## Unsupported Commands in Cisco IOS Release 12.2(52)SE

---

This appendix lists some of the command-line interface (CLI) commands that appear when you enter the question mark (?) at the Catalyst 3750 switch prompt but are not supported in this release, either because they are not tested or because of switch hardware limitations. # IP Multicast Routing

## Unsupported Privileged EXEC Commands

**clear ip rtp header-compression [type number]**

The **debug ip packet** command displays packets received by the switch CPU. It does not display packets that are hardware-switched.

The **debug ip mcache** command affects packets received by the switch CPU. It does not display packets that are hardware-switched.

The **debug ip mpacket [detail] [access-list-number [group-name-or-address]]** command affects only packets received by the switch CPU. Because most multicast packets are hardware-switched, use this command only when you know that the route will forward the packet to the CPU.

**debug ip pim atm**

**show frame-relay ip rtp header-compression [interface type number]**

The **show ip mcache** command displays entries in the cache for those packets that are sent to the switch CPU. Because most multicast packets are switched in hardware without CPU involvement, you can use this command, but multicast packet information is not displayed.

The **show ip mpacket** commands are supported but are only useful for packets received at the switch CPU. If the route is hardware-switched, the command has no effect because the CPU does not receive the packet and cannot display it.

**show ip pim vc [group-address | name] [type number]**

**show ip rtp header-compression [type number] [detail]**

## Unsupported Global Configuration Commands

**ip multicast ttl-threshold ttl-value** (instead, use the **ip multicast boundary access-list-number** interface configuration command)
