic location inform	
	Identifier County Street number Building Room Primary road name City	<pre> : 1 : Santa Clara : 3550 : 19 : C6 : Cisco Way : San Jose</pre>
	State Country	: CA : US

This is an example of output from the **show location civic-location** command that displays all the civic location information:

Switch# show location civic-location static Civic location information

	01011
Identifier County Street number Building	 : 1 : Santa Clara : 3550 : 19
Room	: C6
Primary road name	: Cisco Way
City	: San Jose
State	: CA
Country	: US
Ports	: Gi0/1
Identifier	: 2
Street number	: 24568
Street number suffix	: West
Landmark	: Golden Gate Bridge
Primary road name	: 19th Ave
City	: San Francisco
Country	: US

This is an example of output from the **show location elin-location** command that displays the emergency location information:

```
Switch# show location elin-location identifier 1
Elin location information
------
Identifier : 1
Elin : 14085553881
Ports : Gi0/2
```

This is an example of output from the **show location elin static** command that displays all emergency location information:

```
Switch# show location elin static
Elin location information
------
Identifier : 1
Elin : 14085553881
Ports : Gi0/2
------
Identifier : 2
Elin : 18002228999
```

#### Related Commands

Command	Description
location (global configuration)	Configures the global location information for an endpoint.
location (interface configuration)	Configures the location information for an interface.

### show logging onboard

Use the **show logging onboard** privileged EXEC command to display the on-board failure logging (OBFL) information.

show logging onboard [module [switch-number]] {{clilog | environment | message | poe |
 temperature | uptime | voltage} [continuous | detail | summary] [start hh:mm:ss day month
 year] [end hh:mm:ss day month year]}

Syntax DescriptionT	<pre>module [switch-number]</pre>	(Optional) Display OBFL information about the specified switches.
		Use the <i>switch-number</i> parameter to specify the switch number, which is the stack member number. If the switch is a standalone switch, the switch number is 1. If the switch is in a stack, the range is 1 to 8, depending on the switch member numbers in the stack.
		For more information about this parameter, see the "Usage Guidelines" section for this command.
	clilog	Display the OBFL CLI commands that were entered on the standalone switch or specified stack members.
	environment	Display the unique device identifier (UDI) information for the standalone switch or specified stack members and for all the connected FRU devices: the product identification (PID), the version identification (VID), and the serial number.
	message	Display the hardware-related system messages generated by the standalone switch or specified stack members.
	poe	Display the power consumption of PoE ports on the standalone switch or specified stack members.
	temperature	Display the temperature of the standalone switch or specified stack members.
	uptime	Display the time when the standalone switch or specified stack members start, the reason the standalone switch or specified members restart, and the length of time the standalone switch or specified stack members have been running since they last restarted.
	voltage	Display the system voltages of the standalone switch or the specified switch stack members.
	continuous	(Optional) Display the data in the <i>continuous</i> file.
	summary	(Optional) Display the data in the <i>summary</i> file.
	<b>start</b> <i>hh:mm:ss day month year</i>	(Optional) Display the data from the specified time and date. For more information, see the "Usage Guidelines" section.
	end hh:mm:ss day month year	(Optional) Display the data up to the specified time and date. For more information, see the "Usage Guidelines" section.
	detail	(Optional) Display both the continuous and summary data.

**Command Default** There is no default.

#### Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(53)SE1	This command was introduced.

# **Usage Guidelines** When OBFL is enabled, the switch records OBFL data in a continuous file that contains all of the data. The continuous file is circular. When the continuous file is full, the switch combines the data into a summary file, which is also known as a historical file. Creating the summary file frees up space in the continuous file so that the switch can write newer data to it.

If you enter the **module** keyword but do not enter the switch number, the switch displays OBFL information about the stack members that support OBFL.

Use the **start** and **end** keywords to display data collected only during a particular time period. When specifying the **start** and **end** times, follow these guidelines:

- *hh:mm:ss*—Enter the time as a 2-digit number for a 24-hour clock. Make sure to use the colons (:).
   For example, enter 13:32:45.
- *day*—Enter the day of the month. The range is from 1 to 31.
- *month*—Enter the month in upper case or lower case letters. You can enter the full name of the month, such as **January** or **august**, or the first three letters of the month, such as **jan** or **Aug**.
- year—Enter the year as a 4-digit number, such as 2008. The range is from 1993 to 2035.

This command is supported only on Catalyst 2960-S switches running the LAN Base image.

#### Examples

#### This is an example of output from the **show logging onboard clilog continuous** command:

#### Switch# show logging onboard clilog continuous

### show mac access-group

Use the **show mac access-group** command in EXEC mode to display the MAC access control lists (ACLs) configured for an interface or a switch.

show mac access-group [interface interface-id]

Syntax Description	<b>interface</b> <i>interface-id</i> User EXEC Privileged EXEC	(Optional) Display the MAC ACLs configured on a specific interface. Valid interfaces are physical ports and port channels; the port-channel range is 1 to 6 (available only in privileged EXEC mode).				
Command History	Release	Modification				
	12.2(25)FX	This command was introduced.				
Usage Guidelines Examples	To use this command, the switch must be running the LAN Base image.					
	This is an example of output from the <b>show mac-access group</b> command. Port 2 has the MAC access list <i>macl_e1</i> applied; no MAC ACLs are applied to other interfaces.					
	Switch# show mac acce Interface GigabitEthe Inbound access-lis Interface GigabitEthe Inbound access-lis Interface GigabitEthe Inbound access-lis Interface GigabitEthe	ernet0/1: st is not set ernet0/2: st is macl_e1 ernet0/3: st is not set ernet0/4:

	Total	Mac Addresses fo	r this cr	riteri	on: 9	
Related Commands	Comma	and			Description	
	show mac address-table address				Displays MAC address table information for the specified MAC address.	
	show mac address-table aging-time			ne	Displays the aging time in all VLANs or the specified VLAN.	
					Displays the number of addresses present in all VLANs or the specified VLAN.	
	show	mac address-table	e dynamic	:	Displays dynamic MAC address table entries only.	
	show mac address-table interface			e	Displays the MAC address table information for the specified interface.	

Command	Description
show mac address-table notification	Displays the MAC address notification settings for all interfaces or the specified interface.
show mac address-table static	Displays static MAC address table entries only.

#### show mls qos

Use the **show mls qos** command in EXEC mode to display global quality of service (QoS) configuration information.

show mls qos

- **Syntax Description** This command has no arguments or keywords.
- Command Modes User EXEC Privileged EXEC

 Release
 Modification

 12.2(25)FX
 This command was introduced.

**Examples** This is an example of output from the **show mls qos** command when QoS is enabled and DSCP transparency is enabled:

Switch# **show mls qos** QoS is enabled QoS ip packet dscp rewrite is enabled

Related Commands	Command	Description
	mls qos	Enables QoS for the entire switch.

## show mls qos aggregate-policer

Use the **show mls qos aggregate-policer** command in EXEC mode to display the quality of service (QoS) aggregate policer configuration.

show mls qos aggregate-policer [aggregate-policer-name]

Syntax Description	aggregate-policer-name	(Optional) Display the policer configuration for the specified name.
Command Modes	User EXEC Privileged EXEC	
Command History	Release	Modification
	12.2(25)FX	This command was introduced.
Usage Guidelines	-	num permissible rate of transmission, a maximum burst size for transmissions, ther maximum is exceeded.
<u>Note</u>	To use this command, the	switch must be running the LAN Base image.
Examples	-	put from the <b>show mls qos aggregate-policer</b> command:
		<b>ggregate-policer policer1</b> cer1 1000000 2000000 exceed-action drop map
Related Commands	Command	Description
	mls qos aggregate-polic	er Defines policer parameters that can be shared by multiple classes within a policy map.

#### show mls qos input-queue

Use the **show mls qos input-queue** command in EXEC mode to display quality of service (QoS) settings for the ingress queues.

show mls qos input-queue

**Syntax Description** This command has no arguments or keywords.

Command Modes User EXEC Privileged EXEC

 Release
 Modification

 12.2(25)FX
 This command was introduced.

Examples

This is an example of output from the **show mls qos input-queue** command:

Switch# <b>sh</b>		qos ing	out-queue
Queue	:	1	2
buffers	:	90	10
bandwidth	:	4	4
priority	:	0	10
threshold1	:	100	100
threshold2	:	100	100

Related Commands	Command	Description			
	mls qos srr-queue input bandwidth	Assigns shaped round robin (SRR) weights to an ingress queue.			
	mls qos srr-queue input buffers	Allocates the buffers between the ingress queues.			
	mls qos srr-queue input cos-map	Maps assigned class of service (CoS) values to an ingress queue and assigns CoS values to a queue and to a threshold ID.			
	mls qos srr-queue input dscp-map	Maps assigned Differentiated Services Code Point (DSCP) values to an ingress queue and assigns DSCP values to a queue and to a threshold ID.			
	mls qos srr-queue input priority-queue	Configures the ingress priority queue and guarantees bandwidth.			
	mls qos srr-queue input threshold	Assigns weighted tail-drop (WTD) threshold percentages to an ingress queue.			

## show mls qos interface

Use the **show mls qos interface** command in EXEC mode to display quality of service (QoS) information at the port level.

show mls qos interface [interface-id] [buffers | queueing | statistics]

Syntax Description	interface-id	(Optional) Display QoS information for the specified port. Valid interfaces include physical ports.						
	buffers	(Optional) Display the buffer allocation among the queues.						
	<b>queueing</b> (Optional) Display the queueing strategy (shared or shaped) and the weigh corresponding to the queues.							
	statistics	(Optional) Display statistics for sent and received Differentiated Services Code Points (DSCPs) and class of service (CoS) values, the number of packets enqueued or dropped per egress queue, and the number of in-profile and out-of-profile packets for each policer.						
Command Modes	User EXEC Privileged EXEC							
Command History	Release	Modification						
ommanu mistory	12.2(25)FX	This command was introduced.						
Usage Guidelines <u> </u>		the command-line help string, the <b>policer</b> keyword is not supported.						
Examples	This is an example QoS is enabled:	of output from the <b>show mls qos interface</b> <i>interface-id</i> command when VLAN-based						

This is an example of output from the **show mls qos interface** *interface-id* command when VLAN-based QoS is disabled:

```
Switch# show mls qos interface gigabitethernet1/0/2
```

GigabitEthernet1/0/2 trust state:not trusted trust mode:not trusted trust enabled flag:ena COS override:dis default COS:0 DSCP Mutation Map:Default DSCP Mutation Map Trust device:none gos mode:port-based

This is an example of output from the **show mls qos interface** interface-id **buffers** command:

```
Switch# show mls qos interface gigabitethernet1/0/2 buffers
GigabitEthernet1/0/2
The port is mapped to qset : 1
The allocations between the queues are : 25 25 25 25
```

This is an example of output from the **show mls qos interface** *interface-id* **queueing** command. The egress expedite queue overrides the configured shaped round robin (SRR) weights.

```
Switch# show mls qos interface gigabitethernet1/0/2 queueing
GigabitEthernet1/0/2
Egress Priority Queue :enabled
Shaped queue weights (absolute) : 25 0 0 0
Shared queue weights : 25 25 25
The port bandwidth limit : 100 (Operational Bandwidth:100.0)
The port is mapped to qset : 1
```

This is an example of output from the **show mls qos interface** *interface-id* **statistics** command. Table 2-42 describes the fields in this display.

```
Switch# show mls qos interface gigabitethernet0/2 statistics GigabitEthernet1/0/2
```

#### Table 2-42 show mls qos interface statistics Field Descriptions

Field		Description
DSCP	incoming	Number of packets received for each DSCP value.
	outgoing	Number of packets sent for each DSCP value.
CoS	incoming	Number of packets received for each CoS value.
	outgoing	Number of packets sent for each CoS value.
Policer Inprofile		Number of in profile packets for each policer.
	Outofprofile	Number of out-of-profile packets for each policer.

Related Commands	Command	Description
	mls qos queue-set output buffers	Allocates buffers to a queue-set.
	mls qos queue-set output threshold	Configures the weighted tail-drop (WTD) thresholds, guarantees the availability of buffers, and configures the maximum memory allocation to a queue-set.
	mls qos srr-queue input bandwidth	Assigns SRR weights to an ingress queue.
	mls qos srr-queue input buffers	Allocates the buffers between the ingress queues.
	mls qos srr-queue input cos-map	Maps CoS values to an ingress queue or maps CoS values to a queue and to a threshold ID.
	mls qos srr-queue input dscp-map	Maps DSCP values to an ingress queue or maps DSCP values to a queue and to a threshold ID.
	mls qos srr-queue input priority-queue	Configures the ingress priority queue and guarantees bandwidth.

Command	Description
mls qos srr-queue input threshold	Assigns WTD threshold percentages to an ingress queue.
mls qos srr-queue output cos-map	Maps CoS values to an egress queue or maps CoS values to a queue and to a threshold ID.
mls qos srr-queue output dscp-map	Maps DSCP values to an egress queue or maps DSCP values to a queue and to a threshold ID.
policy-map	Creates or modifies a policy map.
priority-queue	Enables the egress expedite queue on a port.
queue-set	Maps a port to a queue-set.
srr-queue bandwidth limit	Limits the maximum output on a port.
srr-queue bandwidth shape	Assigns the shaped weights and enables bandwidth shaping on the four egress queues mapped to a port.
srr-queue bandwidth share	Assigns the shared weights and enables bandwidth sharing on the four egress queues mapped to a port.

#### show mls qos maps

Use the **show mls qos maps** command in EXEC mode to display quality of service (QoS) mapping information.

show mls qos maps [cos-dscp | cos-input-q | cos-output-q | dscp-cos | dscp-input-q | dscp-mutation dscp-mutation-name | dscp-output-q | ip-prec-dscp | policed-dscp]

Syntax Description	cos-dscp		(Optional) Display class of service (CoS)-to-DSCP map.						
	cos-input-q		(Optional) Display the CoS input queue threshold map.						
	cos-output-q		(Optional) Display the CoS output queue threshold map.						
	dscp-cos		(Optional) Display DSCP-to-CoS map.						
	dscp-input-q		(Optional) Display the DSCP input queue threshold map.						
	dscp-mutation dscp	-mutation-name	(Optional) Display the specified DSCP-to-DSCP-mutation map.						
	dscp-output-q		(Optional) Display the DSCP output queue threshold map.						
	ip-prec-dscp		(Optional) Display the IP-precedence-to-DSCP map.						
	policed-dscp		(Optional) Display the policed-DSCP map.						
Command Modes	User EXEC Privileged EXEC								
Command History	Release	Modification	1						
commanu mistory	12.2(25)FX	This comma	and was introduced.						
Usage Guidelines	corresponding class of	During classification, QoS uses the mapping tables to represent the priority of the traffic and to derive a corresponding class of service (CoS) or Differentiated Services Code Point (DSCP) value from the							
	received CoS, DSCP, or IP precedence value. The policed-DSCP, DSCP-to-CoS, and the DSCP-to-DSCP-mutation maps appear as a matrix. The d1 column specifies the most-significant digit in the DSCP. The d2 row specifies the least-significant digit in the DSCP. The intersection of the d1 and d2 values provides the policed-DSCP, the CoS, or the mutated-DSCP value. For example, in the DSCP-to-CoS map, a DSCP value of 43 corresponds to a CoS value of 5.								
	The DSCP input queue threshold and the DSCP output queue threshold maps appear as a matrix. The d1 column specifies the most-significant digit of the DSCP number. The d2 row specifies the least-significant digit in the DSCP number. The intersection of the d1 and the d2 values provides the queue ID and threshold ID. For example, in the DSCP input queue threshold map, a DSCP value of 43 corresponds to queue 2 and threshold 1 (02-01).								
	The CoS input queue threshold and the CoS output queue threshold maps show the CoS value in the top row and the corresponding queue ID and threshold ID in the second row. For example, in the CoS input queue threshold map, a CoS value of 5 corresponds to queue 2 and threshold 1 (2-1).								

#### Examples

# show mls qos vlan

Use the **show mls qos vlan** command in EXEC mode to display the policy maps attached to a switch virtual interface (SVI).

show mls qos vlan vlan-id

Syntax Description	vlan-id	Specify the VLAN ID of the SVI to display the policy maps. The range is 1 to 4094.
Command Modes	User EXEC Privileged EXEC	
Command History	Release	Modification
	12.2(25)FX	This command was introduced.
Examples		enabled and when policy maps are configured.
·	Switch# <b>show ml</b> Vlan10	
Related Commands	Command	Description
	policy-map	Creates or modifies a policy map that can be attached to multiple ports and enters policy-map configuration mode.

#### show monitor

Use the **show monitor** command in EXEC mode to display information about all Switched Port Analyzer (SPAN) and Remote SPAN (RSPAN) sessions on the switch.

show monitor [session {session\_number | all | local | range list | remote}

Syntax Description	session	(Optional) Display information about specified SPAN sessions.			
	session_number Specify the number of the SPAN or RSPAN session. The ran				
	all Display all SPAN sessions.				
	local	Display only local SPAN sessions.			
	range list	Display a range of SPAN sessions, where <i>list</i> is the range of valid sessions, either a single session or a range of sessions described by two numbers, the lower one first, separated by a hyphen. Do not enter any spaces between comma-separated parameters or in hyphen-specified ranges.			
		<b>Note</b> This keyword is available only in privileged EXEC mode.			
	remote	Display only remote SPAN sessions.			
	detail	(Optional) Display detailed information about the specified sessions.			
Command Modes	User EXEC Privileged EXEC				
Command History	Release	Modification			
	12.2(25)FX	This command was introduced.			
Usage Guidelines Examples	sessions. The output is the same	keywords to show a specific session, all sessions, all local sessions, or all remote for the <b>show monitor</b> command and the <b>show monitor session all</b> command.			
Examples	-	output for the <b>show monitor</b> command:			
	Switch# <b>show monitor</b> Session 1				
	Type : Local Session Source Ports : RX Only : Gi0/1 Both : Gi0/2-3,Gi0/5 Destination Ports :	i-6			

TX Only : 10 Both : 1-9 Dest RSPAN VLAN : 105

This is an example of output for the **show monitor** command for local SPAN source session 1:

Switch# show monitor session 1 Session 1 ------Type : Local Session Source Ports : RX Only : Gi0/1 Both : Gi0/2-3,Gi0/5-6 Destination Ports : Gi0/20 Encapsulation : Replicate Ingress : Disabled

This is an example of output for the **show monitor session all** command when ingress traffic forwarding is enabled:

Switch# show monitor session all Session 1 \_\_\_\_\_ Type : Local Session Source Ports : Both : Gi0/2 Destination Ports : Gi0/3 Encapsulation : Native Ingress : Enabled, default VLAN = 5 Ingress encap : DOT1Q Session 2 \_\_\_\_\_ Type : Local Session Source Ports : Both : Gi0/8 Encapsulation : Replicate Ingress : Enabled, default VLAN = 4

Ingress encap : Untagged

 Related Commands
 Command
 Description

 monitor session
 Starts or modifies a SPAN or RSPAN session.

#### show mvr

Use the **show mvr** privileged EXEC command without keywords to display the current Multicast VLAN Registration (MVR) global parameter values.

show mvr

#### **Syntax Description** This command has no arguments or keywords.

**Command Modes** Privileged EXEC

 Release
 Modification

 12.2(25)FX
 This command was introduced.

**Usage Guidelines** 

The command information includes whether or not MVR is enabled, the MVR multicast VLAN, the maximum query response time, the number of multicast groups, and the MVR mode (dynamic or compatible).

Note

To use this command, the switch must be running the LAN Base image.

#### Examples

This is an example of output from the **show mvr** command. The maximum number of multicast groups is fixed at 256. The MVR mode is either compatible (for interoperability with Catalyst 2900 XL and Catalyst 3500 XL switches) or dynamic (where operation is consistent with IGMP snooping operation and dynamic MVR membership on source ports is supported).

Switch# **show mvr** MVR Running: TRUE MVR multicast VLAN: 1 MVR Max Multicast Groups: 256 MVR Current multicast groups: 0 MVR Global query response time: 5 (tenths of sec) MVR Mode: compatible

Related Commands	Command	Description
	mvr (global configuration)	Enables and configures multicast VLAN registration on the switch.
	mvr (interface configuration)	Configures MVR ports.
	show mvr interface	Displays the configured MVR interfaces, status of the specified interface, or all multicast groups to which the interface belongs when the <b>interface</b> and <b>members</b> keywords are appended to the command.
	show mvr members	Displays all ports that are members of an MVR multicast group or, if there are no members, means the group is inactive.

# show mvr interface

Use the **show mvr interface** privileged EXEC command without keywords to display the Multicast VLAN Registration (MVR) receiver and source ports.

show mvr interface [interface-id [members [vlan vlan-id]]]

Syntax Description	interface-id		Optional) Display M nterface.	VR type, status, and Immediate Leave setting for the			
			Valid interfaces include physical ports (including type, stack member, module, and port number.         Note       Stacking is supported only on Catalyst 2960-S switches.         (Optional) Display all MVR groups to which the specified interface belongs.         (Optional) Display all MVR group members on this VLAN. The range is 1 to 4094.

<b>Related Commands</b>	Command	Description
	clear pagp	Clears PAgP channel-group information.

# show policy-map

Use the **show policy-map** command in EXEC mode to display quality of service (QoS) policy maps, which define classification criteria for incoming traffic.

show policy-map [policy-map-name [class class-map-name]]

Syntax Description	policy-map-name	(Optional) Display the specified policy-map name.
	class class-map-name	(Optional) Display QoS policy actions for a individual class.
Command Modes	User EXEC Privileged EXEC	
Command History	Release	Modification
	12.2(25)FX	This command was introduced.
Usage Guidelines	To use this command, th	he switch must be running the LAN Base image.
		ommand-line help string, the <b>control-plane</b> and <b>interface</b> keywords are not stics shown in the display should be ignored.
	Policy maps can include are exceeded.	policers that specify the bandwidth limitations and the action to take if the limits
Examples	This is an example of ou	utput from the <b>show policy-map</b> command:
	Switch# <b>show policy-m</b> Policy Map videowizar class videowizard_ set dscp 34 police 100000000 2	rd_policy2
	Policy Map mypolicy class dscp5 set dscp 6	
Related Commands	Command	Description
	policy-map	Creates or modifies a policy map that can be attached to multiple ports to

specify a service policy.

# show port-security

Use the **show port-security** privileged EXEC command to display port-security settings for an interface or for the switch.

show port-security [interface interface-id] [address | vlan]

Syntax Description	interface interface-id	(Optional) Display port security settings for the specified interface. Valid interfaces include physical ports (including type, stack member, module, and port number).
		<b>Note</b> Stacking is supported only on Catalyst 2960-S switches.
	address	(Optional) Display all secure MAC addresses on all ports or a specified port.
	vlan	(Optional) Display port security settings for all VLANs on the specified interface. This keyword is visible only on interfaces that have the switchport mode set to <b>trunk</b> .
Command Modes	Privileged EXEC	
Command History	Release	Modification
-	12.2(25)FX	This command was introduced.
	If you enter the <b>address</b> and the aging informati If you enter an <i>interface</i> the interface with aging all the MAC addresses	<i>e-id</i> , the command displays port security settings for the interface. s keyword, the command displays the secure MAC addresses for all interfaces on for each secure address. <i>e-id</i> and the <b>address</b> keyword, the command displays all the MAC addresses for information for each secure address. You can also use this command to display for an interface even if you have not enabled port security on it.
		yword, the command displays the configured maximum and the current number es for all VLANs on the interface. This option is visible only on interfaces that de set to <b>trunk</b> .
Examples	This is an example of the	ne output from the show port-security command:
		GecureAddr CurrentAddr SecurityViolation Security Action
	 Gi1/0/1	1 0 0 Shutdown
	Total Addresses in Sy	vstem (excluding one mac per port) : 1 .n System (excluding one mac per port) : 6272

This is an example of output from the **show port-security interface** interface-id command:

```
Switch# show port-security interface gigabitethernet1/0/1
Port Security : Enabled
Port status : SecureUp
Violation mode : Shutdown
Maximum MAC Addresses : 1
Total MAC Addresses : 0
Configured MAC Addresses : 0
Aging time : 0 mins
Aging type : Absolute
SecureStatic address aging : Disabled
Security Violation count : 0
```

### This is an example of output from the show port-security address command:

### Switch# show port-security address

This is an example of output from the **show port-security interface gigabitethernet**1/0/2 **address** command:

Switch# show port-security interface gigabitethernet1/0/2 address Secure Mac Address Table

Vlan	Mac Address	Туре	Ports	Remaining Age (mins)
1	0006.0700.0800	 SecureConfigured	 Gi0/2	1

Total Addresses: 1

This is an example of output from the **show port-security interface** *interface-id* **vlan** command:

```
Switch# show port-security interface gigabitethernet1/0/2 vlan
Default maximum:not set, using 5120
VLAN Maximum Current
```

5	default	1
10	default	54
11	default	101
12	default	101
13	default	201
14	default	501

<b>Related Commands</b>	Command	Description
	clear port-security	Deletes from the MAC address table a specific type of secure address or all the secure addresses on the switch or an interface.
	switchport port-security	Enables port security on a port, restricts the use of the port to a user-defined group of stations, and configures secure MAC addresses.

### show power inline

Use the **show power inline** command in EXEC mode to display the Power over Ethernet (PoE) status for the specified PoE port or for all PoE ports.

show power inline [police] [[interface-id | consumption | dynamic-priority] | module
 switch-number]

police	(Optional) Display the power policing information about real-time power consumption.
interface-id	(Optional) Display PoE-related power management information for the specified interface.
consumption	(Optional) Display the power allocated to devices connected to PoE ports.
dynamic-priority	(Optional) Display the dynamic priority of each PoE interface. This keyword is supported only on Catalyst 2960-C switches.
module switch-number	(Optional) Limit the display to ports on the specified stack member. The switch number is 1 to 4.
	<b>Note</b> Stacking is supported only on Catalyst 2960-S switches.
	interface-id consumption dynamic-priority

#### Command Modes User EXEC Privileged F

Privileged EXEC

Command History	Release	Modification
	12.2(44)SE	This command was introduced.
	12.2(25)FX	The <b>police</b> keyword was added.
	12.2(55)EX1	The <b>dynamic-priority</b> keyword was added.

### **Usage Guidelines** To use this command, the Catalyst 2960-S switch must be running the LAN Base image.

**Examples** 

This is an example of output from the **show power inline** command on a Catalyst 2960 switch. In the display, port 2 is configured as static; power has been pre-allocated to this port, but no powered device is connected. Port 6 is a static port in the power-deny state because its maximum wattage is configured for 10 W. The connected powered device has a reported class maximum wattage for a Class 0 or Class 3 device. Table 2-43 describes the output fields.

```
Switch# show power inline
```

Available:370.0(w) Used:80.6(w) Remaining:289.4(w)

Fa0/8	auto	off	0.0	n/a	n/a	15.4

The Catalyst 2960CPD-8TT and Catalyst 2960CG-8TC downlink ports cannot provide power to end devices. This is an example of output from the **show power inline** command on a Catalyst 2960CPD-8TT switch:

Switch# show power inline Available:0.0(w) Used:0.0(w) Remaining:0.0(w)

Interface	Admin	Oper	Power	Device	Class	Max
			(Watts)			

Field	Description		
Admin	Administration mode: auto, off, static		
Oper	Operating mode:		
	• on—the powered device is detected, and power is applied.		
	• off—no PoE is applied.		
	• faulty—device detection or a powered device is in a faulty state.		
	• power-deny—a powered device is detected, but no PoE is available, or the maximum wattage exceeds the detected powered-device maximum.		
Power	The supplied PoE in watts		
Device	The device type detected: n/a, unknown, Cisco powered-device, IEEE powered-device, <name cdp="" from=""></name>		
Class	The IEEE classification: n/a, Class <0–4>		
Available	The total amount of PoE in the system		
Used	The amount of PoE allocated to ports		
Remaining	The amount of PoE not allocated to ports in the system. (Available – Used = Remaining)		

Table 2-43 show power inline Fi	ield Descriptions
---------------------------------	-------------------

This is an example of output from the show power inline command on a port:

```
Switch# show power inline fastethernet2/0/1

Interface Admin Oper Power Device Class Max
(Watts)

Fa2/0/1 auto on 6.3 IP Phone 7910 n/a 15.4
```

This is an example of output from the **show power inline consumption** command on all PoE switch ports:

Switch# **show power inline consumption** Default PD consumption : 15400 mW

This is an example of output from the **show power inline module** *switch-number* command on stack member 1:

Switch#	show pow	er inl	line module	1		
Module	Availab	le	Used R	emaining		
	(Watts	)	(Watts)	(Watts)		
1	370.	0	166.2	203.9

		off				n/a		
		off				n/a		
				5		n/a		
		off				n/a		
		off				n/a		
Gi0/9	auto	on		none		n/a	n/a	5.1
Gi0/10	auto	on		log		ok	5.4	4.2
Gi0/11	auto	on		log		log	5.4	5.9
Gi0/12	auto	on		errdisak	ble	ok	5.4	4.2
Gi0/13	auto	errdisa	ble	errdisab	ble	n/a	5.4	0.0
<output< td=""><td>trunca</td><td>ted&gt;</td><td></td><td></td><td></td><td></td><td></td><td></td></output<>	trunca	ted>						

In the previous example:

- The Gi0/1 port is shut down, and policing is not configured.
- The Gi0/2 port is shut down, but policing is enabled with a policing action to generate a syslog message.
- The Gi0/3 port is shut down, but policing is enabled with a policing action is to shut down the port.
- Device detection is disabled on the Gi0/4 port, power is not applied to the port, and policing is disabled.
- Device detection is disabled on the Gi0/5 port, and power is not applied to the port, but policing is enabled with a policing action to generate a syslog message.
- Device detection is disabled on the Gi0/6 port, and power is not applied to the port, but policing is enabled with a policing action to shut down the port.
- The Gi0/7 port is up, and policing is disabled, but the switch does not apply power to the connected device.
- The Gi0/8 port is up, and policing is enabled with a policing action to generate a syslog message, but the switch does not apply power to the powered device.
- The Gi0/9 port is up and connected to a powered device, and policing is disabled.
- The Gi0/10 port is up and connected to a powered device, and policing is enabled with a policing action to generate a syslog message. The policing action does not take effect because the real-time power consumption is less than the cutoff value.

- The Gi0/11 port is up and connected to a powered device, and policing is enabled with a policing action to generate a syslog message.
- The Gi0/12 port is up and connected to a powered device, and policing is enabled with a policing action to shut down the port. The policing action does not take effect because the real-time power consumption is less than the cutoff value.
- The Gi0/13 port is up and connected to a powered device, and policing is enabled with a policing action to shut down the port.

This is an example of the outout of the **show power inline police** privileged EXEC command on a Catalyst 2960CPD-8PT:

Switch# <b>show power inline police</b> Available:22.4(w) Used:15.4(w) Remaining:7.0(w)						
Interface	Admin	Oper	Admin	Oper	Cutoff	Oper
	State	State	Police	Police	Power	Power
Fa0/1	auto	off	none	n/a	n/a	0.0

### show sdm prefer

Use the **show sdm prefer** privileged EXEC command to display information about the Switch Database Management (SDM) templates.

For Catalyst 2960 switches and Catalyst 2960-C Fast Ethernet switches:

### show sdm prefer [default | dual-ipv4-and-ipv6 default | lanbase-routing | qos]

For Catalyst 2960-S switches:

### show sdm prefer [default | lanbase-routing]

For Catalyst 2960-C Gigabit Ethernet switches:

show sdm prefer default

Syntax Description	default	(Optional) Display the template that balances system resources among features. This is the only template supported on Catalyst 2960-S switches.
	dual-ipv4-and-ipv6 default	(Optional) Display the dual template that supports both IPv4 and IPv6. This keyword is not supported on Catalyst 2960-S switches
	lanbase-routing	(Optional) Display the template that maximizes system resources for IPv4 static routing on SVIs.
	qos	(Optional) Display the template that maximizes system resources for quality of service (QoS) access control entries (ACEs). This keyword is not supported on Catalyst 2960-S switches

### **Command Modes** Privileged EXEC

<b>Command History</b>	Release	Modification
	12.2(25)FX	This command was introduced.
	12.2(40)SE	The dual-ipv4-and-ipv6 default keywords were added.
	12.2(53)SE1	The <b>default</b> template for the Catalyst 2960-S switch was added.
	12.2(55)SE	The lanbase-routing template was added for static routing on SVIs.
	12.2(55)EX	The Catalyst 2960-C templates were added.

**Usage Guidelines** When you change the SDM template on a switch by using the **sdm prefer** global configuration command, you must reload the switch for the configuration to take effect. If you enter the **show sdm prefer** command before you enter the **reload** privileged EXEC command, the **show sdm prefer** command shows the template currently in use and the template that will become active after a reload.

A Catalyst 2960-S switch running the LAN base image uses only a default template that includes maximum resources for all supported features or the lanbase-routing template to enable static routing.

Catalyst 2960-C Gigabit Ethernet switches use only a default template for maximum resource support.

The numbers displayed for each template represent an approximate maximum number for each feature resource. The actual number might vary, depending on the actual number of other features configured.

Exam	pl	es
------	----	----

This is an example of output from the **show sdm prefer default** command on a Catalyst 2960 switch:

Switch# show sdm prefer default "default" template: The selected template optimizes the resources in the switch to support this level of features for 0 routed interfaces and 255 VLANs. number of unicast mac addresses: number of IPv4 IGMP groups: 250

number of IPv4 IGMP groups:256number of IPv4/MAC qos aces:128number of IPv4/MAC security aces:384

This is an example of output from the **show sdm prefer** command on a Catalyst 2960 switch showing the existing template:

#### Switch# show sdm prefer

The current template is "lanbase-routing" template. The selected template optimizes the resources in the switch to support this level of features for 8 routed interfaces and 255 VLANs. number of unicast mac addresses: 4K number of IPv4 IGMP groups + multicast routes: 0.25K number of IPv4 unicast routes: 4.25K number of directly-connected IPv4 hosts: 4 K number of indirect IPv4 routes: 0.25K number of IPv4 policy based routing aces: 0

This is an example of output from the **show sdm prefer default** command on a Catalyst 2960-S switch:

0.125k

0.375k

### Switch# show sdm prefer default "default" template:

number of IPv4/MAC qos aces:

number of IPv4/MAC security aces:

The selected template optimizes the resources in the switch to support this level of features for 0 routed interfaces and 255 VLANs.

number of unicast mac addresses:	8K
number of IPv4 IGMP groups:	0.25K
number of IPv4/MAC qos aces:	0.375k
number of IPv4/MAC security aces:	0.375k

This is an example of output from the **show sdm prefer qos** command on a Catalyst 2960 switch:

```
Switch# show sdm prefer qos
"qos" template:
The selected template optimizes the resources in
the switch to support this level of features for
0 routed interfaces and 255 VLANS.
```

number	of	unicast mac addresses:	8K
number	of	IPv4 IGMP groups:	256
number	of	IPv4/MAC qos aces:	384
number	of	IPv4/MAC security aces:	128

This is an example of output from the **show sdm prefer** command on a Catalyst 2960-C Gigabit Ethernet switch:

Switch# show sdm prefer qos The current template is "default" template. The selected template optimizes the resources in the switch to support this level of features for 0 routed interfaces and 255 VLANs. number of unicast mac addresses: 8K number of IPv4 IGMP groups: 0.25K number of IPv6 multicast groups: 0.25K number of IPv4/MAC qos aces: 0.125k number of IPv4/MAC security aces: 0.375k number of IPv6 policy based routing aces: 0 60 number of IPv6 gos aces: number of IPv6 security aces: 0.125k

<b>Related Commands</b>	Command	Description
	sdm prefer	Sets the SDM template to maximize resources.

### show setup express

Use the **show setup express** privileged EXEC command to display if Express Setup mode is active on the switch.

show setup express

- **Syntax Description** This command has no arguments or keywords.
- **Defaults** No default is defined.
- **Command Modes** Privileged EXEC

 Release
 Modification

 12.2(25)FX
 This command was introduced.

**Examples** This is an example of output from the **show setup express co**mmand:

Switch# **show setup express** express setup mode is active

Related Commands	Command	Description
	setup express	Enables Express Setup mode.

### show spanning-tree

	Use the <b>show</b>	spanning-tree co	mmand in EXEC	mode to display	spanning-tree	state information.
--	---------------------	------------------	---------------	-----------------	---------------	--------------------

- show spanning-tree [bridge-group | active [detail] | backbonefast | blockedports | bridge | detail [active] | inconsistentports | interface interface-id | mst | pathcost method | root | summary [totals] | uplinkfast | vlan vlan-id]
- show spanning-tree bridge-group [active [detail] | blockedports | bridge | detail [active] |
  inconsistentports | interface interface-id | root | summary]
- show spanning-tree vlan *vlan-id* [active [detail] | blockedports | bridge | detail [active] | inconsistent ports | interface *interface-id* | root | summary]
- show spanning-tree {vlan vlan-id | bridge-group} bridge [address | detail | forward-time |
  hello-time | id | max-age | priority [system-id] | protocol]
- show spanning-tree {vlan vlan-id | bridge-group} root [address | cost | detail | forward-time |
  hello-time | id | max-age | port | priority [system-id]
- show spanning-tree interface *interface-id* [active [detail] | cost | detail [active] | inconsistency | portfast | priority | rootcost | state]
- show spanning-tree mst [configuration [digest]] | [instance-id [detail | interface interface-id
   [detail]]

Syntax Description	bridge-group	(Optional) Specify the bridge group number. The range is 1 to 255.
	active [detail]	(Optional) Display spanning-tree information only on active interfaces (available only in privileged EXEC mode).
	backbonefast	(Optional) Display spanning-tree BackboneFast status.
	blockedports	(Optional) Display blocked port information (available only in privileged EXEC mode).
	bridge [address   detail   forward-time   hello-time   id   max-age   priority [system-id]   protocol]	(Optional) Display status and configuration of this switch (optional keywords available only in privileged EXEC mode).
	detail [active]	(Optional) Display a detailed summary of interface information ( <b>active</b> keyword available only in privileged EXEC mode).
	inconsistentports	(Optional) Display inconsistent port information (available only in privileged EXEC mode).
	interface interface-id [active [detail]   cost   detail [active]   inconsistency   portfast   priority   rootcost   state]	(Optional) Display spanning-tree information for the specified interface (all options except <b>portfast</b> and <b>state</b> available only in privileged EXEC mode). Enter each interface separated by a space. Ranges are not supported. Valid interfaces include physical ports, VLANs, and port channels. The VLAN range is 1 to 4094. The port-channel range is 1 to 6.

mst [configuration [digest]] [instance-id	(Optional) Display the multiple spanning-tree (MST) region configuration and status (available only in privileged EXEC mode).
[detail   interface	The keywords have these meanings:
interface-id [ <b>detail</b> ]]	• <b>digest</b> —(Optional) Display the MD5 digest included in the current MST configuration identifier (MSTCI). Two separate digests, one for standard and one for prestandard switches, appear (available only in privileged EXEC mode).
	The terminology was updated for the implementation of the IEEE standard, and the <i>txholdcount</i> field was added.
	The new master role appears for boundary ports.
	The word <i>pre-standard</i> or <i>Pre-STD</i> appears when an IEEE standard bridge sends prestandard BPDUs on a port.
	The word <i>pre-standard</i> ( <i>config</i> ) or <i>Pre-STD-Cf</i> appears when a port has been configured to transmit prestandard BPDUs and no prestandard BPDU has been received on that port.
	The word <i>pre-standard</i> ( <i>rcvd</i> ) or <i>Pre-STD-Rx</i> appears when a prestandard BPDU has been received on a port that has not been configured to transmit prestandard BPDUs.
	A <i>dispute</i> flag appears when a designated port receives inferior designated information until the port returns to the forwarding state or ceases to be designated.
	• <i>instance-id</i> —You can specify a single instance ID, a range of IDs separated by a hyphen, or a series of IDs separated by a comma. The range is 1 to 4094. The display shows the number of currently configured instances.
	• <b>interface</b> <i>interface-id</i> —(Optional) Valid interfaces include physical ports, VLANs, and port channels. The VLAN range is 1 to 4094. The port-channel range is 1 to 6.
	• <b>detail</b> —(Optional) Display detailed information for the instance or interface.
pathcost method	(Optional) Display the default path cost method (available only in privileged EXEC mode).
root [address   cost   detail   forward-time   hello-time   id   max-age   port   priority [system-id]]	(Optional) Display root switch status and configuration (all keywords available only in privileged EXEC mode).
summary [totals]	(Optional) Display a summary of port states or the total lines of the spanning-tree state section. The words <i>IEEE Standard</i> identify the MST version running on a switch.
uplinkfast	(Optional) Display spanning-tree UplinkFast status.
vlan vlan-id [active [detail]   backbonefast   blockedports   bridge [address   detail   forward-time   hello-time	(Optional) Display spanning-tree information for the specified VLAN (some keywords available only in privileged EXEC mode). You can specify a single VLAN identified by VLAN ID number, a range of VLANs separated by a hyphen, or a series of VLANs separated by a comma. The range is 1 to 4094.
id   max-age   priority [system-id]   protocol]	

### Command Modes User EXEC

Privileged EXEC

<b>Command History</b>	Release	Modification
	12.2(25)FX	This command was introduced.
	12.2(25)SED	The <b>digest</b> keyword was added, and new digest and transmit hold count fields appear.

### **Usage Guidelines**

If the *vlan-id* variable is omitted, the command applies to the spanning-tree instance for all VLANs.

### **Examples**

This is an example of output from the **show spanning-tree active** command:

Switch# show spanning-tree active VLAN0001 Spanning tree enabled protocol ieee Root ID Priority 32768 0001.42e2.cdd0 Address 3038 Cost Port 24 (GigabitEthernet0/1) Hello Time 2 sec Max Age 20 sec Forward Delay 15 sec Bridge ID Priority 49153 (priority 49152 sys-id-ext 1) Address 0003.fd63.9580 Hello Time 2 sec Max Age 20 sec Forward Delay 15 sec Aging Time 300 Uplinkfast enabled Interface Role Sts Cost Prio.Nbr Type \_\_\_\_\_ \_\_\_\_\_ \_\_\_\_ \_\_\_\_\_ \_\_\_ \_\_\_\_\_ Root FWD 3019 128.24 P2p Gi2/0/1 <output truncated>

### This is an example of output from the show spanning-tree detail command:

### **Related Commands**

Command	Description
clear spanning-tree counters	Clears the spanning-tree counters.
clear spanning-tree detected-protocols	Restarts the protocol migration process.
spanning-tree backbonefast	Enables the BackboneFast feature.
spanning-tree bpdufilter	Prevents an interface from sending or receiving bridge protocol data units (BPDUs).
spanning-tree bpduguard	Puts an interface in the error-disabled state when it receives a BPDU.
spanning-tree cost	Sets the path cost for spanning-tree calculations.
spanning-tree extend system-id	Enables the extended system ID feature.
spanning-tree guard	Enables the root guard or the loop guard feature for all the VLANs associated with the selected interface.
spanning-tree link-type	Overrides the default link-type setting for rapid spanning-tree transitions to the forwarding state.
spanning-tree loopguard default	Prevents alternate or root ports from becoming the designated port because of a failure that leads to a unidirectional link.
spanning-tree mst configuration	Enters multiple spanning-tree (MST) configuration mode through which the MST region configuration occurs.
spanning-tree mst cost	Sets the path cost for MST calculations.
spanning-tree mst forward-time	Sets the forward-delay time for all MST instances.
spanning-tree mst hello-time	Sets the interval between hello BPDUs sent by root switch configuration messages.

Command	Description
spanning-tree mst max-age	Sets the interval between messages that the spanning tree receives from the root switch.
spanning-tree mst max-hops	Sets the number of hops in an MST region before the BPDU is discarded and the information held for an interface is aged.
spanning-tree mst port-priority	Configures an interface priority.
spanning-tree mst priority	Configures the switch priority for the specified spanning-tree instance.
spanning-tree mst root	Configures the MST root switch priority and timers based on the network diameter.
spanning-tree port-priority	Configures an interface priority.
spanning-tree portfast (global configuration)	Globally enables the BPDU filtering or the BPDU guard feature on Port Fast-enabled interfaces or enables the Port Fast feature on all nontrunking interfaces.
spanning-tree portfast (interface configuration)	Enables the Port Fast feature on an interface and all its associated VLANs.
spanning-tree uplinkfast	Accelerates the choice of a new root port when a link or switch fails or when the spanning tree reconfigures itself.
spanning-tree vlan	Configures spanning tree on a per-VLAN basis.

## show storm-control

Use the **show storm-control** command in EXEC mode to display broadcast, multicast, or unicast storm control settings on the switch or on the specified interface or to display storm-control history.

show storm-control [interface-id] [broadcast | multicast | unicast]

Syntax Description	interface-id	· •			vsical port (including type, stack member,
		module, a	and port num	ber).	
			tacking is su ase image.	pported only	on Catalyst 2960-S switches running the LAN
	broadcast	(Optional	l) Display br	oadcast storn	n threshold setting.
	multicast	(Optional	l) Display m	ulticast storm	threshold setting.
	unicast	(Optional	l) Display un	icast storm tl	hreshold setting.
	begin	(Optional	l) Display be	gins with the	e line that matches the <i>expression</i> .
	exclude	(Optional	l) Display ex	cludes lines t	that match the <i>expression</i> .
	include	(Optional	l) Display in	cludes lines t	hat match the specified <i>expression</i> .
	expression	Expressio	on in the out	out to use as	a reference point.
Command Modes	User EXEC Privileged E	XEC			
	<u>.</u>				
Command History	Release		lification		
	12.2(25)FX	This	s command v	as introduce	d.
Usage Guidelines	When you en	nter an <i>interface-i</i>	d, the storm	control thresh	holds appear for the specified interface.
	If you do no	t enter an <i>interfac</i>	e-id, settings	appear for o	ne traffic type for all ports on the switch.
	If you do no	t enter a traffic typ	pe, settings a	ppear for bro	padcast storm control.
Examples			-		<b>orm-control</b> command when no keywords are he broadcast storm control settings appear.
	Switch# <b>sho</b> Interface	w storm-control Filter State	Upper	Lower	Current
	Gi1/0/1 Gi1/0/2 <output td="" tru<=""><td>Forwarding Forwarding ncated&gt;</td><td>20 pps 50.00%</td><td>10 pps 40.00%</td><td>5 pps 0.00%</td></output>	Forwarding Forwarding ncated>	20 pps 50.00%	10 pps 40.00%	5 pps 0.00%

This is an example of output from the **show storm-control** command for a specified interface. Because no traffic-type keyword was entered, the broadcast storm control settings appear.

Switch#Switc	h# <b>show</b>	storm-c	ontrol gigab	itethernet	1/0/1
Interface	Filter	State	Upper	Lower	Current
Gi1/0/1	Forwai	ding	20 pps	10 pps	5 pps

Table 2-44 describes the fields in the **show storm-control** display.

Table 2-44show storm-control Field Descriptions

Field	Description
Interface	Displays the ID of the interface.
Filter State	Displays the status of the filter:
	• Blocking—Storm control is enabled, and a storm has occurred.
	• Forwarding—Storm control is enabled, and no storms have occurred.
	• Inactive—Storm control is disabled.
Upper	Displays the rising suppression level as a percentage of total available bandwidth in packets per second or in bits per second.
Lower	Displays the falling suppression level as a percentage of total available bandwidth in packets per second or in bits per second.
Current	Displays the bandwidth usage of broadcast traffic or the specified traffic type (broadcast, multicast, or unicast) as a percentage of total available bandwidth. This field is only valid when storm control is enabled.

### **Related Commands**

Command	Description
storm-control	Sets the broadcast, multicast, or unicast storm control levels for the switch.

# show switch

Use the **show switch** command in EXEC mode to display information related to a stack member or the switch stack.

۵, Note

This command is supported only on Catalyst 2960-S switches running the LAN base image.

Syntax Description		
	stack-member-number	(Optional) Display information for the specified member. The range is 1 to 4.
	detail	(Optional) Display detailed information about the stack ring.
	neighbors	(Optional) Display the neighbors for the entire stack.
	stack-ports	(Optional) Display port information for the entire stack.
	stack-ports [summary]	(Optional) Display the stack cable length, the stack link status, and the loopback status.
	stack-ring activity [detail]	(Optional) Display the number of frames per member that are sent to the stack ring. Use the <b>detail</b> keyword to display the number of frames per member that are sent to the stack ring, the receive queues, and the ASIC.
	stack-ring speed	(Optional) Display the stack ring speed.
Command Modes	User EXEC Privileged EXEC	
Command History	Release	Modification
	10.0(50)051	
	12.2(53)SE1	This command was introduced.
Usage Guidelines	This command displays the	
Usage Guidelines	This command displays the Waiting—A switch is

Usage Guidelines	<ul> <li>This command displays th</li> <li>Waiting—A switch is The switch has not yes Stack members not pa master is elected and</li> <li>Initializing—A switc it is receiving its syst</li> </ul>	nese states: a booting up and waiting for communication from other switches in the stack. et determined whether or not it is a stack master. articipating in a stack master election remain in the waiting state until the stack ready. h has determined whether its stack master status. If it is not the stack master,

- Ver Mismatch—A switch in version mismatch mode. Version-mismatch mode is when a switch joining the stack has a different stack protocol minor version number than the master.
- SDM Mismatch—A switch in Switch Database Management (SDM) mismatch mode. SDM mismatch is when a member does not support the SDM template running on the master.
- Provisioned—The state of a preconfigured switch before it becomes an active member of a stack, or the state of a member after it has left the stack. The MAC address and the priority number in the display are always 0 for the provisioned switch.

A typical state transition for a member (including a master) booting up is Waiting -> Initializing -> Ready.

A typical state transition for a member becoming a master after a master election is Ready -> Master Re-Init -> Ready.

A typical state transition for a member in version mismatch mode is Waiting -> Ver Mismatch.

You can use the **show switch** command to identify whether the provisioned switch exists in the stack. The **show running-config** and the **show startup-config** privileged EXEC commands do not provide this information.

H/W

Current

The display also includes stack MAC-persistency wait-time if persistent MAC address is enabled.

### **Examples** This example shows summary stack information:

### Switch# show switch

Switch#	Role	Mac Address	Priority	Current State
6	Member	0003.e31a.1e00	1	Ready
*8	Master	0003.e31a.1200	1	Ready
2	Member	0000.000.0000	0	Provisioned

### This example shows detailed stack information:

```
Switch# show switch detail
Switch/Stack Mac Address : 0013.c4db.7e00
Mac persistency wait time: 4 mins
```

Switch#	Role	Mac Address	Priority	Version	State
*1	Master	0013.c4db.7e00	1	0	Ready
2	Member	0000.000.0000	0	0	Provisioned

2	Melliber	0000.000.0000	0	0	PLOVISIONED
6	Member	0003.e31a.1e00	1	0	Ready

	Stack Port	Status	Neighb	ors
Switch#	Port 1	Port 2	Port 1	Port 2
1	Ok	Down	6	None

-	0.12	20111	0	110110
6	Down	Ok	None	1

This example shows the member 6 summary information:

#### Switch# show switch 6

				Current
Switch#	Role	Mac Address	Priority	State
6	Member	0003.e31a.1e00	1	Ready

This example shows the neighbor information for a stack:

Switch# <b>show</b>	switch net	ighbors
Switch #	Port A	Port B
6	None	8
8	6	None

This example shows stack-port information:

Switch#	show	switch st	ack-ports
Switch	1 #	Port A	Port B
6		Down	Ok
8		Ok	Down

### Table 2-45 shows the output for the show switch stack-ports summary command.

Switch# <b>s</b>	Switch# show switch stack-ports summary							
Switch#/	Stack	Neighbor	Cable	Link	Link	Sync	#	In
Port#	Port		Length	OK	Active	OK	Changes	Loopback
	Status						To LinkOK

### Table 2-45 show switch stack-ports summary Command Output

Field	Description		
Switch#/Port#	Member number and its stack port number.		
Stack Port Status	• Absent—No cable is detected on the stack port.		
	• Down—A cable is detected, but either no connected neighbor is up, or the stack port is disabled.		
	• OK—A cable is detected, and the connected neighbor is up.		
Neighbor	Switch number of the active member at the other end of the stack cable.		
Cable Length	Valid lengths are 50 cm, 1 m, or 3 m.		
	If the switch cannot detect the cable length, the value is <i>no cable</i> . The cable might not be connected, or the link might be unreliable.		
Link OK	This shows if the link is stable.		
	The <i>link partner</i> is a stack port on a neighbor switch.		
	• No—The link partner receives invalid protocol messages from the port.		
	• Yes—The link partner receives valid protocol messages from the port.		
Link Active	This shows if the stack port is in the same state as its link partner.		
	• No—The port cannot send traffic to the link partner.		
	• Yes—The port can send traffic to the link partner.		

Field	Description			
Sync OK	• No—The link partner does not send valid protocol messages to the stack port.			
	• Yes—The link partner sends valid protocol messages to the port.			
# Changes to LinkOK	K This shows the relative stability of the link.			
	If a large number of changes occur in a short period of time, link flapping can occur.			
In Loopback	• No— At least one stack port on the member has an attached stack cable.			
	• Yes—None of the stack ports on the member has an attached stack cable.			

This example shows detailed stack-ring activity information:

Switch# show switch stack-ring activity detail	Switch#	show	switch	stack-ring	activity	detail
--	---------	------	--------	------------	----------	--------

Switch	Asic	Rx Queue-1	Rx Queue-2	Rx Queue-3	Rx Queue-4	Total
1		2021864	1228937	281510		3532311
1	1	52	0	72678	0	72730
				Swit	ch 1 Total:	3605041
2	0	2020901	90833	101680	0	2213414
2	1	52	0	0	0	52
				 Cturi +	ch 2 Total:	2213466

Total frames sent to stack ring : 5818507

Note: these counts do not include frames sent to the ring by certain output features, such as output SPAN and output ACLs.

<b>Related Commands</b>	Command	Description
	reload	Reloads the member and puts a configuration change into effect.
	remote command	Monitors all or specified members.
	session	Accesses a specific member.
	switch	Changes the member priority value.
	switch provision	Provisions a new switch before it joins the stack.
	switch renumber	Changes the member number.

## show system mtu

Use the **show system mtu** privileged EXEC command to display the global maximum transmission unit (MTU) or maximum packet size set for the switch.

show system mtu

Syntax Description	This command has no arguments or keywords.		
Command Modes	Privileged EXEC		
Command History	Release	Modification	
	12.2(25)FX	This command was introduced.	
Usage Guidelines	MTU setting, the n	e <b>system mtu</b> or <b>system mtu jumbo</b> global configuration command to change the ew setting does not take effect until you reset the switch. efers to ports operating at 10/100 Mb/s; the system jumbo MTU refers to Gigabit	
	ports; the system routing MTU refers to routed ports.		
Examples	This is an example	of output from the <b>show system mtu</b> command:	
	Switch# <b>show system mtu</b> System MTU size is 1500 bytes System Jumbo MTU size is 1550 bytes		
Related Commands	Command	Description	
	system mtu Sets the MTU size for the Fast Ethernet, Gigabit Ethernet, or routed ports.		

## show udld

Use the **show udld** command in EXEC mode to display UniDirectional Link Detection (UDLD) administrative and operational status for all ports or the specified port.

show udld [interface-id]

Syntax Description	interface-id	(Optional) ID of the interface and port number. Valid interfaces include physical ports and VLANs. The VLAN range is 1 to 4094.	
Command Modes	User EXEC Privileged EXEC		
Command History	Release	Modification	
	12.2(25)FX	This command was introduced.	
Usage Guidelines	If you do not enter a	an <i>interface-id</i> , administrative and operational UDLD status for all interfaces appear.	
Examples	This is an example of output from the <b>show udld</b> <i>interface-id</i> command. For this display, UDLD is enabled on both ends of the link, and UDLD detects that the link is bidirectional. Table 2-46 describes the fields in this display.		
	Switch# <b>show udld gigabitethernet2/0/1</b> Interface gi2/0/1		
	Port enable admin Port enable opera Current bidirecti	histrative configuration setting: Follows device default utional state: Enabled onal state: Bidirectional nal state: Advertisement - Single Neighbor detected 60	
	Time out interval Entry 1 Expiration ti Device ID: 1		
	Device name: Port ID: Gi2/ Neighbor echo	0/1 0 1 device: Switch-B 0 1 port: Gi2/0/2 val: 5	

Field	Description
Interface	The interface on the local device configured for UDLD.
Port enable administrative configuration setting	How UDLD is configured on the port. If UDLD is enabled or disabled, the port enable configuration setting is the same as the operational enable state. Otherwise, the enable operational setting depends on the global enable setting.
Port enable operational state	Operational state that shows whether UDLD is actually running on this port.
Current bidirectional state	The bidirectional state of the link. An unknown state appears if the link is down or if it is connected to an UDLD-incapable device. A bidirectional state appears if the link is a normal two-way connection to a UDLD-capable device. All other values mean miswiring.
Current operational state	The current phase of the UDLD state machine. For a normal bidirectional link, the state machine is most often in the Advertisement phase.
Message interval	How often advertisement messages are sent from the local device. Measured in seconds.
Time out interval	The time period, in seconds, that UDLD waits for echoes from a neighbor device during the detection window.
Entry 1	Information from the first cache entry, which contains a copy of echo information received from the neighbor.
Expiration time	The amount of time in seconds remaining before this cache entry is aged out.
Device ID	The neighbor device identification.
Current neighbor state	The neighbor's current state. If both the local and neighbor devices are running UDLD normally, the neighbor state and local state should be bidirectional. If the link is down or the neighbor is not UDLD-capable, no cache entries appear.
Device name	The device name or the system serial number of the neighbor. The system serial number appears if the device name is not set or is set to the default (Switch).
Port ID	The neighbor port ID enabled for UDLD.
Neighbor echo 1 device	The device name of the neighbors' neighbor from which the echo originated.
Neighbor echo 1 port	The port number ID of the neighbor from which the echo originated
Message interval	The rate, in seconds, at which the neighbor is sending advertisement messages.
CDP device name	The CDP device name or the system serial number. The system serial number appears if the device name is not set or is set to the default (Switch).

Table 2-46 show udid Field Description	Table 2-46	show udld Field Descriptions
--	------------	------------------------------

Related Commands	Command	Description
	udld	Enables aggressive or normal mode in UDLD or sets the configurable message timer time.
	udld port	Enables UDLD on an individual interface or prevents a fiber-optic interface from being enabled by the <b>udld</b> global configuration command.
	udld reset	Resets all interfaces shutdown by UDLD and permits traffic to begin passing through them again.

# show version

Use the **show version** command in EXEC mode to display version information for the hardware and firmware.

show version

**Syntax Description** This command has no arguments or keywords.

Command Modes User EXEC Privileged EXEC

 Release
 Modification

 12.2(25)FX
 This command was introduced.

Examples

This is an example of output from the **show version** command:

Note

Though visible in the **show version** output, the *configuration register* information is not supported on the switch.

Switch uptime is 3 days, 20 hour System returned to ROM by power	-on	
System image file is "flash:c29		
cisco WS-C2960-24TC-L (PowerPC4	05) processor with 61	440K/4088K bytes of memory.

# show vlan

Use the **show vlan** command in EXEC mode to display the parameters for all configured VLANs or one VLAN (if the VLAN ID or name is specified) on the switch.

show vlan [brief | id vlan-id | mtu | name vlan-name | remote-span | summary]

Syntax Description	brief	(Optional) Display one line for each VLAN with the VLAN name, status, and its ports.
	id vlan-id	(Optional) Display information about a single VLAN identified by VLAN ID number. For <i>vlan-id</i> , the range is 1 to 4094.
	mtu	(Optional) Display a list of VLANs and the minimum and maximum transmission unit (MTU) sizes configured on ports in the VLAN.
	name vlan-name	(Optional) Display information about a single VLAN identified by VLAN name. The VLAN name is an ASCII string from 1 to 32 characters.
	remote-span	(Optional) Display information about Remote SPAN (RSPAN) VLANs.
	summary	(Optional) Display VLAN summary information.
Command History	Release	Modification
	12.2(25)FX	This command was introduced.
Usage Guidelines	VLAN have the same different MTUs, and MTU might be dropp	a command output, the MTU_Mismatch column shows whether all the ports in the MTU. When <i>yes</i> appears in this column, it means that the VLAN has ports with packets that are switched from a port with a larger MTU to a port with a smaller ed. If the VLAN does not have an SVI, the hyphen (-) symbol appears in the <sup>5</sup> the MTU-Mismatch column displays <i>yes</i> , the names of the port with the MinMTU MaxMTU appear.
<u>Note</u>	Though visible in the	command-line help string, the <b>ifindex</b> , <b>internal usage</b> , and <b>private-vlan</b> keywords

are not supported.

## Table 2-47 show vlan Command Output Fields

Field	Description
VLAN	VLAN number.
Name	Name, if configured, of the VLAN.
Status	Status of the VLAN (active or suspend).
Ports	Ports that belong to the VLAN.
Туре	Media type of the VLAN.
SAID	Security association ID value for the VLAN.
MTU	Maximum transmission unit size for the VLAN.
Parent	Parent VLAN, if one exists.
RingNo	Ring number for the VLAN, if applicable.

I

Field	Description
BrdgNo	Bridge number for the VLAN, if applicable.
Stp	Spanning Tree Protocol type used on the VLAN.
BrdgMode	Bridging mode for this VLAN—possible values are source-route bridging (SRB) and source-route transparent (SRT); the default is SRB.
Trans1	Translation bridge 1.
Trans2	Translation bridge 2.
Remote SPAN VLANs	Identifies any RSPAN VLANs that have been configured.
Primary/Secondary/ Type/Ports	

Table 2-47 show vlan Command Output Fields (continued

<b>Related Commands</b>	Command	Description
	switchport mode	Configures the VLAN membership mode of a port.
	usb-inactivity-timeout	Enables VLAN configuration mode where you can configure VLANs 1 to 4094.

# show vmps

Use the **show vmps** command in EXEC mode without keywords to display the VLAN Query Protocol (VQP) version, reconfirmation interval, retry count, VLAN Membership Policy Server (VMPS) IP addresses, and the current and primary servers, or use the **statistics** keyword to display client-side statistics.

show vmps [statistics]

Syntax Description	statistics	(Optional) Display VQP client-side statistics and counters.
Command Modes	User EXEC Privileged EXEC	
Command History	Release	Modification
	12.2(25)FX	This command was introduced.
Examples	This is an example of	output from the <b>show vmps</b> command:
	Switch# <b>show vmps</b> VQP Client Status:	
	VMPS VQP Version: Reconfirm Interval: Server Retry Count: VMPS domain server:	1 60 min
	Reconfirmation statu	
	VMPS Action:	other
	This is an example of in the display.	output from the <b>show vmps statistics</b> command. Table 2-48 describes each field
	Switch# <b>show vmps s</b> VMPS Client Statist:	ics
	VQP Queries: VQP Responses: VMPS Changes: VQP Shutdowns: VQP Denied: VQP Wrong Domain:	 0 0 0 0 0 0 0
	VQP Wrong Version: VQP Insufficient Re	0 esource: 0

Field	Description
VQP Queries	Number of queries sent by the client to the VMPS.
VQP Responses	Number of responses sent to the client from the VMPS.
VMPS Changes	Number of times that the VMPS changed from one server to another.
VQP Shutdowns	Number of times the VMPS sent a response to shut down the port. The client disables the port and removes all dynamic addresses on this port from the address table. You must administratively re-enable the port to restore connectivity.
VQP Denied	Number of times the VMPS denied the client request for security reasons. When the VMPS response denies an address, no frame is forwarded to or from the workstation with that address (broadcast or multicast frames are delivered to the workstation if the port has been assigned to a VLAN). The client keeps the denied address in the address table as a blocked address to prevent more queries from being sent to the VMPS for each new packet received from this workstation. The client ages the address if no new packets are received from this workstation on this port within the aging time period.
VQP Wrong Domain	Number of times the management domain in the request does not match the one for the VMPS. Any previous VLAN assignments of the port are not changed. This response means that the server and the client have not been configured with the same VTP management domain.
VQP Wrong Version	Number of times the version field in the query packet contains a value that is higher than the version supported by the VMPS. The VLAN assignment of the port is not changed. The switches send only VMPS Version 1 requests.
VQP Insufficient Resource	Number of times the VMPS is unable to answer the request because of a resource availability problem. If the retry limit has not yet been reached, the client repeats the request with the same server or with the next alternate server, depending on whether the per-server retry count has been reached.

Table 2-48 sh	now vmps statistics	Field Descriptions
---------------	---------------------	--------------------

<b>Related Commands</b>	Command	Description
	clear vmps statistics	Clears the statistics maintained by the VQP client.
	vmps reconfirm (privileged EXEC)	Sends VQP queries to reconfirm all dynamic VLAN assignments with the VMPS.
	vmps retry	Configures the per-server retry count for the VQP client.
	vmps server	Configures the primary VMPS and up to three secondary servers.

## show vtp

Use the **show vtp** command in EXEC mode to display general information about the VLAN Trunking Protocol (VTP) management domain, status, and counters.

show vtp {counters | devices [conflicts] | interface [interface-id] | password | status}

Syntax Description	counters	Display the VTP statistics for the switch.
	password	Display the configured VTP password.
	devices	Display information about all VTP version 3 devices in the domain. This keyword applies only if the switch is not running VTP version 3.
	conflicts	(Optional) Display information about VTP version 3 devices that have conflicting primary servers. This command is ignored when the switch is in VTP transparent or VPT off mode.
	<b>interface</b> [interface-id]	Display VTP status and configuration for all interfaces or the specified interface. The <i>interface-id</i> can be a physical interface or a port channel.
	status	Display general information about the VTP management domain status.
Command Modes	User EXEC Privileged EXEC	
		Modification
Command Modes Command History	Privileged EXEC	Modification This command was introduced.

- If the **password** *password* global configuration command did not specify the **hidden** keyword and encryption is not enabled on the switch, the password appears in clear text.
- If the **password** *password* command did not specify the **hidden** keyword and encryption is enabled on the switch, the encrypted password appears.
- If the **password** *password* command included the **hidden** keyword, the hexadecimal secret key is displayed.

### **Examples**

This is an example of output from the show vtp devices command. A yes in the *Conflict* column means that the responding server is in conflict with the local server for the feature; that is, when two switches in the same domain do not have the same primary server for a database.

```
Switch# show vtp devices
```

Retrieving i	nform	ation from the V	/TP domain. Wait	ing for 5	seconds.
VTP Database	Conf	switch ID	Primary Server	Revision	System Name
	lict				
VLAN	Yes	00b0.8e50.d000	000c.0412.6300	12354	main.cisco.com
MST	No	00b0.8e50.d000	0004.AB45.6000	24	main.cisco.com
VLAN	Yes	000c.0412.6300=	000c.0412.6300	67	qwerty.cisco.com

This is an example of output from the show vtp counters command. Table 2-49 describes the fields in the display.

Switch# show vtp counters

VTP statistics:				
Summary advertisements received	:	0		
Subset advertisements received	:	0		
Request advertisements received	:	0		
Summary advertisements transmitted	:	6970		
Subset advertisements transmitted : 0				
Request advertisements transmitted : 0				
Number of config revision errors	:	0		
Number of config digest errors	:	0		
Number of V1 summary errors	:	0		

VTP pruning statistics:

Trunk	Join Transmitted 3	Join Received	Summary advts received from non-pruning-capable device
Fa1/0/47	0	0	0
Fa1/0/48	0	0	0
Gi2/0/1	0	0	0
Gi3/0/2	0	0	0

Table 2-49 show vtp counters Field Descriptions

Field	Description
Summary advertisements received	Number of summary advertisements received by this switch on its trunk ports. Summary advertisements contain the management domain name, the configuration revision number, the update timestamp and identity, the authentication checksum, and the number of subset advertisements to follow.
Subset advertisements received	Number of subset advertisements received by this switch on its trunk ports. Subset advertisements contain all the information for one or more VLANs.
Request advertisements received	Number of advertisement requests received by this switch on its trunk ports. Advertisement requests normally request information on all VLANs. They can also request information on a subset of VLANs.
Summary advertisements transmitted	Number of summary advertisements sent by this switch on its trunk ports. Summary advertisements contain the management domain name, the configuration revision number, the update timestamp and identity, the authentication checksum, and the number of subset advertisements to follow.

Field	Description
Subset advertisements transmitted	Number of subset advertisements sent by this switch on its trunk ports. Subset advertisements contain all the information for one or more VLANs.
Request advertisements transmitted	Number of advertisement requests sent by this switch on its trunk ports. Advertisement requests normally request information on all VLANs. They can also request information on a subset of VLANs.
Number of configuration revision	Number of revision errors.
errors	Whenever you define a new VLAN, delete an existing one, suspend or resume an existing VLAN, or modify the parameters on an existing VLAN, the configuration revision number of the switch increments.
	Revision errors increment whenever the switch receives an advertisement whose revision number matches the revision number of the switch, but the MD5 digest values do not match. This error means that the VTP password in the two switches is different or that the switches have different configurations.
	These errors means that the switch is filtering incoming advertisements, which causes the VTP database to become unsynchronized across the network.
Number of configuration digest	Number of MD5 digest errors.
errors	Digest errors increment whenever the MD5 digest in the summary packet and the MD5 digest of the received advertisement calculated by the switch do not match. This error usually means that the VTP password in the two switches is different. To solve this problem, make sure the VTP password on all switches is the same.
	These errors mean that the switch is filtering incoming advertisements, which causes the VTP database to become unsynchronized across the network.
Number of V1 summary errors	Number of Version 1 errors.
	Version 1 summary errors increment whenever a switch in VTP V2 mode receives a VTP Version 1 frame. These errors mean that at least one neighboring switch is either running VTP Version 1 or VTP Version 2 with V2-mode disabled. To solve this problem, change the configuration of the switches in VTP V2-mode to disabled.
Join Transmitted	Number of VTP pruning messages sent on the trunk.
Join Received	Number of VTP pruning messages received on the trunk.
Summary Advts Received from non-pruning-capable device	Number of VTP summary messages received on the trunk from devices that do not support pruning.

#### Table 2-49 show vtp counters Field Descriptions (continued)

This is an example of output from the **show vtp status** command for a switch running VTP version 2. Table 2-50 describes the fields in the display.

```
Switch# show vtp status
VTP Version
                             : 2
                             : 0
Configuration Revision
Maximum VLANs supported locally : 1005
Number of existing VLANs : 45
VTP Operating Mode
                             : Transparent
VTP Domain Name
                             : shared_testbed1
VTP Pruning Mode
                             : Disabled
VTP V2 Mode
                             : Disabled
VTP Traps Generation
                             : Enabled
MD5 digest
                              : 0x3A 0x29 0x86 0x39 0xB4 0x5D 0x58 0xD7
```

Field	Description		
VTP Version	Displays the VTP version operating on the switch. By default, the switch implements Version 1 but can be set to Version 2.		
Configuration Revision	Current configuration revision number on this switch.		
Maximum VLANs Supported Locally	Maximum number of VLANs supported locally.		
Number of Existing VLANs	Number of existing VLANs.		
VTP Operating Mode	Displays the VTP operating mode, which can be server, client, or transparent.		
	Server: a switch in VTP server mode is enabled for VTP and sends advertisements. You can configure VLANs on it. The switch guarantees that it can recover all the VLAN information in the current VTP database from NVRAM after reboot. By default, every switch is a VTP server.		
	<b>Note</b> The switch automatically changes from VTP server mode to VTP client mode if it detects a failure while writing the configuration to NVRAM and cannot return to server mode until the NVRAM is functioning.		
	Client: a switch in VTP client mode is enabled for VTP, can send advertisements, but does not have enough nonvolatile storage to store VLAN configurations. You cannot configure VLANs on it. When a VTP client starts up, it does not send VTP advertisements until it receives advertisements to initialize its VLAN database.		
	Transparent: a switch in VTP transparent mode is disabled for VTP, does not send or learn from advertisements sent by other devices, and cannot affect VLAN configurations on other devices in the network. The switch receives VTP advertisements and forwards them on all trunk ports except the one on which the advertisement was received.		
VTP Domain Name	Name that identifies the administrative domain for the switch.		
VTP Pruning ModeDisplays whether pruning is enabled or disabled. Enabling pruning on a venables pruning for the entire management domain. Pruning restricts floor to those trunk links that the traffic must use to access the appropriate ned devices.			
VTP V2 Mode	Displays if VTP Version 2 mode is enabled. All VTP Version 2 switches operate in Version 1 mode by default. Each VTP switch automatically detects the capabilities of all the other VTP devices. A network of VTP devices should be configured to Version 2 only if all VTP switches in the network can operate in Version 2 mode.		
VTP Traps Generation	Displays whether VTP traps are sent to a network management station.		
MD5 Digest	A 16-byte checksum of the VTP configuration.		
Configuration Last Modified	Displays the date and time of the last configuration modification. Displays the IP address of the switch that caused the configuration change to the database.		

## Table 2-50show vtp status Field Descriptions

This is an example of output from the **show vtp status** command for a switch running VTP version 3. .

VTP Domain Name : VTP Pruning Mode : VTP Traps Generation :	3 Cisco Disabled
VTP Operating Mode Number of existing VLANs Number of existing extended VLANs Configuration Revision Primary ID Primary Description MD5 digest Feature MST:	: 7 : 0
VTP Operating Mode Configuration Revision Primary ID Primary Description MD5 digest Feature UNKNOWN:	: Client : 0 : 0000.0000.0000 : : 0x00 0x00 0x00 0x00 0x00 0x00 0x00 0x
VTP Operating Mode	: Transparent

Related Commands	Command	Description		
	clear vtp counters	Clears the VTP and pruning counters.		
	vtp (global configuration)	Configures the VTP filename, interface name, domain name, and mode.
