## New and Changed Information

### Firmware versions 3.0.0.18

- Corrects the condition where the SFP ports in a stack do not automatically come back up after the backup master becomes the master, or the original master rejoins the stack.
- The number of maximum allowed static routes was decreased from 128 routes to 60 routes, but the product documentation has not been updated to reflect this change. If a user attempts to add more than 60 static routes, the error message "IP routing table overflow" displays. (CSCti16222)

## Limitations and Restrictions

- Devices running phase 1 (1.0.x.y) firmware must be upgraded to firmware version 3.0.0.17 using the EasyUpgrade first before upgrading to firmware version 3.0.0.18 using the regular upgrade procedure. Refer to the release notes for firmware 3.0.0.17 and the EasyUpgrade documentation for details.
- Devices running version 3.0.0.18 may see an error message "IP routing table overflow" when adding static routes. The number of maximum allowed static routes was reduced from 128 to 60, and attempting to add more than 60 results in the error message.
