

Cisco CompactFlash Adapter for Bootflash Upgrade Installation Note

Product Numbers: WS-CF-UPG=, CF-ADAPTER=, WS-CF-UPG-1GB=

This publication describes how to replace the switch processor (SP) bootflash memory module (DIMM) with CompactFlash on the Supervisor Engine 720. The WS-CF-UPG= and the CF-ADAPTER= support a 512 MB CompactFlash card; the WS-CF-UPG-1GB= supports a 1 GB CompactFlash card.

Contents

This publication consists of these sections:

- [Obtaining Documentation and Submitting a Service Request, page 33](#)

Note

For translations of the warnings in this publication, see the “[Safety Warning Translations](#)” section on [page 27](#).

The CompactFlash adapter (see [Figure 1](#)) is a device that plugs into the SP bootflash DIMM socket on the Supervisor Engine 720. This device expands the amount of bootflash memory that is available. The kits contain a CompactFlash adapter with the CompactFlash installed. The CompactFlash adapter contains a Cisco IOS image (12.2(18)SXE5 or greater). See your Cisco IOS release notes for the exact release information.

Note

The CompactFlash adapter is not supported in systems that run the Catalyst operating system.

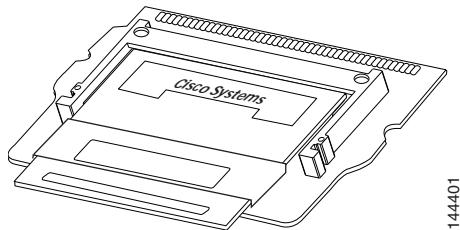

Americas Headquarters:

Cisco Systems, Inc., 170 West Tasman Drive, San Jose, CA 95134-1706 USA

This upgrade is applicable only for the SP bootflash; it is independent from the SP DRAM.

Safety Overview

Safety warnings appear throughout this publication in procedures that may harm you if performed incorrectly. A warning symbol precedes each warning statement.

Statement 1071—Warning Definition

Warning

IMPORTANT SAFETY INSTRUCTIONS

This warning symbol means danger. You are in a situation that could cause bodily injury. Before you work on any equipment, be aware of the hazards involved with electrical circuitry and be familiar with standard practices for preventing accidents. Use the statement number provided at the end of each warning to locate its translation in the translated safety warnings that accompanied this device.

Tento varovný symbol označuje nebezpečenstvo. Nachádzate sa v situácii s nebezpečenstvom úrazu. Pred prácou na akomkoľvek vybavení si uvedomte nebezpečenstvo súvisiace s elektrickými obvodmi a oboznámte sa so štandardnými opatreniami na predchádzanie úrazom. Podľa čísla na konci každého upozornenia vyhľadajte jeho preklad v preložených bezpečnostných upozorneniach, ktoré sú priložené k zariadeniu.

USCHOVAJTE SI TENTO NÁVOD

Installing the SP Bootflash Memory Upgrade Kit

The SP memory upgrade procedure is divided into the following tasks:

- [Verifying the SP ROMMON Version, page 8](#)
- [Upgrading and Verifying the SP ROMMON Image, page 8](#)
- [Removing the Supervisor Engine 720, page 10](#)
- [Installing the CompactFlash Adapter, page 13](#)
- [Reinstalling the Supervisor Engine 720, page 16](#)

If your system has redundant supervisor engines, you need to install the SP memory upgrade on both supervisor engines. To install the SP memory upgrade on both supervisor engines:

- Perform the SP Bootflash memory upgrade procedure on the current standby supervisor engine.
- Perform a manual supervisor engine switchover, switching the upgraded standby supervisor engine to active and the active supervisor engine to standby.
- Perform the SP Bootflash memory upgrade procedure on the current standby supervisor engine.
- If necessary, perform a manual supervisor engine switchover to restore the original redundant supervisor engine configuration.

Verifying the SP ROMMON Version

An SP ROMMON upgrade may be required to support the CompactFlash adapter; you must determine what SP ROMMON release is installed on the Supervisor Engine 720 prior to performing an SP ROMMON upgrade. The minimum SP ROMMON release required is 8.4(2). To determine the currently running SP ROMMON release, enter the **remote command switch show version | include ROM** command

If your system is running SP ROMMON Release 8.4(2) or a later release, you can continue on to “[Removing the Supervisor Engine 720](#)” section on page 10. If your SP ROMMON release is earlier than 8.4(2), you must upgrade the SP ROMMON image. Go to the “[Upgrading and Verifying the SP ROMMON Image](#)” section on page 8.

Upgrading and Verifying the SP ROMMON Image

In order to utilize the SP CompactFlash adapter, your Supervisor Engine 720 must have SP ROMMON Release 8.4(2) or a later release installed on it.

Note The upgrade task description is based on the Supervisor Engine 720 installed in a 9-slot chassis currently running ROMMON from its S (Gold) region; the ROMMON upgrade to support the CompactFlash adapter will be done in the F1 region.

To upgrade your SP ROMMON, perform these steps:

-
- Step 1** Download the latest SP ROMMON (c6ksup3-rm2.srec.8.4.2) from cisco.com and copy it to any of the following locations: sup-bootflash:, bootflash:, disk0:, or disk1: by entering this URL:

<http://www.cisco.com/cgi-bin/tablebuild.pl/cat6000-rommon>

- Step 2** Display the SP ROMMON image status by entering the **show rom-monitor slot 5 sp** command

- Note** The system responds with a message indicating that SP is: “Currently running ROMMON from the S (Gold) region.”
-

- Step 3** Verify that the necessary SP ROMMON version is present by entering the **dir {sup-bootflash:|bootflash:|disk 0:|disk 1:}** command.

- Step 4** Upgrade the SP ROMMON image by entering the **upgrade rom-monitor slot 5 sp file {sup-bootflash:|bootflash:|disk 0:|disk 1:} c6ksup3-rm2.srec.8.4.2** command.

- Note** Slot 5 indicates the slot number of the supervisor engine to be upgraded; the supervisor engine can be installed in either slot 5, slot 6, or in both slots.
-

Reload the switch by entering the **reload** command. At the prompt, type **Y** to confirm and press **Enter**.

- Note** Do not perform a Reset.
-

- Step 5** Boot the Cisco IOS software from the boot device. At this point the SP ROMMON upgrade process is complete; the next steps are used to verify that the upgrade has been completed correctly.

- Step 6** Enter privileged EXEC mode by entering the **enable** command

- Step 7** Display the SP ROMMON image status by entering the **show rom-monitor slot 5 sp**

- Note** The system responds with a message indicating that SP is “Currently running ROMMON from F1 region.”
-

- Step 8** Verify the SP ROMMON version by entering the **remote command switch show version | include ROM** command.

- Note** You should see “ROM: System Bootstrap, Version 8.4(2).”
-

Removing the Supervisor Engine 720

Warning

Only trained and qualified personnel should be allowed to install, replace, or service this equipment.
Statement 1030

The following tools are required to perform the bootflash upgrade kit installation:

- 3/16-inch flat-blade screwdriver for the captive installation screws on the supervisor engine
- Antistatic mat or foam pad to support and protect the removed supervisor engine
- Your own ESD-prevention equipment or the disposable grounding wrist strap included with all upgrade kits, field-replaceable units (FRUs), and spares

Warning

Blank faceplates and cover panels serve three important functions: they prevent exposure to hazardous voltages and currents inside the chassis; they contain electromagnetic interference (EMI) that might disrupt other equipment; and they direct the flow of cooling air through the chassis. Do not operate the system unless all cards, faceplates, front covers, and rear covers are in place.
Statement 1029

Warning

Hazardous voltage or energy is present on the backplane when the system is operating. Use caution when servicing.
Statement 1034

Caution

Always use an ESD wrist strap when handling the Supervisor Engine 720 or coming in contact with internal components.

To remove the supervisor engine, follow these steps:

Step 1 Power down your system.

Step 2 Disconnect any network interface cables attached to the supervisor engine.

Step 3 Attach an ESD grounding strap to your wrist and to ground. (If you are unsure about the correct way to attach an ESD grounding strap, see the “[Attaching Your ESD Grounding Strap](#)” section on page 24 for instructions.)

Step 4 Verify that the captive installation screws on all of the modules in the chassis are tight. This step ensures that the space created by the removed module is maintained.

Note If the captive installation screws are loose, the EMI gaskets on the installed modules will push the modules toward the open slot, reducing the opening size and making it difficult to reinstall the module.

Step 5 Loosen the two captive screws on the supervisor engine that is to be removed.

Step 6 Depending on the orientation of the slots in the chassis (horizontal or vertical), perform one of the following two sets of steps:

Horizontal slots

- a. Place your thumbs on the left and right ejector levers, and simultaneously rotate the levers outward to unseat the supervisor engine from the backplane connector. (See [Figure 2](#).)
- b. Grasp the front edge of the supervisor engine, and slide the supervisor engine partially out of the slot. Place your other hand under the supervisor engine to support the weight of the module. Do not touch the module circuitry. (See [Figure 3](#).)

Vertical slots

- a. Place your thumbs on the ejector levers located at the top and bottom of the supervisor engine, and simultaneously rotate the levers outward to unseat the supervisor engine from the backplane connector.
- b. Grasp the edges of the supervisor engine, and slide the supervisor engine straight out of the slot. Do not touch the module circuitry.

Step 7 Immediately place the supervisor engine on an antistatic mat or antistatic foam.

Figure 2 Opening the Ejector Levers (Horizontal Chassis Shown)

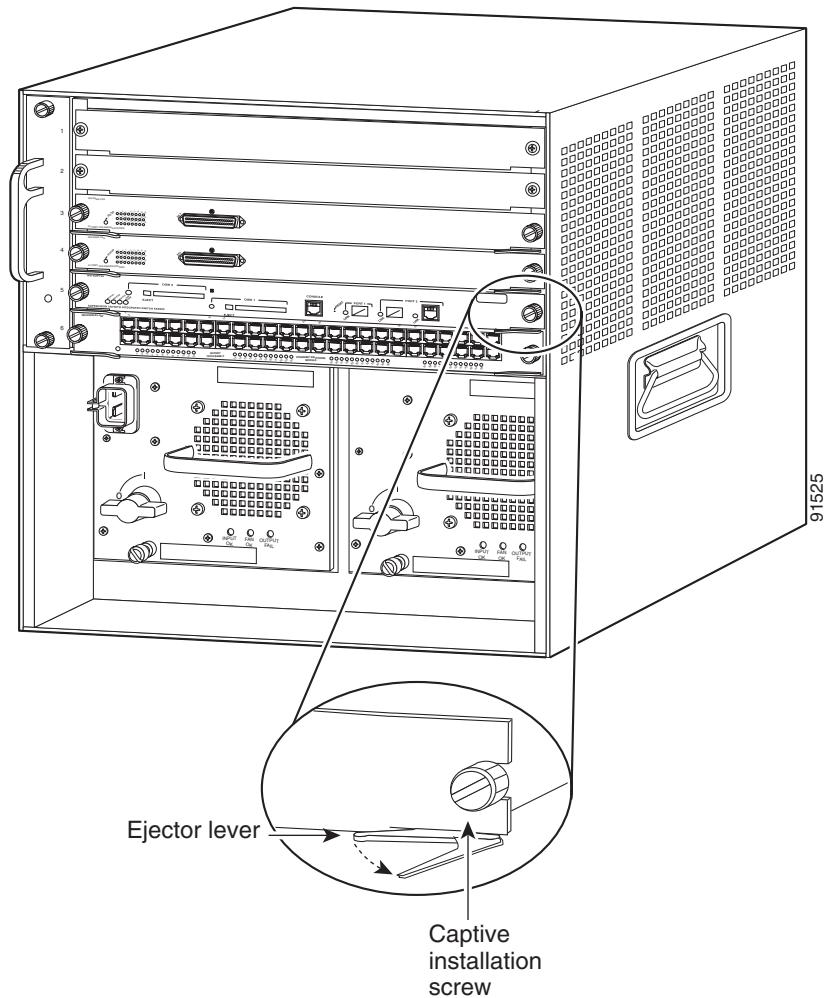

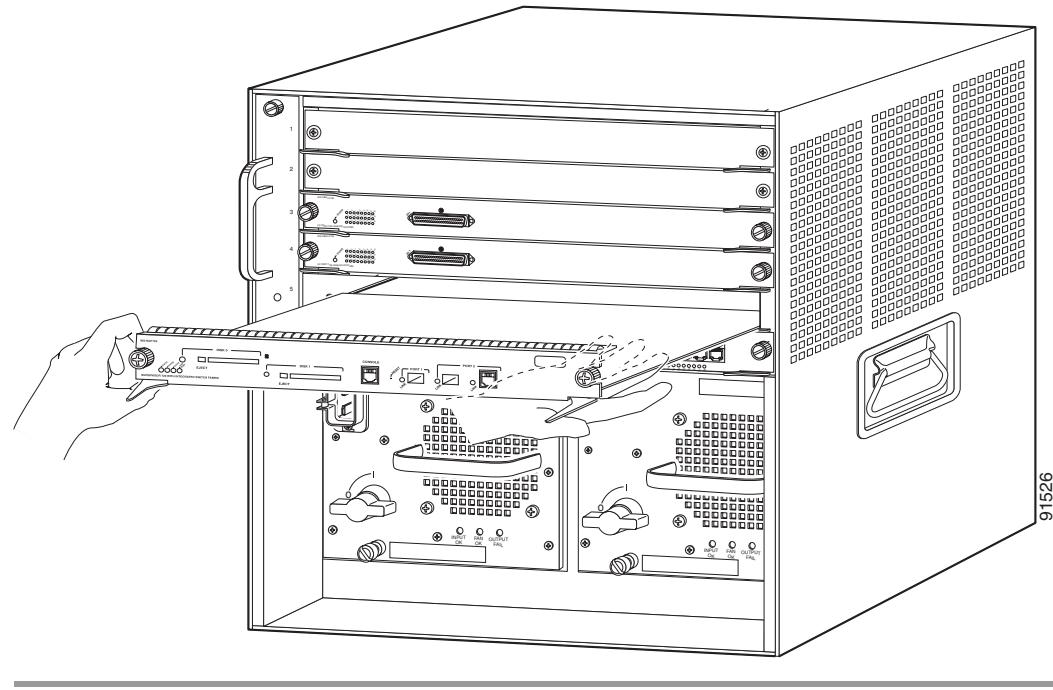

Figure 3 Removing the Module from the Chassis (Horizontal Chassis Shown)

Installing the CompactFlash Adapter

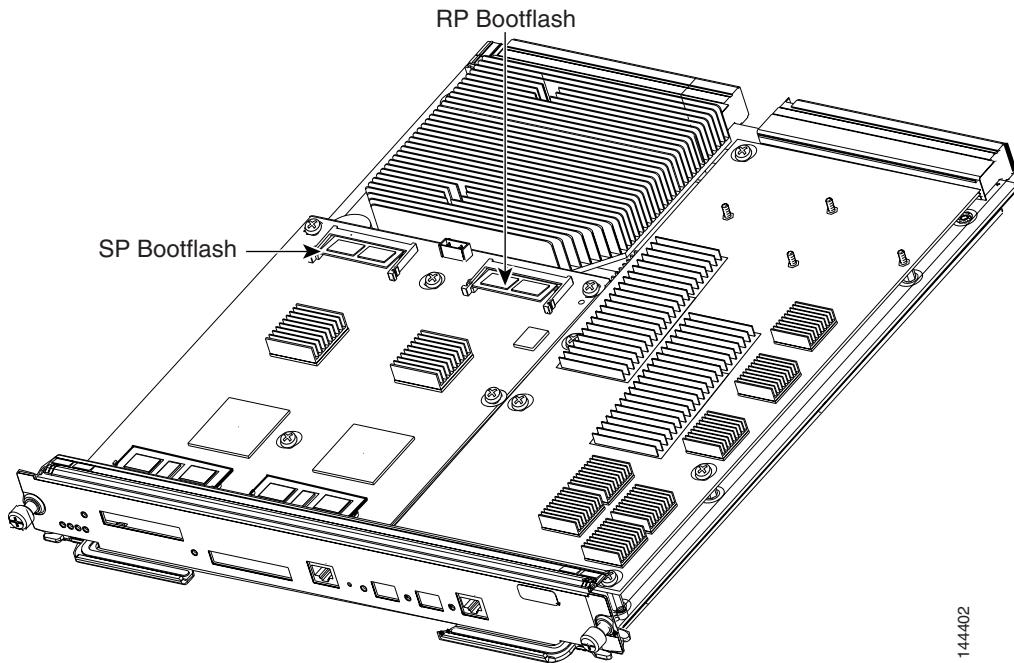

To install the CompactFlash adapter, follow these steps:

- Step 1** Locate the SP BOOTFLASH DIMM socket on the Supervisor Engine 720. (See [Figure 4](#).) The SP BOOTFLASH DIMM is on the left side of the Supervisor Engine 720 as you face the front of the board; the RP BOOTFLASH DIMM is on the right side of the Supervisor Engine 720 as you face the front of the board.

- Note** The DIMM is a sensitive component that is susceptible to ESD damage. To prevent ESD damage, wear an ESD grounding wrist strap and handle the DIMM by the edges only; avoid touching the memory modules, pins, or traces (including the metal *fingers* along the connector edge of the DIMM). Attach an ESD grounding strap to your wrist and to ground. (If you are unsure about the correct way to attach an ESD grounding strap, see the “[Attaching Your ESD Grounding Strap](#)” section on page 24 for instructions.)

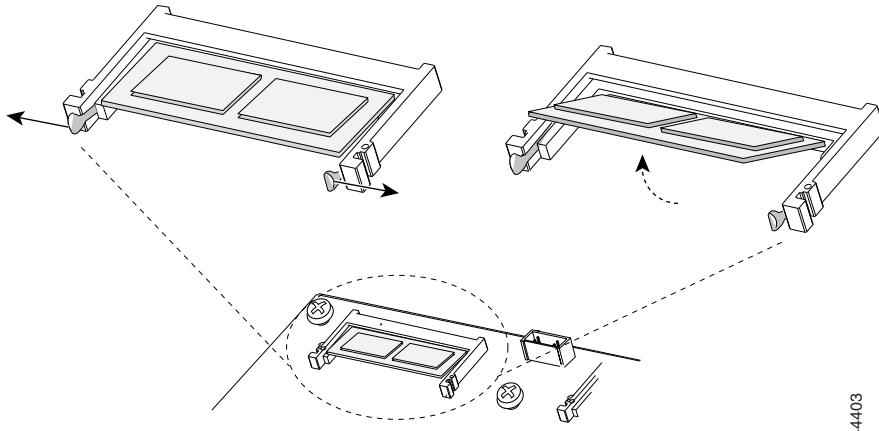

Figure 4 SP and RP DIMM Locations on the Supervisor Engine 720

144402

- Step 2** Release the SP DIMM from the socket by simultaneously releasing the two locking spring clip tabs on either side of the DIMM socket. (See [Figure 5](#), left view.) The DIMM will flip up in the socket. (See [Figure 5](#), right view.)
- Step 3** Hold the DIMM by its edges and carefully remove it from the DIMM socket.

Figure 5 Removing the DIMM

144403

- Step 4** Immediately place the DIMM in an antistatic bag.

Step 5 Open the antistatic bag containing the SP CompactFlash adapter.

Note The SP CompactFlash adapter has a label attached to the CompactFlash identifying it as the SP CompactFlash adapter.

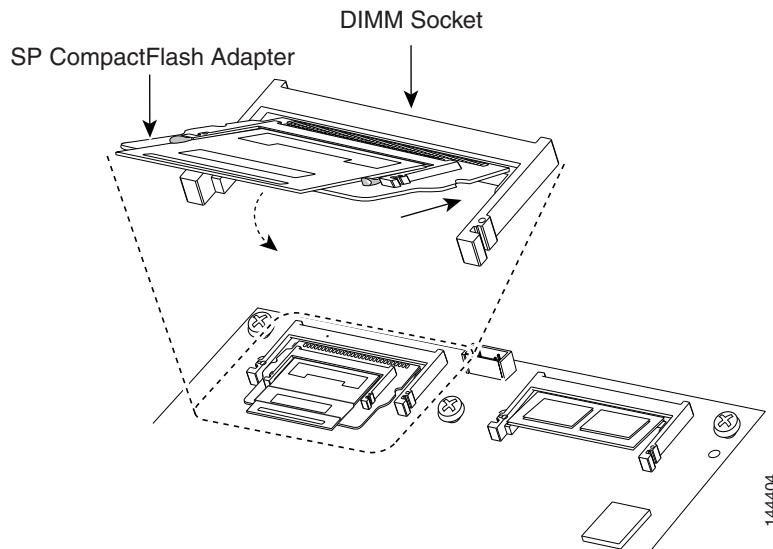

Step 6 Carefully align the CompactFlash adapter edge connector with the DIMM socket. Slide the CompactFlash adapter edge connector at an angle into the socket. (See [Figure 6](#).)

Note Make sure that the CompactFlash adapter edge connector is fully inserted into the DIMM socket.

Step 7 Press down firmly on both edges of the CompactFlash adapter until the CompactFlash adapter latches into place. Visually verify that both locking spring clips are fully engaged over the edges of the CompactFlash adapter. (See [Figure 6](#).)

Figure 6 *Installing the CompactFlash Adapter*

You are now ready to reinstall the Supervisor Engine 720 into the switch chassis.

Reinstalling the Supervisor Engine 720

Caution During this procedure, wear grounding wrist straps and handle modules by the carrier edges only to avoid ESD damage to the card.

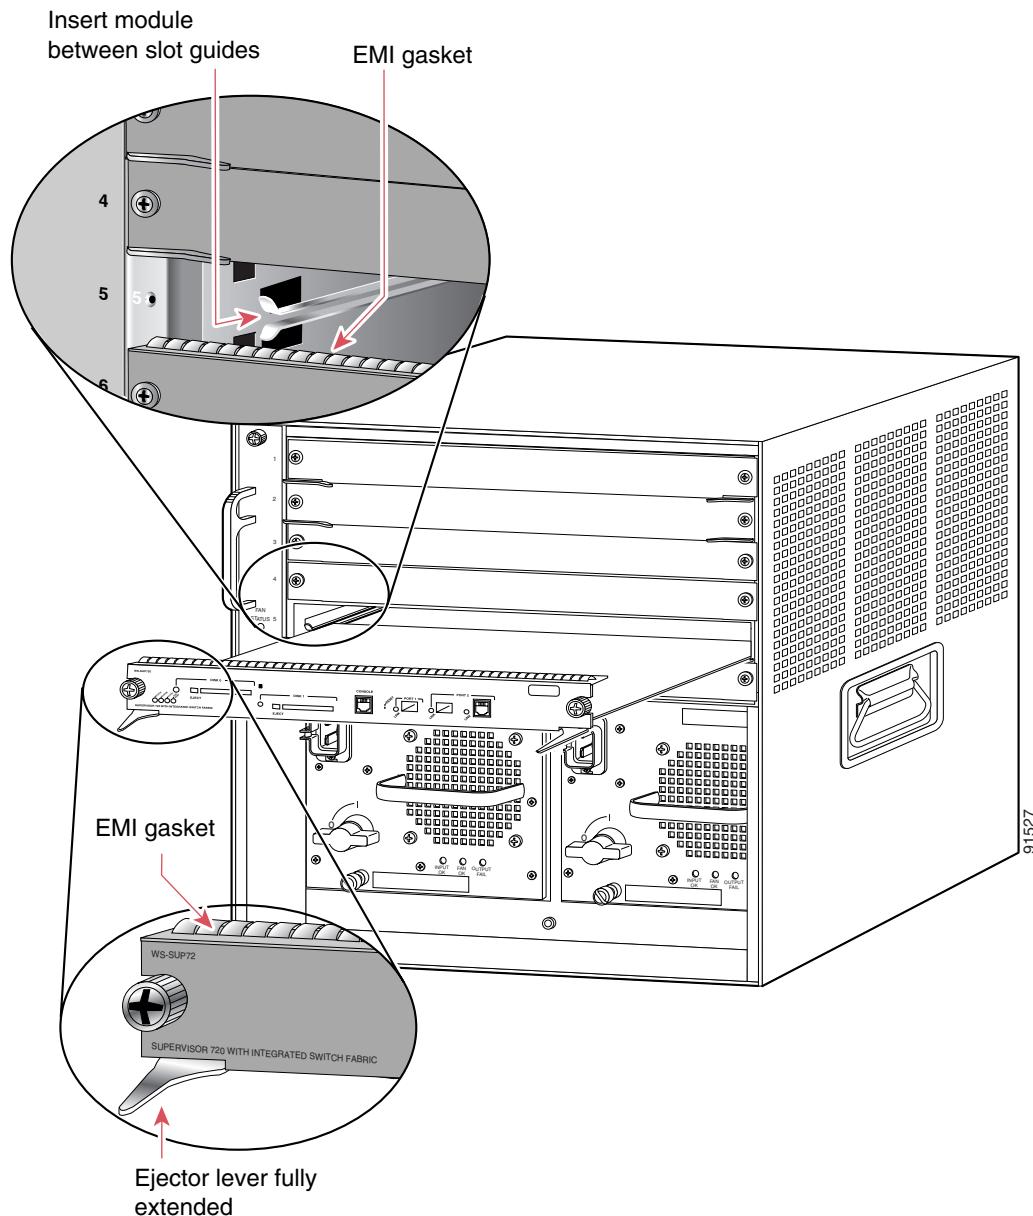

To reinstall the Supervisor Engine 720 in the chassis, follow these steps:

-
- Step 1** Attach an ESD grounding strap to your wrist and to ground. (If you are unsure about the correct way to attach an ESD grounding strap, see the “[Attaching Your ESD Grounding Strap](#)” section on page 24 for instructions.)
- Step 2** Verify that the captive installation screws are tightened on all modules installed in the chassis. This action assures that the EMI gaskets on all modules are fully compressed in order to maximize the opening space for the removed module.

Note If the captive installation screws are loose, the EMI gaskets on the installed modules will push adjacent modules toward the open slot, reducing the opening size and making it difficult to install the removed module.

-
- Step 3** Fully open both ejector levers on the supervisor engine that is being installed. (See [Figure 7](#).)

Figure 7 Positioning the Module in a Horizontal Slot Chassis

- Step 4** Depending on the orientation of the slots in the chassis (horizontal or vertical), perform one of the following two sets of steps:

Horizontal slots

- a. Position the supervisor engine in the slot. (See [Figure 7](#).) Make sure that you align the sides of the module carrier with the slot guides on each side of the slot.
- b. Carefully slide the supervisor engine into the slot until the EMI gasket along the top edge of the module makes contact with the module in the slot above it and both ejector levers have closed to approximately 45 degrees with respect to the module faceplate. (See [Figure 8](#).)
- c. Using the thumb and forefinger of each hand, grasp the two ejector levers and press down to create a small 0.040 inch (1 mm) gap between the supervisor engine's EMI gasket and the module above it. (See [Figure 8](#).)

Note Do not press down too forcefully on the levers because they will bend and be damaged.

- d. While pressing down, simultaneously close the left and right ejector levers to fully seat the supervisor engine in the backplane connector. The ejector levers are fully closed when they are flush with the module faceplate. (See [Figure 8](#).)

Note Failure to fully seat the module in the backplane connector can result in error messages.

- e. Tighten the two captive installation screws on the supervisor engine.

Note Make sure that the ejector levers are fully closed before tightening the captive installation screws.

- f. Power up your system.

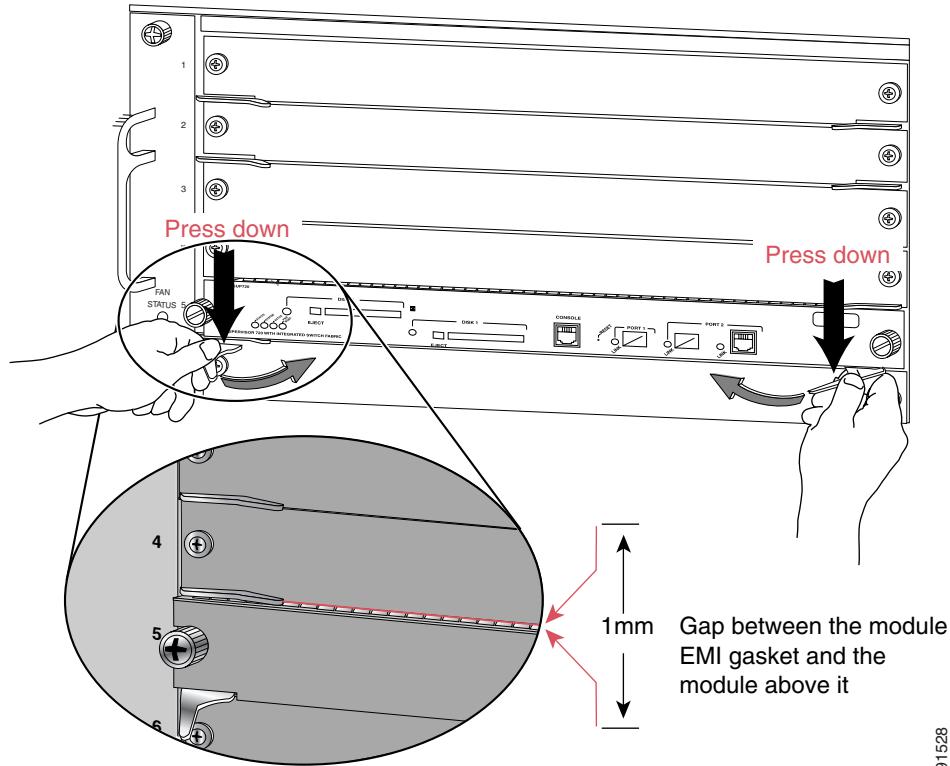

Note Depending on how your system bootstrap is configured, your system might stay in ROMMON. To boot the system from the CF adapter, enter the **boot bootdisk**: command. Once you install the CF adapter, you must define the Cisco IOS bootstrap as **boot system flash sup-bootdisk:[image name]**.

With SP ROMMON Release 8.4(2), the bootstrap has to be defined as sup-bootdisk:. SP ROMMON releases later than 8.4(2) only accept the bootstrap defined as sup-bootflash:.

- g. Verify that the Supervisor Engine 720 STATUS LED is lit.

Periodically check the STATUS LED. If the STATUS LED changes from orange to green, the module has successfully completed the boot process and is now online.

If the STATUS LED remains orange or turns red, the supervisor engine has not successfully completed the boot process and may have encountered an error.

Figure 8 Clearing the EMI Gasket in a Horizontal Slot Chassis

91528

Vertical slots

- Position the supervisor engine in the slot. (See [Figure 9](#).) Make sure that you align the sides of the module carrier with the slot guides on the top and bottom of the slot.
- Carefully slide the supervisor engine into the slot until the EMI gasket along the right edge of the module makes contact with the module in the slot adjacent to it and both ejector levers have closed to approximately 45 degrees with respect to the module faceplate. (See [Figure 10](#).)

Figure 9 Positioning the Module in a Vertical Slot Chassis

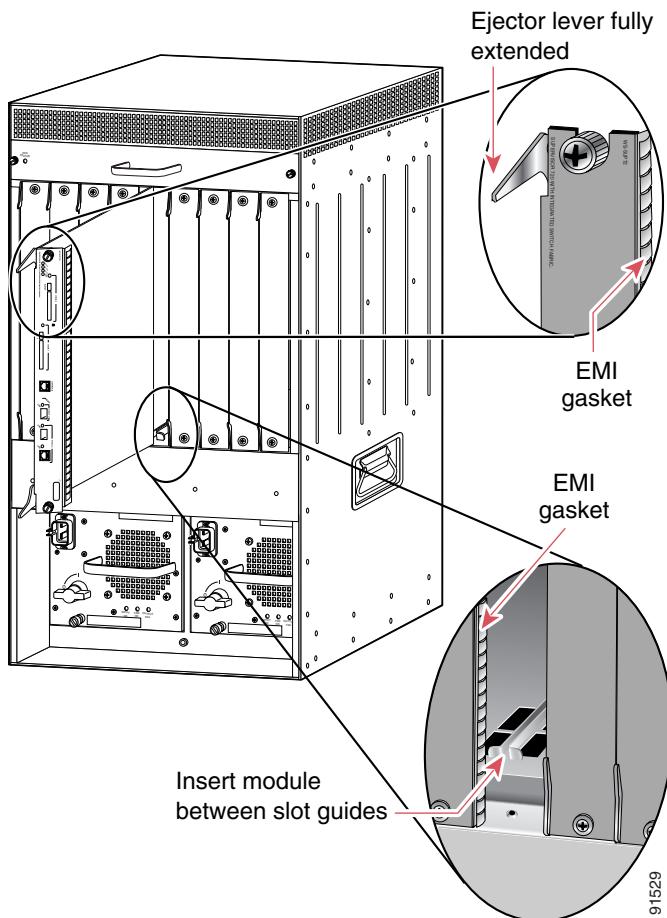

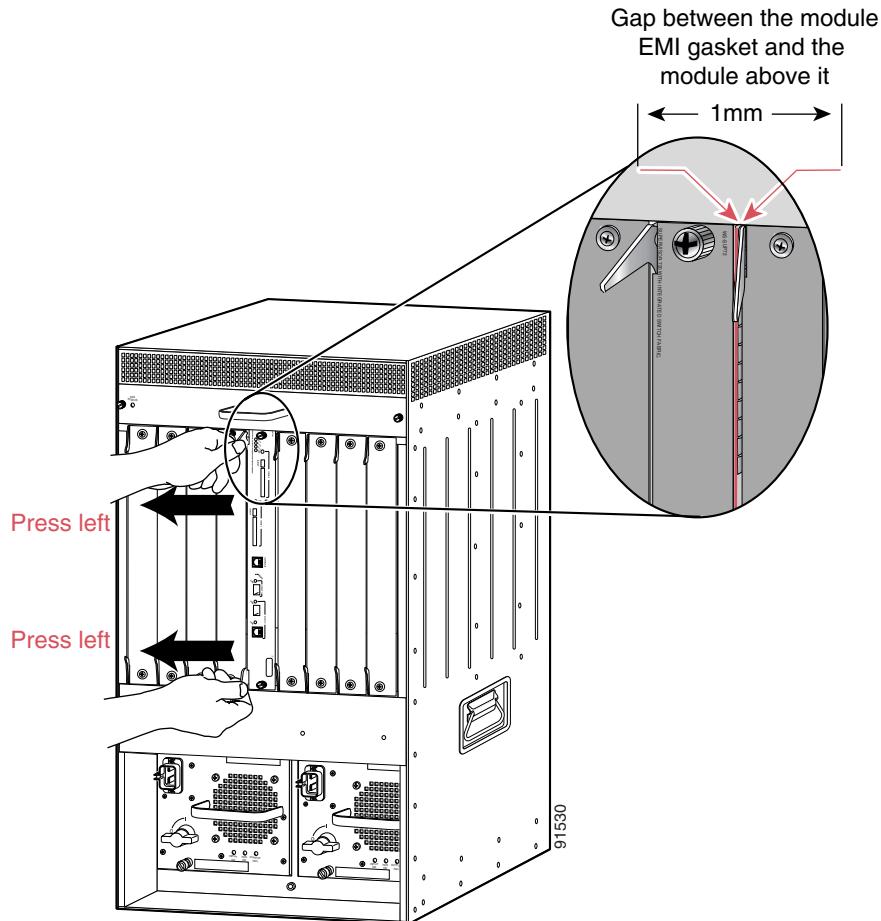

Figure 10 *Clearing the EMI Gasket in a Vertical Slot Chassis*

- c. Using the thumb and forefinger of each hand, grasp the two ejector levers and exert a slight pressure to the left, deflecting it approximately 0.040 inches (1 mm) creating a small gap between the supervisor engine's EMI gasket and the module adjacent to it. (See [Figure 10](#).)

Note Do not exert too much pressure on the ejector levers because they will bend and be damaged.

- d. While pressing down on the ejector levers, simultaneously close the levers to fully seat the supervisor engine in the backplane connector. The ejector levers are fully closed when they are flush with the module faceplate.
- e. Tighten the two captive installation screws on the supervisor engine.

Note Make sure that the ejector levers are fully closed before tightening the captive installation screws.

- f. Power up your system.

Note

Depending on how your system bootstrap is configured, your system might stay in ROMMON. To boot the system from the CF adapter, enter the **boot bootdisk:** command. Once you install the CF adapter, you must define the Cisco IOS bootstrap as **boot system flash sup-bootdisk:[image name]**

With SP ROMMON Release 8.4(2), the bootstrap has to be defined as sup-bootdisk:. SP ROMMON releases later than 8.4(2) only accept the bootstrap defined as sup-bootflash:.

- g. Verify that the Supervisor Engine 720 STATUS LED is lit. Periodically check the STATUS LED. If the STATUS LED changes from orange to green, the module has successfully completed the boot process and is now online.
If the STATUS LED remains orange or turns red, the supervisor engine has not successfully completed the boot process and may have encountered an error.

Removing and Installing the CompactFlash in the CompactFlash Adapter

CompactFlash is normally shipped already installed in the CompactFlash adapter. However, there might be occasions when you will need to replace a defective CompactFlash or swap an existing CompactFlash for a larger capacity device.

To remove the CompactFlash from the adapter, follow these steps:

Step 1 Remove the Supervisor Engine 720 from the system chassis. See the “[Removing the Supervisor Engine 720](#)” section on page 10.

Step 2 Place the Supervisor Engine 720 on an antistatic mat.

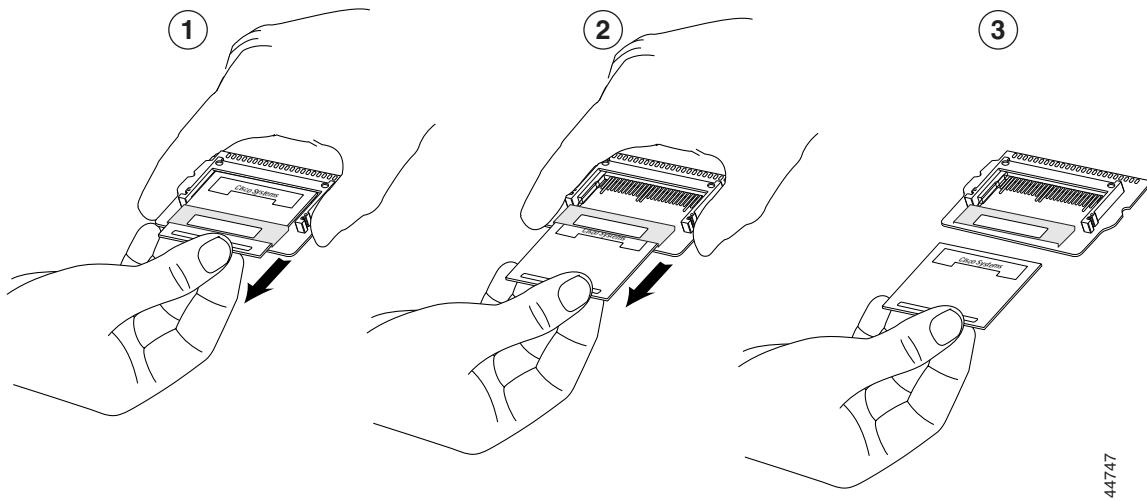

Caution Do not remove the CompactFlash from the CompactFlash adapter while the adapter is installed in the DIMM socket; you must remove the CompactFlash adapter first.

Step 3 Release the CompactFlash adapter from the DIMM socket by simultaneously releasing the two locking spring clips on either side of the DIMM socket. The CompactFlash adapter will flip up in the socket.

Step 4 Hold the CompactFlash adapter by its edges and carefully remove it from the DIMM socket.

Step 5 Holding the CompactFlash adapter in one hand as shown in [Figure 11](#), grasp the CompactFlash with your other hand (View 1) and carefully and firmly pull the CompactFlash (Views 2 and 3) to disconnect the CompactFlash from the adapter.

Figure 11 Removing the CompactFlash from the Adapter

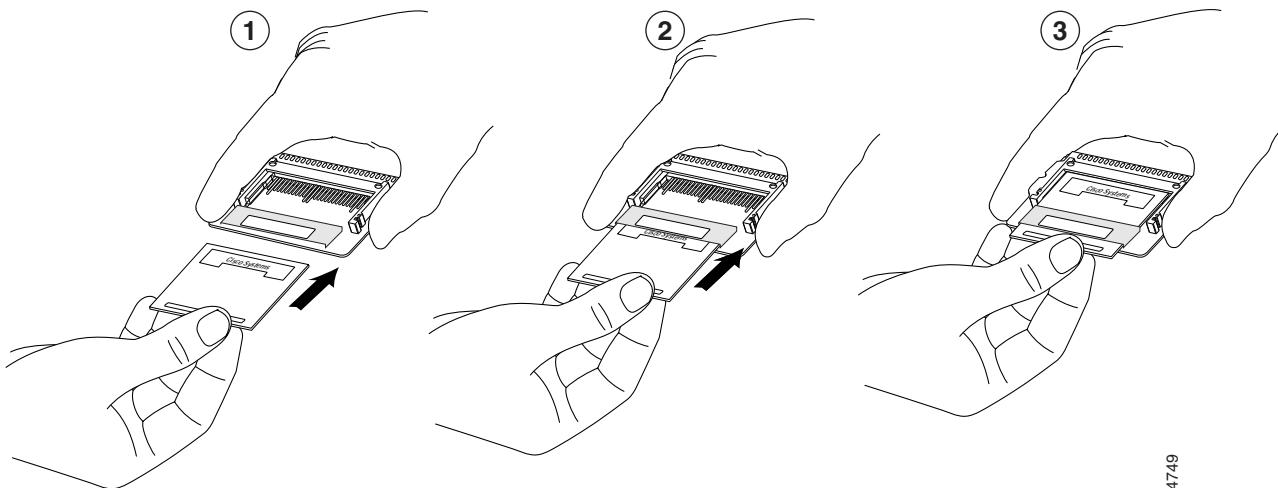

To install the CompactFlash in the adapter, follow these steps:

-
- Step 1** Remove the replacement CompactFlash from its packaging.
 - Step 2** Grasp the empty adapter and the CompactFlash, and position the CompactFlash in front of the adapter as shown in [Figure 12](#), View 1. Align the slots in the CompactFlash with the rails in the adapter.
 - Step 3** Slide the CompactFlash into the adapter until the CompactFlash is firmly seated in the adapter connector. (See [Figure 12](#), Views 2 and 3.)

Note To make good electrical contact, you must fully insert the adapter's connector pins into the CompactFlash; the pins should not be visible.

-
- Step 4** Install the CompactFlash adapter in the DIMM socket using [Step 6](#) and [Step 7](#) on Page 15.
 - Step 5** Reinstall the Supervisor Engine 720 in the chassis following the “[Reinstalling the Supervisor Engine 720](#)” procedure on page 16.

Figure 12 *Installing a CompactFlash in the Adapter*

Attaching Your ESD Grounding Strap

Electrostatic discharge (ESD) damage, which can occur when modules or other FRUs are improperly handled, results in intermittent or complete failures. Modules consist of printed circuit boards that are fixed in metal carriers. Electromagnetic interference (EMI) shielding and connectors are integral components of the carrier. Although the metal carrier helps to protect the board from ESD, always use an ESD grounding strap when handling modules.

Follow these guidelines for preventing ESD damage:

- Always use an ESD wrist strap and ensure that it makes maximum contact with bare skin. ESD grounding straps are available with banana plugs, metal spring clips, or alligator clips. All Catalyst 6500 series chassis are equipped with a banana plug connector (identified by the ground symbol next to the connector) on the front panel. If you have an older Catalyst 6500 series chassis equipped with a plastic banana plug connector, we recommend that you use either the supplied ESD grounding wrist strap (with a metal clip) or an ESD grounding wrist strap equipped with an alligator clip. If you have a newer Catalyst 6500 series chassis that has a bare metal hole as the banana plug connector (also identified by the ground symbol next to the connector), we recommend that you use a personal ESD grounding strap equipped with a banana plug.
- If you choose to use the disposable ESD wrist strap supplied with most FRUs or an ESD wrist strap equipped with an alligator clip, you must attach the system ground lug to the chassis in order to provide a proper grounding point for the ESD wrist strap.

Note This system ground is also referred to as the network equipment building system (NEBS) ground.

- If your chassis does not have the system ground attached, you must install the system ground lug. Refer to the online *Catalyst 6500 Series Switches Installation Guide* for the procedure.

Note You do not need to attach a supplemental system ground wire to the system ground lug; the lug provides a direct path to the bare metal of the chassis.

After you install the system ground lug, you can perform the procedure in this section.

To attach the ESD wrist strap, follow these steps:

Step 1 Attach the ESD wrist strap to bare skin as follows:

- a. If you are using the ESD wrist strap supplied with the FRUs, open the wrist strap package and unwrap the ESD wrist strap. Place the black conductive loop over your wrist and tighten the strap so that it makes good contact with your bare skin.
- b. If you are using an ESD wrist strap equipped with an alligator clip, open the package and remove the ESD wrist strap. Locate the end of the wrist strap that attaches to your body and secure it to your bare skin.

Step 2 Grasp the spring or alligator clip on the ESD wrist strap and momentarily touch the clip to a bare metal spot (unpainted surface) on the rack. We recommend that you touch the clip to an unpainted rack rail so that any built-up static charge is then safely dissipated to the entire rack.

Step 3 Attach either the spring clip or the alligator clip to the ground lug screw as follows (see [Figure 13](#)):

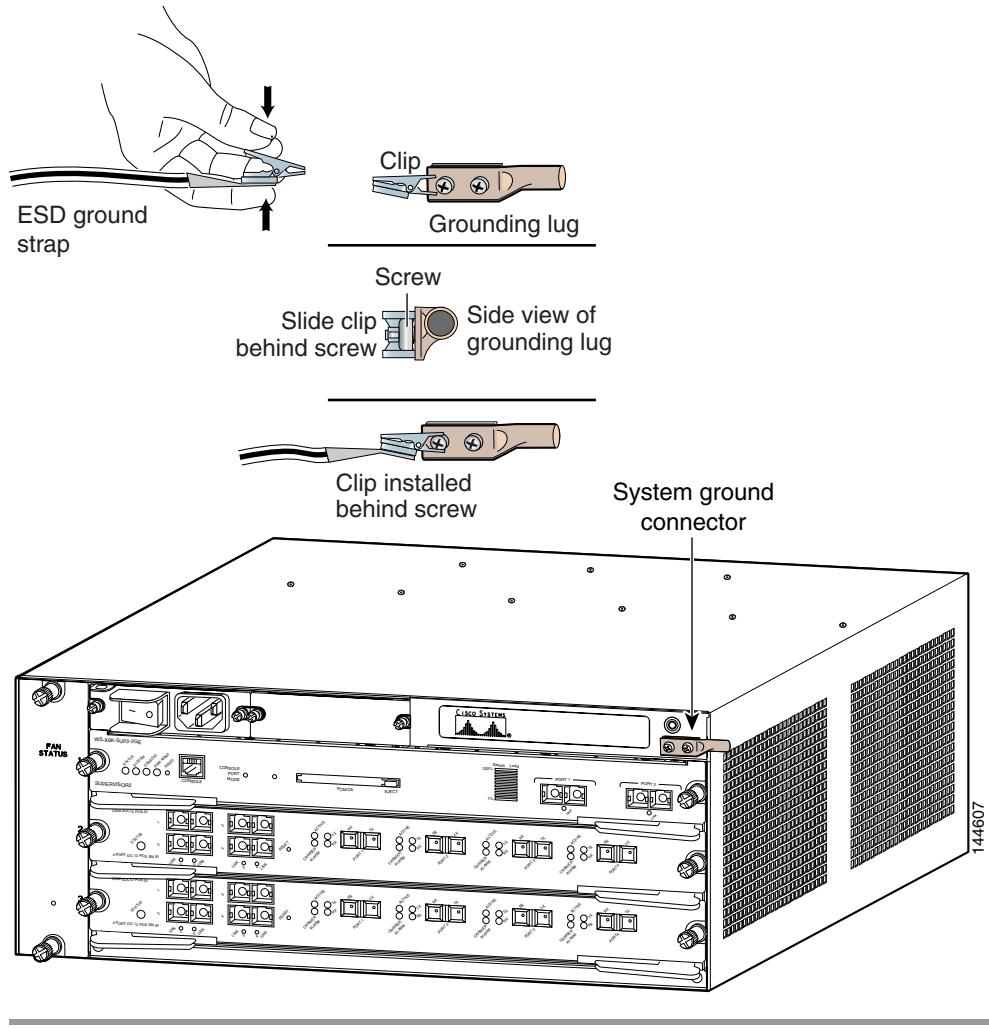

- a. If you are using the ESD wrist strap that is supplied with the FRUs, squeeze the spring clip jaws open, position the spring clip to one side of the system ground lug screw head, and slide the spring clip over the lug screw head so that the spring clip jaws close behind the lug screw head.

Note The spring clip jaws do not open wide enough to fit directly over the head of the lug screw or the lug barrel.

- b. If you are using an ESD wrist strap that is equipped with an alligator clip, attach the alligator clip directly over the head of the system ground lug screw or to the system ground lug barrel.

Figure 13 Attaching the ESD Wrist Strap Clip to the System Ground Lug Screw

Module Handling Guidelines

Follow these guidelines when handling modules:

- Handle carriers by available handles or edges only; avoid touching the printed circuit boards or connectors.
- Place a removed component board-side-up on an antistatic surface or in a static shielding container. If you plan to return the component to the factory, immediately place it in a static shielding container.
- Never attempt to remove the printed circuit board from the metal carrier.

Caution For safety, periodically check the resistance value of the antistatic strap. The measurement should be between 1 and 10 megohm (Mohm).

Safety Warning Translations

This section repeats in multiple languages the basic warnings that appear in this publication.

Statement 1030—Equipment Installation

Warning

Only trained and qualified personnel should be allowed to install, replace, or service this equipment.

Waarschuwing

Deze apparatuur mag alleen worden geïnstalleerd, vervangen of hersteld door bevoegd geschoold personeel.

Varoitus

Tämän laitteen saa asentaa, vaihtaa tai huoltaa ainoastaan koulutettu ja laitteen tunteva henkilökunta.

Attention

Il est vivement recommandé de confier l'installation, le remplacement et la maintenance de ces équipements à des personnels qualifiés et expérimentés.

Warnung

Das Installieren, Ersetzen oder Bedienen dieser Ausrüstung sollte nur geschultem, qualifiziertem Personal gestattet werden.

Avvertenza

Questo apparato può essere installato, sostituito o mantenuto unicamente da un personale competente.

Advarsel

Bare opplært og kvalifisert personell skal foreta installasjoner, utskiftninger eller service på dette utstyret.

Aviso

Apenas pessoal treinado e qualificado deve ser autorizado a instalar, substituir ou fazer a revisão deste equipamento.

¡Advertencia!

Solamente el personal calificado debe instalar, reemplazar o utilizar este equipo.

Varning!

Endast utbildad och kvalificerad personal bör få tillåtelse att installera, byta ut eller reparera denna utrustning.

A berendezést csak szakképzett személyek helyezhetik üzembe, cserélhetik és tarthatják karban.

Предупреждение

Установку, замену и обслуживание этого оборудования может осуществлять только специально обученный квалифицированный персонал.

警告

只有经过培训且具有资格的人员才能进行此设备的安装、更换和维修。

警告

この装置の設置、交換、保守は、訓練を受けた相応の資格のある人が行ってください。

주의	교육을 받고 자격을 갖춘 사람만 이 장비를 설치, 교체, 또는 서비스를 수행해야 합니다.
Aviso	Somente uma equipe treinada e qualificada tem permissão para instalar, substituir ou dar manutenção a este equipamento.
Advarsel	Kun uddannede personer må installere, udskifte komponenter i eller servicere dette udstyr.
تحذير	يسمح للفنيين المختصين فقط بتركيب المعدة أو استبدالها أو إجراء الصيانة عليها.
Upozorenje	Uredaj smije ugradivati, mijenjati i servisirati samo za to obučeno i osposobljeno servisno osoblje.
Upozornení	Instalaci, výměnu nebo opravu tohoto zařízení smějí provádět pouze proškolené a kvalifikované osoby.
Προειδοποίηση	Η τοποθέτηση, η αντικατάσταση και η συντήρηση του εξοπλισμού επιτρέπεται να γίνονται μόνο από καταρπισμένο προσωπικό με τα κατάλληλα προσόντα.
ازهارہ	רק عوّدیم میورنیم و مومنیم رشائیں لہاتکیں، لہچلیف، اور لطفاً بعید زہ۔
Опомена	Местењето, заменувањето и сервисирањето на оваа опрема треба да биде дозволено само на обучен и квалификуван персонал.
Ostrzeżenie	Do instalacji, wymiany i serwisowania tych urządzeń mogą być dopuszczone wyłącznie osoby wykwalifikowane i przeszkolone.
Upozornenie	Inštaláciu, výmenu alebo opravu tohto zariadenia smú vykonávať iba vyškolené a kvalifikované osoby.

Statement 1029—Blank Faceplates and Cover Panels

Warning

Blank faceplates and cover panels serve three important functions: they prevent exposure to hazardous voltages and currents inside the chassis; they contain electromagnetic interference (EMI) that might disrupt other equipment; and they direct the flow of cooling air through the chassis. Do not operate the system unless all cards, faceplates, front covers, and rear covers are in place.

Statement

Waarschuwing

Lege vlakplaten en afdekpanelen vervullen drie belangrijke functies: ze voorkomen blootstelling aan gevaarlijke voltages en stroom binnenin het frame, ze bevatten elektromagnetische storing (EMI) hetgeen andere apparaten kan verstoren en ze leiden de stroom van koellucht door het frame. Het systeem niet bedienen tenzij alle kaarten, vlakplaten en afdekkingen aan de voor- en achterkant zich op hun plaats bevinden.

Varoitus

Tyhjillä tasolaikoilla ja suojaavalla sisäisillä vaarallisilla jännitteille ja sähkövirralle altistumiselta; ne pitäävät sisällään elektromagneettisen häiriön (EMI), joka voi häirittää muita laitteita; ja ne suuntaavat tuuletusilman sisäasennuspaikan läpi. Järjestelmää ei saa käyttää, elleivät kaikki tasolaikat, etukannet ja takakannet ole kunnolla paikoillaan.

Attention

Ne jamais faire fonctionner le système sans que l'intégralité des cartes, des plaques métalliques et des panneaux avant et arrière ne soient fixés à leur emplacement. Ceux-ci remplissent trois fonctions essentielles : ils évitent tout risque de contact avec des tensions et des courants dangereux à l'intérieur du châssis, ils évitent toute diffusion d'interférences électromagnétiques qui pourraient perturber le fonctionnement des autres équipements, et ils canalisent le flux d'air de refroidissement dans le châssis.

Warnung

Blanke Faceplates und Abdeckungen haben drei wichtigen Funktionen: (1) Sie schützen vor gefährlichen Spannungen und Strom innerhalb des Chassis; (2) sie halten elektromagnetische Interferenzen (EMI) zurück, die andere Geräte stören könnten; (3) sie lenken den kühlenden Luftstrom durch das Chassis. Das System darf nur betrieben werden, wenn alle Karten, Faceplates, Vorder- und Rückabdeckungen an Ort und Stelle sind.

Avvertenza

Le piattaforme bianche e i pannelli di protezione hanno tre funzioni importanti: Evitano l'esposizione a voltaggi e correnti elettriche pericolose nello chassis, trattengono le interferenze elettromagnetiche (EMI) che potrebbero scomparire altri apparati e dirigono il flusso di aria per il raffreddamento attraverso lo chassis. Non mettete in funzione il sistema se le schede, le piattaforme, i pannelli frontal e posteriori non sono in posizione.

Advarsel

Blanke ytterplater og deksler sørger for tre viktige funksjoner: de forhindrer utsettelse for farlig spenning og strøm inni kabinettet; de inneholder elektromagnetisk forstyrrelse (EMI) som kan avbryte annet utstyr, og de dirigerer luftavkjølingsstrømmen gjennom kabinettet. Betjen ikke systemet med mindre alle kort, ytterplater, frontdeksler og bakdeksler sitter på plass.

Aviso

As faces furadas e os painéis de proteção desempenham três importantes funções: previnem contra uma exposição perigosa a voltagens e correntes existentes no interior do chassis; previnem contra interferência electromagnética (EMI) que poderá danificar outro equipamento; e canalizam o fluxo do ar de refrigeração através do chassis. Não deverá operar o sistema sem que todas as placas, faces, proteções anteriores e posteriores estejam nos seus lugares.

¡Advertencia! Las placas frontales y los paneles de relleno cumplen tres funciones importantes: evitan la exposición a niveles peligrosos de voltaje y corriente dentro del chasis; reducen la interferencia electromagnética (EMI) que podría perturbar la operación de otros equipos y dirigen el flujo de aire de enfriamiento a través del chasis. No haga funcionar el sistema a menos que todas las tarjetas, placas frontales, cubiertas frontales y cubiertas traseras estén en su lugar.

Varngd! Tomma framplattor och skyddspaneler har tre viktiga funktioner: de förhindrar att personer utsätts för farlig spänning och ström som finns inuti chassit; de innehåller elektromagnetisk interferens (EMI) som kan störa annan utrustning; och de styr riktningen på kylluftsflödet genom chassit. Använd inte systemet om inte alla kort, framplattor, fram- och bakskydd är på plats.

Az előlapok és burkolópanelek három fontos funkciót töltnek be: biztosítják a veszélyes feszültségű és áramerősséggű területek érintésvédelmét; elnyelik a más berendezések működésében működési zavarokat okozó elektromágneses interferenciát (EMI); a gépházon belül terelik a hűtőlevegőt. Csak úgy működtesse a rendszert, ha minden kártya, lemez, elülső és hátulsó burkolat a helyén van.

Предупреждение Заглушки передней панели и защитные панели выполняют три важные функции: помогают избежать поражения электротоком высокого напряжения при прикосновении к внутренним элементам, экранируют электромагнитное излучение, которое может нарушить работу другого оборудования, а также направляют охлаждающий воздушный поток внутри корпуса. Не пользуйтесь устройством со снятыми крышками, заглушкиами, передними и задними защитными панелями.

警告 空白面板和盖板具有三个重要的功能：它们可以防止接触到底盘内危险的电压和电流；它们将可能破坏其它设备的电磁干扰(EMI)封闭起来；它们可以使冷气流从底盘通过。请勿在全部卡、面板、前盖和后盖未安装完毕时操作系统。

警告 ブランクの前面プレートおよびカバー パネルは、3つの重要な役割を果たします。シャーシ内部の危険な電圧および電流に接触しないように防御の役割を果たします。他の機器に悪影響を与えるEMI(電磁波干渉)を外に出しません。さらに、シャーシ全体に冷却用の空気を流します。カード、前面プレート、前面カバー、および背面カバーがすべて取り付けられてから、システムを稼働させてください。

주의 비어있는 전면케이스 커버와 커버 패널은 다음과 같은 세가지 중요한 역할을 합니다. 새시 내부의 위험한 전압 및 전류에 노출되는 것을 방지, 기타 장비에 영향을 끼칠 수 있는 전자파 간섭(EMI)을 포함, 냉각 공기를 새시로 유입. 모든 카드, 전면케이스 커버, 전면 및 후면 커버가 장착되어 있지 않은 경우, 시스템을 작동하지 마십시오.

Aviso Plaquetas vazias e painéis de proteção têm três funções importantes: impedem a exposição a tensões e correntes elétricas perigosas dentro do chassi; apresentam interferência eletromagnética (EMI) que pode danificar outros equipamentos: direcionam o fluxo do ar refrigerado pelo chassi. Não opere o sistema a menos que todas as placas, plaquetas, tampas frontais e tampas traseiras estejam em seu devido lugar.

Advarsel Blanke frontplader og sidepaneler tjener tre vigtige formål: de forhinder udsættelse for farlig spænding og strøm inde i chassiset, de isolerer elektromagnetisk interferens (EMI), der kan forstyre andet udstyr, og de leder en strøm af kølig luft gennem chassiset. Betjen ikke systemet medmindre alle kort, frontplader, sidepaneler og bagpaneler er på plads.

تحذير	<p>تؤدي كل من الواجهات الظاهرة ولوحات التغطية ثلاثة وثلاث وظائف هامة: الحيلولة دون التعرض للجهد الكهربائي الخطير والتيارات الموجودة في الهيكل المعدني، حيث يحتوي كلاً منها على واجهة كهرومغناطيسية () والتي قد تعيق عمل الأجهزة الأخرى كما يقوما بتوجيهه تيار التبريد داخل الهيكل المعدني. لا تحاول تشغيل النظام إلا إذا كانت كافة البطاقات والواجهات والأغطية الأمامية والخلفية موضوعة في مكانها.</p>
Upozorenje	<p>Prazna prednja ploča i pokrovne ploče imaju tri važne funkcije: sprječavaju izlaganje opasnome visokom naponu i struji unutar kućišta, proizvode elektromagnetnu interferenciju koja može ometati rad ostalih uređaja, te usmjeravaju protok rashladnog zraka kroz kućište. Sustav nemojte koristiti ako sve kartice, te prednje, pokrovne i stražnje ploče nisu pravilno ugrađene.</p>
Upozornění	<p>Prázdné lícové desky a krycí panely mají tři důležité funkce: zabraňují odkrytí nebezpečného napětí a proudu uvnitř skříně; obsahují elektromagnetické rušení, které může rušit jiná zařízení; směřují proud chladícího vzduchu skříně. Nepoužívejte systém, pokud nejsou všechny karty, lícové desky, přední kryty a zadní kryty na svém místě.</p>
Προειδοποίηση	<p>Οι κενές προσόψεις και τα κενά πλαίσια καλύμματος χρησιμεύουν για τρεις σημαντικές λειτουργίες: Αποκλείουν την έκθεση σε επικίνδυνες τάσεις και ρεύματα στο εσωτερικό του σασί, περικλείουν τις ηλεκτρομαγνητικές παρεμβολές (EMI) που ενδέχεται να προκαλέσουν προβλήματα σε άλλο εξοπλισμό και κατευθύνουν τη ροή του αέρα ψύξης μέσα στο σασί. Μην θέτετε το σύστημα σε λειτουργία αν δεν βρίσκονται στη θέση τους όλες οι κάρτες, οι μπροστινές πλάκες, οι προσόψεις και οι πλάτες.</p>
אזהרה	<p>לוחות CISCO ריקים ולוחות CISCO משמשים לשלווש פונקציות חשובות: הם מונעים חסיפה למתחים מסוכנים ולחזרם בתוך התושבת; הם מכילים הפרעות אלקטромגנטיות (EMI) העוללות לשבש ציוד אחר; והם מכונים את זרימת האוויר המגן דרך התושבת. אל תפעיל את המערכת אלא אם כל הCARTRİDİS, לוחות הCARTRİDİS והCARTRİDİS האחוריים נמצאים במקוםם.</p>
Opomena	<p>Празните предни площи и плочите за покривање служат за три важни функции: го спречуваат изложувањето на ризични напони и струи во кукиштето; содржат електромагнетни интерференции (EMI) што можат да попречуваат друга опрема; и го насочуваат протокот на воздухот за разладување низ кукиштето. Не работете со системот ако сите картички, предни площи, предни капаци и задни капаци не се на своите места.</p>
Ostrzeżenie	<p>Zaślepki i panele osłonowe pełnią trzy ważne funkcje: zapobiegają kontaktowi użytkownika z niebezpiecznymi napięciami i prądami występującymi wewnętrz obudowy; pochłaniają zakłócenia elektromagnetyczne, które mogłyby negatywnie wpływać na działanie innych urządzeń; kierują przepływem powietrza chłodzącego wewnątrz obudowy. System można eksploatować wyłącznie wtedy, gdy zamontowane są wszystkie karty, zaślepki oraz przednie i tylne osłony.</p>
Upozornenie	<p>Prázdne lícne dosky a krycie panely majú tri dôležité funkcie: zabraňujú odkrytiu nebezpečného napäťia a prúdu vnútri skrine; obsahujú elektromagnetické rušenie, ktoré môže rušiť iné zariadenia; smerujú prúd chladiaceho vzduchu cez skriňu. Nepoužívajte systém, pokiaľ nie sú všetky karty, lícne dosky, predné kryty a zadné kryty na svojom mieste.</p>

Statement 1034—Backplane Voltage

Warning

Hazardous voltage or energy is present on the backplane when the system is operating. Use caution when servicing.

Waarschuwing **Er is gevaarlijke spanning of energie aanwezig op de achterplaat wanneer het systeem bediend wordt. Wees voorzichtig bij het onderhoud.**

Varoitus

Kun laite on toiminassa, taustalevyn muodostuu vaarallista jännitettä. Ole varovainen huoltaessasi laitetta.

Attention

Lorsque le système est en fonctionnement, des tensions électriques circulent sur le fond de panier. Prendre des précautions lors de la maintenance.

Warnung

Wenn das System in Betrieb ist, treten auf der Rückwandplatine gefährliche Spannungen oder Energien auf. Vorsicht bei der Wartung.

Avvertenza

Quando il sistema è in funzione, il pannello posteriore è sotto tensione pericolosa. Prestare attenzione quando si lavora sul sistema.

Advarsel

Farlig spenning er til stede på bakpanelet når systemet kjøres. Utvis forsiktighet under service.

Aviso

Há presença de voltagem perigosa ou de energia na placa traseira quando o sistema está em operação. Tenha cuidado ao fazer a manutenção.

¡Advertencia!

Cuando el sistema está en funcionamiento, el voltaje del plano trasero es peligroso. Tenga cuidado cuando lo revise.

Varning!

Farlig spänning föreligger på bakplattan när systemet körs. Var försiktig vid service.

A rendszer működése közben veszélyes feszültség vagy energia van jelen a hátlapon. Karbantartás közben óvatosan járjon el!

Предупреждение

При работе оборудования на разъемах задней панели присутствует высокое напряжение. Будьте внимательны при работе с оборудованием.

警告

当系统正在运行时，背板上有很危险的电压或能量。进行维修时务必小心。

警告

システムの稼働中は、バックプレーンに危険な電圧またはエネルギーがかかっています。保守作業を行うときは注意してください。

주의

시스템이 가동 중일 때 뒷면에서 위험한 전압 또는 에너지가 발생합니다. 서비스 수행 시 주의하십시오.

Aviso

O sistema em funcionamento emite tensão ou energia elétrica perigosa no painel traseiro. Seja cauteloso ao fazer a manutenção.

Advarsel	Der er farlig spænding og energi på bagpladen når systemet er i brug. Vær forsiktig under servicering.
تحذير	عند تشغيل النظام، يوجد قدر كبير من الجهد الكهربائي الخطير في الجزء الخلفي. كن حريصاً عند إجراء الصيانة.
Upozorenje	Kad sustav radi, na stražnjoj je ploči prisutan opasan visoki napon ili energija. Budite oprezni kod servisiranja.
Upozornení	Při provozu systému je na zadní desce nebezpečné napětí nebo energie. Při opravě dbejte opatrnosti.
Προειδοποίηση	Όταν το σύστημα λειτουργεί, στην πίσω πλάκα συνδέσεων είναι παρούσα επικίνδυνη τάση ή ενέργεια. Να είστε προσεκτικοί κατά τις εργασίες συντήρησης.
ازهراהه	מתוך מושך וחשמל קיימים בלוח האחורי כאשר המערכת פועלה. נקט זהירות בעת הטיפול.
Opomena	На задната плоча има ризичен напон или енергија кога системот работи. Бидете претпазливи при сервисирањето.
Ostrzeżenie	Podczas pracy systemu na płycie interfejsu magistrali występują niebezpieczne napięcia lub energia elektryczna. Przy wykonywaniu czynności serwisowych należy zachować ostrożność.
Upozornenie	Počas prevádzky systému je na zadnej doske nebezpečné napätie alebo energia. Pri oprave buďte opatrní.

Obtaining Documentation and Submitting a Service Request

For information on obtaining documentation, submitting a service request, and gathering additional information, see the monthly *What's New in Cisco Product Documentation*, which also lists all new and revised Cisco technical documentation, at:
