

# **Catalyst 2975 Switch Debug Commands**

This appendix describes the **debug** privileged EXEC commands that have been created or changed for use with the Catalyst 2975 switch. These commands are helpful in diagnosing and resolving internetworking problems and should be enabled only under the guidance of Cisco technical support staff.

Because debugging output is assigned high priority in the CPU process, it can render the system unusable. For this reason, use the **debug** commands only to troubleshoot specific problems or during troubleshooting sessions with Cisco technical support staff. It is best to use the **debug** commands during periods of lower network traffic and fewer users. Debugging during these periods decreases the likelihood that increased **debug** command processing overhead will affect system use.

#### debug authentication

Use the **debug authentication** privileged EXEC command to enable debugging of the authentication settings on an interface. Use the **no** form of this command to disable debugging.

debug authentication {all | errors | events | sync | feature [all] [acct] [auth\_fail\_vlan]
 [auth\_policy] [autocfg] [critical] [dhcp] [guest\_vlan] [mab\_pm] [mda] [multi\_auth]
 [switch\_pm] [switch\_sync] [vlan\_assign] [voice] [webauth] [all | errors | events]}

no debug authentication {all | errors | events | sync | feature [all] [acct] [auth\_fail\_vlan] [auth\_policy] [autocfg] [critical] [dhcp] [guest\_vlan] [mab\_pm] [mda] [multi\_auth] [switch\_pm] [switch\_sync] [vlan\_assign] [voice] [webauth] [all | errors | events]}

Syntax Description	acct	(Optional) Display authentication manager accounting information.
	all	(Optional) Display all authentication manager debug messages.
	auth_fail_vlan	(Optional) Display authentication manager errors for the restricted VLAN.
	auth_policy	(Optional) Display authentication policy messages.
	autocfg	(Optional) Display autoconfiguration authentication manager debug messages.
	critical	(Optional) Display the inaccessible authentication bypass messages.
		<b>Note</b> The inaccessible authentication bypass feature is also referred to as critical authentication or the authentication, authorization, and accounting (AAA) fail policy.
	dhcp	(Optional) Display authentication manager debug messages on DHCP dynamic address-enable interfaces.
	errors	(Optional) Display all authentication manager error debug messages.
	events	(Optional) Display all autentication manager event debug messages, including registry and miscellaneous events.
	feature	(Optional) Display authentication manager feature debug messages
	guest_vlan	(Optional) Display guest VLAN authentication manager messages.
	mab_pm	(Optional) Display MAC authentication manager bypass authentication debug messages.
	mda	(Optional) Display multidomain authentication manager debug messages.
	multi_auth	(Optional) Display multi-authentication manager debug authentication messages.
	switch_pm	(Optional) Display switch port manager messages.
	switch_sync	(Optional) Display synchronization messages between the switch, the authentication server, and the connected devices.
	sync	(Optional) Display operational synchronization authentication manager debug messages.
	vlan_assign	(Optional) Display the VLAN-assignment debug messages.
	voice	(Optional) Display the voice-VLAN debug messages.
	webauth	(Optional) Display web authentication manager debug messages.

#### **Defaults** Authentication debugging is disabled.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(52)SE	This command was introduced.

#### **Usage Guidelines** The **undebug authentication** command is the same as the **no debug authentication** command.

When you enable debugging, it is enabled only on the stack master.

To enable debugging on a stack member, you can start a session from the stack master by using the **session switch-number** privileged EXEC command and then entering the **debug authentication** command at the command-line prompt of the stack member. You also can use the **remote command stack-member-number** *line* privileged EXEC command on the stack master switch to enable debugging on a stack member.

<b>Related Commands</b>	Command	Description
	authentication control-direction	Configures the port mode as unidirectional or bidirectional.
	authentication event	Sets the action for specific authentication events.
	authentication fallback	Configures a port to use web authentication as a fallback method for clients that do not support IEEE 802.1x authentication.
	authentication host-mode	Sets the authorization manager mode on a port.
	authentication open	Enables or disables open access on a port.
	authentication order	Sets the order of authentication methods used on a port.
	authentication periodic	Enables or disables reauthentication on a port.
	authentication port-control	Enables manual control of the port authorization state.
	authentication priority	Adds an authentication method to the port-priority list.
	authentication violation	Configures the violation modes that occur when a new device connects to a port or when a new device connects to a port after the maximum number of devices are connected to that port.
	show authentication	Displays information about authentication manager events on the switch.

#### debug auto qos

Use the **debug auto qos** privileged EXEC command to enable debugging of the automatic quality of service (auto-QoS) feature. Use the **no** form of this command to disable debugging.

debug auto qos

no debug auto qos

- Syntax Description This command has no keywords or arguments.
- **Defaults** Auto-QoS debugging is disabled.
- Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(46)EX	This command was introduced.

# **Usage Guidelines** To display the QoS configuration that is automatically generated when auto-QoS is enabled, enable debugging *before* you enable auto-QoS. You enable debugging by entering the **debug auto qos** privileged EXEC command.

The undebug auto qos command is the same as the no debug auto qos command.

When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member. You also can use the **remote command** *stack-member-number LINE* privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.

#### **Examples**

This example shows how to display the QoS configuration that is automatically generated when auto-QoS is enabled:

Switch# debug auto qos
AutoQoS debugging is on
Switch# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Switch(config)# interface gigabitethernet2/0/1
Switch(config-if)# auto qos voip cisco-phone
21:29:41: mls qos map cos-dscp 0 8 16 26 32 46 48 56
21:29:41: mls qos
21:29:42: no mls qos srr-queue input cos-map
21:29:42: no mls qos srr-queue input cos-map

```
21:29:42: mls qos srr-queue input cos-map queue 2 threshold 2 4 6 7
21:29:43: mls qos srr-queue input cos-map queue 2 threshold 3 3 5
21:29:43: mls qos srr-queue output cos-map queue 1 threshold 3 5
21:29:43: mls gos srr-queue output cos-map queue 2 threshold 3 3 6 7
21:29:44: mls gos srr-queue output cos-map queue 3 threshold 3 2 4
21:29:44: mls qos srr-queue output cos-map queue 4 threshold 2 1
21:29:44: mls qos srr-queue output cos-map queue 4 threshold 3 0
21:29:44: no mls qos srr-queue input dscp-map
21:29:44: no mls gos srr-queue output dscp-map
21:29:44: mls qos srr-queue input dscp-map queue 1 threshold 2 9 10 11 12 13 14 15
21:29:45: mls qos srr-queue input dscp-map queue 1 threshold 3 0 1 2 3 4 5 6 7
21:29:45: mls qos srr-queue input dscp-map queue 1 threshold 3 32
21:29:45: mls qos srr-queue input dscp-map queue 2 threshold 1 16 17 18 19 20 21 22 23

```

<b>Related Commands</b>	Command	Description
	auto qos voip	Configures auto-QoS for voice over IP (VoIP) within a QoS domain.
	show auto qos	Displays the initial configuration that is generated by the automatic auto-QoS feature
	show debugging	Displays information about the types of debugging that are enabled.

# debug backup

Use the **debug backup** privileged EXEC command to enable debugging of the Flex Links backup interface. Use the **no** form of this command to disable debugging.

debug backup {all | errors | events | vlan-load-balancing}

no debug backup {all | errors | events | vlan-load-balancing}

Syntax Description		
Syntax Description	all	Display all backup interface debug messages.
	errors	Display backup interface error or exception debug messages.
	events	Display backup interface event debug messages.
	vlan-load-	Display backup interface VLAN load balancing.
	balancing	
Defaults	Backup interface de	bugging is disabled.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(46)EX	This command was introduced.
Usage Guidelines	The undebug back	<b>up</b> command is the same as the <b>no debug backup</b> command.
Usage Guidelines	When you enable de member, you can sta EXEC command. Th also can use the <b>rem</b>	bugging, it is enabled only on the stack master. To enable debugging on a stack art a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged nen enter the <b>debug</b> command at the command-line prompt of the stack member. You

## debug cisp

Use the **debug cisp** global configuration command to enable debugging message exchanges and events on a Client Information Signalling Protocol (CISP)-enabled interface.Use the **no** form of this command to disable debugging.

debug cisp [all | errors | events | packets | sync]

#### no debug cisp [initialization | interface-configuration | rpc]

Syntax Description	all	Display all CISP debug messages.
	errors	Display CISP debug messages.
	events	Display CISP event debug messages.
	packets	Display CISP packet debug messages.
	sync	Display CISP operational synchronization debug messages.
Defaults	Debugging is disabled.

#### debug cluster

Use the **debug cluster** privileged EXEC command to enable debugging of cluster-specific events. Use the **no** form of this command to disable debugging.

debug cluster {discovery | events | extended | hsrp | http | ip [packet] | members | nat | neighbors | platform | snmp | vqpxy}

no debug cluster {discovery | events | extended | hsrp | http | ip [packet] | members | nat | neighbors | platform | snmp | vqpxy}

Syntax Description	discovery	Display cluster discovery debug messages.
	events	Display cluster event debug messages.
	extended	Display extended discovery debug messages.
	hsrp	Display the Hot Standby Router Protocol (HSRP) debug messages.
	http	Display Hypertext Transfer Protocol (HTTP) debug messages.
	ip [packet]	Display IP or transport packet debug messages.
	members	Display cluster member debug messages.
	nat	Display Network Address Translation (NAT) debug messages.
	neighbors	Display cluster neighbor debug messages.
	platform	Display platform-specific cluster debug messages.
	snmp	Display Simple Network Management Protocol (SNMP) debug messages.
	vqpxy	Display VLAN Query Protocol (VQP) proxy debug messages.
Command Modes	Privileged EXEC	Modification
Gommanu mistory	12.2(46)EX	This command was introduced.
Usage Guidelines		available only on the cluster command switch stack or cluster command switch.
Usage duidennes		
	The undebug clu	ster command is the same as the <b>no debug cluster</b> command.
	member, you can EXEC command.	debugging, it is enabled only on the stack master. To enable debugging on a stack start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged Then enter the <b>debug</b> command at the command-line prompt of the stack member. You emote command <i>stack-member-number LINE</i> privileged EXEC command on the stack
		enable debugging on a member switch without first starting a session.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show cluster	Displays the cluster status and a summary of the cluster to which the switch belongs.
	show cluster candidates	Displays a list of candidate switches when entered on the command switch.
	show cluster members	Displays information about cluster members when executed on the command switch.

#### debug dot1x

Use the **debug dot1x** privileged EXEC command to enable debugging of the IEEE 802.1x authentication feature. Use the **no** form of this command to disable debugging.

debug dot1x {all | errors | events | feature | packets | registry | state-machine}

no debug dot1x {all | errors | events | feature | packets | registry | state-machine}

Syntax Description		
	all	Display all IEEE 802.1x authentication debug messages.
	errors	Display IEEE 802.1x error debug messages.
	events	Display IEEE 802.1x event debug messages.
	feature	Display IEEE 802.1x feature debug messages.
	packets	Display IEEE 802.1x packet debug messages.
	registry	Display IEEE 802.1x registry invocation debug messages.
	state-machine	Display state-machine related-events debug messages.
Note	Though visible in	the command-line help strings, the <b>redundancy</b> keyword is not supported.
Defaults	Debugging is dis	abled.
Command Modes	Privileged EXEC

master switch to enable debugging on a member switch without first starting a session.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show dot1x	Displays IEEE 802.1xstatistics, administrative status, and operational status for the switch or for the specified port.

## debug dtp

Use the **debug dtp** privileged EXEC command to enable debugging of the Dynamic Trunking Protocol (DTP) activity. Use the **no** form of this command to disable debugging.

debug dtp {aggregation | all | decision | events | oserrs | packets | queue | states | timers}

no debug dtp {aggregation | all | decision | events | oserrs | packets | queue | states | timers}

Syntax Description	aggregation	Display DTP user-message aggregation debug messages.
	all	Display all DTP debug messages.
	decision	Display the DTP decision-table debug messages.
	events	Display the DTP event debug messages.
	oserrs	Display DTP operating system-related error debug messages.
	packets	Display DTP packet-processing debug messages.
	queue	Display DTP packet-queueing debug messages.
	states	Display DTP state-transition debug messages.
	timers	Display DTP timer-event debug messages.
Defaults	Debugging is disabl	ed.

#### debug eap

Use the **debug eap** privileged EXEC command to enable debugging of the Extensible Authentication Protocol (EAP) activity. Use the **no** form of this command to disable debugging.

 $debug \ dot1x \ \{all \ | \ authenticator \ | \ errors \ | \ events \ | \ md5 \ | \ packets \ | \ peer \ | \ sm \}$ 

no debug dot1x {all | authenticator | errors | events | md5 | packets | peer | sm}

Syntax Description	all	Display all EAP debug messages.
	authenticator	Display authenticator debug messages.
	errors	Display EAP error debug messages.
	events	Display EAP event debug messages.
	md5	Display EAP-MD5 debug messages.
	packets	Display EAP packet debug messages.
	peer	Display EAP peer debug messages.
	sm	Display EAP state-machine related-events debug messages.
Defaults	Debugging is dis	abled.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(46)EX	This command was introduced.
Usage Guidelines	The <b>undebug do</b>	<b>t1x</b> command is the same as the <b>no debug dot1x</b> command.
	When you enable debugging, it is enabled only on the stack master. To enable debugg member, you can start a session from the stack master by using the <b>session</b> <i>switch-nux</i> EXEC command. Then enter the <b>debug</b> command at the command-line prompt of the st also can use the <b>remote command</b> <i>stack-member-number LINE</i> privileged EXEC commaster switch to enable debugging on a member switch without first starting a session

#### debug etherchannel

Use the **debug etherchannel** privileged EXEC command to enable debugging of the EtherChannel/PAgP shim. This shim is the software module that is the interface between the Port Aggregation Protocol (PAgP) software module and the port manager software module. Use the **no** form of this command to disable debugging.

debug etherchannel [all | detail | error | event | idb]

no debug etherchannel [all | detail | error | event | idb]

Syntax Description	all (Optiona	al) Display all EtherChannel debug messages.
	detail (Optiona	al) Display detailed EtherChannel debug messages.
	error (Optiona	al) Display EtherChannel error debug messages.
	event (Optiona	al) Debug major EtherChannel event messages.
	idb (Optiona	al) Display PAgP interface descriptor block debug messages.
Note	Though visible in the c	ommand-line help strings, the <b>linecard</b> keyword is not supported.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(46)EX	This command was introduced.
Usage Guidelines	If you do not specify a	keyword, all debug messages appear.
	The undebug ethercha	<b>unnel</b> command is the same as the <b>no debug etherchannel</b> command.
	member, you can start a EXEC command. Then also can use the <b>remote</b>	gging, it is enabled only on the stack master. To enable debugging on a stack a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged enter the <b>debug</b> command at the command-line prompt of the stack member. You <b>command</b> <i>stack-member-number LINE</i> privileged EXEC command on the stack e debugging on a member switch without first starting a session.
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show etherchannel	Displays EtherChannel information for the channel.
	show concrementer	Engraçõe Enter entanter information for the entanter.

### debug ilpower

Use the **debug ilpower** privileged EXEC command to enable debugging of the power controller and Power over Ethernet (PoE) system. Use the **no** form of this command to disable debugging.

debug ilpower {cdp | controller | event | ha | port | powerman | registries}

no debug ilpower {cdp | controller | event | ha | port | powerman | registries}

Syntax Description	cdp	Display PoE Cisco Discovery Protocol (CDP) debug messages.
	controller	Display PoE controller debug messages.
	event	Display PoE event debug messages.
	ha	Display PoE high-availability messages.
	port	Display PoE port manager debug messages.
	powerman	Display PoE power management debug messages.
	registries	Display PoE registries debug messages.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(46)EX	This command was introduced.
Usage Guidelines	This command is suppo	orted only on PoE-capable switches.
	member, you can start a EXEC command. Then a also can use the <b>remote</b>	gging, it is enabled only on the stack master. To enable debugging on a stack a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged enter the <b>debug</b> command at the command-line prompt of the stack member. You <b>command</b> <i>stack-member-number LINE</i> privileged EXEC command on the stack debugging on a member switch without first starting a session.
Related Commands	Command	Description
	show controllers powe	er inline Displays the values in the registers of the specified PoE controller.
	show power inline	Displays the power status for the specified PoE port or for all PoE ports.

# debug interface

Use the **debug interface** privileged EXEC command to enable debugging of interface-related activities. Use the **no** form of this command to disable debugging.

debug interface { interface-id | null interface-number | port-channel port-channel-number |
 vlan vlan-id }

**no debug interface** {*interface-id* | **null** *interface-number* | **port-channel** *port-channel-number* | **vlan** *vlan-id*}

Syntax Description	interface-id	Display debug messages for the specified physical port, identified by type switch number/module number/ port, for example <b>gigabitethernet 1/0/2</b> .
	null interface-number	Display debug messages for null interfaces. The <i>interface-number</i> is always <b>0</b> .
	<b>port-channel</b> port-channel-number	Display debug messages for the specified EtherChannel port-channel interface. The <i>port-channel-number</i> range is 1 to 6.
	vlan vlan-id	Display debug messages for the specified VLAN. The <i>vlan-id</i> range is 1 to 4094.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(46)EX	This command was introduced.
Usage Guidelines	•	keyword, all debug messages appear.
	The <b>undebug interface</b> command is the same as the <b>no debug interface</b> command. When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged EXEC command. Then enter the <b>debug</b> command at the command-line prompt of the stack member. You also can use the <b>remote command</b> <i>stack-member-number LINE</i> privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.	
Related Commands	Command	Description
		-
	show debugging	Displays information about the types of debugging that are enabled
	show debugging show etherchannel	Displays information about the types of debugging that are enabled. Displays EtherChannel information for the channel.

# debug IIdp packets

Use the **debug lldp packets** privileged EXEC command to enable debugging of Link Layer Discovery Protocol (LLDP) packets. Use the **no** form of this command to disable debugging.

debug lldp packets

no debug lldp packets

Syntax Description	This command has no arguments or keywords.	
Syntax Description	This command has no arguments or keywords.	

**Defaults** Debugging is disabled.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(50)SE	This command was introduced.

**Usage Guidelines** The **undebug lldp packets** command is the same as the **no debug lldp packets** command.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

#### debug mac-notification

Use the **debug mac-notification** privileged EXEC command to enable debugging of MAC notification events. Use the **no** form of this command to disable debugging.

debug mac-notification

no debug mac-notification

Syntax Description This command has no arguments or keywords	s or keywords.
--	----------------

- **Defaults** Debugging is disabled.
- **Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(46)EX	This command was introduced.

#### **Usage Guidelines** The **undebug mac-notification** command is the same as the **no debug mac-notification** command.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show mac address-table notification	Displays the MAC address notification information for all interfaces or the specified interface.

#### debug macro

Use the **debug macro** privileged EXEC command to enable debugging of the Auto Smartports macro activity. Use the **no** form of this command to disable debugging.

debug macro {action | all | api | common | detector | policydir | server | xml}

no debug macro {action | all | api | common | detector | policydir | server | xml}

Syntax Description	action	Display all action debug messages.
	all	Display all debug messages.
	api	Display all API debug messages.
	common	Display common debug messages.
	detector	Display detector error debug messages.
	policydir	Display policy director debug messages.
	server	Display server debug messages.
	xml	Display XML debug messages.
Defaults	Debugging is disa	bled.

#### debug matm

Use the **debug matm** privileged EXEC command to enable debugging of platform-independent MAC address management. Use the **no** form of this command to disable debugging.

debug matm

no debug matm

- **Syntax Description** This command has no arguments or keywords.
- **Defaults** Debugging is disabled.
- Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(46)EX	This command was introduced.

#### **Usage Guidelines** The **undebug matm** command is the same as the **no debug matm** command.

<b>Related Commands</b>	Command	Description
	debug platform matm	Displays information about platform-dependent MAC address management.
	show debugging	Displays information about the types of debugging that are enabled.

#### debug matm move update

Use the **debug matm move update** privileged EXEC command to enable debugging of MAC address-table move update message processing.

debug matm move update

no debug matm move update

Syntax Description This command has no arguments or keywords.

**Defaults** Debugging is disabled.

Command Modes Privileged EXEC

Command History	Release	Modification	
	12.2(25)SED	This command was introduced.	
	12.2(46)EX	This command was introduced.	

#### **Usage Guidelines** The **undebug matm move update** command is the same as the **no debug matm move update** command.

<b>Related Commands</b>	Command	Description
	mac address-table move update { receive   transmit }	Configures MAC address-table move update feature on the switch.
	show debugging	Displays information about the types of debugging that are enabled.
	show mac address-table move update	Displays the MAC address-table move update information on the switch.

#### debug monitor

Use the **debug monitor** privileged EXEC command to enable debugging of the Switched Port Analyzer (SPAN) feature. Use the **no** form of this command to disable debugging.

debug monitor {all | errors | idb-update | info | list | notifications | platform | requests | snmp}

no debug monitor {all | errors | idb-update | info | list | notifications | platform | requests | snmp}

all	Display all SPAN debug messages.		
errors	Display detailed SPAN error debug messages.		
idb-update	Display SPAN interface description block (IDB) update-trace debug message		
info	Display SPAN informational-tracing debug messages.		
list	Display SPAN port and VLAN-list tracing debug messages.		
notifications	Display SPAN notification debug messages.		
platform	Display SPAN platform-tracing debug messages.		
requests	Display SPAN request debug messages.		
snmp	Display SPAN and Simple Network Management Protocol (SNMP) tracing debug messages.

show mvr

#### debug nmsp

Use the **debug nmsp** privileged EXEC command to the enable debugging of the Network Mobility Services Protocol (NMSP) on the switch. This command is available only when your switch is running the cryptographic (encrypted) software image. Use the **no** form of this command to disable debugging.

debug nmsp {all | connection | error | event | packet | rx | tx}

no debug nmsp

Syntax Description	This command	has no	arguments	or keywords.
--------------------	--------------	--------	-----------	--------------

**Defaults** Debugging is disabled.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(52)SE	This command was introduced.

#### **Usage Guidelines** The **undebug nmsp** command is the same as the **no debug nmsp** command.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show nmsp	Displays the NMSP information.

#### debug nvram

Use the **debug nvram** privileged EXEC command to enable debugging of NVRAM activity. Use the **no** form of this command to disable debugging.

debug nvram

no debug nvram

Syntax Description	This command has no	arguments or keywords.
--------------------	---------------------	------------------------

- **Defaults** Debugging is disabled.
- Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(46)EX	This command was introduced.

#### **Usage Guidelines** The **undebug nvram** command is the same as the **no debug nvram** command.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

### debug pagp

Use the **debug pagp** privileged EXEC command to enable debugging of Port Aggregation Protocol (PAgP) activity. Use the **no** form of this command to disable debugging.

debug pagp [all | dual-active | event | fsm | misc | packet]

no debug pagp [all | dual-active | event | fsm | misc | packet]

Syntax Description	all	(Optional) Display all PAgP debug messages.
	dual-active	(Optional) Display dual-active detection messages.
	event	(Optional) Display PAgP event debug messages.
	fsm	(Optional) Display PAgP finite state-machine debug messages.
	misc	(Optional) Display miscellaneous PAgP debug messages.
	packet	(Optional) Display PAgP packet debug messages.
Defaults	Debugging is di	sabled.
Command Modes	Privileged EXE	C
Command History	Release	Modification
	12.2(46)EX	This command was introduced.
Usage Guidelines	When you enab member, you ca EXEC command also can use the	agp command is the same as the <b>no debug pagp</b> command. It debugging, it is enabled only on the stack master. To enable debugging on a stack in start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged d. Then enter the <b>debug</b> command at the command-line prompt of the stack member. You <b>remote command</b> <i>stack-member-number LINE</i> privileged EXEC command on the stack of enable debugging on a member switch without first starting a session.

#### debug platform cli-redirection main

Use the **debug platform cli-redirection main** privileged EXEC command to enable debugging of the main (important) command-line interface (CLI) redirection events. Use the **no** form of this command to disable debugging.

debug platform cli-redirection main

no debug platform cli-redirection main

- **Syntax Description** This command has no arguments or keywords.
- **Defaults** Debugging is disabled.
- **Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(46)EX	This command was introduced.

### Usage Guidelines The undebug platform cli-redirection main command is the same as the no debug platform cli-redirection main command.

When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member. You also can use the **remote command** *stack-member-number LINE* privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

# debug platform configuration

Use the **debug platform configuration** privileged EXEC command to enable debugging of configuration file activity across the stack. Use the **no** form of this command to disable debugging.

debug platform configuration {all | reception | transmission}

no debug platform configuration {all | reception | transmission}

Syntax Description	all	Display debug messages for all configuration file transmission and reception events throughout the stack.
	reception	Display debug messages for configuration file reception from other stack members.
	transmission	Display debug messages for configuration file transmission to other stack members.
Defaults	Debugging is di	sabled.
Command Modes	Privileged EXE	c
Command History	Release	Modification
	12.2(46)EX	This command was introduced.
Usage Guidelines	command.	<b>latform configuration</b> command is the same as the <b>no debug platform configuration</b> le debugging, it is enabled only on the stack master. To enable debugging on a stack
	member, you ca EXEC command also can use the	n start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged d. Then enter the <b>debug</b> command at the command-line prompt of the stack member. You <b>remote command</b> <i>stack-member-number LINE</i> privileged EXEC command on the stack o enable debugging on a member switch without first starting a session.
<b>Related Commands</b>	Command	Description

## debug platform cpu-queues

Use the **debug platform cpu-queues** privileged EXEC command to enable debugging of platform central processing unit (CPU) receive queues. Use the **no** form of this command to disable debugging.

debug platform cpu-queues {broadcast-q | cbt-to-spt-q | cpuhub-q | host-q | icmp-q | igmp-snooping-q | layer2-protocol-q | logging-q | remote-console-q | software-fwd-q | stp-q}

no debug platform cpu-queues {broadcast-q | cbt-to-spt-q | cpuhub-q | host-q | icmp-q | igmp-snooping-q | layer2-protocol-q | logging-q | remote-console-q | software-fwd-q | stp-q}

Syntax Description	broadcast-q	Display debug messages about packets received by the broadcast queue.
	cbt-to-spt-q	Display debug messages about packets received by the core-based tree to shortest-path tree (cbt-to-spt) queue.
	cpuhub-q	Display debug messages about packets received by the CPU heartbeat queue.
	host-q	Display debug messages about packets received by the host queue.
	icmp-q	Display debug messages about packets received by the Internet Control Message Protocol (ICMP) queue.
	igmp-snooping-q	Display debug messages about packets received by the Internet Group Management Protocol (IGMP)-snooping queue.
	layer2-protocol-q	Display debug messages about packets received by the Layer 2 protocol queue.
	logging-q	Display debug messages about packets received by the logging queue.
	remote-console-q	Display debug messages about packets received by the remote console queue.
	software-fwd-q	Debug packets received by the software forwarding queue.
	stp-q	Debug packets received by the Spanning Tree Protocol (STP) queue.

<u>Note</u>

Though visible in the command-line help strings, the **routing-protocol-Q** and **rpffail-q** keywords are not supported.

**Defaults** Debugging is disabled.

### debug platform ip igmp snooping

Use the **debug platform ip igmp snooping** privileged EXEC command to enable debugging of platform-dependent Internet Group Management Protocol (IGMP) snooping. Use the **no** form of this command to disable debugging.

- debug platform ip igmp snooping {all | di | error | event | group | mgmt | pak | retry | rpc | warn}
- debug platform ip igmp snooping pak {*ip-address* | error | ipopt | leave| query | report | rx | svi | tx}

debug platform ip igmp snooping rpc [cfg | misc | vlan]

no debug platform ip igmp snooping {all | di | error | event | group | mgmt | pak | retry | rpc | warn}

Syntax Description	all	Display all IGMP snooping debug messages.
	di	Display IGMP snooping destination index (di) coordination remote procedure call (RPC) debug messages.
	error	Display IGMP snooping error messages.
	event	Display IGMP snooping event debug messages.
	group	Display IGMP snooping group debug messages.
	mgmt	Display IGMP snooping management debug messages.
	pak { <i>ip-address</i>   error   ipopt   leave	Display IGMP snooping packet event debug messages. The keywords have these meanings:
	query   report   rx	• <i>ip-address</i> —IP address of the IGMP group.
	svi   tx}	• error—Display IGMP snooping packet error debug messages.
		• <b>ipopt</b> —Display IGMP snooping IP bridging options debug messages.
		• leave—Display IGMP snooping leave debug messages.
		• <b>query</b> —Display IGMP snooping query debug messages.
		• <b>report</b> —Display IGMP snooping report debug messages.
		• <b>rx</b> —Display IGMP snooping received packet debug messages.
		• <b>svi</b> —Display IGMP snooping switched virtual interface (SVI) packet debug messages.
		• tx—Display IGMP snooping sent packet debug messages.
	retry	Display IGMP snooping retry debug messages.
	rpc [cfg   misc   vlan]	Display IGMP snooping remote procedure call (RPC) event debug messages. The keywords have these meanings:
		• <b>cfg</b> —(Optional) Display IGMP snooping RPC debug messages.
		• <b>misc</b> —(Optional) IGMP snooping miscellaneous RPC debug messages.
		• vlan—(Optional) IGMP snooping VLAN assert RPC debug messages.
	warn	Display IGMP snooping warning messages.

<u>Note</u>

Though visible in the command-line help strings, the **rpc l3mm** keyword is not supported.

**Defaults** Debugging is disabled.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(46)EX	This command was introduced.

# Usage Guidelines The undebug platform ip igmp snooping command is the same as the no debug platform ip igmp snooping command.

When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member. You also can use the **remote command** *stack-member-number LINE* privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.

<b>Related Commands</b>	Command	Description
	debug ip igmp snooping	Displays information about platform-independent IGMP snooping activity.

#### Usage Guidelines

The **undebug platform phy** command is the same as the **no debug platform phy** command.

When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member. You also can use the **remote command** *stack-member-number LINE* privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

### debug platform pm

Use the **debug platform pm** privileged EXEC command to enable debugging of the platform-dependent port manager software module. Use the **no** form of this command to disable debugging.

- debug platform pm {all | counters | errdisable | etherchnl | exceptions | hpm-events | idb-events | if-numbers | ios-events | link-status | platform | pm-events | pm-span | pm-vectors [detail] | rpc [general | oper-info | state | vectors | vp-events] | soutput-vectors | stack-manager | sync | vlans}
- no debug platform pm {all | counters | errdisable | etherchnl | exceptions | hpm-events | idb-events | if-numbers | ios-events | link-status | platform | pm-events | pm-span | pm-vectors [detail] | rpc [general | oper-info | state | vectors | vp-events] | soutput-vectors | stack-manager | sync | vlans}

Syntax Description	all	Display all port-manager debug messages.
	counters	Display counters for remote procedure call (RPC) debug messages.
	errdisable	Display error-disabled related-events debug messages.
	etherchnl	Display EtherChannel related-events debug messages.
	exceptions	Display system exception debug messages.
	hpm-events	Display platform port-manager event debug messages.
	idb-events	Display interface descriptor block (IDB) related-events debug messages.
	if-numbers	Display interface-number translation-event debug messages.
	ios-events	Display Cisco IOS event debug messages.
	link-status	Display interface link-detection event debug messages.
	platform	Display port-manager function-event debug messages.
	pm-events	Display port manager event debug messages.
	pm-span	Display port manager Switched Port Analyzer (SPAN) event debug messages.
	pm-vectors [detail]	Display port-manager vector-related-event debug messages. The keyword has this meaning:
		• detail—Display vector-function details.
	rpc [general   oper-info   state	Display RPC related-event debug messages. The keywords have these meanings:
	vectors   vp-events]	• general—(Optional) Display RPC general events.
		• <b>oper-info</b> —(Optional) Display operational- and informational-related RPC messages.
		• <b>state</b> —(Optional) Display administrative- and operational-related RPC messages.
		• vectors—(Optional) Display vector-related RPC messages.
		• <b>vp-events</b> —(Optional) Display virtual ports related-events RP messages.
	soutput-vectors	Display IDB output vector event debug messages.

	sync	Display operational synchronization and VLAN line-state event debug messages.
	vlans	Display VLAN creation and deletion event debug messages.
Note	Though visible in the	command-line help strings, the <b>stack-manager</b> keyword is not supported.
Defaults	Debugging is disabled	1.

## debug platform port-security

Use the **debug platform port-security** privileged EXEC command to enable debugging of platform-dependent port-security information. Use the **no** form of this command to disable debugging.

debug platform port-security {add | aging | all | delete | errors | rpc | warnings}

no debug platform port-security {add | aging | all | delete | errors | rpc | warnings}

Syntax Description		
· / · · · · · · · · · · · · · · · · · ·	add	Display secure address addition debug messages.
	aging	Display secure address aging debug messages.
	all	Display all port-security debug messages.
	delete	Display secure address deletion debug messages.
	errors	Display port-security error debug messages.
	rpc	Display remote procedure call (RPC) debug messages.
	warnings	Display warning debug messages.
Defaults	Debugging is disabled	1.
Command Modes	Privileged EXEC

## debug platform qos-acl-tcam

Use the **debug platform qos-acl-tcam** privileged EXEC command to enable debugging of the quality of service (QoS) and access control list (ACL) ternary content addressable memory (TCAM) manager software. Use the **no** form of this command to disable debugging.

debug platform qos-acl-tcam {all | ctcam | errors | labels | mask | rpc | tcam }

no debug platform qos-acl-tcam {all | ctcam | errors | labels | mask | rpc | tcam}

	show debugging	Displays information about the types of debugging that are enabled.
Related Commands	Command	Description
	When you enable debugging, it is enabled only on the stack master. To enable debugging on a sta member, you can start a session from the stack master by using the <b>session</b> <i>switch-number</i> privile EXEC command. Then enter the <b>debug</b> command at the command-line prompt of the stack member also can use the <b>remote command</b> <i>stack-member-number LINE</i> privileged EXEC command on the master switch to enable debugging on a member switch without first starting a session.	
Usage Guidelines	The <b>undebug plat</b> command.	form qos-acl-tcam command is the same as the no debug platform qos-acl-tcam
	12.2(46)EX	This command was introduced.
Command History	Release	Modification
Command Modes	Privileged EXEC	
Defaults	Debugging is disab	oled.
	tcam	Display QATM TCAM-related events debug messages.
	rpc	Display QATM remote procedure call (RPC) related-events debug messages.
	mask	Display QATM mask-related-events debug messages.
	labels	Display QATM label-related-events debug messages.
	ctcam errors	Display Cisco TCAM (CTCAM) related-events debug messages. Display QATM error-related-events debug messages.

#### debug platform resource-manager

Use the **debug platform resource-manager** privileged EXEC command to enable debugging of the resource manager software. Use the **no** form of this command to disable debugging.

debug platform resource-manager {all | dm | erd | errors | madmed | sd | stats | vld}

no debug platform resource-manager {all | dm | erd | errors | madmed | sd | stats | vld}

0 / D 1/		
Syntax Description	all	Display all resource manager debug messages.
	dm	Display destination-map debug messages.
	erd	Display equal-cost-route descriptor-table debug messages.
	errors	Display error debug messages.
	madmed	Display the MAC address descriptor table and multi-expansion descriptor table debug messages.
	sd	Display the station descriptor table debug messages.
	stats	Display statistics debug messages.
	vld	Display the VLAN-list descriptor debug messages.
Defaults	Debugging is disa	bled.

### debug platform snmp

Use the **debug platform snmp** privileged EXEC command to enable debugging of the platform-dependent Simple Network Management Protocol (SNMP) software. Use the **no** form of this command to disable debugging.

#### debug platform snmp

no debug platform snmp

Syntax Description	This command has no	arguments or keywords.
--------------------	---------------------	------------------------

**Defaults** Debugging is disabled.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(46)EX	This command was introduced.

#### **Usage Guidelines** The **undebug platform snmp** command is the same as the **no debug platform snmp** command.

When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member. You also can use the **remote command** *stack-member-number LINE* privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

#### debug platform span

Use the **debug platform span** privileged EXEC command to enable debugging of the platform-dependent Switched Port Analyzer (SPAN) software. Use the **no** form of this command to disable debugging.

#### debug platform span

#### no debug platform span

Syntax Description T	This command has no	arguments or keywords.
----------------------	---------------------	------------------------

**Defaults** Debugging is disabled.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(46)EX	This command was introduced.

#### **Usage Guidelines** The **undebug platform span** command is the same as the **no debug platform span** command.

When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member. You also can use the **remote command** *stack-member-number LINE* privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

# debug platform stack-manager

Use the **debug platform stack-manager** privileged EXEC command to enable debugging of the stack manager software. Use the **no** form of this command to disable debugging.

debug platform stack-manager {all | rpc | sdp | sim | ssm | trace}

no debug platform stack-manager {all | rpc | sdp | sim | ssm | trace}

Syntax Description	all	Display all stack manager debug messages.
	rpc	Display stack manager remote procedure call (RPC) usage debug messages.
	sdp	Display the Stack Discovery Protocol (SDP) debug messages.
	sim	Display the stack information module debug messages.
	ssm	Display the stack state-machine debug messages.
	trace	Trace the stack manager entry and exit debug messages.
Defaults	Debugging is dis	abled.
Command Modes	Privileged EXEC

#### debug platform tcam

Use the **debug platform tcam** privileged EXEC command to enable debugging of ternary content addressable memory (TCAM) access and lookups. Use the **no** form of this command to disable debugging.

debug platform tcam {log | read | search | write} debug platform tcam log 12 {acl {input | output} | local | qos} debug platform tcam log 13 {acl {input | output} | qos} debug platform tcam read {reg | ssram | tcam} debug platform tcam search debug platform tcam write {forw-ram | reg | tcam} no debug platform tcam {log | read | search | write} no debug platform tcam log 12 {acl {input | output} | local | qos} no debug platform tcam log 13 {acl {input | output} | qos} no debug platform tcam read {reg | ssram | tcam} no debug platform tcam read {reg | ssram | tcam} no debug platform tcam search

no debug platform tcam write {forw-ram | reg | tcam}

Syntax Description	log l2 {acl {input   output}   local   qos}	Display Layer 2 field-based CAM look-up type debug messages. The keywords have these meanings:
		• <b>acl</b> { <b>input</b>   <b>output</b> }—Display input or output ACL look-up debug messages.
		• <b>local</b> —Display local forwarding look-up debug messages.
		• <b>qos</b> —Display classification and quality of service (QoS) look-up debug messages.
	l3 {acl {input   output}   qos}	Display Layer 3 field-based CAM look-up type debug messages. The keywords have these meanings:
		• acl {input   output}—Display input or output ACL look-up debug messages.
		• <b>qos</b> —Display classification and quality of service (QoS) look-up debug messages.
		•

	read {reg   ssram   tcam}	Display TCAM-read debug messages. The keywords have these meanings:	
		• <b>reg</b> —Display TCAM-register read debug messages.	
		• <b>ssram</b> —Display synchronous static RAM (SSRAM)-read debug messages.	
		• <b>tcam</b> —Display TCAM-read debug messages.	
	search	Display supervisor-initiated TCAM-search results debug messages.	
	write {forw-ram   reg   tcam}	Display TCAM-write debug messages. The keywords have these meanings:	
		forw-ram—Display forwarding-RAM write debug messages.	
		reg—Display TCAM-register write debug messages.	
		tcam—Display TCAM-write debug messages.	
Note	Though visible in the command-line help strings, the 13 ipv6 {acl {input   output}   local   qos

# debug platform vlan

Use the **debug platform vlan** privileged EXEC command to enable debugging of the VLAN manager software. Use the **no** form of this command to disable debugging.

debug platform vlan {errors | mvid | rpc}

no debug platform vlan {errors | mvid | rpc}

Syntax Description		
Syntax Description	errors	Display VLAN error debug messages.
	mvid	Display mapped VLAN ID allocations and free debug messages.
	rpc	Display remote procedure call (RPC) debug messages.
Defaults	Debugging is disabled	1.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(46)EX	This command was introduced.
	The <b>undebug platform vlan</b> command is the same as the <b>no debug platform vlan</b> command. When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged EXEC command. Then enter the <b>debug</b> command at the command-line prompt of the stack member. You also can use the <b>remote command</b> <i>stack-member-number LINE</i> privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.	
Usage Guidelines	When you enable deb member, you can star EXEC command. The also can use the <b>remo</b>	ugging, it is enabled only on the stack master. To enable debugging on a stack t a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged n enter the <b>debug</b> command at the command-line prompt of the stack member. You <b>te command</b> <i>stack-member-number LINE</i> privileged EXEC command on the stack

# debug pm

Use the **debug pm** privileged EXEC command to enable debugging of port manager (PM) activity. The port manager is a state machine that controls all the logical and physical interfaces. All features, such as VLANs, UniDirectional Link Detection (UDLD), and so forth, work with the port manager to provide switch functions. Use the **no** form of this command to disable debugging.

- debug pm {all | assert | card | etherchnl | hatable | messages | port | redundancy | registry | sm | span | split | vlan | vp}
- no debug pm {all | assert | card | etherchnl | hatable | messages | port | redundancy | registry | sm | span | split | vlan | vp}

Syntax Description	all	Display all DM dabug massagas
	all	Display all PM debug messages.
	assert	Display assert debug messages.
	card	Display line-card related-events debug messages.
	etherchnl	Display EtherChannel related-events debug messages.
	hatable	Display Host Access Table events debug messages.
	messages	Display PM debug messages.
	port	Display port related-events debug messages.
	redundancy	Display redundancy debug messages.
	registry	Display PM registry invocation debug messages.
	sm	Display state-machine related-events debug messages.
	span	Display spanning-tree related-events debug messages.
	split	Display split-processor debug messages.
	vlan	Display VLAN related-events debug messages.
	vp	Display virtual port related-events debug messages.

Though visible in the command-line help strings, the scp and pvlan keywords are not supported.

**Defaults** Debugging is disabled.

Command Modes Privileged EXEC

12.2(46)EX

#### **Command History**

Modification

This command was introduced.

#### Usage Guidelines

The **undebug pm** command is the same as the **no debug pm** command.

When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member. You also can use the **remote command** *stack-member-number LINE* privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.

## debug port-security

Use the **debug port-security** privileged EXEC command to enable debugging of the allocation and states of the port security subsystem. Use the **no** form of this command to disable debugging.

debug port-security

no debug port-security

Syntax Description	This command has no arguments or keywor	ds.
--------------------	---	-----

**Defaults** Debugging is disabled.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(46)EX	This command was introduced.

**Usage Guidelines** The **undebug port-security** command is the same as the **no debug port-security** command.

When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member. You also can use the **remote command** *stack-member-number LINE* privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show port-security	Displays port-security settings for an interface or for the switch.

#### debug qos-manager

Use the **debug qos-manager** privileged EXEC command to enable debugging of the quality of service (QoS) manager software. Use the **no** form of this command to disable debugging.

debug qos-manager {all | event | verbose}

no debug qos-manager {all | event | verbose}

Syntax Description	all	Display all QoS-manager debug messages.
	event	Display QoS-manager related-event debug messages.
	verbose	Display QoS-manager detailed debug messages.
Defaults	Debugging is disabl	ed.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(46)EX	This command was introduced.
Usage Guidelines	The undebug qos-n	nanager command is the same as the no debug qos-manager command.
Usage Guidelines	When you enable de member, you can sta EXEC command. Th also can use the <b>rem</b>	nanager command is the same as the no debug qos-manager command. Ebugging, it is enabled only on the stack master. To enable debugging on a stack art a session from the stack master by using the session switch-number privileged then enter the debug command at the command-line prompt of the stack member. You ote command stack-member-number LINE privileged EXEC command on the stack able debugging on a member switch without first starting a session.
Usage Guidelines Related Commands	When you enable de member, you can sta EXEC command. Th also can use the <b>rem</b>	bugging, it is enabled only on the stack master. To enable debugging on a stack art a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged hen enter the <b>debug</b> command at the command-line prompt of the stack member. You <b>ote command</b> <i>stack-member-number LINE</i> privileged EXEC command on the stack

## debug spanning-tree

Use the **debug spanning-tree** privileged EXEC command to enable debugging of spanning-tree activities. Use the **no** form of this command to disable debugging.

- debug spanning-tree {all | backbonefast | bpdu | bpdu-opt | config | csuf/csrt | etherchannel |
   events | exceptions | general | mstp | pvst+ | root | snmp | switch | synchronization |
   uplinkfast}
- no debug spanning-tree {all | backbonefast | bpdu | bpdu-opt | config | csuf/csrt | etherchannel | events | exceptions | general | mstp | pvst+ | root | snmp | switch | synchronization | uplinkfast}

backbonefast         Display BackboneFast-event debug messages.           bpdu         Display spanning-tree bridge protocol data unit (BPDU) debug messages.           config         Display optimized BPDU handling debug messages.           config         Display ross-stack UplinkFast and cross-stack rapid transition activity debug messages.           exter/csrt         Display EtherChannel-support debug messages.           events         Display spanning-tree option option wessages.           events         Display spanning-tree topology event debug messages.           exceptions         Display general spanning-tree activity debug messages.           general         Display per-VLAN spanning-tree plus (PVST+) event debug messages.           mstp         Debug Multiple Spanning-tree rot-event debug messages.           synchronization         Display spanning-tree rot-event debug messages.           synchronization         Display spanning-tree synchronization event debug messages.           switch         Display switch shim command debug messages.           switch         Display switch shim command debug messages.           uplinkfast         Display UplinkFast-event debug messages.           switch         Display uplinkFast-event debug messages.           spinal y debug messages.         Spinal y debug messages.           switch         Display UplinkFast-event debug messages.	Syntax Description	all	Display all spanning-tree debug messages.

#### **Usage Guidelines** The **undebug spanning-tree command is the** same as the **no debug spanning-tree** command.

When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member. You also can use the **remote command** *stack-member-number LINE* privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.

#### Related Commands

Command	Description
show debugging	Displays information about the types of debugging that are enabled.
show spanning-tree	Displays spanning-tree state information.

	member, you can sta EXEC command. Th also can use the <b>reme</b>	bugging, it is enabled only on the stack master. To enable debugging on a stack rt a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged en enter the <b>debug</b> command at the command-line prompt of the stack member. You <b>ote command</b> <i>stack-member-number LINE</i> privileged EXEC command on the stack ble debugging on a member switch without first starting a session.
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show spanning-tree	Displays spanning-tree state information.

## debug spanning-tree bpdu-opt

Use the **debug spanning-tree bpdu-opt** privileged EXEC command to enable debugging of optimized spanning-tree bridge protocol data units (BPDUs) handling. Use the **no** form of this command to disable debugging.

debug spanning-tree bpdu-opt [detail | packet]

no debug spanning-tree bpdu-opt [detail | packet]

Syntax Description	detail (	Optional) Display detailed optimized BPDU-handling debug messages.
	packet (	Optional) Display packet-level optimized BPDU-handling debug messages.
Defaults	Debugging is disab	led.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(46)EX	This command was introduced.
Usage Guidelines	The <b>undebug span</b> command.	ning-tree bpdu-opt command is the same as the no debug spanning-tree bpdu-opt
	member, you can st EXEC command. T also can use the <b>ren</b>	ebugging, it is enabled only on the stack master. To enable debugging on a stack art a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged hen enter the <b>debug</b> command at the command-line prompt of the stack member. You <b>note command</b> <i>stack-member-number LINE</i> privileged EXEC command on the stack able debugging on a member switch without first starting a session.
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show spanning-tro	ee Displays spanning-tree state information.

#### debug spanning-tree mstp

Use the **debug spanning-tree mstp** privileged EXEC command to enable debugging of the Multiple Spanning Tree Protocol (MSTP) software. Use the **no** form of this command to disable debugging.

debug spanning-tree mstp {all | boundary | bpdu-rx | bpdu-tx | errors | flush | init | migration | pm | proposals | region | roles | sanity\_check | sync | tc | timers}

no debug spanning-tree mstp {all | boundary | bpdu-rx | bpdu-tx | errors | flush | init | migration | pm | proposals | region | roles | sanity\_check | sync | tc | timers}

Syntax Description	all	Enable all the debugging messages.
	boundary	Debug flag changes at these boundaries:
		• An multiple spanning-tree (MST) region and a single spanning-tree region running Rapid Spanning Tree Protocol (RSTP)
		• An MST region and a single spanning-tree region running 802.1D
		• An MST region and another MST region with a different configuration
	bpdu-rx	Debug the received MST bridge protocol data units (BPDUs).
	bpdu-tx	Debug the sent MST BPDUs.
	errors	Debug MSTP errors.
	flush	Debug the port flushing mechanism.
	init	Debug the initialization of the MSTP data structures.
	migration	Debug the protocol migration state machine.
	pm	Debug MSTP port manager events.
	proposals	Debug handshake messages between the designated switch and the root switch.
	region	Debug the region synchronization between the switch processor (SP) and the route processor (RP).
	roles	Debug MSTP roles.
	sanity_check	Debug the received BPDU sanity check messages.
	sync	Debug the port synchronization events.
	tc	Debug topology change notification events.
	timers	Debug the MSTP timers for start, stop, and expire events.
Defaults	Debugging is di	sabled.
Command Modes	Privileged EXE	C
Command History	Release	Modification
	12.2(46)EX	This command was introduced.

## Usage Guidelines The undebug spanning-tree mstp command is the same as the no debug spanning-tree mstp command.

When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member. You also can use the **remote command** *stack-member-number LINE* privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show spanning-tree	Displays spanning-tree state information.

#### debug spanning-tree switch

Use the **debug spanning-tree switch** privileged EXEC command to enable debugging of the software interface between the Spanning Tree Protocol (STP) software module and the port manager software module. Use the **no** form of this command to disable debugging.

debug spanning-tree switch {all | errors | flush | general | helper | pm | rx {decode | errors | interrupt | process} | state | tx [decode] | uplinkfast}

no debug spanning-tree switch {all | errors | flush | general | helper | pm | rx {decode | errors | interrupt | process} | state | tx [decode] | uplinkfast}

Syntax Description		
Syntax Description	all	Display all spanning-tree switch debug messages.
	errors	Display debug messages for the interface between the spanning-tree software module and the port manager software module.
	flush	Display debug messages for the shim flush operation.
	general	Display general event debug messages.
	helper	Display spanning-tree helper-task debug messages. Helper tasks handle bulk spanning-tree updates.
	pm	Display port-manager event debug messages.
	rx	Display received bridge protocol data unit (BPDU) handling debug messages. The keywords have these meanings:
		• <b>decode</b> —Display decoded received packets.
		• errors—Display receive error debug messages.
		• <b>interrupt</b> —Display interrupt service request (ISR) debug messages.
		• <b>process</b> —Display process receive BPDU debug messages.
	state	Display spanning-tree port state change debug messages;
	tx [decode]	Display sent BPDU handling debug messages. The keyword has this meaning:
		• <b>decode</b> —(Optional) Display decoded sent packets.
	uplinkfast	Display uplinkfast packet transmission debug messages.
efaults	Debugging is di	isabled.
ommand Modes	Privileged EXE	C
ommand History	Release	Modification

When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the **session** *switch-number* privileged EXEC command. Then enter the **debug** command at the command-line prompt of the stack member. You also can use the **remote command** *stack-member-number LINE* privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show spanning-tree	Displays spanning-tree state information.

## debug spanning-tree uplinkfast

Use the **debug spanning-tree uplinkfast** privileged EXEC command to enable debugging of spanning-tree UplinkFast events. Use the **no** form of this command to disable debugging.

debug spanning-tree uplinkfast [exceptions]

no debug spanning-tree uplinkfast [exceptions]

Syntax Description	exceptions (O	ptional) Display spanning-tree UplinkFast-exception debug messages.
Defaults	Debugging is disable	d.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(46)EX	This command was introduced.
Usage Guidelines	The <b>undebug spann</b> i <b>uplinkfast</b> command	<b>ng-tree uplinkfast</b> command is the same as the <b>no debug spanning-tree</b>
	When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged EXEC command. Then enter the <b>debug</b> command at the command-line prompt of the stack member. You also can use the <b>remote command</b> <i>stack-member-number LINE</i> privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.	
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show spanning-tree	Displays spanning-tree state information.

#### debug sw-vlan

Use the **debug sw-vlan** privileged EXEC command to enable debugging of VLAN manager activities. Use the **no** form of this command to disable debugging.

debug sw-vlan {badpmcookies | cfg-vlan {bootup | cli} | events | ifs | management | mapping | notification | packets | redundancy | registries | vtp}

no debug sw-vlan {badpmcookies | cfg-vlan {bootup | cli} | events | ifs | management | mapping | notification | packets | redundancy | registries | vtp}

Syntax Description	badpmcookies	Display debug messages for VLAN manager incidents of bad port manager
		cookies.
	cfg-vlan {bootup   cli}	Display config-vlan debug messages. The keywords have these meanings:
		• <b>bootup</b> —Display messages when the switch is booting up.
		• <b>cli</b> —Display messages when the command-line interface (CLI) is in config-vlan mode.
	events	Display debug messages for VLAN manager events.
	ifs	See the <b>debug sw-vlan ifs</b> command.
	management	Display debug messages for VLAN manager management of internal VLANs.
	mapping	Display debug messages for VLAN mapping.
	notification	See the <b>debug sw-vlan notification</b> command.
	packets	Display debug messages for packet handling and encapsulation processes.
	redundancy	Display debug messages for VTP VLAN redundancy.
	registries	Display debug messages for VLAN manager registries.
	vtp	See the <b>debug sw-vlan vtp</b> command.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(46)EX	This command was introduced.
Usage Guidelines	The undebug sw-vlan co	mmand is the same as the <b>no debug sw-vlan</b> command.
	member, you can start a s EXEC command. Then er also can use the <b>remote c</b>	ting, it is enabled only on the stack master. To enable debugging on a stack session from the stack master by using the <b>session</b> <i>switch-number</i> privileged nater the <b>debug</b> command at the command-line prompt of the stack member. You <b>ommand</b> <i>stack-member-number LINE</i> privileged EXEC command on the stack lebugging on a member switch without first starting a session.

Command	Description
show debugging	Displays information about the types of debugging that are enabled.
show vlan	Displays the parameters for all configured VLANs or one VLAN (if the VLAN name or ID is specified) in the administrative domain.
show vtp	Displays general information about VTP management domain, status, and counters.

#### debug sw-vlan ifs

Use the **debug sw-vlan ifs** privileged EXEC command to enable debugging of the VLAN manager IOS file system (IFS) error tests. Use the **no** form of this command to disable debugging.

debug sw-vlan ifs {open {read | write} | read {1 | 2 | 3 | 4} | write}

no debug sw-vlan ifs {open {read | write} | read {1 | 2 | 3 | 4} | write}

Syntax Description	open {read   write}	Display VLAN manager IFS file-open operation debug messages. The keywords have these meanings:
		• read—Display VLAN manager IFS file-read operation debug messages.
		• write—Display VLAN manager IFS file-write operation debug messages.
	read {1   2   3   4}	Display file-read operation debug messages for the specified error test $(1, 2, 3, $ or 4).
	write	Display file-write operation debug messages.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(46)EX	This command was introduced.
Usage Guidelines	When you enable debu member, you can start EXEC command. Then also can use the <b>remote</b> master switch to enable When selecting the file	<b>ifs</b> command is the same as the <b>no debug sw-vlan ifs</b> command. gging, it is enabled only on the stack master. To enable debugging on a stack a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged enter the <b>debug</b> command at the command-line prompt of the stack member. You <b>command</b> <i>stack-member-number LINE</i> privileged EXEC command on the stack e debugging on a member switch without first starting a session. e read operation, Operation 1 reads the file header, which contains the header he file version number. Operation 2 reads the main body of the file, which
	contains most of the do descriptor structures. C	omain and VLAN information. Operation <b>3</b> reads type length version (TLV) Operation <b>4</b> reads TLV data.
Related Commands	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show vlan	Displays the parameters for all configured VLANs or one VLAN (if the VLAN name or ID is specified) in the administrative domain.

# debug sw-vlan notification

Use the **debug sw-vlan notification** privileged EXEC command to enable debugging of the activation and deactivation of Inter-Link Switch (ISL) VLAN IDs. Use the **no** form of this command to disable debugging.

debug sw-vlan notification {accfwdchange | allowedvlancfgchange | fwdchange | linkchange | modechange | pruningcfgchange | statechange}

no debug sw-vlan notification {accfwdchange | allowedvlancfgchange | fwdchange | linkchange | modechange | pruningcfgchange | statechange}

Syntax Description	accfwdchange	Display debug messages for VLAN manager notification of aggregated access interface spanning-tree forward changes.
	allowedvlancfgchange	Display debug messages for VLAN manager notification of changes to the allowed VLAN configuration.
	fwdchange	Display debug messages for VLAN manager notification of spanning-tree forwarding changes.
	linkchange	Display debug messages for VLAN manager notification of interface link-state changes.
	modechange	Display debug messages for VLAN manager notification of interface mode changes.
	pruningcfgchange	Display debug messages for VLAN manager notification of changes to the pruning configuration.
	statechange	Display debug messages for VLAN manager notification of interface state changes.
Defaults	Debugging is disabled.	
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(46)EX	This command was introduced.
Usage Guidelines	The <b>undebug sw-vlan n</b> e command.	otification command is the same as the no debug sw-vlan notification
	member, you can start a s EXEC command. Then er also can use the <b>remote c</b>	ging, it is enabled only on the stack master. To enable debugging on a stack session from the stack master by using the <b>session</b> <i>switch-number</i> privileged neter the <b>debug</b> command at the command-line prompt of the stack member. You <b>ommand</b> <i>stack-member-number LINE</i> privileged EXEC command on the stack lebugging on a member switch without first starting a session.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show vlan	Displays the parameters for all configured VLANs or one VLAN (if the VLAN name or ID is specified) in the administrative domain.

#### debug sw-vlan vtp

Use the **debug sw-vlan vtp** privileged EXEC command to enable debugging of the VLAN Trunking Protocol (VTP) code. Use the **no** form of this command to disable debugging.

debug sw-vlan vtp {events | packets | pruning [packets | xmit] | redundancy | xmit}

no debug sw-vlan vtp {events | packets | pruning | redundancy | xmit}

<ul> <li>Display debug messages for the contents of all incoming VTP packets that have been passed into the VTP code from the IOS VTP platform-dependent layer, except for pruning packets.</li> <li>it] Display debug messages generated by the pruning segment of the VTP code. The keywords have these meanings: <ul> <li>packets—(Optional) Display debug messages for the contents of all incoming VTP pruning packets that have been passed into the VTP code from the IOS VTP platform-dependent layer.</li> <li>xmit—(Optional) Display debug messages for the contents of all outgoing VTP packets that the VTP code requests the IOS VTP platform-dependent layer.</li> </ul> </li> <li>Display debug messages for VTP redundancy.</li> <li>Display debug messages for the contents of all outgoing VTP packets that the VTP code requests the IOS VTP platform-dependent layer to send.</li> </ul>
<ul> <li>code. The keywords have these meanings:</li> <li>packets—(Optional) Display debug messages for the contents of all incoming VTP pruning packets that have been passed into the VTP code from the IOS VTP platform-dependent layer.</li> <li>xmit—(Optional) Display debug messages for the contents of all outgoing VTP packets that the VTP code requests the IOS VTP platform-dependent layer to send.</li> <li>Display debug messages for the contents of all outgoing VTP packets that the VTP redundancy.</li> <li>Display debug messages for the contents of all outgoing VTP packets that the VTP redundancy.</li> </ul>
<ul> <li>incoming VTP pruning packets that have been passed into the VTP code from the IOS VTP platform-dependent layer.</li> <li>xmit—(Optional) Display debug messages for the contents of all outgoing VTP packets that the VTP code requests the IOS VTP platform-dependent layer to send.</li> <li>Display debug messages for VTP redundancy.</li> <li>Display debug messages for the contents of all outgoing VTP packets that the VTP code requests the IOS VTP platform-dependent layer to send,</li> </ul>
outgoing VTP packets that the VTP code requests the IOS VTP platform-dependent layer to send.         Display debug messages for VTP redundancy.         Display debug messages for the contents of all outgoing VTP packets that the VTP code requests the IOS VTP platform-dependent layer to send,
Display debug messages for the contents of all outgoing VTP packets that the VTP code requests the IOS VTP platform-dependent layer to send,
the VTP code requests the IOS VTP platform-dependent layer to send,
Modification
This command was introduced.
1

master switch to enable debugging on a member switch without first starting a session.

If no further parameters are entered after the **pruning keyword**, VTP pruning debugging messages appear. They are generated by the VTP\_PRUNING\_LOG\_NOTICE, VTP\_PRUNING\_LOG\_INFO, VTP\_PRUNING\_LOG\_DEBUG, VTP\_PRUNING\_LOG\_ALERT, and VTP\_PRUNING\_LOG\_WARNING macros in the VTP pruning code.

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show vtp	Displays general information about VTP management domain, status, and
		counters.

### debug udld

Use the **debug udld** privileged EXEC command to enable debugging of the UniDirectional Link Detection (UDLD) feature. Use the **no** form of this command to disable UDLD debugging.

debug udld {events | packets | registries}

no debug udld {events | packets | registries}

Syntax Description	events	Display debug messages for UDLD process events as they occur.	
	packets	Display debug messages for the UDLD process as it receives packets from the	
		packet queue and tries to send them at the request of the UDLD protocol code.	
	registries	Display debug messages for the UDLD process as it processes registry calls from the UDLD process-dependent module and other feature modules.	
Defaults	Debugging is d	lisabled.	
Command Modes	Privileged EXI	BC	
Command History	Release	Modification	
	12.2(46)EX	This command was introduced.	
Usage Guidelines	The undebug u	udld command is the same as the no debug udld command.	
	member, you c EXEC commar also can use the	ble debugging, it is enabled only on the stack master. To enable debugging on a stack an start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged nd. Then enter the <b>debug</b> command at the command-line prompt of the stack member. You e <b>remote command</b> <i>stack-member-number LINE</i> privileged EXEC command on the stack to enable debugging on a member switch without first starting a session.	
For <b>debug udld events</b> , these debugging messages appear:		d events, these debugging messages appear:	
	General UDLD program logic flow		
	• State mach	ine state changes	
	• Program actions for the set and clear ErrDisable state		
	• Neighbor cache additions and deletions		
	Processing of configuration commands		
	<ul> <li>Processing</li> </ul>	g of link-up and link-down indications	

For debug udld packets, these debugging messages appear:

- General packet processing program flow on receipt of an incoming packet
- Indications of the contents of the various pieces of packets received (such as type length versions [TLVs]) as they are examined by the packet reception code
- Packet transmission attempts and the outcome

For debug udld registries, these categories of debugging messages appear:

- Sub-block creation
- Fiber-port status changes
- State change indications from the port manager software
- MAC address registry calls

<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
	show udld	Displays UDLD administrative and operational status for all ports or the specified port.

### debug vqpc

Use the **debug vqpc** privileged EXEC command to enable debugging of the VLAN Query Protocol (VQP) client. Use the **no** form of this command to disable debugging.

debug vqpc [all | cli | events | learn | packet]

no debug vqpc [all | cli | events | learn | packet]

Syntax Description	all	(Optional) Display all VQP client debug messages.
	cli	(Optional) Display the VQP client command-line interface (CLI) debug
		messages.
	events	(Optional) Display VQP client event debug messages.
	learn	(Optional) Display VQP client address learning debug messages.
	packet	(Optional) Display VQP client packet information debug messages.
Defaults	Debugging is disable	led.
Command Modes	Privileged EXEC	
Command History	Release	Modification
	12.2(46)EX	This command was introduced.
Usage Guidelines	The undebug vqpc command is the same as the no debug vqpc command.	
	When you enable debugging, it is enabled only on the stack master. To enable debugging on a stack member, you can start a session from the stack master by using the <b>session</b> <i>switch-number</i> privileged EXEC command. Then enter the <b>debug</b> command at the command-line prompt of the stack member. You also can use the <b>remote command</b> <i>stack-member-number LINE</i> privileged EXEC command on the stack master switch to enable debugging on a member switch without first starting a session.	
<b>Related Commands</b>	Command	Description
	show debugging	Displays information about the types of debugging that are enabled.
