show access-group mode interface

To display the ACL configuration on a Layer 2 interface, use the **show access-group mode interface** command.

show access-group mode interface [*interface interface-number*]

Syntax Description

interface	(Optional) Interface type; valid values are **ethernet**, **fastethernet**, **gigabitethernet**, **tengigabitethernet**, **and port-channel**.
interface-number	(Optional) Interface number.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.2(25)EW	Support for the 10-Gigabit Ethernet interface was introduced on the Catalyst 4500 series switch.

Usage Guidelines The valid values for the port number depend on the chassis used.

Examples   This example shows how to display the ACL configuration on the Fast Ethernet interface 6/1:

```
Switch# show access-group mode interface fa6/1
Interface FastEthernet6/1:
   Access group mode is: merge
Switch#
```

Related Commands

Command	Description
access-group mode	Specifies the override modes (for example, VACL overrides PACL) and the non-override modes (for example, merge or strict mode).

show adjacency

To display information about the Layer 3 switching adjacency table, use the **show adjacency** command.

show adjacency [{*interface interface-number*} | {**null** *interface-number*} | {**port-channel** *number*} | {**vlan** *vlan-id*} | **detail** | **internal** | **summary**]

Syntax Description

interface	(Optional) Interface type; possible valid values are **ethernet**, **fastethernet**, **gigabitethernet**, **tengigabitethernet**, **pos**, **ge-wan**, and **atm**.
interface-number	(Optional) Module and port number; see the "Usage Guidelines" section for valid values.
null *interface-number*	(Optional) Specifies the null interface; the valid value is **0**.
port-channel *number*	(Optional) Specifies the channel interface; valid values are a maximum of 64 values ranging from 1 to 256.
vlan *vlan-id*	(Optional) Specifies the VLAN; valid values are from 1 to 4094.
detail	(Optional) Displays the information about the protocol detail and timer.
internal	(Optional) Displays the information about the internal data structure.
summary	(Optional) Displays a summary of CEF-adjacency information.

Defaults   This command has no default settings.

Command Modes   EXEC

Command History

Release	Modification
12.2(25)EW	Extended to include the 10-Gigabit Ethernet interface.

Usage Guidelines   The *interface-number* argument designates the module and port number. Valid values for *interface-number* depend on the specified interface type and the chassis and module that are used. For example, if you specify a Gigabit Ethernet interface and have a 48-port 10/100BASE-T Ethernet module that is installed in a 13-slot chassis, valid values for the module number are from 1 to 13, and valid values for the port number are from 1 to 48.

Hardware Layer 3 switching adjacency statistics are updated every 60 seconds.

The following information is contained in the **show adjacency** command:

- Protocol interface.
- Type of routing protocol that is configured on the interface.
- Interface address.
- Method of adjacency that was learned.

- MAC address of the adjacent router.

- Time left before the adjacency rolls out of the adjacency table. After it rolls out, a packet must use the same next hop to the destination.

Examples

This example shows how to display adjacency information:

```
Switch# show adjacency
Protocol Interface          Address
IP      FastEthernet2/3     172.20.52.1(3045)
IP      FastEthernet2/3     172.20.52.22(11)
Switch#
```

This example shows how to display a summary of adjacency information:

```
Switch# show adjacency summary
Adjacency Table has 2 adjacencies
  Interface             Adjacency Count
  FastEthernet2/3       2
Switch#
```

This example shows how to display protocol detail and timer information:

```
Switch# show adjacency detail
Protocol Interface          Address
IP      FastEthernet2/3     172.20.52.1(3045)
                            0 packets, 0 bytes
                            000000000FF920000380000000000000
                            00000000000000000000000000000000
                            00605C865B2800D0BB0F980B0800
                            ARP        03:58:12
IP      FastEthernet2/3     172.20.52.22(11)
                            0 packets, 0 bytes
                            000000000FF920000380000000000000
                            00000000000000000000000000000000
                            00801C93804000D0BB0F980B0800
                            ARP        03:58:06
Switch#
```

This example shows how to display adjacency information for a specific interface:

```
Switch# show adjacency fastethernet2/3
Protocol Interface          Address
IP      FastEthernet2/3     172.20.52.1(3045)
IP      FastEthernet2/3     172.20.52.22(11)
Switch#
```

Related Commands

Command	Description
debug adjacency	Displays information about the adjacency debugging.

show ancp multicast

To display multicast streams activated by Access Node Control Protocol (ANCP), use the **show ancp multicast** command.

show ancp multicast [**group** *groupaddr*] [**source** *sourceaddr*] | [**interface** *interfacename*]

Syntax Description

group *groupaddr*	(Optional) Specifies a multicast group address.
source *sourceaddr*	(Optional) Specifies a multicast source address.
interface *interfacename*	(Optional) Specifies a multicast flowing on a specific interface.

Defaults   Displays all the multicast streams activated with ANCP.

Command Modes   Privileged EXEC

Command History

Release	Modification
12.2(50)SG	Support for this command was introduced on the Catalyst 4500 series switch.

Examples   This example shows how to display multicast streams activated by ANCP:

```
ANCP-Client# show ancp mul
ANCP Multicast Streams
ClientID VLAN Interface Joined on
Group 235.3.2.1
0x01060004000A0703 10 Fa7/3 18:27:35 UTC Sat Sep 13 2008

0x0106000400140704 20 Fa7/4 18:25:43 UTC Sat Sep 13 2008
ANCP-Client#
```

show arp access-list

To display detailed information on an ARP access list, use the **show arp** command.

show arp access-list

Syntax Description   This command has no arguments or keywords.

Defaults   This command has no default settings.

Command Modes   EXEC

Command History

Release	Modification
12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Examples   This example shows how to display the ARP ACL information for a switch:

```
Switch# show arp access-list
ARP access list rose
    permit ip 10.101.1.1 0.0.0.255 mac any
    permit ip 20.3.1.0 0.0.0.255 mac any
```

Related Commands

Command	Description
access-group mode	Specifies the override modes (for example, VACL overrides PACL) and the non-override modes (for example, merge or strict mode).
arp access-list	Defines an ARP access list or adds clauses at the end of a predefined list.
ip arp inspection filter vlan	Permits ARPs from hosts that are configured for static IP when DAI is enabled, defines an ARP access list, and applies the access list to a VLAN.

show authentication

To display the Auth Manager information, use the **show authentication** command in EXEC or Privileged EXEC mode.

> **show authentication** {**interface** *interface* | **registrations** | **sessions** [**session-id** *session-id*] [**handle** *handle*] [**interface** *interface*] [**mac** *mac*] [**method** *method*]

Syntax Description

interface *interface*	Displays all of the Auth Manager details associated with the specified interface.
registrations	Displays details of all methods registered with the Auth Manager.
sessions	Displays details of the current Auth Manager sessions (for example, client devices). If you do not enter any optional specifiers, all current active sessions are displayed. You can enter the specifiers singly or in combination to display a specific session (or group of sessions).
session-id *session-id*	(Optional) Specifies an Auth Manager session.
handle *handle*	(Optional) Specifies the particular handle for which Auth Manager information is displayed. Range is 1 to 4294967295.
mac *mac*	(Optional) Displays Auth Manager session information for a specified MAC address.
method *method*	(Optional) Displays all clients authorized by a specified authentication method. Valid values are as follows: • **dot1x** • **mab** • **webauth**

Command Default   This command has no default settings.

Command Modes   EXEC

Command History

Release	Modification
12.2(50)SG	This command was introduced.

Usage Guidelines   Table 2-19 describes the significant fields shown in the show authentication display.

✎ **Note**   The possible values for the status of sessions are given below. For a session in terminal state, "Authz Success" or "Authz Failed" are displayed. "No methods" is displayed if no method has provided a result.

Table 2-19   *show authentication Command Output*

Field	Description
Idle	The session has been initialized and no methods have run yet.
Running	A method is running for this session.
No methods	No method has provided a result for this session.
Authc Success	A method has resulted in authentication success for this session.
Authc Failed	A method has resulted in authentication fail for this session.
Authz Success	All features have been successfully applied for this session.
Authz Failed	A feature has failed to be applied for this session.

Table 2-20 lists the possible values for the state of methods. For a session in terminal state, "Authc Success," "Authc Failed," or "Failed over" are displayed (the latter indicates a method ran and failed over to the next method which did not provide a result. "Not run" is displayed in the case of sessions that are synchronized on standby.

Table 2-20   *State Method Values*

Method State	State Level	Description
Not run	Terminal	The method has not run for this session.
Running	Intermediate	The method is running for this session.
Failed over	Terminal	The method has failed and the next method is expected to provide a result.
Authc Success	Terminal	The method has provided a successful authentication result for the session.
Authc Failed	Terminal	The method has provided a failed authentication result for the session.

Examples   The following example shows how to display authentication methods registered with Auth Manager:

```
Switch# show authentication registrations
Auth Methods registered with the Auth Manager:
Handle Priority Name
3 0 dot1x
2 1 mab
1 2 webauth
Switch#
```

The following example shows how to display Auth Manager details for a specific interface:

```
Switch# show authentication interface gigabitethernet1/23
Client list:
MAC Address Domain Status Handle Interface
000e.84af.59bd DATA Authz Success 0xE0000000 GigabitEthernet1/0/23
Available methods list:
Handle Priority Name
```

```
3 0 dot1x
Runnable methods list:
Handle Priority Name
3 0 dot1x
Switch#
```

The following example shows how to display all Auth Manager sessions on the switch:

```
Switch# show authentication sessions
Interface   MAC Address     Method   Domain   Status        Session ID
Gi3/45      (unknown)       N/A      DATA     Authz Failed   09081404000000007003651EC
Gi3/46      (unknown)       N/A      DATA     Authz Success  09081404000000080057C274
```

The following example shows how to display all Auth Manager sessions on an interface:

```
Switch# show authentication sessions int gi 3/46
            Interface:  GigabitEthernet3/46
          MAC Address:  Unknown
           IP Address:  Unknown
               Status:  Authz Success
               Domain:  DATA
       Oper host mode:  multi-host
     Oper control dir:  both
         Authorized By:  Guest Vlan
          Vlan Policy:  4094
      Session timeout:  N/A
         Idle timeout:  N/A
     Common Session ID:  09081404000000080057C274
        Acct Session ID:  0x0000000A
               Handle:  0xCC000008

Runnable methods list:
      Method    State
      dot1x     Failed over
```

The following example shows how to display Auth Manager session for a specified MAC address:

```
Switch# show authentication sessions mac 000e.84af.59bd
Interface: GigabitEthernet1/23
MAC Address: 000e.84af.59bd
Status: Authz Success
Domain: DATA
Oper host mode: single-host
Authorized By: Authentication Server
Vlan Policy: 10
Handle: 0xE0000000
Runnable methods list:
Method State
dot1x Authc Success
Switch#
```

The following example shows how to display all clients authorized via a specified auth method:

```
Switch# show authentication sessions method mab
No Auth Manager contexts match supplied criteria
Switch# show authentication sessions method dot1x
MAC Address Domain Status Handle Interface
000e.84af.59bd DATA Authz Success 0xE0000000 GigabitEthernet1/23
Switch#
```

Related Commands	Command	Description
	authentication control-direction	Changes the port control to unidirectional or bidirectional.
	authentication critical recovery delay	Configures the 802.1X critical authentication parameters.
	authentication event	Configures the actions for authentication events.
	authentication fallback	Enables the Webauth fallback and specifies the fallback profile to use when failing over to Webauth.
	authentication host-mode	Defines the classification of a session that will be used to apply the access-policies using the host-mode configuration.
	authentication open	Enables open access on this port.
	authentication order	Specifies the order in which authentication methods should be attempted for a client on an interface.
	authentication periodic	Enables reauthentication for this port.
	authentication port-control	Configures the port-control value.
	authentication priority	Specifies the priority of authentication methods on an interface.
	authentication timer	Configures the authentication timer.
	authentication violation	Specifies the action to be taken when a security violation exists on a port.

show auto install status

To display the status of an automatic installation, use the **show auto install status** command.

show auto install status

Syntax Description   This command has no arguments or keywords.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.2(20)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Examples   This example shows how to display the IP address of the TFTP server and to display whether or not the switch is currently acquiring the configuration file on the TFTP server:

```
Switch# show auto install status

Status             : Downloading config file
DHCP Server        : 20.0.0.1
TFTP Server        : 30.0.0.3
Config File Fetched : Undetermined
```

The first IP address in the display indicates the server that is used for the automatic installation. The second IP address indicates the TFTP server that provided the configuration file.

show auto qos

To display the automatic quality of service (auto-QoS) configuration that is applied, use the **show auto qos** user EXEC command.

show auto qos [**interface** [*interface-id*]] [{**begin** | **exclude** | **include**} *expression*]

Syntax Description

interface *interface-id*	(Optional) Displays auto-QoS information for the specified interface or for all interfaces. Valid interfaces include physical ports.
begin	(Optional) Begins with the line that matches the expression.
exclude	(Optional) Excludes lines that match the expression.
include	(Optional) Includes lines that match the specified expression.
expression	(Optional) Expression in the output to use as a reference point.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines   The **show auto qos interface** *interface-id* command displays the auto-QoS configuration; it does not display any user changes to the configuration that might be in effect.

To display information about the QoS configuration that might be affected by auto-QoS on a non-Supervisor Engine 6-E, use one of these commands:

- **show qos**
- **show qos map**
- **show qos interface** *interface-id*
- **show running-config**

Expressions are case sensitive. For example, if you enter **exclude output**, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

Examples   This example shows output from the **show auto qos** command when auto-QoS is enabled:

```
Switch# show auto qos
GigabitEthernet1/2
auto qos voip cisco-phone
Switch#
```

Related Commands

Command	Description
auto qos voip	Automatically configures quality of service (auto-QoS) for Voice over IP (VoIP) within a QoS domain.

show bootflash:

To display information about the bootflash: file system, use the **show bootflash:** command.

show bootflash: [**all** | **chips** | **filesys**]

Syntax Description

all	(Optional) Displays all possible Flash information.
chips	(Optional) Displays Flash chip information.
filesys	(Optional) Displays file system information.

Defaults   This command has no default settings.

Command Modes   EXEC

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Examples   This example shows how to display file system status information:

```
Switch> show bootflash: filesys

-------- F I L E   S Y S T E M   S T A T U S --------
  Device Number = 0
DEVICE INFO BLOCK: bootflash
  Magic Number        = 6887635   File System Vers = 10000   (1.0)

show bootvar

To display BOOT environment variable information, use the **show bootvar** command.

show bootvar

Syntax Description   This command has no arguments or keywords.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Examples   This example shows how to display BOOT environment variable information:

```
Switch# show bootvar
BOOT variable = sup:1;
CONFIG_FILE variable does not exist
BOOTLDR variable does not exist
Configuration register is 0x0
Switch#
```

show cable-diagnostics tdr

To display the test results for the TDR cable diagnostics, use the **show cable-diagnostics tdr** command.

show cable-diagnostics tdr {**interface** {*interface interface-number*}}

Note   This command will be deprecated in future Cisco IOS releases; use the **diagnostic start** command instead.

Syntax Description		
interface *interface*	Interface type; valid values are **fastethernet** and **gigabitethernet**.
interface-number	Module and port number.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History	Release	Modification
	12.2(25)SG	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines   The TDR test is supported on Catalyst 4500 Series Switches running Cisco IOS Release 12.2(25)SG for the following line cards only:

- WS-X4548-GB-RJ45
- WS-X4548-GB-RJ45V
- WS-X4524-GB-RJ45V
- WS-X4013+TS
- WS-C4948
- WS-C4948-10GE

The distance to the fault is displayed in meters (m).

Examples   This example shows how to display information about the TDR test:

```
Switch# show cable-diagnostics tdr interface gi4/13
Interface Speed  Local pair Cable length Remote channel Status
Gi4/13    0Mbps  1-2        102 +-2m     Unknown        Fault
                 3-6        100 +-2m     Unknown        Fault
                 4-5        102 +-2m     Unknown        Fault
                 7-8        102 +-2m     Unknown        Fault
Switch#
```

Table 2-21 describes the fields in the **show cable-diagnostics tdr** command output.

Table 2-21   show cable-diagnostics tdr Command Output Fields

Field	Description
Interface	Interface tested.
Speed	Current line speed.
Pair	Local pair name.
Cable Length	Distance to the fault in meters (m).
Channel	Pair designation (A, B, C, or D).
Status	Pair status displayed is one of the following: • Terminated—The link is up. • Fault—Cable fault (open or short)

Related Commands	Command	Description
	test cable-diagnostics tdr	Tests the condition of copper cables on 48-port 10/100/1000 BASE-T modules.

show call-home

To display the configured CallHome information, use the **show call-home** command in privileged EXEC mode.

show call-home [**alert-group** | **detail** | **mail-server** | **profile** {**all** | *name*} | **statistics**]

Syntax Description		
alert-group	(Optional) Displays the available alert group.	
detail	(Optional) Displays the CallHome configuration in detail.	
mail-server	(Optional) Displays the CallHome mail server-related information.	
profile all	(Optional) Displays configuration information for all existing profiles.	
profile *name*	(Optional) Displays configuration information for a specific destination profile.	
statistics	(Optional) Displays the CallHome statistics.	

Command Default   This command has no default settings.

Command Modes   Privileged EXEC (#)

Command History

Release	Modification
12.2(52)SG	This command was introduced on the Catalyst 4500 series switch, Supervisor Engine 6-E, and Catalyst 4900M chassis.

Examples   The following example displays the configured CallHome settings:

```
Switch# show call-home
Current call home settings:
    call home feature : disable
    call home message's from address: switch@example.com
    call home message's reply-to address: support@example.com

    vrf for call-home messages: Not yet set up

    contact person's email address: technical@example.com

    contact person's phone number: +1-408-555-1234
    street address: 1234 Picaboo Street, Any city, Any state, 12345
    customer ID: ExampleCorp
    contract ID: X123456789
    site ID: SantaClara
    Mail-server[1]: Address: smtp.example.com Priority: 1
    Mail-server[2]: Address: 192.168.0.1 Priority: 2
    Rate-limit: 20 message(s) per minute
```

```
Available alert groups:
    Keyword                 State   Description
    ----------------------- ------- -------------------------------
    configuration           Disable configuration info
    diagnostic              Disable diagnostic info
    environment             Disable environmental info
    inventory               Enable  inventory info
    syslog                  Disable syslog info

Profiles:
    Profile Name: campus-noc
    Profile Name: CiscoTAC-1

        Last call-home message sent time: n/a
```

Related Commands	Command	Description
	call-home (global configuration)	Enters call-home configuration mode.
	call-home send alert-group	Sends a specific alert group message.
	service call-home (refer to Cisco IOS documentation)	Enables or disables call home.

show cdp neighbors

To display detailed information about the neighboring devices that are discovered through CDP, use the **show cdp neighbors** command.

show cdp neighbors [*type number*] [**detail**]

Syntax Description

type	(Optional) Interface type that is connected to the neighbors about which you want information; possible valid values are **ethernet**, **fastethernet**, **gigabitethernet**, **tengigabitethernet**, **port-channel**, and **vlan**.
number	(Optional) Interface number that is connected to the neighbors about which you want information.
detail	(Optional) Displays detailed information about a neighbor (or neighbors) including network address, enabled protocols, hold time, and software version.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.2(25)EW	Extended to include the 10-Gigabit Ethernet interface.

Usage Guidelines

The **vlan** keyword is supported in Catalyst 4500 Series Switches that are configured with a Supervisor Engine 2.

The **port-channel** values are from 0 to 282; values from 257 to 282 are supported on the CSM and the FWSM only.

Examples

This example shows how to display the information about the CDP neighbors:

```
Switch# show cdp neighbors
Capability Codes: R - Router, T - Trans Bridge, B - Source Route Bridge
                  S - Switch, H - Host, I - IGMP, r - Repeater, P - Phone
Device ID       Local Intrfce    Holdtme    Capability  Platform  Port ID
lab-7206        Eth 0               157         R        7206VXR   Fas 0/0/0
lab-as5300-1    Eth 0               163         R        AS5300    Fas 0
lab-as5300-2    Eth 0               159         R        AS5300    Eth 0
lab-as5300-3    Eth 0               122         R        AS5300    Eth 0
lab-as5300-4    Eth 0               132         R        AS5300    Fas 0/0
lab-3621        Eth 0               140         R S      3631-telcoFas 0/0
008024 2758E0   Eth 0               132         T        CAT3000   1/2
Switch#
```

Table 2-22 describes the fields that are shown in the example.

Table 2-22   ***show cdp neighbors Field Descriptions***

Field	Definition
Device ID	Configured ID (name), MAC address, or serial number of the neighbor device.
Local Intrfce	(Local Interface) The protocol that is used by the connectivity media.
Holdtme	(Holdtime) Remaining amount of time, in seconds, that the current device holds the CDP advertisement from a transmitting router before discarding it.
Capability	Capability code that is discovered on the device. This device type is listed in the CDP Neighbors table. Possible values are as follows: R—Router T—Transparent bridge B—Source-routing bridge S—Switch H—Host I—IGMP device r—Repeater P—Phone
Platform	Product number of the device.
Port ID	Protocol and port number of the device.

This example shows how to display detailed information about your CDP neighbors:

```
Switch# show cdp neighbors detail
-------------------------
Device ID: lab-7206
Entry address(es):
  IP address: 172.19.169.83
Platform: cisco 7206VXR,  Capabilities: Router
Interface: Ethernet0,  Port ID (outgoing port): FastEthernet0/0/0
Holdtime : 123 sec

Version :
Cisco Internetwork Operating System Software
IOS (tm) 5800 Software (C5800-P4-M), Version 12.1(2)
Copyright (c) 1986-2002 by Cisco Systems, Inc.

advertisement version: 2
Duplex: half

-------------------------
Device ID: lab-as5300-1
Entry address(es):
  IP address: 172.19.169.87
.
.
.
Switch#
```

Table 2-23 describes the fields that are shown in the example.

Table 2-23   show cdp neighbors detail Field Descriptions

Field	Definition
Device ID	Name of the neighbor device and either the MAC address or the serial number of this device.
Entry address(es)	List of network addresses of neighbor devices.
[network protocol] address	Network address of the neighbor device. The address can be in IP, IPX, AppleTalk, DECnet, or CLNS protocol conventions.
Platform	Product name and number of the neighbor device.
Capabilities	Device type of the neighbor. This device can be a router, a bridge, a transparent bridge, a source-routing bridge, a switch, a host, an IGMP device, or a repeater.
Interface	Protocol and port number of the port on the current device.
Holdtime	Remaining amount of time, in seconds, that the current device holds the CDP advertisement from a transmitting router before discarding it.
Version:	Software version running on the neighbor device.
advertisement version:	Version of CDP that is being used for CDP advertisements.
Duplex:	Duplex state of connection between the current device and the neighbor device.

Related Commands	Command	Description
	show cdp (refer to Cisco IOS documentation)	Displays global CDP information, including timer and hold-time information.
	show cdp entry (refer to Cisco IOS documentation)	Displays information about a specific neighboring device discovered using Cisco Discovery Protocol (CDP).
	show cdp interface (refer to Cisco IOS documentation)	Displays information about the interfaces on which Cisco Discovery Protocol (CDP) is enabled.
	show cdp traffic (refer to Cisco IOS documentation)	Displays traffic information from the CDP table.

show class-map

To display class map information, use the **show class-map** command.

> **show class-map** *class_name*

Syntax Description	*class_name*	Name of the class map.

Defaults	This command has no default settings.

Command Modes	Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.2(25)SG	Displays results from the full-flow option.

Examples   This example shows how to display class map information for all class maps:

```
Switch# show class-map
 Class Map match-any class-default (id 0)
   Match any
 Class Map match-any class-simple (id 2)
   Match any
 Class Map match-all ipp5 (id 1)
   Match ip precedence 5
 Class Map match-all agg-2 (id 3)
Switch#
```

This example shows how to display class map information for a specific class map:

```
Switch# show class-map ipp5
 Class Map match-all ipp5 (id 1)
   Match ip precedence 5
Switch#
```

Assume there are two active flows as shown below on Fast Ethernet interface 6/1:

```
SrcIp          DstIp          IpProt SrcL4Port DstL4Port
--------------------------------------------------------
192.168.10.10  192.168.20.20  20     6789      81
192.168.10.10  192.168.20.20  20     6789      21
```

With following configuration, each flow will be policed to a 1000000 bps with an allowed 9000-byte burst value.

Note   If you use the **match flow ip source-address|destination-address** command, these two flows are consolidated into one flow and they have the same source and destination address.

```
Switch# config terminal
Enter configuration commands, one per line.  End with CNTL/Z.
Switch(config)# class-map c1
Switch(config-cmap)# match flow ip source-address ip destination-address ip protocol l4
source-port l4 destination-port
Switch(config-cmap)# exit
Switch(config)# policy-map p1
Switch(config-pmap)# class c1
Switch(config-pmap-c)# police 1000000 9000
Switch(config-pmap-c)# exit
Switch(config-pmap)# exit
Switch(config)# interface fastEthernet 6/1
Switch(config-if)# service-policy input p1
Switch(config-if)# end
Switch# write memory
Switch# show policy-map interface
FastEthernet6/1

class-map c1
   match flow  ip source-address ip destination-address ip protocol l4 source-port l4
destination-port
!
 policy-map p1
    class c1
       police 1000000 bps 9000 byte conform-action transmit exceed-action drop
!
interface FastEthernet 6/1
  service-policy input p1

Switch# show class-map c1
 Class Map match-all c1 (id 2)
   Match flow  ip source-address ip destination-address ip protocol l4 source-port l4
destination-port
Switch#
```

Related Commands

Command	Description
class-map	Creates a class map to be used for matching packets to the class whose name you specify and to be used enter class-map configuration mode.
show policy-map	Displays information about the policy map.
show policy-map interface	Displays the statistics and configurations of the input and output policies that are attached to an interface.

show device-sensor cache

To display Device Sensor cache entries, use the **show device-sensor cache** command in privileged EXEC mode.

show device-sensor cache {mac *mac-address* **| all}**

Syntax Description		
	mac *mac-address*	Specifies the MAC address of the device for which the sensor cache entries are to be displayed.
	all	Displays sensor cache entries for all devices.

Defaults   There are no defaults for this command.

Command Modes   Privileged EXEC

Command History

Release	Modification
IOS XE 3.4.0SG and IOS 15.1(2)SG	Command introduced on the Catalyst 4500 Series switch.

Usage Guidelines   Use the **show device-sensor cache** command to display a list of TLV fields or options received from a particular device or from all devices.

Examples   The following is sample output from the **show device-sensor cache mac** *mac-address* command:

```
Router# show device-sensor cache mac 0024.14dc.df4d

Device: 0024.14dc.df4d on port GigabitEthernet1/0/24
--------------------------------------------------

The following table describes the significant fields shown in the display:

Field	Description
Device	MAC address of the device and the interface which it is connected to.
Proto	Protocol from which the endpoint device data is being gleaned.
Type	Type of TLV.
Name	Name of the TLV.
Len	Length of the TLV.
Value	Value of the TLV.

Related Commands

Command	Description
debug device-sensor	Enables debugging for Device Sensor.
device-sensor accounting	Adds the Device Sensor protocol data to accounting records and generates additional accounting events when new sensor data is detected.
device-sensor filter-list	Creates a CDP or LLDP filter containing a list of options that can be included or excluded in the Device Sensor output.
device-sensor filter-list dhcp	Creates a DHCP filter containing a list of options that can be included or excluded in the Device Sensor output.
show device-sensor cache	Displays Device Sensor cache entries.

show diagnostic content

To display test information about the test ID, test attributes, and supported coverage test levels for each test and for all modules, use the **show diagnostic content** command.

> **show diagnostic content module** {**all** | *num*}

Syntax Description	

all	Displays all the modules on the chassis.
num	Module number.

Defaults   This command has no default settings.

Command Modes   EXEC

Command History

Release	Modification
12.2(20)EWA	Support for this command was introduced on the Catalyst 4500 series switch.

Examples   This example shows how to display the test suite, monitoring interval, and test attributes for all the modules of the chassis:

```
Switch# show diagnostic content module all

module 1:

 Diagnostics test suite attributes:
     B/* - Basic ondemand test / NA
   P/V/* - Per port test / Per device test / NA
   D/N/* - Disruptive test / Non-disruptive test / NA
     S/* - Only applicable to standby unit / NA
     X/* - Not a health monitoring test / NA
     F/* - Fixed monitoring interval test / NA
     E/* - Always enabled monitoring test / NA
     A/I - Monitoring is active / Monitoring is inactive
     m/* - Mandatory bootup test, can't be bypassed / NA
     o/* - Ongoing test, always active / NA

                                                    Testing Interval
 ID   Test Name                                Attributes  (day hh:mm:ss.ms)
 ==== ======================================== =========== =================
   1) supervisor-bootup ----------------------> **D****I**   not configured
   2) packet-memory-bootup -------------------> **D****I**   not configured
   3) packet-memory-ongoing ------------------> **N****I*o   not configured
```

```
module 6:

 Diagnostics test suite attributes:
     B/* - Basic ondemand test / NA
   P/V/* - Per port test / Per device test / NA
   D/N/* - Disruptive test / Non-disruptive test / NA
     S/* - Only applicable to standby unit / NA
     X/* - Not a health monitoring test / NA
     F/* - Fixed monitoring interval test / NA
     E/* - Always enabled monitoring test / NA

Switch#
```

Related Commands	Command	Description
	show diagnostic result module	Displays the module-based diagnostic test results.
	show diagnostic result module test 2	Displays the results of the bootup packet memory test.
	show diagnostic result module test 3	Displays the results from the ongoing packet memory test.

show diagnostic result module

To display the module-based diagnostic test results, use the **show diagnostic result module** command.

show diagnostic result module [*slot-num* | **all**] [**test** [*test-id* | *test-id-range* | **all**]] [**detail**]

Syntax Description

slot-num	(Optional) Specifies the slot on which diagnostics are displayed.
all	(Optional) Displays the diagnostics for all slots.
test	(Optional) Displays selected tests on the specified module.
test-id	(Optional) Specifies a single test ID.
test-id-range	(Optional) Specifies a range of test IDs.
all	(Optional) Displays the diagnostics for all tests.
detail	(Optional) Displays the complete test results.

Defaults   A summary of the test results for all modules in the chassis is displayed.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.2(18)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Examples   This example shows how to display the summary results for all modules in the chassis:

```
Switch# show diagnostic result module

Current bootup diagnostic level: minimal

module 1:

  Overall diagnostic result: PASS
  Diagnostic level at card bootup: bypass

  Test results: (. = Pass, F = Fail, U = Untested)

    1) supervisor-bootup ----------------------> U
    2) packet-memory-bootup --------------------> U
    3) packet-memory-ongoing -------------------> U

module 4:

  Overall diagnostic result: PASS
  Diagnostic level at card bootup: minimal

  Test results: (. = Pass, F = Fail, U = Untested)

    1) linecard-online-diag --------------------> .
```

```
module 5:

  Overall diagnostic result: PASS
  Diagnostic level at card bootup: minimal

  Test results: (. = Pass, F = Fail, U = Untested)

    1) linecard-online-diag --------------------> .

module 6:

  Overall diagnostic result: PASS
  Diagnostic level at card bootup: minimal

  Test results: (. = Pass, F = Fail, U = Untested)

    1) linecard-online-diag --------------------> .
```

This example shows how to display the online diagnostics for module 1:

```
Switch# show diagnostic result module 1 detail

Current bootup diagnostic level: minimal

module 1:

 Overall diagnostic result: PASS
 Diagnostic level at card bootup: minimal

 Test results: (. = Pass, F = Fail, U = Untested)

show diagnostic result module test

To display the results of the bootup packet memory test, use the **show diagnostic result module test** command. The output indicates whether the test passed, failed, or was not run.

show diagnostic result module [*N* | **all**] [**test** *test-id*] [**detail**]

Syntax Description

N	(Optional) Specifies the module number.
all	(Optional) Specifies all modules.
test *test-id*	(Optional) Specifies the number for the tdr test on the platform.
detail	(Optional) Specifies the display of detailed information for analysis. This option is recommended.

Defaults   Non-detailed results.

Command Modes   EXEC mode

Command History

Release	Modification
12.2(25)SG	This command was introduced on the Catalyst 4500 series switch.

Usage Guidelines   The **detail** keyword is intended for use by Cisco support personnel when analyzing failures.

Examples   This example shows how to display the results of the bootup packet memory tests:

```
Switch# show diagnostic result module 6 detail

module 6:

  Overall diagnostic result:PASS

  Test results:(. = Pass, F = Fail, U = Untested)

bad buffers: 0 (0.0%)
good buffers: 65536 (100.0%)
Bootup test results:
No errors.
```

Related Commands	Command	Description
	diagnostic monitor action	Directs the action of the switch when it detects a packet memory failure.
	show diagnostic result module test 3	Displays the results from the ongoing packet memory test.

show diagnostic result module test 3

To display the results from the ongoing packet memory test, use the **show diagnostic result module test 3** command. The output indicates whether the test passed, failed, or was not run.

show diagnostic result module *N* **test 3** [**detail**]

Syntax Description

N	Module number.
detail	(Optional) Specifies the display of detailed information for analysis.

Defaults   Non-detailed results.

Command Modes   EXEC mode

Command History

Release	Modification
12.2(18)EW	This command was introduced on the Catalyst 4500 series switch.

Usage Guidelines   The **detail** keyword is intended for use by Cisco support personnel when analyzing failures.

Examples   This example shows how to display the results from the ongoing packet memory tests:

```
Switch# show diagnostic result module 1 test 3

Test results: (. = Pass, F = Fail, U = Untested)

    3) packet-memory-ongoing -----------> .
```

This example shows how to display the detailed results from the ongoing packet memory tests:

```
Switch# show diagnostic result module 1 test 3 detail

Test results: (. = Pass, F = Fail, U = Untested)

_____

    3) packet-memory-ongoing -----------> .

        Error code ------------------> 0 (DIAG_SUCCESS)
        Total run count -------------> 0
        Last test execution time ----> n/a
        First test failure time -----> n/a
        Last test failure time ------> n/a
        Last test pass time ---------> n/a
        Total failure count ---------> 0
        Consecutive failure count ---> 0
packet buffers on free list: 64557 bad: 0 used for ongoing tests: 979
```

```
Packet memory errors: 0 0
Current alert level: green
Per 5 seconds in the last minute:

Related Commands	Command	Description
	diagnostic monitor action	Directs the action of the switch when it detects a packet memory failure.
	show diagnostic result module test 2	Displays the results of the bootup packet memory test.

show dot1x

To display the 802.1X statistics and operational status for the entire switch or for a specified interface, use the **show dot1x** command.

show dot1x [**interface** *interface-id*] | [**statistics** [**interface** *interface-id*]] | [**all**]

Syntax Description

interface *interface-id*	(Optional) Displays the 802.1X status for the specified port.
statistics	(Optional) Displays 802.1X statistics for the switch or the specified interface.
all	(Optional) Displays per-interface 802.1X configuration information for all interfaces with a nondefault 802.1X configuration.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(12c)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(19)EW	Display enhanced to show the guest-VLAN value.
12.2(25)EW	Support for the 10-Gigabit Ethernet interface was introduced on the Catalyst 4500 series switch.
12.2(25)EWA	Support for currently assigned reauthentication timer (if the timer is configured to honor the Session-Timeout value) was added.
12.2(31)SG	Support for port direction control and critical recovery was added.

Usage Guidelines

If you do not specify an interface, the global parameters and a summary are displayed. If you specify an interface, the details for that interface are displayed.

If you enter the **statistics** keyword without the **interface** option, the statistics are displayed for all interfaces. If you enter the **statistics** keyword with the **interface** option, the statistics are displayed for the specified interface.

Expressions are case sensitive. For example, if you enter **exclude output**, the lines that contain *output* are not displayed, but the lines that contain *Output* are displayed.

The **show dot1x** command displays the currently assigned reauthentication timer and time remaining before reauthentication, if reauthentication is enabled.

Examples   This example shows how to display the output from the **show dot1x** command:

```
Switch# show dot1x
Sysauthcontrol = Disabled
Dot1x Protocol Version = 2
Dot1x Oper Controlled Directions = Both
Dot1x Admin Controlled Directions = Both
Critical Recovery Delay = 500
Critical EAP = Enabled
Switch#
```

This example shows how to display the 802.1X statistics for a specific port:

```
Switch# show dot1x interface fastethernet6/1
Dot1x Info for FastEthernet6/1
----------------------------------
PAE                       = AUTHENTICATOR
PortControl               = AUTO
ControlDirection          = Both
HostMode                  = MULTI_DOMAIN
ReAuthentication          = Disabled
QuietPeriod               = 60
ServerTimeout             = 30
SuppTimeout               = 30
ReAuthPeriod              = 3600 (Locally configured)
ReAuthMax                 = 2
MaxReq                    = 2
TxPeriod                  = 30
RateLimitPeriod           = 0

Dot1x Authenticator Client List
-------------------------------
Domain                    = DATA
Supplicant                = 0000.0000.ab01
        Auth SM State     = AUTHENTICATED
        Auth BEND SM Stat = IDLE

Port Status               = AUTHORIZED
Authentication Method     = Dot1x
Authorized By             = Authentication Server
Vlan Policy               = 12

        Auth SM State     = AUTHENTICATED
        Auth BEND SM Stat = IDLE
Port Status               = AUTHORIZED
Authentication Method     = Dot1x
Authorized By             = Authentication Server

Switch#
```

Note   Table 2-24 provides a partial list of the displayed fields. The remaining fields in the display show internal state information. For a detailed description of these state machines and their settings, refer to the 802.1X specification.

Table 2-24   show dot1x interface Field Description

Field	Description
PortStatus	Status of the port (authorized or unauthorized). The status of a port is displayed as authorized if the **dot1x port-control** interface configuration command is set to **auto** and has successfully completed authentication.
Port Control	Setting of the **dot1x port-control** interface configuration command.
MultiHosts	Setting of the **dot1x multiple-hosts** interface configuration command (allowed or disallowed).

This is an example of output from the **show dot1x statistics interface gigabitethernet1/1** command. Table 2-25 describes the fields in the display.

```
Switch# show dot1x statistics interface gigabitethernet1/1

PortStatistics Parameters for Dot1x
-------------------------------------------
TxReqId = 0    TxReq = 0     TxTotal = 0
RxStart = 0    RxLogoff = 0  RxRespId = 0  RxResp = 0
RxInvalid = 0  RxLenErr = 0  RxTotal= 0
RxVersion = 0  LastRxSrcMac 0000.0000.0000
Switch#
```

Table 2-25   show dot1x statistics Field Descriptions

Field	Description
TxReq/TxReqId	Number of EAP-request/identity frames that have been sent.
TxTotal	Number of EAPOL frames of any type that have been sent.
RxStart	Number of valid EAPOL-start frames that have been received.
RxLogoff	Number of EAPOL-logoff frames that have been received.
RxRespId	Number of EAP-response/identity frames that have been received.
RxResp	Number of valid EAP-response frames (other than response/identity frames) that have been received.
RxInvalid	Number of EAPOL frames that have been received and have an unrecognized frame type.
RxLenError	Number of EAPOL frames that have been received in which the packet body length field is invalid.
RxTotal	Number of valid EAPOL frames of any type that have been received.
RxVersion	Protocol version number carried in the most recently received EAPOL frame.
LastRxSrcMac	Source MAC address carried in the most recently received EAPOL frame.

Related Commands	**Command**	**Description**
	dot1x critical	Enables the 802.1X critical authentication on a port.
	dot1x critical eapol	Enables sending EAPOL success packets when a port is critically authorized partway through an EAP exchange.
	dot1x critical recovery delay	Sets the time interval between port reinitializations.
	dot1x critical vlan	Assigns a critically authenticated port to a specific VLAN.
	dot1x guest-vlan	Enables a guest VLAN on a per-port basis.
	dot1x max-reauth-req	Sets the maximum number of times that the switch will retransmit an EAP-Request/Identity frame to the client before restarting the authentication process.
	dot1x port-control	Enables manual control of the authorization state on a port.
	mac-address-table notification	Enables MAC address notification on a switch.

show energywise

Use the **show energywise** privileged EXEC command to display the EnergyWise settings and status of the entity and the power over Ethernet (PoE) ports.

> **show energywise** [**categories** | **children** | **domain** | **events** | **level** [**children** | **current** [**children**] | **delta children**] | **neighbors** | **recurrences** | **statistics** | **usage** [**children**] | **version**] [| {**begin** | **exclude** | **include**} *expression*]

Syntax Description

categories	(Optional) Displays the power levels.
children	(Optional) Displays the status of the entity and the PoE ports.
domain	(Optional) Displays the domain to which the entity belongs.
events	(Optional) Displays the last ten events (messages) sent to other entities in the domain.
level children **current children** **delta children**	(Optional) Displays the available power level for the entity. • **children**—Available power levels for the entity and the PoE ports. • **current**—Current power level for the entity. (Optional) **children**—Current power levels for the entity and the PoE ports. • **delta**—Difference between the current and available power levels for the entity. (Optional) **children**—Difference between the current and available power levels for the entity and the PoE ports.
neighbors	(Optional) Displays the neighbor tables for the domains to which the entity belongs.
recurrences	(Optional) Displays the EnergyWise settings and status for recurrence.
statistics	(Optional) Displays the counters for events and errors.
usage children	(Optional) Displays the power for the entity. • **children—**Displays the power for the PoE ports.
version	(Optional) Displays the EnergyWise version.

Command Modes   Privileged EXEC

Command History

Release	Modification
12.2(52)SG	This command was introduced.

Usage Guidelines   Expressions are case sensitive. For example, if you enter | **exclude output**, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

Related Commands

Command	Description
energywise (global configuration)	Enables and configures EnergyWise on the entity.
energywise (interface configuration)	Configures EnergyWise on the PoE port.

show environment

To display the environment alarm, operational status, and current reading for the chassis, use the **show environment** command.

> **show environment** [**alarm**] | [**status** [**chassis** | **fantray** | **powersupply** | **supervisor**]] | [**temperature**]

Syntax Description		
alarm	(Optional) Specifies the alarm status of the chassis.	
status	(Optional) Specifies the operational status information.	
chassis	(Optional) Specifies the operational status of the chassis.	
fantray	(Optional) Specifies the status of the fan tray, and shows fan tray power consumption.	
powersupply	(Optional) Specifies the status of the power supply.	
supervisor	(Optional) Specifies the status of the supervisor engine.	
temperature	(Optional) Specifies the current chassis temperature readings.	

Defaults This command has no default settings.

Command Modes Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(12c)EW	Support for the ability to display generic environment information with the **show environment** command was added.

Examples This example shows how to display information about the environment alarms, operational status, and current temperature readings for the chassis:

```
Switch# show environment
no alarm

Chassis Temperature                   = 32 degrees Celsius
Chassis Over Temperature Threshold    = 75 degrees Celsius
Chassis Critical Temperature Threshold = 95 degrees Celsius

Power                            Fan
Supply  Model No        Type     Status       Sensor
------  --------------- --------- ----------- ------
PS1     PWR-C45-1400AC  AC 1400W  good         good
PS2     none            --        --           --

Power Supply   Max    Min    Max    Min    Absolute
(Nos in Watts) Inline Inline System System Maximum
-------------- ------ ------ ------ ------ --------
PS1                0      0   1360   1360   1400
PS2               --     --     --     --     --
```

```
Power supplies needed by system : 1

Chassis Type : WS-C4507R

Supervisor Led Color : Green

Fantray : good
Fantray removal timeout: 240

Power consumed by Fantray : 50 Watts
```

This example shows how to display information about the environment alarms:

```
Switch# show environment alarm
no alarm
Switch#
```

This example shows how to display information about the power supplies, chassis type, and fan trays:

```
Switch# show environment status
Power                                      Fan
Supply  Model No         Type      Status   Sensor
------  ---------------  ---------  -----------  ------
PS1     PWR-C45-1400AC   AC 1400W   good       good
PS2     none             --         --         --

Power Supply    Max    Min    Max    Min    Absolute
(Nos in Watts)  Inline Inline System System Maximum
--------------  ------ ------ ------ ------ --------
PS1                 0      0   1360   1360   1400
PS2                --     --     --     --     --

Power supplies needed by system : 1

Chassis Type : WS-C4507R

Supervisor Led Color : Green

Fantray : good

Power consumed by Fantray : 50 Watts

Switch#
```

This example shows how to display information about the chassis:

```
Switch# show environment status chassis
Chassis Type :WS-C4507R
Switch#
```

This example shows how to display information about the fan tray:

```
Switch# show environment status fantray
Fantray : good
Power consumed by Fantray : 50 Watts
Switch#
```

This example shows how to display information about the power supply:

```
Switch# show environment status powersupply
Power                                      Fan
Supply  Model No          Type       Status  Sensor
------  ---------------   ---------  -------  ------
PS1     WS-X4008          AC 400W    good     good
PS2     WS-X4008          AC 400W    good     good
PS3     none              --         --       --
Switch#
```

This example shows how to display information about the supervisor engine:

```
Switch# show environment status supervisor
Supervisor Led Color :Green
Switch#
```

This example shows how to display information about the temperature of the chassis:

```
Switch# show environment temperature
Chassis Temperature                   = 32 degrees Celsius
Chassis Over Temperature Threshold    = 75 degrees Celsius
Chassis Critical Temperature Threshold = 95 degrees Celsius
Switch#
```

show errdisable detect

To display the error disable detection status, use the **show errdisable detect** command.

show errdisable detect

Syntax Description   This command has no arguments or keywords.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(19)EW	Display includes the status of storm control.

Examples   This example shows how to display the error disable detection status:

```
Switch# show errdisable detect
ErrDisable Reason    Detection status
-----------------    ----------------
udld                 Enabled
bpduguard            Enabled
security-violatio    Enabled
channel-misconfig    Disabled
psecure-violation    Enabled
vmps                 Enabled
pagp-flap            Enabled
dtp-flap             Enabled
link-flap            Enabled
l2ptguard            Enabled
gbic-invalid         Enabled
dhcp-rate-limit      Enabled
unicast-flood        Enabled
storm-control        Enabled
ilpower              Enabled
arp-inspection       Enabled
Switch#
```

Related Commands

Command	Description
errdisable detect	Enables error-disable detection.
errdisable recovery	Configures the recovery mechanism variables.
show interfaces status	Displays the interface status or a list of interfaces in error-disabled state.

show errdisable recovery

To display error disable recovery timer information, use the **show errdisable recovery** command.

show errdisable recovery

Syntax Description   This command has no arguments or keywords.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(19)EW	Display includes the status of storm control.

Examples   This example shows how to display recovery timer information for error disable:

```
Switch# show errdisable recovery
ErrDisable Reason    Timer Status
-----------------    --------------
udld                 Disabled
bpduguard            Disabled
security-violatio    Disabled
channel-misconfig    Disabled
vmps                 Disabled
pagp-flap            Disabled
dtp-flap             Disabled
link-flap            Disabled
l2ptguard            Disabled
psecure-violation    Disabled
gbic-invalid         Disabled
dhcp-rate-limit      Disabled
unicast-flood        Disabled
storm-control        Disabled
arp-inspection       Disabled

Timer interval:30 seconds

Interfaces that will be enabled at the next timeout:

Interface    Errdisable reason    Time left(sec)
---------    -----------------    --------------
 Fa7/32          arp-inspect          13
```

Related Commands

Command	Description
errdisable detect	Enables error-disable detection.
errdisable recovery	Configures the recovery mechanism variables.
show interfaces status	Displays the interface status or a list of interfaces in error-disabled state.

show etherchannel

To display EtherChannel information for a channel, use the **show etherchannel** command.

show etherchannel [*channel-group*] {**port-channel** | **brief** | **detail** | **summary** | **port** | **load-balance** | **protocol**}

Syntax Description	*channel-group*	(Optional) Number of the channel group; valid values are from 1 to 64.
	port-channel	Displays port-channel information.
	brief	Displays a summary of EtherChannel information.
	detail	Displays detailed EtherChannel information.
	summary	Displays a one-line summary per channel group.
	port	Displays EtherChannel port information.
	load-balance	Displays load-balance information.
	protocol	Displays the enabled protocol.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(13)EW	Support for LACP was added to this command.

Usage Guidelines   If you do not specify a channel group, all channel groups are displayed.

In the output below, the Passive port list field is displayed for Layer 3 port channels only. This field means that the physical interface, which is still not up, is configured to be in the channel group (and indirectly is in the only port channel in the channel group).

Examples   This example shows how to display port-channel information for a specific group:

```
Switch# show etherchannel 1 port-channel
                Port-channels in the group:
                ----------------------
Port-channel: Po1
------------
Age of the Port-channel   = 02h:35m:26s
Logical slot/port   = 10/1          Number of ports in agport = 0
GC                  = 0x00000000     HotStandBy port = null
Passive port list   = Fa5/4 Fa5/5
Port state          = Port-channel L3-Ag Ag-Not-Inuse
```

```
Ports in the Port-channel:
Index   Load    Port
-------------------
Switch#
```

This example shows how to display load-balancing information:

```
Switch# show etherchannel load-balance
Source XOR Destination mac address
Switch#
```

This example shows how to display a summary of information for a specific group:

```
Switch# show etherchannel 1 brief
Group state = L3
Ports: 2   Maxports = 8
port-channels: 1 Max port-channels = 1
Switch#
```

This example shows how to display detailed information for a specific group:

```
Switch# show etherchannel 1 detail
Group state = L3
Ports: 2   Maxports = 8
Port-channels: 1 Max Port-channels = 1
                 Ports in the group:
                 -------------------
Port: Fa5/4
------------

Port state     = EC-Enbld Down Not-in-Bndl Usr-Config
Channel group = 1              Mode = Desirable     Gcchange = 0
Port-channel  = null           GC   = 0x00000000    Psudo-agport = Po1
Port indx     = 0              Load = 0x00

----------
Protocol:  -  (Mode ON)
Switch#
```

Related Commands	Command	Description
	channel-group	Assigns and configures an EtherChannel interface to an EtherChannel group.
	interface port-channel	Accesses or creates a port-channel interface.

show flowcontrol

To display the per-interface status and statistics related to flow control, use the **show flowcontrol** command.

show flowcontrol [**module** *slot* | **interface** *interface*]

Syntax Description

module *slot*	(Optional) Limits the display to interfaces on a specific module.
interface *interface*	(Optional) Displays the status on a specific interface.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.2(25)EW	Support for the 10-Gigabit Ethernet interface was introduced on the Catalyst 4500 series switch.

Usage Guidelines

Table 2-26 describes the fields in the **show flowcontrol** command output.

Table 2-26   show flowcontrol Command Output

Field	Description
Port	Module and port number.
Send-Flowcontrol-Admin	Flow-control administration. Possible settings: **on** indicates the local port sends flow control to the far end; **off** indicates the local port does not send flow control to the far end; **desired** indicates the local end sends flow control to the far end if the far end supports it.
Send-Flowcontrol-Oper	Flow-control operation. Possible setting: **disagree** indicates the two ports could not agree on a link protocol.
Receive-Flowcontrol-Admin	Flow-control administration. Possible settings: **on** indicates the local port requires the far end to send flow control; **off** indicates the local port does not allow the far end to send flow control; **desired** indicates the local end allows the far end to send flow control.
Receive-Flowcontrol-Oper	Flow-control operation. Possible setting: **disagree** indicates the two ports could not agree on a link protocol.
RxPause	Number of pause frames received.
TxPause	Number of pause frames transmitted.

Examples

This example shows how to display the flow control status on all the Gigabit Ethernet interfaces:

```
Switch# show flowcontrol
Port      Send FlowControl  Receive FlowControl  RxPause TxPause
          admin    oper     admin    oper
--------- -------- -------- -------- --------    ------- -------
Te1/1     off      off      on       off         0       0
Te1/2     off      off      on       off         0       0
Gi1/3     off      off      desired  on          0       0
Gi1/4     off      off      desired  on          0       0
Gi1/5     off      off      desired  on          0       0
Gi1/6     off      off      desired  on          0       0
Gi3/1     off      off      desired  off         0       0
Gi3/2     off      off      desired  off         0       0
Gi3/3     off      off      desired  off         0       0
Gi3/4     off      off      desired  off         0       0
Gi3/5     off      off      desired  off         0       0
Gi3/6     off      off      desired  off         0       0
Switch#
```

This example shows how to display the flow control status on module 1:

```
Switch# show flowcontrol module 1
Port    Send FlowControl  Receive FlowControl  RxPause TxPause
        admin    oper     admin    oper
-----   -------- -------- -------- --------    ------- -------
Gi1/1   desired  off      off      off         0       0
Gi1/2   on       disagree on       on          0       0
Switch#
```

This example shows how to display the flow control status on Gigabit Ethernet interface 3/4:

```
Switch# show flowcontrol interface gigabitethernet3/4
Port    Send FlowControl  Receive FlowControl  RxPause TxPause
        admin    oper     admin    oper
-----   -------- -------- -------- --------    ------- -------
Gi3/4   off      off      on       on          0       0
Switch#
```

This example shows how to display the flow control status on 10-Gigabit Ethernet interface 1/1:

```
Switch# show flowcontrol interface tengigabitethernet1/1
Port      Send FlowControl  Receive FlowControl  RxPause TxPause
          admin    oper     admin    oper
--------- -------- -------- -------- --------    ------- -------
Te1/1     off      off      on       off         0       0
Switch#
```

Related Commands

Command	Description
channel-group	Configures a Gigabit Ethernet interface to send or receive pause frames.
show interfaces status	Displays the interface status or a list of interfaces in error-disabled state.

show hw-module port-group

To display how the X2 holes on a module are grouped, use the **show hw-module port-group** command.

show hw-module module *number* **port-group**

Syntax Description		
module	Specifies a line module.	
number	Specifies a slot or module number.	
port-group	Specifies a port-group on a switch.	

Defaults   X2 mode.

Command Modes   Global configuration mode

Command History

Release	Modification
12.2(40)SG	Support for WS-X4606-10GE-E Twin Gigabit converter introduced.

Usage Guidelines   When a TwinGig converter is enabled or disabled, the number and type of ports on the line card change dynamically. The terminology must reflect this behavior. In Cisco IOS, 10-Gigabit ports are named TenGigabit and 1-Gigabit ports are named Gigabit. Starting with Cisco IOS Release 12.2(40)SG, to avoid having ports named TenGigabit1/1 and Gigabit1/1, the 10-Gigabit and 1-Gigabit port numbers are independent. The WS-X4606-10GE-E module with six X2 ports are named TenGigabit<slot-num>/<1-6>, and the SFP ports are named Gigabit<slot-num>/<7-18>.

In the Supervisor Engine 6-E and Catalyst 4900M chassis, the ports are connected to the switching engine through a stub ASIC. This stub ASIC imposes some limitations on the ports: Gigabit and 10-Gigabit ports cannot be mixed on a single stub ASIC; they must either be all 10-Gigabit (X2), or all Gigabit (TwinGig converter and SFP). The faceplates of X2 modules show this stub-port grouping, either with an actual physical grouping, or a box drawn around a grouping.

Examples   This example shows to determine how the X2 holes on a module are grouped on a WS-X4606-10GE-E:

```
Switch# show hw-module module 1 port-group
Module    Port-group    Active       Inactive
----------------------------------------------------------
1         1             Te1/1-3      Gi1/7-12
1         2             Te1/4-6      Gi1/13-18
Switch#
```

Related Commands

Command	Description
hw-module port-group	Selects either Gigabit Ethernet or Ten Gigabit Ethernet interfaces on your module.

show hw-module uplink

To display the current uplink mode, use the **show hw-module uplink** command.

show hw-module uplink

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.2(25)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines

If the active uplink mode is different than configured mode, the output displays the change.

By default, the current (operational) uplink selection is displayed.

Examples

This example shows the output displaying the current (active) uplinks:

```
Switch# show hw-module uplink
Active uplink configuration is TenGigabitEthernet
```

This example shows the output for redundant systems in SSO mode if the 10-Gigabit Ethernet uplinks are active, and the Gigabit Ethernet uplinks are selected:

```
Switch# show hw-module uplink
Active uplink configuration is TenGigabitEthernet
(will be GigabitEthernet after next reload)
A 'redundancy reload shelf' or power-cycle of chassis is required to
apply the new configuration
```

This example shows the output for redundant systems in RPR mode if the 10-Gigabit Ethernet uplinks are active, and the Gigabit Ethernet uplinks are selected:

```
Switch# show hw-module uplink
Active uplink configuration is TenGigabitEthernet
(will be GigabitEthernet after next reload)
A reload of active supervisor is required to apply the new configuration.
```

Related Commands

Command	Description
hw-module uplink select	Selects the 10-Gigabit Ethernet or Gigabit Ethernet uplinks on the Supervisor Engine V-10GE within the W-C4510R chassis.

show idprom

To display the IDPROMs for the chassis, supervisor engine, module, power supplies, fan trays, clock module, and multiplexer (mux) buffer, use the **show idprom** command.

> **show idprom** {**all** | **chassis** | **module** [*mod*] | **interface** *int_name* | **supervisor** | **power-supply** *number* | **fan-tray**}

Syntax Description		
	all	Displays information for all IDPROMs.
	chassis	Displays information for the chassis IDPROMs.
	module	Displays information for the module IDPROMs.
	mod	(Optional) Specifies the module name.
	interface *int_name*	Displays information for the GBIC or SFP IDPROMs.
	supervisor	Displays information for the supervisor engine IDPROMs.
	power-supply *number*	Displays information for the power supply IDPROMs.
	fan-tray	Displays information for the fan tray IDPROMs.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(12c)EW	Support for the **power-supply**, **fan-tray**, **clock-module**, and **mux-buffer** keywords was added.
	12.1(13)EW	Support for **interface** keyword was added.
	12.2(18)EW	Enhanced the **show idprom interface** output to include the hexadecimal display of the GBIC/SFP SEEPROM contents.
	12.2(25)EW	Support for the 10-Gigabit Ethernet interface was introduced on the Catalyst 4500 series switch.

Usage Guidelines   When you enter the **show idprom interface** command, the output lines for Calibration type and Rx (receive) power measurement may not be displayed for all GBICs.

Examples   This example shows how to display IDPROM information for module 4:

```
Switch# show idprom module 4
Module 4 Idprom:

Switch#
```

show interfaces

To display traffic on a specific interface, use the **show interfaces** command.

show interfaces [{{**fastethernet** *mod/interface-number*} | {**gigabitethernet** *mod/interface-number*} | {**tengigabitethernet** *mod/interface-number*} | {**null** *interface-number*} | **vlan** *vlan_id*} | **status**}]

Syntax Description

fastethernet *mod/interface-number*	(Optional) Specifies the Fast Ethernet module and interface.
gigabitethernet *mod/interface-number*	(Optional) Specifies the Gigabit Ethernet module and interface.
tengigabitethernet *mod/interface-number*	(Optional) Specifies the 10-Gigabit Ethernet module and interface.
null *interface-number*	(Optional) Specifies the null interface; the valid value is 0.
vlan *vlan_id*	(Optional) Specifies the VLAN; valid values are from 1 to 4094.
status	(Optional) Displays status information.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(12c)EW	Support for extended VLAN addresses was added.
12.2(25)EW	Support for the 10-Gigabit Ethernet interface was introduced on the Catalyst 4500 series switch.
12.2(31)SGA	Support for auto-MDIX reflected in command output.
12.2(52)SG	Added support for per-VLAN error-disable detection.

Usage Guidelines   The statistics are collected per VLAN for Layer 2 switched packets and Layer 3 switched packets. The statistics are available for both unicast and multicast. The Layer 3 switched packet counts are available for both the ingress and egress directions. The per-VLAN statistics are updated every 5 seconds.

In some cases, the duplex mode that is displayed by the **show interfaces** command is different than that displayed by the **show running-config** command. The duplex mode that is displayed in the **show interfaces** command is the actual duplex mode that the interface is running. The **show interfaces** command shows the operating mode for an interface, but the **show running-config** command shows the configured mode for an interface.

If you do not enter any keywords, all counters for all modules are displayed.

Line cards that support auto-MDIX configuration on their copper media ports include: WS-X4124-RJ45, WS-X4148-RJ with hardware revision 3.0 or later, and WS-X4232-GB-RJ with hardware revision 3.0 or later.

Examples   This example shows how to display traffic for Gigabit Ethernet interface 2/5:

```
Switch# show interfaces gigabitethernet2/5
GigabitEthernet9/5 is up, line protocol is up (connected) (vlan-err-dis)
Hardware is C4k 1000Mb 802.3, address is 0001.64f8.3fa5 (bia 0001.64f8.3fa5)
Internet address is 172.20.20.20/24
MTU 1500 bytes, BW 1000000 Kbit, DLY 10 usec,
reliability 255/255, txload 1/255, rxload 1/255
Encapsulation ARPA, loopback not set
Keepalive set (10 sec)
Full-duplex, 1000Mb/s
ARP type: ARPA, ARP Timeout 04:00:00
Last input 00:00:00, output never, output hang never
Last clearing of "show interface" counters never
Queueing strategy: fifo
Output queue 0/40, 0 drops; input queue 0/75, 0 drops
5 minute input rate 1000 bits/sec, 2 packets/sec
5 minute output rate 0 bits/sec, 0 packets/sec
L2 Switched: ucast: 8199 pkt, 1362060 bytes - mcast: 6980 pkt, 371952 bytes
L3 in Switched: ucast: 0 pkt, 0 bytes - mcast: 0 pkt, 0 bytes mcast
L3 out Switched: ucast: 0 pkt, 0 bytes - mcast: 0 pkt, 0 bytes

Negotiation of Trunking: Off
Access Mode VLAN: none
Trunking Native Mode VLAN: none
Administrative Native VLAN tagging: enabled
Voice VLAN: none
Administrative private-vlan host-association: none
Administrative private-vlan mapping: 202 (VLAN0202) 303 (VLAN0303) 304 (VLAN0304)
Administrative private-vlan trunk native VLAN: none
Administrative private-vlan trunk
Native VLAN tagging: enabled
Administrative private-vlan trunk encapsulation: 802.1q
Administrative private-vlan trunk normal VLANs: none
Administrative private-vlan trunk private VLANs: none
Administrative private-vlan mapping trunk: New 202 (VLAN0202) 303 (VLAN0303) 304
(VLAN0304) 204 (VLAN0204) 305 (VLAN0305) 306 (VLAN0306)
```

```
Operational private-vlan: 202 (VLAN0202) 303 (VLAN0303) 304 (VLAN0304)
Trunking VLANs Enabled: ALL
Pruning VLANs Enabled: 2-1001
Capture Mode Disabled
Capture VLANs Allowed: ALL
Switch#
```

This example shows how to verify the status of auto-MDIX on an RJ-45 port:

Note   You can verify the configuration setting and the operational state of auto-MDIX on the interface by entering the **show interfaces** EXEC command. This field is applicable and appears only on the **show interfaces** command output for 10/100/1000BaseT RJ-45 copper ports on supported linecards including WS-X4124-RJ45, WS-X4148-RJ with hardware revision 3.0 or later, and WS-X4232-GB-RJ with hardware revision 3.0 or later.

```
FastEthernet6/3 is up, line protocol is up (connected)
  Hardware is Fast Ethernet Port, address is 0003.6ba8.ee68 (bia 0003.6ba8.ee68)
  MTU 1500 bytes, BW 100000 Kbit, DLY 100 usec,
     reliability 255/255, txload 1/255, rxload 1/255
  Encapsulation ARPA, loopback not set
  Keepalive set (10 sec)
  Full-duplex, 100Mb/s, link type is auto, media type is 10/100BaseTX
  input flow-control is unsupported output flow-control is unsupported
Auto-MDIX on (operational: on)
ARP type: ARPA, ARP Timeout 04:00:00
  Last input never, output never, output hang never
  Last clearing of "show interface" counters never
  Input queue: 0/2000/0/0 (size/max/drops/flushes); Total output drops: 0
  Queueing strategy: fifo
  Output queue: 0/40 (size/max)
  5 minute input rate 0 bits/sec, 0 packets/sec
  5 minute output rate 0 bits/sec, 0 packets/sec
     0 packets input, 0 bytes, 0 no buffer
     Received 0 broadcasts (0 multicasts)
     0 runts, 0 giants, 0 throttles
     0 input errors, 0 CRC, 0 frame, 0 overrun, 0 ignored
     0 input packets with dribble condition detected
     157082 packets output, 13418032 bytes, 0 underruns
     0 output errors, 0 collisions, 0 interface resets
     0 babbles, 0 late collision, 0 deferred
     1 lost carrier, 0 no carrier
     0 output buffer failures, 0 output buffers swapped out
Switch#
```

This example shows how to display status information for Gigabit Ethernet interface 1/2:

```
Switch# show interfaces gigabitethernet1/2 status
Port      Name        Status       Vlan        Duplex  Speed Type
Gi1/2                 notconnect   1            auto    1000 1000-XWDM-RXONLY
Switch#
```

This example shows how to display status information for the interfaces on the supervisor engine:

```
Switch# show interfaces status

Port      Name        Status       Vlan        Duplex  Speed Type
Te1/1                 connected    1            full    10G  10GBase-LR
Te1/2                 connected    1            full    10G  10GBase-LR
Switch#
```

show interfaces (virtual switch)

To display traffic that is seen by a specific interface, use the **show interfaces** command in EXEC mode.

show interfaces [*interface iswitch-num/mod/port*]

Syntax Description

interface	(Optional) Specifies interface type
switch-num	Specifies port number.
/mod	Specifies module number
/port	Specifies port number

Defaults   This command has no defaults settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
Cisco IOS XE 3.4.0SG and 15.1(2)SG	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines   Statistics are collected on a per-VLAN basis for Layer 2-switched packets and Layer 3-switched packets. Statistics are available for both unicast and multicast traffic. The Layer 3-switched packet counts are available for both ingress and egress directions. The per-VLAN statistics are updated every 5 seconds.

In some cases, you might see a difference in the duplex mode that is displayed between the **show interfaces (virtual switch)** command and the **show running-config switch (virtual switch)** command. In this case, the duplex mode that is displayed in the **show interfaces (virtual switch)** command is the actual duplex mode that the interface is running. The **show interfaces (virtual switch)** command shows the operating mode for an interface, while the **show running-config switch (virtual switch)** command shows the configured mode for an interface.

If you do not specify an interface, the information for all interfaces is displayed.

The output of the **show interfaces GigabitEthernet** command displays an extra 4 bytes for every packet that is sent or received. The extra 4 bytes are the Ethernet frame CRC in the input and output byte statistics.

Examples

The following example shows how to display traffic for a specific interface:

```
Router# show interfaces GigabitEthernet switch 1/3/3
GigabitEthernet1/3/3 is up, line protocol is up (connected)
  Hardware is C6k 1000Mb 802.3, address is 000f.2305.49c0 (bia 000f.2305.49c0)
  MTU 1500 bytes, BW 1000000 Kbit, DLY 10 usec,
     reliability 255/255, txload 1/255, rxload 1/255
  Encapsulation 802.1Q Virtual LAN, Vlan ID  1., loopback not set
  Keepalive set (10 sec)
  Full-duplex, 1000Mb/s, media type is LH
  input flow-control is off, output flow-control is on
  Clock mode is auto
  ARP type: ARPA, ARP Timeout 04:00:00
  Last input 00:00:19, output 00:00:00, output hang never
  Last clearing of "show interface" counters never
  Input queue: 0/75/0/0 (size/max/drops/flushes); Total output drops: 0
  Queueing strategy: fifo
  Output queue: 0/40 (size/max)
  5 minute input rate 0 bits/sec, 0 packets/sec
  5 minute output rate 0 bits/sec, 0 packets/sec
  L2 Switched: ucast: 360 pkt, 23040 bytes - mcast: 0 pkt, 0 bytes
  L3 in Switched: ucast: 0 pkt, 0 bytes - mcast: 0 pkt, 0 bytes mcast
  L3 out Switched: ucast: 0 pkt, 0 bytes mcast: 0 pkt, 0 bytes
     437 packets input, 48503 bytes, 0 no buffer
     Received 76 broadcasts (0 IP multicast)
     0 runts, 0 giants, 0 throttles
     0 input errors, 0 CRC, 0 frame, 0 overrun, 0 ignored
     0 watchdog, 0 multicast, 0 pause input
     0 input packets with dribble condition detected
     86 packets output, 25910 bytes, 0 underruns
     0 output errors, 0 collisions, 0 interface resets
     0 babbles, 0 late collision, 0 deferred
     0 lost carrier, 0 no carrier, 0 PAUSE output
     0 output buffer failures, 0 output buffers swapped out
Router#
```

Related Commands

Command	Description
interface (virtual switch)	Selects an interface to configure and enters the interface configuration mode.

show interfaces counters

To display the traffic on the physical interface, use the **show interfaces counters** command.

show interfaces counters [**all** | **detail** | **errors** | **storm-control** | **trunk**] [**module** *mod*]

Syntax Description

all	(Optional) Displays all the interface counters including errors, trunk, and detail.
detail	(Optional) Displays the detailed interface counters.
errors	(Optional) Displays the interface error counters.
storm-control	(Optional) Displays the number of packets discarded due to suppression on the interface.
trunk	(Optional) Displays the interface trunk counters.
module *mod*	(Optional) Limits the display to interfaces on a specific module.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(19)EW	Support for storm control.
12.2(18)EW	Support for the display of total suppression discards.

Usage Guidelines

If you do not enter any keywords, all the counters for all modules are displayed.

The display for the **storm-control** keyword includes the suppressed multicast bytes.

Examples

This example shows how to display the error counters for a specific module:

```
Switch# show interfaces counters errors module 1

Port          Align-Err     FCS-Err     Xmit-Err     Rcv-Err UnderSize
Gi1/1                 0           0            0           0         0
Gi1/2                 0           0            0           0         0

Port       Single-Col Multi-Col  Late-Col Excess-Col Carri-Sen     Runts     Giants
Gi1/1               0         0         0          0         0         0         0
Gi1/2               0         0         0          0         0         0         0
Switch#
```

This example shows how to display the traffic that is seen by a specific module:

```
Switch# show interfaces counters module 1

Port            InOctets    InUcastPkts    InMcastPkts    InBcastPkts
Gi1/1                  0              0              0              0
Gi1/2                  0              0              0              0

Port           OutOctets   OutUcastPkts   OutMcastPkts   OutBcastPkts
Gi1/1                  0              0              0              0
Gi1/2                  0              0              0              0
Switch#
```

This example shows how to display the trunk counters for a specific module:

```
Switch# show interfaces counters trunk module 1

Port        TrunkFramesTx   TrunkFramesRx   WrongEncap
Gi1/1                   0               0            0
Gi1/2                   0               0            0
Switch#
```

This example shows how to display the number of packets that are discarded due to suppression:

```
Switch# show interfaces counters storm-control

Multicast Suppression : Enabled

Port        BcastSuppLevel   TotalSuppressionDiscards
Fa5/35             10.00%                    6278550
Switch#
```

Related Commands	Command	Description
	show interfaces (virtual switch)	Displays the interface capabilities for an interface or for all the interfaces on a switch.

show interfaces counters (virtual switch)

To display the traffic that the physical interface sees, use the **show interfaces counters** command in EXEC mode.

> **show interfaces** [*interface switch-num*/*mod*/*port*] **counters** [**errors** | **etherchannel** | **protocol status** | **storm-control**]

Syntax Description

interface	(Optional) Specifies the interface type.
switch-num	Specifies the switch number; valid values are 1 and 2.
/mod	Specifies the module number.
/port	Specifies the port number.
errors	(Optional) Displays the interface error counters.
etherchannel	(Optional) Displays information about the EtherChannel interface.
protocol status	(Optional) Displays information about the current status of the enabled protocols.
storm-control	(Optional) Displays the discard count and the level settings for each mode.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
Cisco IOS XE 3.4.0SG and 15.1(2)SG	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines

The **show interfaces counters** command displays the number of all of the packets arriving and includes the number of packets that may be dropped by the interface due to the storm-control settings. To display the total number of dropped packets, you can enter the **show interfaces counters storm-control** command.

The **show interfaces counters storm-control** command displays the discard count and the level settings for each mode. The discard count is a total of all three modes.

If you do not enter any keywords, all counters for all modules are displayed.

If you do not specify an interface, the information for all interfaces is displayed.

When you enter the **show interfaces interface counters etherchannel** command, follow these guidelines:

- If interface specifies a physical port, the command displays the message "Etherchannel not enabled on this interface."

- If interface is omitted, the command displays the counters for all port channels (in the system) and for their associated physical ports.

- If interface specifies a port channel, the command displays the counters for the port channel and all of the physical ports that are associated with it. In addition, when you enter the command specifying the primary aggregator in a Link Aggregation Control Protocol (LACP) port channel with multiple aggregators, the output includes the statistics for all of the aggregators in the port channels and for the ports that are associated with them.

Examples

The following example shows how to display the error counters for a specific:

```
Router# show interfaces gigabitethernet 2/4/47 counters errors
Port          Align-Err    FCS-Err    Xmit-Err    Rcv-Err UnderSize OutDiscards
Gi2/4/47              0          0           0          0         0           0
Port          Single-Col Multi-Col  Late-Col Excess-Col Carri-Sen     Runts    s
Gi2/4/47              0          0         0          0         0         0    0
Port          SQETest-Err Deferred-Tx IntMacTx-Err IntMacRx-Err Symbol-Err
Gi2/4/47              0           0            0            0          0
Router#
```

The following example shows how to display traffic that is seen by a specific interface:

```
Router# show interfaces gigabitethernet 1/2/5 counters
Port            InOctets    InUcastPkts    InMcastPkts    InBcastPkts
Gi1/2/5                0              0              0              0
Port           OutOctets   OutUcastPkts   OutMcastPkts   OutBcastPkts
Gi1/2/5                0              0              0              0
Router#
```

The following example shows how to display the counters for all port channels (in the system) and their associated physical ports:

```
Router# show interfaces counters etherchannel
Port              InOctets    InUcastPkts    InMcastPkts    InBcastPkts
Po1                      0              0              0              0
Po3                      0              0              0              0

Router#
```

The following example shows how to display the counters for all port channels (in the system) and their associated physical ports in Cisco IOS Release 12.2(50)SY and later releases:

```
Router# show interfaces counters etherchannel
Port              InOctets    InUcastPkts    InMcastPkts    InBcastPkts
Po1                      0              0              0              0
Po3                      0              0              0              0
Po10           16341138343       77612803       12212915       14110863
Gi1/4/1        15628478622       77612818        7525970       14110865
Gi1/4/2          712662881              0        4686951              5
Po20           33887345029       88483183       11506653       14101212
Gi2/4/1        33326378013       88491521        7177393       14101663
```

```
Gi2/4/2              562904837              0        4330030              6
Router#
```

The following example shows how to display the protocols enabled for a specific interface:

```
Router# show interfaces gigabitethernet 1/2/5 counters protocol status
Protocols allocated:
 GigabitEthernet1/2/5: Other, IP
Router#
```

The following example shows how to display the discard count and the level settings for each mode for a specific interface:

```
Router# show interfaces gigabitethernet 1/2/5 counters storm-control
Port          UcastSupp %     McastSupp %     BcastSupp %    TotalSuppDiscards
Gi1/2/5            100.0          100.0          100.0                      0
Router#
```

Related Commands

Command	Description
clear counters	Clears the interface counters.

show interfaces description

To display a description and status of an interface, use the **show interfaces description** command.

show interfaces [*interface*] **description**

Syntax Description	*interface* (Optional) Type of interface.

Defaults This command has no default settings.

Command Modes Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Examples This example shows how to display information for all interfaces:

```
Switch# show interfaces description
 Interface Status        Protocol Description
 PO0/0     admin down     down     First interface
 PO0/1     admin down     down
 Gi1/1     up             up       GigE to server farm
Switch#
```

Related Commands

Command	Description
description (refer to Cisco IOS documentation)	Includes a specific description about the digital signal processor (DSP) interface.

show interfaces link

To display how long a cable has been disconnected from an interface, use the **show interfaces link** command:

show interfaces link [**module** *mod_num*]

Syntax Description	**module** *mod_num*	(Optional) Limits the display to interfaces on a module.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.2(18)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines If the interface state is up, the command displays 0:00. If the interface state is down, the time (in hours, minutes, and seconds) is displayed.

Examples   This example shows how to display active link-level information:

```
Switch# show interfaces link

Port    Name            Down Time
Gi1/1                    00:00:00
Gi1/2                    00:00:00
Gi3/1           00:00:00
Gi3/2           00:00:00
Fa4/1                    00:00:00
Fa4/2                    00:00:00
Fa4/3                    00:00:00
Fa4/4                    00:00:00
```

This example shows how to display inactive link-level information:

```
Switch# show interfaces link

Port    Name          Down Time
Gi3/4                 1 minute 28 secs
Gi3/5                 1 minute 28 secs
Gi3/6                 1 minute 28 secs
Gi4/1                 1 minute 28 secs
```

In this example, the cable has been disconnected from the port for 1 minute and 28 seconds.

show interfaces mtu

To display the maximum transmission unit (MTU) size of all the physical interfaces and SVIs on the switch, use the **show interfaces mtu** command.

show interfaces mtu [**module** *mod*]

Syntax Description	

module *mod*	(Optional) Limits the display to interfaces on a specific module.

Defaults This command has no default settings.

Command Modes EXEC

Command History

Release	Modification
12.1(13)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Examples This example shows how to display the MTU size for all interfaces on module 1:

```
Switch> show interfaces mtu module 1

Port    Name            MTU
Gi1/1                   1500
Gi1/2                   1500
Switch>
```

Related Commands

Command	Description
mtu	Enables jumbo frames on an interface by adjusting the maximum size of a packet or maximum transmission unit (MTU).

show interfaces private-vlan mapping

To display PVLAN mapping information for VLAN SVIs, use the **show interfaces private-vlan mapping** command.

>**show interfaces private-vlan mapping** [**active**]

Syntax Description

active	(Optional) Displays active interfaces only.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines

This command displays SVI information only.

Examples

This example shows how to display PVLAN mapping information:

```
Switch# show interfaces private-vlan mapping
Interface Secondary VLAN Type
--------- -------------- -----------------
vlan2     301            isolated
vlan2     302            isolated
Switch#
```

Related Commands

Command	Description
private-vlan	Configures private VLANs and the association between a private VLAN and a secondary VLAN.
private-vlan mapping	Creates a mapping between the primary and the secondary VLANs so that both share the same primary VLAN SVI.

show interfaces status

To display the interface status or a list of interfaces in error-disabled state, use the **show interfaces status** command.

show interfaces status [**err-disabled** | **inactive**] [**module** {*module*}]

Syntax Description	**err-disabled**	(Optional) Displays interfaces in error-disabled state.
	inactive	(Optional) Displays interfaces in inactive state.
	module *module*	(Optional) Displays interfaces on a specific module.

Defaults   This command has no default settings.

Command Modes Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.2(40)SG	Support for WS-X4606-10GE-E Twin Gigabit converter introduced.
12.2(52)SG	Support for per-VLAN error-disable was introduced by adding Err-Disabled VLAN column to output.

Usage Guidelines When at least one VLAN on a port is error-disabled the output for the **show interfaces status** command will display *vl-err-dis* in the VLAN column.

Examples   This example shows how to display the status of all interfaces:

```
Switch# show interfaces status

Port    Name            Status      Vlan       Duplex Speed Type
Te1/1                   connected   1          full   10G   10GBase-LR
Te1/2                   connected   vl-err-dis full   10G   10GBase-LR
Switch#
```

This example shows how to display the status of interfaces in an error-disabled state:

```
Switch# show interfaces status err-disabled

Port    Name            Status      Reason          Err-Disabled VLANs
----    ----            ------      -------          ------------------
Fa9/4                   notconnect  link-flap
Fa9/5                   err-disabled psecure_violation 3-5
Fa9/6                   connected   psecure_violation 10,15
Switch#
```

This example shows how to display the Gigabit Ethernet interfaces on a WS-X4606-10GE-E switch using the TwinGig Convertor:

```
Switch# show interfaces status module 1
Port Name Status Vlan Duplex Speed Type
Te1/1 inactive 1 full 10G No X2
Te1/2 inactive 1 full 10G No X2
Te1/3 inactive 1 full 10G No X2
Te1/4 notconnect 1 full 10G No X2
Te1/5 notconnect 1 full 10G No X2
Te1/6 notconnect 1 full 10G No X2
Gi1/7 notconnect 1 full 1000 No Gbic
Gi1/8 notconnect 1 full 1000 No Gbic
Gi1/9 notconnect 1 full 1000 No Gbic
Gi1/10 notconnect 1 full 1000 No Gbic
Gi1/11 notconnect 1 full 1000 No Gbic
Gi1/12 notconnect 1 full 1000 No Gbic
Gi1/13 inactive 1 full 1000 No Gbic
Gi1/14 inactive 1 full 1000 No Gbic
Gi1/15 inactive 1 full 1000 No Gbic
Gi1/16 inactive 1 full 1000 No Gbic
Gi1/17 inactive 1 full 1000 No Gbic
Gi1/18 inactive 1 full 1000 No Gbic
Switch#
```

Related Commands	Command	Description
	errdisable detect	Enables error-disable detection.
	hw-module port-group	Selects either Gigabit Ethernet or Ten Gigabit Ethernet interfaces on your module.
	show errdisable recovery	Displays error-disable recovery timer information.

show interfaces switchport

To display the administrative and operational status of a switching (nonrouting) port, use the **show interfaces switchport** command.

>**show interfaces** [*interface-id*] **switchport** [**module** *mod*]

Syntax Description

interface-id	(Optional) Interface ID for the physical port.
module *mod*	(Optional) Limits the display to interfaces on the specified module; valid values are from 1 to 6.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(19)EW	Support for per-interface display.
12.2(18)EW	Support for displaying the status of native VLAN tagging in the command output.
15.1.0 SG	Support for PVLAN modes over EtherChannel. Modes include: private-vlan host, private-vlan promiscuous, private-vlan trunk secondary, and private-vlan trunk promiscuous.

Examples

This example shows how to display switch-port information using the **begin** output modifier:

```
Switch# show interfaces switchport | include VLAN
Name: Fa5/6
Access Mode VLAN: 200 (VLAN0200)
Trunking Native Mode VLAN: 1 (default)
Trunking VLANs Enabled: ALL
Pruning VLANs Enabled: ALL
Switch#
```

This example shows how to display switch-port information for module 1:

```
Switch# show interfaces switchport module 1
Name:Gi1/1
Switchport:Enabled
Administrative Mode:dynamic auto
Operational Mode:down
Administrative Trunking Encapsulation:negotiate
Negotiation of Trunking:On
Access Mode VLAN:1 (default)
Trunking Native Mode VLAN:1 (default)
Administrative private-vlan host-association:none
Administrative private-vlan mapping:none
Operational private-vlan:none
Trunking VLANs Enabled:ALL
```

```
             Pruning VLANs Enabled:2-1001

             Name:Gi1/2
             Switchport:Enabled
             Administrative Mode:dynamic auto
             Operational Mode:down
             Administrative Trunking Encapsulation:negotiate
             Negotiation of Trunking:On
             Access Mode VLAN:1 (default)
             Trunking Native Mode VLAN:1 (default)
             Administrative private-vlan host-association:none
             Administrative private-vlan mapping:none
             Operational private-vlan:none
             Trunking VLANs Enabled:ALL
             Pruning VLANs Enabled:2-1001
             Switch#
```

This example shows how to display the status of native VLAN tagging on the port:

```
Switch# show interfaces f3/1 switchport
show interface f3/1 switchport
Name: Fa3/1
Switchport: Enabled
Administrative Mode: private-vlan promiscuous
Operational Mode: private-vlan trunk secondary
Administrative Trunking Encapsulation: negotiate
Operational Trunking Encapsulation: dot1q
Negotiation of Trunking: On
Access Mode VLAN: 1 (default)
Trunking Native Mode VLAN: 1 (default)
Administrative Native VLAN tagging: enabled
Voice VLAN: none
Administrative private-vlan host-association: none
Administrative private-vlan mapping: none
Administrative private-vlan trunk native VLAN: 1
Administrative private-vlan trunk Native VLAN tagging: enabled
Administrative private-vlan trunk encapsulation: dot1q
Administrative private-vlan trunk normal VLANs: 1
Administrative private-vlan trunk associations: none
Administrative private-vlan trunk mappings:
    10 (VLAN0010) 100 (VLAN0100)
Operational private-vlan:
  10 (VLAN0010) 100 (VLAN0100)
Trunking VLANs Enabled: ALL
Pruning VLANs Enabled: 2-1001
Capture Mode Disabled
Capture VLANs Allowed: ALL

Unknown unicast blocked: disabled
Unknown multicast blocked: disabled
Appliance trust: none
Switch#
```

Related Commands	Command	Description
	show interfaces (virtual switch)	Displays the interface capabilities for an interface or for all the interfaces on a switch.
	show interfaces counters	Displays the traffic on the physical interface.

show interfaces transceiver

To display diagnostic-monitoring data for all interfaces that have transceivers installed, use the **show interfaces transceiver** command.

show interfaces {{[*int_name*] **transceiver** {[**detail**]} | {**transceiver** [**module** *mod*] | **detail** [**module** *mod*]}}

Syntax Description		
int_name	(Optional) Interface name.	
detail	(Optional) Displays the calibrated values and the A2D readouts if the readout values differ from the calibrated values. Also displays the high-alarm, high-warning, low-warning, and low-alarm thresholds.	
module *mod*	(Optional) Limits the display to interfaces on a specific module.	

Defaults   The noninterface-specific versions of the **show interfaces transceiver** command are enabled by default.

The interface-specific versions of these commands are enabled by default if the specified interface has a transceiver (GBIC or SFP) that is configured for diagnostic monitoring, and the transceiver is in a module that supports diagnostic monitoring.

Command Modes   Privileged EXEC mode

Command History	Release	Modification
	12.1(20)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.2(18)EW	Support for the **calibration** keyword was withdrawn.

Usage Guidelines   The **show interfaces transceiver** command provides useful information under the following conditions:

- At least one transceiver is installed on a chassis that is configured for diagnostic monitoring.
- The transceiver is in a module that supports diagnostic monitoring.

If you notice that the alarm and warning flags have been set on a transceiver, reenter the command to confirm.

Examples

This example shows how to display diagnostic monitoring data for all interfaces with transceivers installed on the switch:

```
Switch# show interfaces transceiver
   If device is externally calibrated, only calibrated values are printed.
   ++ : high alarm, +  : high warning, -  : low warning, -- : low alarm.
   NA or N/A: not applicable, Tx: transmit, Rx: receive.
   mA: milliamperes, dBm: decibels (milliwatts).
                                               Optical   Optical
             Temperature  Voltage   Current    Tx Power  Rx Power
   Port      (Celsius)    (Volts)   (mA)       (dBm)     (dBm)
   -------   -----------  -------   --------   --------  --------
   Gi1/1       48.1        3.30       0.0        8.1 ++   N/A
   Gi1/2       33.0        3.30       1.8      -10.0     -36.9
   Gi2/1       43.7        5.03      50.6 +    -16.7 --   N/A
   Gi2/2       39.2        5.02      25.7        0.8      N/A
Switch#
```

Note The value for the Optical Tx Power (in dBm) equals ten times log (Tx Power in mW). If the Tx Power value is 3 mW, then the Optical Tx Power value equals 10 * log (3), which equals 10 * .477 or 4.77 dBm. The Optical Rx Power value behaves similarly. If the Tx Power or the Rx Power is zero, then its dBm value is undefined and is shown as N/A (not applicable).

This example shows how to display detailed diagnostic monitoring data, including calibrated values, alarm and warning thresholds, A2D readouts, and alarm and warning flags. The A2D readouts are reported separately in parentheses only if they differ from the calibrated values:

```
Switch# show interfaces transceiver detail
   mA: milliamperes, dBm: decibels (milliwatts), NA or N/A: not applicable.
   ++ : high alarm, +  : high warning, -  : low warning, -- : low alarm.
   A2D readouts (if they differ), are reported in parentheses.
   The threshold values are calibrated.

                                   High Alarm  High Warn  Low Warn   Low Alarm
             Temperature           Threshold   Threshold  Threshold  Threshold
   Port      (Celsius)             (Celsius)   (Celsius)  (Celsius)  (Celsius)
   -------   ------------------    ----------  ---------  ---------  ---------
   Gi1/1       48.1                  100.0      100.0        0.0        0.0
   Gi1/2       34.9                  100.0      100.0        0.0        0.0

```

Related Commands

Command	Description
show idprom	Displays the IDPROMs for the chassis.
show interfaces status	Displays the interface status or a list of interfaces in error-disabled state.

show interfaces trunk

To display port and module interface-trunk information, use the **show interfaces trunk** command.

show interfaces trunk [**module** *mod*]

Syntax Description	**module** *mod* (Optional) Limits the display to interfaces on the specified module; valid values are from 1 to 6.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines   If you do not specify a keyword, only information for trunking ports is displayed.

Examples   This example shows how to display interface-trunk information for module 5:

```
Switch# show interfaces trunk module 5

Port      Mode         Encapsulation  Status        Native vlan
Fa5/1     routed       negotiate      routed        1
Fa5/2     routed       negotiate      routed        1
Fa5/3     routed       negotiate      routed        1
Fa5/4     routed       negotiate      routed        1
Fa5/5     routed       negotiate      routed        1
Fa5/6     off          negotiate      not-trunking  10
Fa5/7     off          negotiate      not-trunking  10
Fa5/8     off          negotiate      not-trunking  1
Fa5/9     desirable    n-isl          trunking      1
Fa5/10    desirable    negotiate      not-trunking  1
Fa5/11    routed       negotiate      routed        1

show ip arp inspection

To show the status of dynamic ARP inspection for a specific range of VLANs, use the **show ip arp inspection** command.

show ip arp inspection {[**statistics**] **vlan** *vlan-range* | **interfaces** [*interface-name*]}

Syntax Description

statistics	(Optional) Displays statistics for the following types of packets that have been processed by this feature: forwarded, dropped, MAC validation failure, and IP validation failure.
vlan *vlan-range*	(Optional) When used with the **statistics** keyword, displays the statistics for the selected range of VLANs. Without the **statistics** keyword, displays the configuration and operating state of DAI for the selected range of VLANs.
interfaces *interface-name*	(Optional) Displays the trust state and the rate limit of ARP packets for the provided interface. When the interface name is not specified, the command displays the trust state and rate limit for all applicable interfaces in the system.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Examples

This example shows how to display the statistics of packets that have been processed by DAI for VLAN 3:

```
Switch# show ip arp inspection statistics vlan 3

Vlan        Forwarded          Dropped      DHCP Drops       ACL Drops
----        ---------          -------      ----------       ----------
   3            31753           102407          102407                0

Vlan    DHCP Permits     ACL Permits    Source MAC Failures
----    ------------     -----------    -------------------
   3           31753               0                      0

Vlan    Dest MAC Failures    IP Validation Failures
----    -----------------    ----------------------
   3                    0                         0
Switch#
```

This example shows how to display the statistics of packets that have been processed by DAI for all active VLANs:

```
Switch# show ip arp inspection statistics

```

This example shows how to clear the buffer with the **clear ip arp inspection log** command:

```
Switch# clear ip arp inspection log
Switch# show ip arp inspection log
Total Log Buffer Size : 10
Syslog rate : 0 entries per 10 seconds.
No entries in log buffer.
Switch#
```

Related Commands

Command	Description
arp access-list	Defines an ARP access list or adds clauses at the end of a predefined list.
clear ip arp inspection log	Clears the status of the log buffer.

show ip cef vlan

To view IP CEF VLAN interface status and configuration information and display the prefixes for a specific interface, use the **show ip cef vlan** command.

show ip cef vlan *vlan_num* [**detail**]

Syntax Description		
vlan_num	Number of the VLAN.	
detail	(Optional) Displays detailed information.	

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Examples   This example shows how to display the prefixes for a specific VLAN:

```
Switch# show ip cef vlan 1003
Prefix              Next Hop             Interface
0.0.0.0/0           172.20.52.1          FastEthernet3/3
0.0.0.0/32          receive
10.7.0.0/16         172.20.52.1          FastEthernet3/3
10.16.18.0/23       172.20.52.1          FastEthernet3/3
Switch#
```

This example shows how to display detailed IP CEF information for a specific VLAN:

```
Switch# show ip cef vlan 1003 detail
IP Distributed CEF with switching (Table Version 2364), flags=0x0
  1383 routes, 0 reresolve, 0 unresolved (0 old, 0 new)
  1383 leaves, 201 nodes, 380532 bytes, 2372 inserts, 989 invalidations
  0 load sharing elements, 0 bytes, 0 references
  universal per-destination load sharing algorithm, id 9B6C9823
  3 CEF resets, 0 revisions of existing leaves
  refcounts:  54276 leaf, 51712 node

Adjacency Table has 5 adjacencies
Switch#
```

show ip dhcp snooping

To display the DHCP snooping configuration, use the **show ip dhcp snooping** command.

show ip dhcp snooping

Syntax Description   This command has no arguments or keywords.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(12c)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.2(25)EWA	Support for option 82 on untrusted ports was added.

Examples   This example shows how to display the DHCP snooping configuration:

```
Switch# show ip dhcp snooping
Switch DHCP snooping is enabled
DHCP snooping is configured on following VLANs:
500,555
DHCP snooping is operational on following VLANs:
500,555
DHCP snooping is configured on the following L3 Interfaces:
Insertion of option 82 is enabled
circuit-id default format: vlan-mod-port
remote-id: switch123 (string)
Option 82 on untrusted port is not allowed Verification of hwaddr field is enabled DHCP
snooping trust/rate is configured on the following Interfaces:
Interface Trusted Rate limit (pps)
------------------------ ------- ----------------
FastEthernet5/1 yes 100
Custom circuit-ids:
VLAN 555: customer-555
FastEthernet2/1 no unlimited
Custom circuit-ids:
VLAN 500: customer-500
Switch#
```

show ip dhcp snooping binding

Command	Description
ip dhcp snooping	Globally enables DHCP snooping.
ip dhcp snooping information option	Enables DHCP option 82 data insertion.
ip dhcp snooping limit rate	Configures the number of the DHCP messages that an interface can receive per second.
ip dhcp snooping trust	Enables DHCP snooping on a trusted VLAN.
ip dhcp snooping vlan	Enables DHCP snooping on a VLAN or a group of VLANs.

To display the DHCP snooping binding entries, use the **show ip dhcp snooping binding** command.

> **show ip dhcp snooping binding** [*ip-address*] [*mac-address*] [**vlan** *vlan_num*]
> [**interface** *interface_num*]

Syntax Description

ip-address	(Optional) IP address for the binding entries.
mac-address	(Optional) MAC address for the binding entries.
vlan *vlan_num*	(Optional) Specifies a VLAN.
interface *interface_num*	(Optional) Specifies an interface.

Defaults
If no argument is specified, the switch will display the entire DHCP snooping binding table.

Command Modes
Privileged EXEC mode

Command History

Release	Modification
12.1(12c)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines
DHCP snooping is enabled on a VLAN only if both the global snooping and the VLAN snooping are enabled.

To configure a range of VLANs, use the optional *last_vlan* argument to specify the end of the VLAN range.

Examples
This example shows how to display the DHCP snooping binding entries for a switch:

```
Switch# show ip dhcp snooping binding

MacAddress      IP Address    Lease (seconds)    Type           VLAN     Interface
-----------     -----------   ----------------   -------------  -----    ------------
0000.0100.0201  10.0.0.1        1600             dhcp-snooping   100      FastEthernet3/1
Switch#
```

This example shows how to display an IP address for DHCP snooping binding entries:

```
Switch# show ip dhcp snooping binding 172.100.101.102

MacAddress        IP Address        Lease (seconds)    Type            VLAN      Interface
-----------       -----------       ----------------   -------------   -----     ------------
0000.0100.0201    172.100.101.102   1600               dhcp-snooping    100      FastEthernet3/1
Switch#
```

This example shows how to display the MAC address for the DHCP snooping binding entries:

```
Switch# show ip dhcp snooping binding 55.5.5.2 0002.b33f.3d5f

MacAddress         IpAddress       Lease(sec)  Type           VLAN  Interface
------------------ --------------- ----------  -------------  ----  --------------------
00:02:B3:3F:3D:5F  55.5.5.2        492         dhcp-snooping    99 FastEthernet6/36
Switch#
```

This example shows how to display the DHCP snooping binding entries' MAC address for a specific VLAN:

```
Switch# show ip dhcp snooping binding 55.5.5.2 0002.b33f.3d5f vlan 99

MacAddress         IpAddress       Lease(sec)  Type           VLAN  Interface
------------------ --------------- ----------  -------------  ----  --------------------
00:02:B3:3F:3D:5F  55.5.5.2        479         dhcp-snooping    99   FastEthernet6/36
Switch#
```

This example shows how to display the dynamic DHCP snooping binding entries:

```
Switch# show ip dhcp snooping binding dynamic

MacAddress     IP Address   Lease (seconds)   Type          VLAN    Interface
-----------    -----------  ---------------   ------------  -----   ------------
0000.0100.0201 10.0.0.1     1600              dhcp-snooping   100    FastEthernet3/1
Switch#
```

This example shows how to display the DHCP snooping binding entries on VLAN 100:

```
Switch# show ip dhcp snooping binding vlan 100'

MacAddress     IP Address   Lease (seconds)   Type          VLAN    Interface
-----------    -----------  ---------------   ------------  -----   ------------
0000.0100.0201 10.0.0.1     1600              dhcp-snooping   100    FastEthernet3/1
Switch#
```

This example shows how to display the DHCP snooping binding entries on Ethernet interface 0/1:

```
Switch# show ip dhcp snooping binding interface fastethernet3/1

MacAddress     IP Address   Lease (seconds)   Type          VLAN    Interface
-----------    -----------  ---------------   ------------  -----   ------------
0000.0100.0201 10.0.0.1     1600              dhcp-snooping   100    FastEthernet3/1
Switch#
```

Table 2-27 describes the fields in the **show ip dhcp snooping** command output.

Table 2-27   show ip dhcp snooping Command Output

Field	Description
Mac Address	Client hardware MAC address.
IP Address	Client IP address assigned from the DHCP server.
Lease (seconds)	IP address lease time.
Type	Binding type; statically configured from CLI or dynamically learned.
VLAN	VLAN number of the client interface.
Interface	Interface that connects to the DHCP client host.

Related Commands

Command	Description
ip dhcp snooping information option	Enables DHCP option 82 data insertion.
ip dhcp snooping limit rate	Configures the number of the DHCP messages that an interface can receive per second.
ip dhcp snooping trust	Enables DHCP snooping on a trusted VLAN.
ip dhcp snooping vlan	Enables DHCP snooping on a VLAN or a group of VLANs.
ip igmp snooping	Enables IGMP snooping.
ip igmp snooping vlan	Enables IGMP snooping for a VLAN.

show ip dhcp snooping database

To display the status of the DHCP snooping database agent, use the **show ip dhcp snooping database** command.

show ip dhcp snooping database [**detail**]

Syntax Description	detail	(Optional) Provides additional operating state and statistics information.

Defaults   This command has no default settings.

Command Modes Privileged EXEC mode

Command History

Release	Modification
12.1(12c)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(19)EW	Added support of state and statistics information.

Examples   This example shows how to display the DHCP snooping database:

```
Switch# show ip dhcp snooping database
Agent URL :
Write delay Timer : 300 seconds
Abort Timer : 300 seconds

Agent Running : No
Delay Timer Expiry : Not Running
Abort Timer Expiry : Not Running

Last Succeded Time : None
Last Failed Time : None
Last Failed Reason : No failure recorded.

Total Attempts       :         0   Startup Failures :         0
Successful Transfers :         0   Failed Transfers :         0
Successful Reads     :         0   Failed Reads     :         0
Successful Writes    :         0   Failed Writes    :         0
Media Failures       :         0

Switch#
```

This example shows how to view additional operating statistics:

```
Switch# show ip dhcp snooping database detail
Agent URL : tftp://10.1.1.1/directory/file
Write delay Timer : 300 seconds
Abort Timer : 300 seconds

Agent Running : No
Delay Timer Expiry : 7 (00:00:07)
Abort Timer Expiry : Not Running

Last Succeded Time : None
Last Failed Time : 17:14:25 UTC Sat Jul 7 2001
Last Failed Reason : Unable to access URL.

Total Attempts       :        21  Startup Failures :        0
Successful Transfers :         0  Failed Transfers :       21
Successful Reads     :         0  Failed Reads     :        0
Successful Writes    :         0  Failed Writes    :       21
Media Failures       :         0

First successful access: Read

Last ignored bindings counters :
Binding Collisions   :         0  Expired leases    :        0
Invalid interfaces   :         0  Unsupported vlans :        0
Parse failures       :         0
Last Ignored Time : None

Total ignored bindings counters:
Binding Collisions   :         0  Expired leases    :        0
Invalid interfaces   :         0  Unsupported vlans :        0
Parse failures       :         0

Switch#
```

Related Commands	Command	Description
	ip dhcp snooping	Globally enables DHCP snooping.
	ip dhcp snooping database	Stores the bindings that are generated by DHCP snooping.
	ip dhcp snooping information option	Enables DHCP option 82 data insertion.
	ip dhcp snooping limit rate	Configures the number of the DHCP messages that an interface can receive per second.
	ip dhcp snooping trust	Enables DHCP snooping on a trusted VLAN.
	ip dhcp snooping vlan	Enables DHCP snooping on a VLAN or a group of VLANs.

show ip igmp interface

To view IP IGMP interface status and configuration information, use the **show ip igmp interface** command.

show ip igmp interface [**fastethernet** *slot/port* | **gigabitethernet** *slot/port* |
tengigabitethernet *slot/port* | **null** *interface-number* | **vlan** *vlan_id*]

Syntax Description		
fastethernet *slot/port*	(Optional) Specifies the Fast Ethernet interface and the number of the slot and port.	
gigabitethernet *slot/port*	(Optional) Specifies the Gigabit Ethernet interface and the number of the slot and port; valid values are from 1 to 9.	
tengigabitethernet *slot/port*	(Optional) Specifies the 10-Gigabit Ethernet interface and the number of the slot and port; valid values are from 1 to 2.	
null *interface-number*	(Optional) Specifies the null interface and the number of the interface; the only valid value is **0**.	
vlan *vlan_id*	(Optional) Specifies the VLAN and the number of the VLAN; valid values are from 1 to 4094.	

Defaults   If you do not specify a VLAN, information for VLAN 1 is shown.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(12c)EW	Added support for extended VLAN addresses.
12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.

Usage Guidelines   If you omit the optional arguments, the **show ip igmp interface** command displays information about all interfaces.

Examples   This example shows how to view IGMP information for VLAN 200:

```
Switch# show ip igmp interface vlan 200
IGMP snooping is globally enabled
IGMP snooping is enabled on this Vlan
IGMP snooping immediate-leave is disabled on this Vlan
IGMP snooping mrouter learn mode is pim-dvmrp on this Vlan
IGMP snooping is running in IGMP-ONLY mode on this VLAN
Switch#
```

Related Commands

Command	Description
clear ip igmp group	Deletes the IGMP group cache entries.
show ip igmp snooping mrouter	Displays information on the dynamically learned and manually configured multicast switch interfaces.

show ip igmp profile

To view all configured IGMP profiles or a specified IGMP profile, use the **show ip igmp profile** privileged EXEC command.

>   **show ip igmp profile** [*profile number*]

Syntax Description

profile number	(Optional) IGMP profile number to be displayed; valid ranges are from 1 to 4294967295.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(11b)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines   If no profile number is entered, all IGMP profiles are displayed.

Examples   This example shows how to display IGMP profile 40:

```
Switch# show ip igmp profile 40
IGMP Profile 40
    permit
    range 233.1.1.1 233.255.255.255
Switch#
```

This example shows how to display all IGMP profiles:

```
Switch# show ip igmp profile
IGMP Profile 3
    range 230.9.9.0 230.9.9.0
IGMP Profile 4
    permit
    range 229.9.9.0 229.255.255.255
Switch#
```

Related Commands

Command	Description
ip igmp profile	Creates an IGMP profile.

show ip igmp snooping

To display information on dynamically learned and manually configured VLAN switch interfaces, use the **show ip igmp snooping** command.

> **show ip igmp snooping** [**querier** | **groups** | **mrouter**] [**vlan** *vlan_id*] *a.b.c.d* [*summary* | *sources* | *hosts*] [*count*]

Syntax Description

querier	(Optional) Specifies that the display will contain IP address and version information.
groups	(Optional) Specifies that the display will list VLAN members sorted by group IP addresses.
mrouter	(Optional) Specifies that the display will contain information on dynamically learned and manually configured multicast switch interfaces.
vlan *vlan_id*	(Optional) Specifies a VLAN; valid values are from 1 to 1001 and from 1006 to 4094.
a.b.c.d	Group or multicast IP address.
summary	(Optional) Specifies a display of detailed information for a v2 or v3 group.
sources	(Optional) Specifies a list of the source IPs for the specified group.
hosts	(Optional) Specifies a list of the host IPs for the specified group.
count	(Optional) Specifies a display of the total number of group addresses learned by the system on a global or per-VLAN basis.

Defaults   This command has no default settings.

Command Modes   EXEC

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(19)EW	Support for extended addressing was added.
12.1(20)EW	Added support to display configuration state for IGMPv3 explicit host tracking.

Usage Guidelines   You can also use the **show mac-address-table multicast** command to display the entries in the MAC address table for a VLAN that has IGMP snooping enabled.

You can display IGMP snooping information for VLAN interfaces by entering the **show ip igmp snooping** command.

Examples

This example shows how to display the global snooping information on the switch:

```
Switch# show ip igmp snooping
Global IGMP Snooping configuration:
-----------------------------------
IGMP snooping            : Enabled
IGMPv3 snooping          : Enabled
Report suppression       : Enabled
TCN solicit query        : Disabled
TCN flood query count    : 2

Vlan 1:
--------
IGMP snooping                 : Enabled
IGMPv2 immediate leave        : Disabled
Explicit host tracking        : Enabled
Multicast router learning mode : pim-dvmrp
CGMP interoperability mode    : IGMP_ONLY

Vlan 2:
--------
IGMP snooping                 : Enabled
IGMPv2 immediate leave        : Disabled
Explicit host tracking        : Enabled
Multicast router learning mode : pim-dvmrp
CGMP interoperability mode    : IGMP_ONLY
Switch>
```

This example shows how to display the snooping information on VLAN 2:

```
Switch# show ip igmp snooping vlan 2
Global IGMP Snooping configuration:
-----------------------------------
IGMP snooping            : Enabled
IGMPv3 snooping          : Enabled
Report suppression       : Enabled
TCN solicit query        : Disabled
TCN flood query count    : 2

Vlan 2:
--------
IGMP snooping                 : Enabled
IGMPv2 immediate leave        : Disabled
Explicit host tracking        : Enabled
Multicast router learning mode : pim-dvmrp
CGMP interoperability mode    : IGMP_ONLY
Switch>
```

This example shows how to display IGMP querier information for all VLANs on a switch:

```
Switch# show ip igmp snooping querier
Vlan      IP Address      IGMP Version      Port
---------------------------------------------------
2         10.10.10.1      v2                Router
3         172.20.50.22    v3                Fa3/15
Switch>
```

This example shows how to display IGMP querier information for VLAN 5 when running IGMPv2:

```
Switch# show ip igmp snooping querier vlan 5
IP address                :5.5.5.10
IGMP version              :v2
Port                      :Fa3/1
Max response time         :10s
Switch>
```

This example shows how to display IGMP querier information for VLAN 5 when running IGMPv3:

```
Switch# show ip igmp snooping querier vlan 5
IP address                :5.5.5.10
IGMP version              :v3
Port                      :Fa3/1
Max response time         :10s
Query interval            :60s
Robustness variable       :2
Switch>
```

This example shows how to display snooping information for a specific group:

```
Switch# show ip igmp snooping group

Vlan      Group          Version      Ports
-------------------------------------------------------------
2         224.0.1.40     v3           Router
2         224.2.2.2      v3           Fa6/2
Switch>
```

This example shows how to display the group's host types and ports in VLAN 1:

```
Switch# show ip igmp snooping group vlan 1
Vlan      Group          Host Type    Ports
-------------------------------------------------------------
1         229.2.3.4      v3           fa2/1 fa2/3
1         224.2.2.2      v3           Fa6/2
Switch>
```

This example shows how to display the group's host types and ports in VLAN 1:

```
Switch# show ip igmp snooping group vlan 10 226.6.6.7
Vlan      Group          Version      Ports
-------------------------------------------------------------
10        226.6.6.7      v3           Fa7/13, Fa7/14
Switch>
```

This example shows how to display the current state of a group with respect to a source IP address:

```
Switch# show ip igmp snooping group vlan 10 226.6.6.7 sources
Source information for group 226.6.6.7:
Timers: Expired sources are deleted on next IGMP General Query

SourceIP      Expires   Uptime    Inc Hosts Exc Hosts
----------------------------------------------------------
2.0.0.1       00:03:04  00:03:48  2         0
2.0.0.2       00:03:04  00:02:07  2         0
Switch>
```

This example shows how to display the current state of a group with respect to a host MAC address:

```
Switch# show ip igmp snooping group vlan 10 226.6.6.7 hosts
IGMPv3 host information for group 226.6.6.7
Timers: Expired hosts are deleted on next IGMP General Query

Host (MAC/IP)  Filter mode    Expires   Uptime    # Sources
---------------------------------------------------------------
175.1.0.29     INCLUDE        stopped   00:00:51     2
175.2.0.30     INCLUDE        stopped   00:04:14     2
Switch>
```

This example shows how to display summary information for a v3 group:

```
Switch# show ip igmp snooping group vlan 10 226.6.6.7 summary
Group Address (Vlan 10)      : 226.6.6.7
Host type                    : v3
Member Ports                 : Fa7/13, Fa7/14
Filter mode                  : INCLUDE
Expires                      : stopped
Sources                      : 2
Reporters (Include/Exclude)  : 2/0
Switch>
```

This example shows how to display multicast router information for VLAN 1:

```
Switch# show ip igmp snooping mrouter vlan 1
vlan          ports
-----+--------------------------------------
  1         Gi1/1,Gi2/1,Fa3/48,Router
Switch#
```

This example shows how to display the total number of group addresses learned by the system globally:

```
Switch# show ip igmp snooping group count
Total number of groups:   54
Switch>
```

This example shows how to display the total number of group addresses learned on VLAN 5:

```
Switch# show ip igmp snooping group vlan 5 count
Total number of groups:   30
Switch>
```

Related Commands	Command	Description
	ip igmp snooping	Enable IGMP snooping.
	ip igmp snooping vlan immediate-leave	Enable IGMP immediate-leave processing.
	ip igmp snooping vlan mrouter	Configures a Layer 2 interface as a multicast router interface for a VLAN.
	ip igmp snooping vlan static	Configures a Layer 2 interface as a member of a group.
	show ip igmp interface	Displays the information about the IGMP-interface status and configuration.
	show ip igmp snooping mrouter	Displays information on the dynamically learned and manually configured multicast switch interfaces.
	show mac-address-table multicast	Displays information about the multicast MAC address table.

show ip igmp snooping membership

To display host membership information, use the **show ip igmp snooping membership** command.

show ip igmp snooping membership [**interface** *interface_num*] [**vlan** *vlan_id*]
[**reporter** *a.b.c.d*] [**source** *a.b.c.d* **group** *a.b.c.d*]

Syntax Description

interface *interface_num*	(Optional) Displays IP address and version information of an interface.
vlan *vlan_id*	(Optional) Displays VLAN members sorted by group IP address of a VLAN; valid values are from 1 to 1001 and from 1006 to 4094.
reporter *a.b.c.d*	(Optional) Displays membership information for a specified reporter.
source *a.b.c.d*	(Optional) Specifies a reporter, source, or group IP address.
group *a.b.c.d*	(Optional) Displays all members of a channel (source, group), sorted by interface or VLAN.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(20)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.

Usage Guidelines   This command is valid only if explicit host tracking is enabled on the switch.

Examples   This example shows how to display host membership for the Gigabit Ethernet interface 4/1:

```
Switch# show ip igmp snooping membership interface gigabitethernet4/1
#channels: 5
#hosts : 1
Source/Group Interface Reporter Uptime Last-Join Last-Leave

40.40.40.2/224.10.10.10 Gi4/1 20.20.20.20 00:23:37 00:06:50 00:20:30
40.40.40.4/224.10.10.10Gi4/1 20.20.20.20 00:39:42 00:09:17 -
Switch#
```

This example shows how to display host membership for VLAN 20 and group 224.10.10.10:

```
Switch# show ip igmp snooping membership vlan 20 source 40.40.40.2 group 224.10.10.10
#channels: 5
#hosts : 1
Source/Group Interface Reporter Uptime Last-Join Last-Leave

40.40.40.2/224.10.10.10 Gi4/1 20.20.20.20 00:23:37 00:06:50 00:20:30
Switch#
```

This example shows how to display host membership information for VLAN 20 and to delete the explicit host tracking:

```
Switch# show ip igmp snooping membership vlan 20
Snooping Membership Summary for Vlan 20
----------------------------------------
Total number of channels:5
Total number of hosts   :4

Source/Group                    Interface   Reporter          Uptime   Last-Join/
                                                                                  Last-Leave
------------------------------------------------------------------------------------------------

                                                                                  -

Switch# clear ip igmp snooping membership vlan 20
Switch#
```

Related Commands	**Command**	**Description**
	clear ip igmp snooping membership	Clears the explicit host tracking database.
	ip igmp snooping vlan explicit-tracking	Enables per-VLAN explicit host tracking.
	show ip igmp snooping	Displays information on dynamically learned and manually configured VLAN switch interfaces.

show ip igmp snooping mrouter

To display information on the dynamically learned and manually configured multicast switch interfaces, use the **show ip igmp snooping mrouter** command.

show ip igmp snooping mrouter [**vlan** *vlan-id*]

Syntax Description

vlan *vlan-id*	(Optional) Specifies a VLAN; valid values are from 1 to 1001 and from 1006 to 4094.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(19)EW	Added support for extended VLAN addresses.

Usage Guidelines

You can also use the **show mac-address-table multicast** command to display entries in the MAC address table for a VLAN that has IGMP snooping enabled.

You can display IGMP snooping information for the VLAN interfaces by entering the **show ip igmp interface vlan** *vlan-num* command.

Examples

This example shows how to display snooping information for a specific VLAN:

```
Switch# show ip igmp snooping mrouter vlan 1
vlan         ports
-----+---------------------------------------
  1          Gi1/1,Gi2/1,Fa3/48,Switch
Switch#
```

Related Commands

Command	Description
ip igmp snooping vlan mrouter	Statically configures a Layer 2 interface as a multicast router interface for a VLAN.
show ip igmp interface	Displays the information about the IGMP-interface status and configuration.
show mac-address-table multicast	Displays information about the multicast MAC address table.

show ip igmp snooping vlan

To display information on the dynamically learned and manually configured VLAN switch interfaces, use the **show ip igmp snooping vlan** command.

> **show ip igmp snooping vlan** *vlan_num*

Syntax Description	*vlan_num* Number of the VLAN; valid values are from 1 to 1001 and from 1006 to 4094.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(12c)EW	Support for extended addressing was added.

Usage Guidelines   You can also use the **show mac-address-table multicast** command to display the entries in the MAC address table for a VLAN that has IGMP snooping enabled.

Examples   This example shows how to display snooping information for a specific VLAN:

```
Switch# show ip igmp snooping vlan 2
vlan 2
----------
IGMP snooping is globally enabled
IGMP snooping TCN solicit query is globally enabled
IGMP snooping global TCN flood query count is 2
IGMP snooping is enabled on this Vlan
IGMP snooping immediate-leave is disabled on this Vlan
IGMP snooping mrouter learn mode is pim-dvmrp on this Vlan
IGMP snooping is running in IGMP_ONLY mode on this Vlan
Switch#
```

Related Commands

Command	Description
ip igmp snooping	Enable IGMP snooping.
ip igmp snooping vlan immediate-leave	Enable IGMP immediate-leave processing.
ip igmp snooping vlan mrouter	Statically configures a Layer 2 interface as a multicast router interface for a VLAN.
ip igmp snooping vlan static	Configures a Layer 2 interface as a member of a group.
show ip igmp interface	Displays the information about the IGMP-interface status and configuration.
show ip igmp snooping mrouter	Displays information on the dynamically learned and manually configured multicast switch interfaces.
show mac-address-table multicast	Displays information about the multicast MAC address table.

show ip interface

To display the usability status of interfaces that are configured for IP, use the **show ip interface** command.

show ip interface [*type number*]

Syntax Description	*type*	(Optional) Interface type.
	number	(Optional) Interface number.

Defaults   This command has no default settings.

Command Modes   EXEC

Command History

Release	Modification
12.2(25)EW	Extended to include the 10-Gigabit Ethernet interface.

Usage Guidelines   The Cisco IOS software automatically enters a directly connected route in the routing table if the interface is usable. A usable interface is one through which the software can send and receive packets. If the software determines that an interface is not usable, it removes the directly connected routing entry from the routing table. Removing the entry allows the software to use dynamic routing protocols to determine backup routes to the network, if any.

If the interface can provide two-way communication, the line protocol is marked "up." If the interface hardware is usable, the interface is marked "up."

If you specify an optional interface type, you see information only on that specific interface.

If you specify no optional arguments, you see information on all the interfaces.

When an asynchronous interface is encapsulated with PPP or Serial Line Internet Protocol (SLIP), IP fast switching is enabled. The **show ip interface** command on an asynchronous interface that is encapsulated with PPP or SLIP displays a message indicating that IP fast switching is enabled.

Examples   This example shows how to display the usability status for a specific VLAN:

```
Switch# show ip interface vlan 1
Vlan1 is up, line protocol is up
  Internet address is 10.6.58.4/24
  Broadcast address is 255.255.255.255
  Address determined by non-volatile memory
  MTU is 1500 bytes
  Helper address is not set
  Directed broadcast forwarding is disabled
  Outgoing access list is not set
  Inbound  access list is not set
  Proxy ARP is enabled
```

```
        Local Proxy ARP is disabled
        Security level is default
        Split horizon is enabled
        ICMP redirects are always sent
        ICMP unreachables are always sent
        ICMP mask replies are never sent
        IP fast switching is enabled
        IP fast switching on the same interface is disabled
        IP Flow switching is disabled
        IP CEF switching is enabled
        IP Fast switching turbo vector
        IP Normal CEF switching turbo vector
        IP multicast fast switching is enabled
        IP multicast distributed fast switching is disabled
        IP route-cache flags are Fast, CEF
        Router Discovery is disabled
        IP output packet accounting is disabled
        IP access violation accounting is disabled
        TCP/IP header compression is disabled
        RTP/IP header compression is disabled
        Probe proxy name replies are disabled
        Policy routing is disabled
        Network address translation is disabled
        WCCP Redirect outbound is disabled
        WCCP Redirect inbound is disabled
        WCCP Redirect exclude is disabled
        BGP Policy Mapping is disabled
        Sampled Netflow is disabled
        IP multicast multilayer switching is disabled
        Netflow Data Export (hardware) is enabled
Switch#
```

Table 2-28 describes the fields that are shown in the example.

Table 2-28   show ip interface Field Descriptions

Field	Description
Ethernet0 is up	If the interface hardware is usable, the interface is marked "up." For an interface to be usable, both the interface hardware and line protocol must be up.
line protocol is up	If the interface can provide two-way communication, the line protocol is marked "up." For an interface to be usable, both the interface hardware and line protocol must be up.
Internet address and subnet mask	IP address and subnet mask of the interface.
Broadcast address	Broadcast address.
Address determined by...	Status of how the IP address of the interface was determined.
MTU	MTU value that is set on the interface.
Helper address	Helper address, if one has been set.
Secondary address	Secondary address, if one has been set.
Directed broadcast forwarding	Status of directed broadcast forwarding.
Multicast groups joined	Multicast groups to which this interface belongs.
Outgoing access list	Status of whether the interface has an outgoing access list set.
Inbound access list	Status of whether the interface has an incoming access list set.

Table 2-28   *show ip interface Field Descriptions (continued)*

Field	Description
Proxy ARP	Status of whether Proxy Address Resolution Protocol (ARP) is enabled for the interface.
Security level	IP Security Option (IPSO) security level set for this interface.
Split horizon	Status of split horizon.
ICMP redirects	Status of the redirect messages on this interface.
ICMP unreachables	Status of the unreachable messages on this interface.
ICMP mask replies	Status of the mask replies on this interface.
IP fast switching	Status of whether fast switching has been enabled for this interface. Fast switching is typically enabled on serial interfaces, such as this one.
IP SSE switching	Status of the IP silicon switching engine (SSE).
Router Discovery	Status of the discovery process for this interface. It is typically disabled on serial interfaces.
IP output packet accounting	Status of IP accounting for this interface and the threshold (maximum number of entries).
TCP/IP header compression	Status of compression.
Probe proxy name	Status of whether the HP Probe proxy name replies are generated.
WCCP Redirect outbound is enabled	Status of whether packets that are received on an interface are redirected to a cache engine.
WCCP Redirect exclude is disabled	Status of whether packets that are targeted for an interface are excluded from being redirected to a cache engine.
Netflow Data Export (hardware) is enabled	NDE hardware flow status on the interface.

show ip mfib

To display all active Multicast Forwarding Information Base (MFIB) routes, use the **show ip mfib** command.

show ip mfib [**all** | **counters** | **log** [*n*]]

Syntax Description		
all	(Optional) Specifies all routes in the MFIB, including those routes that are used to accelerate fast switching but that are not necessarily in the upper-layer routing protocol table.	
counters	(Optional) Specifies the counts of MFIB-related events. Only nonzero counters are shown.	
log	(Optional) Specifies a log of the most recent number of MFIB-related events. The most recent event is first.	
n	(Optional) Number of events.	

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.2(40)SG	Support for command introduced on the Supervisor Engine 6-E and Catalyst 4900M chassis.

Usage Guidelines   In the Supervisor Engine 6-E and Catalyst 4900M chassis, the output of the **show ip mfib** command does not display any hardware counters.

The MFIB table contains a set of IP multicast routes; each route in the MFIB table contains several flags that associate to the route.

The route flags indicate how a packet that matches a route is forwarded. For example, the IC flag on an MFIB route indicates that some process on the switch needs to receive a copy of the packet. These flags are associated with MFIB routes:

- Internal Copy (IC) flag—Set on a route when a process on the switch needs to receive a copy of all packets matching the specified route.
- Signaling (S) flag—Set on a route when a switch process needs notification that a packet matching the route is received. In the expected behavior, the protocol code updates the MFIB state in response to having received a packet on a signaling interface.
- Connected (C) flag—When set on a route, the C flag has the same meaning as the S flag, except that the C flag indicates that only packets sent by directly connected hosts to the route should be signaled to a protocol process.

A route can also have a set of flags associated with one or more interfaces. For an (S,G) route, the flags on interface 1 indicate how the ingress packets should be treated and whether packets matching the route should be forwarded onto interface 1. These per-interface flags are associated with the MFIB routes:

- Accepting (A)—Set on the RPF interface when a packet that arrives on the interface and that is marked as Accepting (A) is forwarded to all Forwarding (F) interfaces.

- Forwarding (F)—Used with the A flag as described above. The set of forwarding interfaces together form a multicast olist or output interface list.

- Signaling (S)—Set on an interface when a multicast routing protocol process in Cisco IOS needs to be notified of ingress packets on that interface.

- Not Platform (NP) fast-switched—Used with the F flag. A forwarding interface is also marked as Not Platform fast-switched whenever that output interface cannot be fast-switched by the platform hardware and requires software forwarding.

  For example, the Catalyst 4506 switch with Supervisor Engine III cannot switch tunnel interfaces in hardware so these interfaces are marked with the NP flag. When an NP interface is associated with a route, a copy of every ingress packet arriving on an Accepting interface is sent to the switch software forwarding path for software replication and then forwarded to the NP interface.

Examples   This example shows how to display all active MFIB routes:

```
Switch# show ip mfib
IP Multicast Forwarding Information Base
Entry Flags: C - Directly Connected, S - Signal,
             IC - Internal Copy
Interface Flags: A - Accept, F - Forward, NS - Signal,
             NP - Not platform switched
Packets: Fast/Partial/Slow Bytes: Fast/Partial/Slow:
(171.69.10.13, 224.0.1.40), flags (IC)
   Packets: 2292/2292/0, Bytes: 518803/0/518803
   Vlan7 (A)
   Vlan100 (F NS)
   Vlan105 (F NS)
(*, 224.0.1.60), flags ()
   Packets: 2292/0/0, Bytes: 518803/0/0
   Vlan7 (A NS)
(*, 224.0.1.75), flags ()
   Vlan7 (A NS)
(10.34.2.92, 239.192.128.80), flags ()
   Packets: 24579/100/0, 2113788/15000/0 bytes
   Vlan7 (F NS)
   Vlan100 (A)
(*, 239.193.100.70), flags ()
   Packets: 1/0/0, 1500/0/0 bytes
   Vlan7 (A)
Switch#
```

Related Commands

Command	Description
clear ip mfib counters	Clears the global MFIB counters and the counters for all active MFIB routes.

show ip mfib fastdrop

To display all currently active fast-drop entries and to show whether fast drop is enabled, use the **show ip mfib fastdrop** command.

show ip mfib fastdrop

Syntax Description   This command has no arguments or keywords.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Examples   This example shows how to display all currently active fast-drop entries and whether fast drop is enabled.

```
Switch# show ip mfib fasttdrop
MFIB fastdrop is enabled.
MFIB fast-dropped flows:
(10.0.0.1, 224.1.2.3, Vlan9 ) 00:01:32
(10.1.0.2, 224.1.2.3, Vlan9 ) 00:02:30
(1.2.3.4, 225.6.7.8, Vlan3) 00:01:50
Switch#
```

Related Commands

Command	Description
clear ip mfib fastdrop	Clears all the MFIB fast-drop entries.

show ip mroute

To display IP multicast routing table information, use the **show ip mroute** command.

show ip mroute [*interface_type slot/port* | *host_name* | *host_address* [*source*] | **active** [*kbps* | *interface_type num*] | **count** | **pruned** | **static** | **summary**]

Syntax Description

interface_type slot/port	(Optional) Interface type and number of the slot and port; valid values for *interface type* are **fastethernet**, **gigabitethernet**, **tengigabitethernet**, **null**, and **vlan**.
host_name	(Optional) Name or IP address as defined in the DNS hosts table.
host_address source	(Optional) IP address or name of a multicast source.
active	(Optional) Displays the rate that active sources are sending to multicast groups.
kbps interface_type num	(Optional) Minimum rate at which active sources are sending to multicast groups; active sources sending at this rate or greater will be displayed. Valid values are from 1 to 4294967295 kbps.
count	(Optional) Displays the route and packet count information.
pruned	(Optional) Displays the pruned routes.
static	(Optional) Displays the static multicast routes.
summary	(Optional) Displays a one-line, abbreviated summary of each entry in the IP multicast routing table.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.

Usage Guidelines

If you omit all the optional arguments and keywords, the **show ip mroute** command displays all the entries in the IP multicast routing table.

The **show ip mroute active** *kbps* command displays all the sources sending at a rate greater than or equal to *kbps*.

The multicast routing table is populated by creating source, group (S,G) entries from star, group (*,G) entries. The star refers to all source addresses, the "S" refers to a single source address, and the "G" refers to the destination multicast group address. In creating (S,G) entries, the software uses the best path to that destination group found in the unicast routing table (through Reverse Path Forwarding (RPF).

Examples   This example shows how to display all the entries in the IP multicast routing table:

```
Switch# show ip mroute

IP Multicast Routing Table
Flags:D - Dense, S - Sparse, s - SSM Group, C - Connected, L - Local,
        P - Pruned, R - RP-bit set, F - Register flag, T - SPT-bit set,
        J - Join SPT, M - MSDP created entry, X - Proxy Join Timer Running
        A - Advertised via MSDP, U - URD, I - Received Source Specific Host
            Report
Outgoing interface flags:H - Hardware switched
Timers:Uptime/Expires
Interface state:Interface, Next-Hop or VCD, State/Mode

(*, 230.13.13.1), 00:16:41/00:00:00, RP 10.15.1.20, flags:SJC
  Incoming interface:GigabitEthernet4/8, RPF nbr 10.15.1.20
  Outgoing interface list:

 GigabitEthernet4/9, Forward/Sparse-Dense, 00:16:41/00:00:00, H

(*, 230.13.13.2), 00:16:41/00:00:00, RP 10.15.1.20, flags:SJC

 Incoming interface:GigabitEthernet4/8, RPF nbr 10.15.1.20, RPF-MFD
  Outgoing interface list:
    GigabitEthernet4/9, Forward/Sparse-Dense, 00:16:41/00:00:00, H

(10.20.1.15, 230.13.13.1), 00:14:31/00:01:40, flags:CJT

 Incoming interface:GigabitEthernet4/8, RPF nbr 10.15.1.20, RPF-MFD
  Outgoing interface list:
    GigabitEthernet4/9, Forward/Sparse-Dense, 00:14:31/00:00:00, H
(132.206.72.28, 224.2.136.89), 00:14:31/00:01:40, flags:CJT
  Incoming interface:GigabitEthernet4/8, RPF nbr 10.15.1.20, RPF-MFD

 Outgoing interface list:Null
Switch#
```

This example shows how to display the rate that the active sources are sending to the multicast groups and to display only the active sources that are sending at greater than the default rate:

```
Switch# show ip mroute active

Active IP Multicast Sources - sending > = 4 kbps

Group: 224.2.127.254, (sdr.cisco.com)
   Source: 146.137.28.69 (mbone.ipd.anl.gov)
     Rate: 1 pps/4 kbps(1sec), 4 kbps(last 1 secs), 4 kbps(life avg)

Group: 224.2.201.241, ACM 97
   Source: 130.129.52.160 (webcast3-e1.acm97.interop.net)
     Rate: 9 pps/93 kbps(1sec), 145 kbps(last 20 secs), 85 kbps(life avg)

Group: 224.2.207.215, ACM 97
   Source: 130.129.52.160 (webcast3-e1.acm97.interop.net)
     Rate: 3 pps/31 kbps(1sec), 63 kbps(last 19 secs), 65 kbps(life avg)
Switch#
```

This example shows how to display route and packet count information:

```
Switch# show ip mroute count
IP Multicast Statistics
56 routes using 28552 bytes of memory
13 groups, 3.30 average sources per group
Forwarding Counts:Pkt Count/Pkts per second/Avg Pkt Size/Kilobits per second

Other counts:Total/RPF failed/Other drops(OIF-null, rate-limit etc)

Group:224.2.136.89, Source count:1, Group pkt count:29051
  Source:132.206.72.28/32, Forwarding:29051/-278/1186/0, Other:85724/8/56665
Switch#
```

This example shows how to display summary information:

```
Switch# show ip mroute summary
IP Multicast Routing Table
Flags: D - Dense, S - Sparse, s - SSM Group, C - Connected, L - Local,
       P - Pruned, R - RP-bit set, F - Register flag, T - SPT-bit set,
       J - Join SPT, M - MSDP created entry, X - Proxy Join Timer Running
       A - Advertised via MSDP, U - URD, I - Received Source Specific Host
          Report
Outgoing interface flags: H - Hardware switched
Timers: Uptime/Expires
Interface state: Interface, Next-Hop or VCD, State/Mode

Switch#
```

Table 2-29 describes the fields shown in the output.

Table 2-29   show ip mroute Field Descriptions

Field	Description
Flags:	Information about the entry.
D - Dense	Entry is operating in dense mode.
S - Sparse	Entry is operating in sparse mode.
s - SSM Group	Entry is a member of an SSM group.
C - Connected	Member of the multicast group is present on the directly connected interface.
L - Local	Switch is a member of the multicast group.
P - Pruned	Route has been pruned. This information is retained in case a downstream member wants to join the source.
R - Rp-bit set	Status of the (S,G) entry; is the (S,G) entry pointing toward the RP. The R - Rp-bit set is typically a prune state along the shared tree for a particular source.
F - Register flag	Status of the software; indicates if the software is registered for a multicast source.
T - SPT-bit set	Status of the packets; indicates if the packets been received on the shortest path source tree.

Table 2-29 **show ip mroute Field Descriptions (continued)**

Field	Description
J - Join SPT	For (*, G) entries, indicates that the rate of traffic flowing down the shared tree is exceeding the SPT-Threshold set for the group. (The default SPT-Threshold setting is 0 kbps.) When the J - Join SPT flag is set, the next (S,G) packet received down the shared tree triggers an (S,G) join in the direction of the source causing the switch to join the source tree.
	For (S, G) entries, indicates that the entry was created because the SPT-Threshold for the group was exceeded. When the J - Join SPT flag is set for (S,G) entries, the switch monitors the traffic rate on the source tree and attempts to switch back to the shared tree for this source if the traffic rate on the source tree falls below the group's SPT-Threshold for more than one minute.
	The switch measures the traffic rate on the shared tree and compares the measured rate to the group's SPT-Threshold once every second. If the traffic rate exceeds the SPT-Threshold, the J- Join SPT flag is set on the (*, G) entry until the next measurement of the traffic rate. The flag is cleared when the next packet arrives on the shared tree and a new measurement interval is started.
	If the default SPT-Threshold value of 0 Kbps is used for the group, the J- Join SPT flag is always set on (*, G) entries and is never cleared. When the default SPT-Threshold value is used, the switch immediately switches to the shortest-path tree when traffic from a new source is received.
Outgoing interface flag:	Information about the outgoing entry.
H - Hardware switched	Entry is hardware switched.
Timer:	Uptime/Expires.
Interface state:	Interface, Next-Hop or VCD, State/Mode.
(*, 224.0.255.1) (198.92.37.100/32, 224.0.255.1)	Entry in the IP multicast routing table. The entry consists of the IP address of the source switch followed by the IP address of the multicast group. An asterisk (*) in place of the source switch indicates all sources.
	Entries in the first format are referred to as (*,G) or "star comma G" entries. Entries in the second format are referred to as (S,G) or "S comma G" entries. (*,G) entries are used to build (S,G) entries.
uptime	How long (in hours, minutes, and seconds) the entry has been in the IP multicast routing table.
expires	How long (in hours, minutes, and seconds) until the entry is removed from the IP multicast routing table on the outgoing interface.

Table 2-29   show ip mroute Field Descriptions (continued)

Field	Description
RP	Address of the RP switch. For switches and access servers operating in sparse mode, this address is always 0.0.0.0.
flags:	Information about the entry.
Incoming interface	Expected interface for a multicast packet from the source. If the packet is not received on this interface, it is discarded.
RPF neighbor	IP address of the upstream switch to the source. "Tunneling" indicates that this switch is sending data to the RP encapsulated in Register packets. The hexadecimal number in parentheses indicates to which RP it is registering. Each bit indicates a different RP if multiple RPs per group are used.
DVMRP or Mroute	Status of whether the RPF information is obtained from the DVMRP routing table or the static mroutes configuration.
Outgoing interface list	Interfaces through which packets are forwarded. When the **ip pim nbma-mode** command is enabled on the interface, the IP address of the PIM neighbor is also displayed.
Ethernet0	Name and number of the outgoing interface.
Next hop or VCD	Next hop specifies downstream neighbor's IP address. VCD specifies the virtual circuit descriptor number. VCD0 indicates that the group is using the static-map virtual circuit.
Forward/Dense	Status of the packets; indicates if they are they forwarded on the interface if there are no restrictions due to access lists or the TTL threshold. Following the slash (/), mode in which the interface is operating (dense or sparse).
Forward/Sparse	Sparse mode interface is in forward mode.
time/time (uptime/expiration time)	Per interface, how long (in hours, minutes, and seconds) the entry has been in the IP multicast routing table. Following the slash (/), how long (in hours, minutes, and seconds) until the entry is removed from the IP multicast routing table.

Related Commands

Command	Description
ip multicast-routing (refer to Cisco IOS documentation)	Enables IP multicast routing.
ip pim (refer to Cisco IOS documentation)	Enables Protocol Independent Multicast (PIM) on an interface.

show ip source binding

To display IP source bindings that are configured on the system, use the **show ip source binding** EXEC command.

show ip source binding [*ip-address*] [*mac-address*] [**dhcp-snooping** | **static**] [**vlan** *vlan-id*]
[**interface** *interface-name*]

Syntax Description		
	ip-address	(Optional) Binding IP address.
	mac-address	(Optional) Binding MAC address.
	dhcp-snooping	(Optional) DHCP-snooping type binding.
	static	(Optional) Statically configured binding.
	vlan *vlan-id*	(Optional) VLAN number.
	interface *interface-name*	(Optional) Binding interface.

Defaults   Displays both static and DHCP snooping bindings.

Command Modes   Privileged EXEC mode

Command History	Release	Modification
	12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines The optional parameters filter the display output result.

Examples   This example shows how to display the IP source bindings:

```
Switch# show ip source binding
MacAddress         IpAddress       Lease(sec)  Type          VLAN  Interface
------------------ --------------- ----------  ------------  ----  --------------------
00:00:00:0A:00:0B  11.0.0.1        infinite    static        10    FastEthernet6/10

Switch#
```

This example shows how to display the static IP binding entry of IP address 11.0.01:

```
Switch# show ip source binding 11.0.0.1 0000.000A.000B static vlan 10 interface Fa6/10
show ip source binding 11.0.0.1 0000.000A.000B static vlan 10 interface Fa6/10
MacAddress         IpAddress       Lease(sec)  Type          VLAN  Interface
------------------ --------------- ----------  ------------  ----  --------------------
00:00:00:0A:00:0B  11.0.0.1        infinite    static        10    FastEthernet6/10
Switch#
```

Related Commands	Command	Description
	ip source binding	Adds or deletes a static IP source binding entry.

show ip verify source

To display the IP source guard configuration and filters on a particular interface, use the **show ip verify source** command.

show ip verify source [**interface** *interface_num*]

Syntax Description

interface *interface_num*	(Optional) Specifies an interface.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Examples   These examples show how to display the IP source guard configuration and filters on a particular interface with the **show ip verify source interface** command:

- This output appears when DHCP snooping is enabled on VLANs 10–20, interface fa6/1 has IP source filter mode that is configured as IP, and an existing IP address binding 10.0.0.1 is on VLAN 10:

```
Interface  Filter-type  Filter-mode  IP-address      Mac-address     Vlan
---------  -----------  -----------  --------------  --------------  ---------
fa6/1      ip           active       10.0.0.1                        10
fa6/1      ip           active       deny-all                        11-20
```

Note   The second entry shows that a default PVACL (deny all IP traffic) is installed on the port for those snooping-enabled VLANs that do not have a valid IP source binding.

- This output appears when you enter the **show ip verify source interface fa6/2** command and DHCP snooping is enabled on VLANs 10–20, interface fa6/1 has IP source filter mode that is configured as IP, and there is an existing IP address binding 10.0.0.1 on VLAN 10:

```
Interface  Filter-type  Filter-mode  IP-address      Mac-address     Vlan
---------  -----------  -----------  --------------  --------------  ---------
fa6/2      ip           inactive-trust-port
```

- This output appears when you enter the **show ip verify source interface fa6/3** command and the interface fa6/3 does not have a VLAN enabled for DHCP snooping:

```
Interface  Filter-type  Filter-mode  IP-address      Mac-address     Vlan
---------  -----------  -----------  --------------  --------------  ---------
fa6/3      ip           inactive-no-snooping-vlan
```

- This output appears when you enter the **show ip verify source interface fa6/4** command and the interface fa6/4 has an IP source filter mode that is configured as IP MAC and the existing IP MAC that binds 10.0.0.2/aaaa.bbbb.cccc on VLAN 10 and 11.0.0.1/aaaa.bbbb.cccd on VLAN 11:

```
Interface  Filter-type  Filter-mode  IP-address      Mac-address    Vlan
---------  -----------  -----------  --------------- -------------- ---------
fa6/4      ip-mac       active       10.0.0.2        aaaa.bbbb.cccc 10
fa6/4      ip-mac       active       11.0.0.1        aaaa.bbbb.cccd 11
fa6/4      ip-mac       active       deny-all        deny-all       12-20
```

- This output appears when you enter the **show ip verify source interface fa6/5** command and the interface fa6/5 has IP source filter mode that is configured as IP MAC and existing IP MAC binding 10.0.0.3/aaaa.bbbb.ccce on VLAN 10, but port security is not enabled on fa6/5:

```
Interface  Filter-type  Filter-mode  IP-address      Mac-address    Vlan
---------  -----------  -----------  --------------- -------------- ---------
fa6/5      ip-mac       active       10.0.0.3        permit-all     10
fa6/5      ip-mac       active       deny-all        permit-all     11-20
```

✎

Note   Enable port security first because the DHCP security MAC filter cannot apply to the port or VLAN.

- This output appears when you enter the **show ip verify source interface fa6/6** command and the interface fa6/6 does not have IP source filter mode that is configured:

```
DHCP security is not configured on the interface fa6/6.
```

This example shows how to display all the interfaces on the switch that have DHCP snooping security and IP Port Security tracking enabled with the **show ip verify source** command.

The output is an accumulation of per-interface **show** CLIs:

```
Interface  Filter-type  Filter-mode         IP-address      Mac-address    Vlan
---------  -----------  -----------         --------------- -------------- ---------
fa6/1      ip           active              10.0.0.1                       10
fa6/1      ip           active              deny-all                       11-20
fa6/2      ip           inactive-trust-port
Fa6/3      ip trk       active              40.1.1.24                      10
Fa6/3      ip trk       active              40.1.1.20                      10
Fa6/3      ip trk       active              40.1.1.21                      10
fa6/4      ip-mac       active              10.0.0.2        aaaa.bbbb.cccc 10
fa6/4      ip-mac       active              11.0.0.1        aaaa.bbbb.cccd 11
fa6/4      ip-mac       active              deny-all        deny-all       12-20
fa6/5      ip-mac       active              10.0.0.3        permit-all     10
fa6/5      ip-mac       active              deny-all        permit-all     11-20
```

Related Commands	Command	Description
	ip dhcp snooping information option	Enables DHCP option 82 data insertion.
	ip dhcp snooping limit rate	Configures the number of the DHCP messages that an interface can receive per second.
	ip dhcp snooping trust	Enables DHCP snooping on a trusted VLAN.
	ip igmp snooping	Enables IGMP snooping.
	ip igmp snooping vlan	Enables IGMP snooping for a VLAN.
	ip source binding	Adds or deletes a static IP source binding entry.
	ip verify source	Enables IP source guard on untrusted Layer 2 interfaces.
	show ip source binding	Displays the DHCP snooping binding entries.

show ip wccp

To display the Web Cache Communication Protocol (WCCP) global configuration and statistics, use the **show ip wccp** command in user EXEC or privileged EXEC mode.

show ip wccp [*service-number* [**view** | **detail**] | **interfaces** [**cef** | **counts** | **detail**] | **web-cache**]

Syntax Description	

service-number	(Optional) Identification number of the web cache service group being controlled by the cache. The number can be from 0 to 254. For web caches using Cisco cache engines, the reverse proxy service is indicated by a value of 99.
interfaces	(Optional) WCCP redirect interfaces.
cef	(Optional) CEF interface statistics, including the number of input, output, dynamic, static, and multicast services.
counts	(Optional) WCCP interface count statistics, including the number of CEF and process-switched output and input packets redirected.
detail	(Optional) WCCP interface configuration statistics, including the number of input, output, dynamic, static, and multicast services.
web-cache	(Optional) Statistics for the web cache service.
view	(Optional) Other members of a particular service group, have or have not been detected.
detail	(Optional) Information about the router and all web caches.

Command Modes   User EXEC (>)
Privileged EXEC (#)

Command History

Release	Modification
15.0(2)SG	This command was introduced on Catalyst 4900M, Catalyst 4948E, Supervisor Engine 6-E, and Supervisor Engine 6L-E.

Usage Guidelines   Use the **clear ip wccp** command to reset the counter for the "Packets Redirected" information.

Use the **show ip wccp** *service-number* command to get the "Total Packets S/W Redirected" count. The "Total Packets S/W Redirected" count is the number of packets redirected in software.

Use the **show ip wccp** *service-number* **detail** command to get the "Packets Redirected" count. The "Packets Redirected" count is the number of packets redirected in software.

Use the **show ip wccp web-cache detail** command to get an indication of which traffic is redirected to which cache engine.

Use the **show ip wccp** command to show the configured WCCP services and a summary of their current state.

For cache-engine clusters using Cisco cache engines, the reverse proxy *service-number* is indicated by a value of 99.

All the packet statistics correspond to packets switched in software.

Examples   This section contains examples and field descriptions for the following forms of this command:

- **show ip wccp** *service-number*
- **show ip wccp** *service-number* **view**
- **show ip wccp** *service-number* **detail**
- **show ip wccp interfaces**
- **show ip wccp web-cache**
- **show ip wccp web-cache detail**
- **show ip wccp**

show ip wccp *service-number*

The following is sample output from the **show ip wccp** *service-number* command:

```
Switch# show ip wccp 90

Global WCCP information:
    Router information:
        Router Identifier:              100.1.1.16
        Protocol Version:               2.0

    Service Identifier: 90
        Number of Service Group Clients:    1
        Number of Service Group Routers:    1
        Total Packets s/w Redirected:       0
          Process:                          0
          CEF:                              0
        Redirect Access-list:           -none-
        Total Packets Denied Redirect:      0
        Total Packets Unassigned:           0
        Group Access-list:              -none-
        Total Messages Denied to Group:     0
        Total Authentication failures:      0
        Total Bypassed Packets Received:    0
```

Table 30 describes the significant fields shown in the display.

Table 30   show ip wccp *service-number* ***Field Descriptions***

Field	Description
Router information	A list of routers detected by the current router.
Protocol Version	The version of WCCP being used by the router in the service group.
Service Identifier	Indicates which service is detailed.
Number of Service Group Clients:	The number of clients that are visible to the router and other clients in the service group.
Number of Service Group Routers	The number of routers in the service group.
Total Packets s/w Redirected	Total number of packets s/w redirected by the router.
Redirect Access-list	The name or number of the access list that determines which packets will be redirected.
Total Packets Denied Redirect	Total number of packets that were not redirected because they did not match the access list.

Table 30   show ip wccp *service-number* ***Field Descriptions (continued)***

Field	Description
Total Packets Unassigned	Number of packets that were not redirected because they were not assigned to any cache engine. Packets may not be assigned during initial discovery of cache engines or when a cache is dropped from a cluster.
Group Access-list	Indicates which cache engine is allowed to connect to the router.
Total Messages Denied to Group	Indicates the number of packets denied by the *group-list* access list.
Total Authentication failures	The number of instances where a password did not match.
Total Bypassed Packets Received	The number of packets that have been bypassed. Process, fast, and Cisco Express Forwarding (CEF) are switching paths within Cisco IOS software.

show ip wccp *service-number* **view**

The following is sample output from the **show ip wccp** *service-number* **view** command for service group 1:

```
Switch# show ip wccp 1 view

WCCP Router Informed of:
 10.168.88.10
 10.168.88.20

WCCP Cache Engines Visible
 10.168.88.11
 10.168.88.12

WCCP Cache Engines Not Visible:
 -none-
```

Note   The number of maximum service groups that can be configured is 256.

If any web cache is displayed under the WCCP Cache Engines Not Visible field, the router needs to be reconfigured to map the web cache that is not visible to it.

Table 31 describes the significant fields shown in the display.

Table 31   show ip wccp *service-number* ***view Field Descriptions***

Field	Description
WCCP Router Informed of	A list of routers detected by the current router.
WCCP Clients Visible	A list of clients that are visible to the router and other clients in the service group.
WCCP Clients Not Visible	A list of clients in the service group that are not visible to the router and other clients in the service group.

show ip wccp *service-number* **detail**

The following example displays WCCP client information and WCCP router statistics that include the type of services:

```
Switch# show ip wccp 91 detail

WCCP Client information:
        WCCP Client ID:         10.10.10.2
        Protocol Version:       2.0
        State:                  Usable
        Redirection:            L2
        Packet Return:          GRE
        Packets Redirected:     0
        Connect Time:           00:05:23
        Assignment:             MASK

        Mask  SrcAddr    DstAddr    SrcPort DstPort
        ----  -------    -------    ------- -------
        0000: 0x00000000 0x00000001 0x0000  0x0000

        Value SrcAddr    DstAddr    SrcPort DstPort CE-IP
        ----- -------    -------    ------- ------- -----
        0000: 0x00000000 0x00000000 0x0000  0x0000  0x0A0A0A02 (10.10.10.2)
        0001: 0x00000000 0x00000001 0x0000  0x0000  0x0A0A0A02 (10.10.10.2)
```

show ip wccp interfaces

The following is sample output from the **show ip wccp interfaces** command:

```
Switch# show ip wccp interfaces

WCCP interface configuration:
    FastEthernet10/4
        Output services: 2
        Input services: 3
        Mcast services: 1
        Exclude In:      FALSE
```

Table 32 describes the significant fields shown in the display.

Table 32   show ip wccp interfaces Field Descriptions

Field	Description
Output services	Indicates the number of output services configured on the interface.
Input services	Indicates the number of input services configured on the interface.
Mcast services	Indicates the number of multicast services configured on the interface.
Exclude In	Displays whether traffic on the interface is excluded from redirection.

show ip wccp web-cache

The following is sample output from the **show ip wccp web-cache** command:

```
Switch# show ip wccp web-cache

Global WCCP information:
    Router information:
```

```
            Router Identifier:              10.10.11.10
            Protocol Version:               2.0

      Service Identifier: web-cache
            Number of Service Group Clients:    1
            Number of Service Group Routers:    1
            Total Packets Redirected:           0
              Process:                          0
              CEF:                              0
              Platform:                         0
            Redirect access-list:               no_linux
            Total Packets Denied Redirect:      0
            Total Packets Unassigned:           0
            Group access-list:                  -none-
            Total Messages Denied to Group:     0
            Total Authentication failures:      0
            Total Bypassed Packets Received: 0
```

Table 33 describes the significant fields shown in the display.

Table 33   show ip wccp web-cache Field Descriptions

Field	Description
Protocol Version	Indicates that WCCPv2 is enabled.
Service Identifier	Indicates which service is detailed.
Number of Service Group Clients	Number of clients using the router as their home router.
Number of Service Group Routers	The number of routers in the service group.
Total Packets s/w Redirected	Total number of packets s/w redirected by the router.
Redirect access-list	The name or number of the access list that determines which packets will be redirected.
Total Packets Denied Redirect	Total number of packets that were not redirected because they did not match the access list.
Total Packets Unassigned	Number of packets that were not redirected because they were not assigned to any cache engine. Packets may not be assigned during initial discovery of cache engines or when a cache is dropped from a cluster.
Group access-list	Indicates which cache engine is allowed to connect to the router.
Total Messages Denied to Group	Indicates the number of packets denied by the *group-list* access list.
Total Authentication failures	The number of instances where a password did not match.

show ip wccp web-cache detail

The following example displays web cache engine information and WCCP router statistics for the web cache service:

```
Switch# show ip wccp web-cache detail

WCCP Client information:
        WCCP Client ID:         10.10.10.2
        Protocol Version:       2.0
        State:                  Usable
        Redirection:            L2
        Packet Return:          GRE
```

```
              Packets Redirected:    0
              Connect Time:          00:23:19
              Assignment:            MASK

              Mask  SrcAddr    DstAddr     SrcPort DstPort
              ----  -------    -------     ------- -------
              0000: 0x00000000 0x00000001 0x0000  0x0000

              Value SrcAddr    DstAddr     SrcPort DstPort CE-IP
              ----- -------    -------     ------- ------- -----
              0000: 0x00000000 0x00000000 0x0000  0x0000  0x0A0A0A02 (10.10.10.2)
              0001: 0x00000000 0x00000001 0x0000  0x0000  0x0A0A0A02 (10.10.10.2)
```

Table 34 describes the significant fields shown in the display.

Table 34   show ip wccp web-cache detail Field Descriptions

Field	Description
WCCP Client Information	The header for the area that contains fields for information on clients.
WCCP Client ID	The IP address of the cache engine in the service group.
Protocol Version	The version of WCCP being used by the cache engine in the service group.
State	Indicates whether the cache engine is operating properly and can be contacted by a router and other cache engines in the service group.
Packets Redirected	The number of packets that have been redirected to the cache engine.
Connect Time	The amount of time the cache engine has been connected to the router.

show ip wccp

```
Switch# show ip wccp

Global WCCP information:
    Router information:
        Router Identifier:                10.10.11.10
        Protocol Version:                 2.0

    Service Identifier: web-cache
        Number of Service Group Clients:  1
        Number of Service Group Routers:  1
        Total Packets s/w Redirected:     0
          Process:                        0
          CEF:                            0
        Redirect access-list:             -none-
        Total Packets Denied Redirect:    0
        Total Packets Unassigned:         0
        Group access-list:                -none-
        Total Messages Denied to Group:   0
        Total Authentication failures:    0
        Total Bypassed Packets Received:  0

    Service Identifier: 91
        Number of Service Group Clients:  1
        Number of Service Group Routers:  1
```

```
Total Packets s/w Redirected:        0
  Process:                           0
  CEF:                               0
Redirect access-list:              -none-
Total Packets Denied Redirect:       0
Total Packets Unassigned:            0
Group access-list:                 -none-
Total Messages Denied to Group:      0
Total Authentication failures:       0
Total Bypassed Packets Received:     0
```

Related Commands	Command	Description
	clear ip wccp	Clears the counter for packets redirected using WCCP.
	ip wccp	Enables support of the WCCP service for participation in a service group.
	ip wccp redirect	Enables packet redirection on an outbound or inbound interface using WCCP.

show ipc

To display IPC information, use the **show ipc** command.

show ipc {**nodes** | **ports** | **queue** | **status**}

Syntax Description

nodes	Displays the participating nodes.
ports	Displays the local IPC ports.
queue	Displays the contents of the IPC retransmission queue.
status	Displays the status of the local IPC server.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(12c)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Examples

This example shows how to display the participating nodes:

```
Switch# show ipc nodes
There are 3 nodes in this IPC realm.
  ID      Type                Name               Last  Last
                                                 Sent  Heard
   10000 Local     IPC Master                    0      0
 2010000 Local     GALIOS IPC:Card 1             0      0
 2020000 Ethernet  GALIOS IPC:Card 2             12     26
Switch#
```

This example shows how to display the local IPC ports:

```
Switch# show ipc ports
There are 11 ports defined.

Port ID       Type     Name             (current/peak/total)
   10000.1    unicast    IPC Master:Zone
   10000.2    unicast    IPC Master:Echo
   10000.3    unicast    IPC Master:Control
   10000.4    unicast    Remote TTY Server Port
   10000.5    unicast    GALIOS RF :Active
     index = 0  seat_id = 0x2020000  last sent = 0    heard = 1635   0/1/1635

   10000.6    unicast    GALIOS RED:Active
     index = 0  seat_id = 0x2020000  last sent = 0    heard = 2      0/1/2

 2020000.3    unicast    GALIOS IPC:Card 2:Control
 2020000.4    unicast    GALIOS RFS :Standby
 2020000.5    unicast    Slave: Remote TTY Client Port
 2020000.6    unicast    GALIOS RF :Standby
 2020000.7    unicast    GALIOS RED:Standby
```

```
RPC packets: current/peak/total

                                                            0/1/17
Switch#
```

This example shows how to display the contents of the IPC retransmission queue:

```
Switch# show ipc queue
There are 0 IPC messages waiting for acknowledgement in the transmit queue.
There are 0 IPC messages waiting for a response.
There are 0 IPC messages waiting for additional fragments.
There are 0 IPC messages currently on the IPC inboundQ.
There are 0 messages currently in use by the system.
Switch#
```

This example shows how to display the status of the local IPC server:

```
Switch# show ipc status
IPC System Status:

This processor is the IPC master server.

6000 IPC message headers in cache
3363 messages in, 1680 out, 1660 delivered to local port,
1686 acknowledgements received, 1675 sent,
0 NACKS received, 0 sent,
0 messages dropped on input, 0 messages dropped on output
0 no local port, 0 destination unknown, 0 no transport
0 missing callback or queue, 0 duplicate ACKs, 0 retries,
0 message timeouts.
0 ipc_output failures, 0 mtu failures,
0 msg alloc failed, 0 emer msg alloc failed, 0 no origs for RPC replies
0 pak alloc failed, 0 memd alloc failed
0 no hwq, 1 failed opens, 0 hardware errors
No regular dropping of IPC output packets for test purposes
Switch#
```

show ipv6 snooping counters

To display the number of packets dropped per port due to RA Guard, use the **show ipv6 snooping counters** *interface* command.

show ipv6 snooping counters *interface*

Syntax Description

interface	Specifies the interface.

Defaults   None

Command Modes   Interface mode

Command History

Release	Modification
12.2(54)SG	The **show ipv6 first-hop counters** command was introduced on the Catalyst 4500 series switch.
15.0(2)SG, XE 3.3.0SG	Same behavior, new syntax; **show ipv6 snooping counters**

Examples   This example provides a sample output for the **show ipv6 snooping counters** command on interface Gi2/49:

```
Switch# show ipv6 snooping counters int gi 2/48
Received messages on Gi2/48:
Protocol        Protocol message
ICMPv6          RS          RA          NS          NA          REDIR       CPS         CPA

show ipv6 mld snooping

To display IP version 6 (IPv6) Multicast Listener Discovery (MLD) snooping configuration of the switch or the VLAN, use the **show ipv6 mld snooping** command.

show ipv6 mld snooping [**vlan** *vlan-id*]

Syntax Description

vlan *vlan-id*	(Optional) Specifies a VLAN; the range is 1 to 1001 and 1006 to 4094.

Command Modes User EXEC mode

Command History

Release	Modification
12.2(40)SG	This command was introduced on the Catalyst 4500.

Usage Guidelines Use this command to display MLD snooping configuration for the switch or for a specific VLAN.

VLAN numbers 1002 through 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in MLD snooping.

Examples This is an example of output from the **show ipv6 mld snooping vlan** command. It shows snooping characteristics for a specific VLAN.

```
Switch> show ipv6 mld snooping vlan 100
Global MLD Snooping configuration:
-------------------------------------------
MLD snooping                : Enabled
MLDv2 snooping (minimal)     : Enabled
Listener message suppression  : Enabled
TCN solicit query            : Disabled
TCN flood query count        : 2
Robustness variable          : 3
Last listener query count    : 2
Last listener query interval  : 1000

Vlan 100:
--------
MLD snooping                      : Disabled
MLDv1 immediate leave             : Disabled
Explicit host tracking            : Enabled
Multicast router learning mode    : pim-dvmrp
Robustness variable               : 3
Last listener query count         : 2
Last listener query interval      : 1000
```

This is an example of output from the **show ipv6 mld snooping** command. It displays snooping characteristics for all VLANs on the switch.

```
Switch> show ipv6 mld snooping
Global MLD Snooping configuration:
-------------------------------------------
```

```
MLD snooping               : Enabled
MLDv2 snooping (minimal)   : Enabled
Listener message suppression  : Enabled
TCN solicit query          : Disabled
TCN flood query count      : 2
Robustness variable        : 3
Last listener query count  : 2
Last listener query interval  : 1000

Vlan 1:
--------
MLD snooping                    : Disabled
MLDv1 immediate leave           : Disabled
Explicit host tracking          : Enabled
Multicast router learning mode  : pim-dvmrp
Robustness variable             : 1
Last listener query count       : 2
Last listener query interval    : 1000

<output truncated>

Vlan 951:
--------
MLD snooping                    : Disabled
MLDv1 immediate leave           : Disabled
Explicit host tracking          : Enabled
Multicast router learning mode  : pim-dvmrp
Robustness variable             : 3
Last listener query count       : 2
Last listener query interval    : 1000
```

Related Commands	Command	Description
	ipv6 mld snooping	Enables IP version 6 (IPv6) Multicast Listener Discovery (MLD) snooping globally or on the specified VLAN.

show ipv6 mld snooping mrouter

To display dynamically learned and manually configured IP version 6 (IPv6) Multicast Listener Discovery (MLD) switch ports for the switch or a VLAN, use the **show ipv6 mld snooping mrouter** command.

> **show ipv6 mld snooping mrouter** [**vlan** *vlan-id*]

Syntax Description	**vlan** *vlan-id*	(Optional) Specifies a VLAN; the range is 1 to 1001 and 1006 to 4094.

Command Modes   User EXEC mode

Command History

Release	Modification
12.2(40)SG	This command was introduced on Catalyst 4500.

Usage Guidelines   Use this command to display MLD snooping switch ports for the switch or for a specific VLAN.

VLAN numbers 1002 through 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in MLD snooping.

Examples   This is an example of output from the **show ipv6 mld snooping mrouter** command. It displays snooping characteristics for all VLANs on the switch that are participating in MLD snooping.

```
Switch> show ipv6 mld snooping mrouter
Vlan    ports
----    -----
   2    Gi1/0/11(dynamic)
  72    Gi1/0/11(dynamic)
 200    Gi1/0/11(dynamic)
```

This is an example of output from the **show ipv6 mld snooping mrouter vlan** command. It shows multicast switch ports for a specific VLAN.

```
Switch> show ipv6 mld snooping mrouter vlan 100
Vlan    ports
----    -----
   2    Gi1/0/11(dynamic)
```

ipv6 mld snooping	Enables IP version 6 (IPv6) Multicast Listener Discovery (MLD) snooping globally or on the specified VLAN.
ipv6 mld snooping vlan	Configures IP version 6 (IPv6) Multicast Listener Discovery (MLD) snooping parameters on the VLAN interface.

show ipv6 mld snooping querier

To display IP version 6 (IPv6) Multicast Listener Discovery (MLD) snooping querier-related information most recently received by the switch or the VLAN, use the **show ipv6 mld snooping querier** command.

show ipv6 mld snooping querier [**vlan** *vlan-id*]

Syntax Description

vlan *vlan-id*	(Optional) Specifiesa VLAN; the range is 1 to 1001 and 1006 to 4094.

Command Modes User EXEC mode

Command History

Release	Modification
12.2(40)SG	This command was introduced on the Catalyst 4500.

Usage Guidelines Use the **show ipv6 mld snooping querier** command to display the MLD version and IPv6 address of a detected device that sends MLD query messages, which is also called a *querier*. A subnet can have multiple multicast switches but has only one MLD querier. The querier can be a Layer 3 switch.

The **show ipv6 mld snooping querier** command output also shows the VLAN and interface on which the querier was detected. If the querier is the switch, the output shows the *Port* field as *Router*. If the querier is a router, the output shows the port number on which the querier is learned in the *Port* field.

The output of the **show ipv6 mld snoop querier vlan** command displays the information received in response to a query message from an external or internal querier. It does not display user-configured VLAN values, such as the snooping robustness variable on the particular VLAN. This querier information is used only on the MASQ message that is sent by the switch. It does not override the user-configured robustness variable that is used for aging out a member that does not respond to query messages.

VLAN numbers 1002 through 1005 are reserved for Token Ring and FDDI VLANs and cannot be used in MLD snooping.

Examples This is an example of output from the **show ipv6 mld snooping querier** command:

```
Switch> show ipv6 mld snooping querier
Vlan      IP Address              MLD Version Port
---------------------------------------------------------
2         FE80::201:C9FF:FE40:6000 v1          Gi3/0/1
```

This is an example of output from the **show ipv6 mld snooping querier vlan** command:

```
Switch> show ipv6 mld snooping querier vlan 2
IP address : FE80::201:C9FF:FE40:6000
MLD version : v1
Port : Gi3/0/1
Max response time : 1000s
```

	ipv6 mld snooping last-listener-query-interval	Configures IP version 6 (IPv6) MLD snooping last-listener query interval on the switch or on a VLAN.
	ipv6 mld snooping robustness-variable	Configures the number of IP version 6 (IPv6) MLD queries that the switch sends before deleting a listener that does not respond.
	ipv6 mld snooping tcn	Configures IP version 6 (IPv6) MLD Topology Change Notifications (TCNs).

show issu capability

To display the ISSU capability for a client, use the **show issu capability** command.

show issu capability {**entries** | **groups** | **types**} [*client_id*]

Syntax Description	

entries	Displays a list of Capability Types and Dependent Capability Types that are included in a single Capability Entry. Types within an entry can also be independent.
groups	Displays a list of Capability Entries in priority order (the order that they will be negotiated on a session).
types	Displays an ID that identifies a particular capability.
client_id	(Optional) Identifies the client registered to the ISSU infrastructure.
	To obtain a list of client IDs, use the **show issu clients** command.

Defaults This command has no default settings.

Command Modes User EXEC mode

Command History

Release	Modification
12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.

Usage Guidelines Capability is a functionality that an ISSU client can support and is required to interoperate with peers.

When an ISSU-aware client establishes its session with the peer, an ISSU negotiation takes place. The ISSU infrastructure uses the registered information to negotiate the capabilities and the message version to be used during the session.

Examples The following example shows how to display the ISSU capability types for the IP host ISSU client (clientid=2082):

```
Switch# show issu capability types 2082
Client_ID = 2082,  Entity_ID = 1 :
     Cap_Type = 0
Switch#
```

The following example shows how to display the ISSU capabilities entries for the IP host ISSU client (clientid=2082):

```
Switch# show issu capability entries 2082
Client_ID = 2082,  Entity_ID = 1 :
    Cap_Entry = 1 :
                   Cap_Type = 0
Switch#
```

The following example shows how to display the ISSU capabilities groups for the IP host ISSU client (clientid=2082):

```
Switch# show issu capability groups 2082
Client_ID = 2082,  Entity_ID = 1 :
    Cap_Group = 1 :
          Cap_Entry = 1
                      Cap_Type = 0
Switch#
```

Related Commands

Command	Description
show issu clients	Displays the ISSU clients.

show issu clients

To display the ISSU clients, use the **show issu clients** command.

show issu clients [*peer_uid*]

Syntax Description

peer_uid	(Optional) Displays a list of clients registered to ISSU infrastructure at the peer supervisor engine.

Defaults

Displays a list of clients registered to the ISSU infrastructure at the supervisor engine where the command is entered.

Command Modes

User EXEC mode

Command History

Release	Modification
12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.

Usage Guidelines

To implement ISSU versioning functionality, a client must first register itself, client capability, and client message information with the ISSU infrastructure during the system initialization.

Examples

The following example shows how to display the ISSU clients:

```
Switch# show issu clients
 Client_ID = 2,   Client_Name = ISSU Proto client,  Entity_Count = 1
 Client_ID = 3,   Client_Name = ISSU RF,  Entity_Count = 1
 Client_ID = 4,   Client_Name = ISSU CF client,  Entity_Count = 1
 Client_ID = 5,   Client_Name = ISSU Network RF client,  Entity_Count = 1
 Client_ID = 7,   Client_Name = ISSU CONFIG SYNC,  Entity_Count = 1
 Client_ID = 8,   Client_Name = ISSU ifIndex sync,  Entity_Count = 1
 Client_ID = 9,   Client_Name = ISSU IPC client,  Entity_Count = 1
 Client_ID = 10,  Client_Name = ISSU IPC Server client,  Entity_Count = 1
 Client_ID = 11,  Client_Name = ISSU Red Mode Client,  Entity_Count = 1
 Client_ID = 100,  Client_Name = ISSU rfs client,  Entity_Count = 1
 Client_ID = 110,  Client_Name = ISSU ifs client,  Entity_Count = 1
 Client_ID = 200,  Client_Name = ISSU Event Manager client,  Entity_Count = 1
 Client_ID = 2002,  Client_Name = CEF Push ISSU client,  Entity_Count = 1
 Client_ID = 2003,  Client_Name = ISSU XDR client,  Entity_Count = 1
 Client_ID = 2004,  Client_Name = ISSU SNMP client,  Entity_Count = 1

Related Commands	Command	Description
	show issu capability	Displays the ISSU capability for a client.
	show issu entities	Displays the ISSU entity information.

show issu comp-matrix

To display information regarding the In Service Software Upgrade (ISSU) compatibility matrix, use the **show issu comp-matrix** command.

show issu comp-matrix {**negotiated** | **stored** | **xml**}

Syntax Description

negotiated	Displays negotiated compatibility matrix information.
stored	Displays stored compatibility matrix information.
xml	Displays negotiated compatibility matrix information in XML format.

Defaults

This command has no default settings.

Command Modes

User EXEC mode

Command History

Release	Modification
12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.

Usage Guidelines

Before attempting an ISSU, you should know the compatibility level between the old and the new Cisco IOS software versions on the active and the standby supervisor engines. ISSU will not work if the two versions are incompatible.

The compatibility matrix is available on Cisco.com so that you can also veiw in advance whether an upgrade can be performed with the ISSU process. The compatibility matrix during the ISSU process and later by entering the **show issu comp-matrix** command. To display information on the negotiation of the compatibility matrix data between two software versions on a given system, use the **show issu comp-matrix negotiated** command.

Compatibility matrix data is stored with each Cisco IOS software image that supports ISSU capability. To display stored compatibility matrix information, use the **show issu comp-matrix stored** command.

The compatibility matrix information are built-in any Cisco IOS ISSU image. The ISSU infrastructure performs a matrix lookup as soon as the communication with the standby supervisor engine is established. There are three possible results from the lookup operation:

- Compatible—The Base-level system infrastructure and all optional HA-aware subsystems are compatible. In-service upgrade or downgrade between these versions will succeed with minimal service impact.

- Base-Level Compatible—One or more of the optional HA-aware subsystems are not compatible. Although an in-service upgrade or downgrade between these versions will succeed, some subsystems will not be able to maintain their state during the switchover. Prior to attempting an in-service upgrade or downgrade, the impact of this on operation and service of the switch must be considered carefully.

- **Incompatible**—A set of core system infrastructure must be able to execute in a stateful manner for SSO to function correctly. If any of these "required" features or subsystems is not compatible in two different Cisco IOS images, the two versions of the Cisco IOS images are declared "Incompatible". This means that an in-service upgrade or downgrade between these versions is not possible. The systems operates in RPR mode during the period when the versions of Cisco IOS at the active and standby supervisor engines differ.

Examples   This example displays negotiated compatibility matrix information:

```
Switch# show issu comp-matrix negotiated

Related Commands

Command	Description
show issu clients	Displays the ISSU clients.
show issu sessions	Displays ISSU session information for a specified client.

show issu endpoints

To display the ISSU endpoint information, use the **show issu endpoints** command.

show issu endpoints

Syntax Description

This command has no arguments or keywords

Defaults

This command has no default settings.

Command Modes

User EXEC mode

Command History

Release	Modification
12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.

Usage Guidelines

Endpoint is an execution unit within a redundancy domain. There are only 2 endpoints on the Catalyst 4500 series switch redundant chassis: 1 and 2. The endpoints correspond to the slot numbers for the supervisor engine. The ISSU infrastructure communicates between these two endpoints to establish session and to perform session negotiation for ISSU clients.

Examples

The following example shows how to display the ISSU endpoints:

```
Switch# show issu endpoints
My_Unique_ID = 1/0x1,  Client_Count = 46

 This endpoint communicates with 1 peer endpoints :
   Peer_Unique_ID      CAP      VER     XFORM      ERP        Compatibility
         2/0x2          1        1        1         1                Same

 Shared Negotiation Session Info :
    Nego_Session_ID = 15
    Nego_Session_Name = shared nego session
    Transport_Mtu = 4096
    Ses_In_Use = 2
Switch#
```

Related Commands

Command	Description
show issu clients	Displays the ISSU clients.

show issu entities

To display the ISSU entity information, use the **show issu entities** command.

show issu entities [*client_id*]

Syntax Description

client_id	(Optional) ISSU client ID.

Defaults

This command has no default settings.

Command Modes

User EXEC mode

Command History

Release	Modification
12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.

Usage Guidelines

Entity is a logical group of sessions with some common attributes (like capability list and message type). Currently, most ISSU clients on the Catalyst 4500 series switch have only one entity.

Examples

The following example shows how to display the entity information for a specified ISSU client:

```
Switch#show issu entities 2072
Client_ID = 2072 :
     Entity_ID = 1,  Entity_Name = ISSU dot1x entity :
       MsgType MsgGroup CapType CapEntry CapGroup
         Count    Count    Count    count    Count
          28        1        1        1        1
Switch#
```

Related Commands

Command	Description
show issu clients	Displays the ISSU clients.

show issu fsm

![Note icon]

Note   This command is not intended for end-users.

To display the ISSU finite state machine (FSM) information corresponding to an ISSU session, use the **show issu fsm** command.

show issu fsm [*session_id*]

Syntax Description

session_id	(Optional) Provides detailed information about the FSM for the specified session.

Defaults   This command has no default settings.

Command Modes   User EXEC mode

Command History

Release	Modification
12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.

Examples   The following example displays and verifies the ISSU state after LOADVERSION:

```
Switch# show issu fsm 26
Session_ID = 26 :
  FSM_Name        Curr_State     Old_State       Error_Reason
  FSM_L1          TRANS          A_VER           none
  FSM_L2_HELLO    EXIT           RCVD            none
  FSM_L2_A_CAP    A_EXIT         A_RSP           none
  FSM_L2_P_CAP    P_INIT         unknown         none
  FSM_L2_A_VER    A_EXIT         A_RES_RSP       none
  FSM_L2_P_VER    P_INIT         unknown         none
  FSM_L2_TRANS    COMP           COMP            none
 Current FSM is FSM_L2_TRANS
 Session is compatible
 Negotiation started at 00:01:07.688, duration is 0.148 seconds
Switch#
```

Related Commands

Command	Description
show issu clients	Displays the ISSU clients.
show issu sessions	Displays ISSU session information for a specified client.

show issu message

To display checkpoint messages for a specified ISSU client, use the **show issu message** command.

> **show issu message** {**groups** | **types**} [*client_id*]

Syntax Description	

groups	Displays information on Message Group supported by the specified client.
types	Displays information on all Message Types supported by the specified client.
client_id	(Optional) Specifies a client ID.

Defaults   If client ID is not specified, displays message groups or message types information for all clients registered to the ISSU infrastructure.

Command Modes   User EXEC mode

Command History

Release	Modification
12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.

Usage Guidelines   Messages are sync-data (also known as checkpoint data) sent between two endpoints.

When an ISSU-aware client establishes its session with a peer, an ISSU negotiation takes place. The ISSU infrastructure uses the registered information to negotiate the capabilities and the message version to be used during the session.

Examples   The following example shows how to display the message groups for Client_id 2082:

```
Switch#show issu message groups 2082
Client_ID = 2082,  Entity_ID = 1 :
    Message_Group = 1 :
                Message_Type = 1,  Version_Range = 1 ~ 2
                Message_Type = 2,  Version_Range = 1 ~ 2
Switch#
```

The following example shows how to display the message types for Client_id 2082:

```
Switch#show issu message types 2082
Client_ID = 2082,  Entity_ID = 1 :
    Message_Type = 1,  Version_Range = 1 ~ 2
        Message_Ver = 1,    Message_Mtu = 12
        Message_Ver = 2,    Message_Mtu = 8
    Message_Type = 2,  Version_Range = 1 ~ 2
        Message_Ver = 1,    Message_Mtu = 32
        Message_Ver = 2,    Message_Mtu = 28
Switch#
```

Related Commands	Command	Description
	show issu clients	Displays the ISSU clients.

show issu negotiated

To display the negotiated capability and message version information of the ISSU clients, use the **show issu negotiated** command.

> **show issu negotiated** {**capability** | **version**} [*session_id*]

Syntax Description

capability	Displays all negotiated capabilities.
version	Displays details of all negotiated messages.
session_id	(Optional) Specifies the ISSU session ID for which the capability or version information is displayed.

Defaults   Displays negotiated capability or version information for all ISSU sessions.

Command Modes   User EXEC mode

Command History

Release	Modification
12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.

Examples   The following example shows how to display the message types for a specific group:

```
Switch# show issu negotiated capability 26
 Session_ID = 26 :
    Cap_Type = 0,    Cap_Result = 1    No cap value assigned

Switch# show issu negotiated version 26
 Session_ID = 26 :
    Message_Type = 1,  Negotiated_Version = 1,  Message_MTU = 44
    Message_Type = 2,  Negotiated_Version = 1,  Message_MTU = 4
```

Related Commands

Command	Description
show issu sessions	Displays ISSU session information for a specified client.

show issu rollback-timer

To display ISSU rollback-timer status, use the **show issu rollback-timer** command.

show issu rollback-timer

Syntax Description   This command has no arguments or keywords.

Defaults   This command has no default settings.

Command Modes   Priviledged EXEC mode

Command History

Release	Modification
12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.

Examples   The following example shows how to display the rollback-timer status:

```
Switch#show issu rollback-timer
       Rollback Process State = Not in progress
     Configured Rollback Time = 45:00
Switch#
```

Related Commands

Command	Description
issu acceptversion	Halts the rollback timer and ensures that the new Cisco IOS software image is not automatically stopped during the ISSU process.
issu runversion	Forces a change from the active supervisor engine to the standby supervisor engine and causes the newly active supervisor engine to run the new image specified in the **issu loadversion** command.

show issu sessions

To display ISSU session information for a specified client, use the **show issu sessions** command.

> **show issu sessions** [*client_id*]

Syntax Description

client_id	(Optional) Specifies the ISSU client ID.

Defaults

Displays session information for all clients registered to the ISSU infrastructure.

Command Modes

User EXEC mode

Command History

Release	Modification
12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.

Usage Guidelines

Session is bidirectional and a reliable connection is established between two endpoints. Sync-data and negotiation messages are sent to the peer endpoint through a session. On a Catalyst 4500 series switch, each ISSU-aware client has a maximum of one session at each endpoint.

When an ISSU-aware client establishes its session with the peer, an ISSU negotiation takes place. The ISSU infrastructure uses the registered information to negotiate the capabilities and the message version to be used during the session.

Examples

The following example shows how to display the rollback-timer status:

```
Switch#show issu sessions 2072
Client_ID = 2072,  Entity_ID = 1 :

 *** Session_ID = 26,  Session_Name = dot1x :

    Peer    Peer  Negotiate  Negotiated   Cap      Msg      Session
  UniqueID  Sid    Role        Result    GroupID  GroupID  Signature
    2       26    PRIMARY    COMPATIBLE    1        1         0
                             (no policy)

    Negotiation Session Info for This Message Session:
        Nego_Session_ID = 26
        Nego_Session_Name = dot1x
        Transport_Mtu = 17884
Switch#
```

Related Commands

Command	Description
show issu clients	Displays the ISSU clients.

show issu state

To display the ISSU state and current booted image name during the ISSU process, use the **show issu state** command.

show issu state [*slot_number*] [**detail**]

Syntax Description

slot_number	(Optional) Specifies the slot number whose ISSU state needs to be displayed (1 or 2).
detail	(Optional) Provides detailed information about the state of the active and standby supervisor engines.

Defaults

The command displays the ISSU state and current booted image name of both the active and standby supervisor engines.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.

Usage Guidelines

It might take several seconds after the **issu loadversion** command is entered for Cisco IOS software to load onto the standby supervisor engine and the standby supervisor engine to transition to SSO mode. If you enter the **show issu state** command too soon, you might not see the information you need.

Examples

The following example displays and verifies the ISSU state after LOADVERSION:

```
Switch# show issu state detail
                       Slot = 1
                   RP State = Active
                 ISSU State = Load Version
              Boot Variable = bootflash:old_image,12
             Operating Mode = Stateful Switchover
            Primary Version = bootflash:old_image
          Secondary Version = bootflash:new_image
            Current Version = bootflash:old_image

                       Slot = 2
                   RP State = Standby
                 ISSU State = Load Version

             Operating Mode = Stateful Switchover
            Primary Version = bootflash:old_image
          Secondary Version = bootflash:new_image
            Current Version = bootflash:new_image

Switch#
```

Related Commands	Command	Description
	issu abortversion	Cancels the ISSU upgrade or the downgrade process in progress and restores the switch to its state before the start of the process.
	issu acceptversion	Halts the rollback timer and ensures that the new Cisco IOS software image is not automatically stopped during the ISSU process.
	issu commitversion	Loads the new Cisco IOS software image into the new standby supervisor engine.
	issu loadversion	Starts the ISSU process.
	issu runversion	Forces a change from the active supervisor engine to the standby supervisor engine and causes the newly active supervisor engine to run the new image specified.

show l2protocol-tunnel

To display information about the Layer 2 protocol tunnel ports, use the **show l2protocol-tunnel** command. This command displays information for the interfaces with protocol tunneling enabled.

> **show l2protocol-tunnel** [**interface** *interface-id*] [[**summary**] | {**begin** | **exclude** | **include**} *expression*]

Syntax Description

interface *interface-id*	(Optional) Specifies the interface for which protocol tunneling information appears. Valid interfaces are physical ports and port channels; the port channel range is 1 to 64.
summary	(Optional) Displays only Layer 2 protocol summary information.
begin	(Optional) Displays information beginning with the line that matches the *expression*.
exclude	(Optional) Displays information that excludes lines that match the *expression*.
include	(Optional) Displays the lines that match the specified *expression*.
expression	(Optional) Expression in the output to use as a reference point.

Command Modes   User EXEC mode

Command History

Release	Modification
12.2(18)EW	This command was first introduced on the Catalyst 4500 series switch.
12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.

Usage Guidelines   After enabling Layer 2 protocol tunneling on an access or 802.1Q tunnel port with the **l2protocol-tunnel** command, you can configure some or all of these parameters:

- Protocol type to be tunneled
- Shutdown threshold
- Drop threshold

If you enter the **show l2protocol-tunnel** [**interface** *interface-id*] command, only information about the active ports on which all the parameters are configured appears.

If you enter the **show l2protocol-tunnel summary** command, only information about the active ports on which some or all of the parameters are configured appears.

Expressions are case sensitive. For example, if you enter | **exclude output**, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

Examples   This is an example of output from the **show l2protocol-tunnel** command:

```
Switch> show l2protocol-tunnel
COS for Encapsulated Packets: 5

Port    Protocol Shutdown  Drop      Encapsulation Decapsulation Drop

```

Related Commands	Command	Description
	l2protocol-tunnel	Enables protocol tunneling on an interface.
	l2protocol-tunnel cos	Configures the class of service (CoS) value for all tunneled Layer 2 protocol packets.

show lacp

To display LACP information, use the **show lacp** command.

show lacp [*channel-group*] {**counters** | **internal** | **neighbors** | **sys-id**}

Syntax Description

channel-group	(Optional) Number of the channel group; valid values are from 1 to 64.
counters	Displays the LACP statistical information.
internal	Displays the internal information.
neighbors	Displays the neighbor information.
sys-id	Displays the LACP system identification.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(13)EW	Support for this command was introduced on the Catalyst 4500 Series Switches.

Usage Guidelines

This command is not supported on systems that are configured with a Supervisor Engine I.

If you do not specify a *channel-group* value, all channel groups are displayed.

You can enter the optional *channel-group* value to specify a channel group for all keywords, except the **sys-id** keyword.

Examples

This example shows how to display LACP statistical information for a specific channel group:

```
Switch# show lacp 1 counters
            LACPDUs       Marker      LACPDUs
Port     Sent   Recv   Sent   Recv   Pkts Err
-------------------------------------------------
Channel group: 1
  Fa4/1   8      15     0      0      3    0
  Fa4/2   14     18     0      0      3    0
  Fa4/3   14     18     0      0      0
  Fa4/4   13     18     0      0      0
Switch#
```

The output displays the following information:

- The LACPDUs Sent and Recv columns display the LACPDUs sent and received on each specific interface.

- The LACPDUs Pkts and Err columns display the marker protocol packets.

This example shows how to display internal information for the interfaces belonging to a specific channel:

```
Switch# show lacp 1 internal
Flags:  S - Device sends PDUs at slow rate. F - Device sends PDUs at fast rate.
        A - Device is in Active mode.      P - Device is in Passive mode.

Channel group 1
                            LACPDUs    LACP Port    Admin   Oper    Port    Port

Fa4/3       saC     bndl    30s        32768        100     100     0xc3    0x75
Fa4/4       saC     bndl    30s        32768        100     100     0xc4    0x75
Switch#
```

Table 2-35 lists the output field definitions.

Table 2-35   show lacp internal Command Output Fields

Field	Description
State	State of the specific port at the current moment is displayed; allowed values are as follows: • *bndl*—Port is attached to an aggregator and bundled with other ports. • *susp*—Port is in a suspended state; it is not attached to any aggregator. • *indep*—Port is in an independent state (not bundled but able to switch data traffic. In this case, LACP is not running on the partner port). • *hot-sby*—Port is in a hot-standby state. • *down*—Port is down.
LACPDUs Interval	Interval setting.
LACP Port Priority	Port priority setting.
Admin Key	Administrative key.
Oper Key	Operator key.
Port Number	Port number.
Port State	State variables for the port encoded as individual bits within a single octet with the following meaning [1]: • **bit0**: *LACP_Activity* • **bit1**: *LACP_Timeout* • **bit2**: *Aggregation* • **bit3**: *Synchronization* • **bit4**: *Collecting* • **bit5**: *Distributing* • **bit6**: *Defaulted* • **bit7**: *Expired*

This example shows how to display LACP neighbors information for a specific port channel:

```
Switch# show lacp 1 neighbor
Flags:  S - Device sends PDUs at slow rate. F - Device sends PDUs at fast rate.
        A - Device is in Active mode.      P - Device is in Passive mode.

Channel group 1 neighbors
          Partner               Partner
Port      System ID             Port Number      Age      Flags
Fa4/1     8000,00b0.c23e.d84e   0x81             29s      P
Fa4/2     8000,00b0.c23e.d84e   0x82             0s       P
Fa4/3     8000,00b0.c23e.d84e   0x83             0s       P
Fa4/4     8000,00b0.c23e.d84e   0x84             0s       P

          Port         Admin     Oper      Port
          Priority     Key       Key       State
Fa4/1     32768        200       200       0x81
Fa4/2     32768        200       200       0x81
Fa4/3     32768        200       200       0x81
Fa4/4     32768        200       200       0x81
Switch#
```

In the case where no PDUs have been received, the default administrative information is displayed in braces.

This example shows how to display the LACP system identification:

```
Switch> show lacp sys-id
8000,AC-12-34-56-78-90
Switch>
```

The system identification is made up of the system priority and the system MAC address. The first two bytes are the system priority, and the last six bytes are the globally administered individual MAC address associated to the system.

Related Commands

Command	Description
lacp port-priority	Sets the LACP priority for the physical interfaces.
lacp system-priority	Sets the priority of the system for LACP.

show license

To display information about the software license, use the **show license** command.

.**show license** [**agent** [**counters** | **session**] [**all** | **detail** [*feature-name*] | **feature** | **file** | **statistics** |
status | **udi** | **right-to-use** | **summary** | **permanent** | **in-use** | **image levels** | **evaluation** | **expiring**]

Syntax Description

agent	Shows information about the software license agent.
all	Shows information about all licenses in the system.
detail *feature-name*	Shows detailed information about a specified licensed feature or about all licenses.
feature	Shows a list of licensed features available in an image
file	Shows license entries stored in the license file.
statistics	Shows license statistics information.
status	Shows information about supported license types and license operations, and provides device status.
udi	Shows all the unique device identifier (UDI) values that can be licensed in a system
right-to-use	Shows all PRTU licenses.
summary	Shows a brief summary of all licenses.
permanent	Show all available permanent licenses
in-use	Show all available in-use licenses
image levels	Shows license image levels
evaluation	Shows all evaluation licenses.
expiring	Shows all available expiring licenses.

Defaults License-related information is not displayed

Command Modes Privileged EXEC mode

Command History

Release	Modification
IOS XE 3.1.0	Support for **show license** introduced on the Catalyst 4500 Series Switches.
IOS XE 3.4.2	Keyword **right-to-use** introduced on the Catalyst 4500 Series Switches

Usage Guidelines Use this command to display license information and to help with troubleshooting issues related to Cisco IOS software licenses. It displays all the licenses in the system.

This command also displays those features that are available but not licensed to execute (i.e., multiple license can be active but not in use (execute) simultaneously. Only one type license can be used at a given time. Output is grouped according to how the features are stored in license storage (i.e., .where license information is stored on the device).

Examples).

These are examples of output from the show license agent command:

```
Switch# show license agent counters
License Agent Counters
Request Messages Received:0: Messages with Errors:0
Request Operations Received:0: Operations with Errors:0
Notification Messages Sent:1: Transmission Errors:0

Switch# show license agent session
License Agent Sessions: 0 open, maximum is 9

Switch# show license ?
agent show license agent
all Displays All The License(s).
call-home Show license call-home information
detail Displays Details Of A Given License.
evaluation Displays Evaluation License(s)
expiring Displays Expiring License(s).
feature Displays License Enabled Features.
file Displays All The License File(s).
handle show license handle
image show license image level
in-use Displays License That Are In-Use.
permanent Displays Permanent License(s)
right-to-use show permanent right-to-use licenses
statistics Displays License Statistics.
status Displays License Status.
summary Displays Brief Summary Of All License(s).
udi Displays UDI Value
```

This is an example of output from the **show license detail** command:

```
Switch# show license detail

call-home revoke Revoke license via call-home resend Fetch license via call-home Device
status Device Credential type: IMAGE Device Credential Verification: PASS Rehost Type:
DC_OR_IC
```

When you enter the **show license udi** command on WS-C4507R+E, this output appears:

```
Switch# show license udi
Device# PID SN UDI
---------------------------------------
*0 WS-C4507R+E FOX1327G52D WS-C4507R+E:FOX1327G52D
```

✎

Note   The **show license udi** command output shows details on the current switch.

Displays all the Right to use licenses present on the device and their status. It contains license details:
license state, licenses currently in use, and whether the EULA is accepted by the user.

```
Switch# show license right-to-use
License Store: Built-In License Storage
StoreIndex: 1    Feature: ipservices                        Version: 1.0
```

```
                         License Type: PermanentRightToUse
                         License State: Active, Not in Use, EULA accepted
                             Period used: 1  hour  50 minutes
                         License Priority: High
                         License Count: Non-Counted
```

This is an example of the **show license summary** command:

```
Switch# show license summary
Index 0 Feature: entservices
Period left: 8 weeks 3 days
License Type: Evaluation
License State: Active, Not in Use, EULA accepted
License Count: Non-Counted
License Priority: Low

License Count: Non-Counted
License Priority: Medium
License Store: Dynamic License Storage
```

show mab

To display MAC authentication bypass (MAB) information, use the **show mab** command in EXEC mode.

show mab {**interface** *interface interface-number* | **all**} [**detail**]

Syntax Description

interface *interface*	Interface type; possible valid value is **gigabitethernet**.
interface-number	Module and port number.
all	Displays MAB information for all interfaces.
detail	(Optional) Displays detailed MAB information.

Command Default   None.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.2(50)SG	This command was introduced.

Usage Guidelines   Table 2-36 lists the fields in the **show mab** command.

Table 2-36   show mab Command Output

Field	Description
Mac-Auth-Bypass	MAB state
Inactivity Timeout	Inactivity timeout
Client MAC	Client MAC address
MAB SM state	MAB state machine state
Auth Status	Authorization status

Table 2-37 lists the possible values for the state of the MAB state machine.

Table 2-37   MAB State Machine Values

State	State Level	Description
Initialize	Intermediate	The state of the session when it initializes
Acquiring	Intermediate	The state of the session when it is obtaining the client MAC address

Table 2-37   MAB State Machine Values (continued)

Authorizing	Intermediate	The state of the session during MAC-based authorization
Terminate	Terminal	The state of the session once a result has been obtained. For a session in terminal state, "TERMINATE" displays.

Table 2-38 lists the possible displayed values for the MAB authorization status.

Table 2-38   MAB Authorization Status Values

Status	Description
AUTHORIZED	The session has successfully authorized.
UNAUTHORIZED	The session has failed to be authorized.

Examples   The following example shows how to display MAB information:

```
Switch# show mab all
MAB details for GigaEthernet1/3
-----------------------------------
Mac-Auth-Bypass = Enabled
Inactivity Timeout = None
Switch#
```

The following example shows how to display detailed MAB information:

```
Switch# show mab all detail
MAB details for GigaEthernet1/3
-----------------------------------
Mac-Auth-Bypass = Enabled
Inactivity Timeout = None
MAB Client List
---------------
Client MAC = 000f.23c4.a401
MAB SM state = TERMINATE
Auth Status = AUTHORIZED
```

The following example shows how to display MAB information for a specific interface:

```
Switch# show mab interface GigaEthernet1/3
MAB details for GigaEthernet1/3
-----------------------------------
Mac-Auth-Bypass = Enabled
Inactivity Timeout = None
```

The following example shows how to display detailed MAB information for a specific interface:

```
Switch# show mab interface gigabitethernet1/1 detail
MAB details for GigaEthernet1/1
-------------------------------------
Mac-Auth-Bypass = Enabled
Inactivity Timeout = None
MAB Client List
---------------
Client MAC = 000f.23c4.a401
MAB SM state = TERMINATE
Auth Status = AUTHORIZED
Switch#
```

Related Commands	Command	Description
	mab	Enables and configures MAC authorization bypass (MAB) on a port.

show mac access-group interface

To display the ACL configuration on a Layer 2 interface, use the **show mac access-group interface** command.

show mac access-group interface [*interface interface-number*]

Syntax Description	*interface*	(Optional) Specifies the interface type; valid values are **ethernet**, **fastethernet**, **gigabitethernet**, **tengigabitethernet**, **pos**, **atm**, **port-channel**, and **ge-wan**.
	interface-number	(Optional) Specifies the port number.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History	Release	Modification
	12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines   The valid values for the port number depend on the chassis used.

Examples   This example shows how to display the ACL configuration on interface fast 6/1:

```
Switch# show mac access-group interface fast 6/1
Interface FastEthernet6/1:
   Inbound access-list is simple-mac-acl
   Outbound access-list is not set
```

Related Commands	Command	Description
	access-group mode	Specifies the override modes (for example, VACL overrides PACL) and the non-override modes (for example, merge or strict mode).

show mac-address-table address

To display MAC address table information for a specific MAC address, use the
show mac-address-table address command.

show mac-address-table address *mac_addr* [**interface** *type slot/port* | **protocol** *protocol* | **vlan**
vlan_id]

Syntax Description		
mac_addr	48-bit MAC address; the valid format is H.H.H.
interface *type slot/port*	(Optional) Displays information for a specific interface; valid values for *type* are **fastethernet**, **gigabitethernet**, and **tengigabitethernet**.
protocol *protocol*	(Optional) Specifies a protocol. See the "Usage Guidelines" section for more information.
vlan *vlan_id*	(Optional) Displays entries for the specific VLAN only; valid values are from 1 to 4094.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(12c)EW	Added support for extended VLAN addresses.
12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.

Usage Guidelines   For the MAC address table entries that are used by the routed ports, the routed port name is displayed in the "vlan" column not the internal VLAN number.

The keyword definitions for the *protocol* variable are as follows:

- **ip** specifies the IP protocol.
- **ipx** specifies the IPX protocols.
- **assigned** specifies the assigned protocol entries.
- **other** specifies the other protocol entries.

Examples   This example shows how to display MAC address table information for a specific MAC address:

```
Switch# show mac-address-table address 0030.94fc.0dff
Unicast Entries
 vlan   mac address     type        protocols           port
-------+---------------+--------+--------------------+--------------------
   1    0030.94fc.0dff    static ip,ipx,assigned,other  Switch
Fa6/1  0030.94fc.0dff    static ip,ipx,assigned,other  Switch
Fa6/2  0030.94fc.0dff    static ip,ipx,assigned,other  Switch
Switch#
```

Related Commands

Command	Description
show mac-address-table aging-time	Displays MAC address table aging information.
show mac-address-table count	Displays the number of entries currently in the MAC address table.
show mac-address-table dynamic	Displays the dynamic MAC address table entries only.
show mac-address-table interface	Displays the MAC address table information for a specific interface.
show mac-address-table multicast	Displays information about the multicast MAC address table.
show mac-address-table protocol	Displays the MAC address table information that is based on the protocol.
show mac-address-table static	Displays the static MAC address table entries only.
show mac-address-table vlan	Displays information about the MAC address table for a specific VLAN.

show mac-address-table aging-time

To display the MAC address aging time, use the **show mac-address-table aging-time** command.

show mac-address-table aging-time [**vlan** *vlan_id*]

Syntax Description

vlan *vlan_id*	(Optional) Specifies a VLAN; valid values are from 1 to 4094.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(12c)EW	Support for extended addressing was added.

Examples   This example shows how to display the currently configured aging time for all VLANs:

```
Switch# show mac-address-table aging-time
Vlan    Aging Time
----    ----------
100     300
200     1000

Switch#
```

This example shows how to display the currently configured aging time for a specific VLAN:

```
Switch# show mac-address-table aging-time vlan 100
Vlan    Aging Time
----    ----------
 100    300

Switch#
```

Related Commands

Command	Description
show mac-address-table address	Displays the information about the MAC-address table.
show mac-address-table count	Displays the number of entries currently in the MAC address table.
show mac-address-table dynamic	Displays the dynamic MAC address table entries only.
show mac-address-table interface	Displays the MAC address table information for a specific interface.
show mac-address-table multicast	Displays information about the multicast MAC address table.

Command	Description
show mac-address-table protocol	Displays the MAC address table information that is based on the protocol.
show mac-address-table static	Displays the static MAC address table entries only.
show mac-address-table vlan	Displays information about the MAC address table for a specific VLAN.

show mac-address-table count

To display the number of entries currently in the MAC address table, use the **show mac-address-table count** command.

show mac-address-table count [**vlan** *vlan_id*]

Syntax Description	**vlan** *vlan_id*	(Optional) Specifies a VLAN; valid values are from 1 to 4094.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(12c)EW	Added support for extended VLAN addresses.

Examples   This example shows how to display the entry count for a specific VLAN:

```
Switch# show mac-address-table count vlan 1
MAC Entries for Vlan 1:
Dynamic Unicast Address Count:             0
Static Unicast Address (User-defined) Count:   0
Static Unicast Address (System-defined) Count: 1
Total Unicast MAC Addresses In Use:        1
Total Unicast MAC Addresses Available:     32768
Multicast MAC Address Count:               1
Total Multicast MAC Addresses Available:   16384
Switch#
```

Related Commands

Command	Description
show mac-address-table address	Displays the information about the MAC-address table.
show mac-address-table aging-time	Displays MAC address table aging information.
show mac-address-table dynamic	Displays the dynamic MAC address table entries only.
show mac-address-table interface	Displays the MAC address table information for a specific interface.
show mac-address-table multicast	Displays information about the multicast MAC address table.
show mac-address-table protocol	Displays the MAC address table information that is based on the protocol.

Command	Description
show mac-address-table static	Displays the static MAC address table entries only.
show mac-address-table vlan	Displays information about the MAC address table for a specific VLAN.

show mac-address-table dynamic

To display the dynamic MAC address table entries only, use the **show mac-address-table dynamic** command.

> **show mac-address-table dynamic** [**address** *mac_addr* | **interface** *type slot/port* |
> **protocol** *protocol* | **vlan** *vlan_id*]

Syntax Description

address *mac_addr*	(Optional) Specifies a 48-bit MAC address; the valid format is H.H.H.
interface *type slot/port*	(Optional) Specifies an interface to match; valid values for *type* are **fastethernet**, **gigabitethernet**, and **tengigabitethernet**.
protocol *protocol*	(Optional) Specifies a protocol. See the "Usage Guidelines" section for more information.
vlan *vlan_id*	(Optional) Displays entries for a specific VLAN; valid values are from 1 to 4094.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(12c)EW	Added support for extended VLAN addresses.
12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.

Usage Guidelines   The keyword definitions for the *protocol* argument are as follows:

- **assigned** specifies assigned protocol entries.
- **ip** specifies IP protocol.
- **ipx** specifies IPX protocols.
- **other** specifies other protocol entries.

The **show mac-address-table dynamic** command output for an EtherChannel interface changes the port number designation (such as, 5/7) to a port group number (such as, Po80).

For the MAC address table entries that are used by the routed ports, the routed port name is displayed in the "vlan" column not the internal VLAN number.

Examples

This example shows how to display all the dynamic MAC address entries:

```
Switch# show mac-address-table dynamic
Unicast Entries
 vlan   mac address     type        protocols              port
-------+---------------+--------+--------------------+--------------------
    1   0000.0000.0201   dynamic ip                   FastEthernet6/15
    1   0000.0000.0202   dynamic ip                   FastEthernet6/15
    1   0000.0000.0203   dynamic ip,assigned          FastEthernet6/15
    1   0000.0000.0204   dynamic ip,assigned          FastEthernet6/15
    1   0000.0000.0205   dynamic ip,assigned          FastEthernet6/15
    2   0000.0000.0101   dynamic ip                   FastEthernet6/16
    2   0000.0000.0102   dynamic ip                   FastEthernet6/16
    2   0000.0000.0103   dynamic ip,assigned          FastEthernet6/16
    2   0000.0000.0104   dynamic ip,assigned          FastEthernet6/16
    2   0000.0000.0105   dynamic ip,assigned          FastEthernet6/16
Switch#
```

This example shows how to display the dynamic MAC address entries with a specific protocol type (in this case, assigned):

```
Switch# show mac-address-table dynamic protocol assigned
Unicast Entries
 vlan   mac address     type        protocols              port
-------+---------------+--------+--------------------+--------------------
    1   0000.0000.0203   dynamic ip,assigned          FastEthernet6/15
    1   0000.0000.0204   dynamic ip,assigned          FastEthernet6/15
    1   0000.0000.0205   dynamic ip,assigned          FastEthernet6/15
    2   0000.0000.0103   dynamic ip,assigned          FastEthernet6/16
    2   0000.0000.0104   dynamic ip,assigned          FastEthernet6/16
    2   0000.0000.0105   dynamic ip,assigned          FastEthernet6/16
Switch#
```

Related Commands

Command	Description

    2   ffff.ffff.ffff  system Fa6/16
Switch#
```

	Command	Description
Related Commands	**show mac-address-table address**	Displays the information about the MAC-address table.
	show mac-address-table aging-time	Displays MAC address table aging information.
	show mac-address-table count	Displays the number of entries currently in the MAC address table.
	show mac-address-table dynamic	Displays the dynamic MAC address table entries only.
	show mac-address-table multicast	Displays information about the multicast MAC address table.
	show mac-address-table protocol	Displays the MAC address table information that is based on the protocol.
	show mac-address-table static	Displays the static MAC address table entries only.
	show mac-address-table vlan	Displays information about the MAC address table for a specific VLAN.

show mac address-table learning

To display the status of MAC address learning for all VLANs or a specified VLAN, use the **show mac address-table learning** user EXEC command.

show mac address-table learning [**vlan** *vlan-id*] [**|** {**begin** | **exclude** | **include**} *expression*]

Syntax Description

vlan *vlan-id*	(Optional) Displays information for a specific VLAN. The range is 1 to 4094.
| begin	(Optional) Displays the line that matches the *expression*.
| exclude	(Optional) Displays excluded lines that match the *expression*.
| include	(Optional) Displays included lines that match the specified *expression*.
expression	(Optional) Specifies the expression in the output as a reference point.

Defaults

MAC address learning is enabled on all VLANs.

Command Modes

User EXEC

Command History

Release	Modification
12.2(54)SG	This command was modified to support the learning disable feature on the Catalyst 4500 series switch.

Usage Guidelines

To display configured VLANs, and whether MAC address learning is enabled or disabled, use the **show mac address-table learning** command without keywords. .

To display the learning status on an individual VLAN, use the command with a specific VLAN ID.

Expressions are case sensitive. For example, if you enter **| exclude output**, the lines that contain output do not appear, but the lines that contain Output appear.

Examples

This example shows that MAC address learning is disabled on VLAN 200:

```
Switch> show mac address-table learning
VLAN    Learning Status
----    ---------------
1           yes
100         yes
200         no
```

Related Commands

Command	Description
mac address-table learning vlan	Enables or disables MAC address learning on a VLAN.

show mac-address-table multicast

To display information about the multicast MAC address table, use the **show mac-address-table multicast** command.

> **show mac-address-table multicast** [**count** | {**igmp-snooping** [**count**]} | {**user** [**count**]} | {**vlan** *vlan_num*}]

Syntax Description

count	(Optional) Displays the number of multicast entries.
igmp-snooping	(Optional) Displays only the addresses learned by IGMP snooping.
user	(Optional) Displays only the user-entered static addresses.
vlan *vlan_num*	(Optional) Displays information for a specific VLAN only; valid values are from 1 to 4094.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(12c)EW	Added support for extended VLAN addresses.

Usage Guidelines

For the MAC address table entries that are used by the routed ports, the routed port name is displayed in the "vlan" column not the the internal VLAN number.

Examples

This example shows how to display multicast MAC address table information for a specific VLAN:

```
Switch# show mac-address-table multicast vlan 1
Multicast Entries
 vlan    mac address    type    ports
-------+--------------+-------+----------------------------------------
   1    ffff.ffff.ffff   system Switch,Fa6/15
Switch#
```

This example shows how to display the number of multicast MAC entries for all VLANs:

```
Switch# show mac-address-table multicast count
MAC Entries for all vlans:
Multicast MAC Address Count:              141
Total Multicast MAC Addresses Available:  16384
Switch#
```

Related Commands	Command	Description
	show mac-address-table address	Displays the information about the MAC-address table.
	show mac-address-table aging-time	Displays MAC address table aging information.
	show mac-address-table count	Displays the number of entries currently in the MAC address table.
	show mac-address-table dynamic	Displays the dynamic MAC address table entries only.
	show mac-address-table interface	Displays the MAC address table information for a specific interface.
	show mac-address-table protocol	Displays the MAC address table information that is based on the protocol.
	show mac-address-table static	Displays the static MAC address table entries only.
	show mac-address-table vlan	Displays information about the MAC address table for a specific VLAN.

show mac-address-table notification

To display the MAC address table notification status and history, use the **show mac-address-table notification** command.

> **show mac-address-table notification** [**change**] [**interface** [*interface-id*]] | [**mac-move**] | [**threshold**] | [**learn-fail**]

Syntax Description

change	(Optional) Displays the MAC address change notification status.
interface	(Optional) Displays MAC change information for an interfaces.
interface-id	(Optional) Displays the information for a specific interface. Valid interfaces include physical ports and port channels.
mac-move	(Optional) Displays MAC move notification status.
threshold	(Optional) Displays the MAC threshold notification status.
learn-fail	(Optional) Displays general information of hardware MAC learning failure notifications.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.2(31)SG	Support for this command was introduced on the Catalyst 4500 series switch.
12.2(52)SG	Support for **learn-fail** keyword, Supervisor Engine 6-E, and Catalyst 4900M chassis added.

Usage Guidelines

Use the **show mac-address-table notification change** command to display the MAC change notification interval, the maximum number of entries allowed in the history table, the history table contents, and whether the MAC change feature is enabled or disabled.

Use the **interface** keyword to display the flags for all interfaces. If the *interface-id* is included, only the flags for that interface are displayed.

Examples

This example shows how to display all the MAC address notification information:

```
Switch# show mac-address-table notification change
MAC Notification Feature is Enabled on the switch
Interval between Notification Traps : 1 secs
Number of MAC Addresses Added : 5
Number of MAC Addresses Removed : 1
Number of Notifications sent to NMS : 3
Maximum Number of entries configured in History Table : 500
Current History Table Length : 3
MAC Notification Traps are Enabled
```

```
History Table contents
----------------------
History Index 1, Entry Timestamp 478433, Despatch Timestamp 478433
MAC Changed Message :
Operation: Added   Vlan: 1     MAC Addr: 1234.5678.9ab0 Dot1dBasePort: 323
History Index 2, Entry Timestamp 481834, Despatch Timestamp 481834
MAC Changed Message :
Operation: Added   Vlan: 1     MAC Addr: 1234.5678.9ab1 Dot1dBasePort: 323
Operation: Added   Vlan: 1     MAC Addr: 1234.5678.9ab2 Dot1dBasePort: 323
Operation: Added   Vlan: 1     MAC Addr: 1234.5678.9ab3 Dot1dBasePort: 323
Operation: Added   Vlan: 1     MAC Addr: 1234.5678.9ab4 Dot1dBasePort: 323
History Index 3, Entry Timestamp 484334, Despatch Timestamp 484334
MAC Changed Message :
Operation: Deleted Vlan: 1     MAC Addr: 1234.5678.9ab0 Dot1dBasePort: 323
Switch#
```

This example shows how to display the MAC address change status on the FastEthernet interface 7/1:

```
Switch# show mac-address-table notification change interface FastEthernet 7/1
MAC Notification Feature is Enabled on the switch
Interface          MAC Added Trap MAC Removed Trap
---------          -------------- ----------------
FastEthernet7/1    Enabled        Disabled

Switch#
```

This example shows how to display the MAC address move status:

```
Switch# show mac-address-table notification mac-move
MAC Move Notification: Enabled
Switch#
```

This example shows how to display the MAC address table utilization status:

```
Switch# show mac-address-table notification threshold
Status       limit       Interval
-------------+-----------+-------------
   enabled      50         120
Switch#
```

This example shows how to display general information of MAC learning failure notifications:

```
Switch# show mac address-table notification learn-fail
Status       limit       Interval
-------------+-----------+-------------
   disabled     2000         120
```

Related Commands	Command	Description
	clear mac-address-table	Clears the address entries from the Layer 2 MAC address table.
	mac-address-table notification	Enables MAC address notification on a switch.
	snmp-server enable traps	Enables SNMP notifications (traps or informs).
	snmp trap mac-notification change	Enables SNMP MAC address notifications.

show mac-address-table protocol

To display the MAC address table information that is based on the protocol, use the **show mac-address-table protocol** command.

show mac-address-table protocol {**assigned** | **ip** | **ipx** | **other**}

Syntax Description

assigned	Specifies the assigned protocol entries.
ip	Specifies the IP protocol entries.
ipx	Specifies the IPX protocol entries.
other	Specifies the other protocol entries.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines   For the MAC address table entries that are used by the routed ports, the routed port name is displayed in the "vlan" column not the the internal VLAN number.

Examples   This example shows how to display the MAC address table entries that have a specific protocol type (in this case, assigned):

```
Switch# show mac-address-table protocol assigned
vlan   mac address     type    protocol  qos             ports
-----+--------------+-------+--------+---+-------------------------------
 200  0050.3e8d.6400  static   assigned  --  Switch
 100  0050.3e8d.6400  static   assigned  --  Switch
   5  0050.3e8d.6400  static   assigned  --  Switch
4092  0000.0000.0000  dynamic  assigned  --  Switch
   1  0050.3e8d.6400  static   assigned  --  Switch
   4  0050.3e8d.6400  static   assigned  --  Switch
4092  0050.f0ac.3058  static   assigned  --  Switch
4092  0050.f0ac.3059  dynamic  assigned  --  Switch
   1  0010.7b3b.0978  dynamic  assigned  --  Fa5/9
Switch#
```

This example shows the other output for the previous example:

```
Switch# show mac-address-table protocol other
Unicast Entries
 vlan   mac address     type       protocols            port
-------+--------------+-------+--------------------+--------------------
    1   0000.0000.0201  dynamic other                FastEthernet6/15
    1   0000.0000.0202  dynamic other                FastEthernet6/15
    1   0000.0000.0203  dynamic other                FastEthernet6/15
    1   0000.0000.0204  dynamic other                FastEthernet6/15
    1   0030.94fc.0dff   static ip,ipx,assigned,other  Switch

Related Commands

Command	Description
show mac-address-table address	Displays the information about the MAC-address table.
show mac-address-table aging-time	Displays MAC address table aging information.
show mac-address-table count	Displays the number of entries currently in the MAC address table.
show mac-address-table dynamic	Displays the dynamic MAC address table entries only.
show mac-address-table interface	Displays the MAC address table information for a specific interface.
show mac-address-table multicast	Displays information about the multicast MAC address table.
show mac-address-table static	Displays the static MAC address table entries only.
show mac-address-table vlan	Displays information about the MAC address table for a specific VLAN.

show mac-address-table static

To display the static MAC address table entries only, use the **show mac-address-table static** command.

show mac-address-table static [**address** *mac_addr* | **interface** *type number* | **protocol** *protocol* | **vlan** *vlan_id*]

Syntax Description		
address *mac_addr*	(Optional) Specifies a 48-bit MAC address to match; the valid format is H.H.H.
interface *type number*	(Optional) Specifies an interface to match; valid values for *type* are **fastethernet**, **gigabitethernet**, and **tengigabitethernet**.
protocol *protocol*	(Optional) Specifies a protocol. See the "Usage Guidelines" section for more information.
vlan *vlan_id*	(Optional) Displays the entries for a specific VLAN; valid values are from 1 to 4094.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(12c)EW	Added support for extended VLAN addresses.
12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.

Usage Guidelines   For the MAC address table entries that are used by the routed ports, the routed port name is displayed in the "vlan" column not the internal VLAN number.

The keyword definitions for the *protocol* argument are as follows:

- **assigned** specifies the assigned protocol entries.
- **ip** specifies the IP protocol.
- **ipx** specifies the IPX protocols.
- **other** specifies the other protocol entries.

Examples   This example shows how to display all the static MAC address entries:

```
Switch# show mac-address-table static
Unicast Entries
 vlan   mac address     type        protocols           port
-------+---------------+--------+--------------------+--------------------
   1    0030.94fc.0dff    static ip,ipx,assigned,other  Switch
Fa6/1  0030.94fc.0dff    static ip,ipx,assigned,other  Switch
Fa6/2  0030.94fc.0dff    static ip,ipx,assigned,other  Switch

Multicast Entries
 vlan   mac address     type    ports
-------+---------------+-------+-----------------------------------------
   1    ffff.ffff.ffff   system Switch,Fa6/15
   2    ffff.ffff.ffff   system Fa6/16
1002    ffff.ffff.ffff   system
1003    ffff.ffff.ffff   system
1004    ffff.ffff.ffff   system
1005    ffff.ffff.ffff   system
Fa6/1  ffff.ffff.ffff   system Switch,Fa6/1
Fa6/2  ffff.ffff.ffff   system Switch,Fa6/2
.
.
.
Switch#
```

This example shows how to display the static MAC address entries with a specific protocol type (in this case, assigned):

```
Switch# show mac-address-table static protocol assigned
Unicast Entries
 vlan   mac address     type        protocols           port
-------+---------------+--------+--------------------+--------------------
   1    0030.94fc.0dff    static ip,ipx,assigned,other  Switch
Fa6/1  0030.94fc.0dff    static ip,ipx,assigned,other  Switch
Fa6/2  0030.94fc.0dff    static ip,ipx,assigned,other  Switch

Multicast Entries
 vlan   mac address     type    ports
-------+---------------+-------+-----------------------------------------
   1    ffff.ffff.ffff   system Switch,Fa6/15
   2    ffff.ffff.ffff   system Fa6/16

show mac-address-table dynamic	Displays the dynamic MAC address table entries only.
show mac-address-table interface	Displays the MAC address table information for a specific interface.

Command	Description
show mac-address-table multicast	Displays information about the multicast MAC address table.
show mac-address-table protocol	Displays the MAC address table information that is based on the protocol.
show mac-address-table vlan	Displays information about the MAC address table for a specific VLAN.

show mac-address-table vlan

To display information about the MAC address table for a specific VLAN, use the **show mac-address-table vlan** command.

show mac-address-table [**vlan** *vlan_id*] [**protocol** *protocol*]

Syntax Description

vlan *vlan_id*	(Optional) Displays the entries for a specific VLAN; valid values are from 1 to 4094.
protocol *protocol*	(Optional) Specifies a protocol. See the "Usage Guidelines" section for more information.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(12c)EW	Support for extended addressing was added.

Usage Guidelines

For the MAC address table entries used by the routed ports, the routed port name is displayed in the "vlan" column not the the internal VLAN number.

The keyword definitions for the *protocol* variable are as follows:

- **assigned** specifies the assigned protocol entries.
- **ip** specifies the IP protocol.
- **ipx** specifies the IPX protocols.
- **other** specifies the other protocol entries.

Examples

This example shows how to display information about the MAC address table for a specific VLAN:

```
Switch# show mac-address-table vlan 1
Unicast Entries
 vlan   mac address     type        protocols           port
-------+--------------+--------+-------------------+-------------------
    1   0000.0000.0201  dynamic ip                    FastEthernet6/15
    1   0000.0000.0202  dynamic ip                    FastEthernet6/15
    1   0000.0000.0203  dynamic other                 FastEthernet6/15
    1   0000.0000.0204  dynamic other                 FastEthernet6/15
    1   0030.94fc.0dff   static ip,ipx,assigned,other Switch

Multicast Entries
 vlan    mac address    type    ports
-------+--------------+-------+-------------------------------------------
    1   ffff.ffff.ffff  system Switch,Fa6/15
Switch#
```

This example shows how to display MAC address table information for a specific protocol type:

```
Switch# show mac-address-table vlan 100 protocol other
Unicast Entries
 vlan   mac address     type        protocols           port
-------+--------------+--------+-------------------+-------------------
    1   0000.0000.0203  dynamic other                 FastEthernet6/15
    1   0000.0000.0204  dynamic other                 FastEthernet6/15
    1   0030.94fc.0dff   static ip,ipx,assigned,other Switch

Multicast Entries
 vlan    mac address    type    ports
-------+--------------+-------+-------------------------------------------
    1   ffff.ffff.ffff  system Switch,Fa6/15
Switch#
```

Related Commands

Command	Description
show mac-address-table address	Displays the information about the MAC-address table.
show mac-address-table aging-time	Displays MAC address table aging information.
show mac-address-table count	Displays the number of entries currently in the MAC address table.
show mac-address-table dynamic	Displays the dynamic MAC address table entries only.
show mac-address-table interface	Displays the MAC address table information for a specific interface.
show mac-address-table multicast	Displays information about the multicast MAC address table.
show mac-address-table protocol	Displays the MAC address table information that is based on the protocol.
show mac-address-table static	Displays the static MAC address table entries only.

show macro auto mac-address-group

Use the **show macro auto mac-address-group** command to display the configuration of MAC address group.

show macro auto mac-address-group

Syntax Description	No keywords

Command History

Release	Modification
12.2(54)SG	This command was introduced on the Catalyst 4500 series switch.

Examples

This example shows how to displaythe configuration of the MAC address group:

```
Switch# show macro auto address-group
MAC Address Group Configuration:

Group Name                       OUI         MAC ADDRESS
----------------------------------------------------------
testGroup                                    2222.2222.2222
                                             1111.1111.1111
```

show macro auto device

Use the **show macro auto device** global configuration command to display the default information for a device, including builtin function name and the parameters that can be provided for the commands when executing the builtin function.

show macro auto device *device_id*

Syntax Description

device_id	Specifies the device ID.

Defaults   None

Command Modes   Global configuration

Command History

Release	Modification
12.2(54)SG	This command was introduced on the Catalyst 4500 series switch.

Usage Guidelines   This command displays the default values as well as the currently used values if configured.

Examples   This example shows how to display the default information for the device access-point:

```
Switch# show macro auto device access-point
Device:access-point
Default Macro:CISCO_AP_AUTO_SMARTPORT
Current Macro:CISCO_AP_AUTO_SMARTPORT
Configurable Parameters:NATIVE_VLAN
Defaults Parameters:NATIVE_VLAN=1
Current Parameters:NATIVE_VLAN=1
```

Related Commands

Command	Description
show macro auto event manager	Refer to the Command Reference in the IOS library
show macro auto interface	Display Auto SmartPorts status and the functions applied on an interface.

show macro auto interface

Use the **show macro auto interface** command to display Auto SmartPorts status and the functions applied on an interface.

> **show macro auto interface** *interface_id*

Syntax Description

interface_id	Specifies an interface ID.

Defaults

None

Command Modes

Global configuration

Command History

Release	Modification
12.2(54)SG	This command was introduced on the Catalyst 4500 series switch.

Examples

This example shows how to display Auto SmartPorts status and the applied macros:

```
Switch# show macro auto int gi3/8
 Global Auto Smart Port Status
 Auto Smart Ports Enabled
 Fallback : CDP  Disabled, LLDP Disabled
Interface    Auto Smart Port   Fallback    Macro Description(s)
-------------------------------------------------------------
Gi3/8        TRUE              None        CISCO_PHONE_EVENT
```

Related Commands

Command	Description
show macro auto device	Displays the default information for a device, including builtin function name and the parameters that can be provided for the commands when executing the builtin function.

show macro auto monitor clients

To display the clients using the device classifier facility on the switch, use the **show macro auto monitor clients** user EXEC command.

>   **show macro auto monitor clients**

Syntax Description   This command has no arguments or keywords.

Command Default   User EXEC
Privileged EXEC

Command History

Release	Modification
Release IOS XE 3.3.0 SG (15.1(1)SG)	This command was introduced on the Catalyst 4500 series switch.

Usage Guidelines   Device classifier (DC) is enabled by default when you enable a client application (for example, Auto Smartports) that uses its functionality. Use the **show macro auto monitor clients** command to display the clients that are using the DC feature on the switch.

As long as any clients are using the DC, you cannot disable it by using the **no macro auto monitor** command. If you attempt to disable the DC while a client is using it, an error message appears.

Examples   This example shows how to use the **show macro auto monitor clients** privileged EXEC command to view the clients using the DC on the switch:

```
Switch# show macro auto monitor clients
Client Name
===================
Auto Smart Ports
```

This example shows the error message that appears when you attempt to disable DC while a client is using it:

```
Switch(config)# no macro auto monitor
These subsystems should be disabled before disabling Device classifier
Auto Smart Ports

% Error - device classifier is not disabled
```

Related Commands

Command	Description
macro auto device	Configures macro default parameter values.
macro auto execute (built-in function)	Configures mapping from an event trigger to a built-in macro.
macro auto global processing	Enables Auto Smartports on a switch.

Command	Description
macro auto mac-address-group	Configures MAC address groups.
macro auto sticky	Configures macro persistence.
shell trigger	Creates event triggers.
show macro auto monitor type	Displays all the device types recognized by the device classifier.
show shell triggers	Displays information about event triggers and macros.

show macro auto monitor device

To display the devices connected to a switch and their associated properties, use the **show macro auto monitor device** user EXEC command.

> **show macro auto monitor device** [**detail** | **filter** *string* | **interface** *interface_id* | **mac-address** *mac_address*]

Syntax Description

detail	Displays detailed device classifier information.
filter *string*	Displays information for devices that match the filter.
interface *interface_id*	Displays information about devices attached to the specified interface.
mac *mac_address*	Displays device information for the specified endpoint.

Command Modes

User EXEC
Privileged EXEC

Command History

Release	Modification
Release IOS XE 3.3.0 SG (15.1(1)SG)	This command was introduced on the Catalyst 4500 series switch.

Usage Guidelines

Use this command to display the devices connected to a switch. Use the **show macro auto device** privileged EXEC command to display the configurable parameters for a device.

Examples

This example shows how to use the **show macro auto monitor device** privileged EXEC command with no optional keywords to view the devices connected to the switch:

```
Switch# show macro auto monitor device
MAC_Address          Port_Id          Profile Name
=============      =======      ===========================
000a.b8c6.1e07    Gi1/0/2    Cisco-Device
001f.9e90.1250    Gi1/0/4    Cisco-AP-Aironet-1130
=======================================================
```

This example shows how to use the **show macro auto monitor device** privileged EXEC command with the optional **mac-address** keyword to view summary information about the connected device with the specified MAC address:

```
Switch# show macro auto monitor device mac-address 001f.9e90.1250
MAC_Address        Port_Id     Profile Name
=============      =======      ===========================
001f.9e90.1250    Gi1/0/4    Cisco-AP-Aironet-1130
=======================================================
```

This example shows how to use the **show macro auto monitor device** privileged EXEC command with the optional **mac-address** and **detail** keywords to view detailed information about the connected device with the specified MAC address:

```
Switch# show macro auto monitor device mac-address 001f.9e90.1250 detail
MAC_Address      Port_Id    Certainty Parent    ProfileType  Profile Name
Device_Name
==============   =======    ======== ======    ===========
==========================   ===========
001f.9e90.1250   Gi1/0/4    40       2         Built-in     Cisco-AP-Aironet-1130
cisco AIR-LAP1131AG-E-K9
=======================================================================================
=======
```

This example shows how to use the **show macro auto monitor device** privileged EXEC command with the optional **interface** keyword to view summary information about the device connected to the specified interface:

```
Switch# show macro auto monitor device interface gi 1/0/2
MAC_Address           Port_Id          Profile Name
==============   =======    =============================
000a.b8c6.1e07   Gi1/0/2    Cisco-Device
====================================================
```

This example shows how to use the **show macro auto monitor device** privileged EXEC command with the optional **interface** and **detail** keywords to view detailed information about the device connected to the specified interface:

```
Switch# show macro auto monitor device interface gi 1/0/2 detail
MAC_Address      Port_Id    Certainty Parent    ProfileType  Profile Name
Device_Name
==============   =======    ======== ======    ===========

	shell trigger	Creates event triggers.
	show macro auto monitor clients	Displays all the device types recognized by the device classifier.
	show macro auto monitor type	Displays all the device types recognized by the device classifier.
	show shell triggers	Displays information about event triggers and macros.

show macro auto monitor type

To display all the device types recognized by the device classifier, use the **show macro auto monitor type** user EXEC command.

show macro auto monitor type [**table** [*built-in* | *default*] | **string** *filter_string*]

Syntax Description		
	table	Displays device classification in a table.
	built-in	Displays device classification information from the built-in device table.
	default	Displays device classification information from the default device table.
	filter *string*	Displays information for devices that match the filter.

Command Modes	
	User EXEC
	Privileged EXEC

Command History	Release	Modification
	Release IOS XE 3.3.0 SG (15.1(1)SG)	This command was introduced on the Catalyst 4500 series switch.

Usage Guidelines

This command displays all the device types recognized by the device classification engine. The number of available device types is the number of profiles stored on the switch. Because the number of profiles can be very large, you can use the **filter** keyword to limit the command output.

Examples

This example shows how to use the **show macro auto monitor type** privileged EXEC command with no optional keywords to view the devices recognized by the device classifier:

```
Switch# show macro auto monitor type table
  Valid        Type       Profile Name                      min Conf   ID
===========  =========  ===================               ========  ====
  Valid       Default    Apple-Device                           10        0
  Valid       Default    Aruba-Device                           10        1
  Valid       Default    Avaya-Device                           10        2

Related Commands	Command	Description
	macro auto device	Configures macro default parameter values.
	macro auto execute (built-in function)	Configures mapping from an event trigger to a built-in macro.
	macro auto global processing	Enables Auto Smartports on a switch.
	macro auto mac-address-group	Configures MAC address groups.
	macro auto sticky	Configures macro persistence.
	shell trigger	Creates event triggers.
	show macro auto monitor clients	Displays all the device types recognized by the device classifier.
	show macro auto monitor device	Displays all the device types recognized by the device classifier.

show module

To display information about the module, use the **show module** command.

> **show module** [*mod* | **all**]

Syntax Description

mod	(Optional) Number of the module; valid values vary from chassis to chassis.
all	(Optional) Displays information for all modules.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.2(25)EW	Enhanced the output of the **show idprom interface command** to include the 10-Gigabit Ethernet interface.

Usage Guidelines

In the Mod Sub-Module fields in the command output, the **show module** command displays the supervisor engine number but appends the uplink daughter card's module type and information.

If the PoE consumed by the module is more than 50 W above the administratively allocated PoE, the "Status" displays as "PwrOver." If the PoE consumed by the module is more than 50 W above the PoE module limit, the "Status" displays as "PwrFault."

Examples

This example shows how to display information for all the modules.

This example shows the **show module** command output for a system with inadequate power for all installed modules. The system does not have enough power for Module 5; the "Status" displays it as "PwrDeny."

```
Switch# show module all
Mod  Ports Card Type                              Model            Serial No.

show monitor

To display information about the SPAN session, use the **show monitor** command.

show monitor [**session**] [**range** *session-range* | **local** | **remote** | **all** | *session-number*] [**detail**]

Syntax Description

session	(Optional) Displays the SPAN information for a session.
range	(Optional) Displays information for a range of sessions.
session-range	(Optional) Specifies a range of sessions.
local	(Optional) Displays all local SPAN sessions.
remote	(Optional) Displays the RSPAN source and destination sessions.
all	(Optional) Displays the SPAN and RSPAN sessions.
session-number	(Optional) Session number; valid values are from1 to 6.
detail	(Optional) Displays the detailed SPAN information for a session.

Defaults

The **detail** keyword only displays lines with a nondefault configuration.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(13)EW	Added support for differing directions within a single user session.
12.1(19)EW	Output enhanced to display configuration status of SPAN enhancements.
12.1(20)EW	Added support to display configuration state for remote SPAN and learning.
12.2(20)EW	Added support to display ACLs that are applied to SPAN sessions.

Examples

This example shows how to display whether ACLs are applied to a given SPAN session on a Catalyst 4500 series switch:

```
Switch# show monitor

Session 1
---------
Type            : Local Session
Source Ports    :
    Both        : Fa6/1
Destination Ports : Fa6/2
    Encapsulation : Native
          Ingress : Disabled
         Learning : Disabled
Filter VLANs    : 1
IP Access-group : 10
```

This example shows how to display SPAN information for session 2:

```
Switch# show monitor session 2
Session 2
------------
Type : Remote Source Session
Source Ports:
    RX Only:       Fa1/1-3
Dest RSPAN VLAN:  901
Ingress : Enabled, default VLAN=2
Learning : Disabled
Switch#
```

This example shows how to display the detailed SPAN information for session 1:

```
Switch# show monitor session 1 detail
Session 1
---------
Type             : Local Session
Source Ports     :
    RX Only      : None
    TX Only      : None
    Both         : Gi1/1, CPU
Source VLANs     :
    RX Only      : None
    TX Only      : None
    Both         : None
Source RSPAN VLAN : Fa6/1
Destination Ports : Fa6/1
    Encapsulation : DOT1Q
          Ingress : Enabled, default VLAN = 2
Filter VLANs     : None
  Filter Types RX : Good
  Filter Types TX : None
Dest Rspan Vlan : 901
Ingress : Enabled, default VLAN=2
Learning : Disabled
IP Access-group : None
Switch#
```

This example shows how to display SPAN information for session 1 beginning with the line that starts with Destination:

```
Switch# show monitor session 1 | begin Destination
Destination Ports: None
Filter VLANs:      None
Switch#
Switch#
```

Related Commands	Command	Description
	monitor session	Enables the SPAN sessions on interfaces or VLANs.

show monitor capture

To display the capture point details, so that you can see what capture points are defined, what their attributes are, and whether they are active, use the **show monitor capture** command.

show monitor capture [*name* **[parameter]** | **buffer [brief | detailed | dump]]**

Syntax Description

name	Specifies the capture point name.
parameter	Reconstructs and displays the exec commands for specifying the capture point.
buffer [brief | detailed | dump]	Source the packets from the capture buffer, decode and display them in brief, detailed or dump mode.

Defaults

If the capture point name is not provided, the command displays all the capture point details.

If the display mode is not specified, the command defaults to brief mode.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
IOS XE 3.3.0SG/ 15.1(1)SG	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines

When the command is issued with no parameters, it displays the details of all the capture points. When specified with a capture point name and no other parameters, it displays the details of the specific capture point name. With the **parameter** keyword, the command reconstructs the commands that describe the capture point and displays them.

The **buffer** option displays the packets from the capture buffer. This option is applicable only if the capture point directs the captured packets to the buffer. The packets can be decoded and displayed in either the brief, detailed, or dump mode. The default mode is **brief**.

Examples

Following are example of how to use the **show monitor capture** command:

```
Switch# show monitor capture mycap buffer brief
    0.000000    10.1.1.215 -> 20.1.1.2      UDP Source port: 20001   Destination port: 20002
    1.000000    10.1.1.216 -> 20.1.1.2      UDP Source port: 20001   Destination port: 20002
    2.000000    10.1.1.217 -> 20.1.1.2      UDP Source port: 20001   Destination port: 20002
    3.000000    10.1.1.218 -> 20.1.1.2      UDP Source port: 20001   Destination port: 20002
    4.000000    10.1.1.219 -> 20.1.1.2      UDP Source port: 20001   Destination port: 20002
    5.000000    10.1.1.220 -> 20.1.1.2      UDP Source port: 20001   Destination port: 20002
    6.000000    10.1.1.221 -> 20.1.1.2      UDP Source port: 20001   Destination port: 20002
    7.000000    10.1.1.222 -> 20.1.1.2      UDP Source port: 20001   Destination port: 20002
    8.000000    10.1.1.223 -> 20.1.1.2      UDP Source port: 20001   Destination port: 20002
    9.000000    10.1.1.224 -> 20.1.1.2      UDP Source port: 20001   Destination port: 20002
   10.000000    10.1.1.225 -> 20.1.1.2      UDP Source port: 20001   Destination port: 20002
   11.000000    10.1.1.226 -> 20.1.1.2      UDP Source port: 20001   Destination port: 20002
```

```

show monitor capture file

To decode and display packets from a previously captured .pcap file, use the **show monitor capture file** command.

show monitor capture file *name* [**display-filter** *filter-string*] [**brief** | **detailed** | **dump**]

Syntax Description

name	Specfies the filename.
display-filter *filter-string*	Specifies the display filter string according to Wireshark's display-filter syntax.
brief	**detailed**	**dump**	Determines the display mode.
	brief—Displays a one line summary of the packet with key fields
	detailed—Displays all the fields in the packet for the protocols supported and displays the payload in hexadecimal form.
	dump—Displays a one line summary of the packet with key fields and also displays the packet in hexadecimal form.

Defaults   **brief**

Command Modes   Privileged EXEC mode

Command History

Release	Modification
IOS XE 3.3.0SG/ 15.1(1)SG	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines   If no display filter is specified, then all the packets in the file are displayed. Because the display filter must observe the Wireshark display filter syntax, ensure that the display filter is accurate. Also, use a double quotes when specifying the filter.

Examples   This example shows how to display packets from a .pcap file with a display filter:

```
Switch# show monitor capture file bootflash:test.pcap display-filter
```

This example displays a brief output from a .pcap file:

```
Switch# show monitor capture file bootflash:mycap.pcap
  1   0.000000   10.1.1.140 -> 20.1.1.2     UDP Source port: 20001  Destination port:

show netflow-lite exporter

> **Note** NetFlow-lite is only supported on the Catalyst 4948E and Catalyst 4948E-F Ethernet switches.

To displays information about the collector and global stats, use the **show netflow-lite exporter** command.

> **show netflow-lite exporter** *exporter-name*

Syntax Description

exporter-name	Specifies an exporter name.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
15.0(2)SG	Command introduced on the Catalyst 4500 series switch.

Usage Guidelines   This command displays the total number of export packets sent.

Examples   This example shows how to display information about the collector and global stats:

```
Switch# show netflow-lite  exporter e1
Netflow-lite  Exporter e1:
  Description:            Exporter
  Network Protocol Configuration:
    Destination IP address:  192.168.1.1
    VRF label:             cisc
    Source IP Address:     10.1.1.5
    DSCP:                  0x1
    TTL:                   30
    COS:                   1
  Transport Protocol Configuration:
    Transport Protocol:    UDP
    Destination Port:      1234
    Source Port:           65535
  Export Protocol Configuration:
    Export Protocol:       netflow-v9
  Exporter Statistics:
    Export packets sent:   36
```

Related Commands	Command	Description
	cos (netflow-lite exporter submode)	Specifies a cos value for the NetFlow-lite collector.
	source (netflow-lite exporter submode)	Specifies a source Layer 3 interface of the NetFlow-lite collector.
	transport udp (netflow-lite exporter submode)	Specifies a UDP transport destination port for a NetFlow-lite collector.
	ttl (netflow-lite exporter submode)	Specifies a ttl value for the NetFlow-lite collector.
	dscp (netflow-lite exporter submode)	Specifies a cos value for the NetFlow-lite collector.
	template data timeout (netflow-lite exporter submode)	Specifies a template data timeout for the NetFlow-lite collector.
	options timeout (netflow-lite exporter submode)	Specifies an options timeout for the NetFlow-lite collector.
	export-protocol (netflow-lite exporter submode)	Specifies the export protocol for the NetFlow-lite collector.

show netflow-lite monitor

Note   NetFlow-lite is only supported on the Catalyst 4948E and Catalyst 4948E-F Ethernet switches.

To display information about a particular packet or per data source stats, use the **show netflow-lite monitor** command.

show netflow-lite monitor *monitor-number* **interface** *interface-name*

show netflow-lite monitor *monitor-number* **vlan** *vlan-id*

Syntax Description		
	monitor-number	Specifies a monitor name.
	interface-name	Specifies an interface.
	vlan-id	Specifies a VLAN.

Defaults   None

Command Modes   Privileged EXEC mode

Command History	Release	Modification
	15.0(2)SG	Command introduced on the Catalyst 4500 series switch.

Usage Guidelines   This command displays information about a particular packet or per data source stats. The interface can be either a physical port or a VLAN.

This command displays the following packet sampling statistics:

- Total # of packet (samples) exported
- Total # of packet (samples) dropped due to lack of local resources
- Total# of packets seen at the data source

The *packetsObserved* statistic accounts for packets that are dropped by input ACL or QoS policer.

The exported packets only represent samples from the non-dropped packet population.

Examples   These examples show how to display information about a particular packet or per data source stats:

```
Switch# show netflow-lite monitor 1 interface gi1/3
Interface GigabitEthernet1/3:
  Netflow-lite  Monitor-1:
    Active:             TRUE
    Sampler:            sampler1
    Exporter:           exporter1
    Average Packet Size: 0
```

```
    Statistics:
      Packets exported:     0
      Packets observed:     0
      Packets dropped:      0
      Average Packet Size observed: 64
      Average Packet Size used: 64

Switch# show netflow-lite monitor 1 vlan 2
VlanID-2:
  Netflow-lite  Monitor-1:
    Active:               TRUE
    Sampler:              sampler1
    Exporter:             exporter1
    Average Packet Size:  0
  Statistics:
    Packets exported:     0
    Packets observed:     0
    Packets dropped:      0
    Average Packet Size observed: 64
    Average Packet Size used: 64
```

Related Commands	Command	Description
	sampler (netflow-lite monitor submode)	Activates sampling on an interface in netflow-lite monitor submode.
	exporter (netflow-lite monitor submode)	Assigns an exporter in netflow-lite monitor submode.
	average-packet-size (netflow-lite monitor submode)	Specifies the average packet size at the observation point.

show netflow-lite sampler

> **Note** NetFlow-lite is only supported on the Catalyst 4948E and Catalyst 4948E-F Ethernet switches.

To display information about a sampler, use the **show netflow-lite sampler** command.

show netflow-lite sampler *sampler-name*

Syntax Description

sampler-name	Specifies a sampler name.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
15.0(2)SG	Command introduced on the Catalyst 4500 series switch.

Examples   This example shows how to display information about a sampler,:

```
Switch# show netflow-lite sampler low-rate
Netflow-lite Sampler low-rate:
  Description:         Sampler
  Sampling rate:       1 out of 256
  Packet Section Size: 64 bytes
  Packet offset:       0 bytes
```

Related Commands

Command	Description
packet-section size (netflow-lite sampler submode)	Specifies a sampled header size in netflow-lite submode.
packet-rate (netflow-lite sampler submode)	Specifies a packet sampling rate in netflow-lite sampler submode.
packet-offset (netflow-lite sampler submode)	Specifies a starting packet offset in netflow-lite submode.

show nmsp

To display the Network Mobility Services Protocol (NMSP) information for the switch, use the **show nmsp** command. This command is available only when your switch is running the cryptographic (encrypted) software image.

> **show nmsp** {**attachment suppress interface** | **capability** | **notification interval** | **statistics** {**connection** | **summary**} | **status** | **subscription** {**detail** | **summary**}}

Syntax Description

attachment suppress interface	Displays attachment suppress interfaces.
capability	Displays switch capabilities including the supported services and subservices.
notification interval	Displays the notification intervals of the supported services.
statistics connection | **summary**	Displays the NMSP statistics information. • **connection**—Displays the message counters on each connection. • **summary**—Displays the global counters.
status	Displays information about the NMSP connections.
subscription detail | **summary**	Displays the subscription information on each NMSP connection. • **detail**—Displays all services and subservices subscribed on each connection. • **summary**—Displays all services subscribed on each connection.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.2(52)SG	Support for this command was introduced on the Catalyst 4500 series switch.

Examples   This is an example of output from the **show nmsp attachment suppress interface** command:

```
Switch# show nmsp attachment suppress interface
NMSP Attachment Suppression Interfaces
--------------------------------------
GigabitEthernet1/1
GigabitEthernet1/2
Switch#
```

This is an example of output from the **show nmsp capability** command:

```
Switch# show nmsp capability
NMSP Switch Capability
-----------------------
Service          Subservice
-----------      --------------
Attachment       Wired Station
Location         Subscription
Switch#
```

This is an example of output from the **show nmsp notification interval** command:

```
Switch# show nmsp notification interval
NMSP Notification Intervals
---------------------------------
Attachment notify interval: 30 sec (default)
Location notify interval: 30 sec (default)
Switch#
```

This is an example of output from the **show nmsp statistics connection** and **show nmsp statistics summary** commands:

```
Switch# show nmsp statistics connection
NMSP Connection Counters
-----------------------------------
Connection 1:
  Connection status: UP
  Freed connection: 0

  Tx message count          Rx message count
  ----------------------    -----------------------
  Subscr Resp: 1            Subscr Req: 1
  Capa Notif: 1             Capa Notif: 1
  Atta Resp: 1              Atta Req: 1
  Atta Notif: 0
  Loc Resp: 1               Loc Req: 1
  Loc Notif: 0

                            Unsupported msg: 0
Switch#

Switch# show nmsp statistics summary
NMSP Global Counters
----------------------
  Send too big msg: 0
  Failed socket write: 0
  Partial socket write: 0
  Socket write would block: 0
  Partial socket write: 0
  Failed socket read: 0
  Socket read would block: 0
  Transmit Q full: 0
  Max Location Nofity Msg: 0
  Max Attachement Notify Msg: 0
  Max TX Q Size: 0
Switch#
```

This is an example of output from the **show nmsp status** command:

```
Switch# show nmsp status
NMSP Status
--------------
NMSP: enabled

MSE IP Address     TxEchoResp RxEchoReq TxData RxData
--------------     ---------- --------- ------ ------
172.19.35.109       5          5         4      4
Switch#
```

This is an example of output from the **show nmsp show subscription detail** and **show nmsp show subscription summary** commands:

```
Switch# show nmsp subscription detail
Mobility Services Subscribed by 172.19.35.109:
Services        Subservices
------------    -------------------
Attachment:     Wired Station
Location:       Subscription

Switch# show nmsp subscription summary
Mobility Services Subscribed:
MSE IP Address      Services
--------------      --------
172.19.35.109       Attachment, Location
Switch#
```

Related Commands	Command	Description
	clear nmsp statistics	Clears the NMSP statistic counters.
	nmsp	Configures Network Mobility Services Protocol (NMSP) on the switch.

show pagp

To display information about the port channel, use the **show pagp** command.

show pagp [*group-number*] {**counters** | **dual-active** | **internal** | **neighbor**}

Syntax Description

group-number	(Optional) Channel-group number; valid values are from 1 to 64.
counters	Specifies the traffic counter information.
dual-active	Specifies the dual-active information.
internal	Specifies the PAgP internal information.
neighbor	Specifies the PAgP neighbor information.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines

You can enter any **show pagp** command to display the active PAgP port-channel information. To display the nonactive information, enter the **show pagp** command with a group.

Examples

This example shows how to display information about the PAgP counter:

```
Switch# show pagp counters
          Information      Flush
Port      Sent   Recv    Sent  Recv
---------------------------------
Channel group: 1
  Fa5/4   2660   2452    0     0
  Fa5/5   2676   2453    0     0
Channel group: 2
  Fa5/6   289    261     0     0
  Fa5/7   290    261     0     0
Switch#
```

This example shows how to display PAgP dual-active information:

```
Switch# show pagp dual-active
PAgP dual-active detection enabled: Yes
PAgP dual-active version: 1.1
```

```
Channel group 30

Gi2/1/15  Yes              mr-rogers-nbr        Fa1/2/15  1.1
Gi2/1/16  Yes              mr-rogers-nbr        Fa1/2/16  1.1
Router#
```

The following example shows how to display dual-active detection information for a specific port channel:

```
Router# show pagp dual-active
PAgP dual-active detection enabled: Yes
PAgP dual-active version: 1.1
Channel group 3 dual-active detect capability w/nbrs
Dual-Active trusted group: No
          Dual-Active    Partner               Partner   Partner
Port      Detect Capable Name                  Port      Version
Fa1/2/33  No               None                 None      N/A
Router#
```

Related Commands

Command	Description
dual-active detection (virtual switch)	Enables and configures dual-active detection.

show policy-map

To display information about the policy map, use the **show policy-map** command.

show policy-map [*policy_map_name*]

Syntax Description

policy_map_name	(Optional) Name of the policy map.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Examples

This example shows how to display information for all the policy maps:

```
Switch# show policy-map
Policy Map ipp5-policy
  class  ipp5
   set ip precedence 6
Switch#
```

This example shows how to display information for a specific policy map:

```
Switch# show policy ipp5-policy
Policy Map ipp5-policy
  class  ipp5
   set ip precedence 6
Switch#
```

Related Commands

Command	Description
class-map	Creates a class map to be used for matching packets to the class whose name you specify and to enter class-map configuration mode
policy-map	Creates a policy map that can be attached to multiple ports to specify a service policy and to enter policy-map configuration mode
show class-map	Displays class map information.
show policy-map interface	Displays the statistics and configurations of the input and output policies that are attached to an interface.

show policy-map control-plane

To display the configuration either of a class or of all classes for the policy map of a control plane, use the **show policy-map control-plane** command.

show policy-map control-plane [**input** [**class** *class-name*] | [**class** *class-name*]]

Syntax Description

input	(Optional) Displays statistics for the attached input policy.
class *class-name*	(Optional) Displays the name of the class.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.2(31)SG	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines

This command is not supported on the Supervisor Engine 6-E and Catalyst 4900M chassis.

The **show policy-map control-plane** command displays information for aggregate control-plane services that control the number or rate of packets that are going to the process level.

Examples

This example shows that the policy map TEST is associated with the control plane. This policy map polices traffic that matches the class-map TEST, while allowing all other traffic (that matches the class-map class-default) to go through as is. Table 2-39 describes the fields shown in the display.

```
Switch# show policy-map control-plane

Control Plane

  Service-policy input: system-cpp-policy

    Class-map: system-cpp-eapol (match-all)
      0 packets
      Match: access-group name system-cpp-eapol

    Class-map: system-cpp-bpdu-range (match-all)
      0 packets
      Match: access-group name system-cpp-bpdu-range

    Class-map: system-cpp-cdp (match-all)
      28 packets
      Match: access-group name system-cpp-cdp
      police: Per-interface
        Conform: 530 bytes Exceed: 0 bytes
```

```
            Class-map: system-cpp-garp (match-all)
              0 packets
              Match: access-group name system-cpp-garp

            Class-map: system-cpp-sstp (match-all)
              0 packets
              Match: access-group name system-cpp-sstp

            Class-map: system-cpp-cgmp (match-all)
              0 packets
              Match: access-group name system-cpp-cgmp

            Class-map: system-cpp-ospf (match-all)
              0 packets
              Match: access-group name system-cpp-ospf

            Class-map: system-cpp-igmp (match-all)
              0 packets
              Match: access-group name system-cpp-igmp

            Class-map: system-cpp-pim (match-all)
              0 packets
              Match: access-group name system-cpp-pim

            Class-map: system-cpp-all-systems-on-subnet (match-all)
              0 packets
              Match: access-group name system-cpp-all-systems-on-subnet

            Class-map: system-cpp-all-routers-on-subnet (match-all)
              0 packets
              Match: access-group name system-cpp-all-routers-on-subnet

            Class-map: system-cpp-ripv2 (match-all)
              0 packets
              Match: access-group name system-cpp-ripv2

            Class-map: system-cpp-ip-mcast-linklocal (match-all)
              0 packets
              Match: access-group name system-cpp-ip-mcast-linklocal

            Class-map: system-cpp-dhcp-cs (match-all)
              0 packets
              Match: access-group name system-cpp-dhcp-cs

            Class-map: system-cpp-dhcp-sc (match-all)
              0 packets
              Match: access-group name system-cpp-dhcp-sc

            Class-map: system-cpp-dhcp-ss (match-all)
              0 packets
              Match: access-group name system-cpp-dhcp-ss

            Class-map: class-default (match-any)
              0 packets
              Match: any
                0 packets
        Switch#
```

Table 2-39   show policy-map control-plane Field Descriptions

Field	Description
Fields Associated with Classes or Service Policies	
Service-policy input	Name of the input service policy that is applied to the control plane. (If configured, this field will also show the output service policy.)
Class-map	Class of traffic being displayed. Traffic is displayed for each configured class. The choice for implementing class matches (for example, match-all or match-any) can also appear next to the traffic class.
Match	Match criteria for the specified class of traffic. **Note** For more information about the variety of match criteria options available, refer to the chapter "Configuring the Modular Quality of Service Command-Line Interface" in the *Cisco IOS Quality of Service Solutions Configuration Guide*.
Fields Associated with Traffic Policing	
police	**police** command has been configured to enable traffic policing.
conformed	Action to be taken on packets conforming to a specified rate; displays the number of packets and bytes on which the action was taken.
exceeded	Action to be taken on packets exceeding a specified rate; displays the number of packets and bytes on which the action was taken.

Related Commands	Command	Description
	control-plane	Enters control-plane configuration mode.
	service-policy input (control-plane)	Attaches a policy map to a control plane for aggregate control plane services.

show policy-map interface

To display the statistics and configurations of the input and output policies that are attached to an interface, use the **show policy-map interface** command.

show policy-map interface [{**fastethernet** *interface-number*} | {**gigabitethernet** *interface-number*} | {**port-channel** *number*} | {**vlan** *vlan_id*}] [**input** | **output**]

Syntax Description

fastethernet *interface-number*	(Optional) Specifies the Fast Ethernet 802.3 interface.
gigabitethernet *interface-number*	(Optional) Specifies the Gigabit Ethernet 802.3z interface.
port-channel *number*	(Optional) Specifies the port channel.
vlan *vlan_id*	(Optional) Specifies the VLAN ID; valid values are from 1 to 4094.
input	(Optional) Specifies input policies only.
output	(Optional) Specifies output policies only.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(12c)EW	Added support for extended VLAN addresses.
12.2(25)SG	Displays results for full flow policing.

Examples   This example shows how to display the statistics and configurations of all input and output policies attached to an interface:

```
Switch# show policy-map interface

 FastEthernet6/1

  service-policy input:ipp5-policy

    class-map:ipp5 (match-all)
      0 packets
      match:ip precedence 5
      set:
        ip precedence 6

    class-map:class-default (match-any)
      0 packets
      match:any
        0 packets
```

```
    service-policy output:ipp5-policy

      class-map:ipp5 (match-all)
        0 packets
        match:ip precedence 5
        set:
          ip precedence 6

      class-map:class-default (match-any)
        0 packets
        match:any
          0 packets
Switch#
```

This example shows how to display the input policy statistics and configurations for a specific interface:

```
Switch# show policy-map interface fastethernet 5/36 input
service-policy input:ipp5-policy

      class-map:ipp5 (match-all)
        0 packets
        match:ip precedence 5
        set:
          ip precedence 6

      class-map:class-default (match-any)
        0 packets
        match:any
          0 packets
Switch#
```

With the following configuration, each flow is policed to a 1000000 bps with an allowed 9000-byte burst value.

Note   If you use the **match flow ip source-address|destination-address** command, these two flows are consolidated into one flow and they have the same source and destination address.

```
Switch# config terminal
Enter configuration commands, one per line.  End with CNTL/Z.
Switch(config)# class-map c1
Switch(config-cmap)# match flow ip source-address ip destination-address ip protocol l4
source-port l4 destination-port
Switch(config-cmap)# exit
Switch(config)# policy-map p1
Switch(config-pmap)# class c1
Switch(config-pmap-c)# police 1000000 9000
Switch(config-pmap-c)# exit
Switch(config-pmap)# exit
Switch(config)# interface fastEthernet 6/1
Switch(config-if)# service-policy input p1
Switch(config-if)# end
Switch# write memory
Switch# show policy-map interface
FastEthernet6/1

class-map c1
    match flow  ip source-address ip destination-address ip protocol l4 source-port l4
destination-port
!
 policy-map p1
    class c1
```

```
         police 1000000 bps 9000 byte conform-action transmit exceed-action drop
!
interface FastEthernet 6/1
  service-policy input p1

Switch# show policy-map p1
  Policy Map p1
    Class c1
      police 1000000 bps 9000 byte conform-action transmit exceed-action drop

Switch# show policy-map interface
 FastEthernet6/1

  Service-policy input: p1

    Class-map: c1 (match-all)
      15432182 packets
      Match: flow  ip source-address ip destination-address ip protocol l4 source-port l4
destination-port
      police: Per-interface
        Conform: 64995654 bytes Exceed: 2376965424 bytes

    Class-map: class-default (match-any)
      0 packets
      Match: any
        0 packets
Switch#
```

Related Commands	Command	Description
	class-map	Creates a class map to be used for matching packets to the class whose name you specify and to be used enter class-map configuration mode.
	policy-map	Creates a policy map that can be attached to multiple ports to specify a service policy and to enter policy-map configuration mode.
	show class-map	Displays class map information.
	show qos	Displays QoS information.

show policy-map interface vlan

To show the QoS policy-map information applied to a specific VLAN on an interface, use the **show policy-map interface vlan** command.

show policy-map interface vlan *interface-id* **vlan** *vlan-id*

Syntax Description

interface *interface-id*	(Optional) Displays QoS policy-map information for a specific interface.
vlan *vlan-id*	(Optional) Displays QoS policy-map information for a specific VLAN.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(13)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Examples   The following example show a configuration on a non-Supervisor Engine 6-E:

```
interface GigabitEthernet3/1
 vlan-range 20,400
  service-policy input p1
 vlan-range 300-301
  service-policy output p2
```

This example shows how to display policy-map statistics on VLAN 20 on the Gigabit Ethernet 6/1 interface:

```
Switch# show policy-map interface gigabitEthernet 3/1 vlan 20
 GigabitEthernet3/1 vlan 20

  Service-policy input: p1

    Class-map: class-default (match-any)
      0 packets
      Match: any
        0 packets
      police: Per-interface
        Conform: 0 bytes Exceed: 0 bytes
Switch#
```

The following example shows a configuration on a non-Supervisor Engine 6-E:

```
interface fastethernet6/1
 vlan-range 100
  service-policy in p1
```

This example shows how to display policy-map statistics on VLAN 100 on the FastEthernet interface:

```
Switch# show policy-map interface fastEthernet 6/1 vlan 100

  FastEthernet6/1 vlan 100

   Service-policy input: p1
```

```
        Class-map: c1 (match-all)
          0 packets
          Match: ip dscp af11 (10)
          police: Per-interface
            Conform: 0 bytes Exceed: 0 bytes

        Class-map: class-default (match-any)
          0 packets
          Match: any
            0 packets
Switch#
```

The following example shows a configuration on a Supervisor Engine 6-E:

```
interface gigabitethernet3/1
 vlan-range 100
  service-policy in p1
```

This example shows how to display policy-map statistics on VLAN 100 on the FastEthernet interface:

```
Switch# show policy-map interface gigabitethernet 3/1 vlan 100
GigabitEthernet3/1 vlan 100

  Service-policy input: p1

    Class-map: c1 (match-all)
      0 packets
      Match: ip dscp af11 (10)
      police:
          rate 128000 bps, burst 4000 bytes
           conformed 0 packets, 0 bytes; action:
             transmit
           exceeded 0 packets, 0 bytes; action:
             drop
           conformed 0 bps, exceeded 0 bps

    Class-map: class-default (match-any)
      0 packets
      Match: any
        0 packets
Switch#
```

Related Commands

Command	Description
service-policy (interface configuration)	Attaches a policy map to an interface.
show policy-map interface	Displays the statistics and configurations of the input and output policies that are attached to an interface.

show port-security

To display the port security settings for an interface or for the switch, use the **show port-security** command.

show port-security [**address**] [**interface** *interface-id*]
[**interface** *port-channel port-channel-number*] [**vlan** *vlan-id*]

Syntax Description

address	(Optional) Displays all secure MAC addresses for all ports or for a specific port.
interface *interface-id*	(Optional) Displays port security settings for a specific interface.
interface *port-channel port channel-number*	(Optional) Displays port security for a specific port-channel interface.
vlan *vlan-id*	(Optional) Displays port security settings for a specific VLAN.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(13)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.2(18)EW	Support was enhanced to display sticky MAC addresses.
12.2(25)EWA	Support was enhanced to display settings on a per-VLAN basis.
12.2(31)SGA	Support was enhanced to display settings on EtherChannel interfaces.

Usage Guidelines

If you enter the command without keywords, the output includes the administrative and operational status of all secure ports on the switch.

If you enter the *interface-id* value or *port-channel-interface* value, the **show port-security** command displays port security settings for the interface.

If you enter the **address** keyword, the **show port-security address** command displays the secure MAC addresses for all interfaces and the aging information for each secure address.

If you enter the *interface-id* value and the **address** keyword, the **show port-security address interface** command displays all the MAC addresses for the interface with aging information for each secure address. You can also use this command to display all the MAC addresses for an interface even if you have not enabled port security on it.

Sticky MAC addresses are addresses that persist across switch reboots and link flaps.

Examples   This example shows how to display port security settings for the entire switch:

```
Switch# show port-security
Secure Port  MaxSecureAddr  CurrentAddr  SecurityViolation  Security Action
              (Count)        (Count)        (Count)
---------------------------------------------------------------------------
     Fa3/1          2             2               0            Restrict
     Fa3/2          2             2               0            Restrict
     Fa3/3          2             2               0            Shutdown
     Fa3/4          2             2               0            Shutdown
     Fa3/5          2             2               0            Shutdown
     Fa3/6          2             2               0            Shutdown
     Fa3/7          2             2               0            Shutdown
     Fa3/8          2             2               0            Shutdown
    Fa3/10          1             0               0            Shutdown
    Fa3/11          1             0               0            Shutdown
    Fa3/12          1             0               0            Restrict
    Fa3/13          1             0               0            Shutdown
    Fa3/14          1             0               0            Shutdown
    Fa3/15          1             0               0            Shutdown
    Fa3/16          1             0               0            Shutdown
       Po2          3             1               0            Shutdown

```

This example shows how to display the maximum allowed number of secure MAC addresses and the current number of secure MAC addresses on interface Gigabitethernet1/1:

```
Switch# show port-security interface gigabitethernet1/1 vlan
Default maximum: 22
VLAN  Maximum    Current
  2       22        3
  3       22        3
  4       22        3
  5       22        1
  6       22        2
```

This example shows how to display the port security settings on interface Gigabitethernet1/1 for VLANs 2 and 3:

```
Switch# show port-security interface gigabitethernet1/1 vlan 2-3
Default maximum: 22
VLAN  Maximum    Current
  2       22        3
  3       22        3
```

This example shows how to display all secure MAC addresses configured on interface Gigabitethernet1/1 with aging information for each address.

```
Switch# show port-security interface gigabitethernet1/1 address

Related Commands

Command	Description
switchport port-security	Enables port security on an interface.

show power

To display information about the power status, use the **show power** command.

> **show power** [**available** | **capabilities** | **detail** | **inline** {[*interface*] **detail** | **consumption default** | **module** *mod* **detail**}} | **module** | **status** | **supplies**]

Syntax Description

available	(Optional) Displays the available system power.
capabilities	(Optional) Displays the individual power supply capabilities.
detail	(Optional) Displays detailed information on power resources.
inline	(Optional) Displays the PoE status.
interface **detail**	(Optional) Detailed information on the PoE status for the interface
consumption default	(Optional) Displays the PoE consumption.
module *mod* **default**	(Optional) Displays the PoE consumption for the specified module.
status	(Optional) Displays the power supply status.
supplies	(Optional) Displays the number of power supplies needed by the system.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.2(25)SG	Displays inline power handling for the Supervisor Engine II-Plus-TS.
12.2(52)SG	Support to display detailed PoE consumption information on an interface/module.

Usage Guidelines   If a powered device is connected to an interface with external power, the switch does not recognize the powered device. The Device column in the output of the **show power inline** command displays as unknown.

If your port is not capable of supporting PoE, you will receive this message:

```
Power over Ethernet not supported on interface Admin
```

The **show power inline** *interface* | *module* command displays the amount of power that is used to operate a Cisco IP Phone. To view the amount of power requested, use the **show cdp neighbors** command.

Because FPGAs and other hardware components on the WS-X4548-RJ45V+ and WS-X4648-RJ45V+E modules consume PoE, the operating PoE consumption for an 802.3af-compliant module can be nonzero when there are no powered devices attached to the module. The operating PoE can vary by as much as 20 W because of fluctuations in the PoE that is consumed by the hardware components.

Examples   This example shows how to display information about the general power supply:

```
Switch# show power
Power                                          Fan    Inline
Supply  Model No          Type       Status    Sensor Status
------  ----------------  ---------  ----------- ------ ------
PS1     PWR-C45-2800AC    AC 2800W   good       good   good
PS2     PWR-C45-1000AC    AC 1000W   err-disable good   n.a.

*** Power Supplies of different type have been detected***

Power supplies needed by system    :1
Power supplies currently available :1

Power Summary                   Maximum
 (in Watts)           Used     Available
---------------------  ----    ---------
System Power (12V)     328       1360
Inline Power (-50V)      0       1400
Backplane Power (3.3V)  10         40
---------------------  ----
Total Used             338 (not to exceed Total Maximum Available = 750)
Switch#
```

This example shows how to display the amount of available system power:

```
Switch# show power available
Power Summary
 (in Watts)    Available   Used   Remaining
-------------  ---------  ------  ---------
System Power    1360       280     1080
Inline Power    1400         0     1400
Maximum Power   2800       280     2520
Switch#
```

Note   The "Inline Power Oper" column displays the PoE consumed by the powered devices attached to the module in addition to the PoE consumed by the FPGAs and other hardware components on the module. The "Inline Power Admin" column displays only the PoE allocated by the powered devices attached to the module.

This example shows how to display the power status information:

```
Switch# show power status
Power                                          Fan    Inline
Supply  Model No          Type       Status    Sensor Status
------  ----------------  ---------  ----------- ------ ------
PS1     PWR-C45-2800AC    AC 2800W   good       good   good
PS2     PWR-C45-2800AC    AC 2800W   good       good   good

Power Supply    Max    Min    Max     Min     Absolute
(Nos in Watts)  Inline Inline System  System  Maximum
--------------  ------ ------ ------  ------  --------
PS1             1400   1400   1360    1360    2800
PS2             1400   1400   1360    1360    2800
Switch#
```

This example shows how to verify the PoE consumption for the switch:

```
Switch# show power inline consumption default
Default PD consumption : 5000 mW
Switch#
```

This example shows how to display the status of inline power:

```
Switch# show power inline
Available:677(w)  Used:117(w)  Remaining:560(w)

```

Note When the Supervisor Engine II+TS is used with the 1400 W DC power supply (PWR-C45-1400DC), and only one 12.5 A input of the DC power supply is used, the supervisor engine's power consumption may vary depending on whether there is any linecard inserted at slot 2 and 3, as well as on the type of linecards inserted. This amount varies between 155 W and 330 W. This variability also affects the

maximum amount of available supervisor engine inline power, which can also vary from 0 W to 175 W. Therefore, it is possible for a supervisor engine to deny inline power to some connected inline power devices when one or more linecards are inserted into the chassis.

The output of the commands **show power detail** and **show power module** display the supervisor engine's variable power consumption and its inline power summary:

```
Switch# show power detail
sh power detail

Related Commands	Command	Description
	power dc input	Configures the power DC input parameters on the switch.
	power inline	Sets the inline-power state for the inline-power-capable interfaces.
	power inline consumption	Sets the default power that is allocated to an interface for all the inline-power-capable interfaces on the switch.
	power redundancy-mode	Configures the power settings for the chassis.

show power inline police

To display PoE policing and monitoring status, use the **show power inline police** command.

show power inline police [*interfacename*] [**module** *n*]

Syntax Description

interfacename	(optional) Displays PoE policing and monitoring status for a particular interface.
module *n*	(optional) Display PoE policing and monitoring status for all interfaces on this module.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.2(50)SG	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines

The Oper Power field displays the true power consumption of the connected device.

The **show power inline police** command with no keywords displays PoE policing status for all interfaces in the chassis.

If this command is executed at the global level, the last line of the output under Oper Power field displays the total true inline power consumption of all devices connected to the switch.

Examples

This example shows how to display PoE policing status for a interface GigabitEthernet 2/1:

```
Switch# show power inline police gigabitEthernet 2/1
Available:421(w)  Used:44(w)  Remaining:377(w)

Interface Admin  Oper        Admin       Oper       Cutoff Oper
          State  State       Police      Police     Power  Power
--------- ------ ----------  ----------  ---------- ------ -----
Gi2/1     auto   on          errdisable  ok         22.6   9.6
```

Related Commands

Command	Description
power inline police	Configures PoE policing on a particular interface.

show pppoe intermediate-agent interface

To display PPPoE Intermediate Agent configuration and statistics (packet counters), use the **show pppoe intermediate-agent interface** command.

show ppoe intermediate-agent information interface *interface*

show ppoe intermediate-agent statistics interface *interface*

Syntax Description

interface *interface*	Interface for which information or statistics are displayed.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.2(50)SG	Support for this command was introduced on the Catalyst 4500 series switch.

Examples

This example shows how to display PPPoE Intermediate Agent configuration:

```
Switch# show pppoe intermediate-agent information
Switch PPPoE Intermediate-Agent is enabled
PPPoE Intermediate-Agent trust/rate is configured on the following Interfaces:
Interface              IA       Trusted   Vsa Strip   Rate limit (pps)
---------------------- -------- -------   ---------   ----------------
GigabitEthernet3/4       no        yes       yes         unlimited
PPPoE Intermediate-Agent is configured on following VLANs:
2-3
GigabitEthernet3/7       no        no        no          unlimited
PPPoE Intermediate-Agent is configured on following VLANs:
2-3
```

This example shows how to display PPPoE Intermediate Agent statistics on an interface:

```
Switch# show pppoe intermediate-agent statistics interface g3/7
Interface : GigabitEthernet3/7
 Packets received
  All = 3
  PADI = 0 PADO = 0
  PADR = 0 PADS = 0
  PADT = 3
 Packets dropped:
  Rate-limit exceeded = 0
  Server responses from untrusted ports = 0
  Client requests towards untrusted ports = 0
  Malformed PPPoE Discovery packets = 0
Vlan 2: Packets received PADI = 6 PADO = 0 PADR = 6 PADS = 0 PADT = 6
Vlan 3: Packets received PADI = 4 PADO = 0 PADR = 4 PADS = 0 PADT = 4
```

Related Commands

Command	Description
pppoe intermediate-agent (global)	Enables the PPPoE Intermediate Agent feature on a switch.
pppoe intermediate-agent format-type (global)	Sets the access-node-identifier, generic-error-message, and identifier-string for the switch.
pppoe intermediate-agent (interface)	Enables the PPPoE Intermediate Agent feature on an interface.
pppoe intermediate-agent format-type (interface)	Sets circuit-id or remote-id for an interface.

show qos

To display QoS information, use the **show qos** command.

show qos

Syntax Description   This command has no arguments or keywords.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines   This command is not supported on the Supervisor Engine 6-E and Catalyst 4900M chassis.

Examples   This example shows the output that might be displayed if you do not enter any keywords:

```
Switch# show qos
  QoS is enabled globally
Switch#
```

Related Commands

Command	Description
qos account layer-all encapsulation	Globally enables QoS functionality on the switch.

show qos aggregate policer

To display QoS aggregate policer information, use the **show qos aggregate policer** command.

show qos aggregate policer [*aggregate_name*]

Syntax Description	*aggregate_name*	(Optional) Named aggregate policer.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines   This command is not supported on the Supervisor Engine 6-E and Catalyst 4900M chassis.

The aggregate policer name is case sensitive.

Examples   This example shows the output if you do not enter any keywords:

```
Switch# show qos aggregate policer
Policer aggr-1
Rate(bps):10000000 Normal-Burst(bytes):1000000
conform-action:transmit exceed-action:policed-dscp-transmit
Policymaps using this policer:
    ipp5-policy
Switch#
```

Related Commands

Command	Description
qos trust	Defines a named aggregate policer.

show qos dbl

To display global Dynamic Buffer Limiting (DBL) information, use the **show qos dbl** command.

show qos dbl

Syntax Description   This command has no arguments or keywords.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(13)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines   This command is not supported on the Supervisor Engine 6-E and Catalyst 4900M chassis.

Examples   This example shows how to display global DBL information:

```
Switch# show qos dbl
DBL is enabled globally
DBL flow includes vlan
DBL flow includes l4-ports
DBL does not use ecn to indicate congestion
DBL exceed-action mark probability:15%
DBL max credits:15
DBL aggressive credit limit:10
DBL aggressive buffer limit:2 packets
DBL DSCPs with default drop probability:
    1-10
Switch#
```

Related Commands

Command	Description
qos account layer-all encapsulation	Globally enables QoS functionality on the switch.

show qos interface

To display queueing information, use the **show qos interface** command.

show qos interface {**fastethernet** *interface-number* | **gigabitethernet** *interface-number*} | [**vlan** *vlan_id* | **port-channel** *number*]

Syntax Description

fastethernet *interface-number*	Specifies the Fast Ethernet 802.3 interface.
gigabitethernet *interface-number*	Specifies the Gigabit Ethernet 802.3z interface.
vlan *vlan_id*	(Optional) Specifies the VLAN ID; valid values are from 1 to 4094.
port-channel *number*	(Optional) Specifies the port channel; valid ranges are from 1 to 64.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(13)EW	Added support for extended VLAN addresses.
12.1(19)EW	Display changed to include the Port Trust Device.

Usage Guidelines

This command is not supported on the Supervisor Engine 6-E and Catalyst 4900M chassis.

Examples

This example shows how to display queueing information:

```
Switch# show qos interface fastethernet 6/1
    QoS is enabled globally
    Port QoS is enabled
    Administrative Port Trust State: 'dscp'
    Operational Port Trust State: 'untrusted'
    Port Trust Device:'cisco-phone'
    Default DSCP:0 Default CoS:0

    Tx-Queue    Bandwidth    ShapeRate    Priority    QueueSize
                (bps)        (bps)                    (packets)
       1        31250000     disabled     N/A         240
       2        31250000     disabled     N/A         240
       3        31250000     disabled     normal      240
       4        31250000     disabled     N/A         240
Switch#
```

Related Commands

Command	Description
show qos	Displays QoS information.
tx-queue	Configures the transmit queue parameters for an interface.

show qos maps

To display QoS map information, use the **show qos maps** command.

show qos maps [**cos** | **dscp** [**policed** | **tx-queue**]]

Syntax Description		
cos	(Optional) Displays CoS map information.
dscp	(Optional) Displays DSCP map information.
policed	(Optional) Displays policed map information.
tx-queue	(Optional) Displays tx-queue map information.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines

This command is not supported on the Supervisor Engine 6-E and Catalyst 4900M chassis.

Examples

This example shows how to display QoS map settings:

```
Switch# show qos maps
DSCP-TxQueue Mapping Table (dscp = d1d2)
d1 :d2  0   1   2   3   4   5   6   7   8   9

	qos account layer-all encapsulation	Globally enables QoS functionality on the switch.

show redundancy

To display redundancy facility information, use the **show redundancy** command.

show redundancy {**clients** | **counters** | **history** | **states**}

Syntax Description	**clients**	(Optional) Displays information about the redundancy facility client.
	counters	(Optional) Displays information about the redundancy facility counter.
	history	(Optional) Displays a log of past status and related information for the redundancy facility.
	states	(Optional) Displays information about the redundancy facility state, such as disabled, initialization, standby, active.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History	**Release** — **Modification**
	12.1.(13)EW — Support for this command was introduced on the Catalyst 4500 series switch (Catalyst 4507R only).
	12.2(31)SGA — Support for ISSU was introduced.

Examples   This example shows how to display information about the redundancy facility:

```
Switch# show redundancy
Switch# show redundancy
4507r-demo#show redundancy
Redundant System Information :
------------------------------
       Available system uptime = 2 days, 2 hours, 39 minutes
Switchovers system experienced = 0
             Standby failures = 0
       Last switchover reason = none

               Hardware Mode = Duplex
    Configured Redundancy Mode = Stateful Switchover
     Operating Redundancy Mode = Stateful Switchover
             Maintenance Mode = Disabled
               Communications = Up

Current Processor Information :
------------------------------
             Active Location = slot 1
        Current Software state = ACTIVE
     Uptime in current state = 2 days, 2 hours, 39 minutes
               Image Version = Cisco Internetwork Operating System Software
IOS (tm) Catalyst 4000 L3 Switch Software (cat4000-I5S-M), Version 12.2(20)EWA(3
.92), CISCO INTERNAL USE ONLY ENHANCED PRODUCTION VERSION
```

```

Switch#
```

This example shows how to display redundancy facility client information:

```
Switch# show redundancy clients
clientID = 0        clientSeq = 0        RF_INTERNAL_MSG
clientID = 30       clientSeq = 135      Redundancy Mode RF
clientID = 28       clientSeq = 330      GALIOS_CONFIG_SYNC
clientID = 65000    clientSeq = 65000    RF_LAST_CLIENT Switch
```

The output displays the following information:

- clientID displays the client's ID number.

- clientSeq displays the client's notification sequence number.

- Current redundancy facility state.

This example shows how to display the redundancy facility counter information:

```
Switch# show redundancy counters
Redundancy Facility OMs
               comm link up = 1
        comm link down down = 0

          invalid client tx = 0
          null tx by client = 0
                tx failures = 0
      tx msg length invalid = 0

        client not rxing msgs = 0
 rx peer msg routing errors = 0
            null peer msg rx = 0
        errored peer msg rx = 0

                 buffers tx = 1535
      tx buffers unavailable = 0
                 buffers rx = 1530
        buffer release errors = 0

 duplicate client registers = 0
  failed to register client = 0
        Invalid client syncs = 0
Switch#
```

This example shows how to display redundancy facility history information:

```
Switch# show redundancy history
00:00:01 client added: RF_INTERNAL_MSG(0) seq=0
00:00:01 client added: RF_LAST_CLIENT(65000) seq=65000

00:01:38 *my state = ACTIVE(13) *peer state = STANDBY COLD(4)
Switch#
```

This example shows how to display information about the redundancy facility state:

```
Switch# show redundancy states
my state = 13 -ACTIVE
     peer state = 8  -STANDBY HOT
           Mode = Duplex
           Unit = Primary
        Unit ID = 2

Redundancy Mode (Operational) = Stateful Switchover
Redundancy Mode (Configured)  = Stateful Switchover
     Split Mode = Disabled
   Manual Swact = Enabled
 Communications = Up

   client count = 21
 client_notification_TMR = 240000 milliseconds
         keep_alive TMR = 9000 milliseconds
       keep_alive count = 0
   keep_alive threshold = 18
           RF debug mask = 0x0
Switch#
```

Related Commands	Command	Description
	redundancy	Enters the redundancy configuration mode.
	redundancy force-switchover	Forces a switchover from the active to the standby supervisor engine.

show redundancy config-sync

To display an ISSU config-sync failure or the ignored mismatched command list (MCL), if any, use the **show redundancy config-sync** command.

> **show redundancy config-sync** {**failures** | **ignored**} {**bem** | **mcl**| **prc**}

> **show redundancy config-sync ignored failures mcl**

Syntax Description

failures	Displays MCL entries or BEM/PRC failures.
ignored	Displays the ignored MCL entries.
bem	(Deprecated)
mcl	Displays commands that exist in the active supervisor engine's running configuration, but are not supported by the image on the standby supervisor engine.
prc	Displays a Parser Return Code (PRC) failure and forces the system to operate in RPR mode provided there is a mismatch in the return code for a command execution at the active and standby supervisor engine.

Defaults   This command has no default settings.

Command Modes   User EXEC mode

Command History

Release	Modification
12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.
12.2(44)SG	Updated command syntax from issu config-sync to redundancy config-sync.

Usage Guidelines   When two versions of Cisco IOS images are involved, the command sets supported by two images might differ. If any of those mismatched commands are executed on the active supervisor engine, the standby supervisor engine might not recognize those commands. This causes a config mismatch condition. If the syntax check for the command fails on standby supervisor engine during a bulk sync, the command is moved into the MCL and the standby supervisor engine is reset. To display all the mismatched commands, use the **show redundancy config-sync failures mcl** command.

To *clean* the MCL, follow these steps:

Step 1 Remove all mismatched commands from the active supervisor engines' running configuration.

Step 2 Revalidate the MCL with a modified running configuration using the **redundancy config-sync validate mismatched-commands** command.

Step 3 Reload the standby supervisor engine.

Alternatively, you could ignore the MCL by following these steps:

Step 1 Enter the **redundancy config-sync ignore mismatched-commands** command.

Step 2 Reload the standby supervisor engine; the system transitions to SSO mode.

> **Note** If you ignore the mismatched commands, the *out-of-sync* configuration at the active supervisor engine and the standby supervisor engine still exists.

Step 3 You can verify the ignored MCL with the **show redundancy config-sync ignored mcl** command.

Each command sets a return code in the action function that implements the command. This return code indicates whether or not the command successfully executes. The active supervisor engine maintains the PRC after executing a command. The standby supervisor engine executes the command and sends PRC back to the active supervisor engine. PRC failure occurs if these two PRCs do not match. If a PRC error occurs at the standby supervisor engine either during bulk sync or LBL sync, the standby supervisor engine is reset. To display all PRC failures, use the **show redundancy config-sync failures prc** command.

To display best effort method (BEM) errors, use the **show redundancy config-sync failures bem** command.

Examples The following example shows how to display the ISSU BEM failures:

```
Switch# show redundancy config-sync failures bem
BEM Failed Command List
-----------------------

The list is Empty
Switch#
```

The following example shows how to display the ISSU MCL failures:

```
Switch# show redundancy config-sync failures mcl
Mismatched Command List
-----------------------

The list is Empty
Switch#
```

The following example shows how to display the ISSU PRC failures:

```
Switch# show redundancy config-sync failures prc
PRC Failed Command List
-----------------------------
interface FastEthernet3/2
 ! <submode> "interface"
- channel-protocol pagp
 ! </submode> "interface"
```

Related Commands	Command	Description
	redundancy config-sync mismatched-commands	Moves the active supervisor engine into the Mismatched Command List (MCL) and resets the standby supervisor engine.

show running-config

To display the module status and configuration, use the **show running-config** command.

show running-config [**module** *slot*]

Syntax Description

module *slot*	(Optional) Specifies the module slot number; valid values are from 1 to 6.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines

In some cases, you might see a difference in the duplex mode displayed when you enter the **show interfaces** command and the **show running-config** command. If you do see a difference, the duplex mode displayed in the **show interfaces** command is the actual duplex mode that the interface is running. The **show interfaces** command shows the operating mode for an interface, while the **show running-config** command shows the configured mode for an interface.

The **show running-config** command output for an interface may display a duplex mode configuration but no configuration for the speed. When no speed is displayed in the output, it indicates that the interface speed is configured to be auto and that the duplex mode shown becomes the operational setting once the speed is configured to something other than auto. With this configuration, it is possible that the operating duplex mode for that interface does not match the duplex mode shown with the **show running-config** command.

Examples

This example shows how to display the module and status configuration for all modules:

```
Switch# show running-config
03:23:36:%SYS-5-CONFIG_I:Configured from console by consolesh runn
Building configuration...

Current configuration:3268 bytes
!
version 12.1
no service pad
service timestamps debug uptime
service timestamps log uptime
no service password-encryption
!
hostname Switch
!
!
power supplies required 1
ip subnet-zero
```

```
!
!
!
interface FastEthernet1
 no ip address
 shutdown
 duplex auto
 speed auto
Switch#
```

This example shows the output for the **show running-config** command when you have enabled the **switchport voice vlan** command:

```
Switch# show running-config int fastethernet 6/1
Building configuration...

Current configuration:133 bytes
!
interface FastEthernet6/1
 switchport voice vlan 2
 no snmp trap link-status
 spanning-tree portfast
 channel-group 1 mode on
end

Switch#
```

show shell functions

Use the **show shell functions** command to display configurations for all builtin shell functions.

show shell functions

Syntax Description

No keywords

Defaults

None

Command Modes

Priviledged EXEC

Command History

Release	Modification
12.2(54)SG	This command was introduced on the Catalyst 4500 series switch.

Usage Guidelines

This command only displays the contents of builtin shell functions. To display the contents of user created functions, use the **show shell triggers** command.

Examples

This example illustrates how to display configurations included for all the shell functions:

```
Switch# show shell functions
```

Related Commands

Command	Description
shell trigger	Creates a user defined trigger.
show shell triggers	Configures a user defined trigger.

show shell triggers

Use the **show shell triggers** command to display detail for all supported builtin and user created triggers.

show shell triggers

Syntax Description	**No keywords**

Defaults	None

Command Modes	Privileged EXEC

Command History

Release	Modification
12.2(54)SG	This command was introduced on the Catalyst 4500 series switch.

Usage Guidelines This command displays builtin triggers and user defined triggers (with their mapped functions).

Examples This example illustrates how to display detail for all supported triggers:

```
Switch# show shell triggers
Trigger Id: testGroup
Trigger description: testGroup
Trigger environment:
Trigger mapping function:
```

Related Commands

Command	Description
shell trigger	Creates a user defined trigger.
show shell functions	Displays configurations included for all the builtin functions including user created and built-in functions.

show slavebootflash:

To display information about the standby bootflash file system, use the **show slavebootflash:** command.

show slavebootflash: [**all** | **chips** | **filesys**]

Syntax Description

all	(Optional) Displays all possible Flash information.
chips	(Optional) Displays Flash chip information.
filesys	(Optional) Displays file system information.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Examples

This example shows how to display file system status information:

```
Switch# show slavebootflash: filesys

show slaveslot0:

To display information about the file system on the standby supervisor engine, use the **show slaveslot0:** command.

show slot0: [**all** | **chips** | **filesys**]

Syntax Description

all	(Optional) Displays all flash information including the output from the **show slot0: chips** and **show slot0: filesys** commands.
chips	(Optional) Displays flash chip register information.
filesys	(Optional) Displays file system status information.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Examples

This example shows how to display a summary of the file system:

```
Switch# show slaveslot0:
-# - ED --type-- --crc--- -seek-- nlen -length- -----date/time------ name
1   .. image    6375DBB7 A4F144   6 10678468 Nov 09 1999 10:50:42 halley

5705404 bytes available (10678596 bytes used)
Switch>
```

This example shows how to display flash chip information:

```
Switch# show slaveslot0: chips

show slot0:

To display information about the slot0: file system, use the **show slot0:** command.

show slot0: [**all** | **chips** | **filesys**]

Syntax Description

all	(Optional) Displays all flash information including the output from the **show slot0: chips** and **show slot0: filesys** commands.
chips	(Optional) Displays flash chip register information.
filesys	(Optional) Displays file system status information.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Examples

This example shows how to display a summary of the file system:

```
Switch# show slot0:
-# - ED --type-- --crc--- -seek-- nlen -length- -----date/time------ name
1   .. image    6375DBB7  A4F144    6 10678468 Nov 09 1999 10:50:42 halley

5705404 bytes available (10678596 bytes used)
Switch>
```

This example shows how to display flash chip information:

```
Switch# show slot0: chips

show spanning-tree

To display spanning-tree state information, use the **show spanning-tree** command.

show spanning-tree [*bridge_group* | **active** | **backbonefast** | **bridge** [*id*] | **inconsistentports** |
interface *type* | **root** | **summary** [**total**] | **uplinkfast** | **vlan** *vlan_id* | **pathcost method** | **detail**]

Syntax Description

bridge_group	(Optional) Specifies the bridge group number; valid values are from 1 to 255.
active	(Optional) Displays the spanning-tree information on active interfaces only.
backbonefast	(Optional) Displays the spanning-tree BackboneFast status.
bridge	(Optional) Displays the bridge status and configuration information.
id	(Optional) Name of the bridge.
inconsistentports	(Optional) Displays the root inconsistency state.
interface *type*	(Optional) Specifies the interface type and number; valid values are **fastethernet**, **gigabitethernet**, **tengigabitethernet**, **port-channel** (1 to 64), and **vlan** (1 to 4094).
root	(Optional) Displays the root bridge status and configuration.
summary	(Optional) Specifies a summary of port states.
total	(Optional) Displays the total lines of the spanning-tree state section.
uplinkfast	(Optional) Displays the spanning-tree UplinkFast status.
vlan *vlan_id*	(Optional) Specifies the VLAN ID; valid values are from 1 to 4094.
pathcost method	(Optional) Displays the default path cost calculation method used.
detail	(Optional) Displays a summary of interface information.

Defaults   Interface information summary is displayed.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(12c)EW	Support for extended addressing was added.
12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.

Examples   This example shows how to display spanning-tree information on the active interfaces only:

```
Switch# show spanning-tree active
UplinkFast is disabled
BackboneFast is disabled

 VLAN1 is executing the ieee compatible Spanning Tree protocol
  Bridge Identifier has priority 32768, address 0050.3e8d.6401
  Configured hello time 2, max age 20, forward delay 15
  Current root has priority 16384, address 0060.704c.7000
  Root port is 265 (FastEthernet5/9), cost of root path is 38
  Topology change flag not set, detected flag not set
  Number of topology changes 0 last change occurred 18:13:54 ago
  Times:  hold 1, topology change 24, notification 2
          hello 2, max age 14, forward delay 10
  Timers: hello 0, topology change 0, notification 0

 Port 265 (FastEthernet5/9) of VLAN1 is forwarding
   Port path cost 19, Port priority 128, Port Identifier 129.9.
   Designated root has priority 16384, address 0060.704c.7000
   Designated bridge has priority 32768, address 00e0.4fac.b000
   Designated port id is 128.2, designated path cost 19
   Timers: message age 3, forward delay 0, hold 0
   Number of transitions to forwarding state: 1
   BPDU: sent 3, received 32852
Switch#
```

This example shows how to display the spanning-tree BackboneFast status:

```
Switch# show spanning-tree backbonefast
BackboneFast is enabled

BackboneFast statistics
-----------------------
Number of transition via backboneFast (all VLANs) : 0
Number of inferior BPDUs received (all VLANs)     : 0
Number of RLQ request PDUs received (all VLANs)   : 0
Number of RLQ response PDUs received (all VLANs)  : 0
Number of RLQ request PDUs sent (all VLANs)       : 0
Number of RLQ response PDUs sent (all VLANs)      : 0
Switch#
```

This example shows how to display spanning-tree information for the bridge:

```
Switch# show spanning-tree bridge
VLAN1
  Bridge ID  Priority    32768
             Address     0050.3e8d.6401
             Hello Time   2 sec  Max Age 20 sec  Forward Delay 15 sec
VLAN2
  Bridge ID  Priority    32768
             Address     0050.3e8d.6402
             Hello Time   2 sec  Max Age 20 sec  Forward Delay 15 sec
VLAN3
  Bridge ID  Priority    32768
             Address     0050.3e8d.6403
             Hello Time   2 sec  Max Age 20 sec  Forward Delay 15 sec
Switch#
```

This example shows how to display a summary of interface information:

```
Switch# show spanning-tree

VLAN1
```

```

Switch#
```

This example shows how to display spanning-tree information for Fast Ethernet interface 5/9:

```
Switch# show spanning-tree interface fastethernet5/9
Interface Fa0/10 (port 23) in Spanning tree 1 is ROOT-INCONSISTENT
Port path cost 100, Port priority 128
Designated root has priority 8192, address 0090.0c71.a400
Designated bridge has priority 32768, address 00e0.1e9f.8940
Designated port is 23, path cost 115
Timers: message age 0, forward delay 0, hold 0
BPDU: sent 0, received 0
The port is in the portfast mode
Switch#
```

This example shows how to display spanning-tree information for a specific VLAN:

```
Switch# show spanning-tree vlan 1
VLAN1 is executing the ieee compatible Spanning Tree protocol
  Bridge Identifier has priority 32768, address 0030.94fc.0a00
  Configured hello time 2, max age 20, forward delay 15
  We are the root of the spanning tree
  Topology change flag not set, detected flag not set
  Number of topology changes 5 last change occurred 01:50:47 ago
          from FastEthernet6/16
  Times: hold 1, topology change 35, notification 2
          hello 2, max age 20, forward delay 15

  Timers:hello 0, topology change 0, notification 0, aging 300

 Port 335 (FastEthernet6/15) of VLAN1 is forwarding
```

```
      Port path cost 19, Port priority 128, Port Identifier 129.79.
      Designated root has priority 32768, address 0030.94fc.0a00
      Designated bridge has priority 32768, address 0030.94fc.0a00
      Designated port id is 129.79, designated path cost 0
      Timers:message age 0, forward delay 0, hold 0
      Number of transitions to forwarding state:1
      BPDU:sent 6127, received 0
Switch#
```

This example shows how to display spanning-tree information for a specific bridge group:

```
Switch# show spanning-tree vlan 1
 UplinkFast is disabled
 BackboneFast is disabled
Switch#
```

This example shows how to display a summary of port states:

```
Switch# show spanning-tree summary
Root bridge for:VLAN1, VLAN2.
PortFast BPDU Guard is disabled
EtherChannel misconfiguration guard is enabled
UplinkFast is disabled
BackboneFast is disabled
Default pathcost method used is short

Name                Blocking Listening Learning Forwarding STP Active
------------------- -------- --------- -------- ---------- ----------
VLAN1                  0        0         0         1          1
VLAN2                  0        0         0         1          1
------------------- -------- --------- -------- ---------- ----------
          2 VLANs 0        0         0         2          2
Switch#
```

This example shows how to display the total lines of the spanning-tree state section:

```
Switch#  show spanning-tree summary totals
Root bridge for:VLAN1, VLAN2.
PortFast BPDU Guard is disabled
EtherChannel misconfiguration guard is enabled
UplinkFast is disabled
BackboneFast is disabled
Default pathcost method used is short

Name                Blocking Listening Learning Forwarding STP Active
------------------- -------- --------- -------- ---------- ----------
          2 VLANs 0        0         0         2          2
Switch#
```

This example shows how to determine whether any ports are in root inconsistent state:

```
Switch#  show spanning-tree inconsistentports

Name                Interface           Inconsistency
------------------- ------------------- ------------------
VLAN1               FastEthernet3/1     Root Inconsistent

Number of inconsistent ports (segments) in the system:1
Switch#
```

Related Commands

Command	Description
spanning-tree backbonefast	Enables BackboneFast on a spanning-tree VLAN.
spanning-tree cost	Calculates the path cost of STP on an interface.
spanning-tree guard	Enables root guard.
spanning-tree pathcost method	Sets the path cost calculation method.
spanning-tree portfast default	Enables PortFast by default on all access ports.
spanning-tree portfast (interface configuration mode)	Enables PortFast mode.
spanning-tree port-priority	Prioritizes an interface when two bridges compete for position as the root bridge.
spanning-tree uplinkfast	Enables the UplinkFast feature.
spanning-tree vlan	Configures STP on a per-VLAN basis.

show spanning-tree mst

To display MST protocol information, use the **show spanning-tree mst** command.

> **show spanning-tree mst** [**configuration**]

> **show spanning-tree mst** [*instance-id*] [**detail**]

> **show spanning-tree mst** [*instance-id*] **interface** *interface* [**detail**]

Syntax Description

configuration	(Optional) Displays region configuration information.
instance-id	(Optional) Instance identification number; valid values are from 0 to 15.
detail	(Optional) Displays detailed MST protocol information.
interface *interface*	(Optional) Interface type and number; valid values for type are **fastethernet**, **gigabitethernet**, **tengigabitethernet**, **port-channel**, and **vlan**. See the "Usage Guidelines" section for more information.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(12c)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.

Usage Guidelines   This command is not supported on systems that are configured with a Supervisor Engine I.

In the output display of the **show spanning-tree mst configuration** command, a warning message might display. This message appears if you do not map secondary VLANs to the same instance as the associated primary VLAN. The display includes a list of the secondary VLANs that are not mapped to the same instance as the associated primary VLAN. The warning message is as follows:

```
These secondary vlans are not mapped to the same instance as their primary:
-> 3
```

See the **show spanning-tree** command for output definitions.

Examples

This example shows how to display region configuration information:

```
Switch# show spanning-tree mst configuration
Name     [leo]
Revision 2702
Instance  Vlans mapped
--------  ------------------------------------------------------------------------
0         1-9,11-19,21-29,31-39,41-4094
1         10,20,30,40
--------------------------------------------------------------------------------
Switch#
```

This example shows how to display additional MST protocol values:

```
Switch# show spanning-tree mst 3 detail
# # # # # # MST03 vlans mapped: 3,3000-3999
Bridge address 0002.172c.f400 priority 32771 (32768 sysid 3)
Root this switch for MST03

GigabitEthernet1/1 of MST03 is boundary forwarding
Port info port id 128.1 priority 128
cost 20000
Designated root address 0002.172c.f400 priority 32771
cost 0
Designated bridge address 0002.172c.f400 priority 32771 port
id 128.1
Timers: message expires in 0 sec, forward delay 0, forward transitions 1
Bpdus (MRecords) sent 4, received 0

FastEthernet4/2 of MST03 is backup blocking
Port info port id 128.194 priority 128 cost
200000
Designated root address 0002.172c.f400 priority 32771
cost 0
Designated bridge address 0002.172c.f400 priority 32771 port id
128.193
Timers: message expires in 2 sec, forward delay 0, forward transitions 1
Bpdus (MRecords) sent 3, received 252
Switch#
```

This example shows how to display MST information for a specific interface:

```
Switch# show spanning-tree mst 0 interface fastethernet4/1 detail
Edge port: no (trunk) port guard : none
(default)
Link type: point-to-point (point-to-point) bpdu filter: disable

Related Commands

Command	Description
spanning-tree mst	Sets the path cost and port-priority parameters for any MST instance.
spanning-tree mst forward-time	Sets the forward delay timer for all the instances.
spanning-tree mst hello-time	Sets the hello-time delay timer for all the instances.
spanning-tree mst max-hops	Specifies the number of possible hops in the region before a BPDU is discarded.
spanning-tree mst root	Designates the primary root.

show storm-control

To display the broadcast storm control settings on the switch or on the specified interface, use the **show storm-control** command.

> **show storm-control** [*interface-id* | **broadcast**]

Supervisor Engine 6-E and Catalyst 4900M chassis

> **show storm-control** [*interface-id* | **broadcast** | **multicast**]

Syntax Description	*interface-id*	(Optional) Specifies the interface ID for the physical port.
	broadcast	(Optional) Displays the broadcast storm threshold setting.
	multicast	(Optional) Displays the multicast storm threshold setting.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.
12.2(40)SG	Added support for the Supervisor Engine 6-E and Catalyst 4900M chassis.

Usage Guidelines   When you enter an interface ID, the storm control thresholds are displayed for the specified interface.

If you do not enter an interface ID, the settings are displayed for the broadcast traffic type for all ports on the switch.

Examples   This is an example of output from the **show storm-control** command when no keywords are entered. Because no traffic type keyword was entered, the broadcast storm control settings are displayed.

```
Switch# show storm-control
Interface  Filter State   Upper    Lower    Current
---------  -------------  -------  -------  -------
Gi2/1      Forwarding     30.00%   30.00%     N/A
Gi4/1      Forwarding     30.00%   30.00%     N/A
Gi4/3      Forwarding     30.00%   30.00%     N/A
Switch#
```

This is an example of output from the **show storm-control multicast** command on a Supervisor Engine 6-E:

```
Switch# show storm-control multicast //Supervisor Engine 6-E
Interface Filter State  Broadcast Multicast Level
--------- ------------- --------- --------- -----
Fa6/2     Blocking      Enabled   Enabled   61%
Switch#
```

This is an example of output from the **show storm-control** command on a Supervisor Engine 6-E when no keywords are entered:

```
Switch# show storm-control
Interface Filter State  Broadcast Multicast Level
--------- ------------- --------- --------- -----
Fa6/1     Blocking      Enabled   Disabled  81%
Fa6/2     Blocking      Enabled   Enabled   61%
Switch#
```

This is an example of output from the **show storm-control** command for a specified interface:

```
Switch# show storm-control fastethernet2/17
Interface  Filter State   Level    Current
---------  -------------  -------  -------
Fa2/17     Forwarding     50.00%   0.00%
Switch#
```

This is an example of output from the **show storm-control** command for a specified interface on a Supervisor Engine 6-E:

```
Switch# show storm-control interface fastethernet6/1
Interface  Filter State   Broadcast Multicast  Level
---------  -------------  -------   -------    -----
Fa6/1      Blocking       Enabled   Disabled   81%
Switch#
```

Table 2-40 describes the fields in the **show storm-control** display.

Table 2-40   show storm-control Field Descriptions

Field	Description
Interface	Displays the ID of the interface.
Filter State	Displays the status of the filter: • Blocking—Storm control is enabled, and a storm has occurred. • Forwarding—Storm control is enabled, and no storms have occurred. • Inactive—Storm control is disabled.
Level	Displays the threshold level set on the interface for broadcast traffic.
Current	Displays the bandwidth utilization of broadcast traffic as a percentage of total available bandwidth. This field is valid only when storm control is enabled. **Note** N/A is displayed for interfaces that do storm control in the hardware.

Related Commands	Command	Description
	storm-control	Enables broadcast storm control on a port and specifies what to do when a storm occurs on a port.
	show interfaces counters	Displays the traffic on the physical interface.
	show running-config	Displays the running configuration of a switch.

show switch virtual (virtual switch)

To display configuration and status information for a virtual switching system (VSS), use the **show switch virtual** command in EXEC mode.

> **show switch virtual [dual-active {bfd | pagp | summary} | link [counters | detail | port-channel | ports] | redundancy | role | slot-map]**

Syntax Description

detail	(Optional) Displays detailed virtual switch information.
detail-active	(Optional) Displays virtual switch dual-active information.
bridge	(Optional) Displays the bridge status and configuration information.
pagp	Specifies a summary of dual-active PAgP information.
summary	Specifies a summary of dual-active configuration information.
link	(Optional) Displays the virtual switch link information.
counters	(Optional) Displays VSL counter information.
port-channel	(Optional) Displays VSL port channel information.
ports	(Optional) Displays VSL port information.
redundancy	(Optional) Displays the VSS redundancy status.
role	(Optional) Displays the VSS role information.
slot-map	(Optional) Displays the VSS slot map table.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
Cisco IOS XE 3.4.0SG and 15.1(2)SG	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines   Use this command to display configuration and status information for a VSS.

The **show switch virtual link detail** command displays the output of the **show switch virtual link** commands and the **show vslp lmp internal** commands. In the output, the entry "show int" is displayed for all the VSL members.

The **show switch virtual dual-active pagp** command displays dual-active trust mode status.

Examples

The following example shows how to display configuration and status information for the VSS:

- In virtual switch mode without skipping config-register:

```
Router# show switch virtual
Switch mode : Virtual Switch
Virtual switch domain number : 1
Local switch number : 2
Local switch operational role: Virtual Switch Active
Peer switch number : 1
Peer switch operational role : Virtual Switch Standby
Router#
```

- In virtual switch mode with skipping config-register but not yet rebooted:

```
Router# show switch virtual
Switch mode : Virtual Switch
Virtual switch domain number : 1
Local switch number : 2
Local switch operational role: Virtual Switch Active
Peer switch number : 1
Peer switch operational role : Virtual Switch Standby
Warning: Config-register set or will be set to skip configuration 0x2142 in the next
reload.
Change config-register; otherwise, switch will be boot in Standalone mode with some
default config.
Router#
```

- In standalone mode without skipping config-register:

```
Router# show switch virtual
Switch Mode : Standalone
 Not in Virtual Switch mode due to:
  Domain ID is not configured
Router#
```

- In standalone mode with skipping config-register:

```
Router# show switch virtual
Switch Mode : Standalone
 Not in Virtual Switch mode due to:
  Domain ID is not configured
  Warning: config-register is set to skip parse 0x2142 in RP or SP
Use [show boot] on RP/SP to verify.
Router#
```

The following example shows how to display the virtual switch link information:

```
Router# show switch virtual link
VSL Status          : UP
VSL Uptime          : 4 hours, 26 minutes
VSL SCP Ping        : Pass (or Fail)   OK (or Not OK)
VSL ICC (Ping)      : Pass (or Fail)
VSL Control Link    : Te1/3/1
Router#
```

The following example shows how to display the virtual switch link counter information:

```
Router# show switch virtual link counters
Port            InOctets    InUcastPkts   InMcastPkts   InBcastPkts
Po10            66340451       190415         15637        112069

Te1/3/1    0           0         0          0        0         0
Po10       0           0         0          0        0         0
Te1/3/1    0           0         0          0        0         0
Po20       0           0         0          0        0         0
Te2/3/1    0           0         0          0        0         0
Router#
```

The following example shows how to display the virtual switch link port-channel information:

```
Router# show switch virtual link port-channel
VSL Port Channel Information
Flags:  D - down        P - bundled in port-channel
        I - stand-alone s - suspended
        H - Hot-standby (LACP only)
        R - Layer3      S - Layer2
        U - in use      N - not in use, no aggregation
        f - failed to allocate aggregator
        M - not in use, no aggregation due to minimum links not met
        m - not in use, port not aggregated due to minimum links not met
        u - unsuitable for bundling
        w - waiting to be aggregated
Router#
```

This example shows how to display information for BFD dual-active detection:

```
Router# show switch virtual dual-active bfd
Bfd dual-active detection enabled: Yes
Bfd dual-active interface pairs configured:
  interface1 Gi1/9/48 interface2 Gi2/1/48
Group  Port-channel  Protocol    Ports
------+-------------+-----------+--------------------------------------------
10     Po10(RU)       -           Te1/3/1(P)
20     Po20(RU)       -           Te2/2/1(P)
Router#
```

The following example shows how to display the virtual switch link port information:

```
Router# show switch virtual link port
VSL Link Info       : Configured: 3   Operational: 1

  49          1           0       -
Router#
```

Related Commands

Command	Description
dual-active detection (virtual switch)	Enables and configures dual-active detection.
switch (virtual switch)	Configures the VSS domain number and enter the virtual switch domain configuration submode.

show system mtu

To display the global MTU setting, use the **show system mtu** command.

show system mtu

Syntax Description   This command has no arguments or keywords.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(12c)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Examples   This example shows how to display the global MTU setting:

```
Switch# show system mtu
Global Ethernet MTU is 1550 bytes.
Switch#
```

Related Commands

Command	Description
system mtu	Sets the maximum Layer 2 or Layer 3 payload size.

show tech-support

To display troubleshooting information for TAC, use the **show tech-support** command.

show tech-support [**bridging** | **cef** | **ipmulticast** | **isis** | **password** [**page**] | **page**]

Syntax Description

bridging	(Optional) Specifies bridging-related information.
cef	(Optional) Specifies CEF-related information.
ipmulticast	(Optional) Specifies IP multicast-related information.
isis	(Optional) Specifies CLNS and ISIS-related information.
password	(Optional) Includes passwords and other security information in the output.
page	(Optional) Displays one page of information at a time in the output.

Defaults

The defaults are as follows:

- Outputs are displayed without page breaks.
- Passwords and other security information are removed from the output.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines

Output from the **show tech-support** command may be terminated in midstream with the key combination Ctrl+Alt+6. The command output is buffered so that the command terminates when output of the current subcommand running under this command completes.

Press the **Return** key to display the next line of output, or press the **Space** bar to display the next page of information. If you do not enter the **page** keyword, the output scrolls. It does not stop for page breaks.

If you enter the **password** keyword, password encryption is enabled, but only the encrypted form appears in the output.

If you do not enter the **password** keyword, the passwords and other security-sensitive information in the output are replaced in the output with the word "removed."

The **show tech-support** commands are a compilation of several **show** commands and the output can be quite lengthy. For a sample display of the output of the **show tech-support** command, see the individual **show** command listed.

If you enter the **show tech-support** command without arguments, the output displays the equivalent of these **show** commands:

- **show version**
- **show running-config**
- **show stacks**

- **show interfaces**
- **show controllers**
- **show process memory**
- **show process cpu**
- **show buffers**
- **show logging**
- **show module**
- **show power**
- **show environment**
- **show interfaces switchport**
- **show interfaces trunk**
- **show vlan**

If you enter the **ipmulticast** keyword, the output displays the equivalent of these **show** commands:

- **show ip pim interface**
- **show ip pim interface count**
- **show ip pim neighbor**
- **show ip pim rp**
- **show ip igmp groups**
- **show ip igmp interface**
- **show ip mroute count**
- **show ip mroute**
- **show ip mcache**
- **show ip dvmrp route**

Examples   For a sample display of the **show tech-support** command output, see the commands listed in the "Usage Guidelines" section for more information.

Related Commands   See the "Usage Guidelines " section.

show udld

To display the administrative and operational UDLD status, use the **show udld** priviledged EXEC command.

show udld *interface-id* | **neighbors** | **fast-hello** {*interface id*}

Syntax Description

interface id	Specifies the administrative and operational UDLD status for a specific interface.
neighbors	Specifies the UDLD neighbor summary.
fast-hello	Specifies Fast UDLD neighbor summary and interface specific status.
interface-id	Specifies the name of the interface.

Defaults   None

Command Modes   Privileged EXEC

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.
12.2(54)SG	Added support for **show udld fast-hello** and **show udld fast-hello** *interface id*.

Usage Guidelines   If you do not enter an *interface_id* value, the administrative and operational UDLD status for all interfaces is displayed.

Examples   To verify status for a particular link as reported by UDLD, enter the following command:

```
Switch# show udld g1/34
Interface Gi1/34
---
Port enable administrative configuration setting: Enabled / in aggressive mode
Port enable operational state: Enabled / in aggressive mode
Current bidirectional state: Bidirectional
Current operational state: Advertisement - Single neighbor detected
Message interval: 15000 ms
Time out interval: 5000 ms

Port fast-hello configuration setting: Disabled
Port fast-hello interval: 0 ms
Port fast-hello operational state: Disabled
Neighbor fast-hello configuration setting: Disabled
Neighbor fast-hello interval: Unknown

    Entry 1
    ---
```

```
        Expiration time: 43300 ms
        Cache Device index: 1
        Current neighbor state: Bidirectional
        Device ID: FOX10430380
        Port ID: Gi1/34
        Neighbor echo 1 device: FOX104303NL
        Neighbor echo 1 port: Gi1/34

        TLV Message interval: 15 sec
        No TLV fast-hello interval
        TLV Time out interval: 5
        TLV CDP Device name: Switch
```

To verify link status as reported by UDLD, enter the following command:

```
Switch# show udld neighbors

Port      Device Name  Device ID   Port ID    Neighbor State
----      -----------  ---------   -------    --------------
Gi1/33    FOX10430380  1           Gi1/33     Bidirectional
Gi1/34    FOX10430380  1           Gi1/34     Bidirectional
```

To verify Fast UDLD configuration, enter the following command:

```
Switch# show udld fast-hello
Total ports on which fast hello can be configured: 16
Total ports with fast hello configured: 3
Total ports with fast hello operational: 3
Total ports with fast hello non-operational: 0

Port-ID   Hello Neighbor-Hello Neighbor-Device Neighbor-Port Status
-------   ----- -------------- --------------- ------------- ------
Gi1/45    200   200            FOX104303NL     Gi1/45        Operational
Gi1/46    200   200            FOX104303NL     Gi1/46        Operational
Gi1/47    200   200            FOX104303NL     Gi1/47        Operational
```

To verify status for a particular link as reported by Fast UDLD, enter the following command:

```
Switch# show udld fast-hello g1/33

Interface Gi1/33
---
Port enable administrative configuration setting: Enabled / in aggressive mode
Port enable operational state: Enabled / in aggressive mode
Current bidirectional state: Bidirectional
Current operational state: Advertisement - Single neighbor detected
Message interval: 200 ms
Time out interval: 5000 ms

Port fast-hello configuration setting: Enabled
Port fast-hello interval: 200 ms
Port fast-hello operational state: Enabled
Neighbor fast-hello configuration setting: Enabled
Neighbor fast-hello interval: 200 ms

    Entry 1
    ---
    Expiration time: 500 ms
    Cache Device index: 1
    Current neighbor state: Bidirectional
    Device ID: FOX10430380
    Port ID: Gi1/33
    Neighbor echo 1 device: FOX104303NL
    Neighbor echo 1 port: Gi1/33
```

```
        TLV Message interval: 15
        TLV fast-hello interval: 200 ms
        TLV Time out interval: 5
        TLV CDP Device name: Switch
```

	Command	Description
Related Commands	**udld (global configuration mode)**	Enables aggressive or normal mode in the UDLD protocol and sets the configurable message timer time.
	udld (interface configuration mode)	Enables UDLD on an individual interface or prevents a fiber interface from being enabled by the **udld (global configuration mode)** command.

show vlan

To display VLAN information, use the **show vlan** command.

show vlan [**brief** | **id** *vlan_id* | **name** *name*]

show vlan private-vlan [*type*]

Syntax Description		
brief	(Optional) Displays only a single line for each VLAN, naming the VLAN, status, and ports.	
id *vlan_id*	(Optional) Displays information about a single VLAN identified by VLAN ID number; valid values are from 1 to 4094.	
name *name*	(Optional) Displays information about a single VLAN identified by VLAN name; valid values are an ASCII string from 1 to 32 characters.	
private-vlan	Displays private VLAN information.	
type	(Optional) Private VLAN type.	

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(12c)EW	Added support for extended VLAN addresses.

Examples   This example shows how to display the VLAN parameters for all VLANs within the administrative domain:

```
Switch# show vlan
VLAN Name                             Status    Ports
---- -------------------------------- --------- -------------------------------
1    default                          active    Fa5/9
2    VLAN0002                         active    Fa5/9
3    VLAN0003                         active    Fa5/9
4    VLAN0004                         active    Fa5/9
5    VLAN0005                         active    Fa5/9
6    VLAN0006                         active    Fa5/9
10   VLAN0010                         active    Fa5/9
20   VLAN0020                         active    Fa5/9

<...Output truncated...>

Switch#
```

Table 2-41 describes the fields in the **show vlan** command output.

Table 2-41   show vlan Command Output Fields

Field	Description
VLAN	VLAN number.
Name	Name, if configured, of the VLAN.
Status	Status of the VLAN (active or suspend).
Ports	Ports that belong to the VLAN.
Type	Media type of the VLAN.
SAID	Security Association Identifier value for the VLAN.
MTU	Maximum transmission unit size for the VLAN.
Parent	Parent VLAN, if one exists.
RingNo	Ring number for the VLAN, if applicable.
BrdgNo	Bridge number for the VLAN, if applicable.
Stp	Spanning Tree Protocol type used on the VLAN.

The following example shows how to verify that the primary VLAN and secondary VLANs are correctly associated with each other and the same association also exists on the PVLAN port:

```
Switch# show vlan private-vlan

Primary Secondary Type             Ports
------- --------- -----------------
------------------------------------------
10      100       community    Fa3/1, Fa3/2
```

The following example shows how to remove the VLAN association:

```
Switch(config)# vlan 10
Switch(config-vlan)# private-vlan association remove 100
Switch(config-vlan)# end
Switch# show vlan private
Primary Secondary Type             Ports
------- --------- ---------------- ----------------------------------------
10                primary
        100       community
```

This example show how to verify PVLAN configuration on the interface:

```
Switch# show interface f3/2 status
Port      Name              Status      Vlan      Duplex  Speed Type
Fa3/2                       connected   pvlan seco a-full  a-100 10/100BaseTX

Switch# show interface f3/1 status
Port      Name              Status      Vlan      Duplex  Speed Type
Fa3/1                       connected   pvlan prom a-full  a-100 10/100BaseTX
Switch#
```

Related Commands	Command	Description
	vlan (VLAN Database mode)	Configures a specific VLAN.
	vlan database	Enters VLAN configuration mode.
	vtp (global configuration mode)	Modifies the name of a VTP configuration storage file.

show vlan access-map

To display the contents of a VLAN access map, use the **show vlan access-map** command.

show vlan access-map [*map-name*]

Syntax Description

map-name	(Optional) Name of the VLAN access map.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(12c)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Examples

This command shows how to display the contents of a VLAN access map:

```
Switch# show vlan access-map mordred
Vlan access-map "mordred"  1
        match: ip address 13
        action: forward capture
Switch#
```

Related Commands

Command	Description
vlan access-map	Enters VLAN access-map command mode to create a VLAN access map.

show vlan counters

To display the software-cached counter values, use the **show vlan counters** command.

show vlan [**id** *vlanid*] **counters**

Syntax Description

id *vlanid*	(Optional) Displays the software-cached counter values for a specific VLAN.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(13)EW	Support for this command was introduced on the Catalyst 4500 Series Switches.

Usage Guidelines

If you enter the **show vlan counters** command without specifying the VLAN ID, the software-cached counter values for all VLANs are displayed.

Examples

This example shows how to display the software-cached counter values for a specific VLAN:

```
Switch# show vlan counters
* Multicast counters include broadcast packets

Vlan Id                                  : 1
L2 Unicast Packets                       : 0
L2 Unicast Octets                        : 0
L3 Input Unicast Packets                 : 0
L3 Input Unicast Octets                  : 0
L3 Output Unicast Packets                : 0
L3 Output Unicast Octets                 : 0
L3 Output Multicast Packets              : 0
L3 Output Multicast Octets               : 0
L3 Input Multicast Packets               : 0
L3 Input Multicast Octets                : 0
L2 Multicast Packets                     : 1
L2 Multicast Octets                      : 94
Switch>
```

Related Commands

Command	Description
clear vlan counters	Clears the software-cached counter values to start from zero again for a specified VLAN or all existing VLANs.

show vlan dot1q tag native

To display all the ports on the switch that are eligible for native VLAN tagging as well as their current native VLAN tagging status, use the **show vlan dot1q tag native** command.

show vlan dot1q tag native

Syntax Description   This command has no arguments or keywords.

Defaults   This command has no default settings.

Command Modes   User EXEC mode

Command History

Release	Modification
12.1(18)EW	This command was introduced on the Catalyst 4500 series switch.

Examples   This is an example of output from the **show vlan dot1q tag native** command:

```
Switch# show vlan dot1q tag native
dot1q native vlan tagging is disabled globally

Per Port Native Vlan Tagging State
---------------------------------

Port    Operational    Native VLAN
        Mode           Tagging State
----------------------------------

f3/2    trunk          enabled
f3/16   PVLAN trunk    disabled
f3/16   trunk          enabled
```

Related Commands

Command	Description
switchport mode	Sets the interface type.
vlan (global configuration) (refer to Cisco IOS documentation)	Enters global VLAN configuration mode.
vlan (VLAN configuration) (refer to Cisco IOS documentation)	Enters VLAN configuration mode.

show vlan group

To display the VLANs mapped to VLAN groups, use the **show vlan group** privildeged EXEC command.

show vlan group [**group-name** *group-name*]

Syntax Description	group-name *group-name*	(Optional) Displays the VLANs mapped to the specified VLAN group.

Defaults   None

Command Modes   Privileged EXEC

Command History	Release	Modification
	12.2(54)SG	This command was modified to support user distribution on the Catalyst 4500 series switch.

Usage Guidelines   The **show vlan group** command displays the existing VLAN groups and lists the VLANs and VLAN ranges that are members of each VLAN group. If you use the **group-name** keyword, you display only the members of the VLAN group specified by the *group-name* argument.

Examples   This example shows how to display the members of a specified VLAN group:

```
Switch# show vlan group group-name ganymede

Group Name Vlans Mapped
--------------- -------------------
ganymede        7-9
```

Related Commands	Command	Description
	vlan group	Creates or modifies a VLAN group.

show vlan internal usage

To display information about the internal VLAN allocation, use the **show vlan internal usage** command.

show vlan [**id** *vlan-id*] **internal usage**

Syntax Description

id *vlan-id*	(Optional) Displays internal VLAN allocation information for the specified VLAN; valid values are from 1 to 4094.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Examples

This example shows how to display information about the current internal VLAN allocation:

```
Switch# show vlan internal usage

VLAN Usage
---- --------------------
1025 -
1026 -
1027 -
1028 -
1029 Port-channel6
1030 GigabitEthernet1/2
1032 FastEthernet3/20
1033 FastEthernet3/21
1129 -
```

This example shows how to display information about the internal VLAN allocation for a specific VLAN:

```
Switch# show vlan id 1030 internal usage

VLAN Usage
---- --------------------
1030 GigabitEthernet1/2
```

Related Commands

Command	Description
vlan internal allocation policy	Configures the internal VLAN allocation scheme.

show vlan mapping

Use the **show vlan mapping** privileged EXEC command to display information about VLAN mapping on trunk ports.

show vlan mapping [**interface** *interface-id*] [| {**begin** | **exclude** | **include**} *expression*]

Syntax Description	

interface *interface-id*	(Optional) Displays VLAN mapping information for the specified interface.
| begin	(Optional) Displays begins with the line that matches the *expression*.
| exclude	(Optional) Displays excludes lines that match the *expression*.
| include	(Optional) Displays includes lines that match the specified *expression*.
expression	Specifies an expression in the output to use as a reference point.

Defaults   None

Command Modes   Privileged EXEC

Command History

Release	Modification
12.2(54)SG	This command was introduced on the Catalyst 4500 series switch.

Usage Guidelines   Expressions are case sensitive. For example, if you enter **| exclude output**, the lines that contain *output* are not displayed, but the lines that contain *Output* are displayed.

Examples   This is a sample output from the **show vlan mapping** command:

```
Switch# show vlan mapping
Interface Fa0/5:
VLANs on wire        Translated VLAN      Operation
------------------   ---------------      --------------
default QinQ              1               selective QinQ
Interface Fa0/2:
VLANs on wire        Translated VLAN      Operation
------------------   ---------------      --------------
2                        104             1-to-1 mapping
```

This is a sample output from the **show vlan mapping** command for an interface:

```
Switch# show vlan mapping interface fa0/6
Interface fa0/6:
VLAN on wire         Translated VLAN       Operation
1                        11               1-to-1 mapping
12,16-18                 100                 selective QinQ
*                        101                 default QinQ
```

Related Commands	Command	Description
	switchport vlan mapping	Configures VLAN mapping on an interface.

show vlan mtu

To display the minimum and maximum transmission unit (MTU) sizes of each VLAN, use the **show vlan mtu** command.

show vlan mtu

Syntax Description   This command has no arguments or keywords

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(13)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines   The MTU_Mismatch column in the command output indicates whether all the ports in the VLAN have the same MTU. When "yes" is displayed in the MTU_Mismatch column, it means that the VLAN has a port with different MTUs, and packets might be dropped that are switched from a port with a larger MTU to a port with a smaller MTU. If the VLAN does not have an SVI, the hyphen (-) symbol is displayed in the SVI_MTU column.

For a VLAN, if the MTU-Mismatch column displays "yes," the names of the port with the MinMTU and the port with the MaxMTU are displayed. For a VLAN, if the SVI_MTU is bigger than the MinMTU, "TooBig" is displayed after the SVI_MTU.

Examples   This is an example of output from the **show vlan mtu** command:

```
Switch# show vlan mtu

VLAN    SVI_MTU       MinMTU(port)   MaxMTU(port)   MTU_Mismatch
----  -------------  -------------  ------------   ------------
1    1500           1500           1500            No
Switch>
```

Related Commands

Command	Description
mtu	Enables jumbo frames on an interface by adjusting the maximum size of a packet or maximum transmission unit (MTU).

show vlan private-vlan

To display private VLAN information, use the **show vlan private-vlan** command.

show vlan private-vlan [*type*]

Syntax Description

type	(Optional) Displays the private VLAN type; valid types are isolated, primary, community, twoway-community nonoperational, and normal.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.2(20)EW	Support for community VLAN was added.
15.1.0 SG	Support for PVLAN modes over EtherChannel. Modes include: private-vlan host, private-vlan promiscuous, private-vlan trunk secondary, and private-vlan trunk promiscuous.

Usage Guidelines

When the **show vlan private-vlan type** command displays a VLAN type as normal, it indicates that a regular VLAN has been used in the private VLAN configuration. When normal is displayed, this indicates that two VLANs have been associated before the type was set, and the private VLAN is not operational. This information is useful for debugging purposes.

Examples

This example shows how to display information about all currently configured private VLANs:

```
Switch# show vlan private-vlan

Primary Secondary Type              Ports
------- --------- ----------------- ----------------------------------------
2       301       community         Fa5/3, Fa5/25
2       302       community
2       303       community         Fa5/3, Po63
        10        community
100     101       isolated
150     151       non-operational
        202       community
        303       twoway-community
401     402       non-operational
Switch#
```

Note   A blank Primary value indicates that no association exists.

This example shows how to display information about all currently configured private VLAN types:

```
Switch# show vlan private-vlan type

Vlan Type
---- ----------------
202  primary
303  community
304  community
305  community
306  community
307  community
308  normal
309  community
440  isolated
Switch#
```

Table 2-42 describes the fields in the **show vlan private-vlan** command output.

Table 2-42   show vlan private-vlan Command Output Fields

Field	Description
Primary	Number of the primary VLAN.
Secondary	Number of the secondary VLAN.
Secondary-Type	Secondary VLAN type is **isolated or community.**
Ports	Indicates the ports within a VLAN.
Type	Type of VLAN; possible values are **primary, isolated**, community, nonoperational, or **normal**.

Related Commands	Command	Description
	private-vlan	Configures private VLANs and the association between a private VLAN and a secondary VLAN.
	private-vlan mapping	Creates a mapping between the primary and the secondary VLANs so that both share the same primary VLAN SVI.

show vlan remote-span

To display a list of Remote SPAN (RSPAN) VLANs, use the **show vlan remote-span** command.

show vlan remote-span

Syntax Description   This command has no arguments or keywords.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(12)EW	This command was introduced on the Catalyst 4500 Series Switches.

Examples   This example shows how to display a list of RSPAN VLANs:

```
Router# show vlan remote-span
Remote SPAN VLANs
------------------------------------------------------------------------
2,20
```

Related Commands

Command	Description
remote-span	Converts a VLAN into an RSPAN VLAN.
vlan (VLAN Database mode)	Configures a specific VLAN.

show vmps

To display the VLAN Query Protocol (VQP) version, reconfirmation interval, retry count, VLAN Membership Policy Server (VMPS) IP addresses, current servers, and primary servers, use the **show vmps** command.

show vmps [**statistics**]

Syntax Description	
statistics	(Optional) Displays the client-side statistics.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
12.1(13)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Examples

This is an example of output from the **show vmps** command:

```
Switch# show vmps
VQP Client Status:
--------------------
VMPS VQP Version:   1
Reconfirm Interval: 60 min
Server Retry Count: 3
VMPS domain server: 172.20.50.120 (primary, current)

Reconfirmation status
--------------------
VMPS Action:        No Dynamic Port
Switch#
```

This is an example of output from the **show vmps statistics** command:

```
Switch# show vmps statistics
VMPS Client Statistics
----------------------
VQP  Queries:            0
VQP  Responses:          0
VMPS Changes:            0
VQP  Shutdowns:          0
VQP  Denied:             0
VQP  Wrong Domain:       0
VQP  Wrong Version:      0
VQP  Insufficient Resource: 0
Switch#
```

Related Commands

Command	Description
vmps reconfirm (privileged EXEC)	Sends VLAN Query Protocol (VQP) queries to reconfirm all the dynamic VLAN assignments with the VLAN Membership Policy Server (VMPS).

show vslp (virtual switch)

To display Virtual Switch Link Protocol (VSLP) instance information, use the **show vslp** command in EXEC mode.

show vslp {**lmp** | **rrp** [*type*]} | {**instances** | **lmp** [*type*] | **packet** [**counters**] | **rrp** [*type*]}

Syntax Description

lmp	Specifies the Link Maintenance Protocol (LMP) information.
rrp	Specifies the Role Resolution Protocol (RRP) information.
type	Specifies the type of information; see the "Usage Guidelines" section for valid values.
instances	Displays the VSLP instance mappings.
packet	Displays the VSLP packet information.
counters	(Optional) Displays the VSLP packet counter information.

Defaults

This command has no default settings.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
Cisco IOS XE 3.4.0SG and 15.1(2)SG	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines

The valid values for the *type* argument are as follows:

- **counters**—Displays counter information.
- **detail**—Displays detailed information.
- **fsm**—Displays Finite State Machine (FSM) information.
- **neighbors**—Displays neighbor information (supported with the *lmp* keyword only).
- **status**—Displays status information.
- **summary**—Displays a summary of information.
- **timer**—Displays Tx and Rx hello timer values.

The timers already displayed in the show vslp lmp timers output are shown in the output of the show vslp lmp summary command.

The output of the **show vslp rrp detail** command includes the information from the following commands:

- **show vslp rrp summary**
- **show vslp rrp counters**
- **show vslp rrp fsm**

Examples   The following example shows how to display a summary of LMP information for a specific VSLP instance.

```
Router# show vslp 2 lmp summary
  LMP summary
    Link info:         Configured: 2        Operational: 0
                                Peer Peer              Peer  Peer   Timer(s) running
Port    Flag State        Flag MAC               Swtch Port   (Time remaining)
-----------------------------------------------------------------------------------
 4/1    v   link_down      -   -                   -    -
 4/2    v   link_down      -   -                   -    -
Router#
```

The following example shows how to displays the VSLP instance mappings.

```
Router# show vslp instances
VSLP instance mappings:
Instance Num  Name                                   Switch Num   Flag
--------------------------------------------------------------------------
2             VSL                                    2            0x00000001
Router#
```

The following example shows how to display LMP neighbor information:

```
Router# show vslp 2 lmp neighbors
  LMP neighbors
    Peer Group info:        # Groups: 0
Router#
```

The following example shows how to display a summary of LMP information:

```
Router# show vslp lmp summary
Instance #1:
LMP summary
Link info:        Configured: 3        Operational: 1
                                Peer Peer           Peer   Peer      Timer(s) running
 Interface  Flag State        Flag MAC            Switch Interface   (Time remaining)
--------------------------------------------------------------------------------
 Gi1/3/1    v   link_down      -   -                -    -
 Gi1/5/4    vf  operational    vf  0013.5fcb.1480 2    Gi1/6/4    T4(240ms) T5(2.22s)
 Gi1/5/5    v   link_down      -   -                -    -
Flags:  V - valid        f -> B - bidirectional
```

The following examples shows how to display the LMP Tx and Rx hello timer values:

```
Router# show vslp lmp timer
Instance #1:
  LMP hello timer
                          Hello Tx (T4) ms        Hello Rx (T5*) ms
Interface    State       Cfg    Cur    Rem       Cfg    Cur    Rem
--------------------------------------------------------------------
Gi1/9/1      link_down   1000   -      -         500000 -      -
Gi1/9/3      link_down   1000   -      -         500000 -      -
Gi1/9/5      link_down   1000   -      -         500000 -      -
Router#
```

The following example shows how to display VSLP packet information:

```
Router# show vslp packet
VSLP packet counters
  Transmitted:
    total      = 1543
    error      = 0
    err_cksum  = 0
    eobc       = 0
```

```
    ibc         = 0
    eobc[LMP]   = 0
    eobc[RRP]   = 0
    eobc[PING]  = 0
  Received:
    total       = 1564
    error       = 0
    err_cksum   = 0
    eobc        = 1564
    ibc         = 0
    total[LMP]  = 0
    total[RRP]  = 0
    total[PING] = 0
    eobc[LMP]   = 1559
    eobc[RRP]   = 5
    eobc[PING]  = 0
Router#
```

The following example shows how to display VSLP packet counter information:

```
Router# show vslp packet counters
VSLP packet counters
  Transmitted:
    total       = 28738
    error       = 0
    err_cksum   = 0
    eobc             = 28738
      eobc[LMP]  = 28701
      eobc[RRP]  = 17
      eobc[PING] = 20
    ibc              = 0
      ibc[LMP]     = 0
      ibc[RRP]     = 0
      ibc[PING]    = 0
  Received:
    total       = 28590
    error       = 0
    err_cksum   = 0
    eobc             = 28590
      eobc[LMP]  = 28552
      eobc[RRP]  = 18
      eobc[PING] = 20
    ibc              = 0
      ibc[LMP]     = 0
      ibc[RRP]     = 0
      ibc[PING]    = 0
Router#
```

The following example shows how to display a summary of RRP information:

```
Router# show vslp rrp summary
RRP information for Instance 1
-------------------------------
Valid  Flags  Peer      Preferred  Reserved
              Count     Peer       Peer
-------------------------------------------------
TRUE    V      1         1          1
Switch    Peer  Switch   Status  Preempt  Priority  Role     Local   Remote
          Group Number                                       SID     SID
----------------------------------------------------------------------
Local    0     1     UP      TRUE     200       ACTIVE   0       0
Remote   1     2     UP      FALSE    100       STANDBY  9272    271
Flags:  V - valid
```

show vtp

To display VTP statistics and domain information, use the **show vtp** command.

> **show vtp** {**counters** | **status**}

Syntax Description

counters	Specifies the VTP statistics.
status	Specifies the VTP domain status.

Defaults   This command has no default settings.

Command Modes   Privileged EXEC mode

Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Examples   This example shows how to display the VTP statistics:

```
Switch# show vtp counters
VTP statistics:
Summary advertisements received    : 1
Subset advertisements received     : 1
Request advertisements received    : 0
Summary advertisements transmitted : 31
Subset advertisements transmitted  : 1
Request advertisements transmitted : 0
Number of config revision errors   : 0
Number of config digest errors     : 0
Number of V1 summary errors        : 0

VTP pruning statistics:

Trunk            Join Transmitted Join Received    Summary advts received from
                                                   non-pruning-capable device
---------------- ---------------- ---------------- --------------------------
Fa5/9            1555             1564             0
Switch#
```

This example shows how to display the VTP domain status:

```
Switch# show vtp status
VTP Version                  : 2
Configuration Revision       : 250
Maximum VLANs supported locally : 1005
Number of existing VLANs     : 33
VTP Operating Mode           : Server
VTP Domain Name              : Lab_Network
VTP Pruning Mode             : Enabled
VTP V2 Mode                  : Enabled
VTP Traps Generation         : Disabled
```

```
MD5 digest                     : 0xE6 0xF8 0x3E 0xDD 0xA4 0xF5 0xC2 0x0E
Configuration last modified by 172.20.52.18 at 9-22-99 11:18:20
Local updater ID is 172.20.52.18 on interface Vl1 (lowest numbered VLAN interfac
e found)
Switch#
```

This example shows how to display only those lines in the **show vtp** output that contain the word Summary:

```
Switch# show vtp counters | include Summary
Summary advertisements received    : 1
Summary advertisements transmitted : 32
Trunk            Join Transmitted Join Received    Summary advts received from
Switch#
```

Table 2-43 describes the fields in the **show vtp** command output.

Table 2-43   show vtp Command Output Fields

Field	Description
Summary advertisements received	Total number of summary advertisements received.
Subset advertisements received	Total number of subset advertisements received.
Request advertisements received	Total number of request advertisements received.
Summary advertisements transmitted	Total number of summary advertisements transmitted.
Subset advertisements transmitted	Total number of subset advertisements transmitted.
Request advertisements transmitted	Total number of request advertisements transmitted.
Number of config revision errors	Number of config revision errors.
Number of config digest errors	Number of config revision digest errors.
Number of V1 summary errors	Number of V1 summary errors.
Trunk	Trunk port participating in VTP pruning.
Join Transmitted	Number of VTP-Pruning Joins transmitted.
Join Received	Number of VTP-Pruning Joins received.
Summary advts received from non-pruning-capable device	Number of Summary advertisements received from nonpruning-capable devices.
Number of existing VLANs	Total number of VLANs in the domain.
Configuration Revision	VTP revision number used to exchange VLAN information.
Maximum VLANs supported locally	Maximum number of VLANs allowed on the device.
Number of existing VLANs	Number of existing VLANs.
VTP Operating Mode	Indicates whether VTP is enabled or disabled.
VTP Domain Name	Name of the VTP domain.
VTP Pruning Mode	Indicates whether VTP pruning is enabled or disabled.
VTP V2 Mode	Indicates the VTP V2 mode as server, client, or transparent.
VTP Traps Generation	Indicates whether VTP trap generation mode is enabled or disabled.
MD5 digest	Checksum values.

Related Commands

Command	Description
vtp (global configuration mode)	Modifies the name of a VTP configuration storage file.
vtp client	Places a device in VTP client mode.
vtp domain	Configures the administrative domain name for a device.
vtp password	Creates a VTP domain password.
vtp pruning	Enables pruning in the VLAN database.
vtp server	Places the device in VTP server mode.
vtp transparent	Places device in VTP transparent mode.
vtp v2-mode	Enables version 2 mode.
