CONTENTS

Preface

Contents

General Description of the Cisco TelePresence Recording Server

The Cisco TelePresence Recording Server (CTRS) allows users to do the following:

- Create recordings.
- Store recordings on the CTRS.
- Share recordings with others for viewing.
- Make recordings public so that anyone with access to the CTRS can view them.
- Play back recordings on a TelePresence endpoint.
- Play back recordings with a standard browser-based player.
- Download your recordings or public recordings.

CTRS enables users to record in TelePresence Studio Mode. In Studio Mode, users can create team announcements, corporate messages, training modules, video blogs, and other similar recordings.

To record, users must have access to a CTS with CTRS functionality; they control recording through the CTS IP phone interface.

All recordings are HD video and audio. All recorded content, including materials that users choose to display on a device that is connected to the VGA input or through a document camera, is shown on the TelePresence monitor from the viewer's perspective. CTRS acts as a viewer endpoint in a TelePresence session and records what it sees.

Users can then share a recording by sending it to a recipient's e-mail address. To play a recording, the recipient must sign in to the CTRS browser-based user portal with a corporate username and password (LDAP username and password). If the recipient wants to play a recording on a TelePresence display, he or she must sign in to CTRS through the CTS IP phone user interface with a corporate username and personal identification number (PIN).

System Requirements

- Cisco MCS-7845-I2 CCE4 Media Convergence Server with eight 146 gigabyte drives.
- Cisco TelePresence System software, Release 1.6 or later; IP phone with MIDlets version TSPM.1-6-0-2S or later.
- Cisco TelePresence Manager, Release 1.6 or later.
- Cisco Unified Communications Manager (Cisco Unified CM), Release 7.0.2, Release 7.1.2, or later.
- CTS-500, CTS-1000, CTS-1300, CTS-3000 and/or CTS-3200 systems.
- For the user portal, ensure that the browser that you use to play recordings includes the most recent version of Flash.

Cisco TelePresence Recording Server Release 1.6 Command Reference Organization

The *Cisco TelePresence Recording Server Release 1.6 Command Reference* is organized into the following chapters:

- Chapter 1: "Using Cisco TelePresence Recording Server CLI Commands"
  This section provides information about using CTRS CLI commands.
- Chapter 2: "CTRS **Delete** Commands"
  This section lists and describes all CTRS **delete** commands.
- Chapter 3: "CTRS **File** Commands"
  This section lists and describes all CTRS **file** commands.
- Chapter 4: "CTRS **Set** Commands"
  This section lists and describes all CTRS **set** commands.
- Chapter 5: "CTRS **Show** Commands"
  This section lists and describes all CTRS **show** commands.
- Chapter 6: "CTRS **Unset** Commands"
  This section lists and describes all CTRS **unset** commands.
- Chapter 7: "CTRS **Utils** Commands"
  This section lists and describes all CTRS **utils** commands.

Obtaining Documentation and Submitting a Service Request

For information on obtaining documentation, submitting a service request, and gathering additional information, see the monthly *What's New in Cisco Product Documentation*, which also lists all new and revised Cisco technical documentation, at:

http://www.cisco.com/en/US/docs/general/whatsnew/whatsnew.html

Subscribe to the *What's New in Cisco Product Documentation* as a Really Simple Syndication (RSS) feed and set content to be delivered directly to your desktop using a reader application. The RSS feeds are a free service and Cisco currently supports RSS Version 2.0.

C H A P T E R 1

Using Cisco TelePresence Recording Server CLI Commands

Revised: November 2009, OL-19547-01

Contents

Introduction

This chapter explains how to use the Cisco TelePresence Recording Server (CTRS) command line interface (CLI).

Starting a CLI Session

You can access the CTRS CLI through the physical console or remotely. If you want to access the CTRS CLI remotely, use Secure Shell (SSH) from a personal computer or workstation to connect securely to CTRS.

You will need the following to log in to CTRS:

- CTRS IP address
- Admin ID and password

Note The admin ID and password can be changed from the default in the Cisco Unified Communications Manager (Unified CM) for CTRS device page.

To start a CLI session:

Step 1 From a remote system, use SSH to connect securely to CTRS. In the SSH client, enter the following information: ssh adminname@IP Address

- adminname is the Admin ID
- IP Address is the IP address of CTRS

Step 2 When the system prompts you, enter the password.

Step 3 The CLI prompt displays. You can now enter any command.

Note The prompt will always be "admin."

CLI Command Basics

- Enter the beginning of a command and press **Tab** to have the system complete the command for you.
- Enter a full command and press **Tab** to display all commands or subcommands that are available. If you press **Tab** and the current command line repeats, no additional syntax is available.
- To get detailed help, enter **help** *command name* at the prompt.
- To get command syntax for a particular command, enter *command name*? at the prompt.

Ending a CLI Session

To end a CLI session:

Step 1 At the prompt, enter **quit**.

C H A P T E R 2

CTRS Delete Commands

Revised: November 2009, OL-19547-01

This chapter contains Cisco TelePresence Recording Server (CTRS) **delete** commands:

Note For information about using the CTRS administration software, refer to the *Cisco TelePresence Recording Server Release 1.6 Administration Guide* at the following URL:

http://www.cisco.com/en/US/products/ps10341/prod_maintenance_guides_list.html

delete account

delete account *name*

Syntax Description

name	Name of the administrative account to be deleted

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was introduced.

Usage Guidelines   Use this command to delete an administrative account.

Examples   admin: **delete account admin1**

delete dns addr

delete dns addr *address*

Syntax Description	*address*	IP address of the Domain Name System (DNS) server to be deleted

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was introduced.

Usage Guidelines   Use this command to delete the specified Domain Name System (DNS) server from the system.

Examples

```
admin: delete dns addr 1xx.2xx.3xx.4xx
***   W A R N I N G   ***
This will cause the system to temporarily lose network connectivity

          Do you want to continue ?

Enter "yes" to continue or any other key to abort
yes
executing...
```

delete process

delete process *pid* [**force** | **terminate** | **crash**]

Syntax Description

pid	Process identification number
force	Stops the process. Use this option only if the **delete process** *pid* command does not terminate the process.
terminate	Tells the operating system to stop the process. Use this option only if the **delete process** *pid* **force** command does not terminate the process.
crash	Crashes the process with a crash dump

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was introduced.

Usage Guidelines   Use this command to delete a process.

Examples   admin: **delete process 1429**

delete recording

delete recording *recid*

Syntax Description	*recid*	Recording identification number

Command Modes   Admin

Command History	Release	Modifications
	1.6	This command was introduced.

Usage Guidelines   Use this command to delete an mp4 file corresponding to its recording identification number.

Examples   admin: **delete recording 3**

■ delete recording

C H A P T E R 3

CTRS File Commands

Revised: November 2009, OL-19547-01

This chapter contains Cisco TelePresence Recording Server (CTRS) **file** commands:

Note   For information about using the CTRS administration software, refer to the *Cisco TelePresence Recording Server Release 1.6 Administration Guide* at the following URL:

http://www.cisco.com/en/US/products/ps10341/prod_maintenance_guides_list.html

file delete activelog

file delete activelog *file-spec* [**det**] [**noconfirm**]

Syntax Description	*file-spec*	Name of the file to delete. *File-spec* can contain an asterisk (*) as a wildcard.
	det	Provides details about the files being deleted.
	noconfirm	Deletes files without requesting confirmation of each deletion.

Command Modes   Admin

Command History	Release	Modifications
	1.6	This command was introduced.

Usage Guidelines   Use this command to delete one or more files on an active side logging area.

Note   You cannot delete files that are in use.

Examples
```
admin:file delete activelog platform/log/*.log det noconfirm
deleting file : platform/log/cli00001.log
deleting file : platform/log/cli00002.log
deleting file : platform/log/cli00003.log
deleting file : platform/log/cli00004.log
files:        found = 4, deleted = 4
```

file delete inactivelog

file delete inactivelog *file-spec* [**det**] [**noconfirm**]

Syntax Description

file-spec	Name of the file to delete. *File-spec* can contain an asterisk (*) as a wildcard.
det	Provides details about the files being deleted.
noconfirm	Deletes files without requesting confirmation of each deletion.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was introduced.

Usage Guidelines   Use this command to delete one or more files on an inactive side logging area.

Note   You cannot delete files that are in use.

Examples
```
admin:file delete inactivelog platform/log/*.log det noconfirm
deleting file : platform/log/cli00001.log
deleting file : platform/log/cli00002.log
deleting file : platform/log/cli00003.log
deleting file : platform/log/cli00004.log
files:       found = 4, deleted = 4
```

file delete install

file delete install *file-spec* [**det**] [**noconfirm**]

Syntax Description

file-spec	Name of the file to delete. *File-spec* can contain an asterisk (*) as a wildcard.
det	Provides details about the files being deleted.
noconfirm	Deletes files without requesting confirmation of each deletion.

Command Modes

Admin

Command History

Release	Modifications
1.6	This command was introduced.

Usage Guidelines

Use this command to delete one or more files on an install side logging area.

Note You cannot delete files that are in use.

Examples

```
admin:file delete install platform/log/*.log det noconfirm
deleting file : platform/log/cli00001.log
deleting file : platform/log/cli00002.log
deleting file : platform/log/cli00003.log
deleting file : platform/log/cli00004.log
files:      found = 4, deleted = 4
```

file dump activelog

file dump activelog *file-spec* [**expression** | **recent**]

Syntax Description

file-spec	Name of the file to dump.
expression	Hexadecimal identifier of file to dump.
recent	Dumps the most recently changed file in the directory.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was introduced.

Usage Guidelines   Use this command to dump the contents of a file on an active side logging area.

Examples
```
admin:file dump activelog platform/log/cli00001.log
2005-08-03 15:01:39,482 INFO [main] - Startup of CLI
Getting XML configuration file
....
```

file dump inactivelog

file dump inactivelog *file-spec*[**expression** | **recent**]

Syntax Description

file-spec	Name of the file to dump.
expression	Hexadecimal identifier of file to dump.
recent	Dumps the most recently changed file in the directory.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was introduced.

Usage Guidelines   Use this command to dump the contents of a file on an inactive side logging area.

Examples
```
admin:file dump inactivelog platform/log/cli00001.log
2005-08-03 15:01:39,482 INFO [main] - Startup of CLI
Getting XML configuration file
....
```

file dump install

file dump install *file-spec* [**expression** | **recent**]

Syntax Description		
	file-spec	Name of the file to dump.
	expression	Hexadecimal identifier of file to dump.
	recent	Dumps the most recently changed file in the directory.

Command Modes	
	Admin

Command History	Release	Modifications
	1.6	This command was introduced.

Usage Guidelines   Use this command to dump the contents of a file on an install side logging area.

Examples
```
admin:file dump install install.log page
12/09/2005 17:43:54 anaconda|========================= Starting Installation
=========================|<LVL::Info>
12/09/2005 17:43:54 anaconda|Starting anaconda script|<LVL::Info>
....
```

file get activelog

file get activelog *file-spec* **[reltime | abstime | match | recurs]**

Syntax Description

file-spec	Name of the file to retrieve. *File-spec* can contain an asterisk (*) as a wildcard.
reltime	Relative time to filter in the following format: months/weeks/days/hours/minutes.
abstime	Absolute time to filter in the following format: hh:mm:MM/DD/YY hh:mm:MM/DD/YY
match	Search pattern to filter.
recurs	Collect all files located in *file-spec* and subdirectories.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was introduced.

Usage Guidelines   Use this command to retrieve active log files using SFTP.

✎

Note   The files are saved under [target dir from input]/[this server's ip address]/[time period]/.

Examples   admin:**file get activelog platform abstime 00:00:12/01/04 01:00:12/30/04**

file get inactivelog

file get inactivelog *file-spec* **[reltime | abstime | match | recurs]**

Syntax Description

file-spec	Name of the file to retrieve. *File-spec* can contain an asterisk (*) as a wildcard.
reltime	Relative time to filter in the following format: months/weeks/days/hours/minutes.
abstime	Absolute time to filter in the following format: hh:mm:MM/DD/YY hh:mm:MM/DD/YY
match	Search pattern to filter.
recurs	Collect all files located in *file-spec* and subdirectories.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was introduced.

Usage Guidelines   Use this command to retrieve inactive log files using SFTP.

Note   The files are saved under [target dir from input]/[this server's ip address]/[time period]/.

Examples   admin:**file get inactivelog platform abstime 00:00:12/01/04 01:00:12/30/04**

file get install

file get install *file-spec* **[reltime | abstime | match | recurs]**

Syntax Description

file-spec	Name of the file to retrieve. *File-spec* can contain an asterisk (*) as a wildcard.
reltime	Relative time to filter in the following format: months/weeks/days/hours/minutes.
abstime	Absolute time to filter in the following format: hh:mm:MM/DD/YY hh:mm:MM/DD/YY.
match	Search pattern to filter
recurs	Collect all files located in *file-spec* and subdirectories.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was introduced.

Usage Guidelines   Use this command to retrieve install log files using SFTP.

> **Note**   The files are saved under [target dir from input]/[this server's ip address]/[time period]/.

Examples   admin:**file get install platform abstime 00:00:12/01/04 01:00:12/30/04**

file list activelog

file list activelog *file-spec* **[page] [detail] [reverse] [date] [size]**

Syntax Description	*file-spec*	Name of the file. *File-spec* can contain an asterisk (*) as a wildcard.
	page	Pauses output.
	detail	Shows detailed listing.
	reverse	Displays listing in reverse sort order.
	date	Sorts listing by date.
	size	Sorts listing by file size.

Command Modes   Admin

Command History	**Release**	**Modifications**
	1.6	This command was introduced.

Usage Guidelines   Use this command to list active logging files.

Examples

```
admin:file list activelog platform detail
13 Dec,2005 14:23:59      <dir>    cli
13 Dec,2005 14:23:59      <dir>    drf
13 Dec,2005 14:23:59      <dir>    log
13 Dec,2005 14:23:59      <dir>    temp
09 Dec,2005 17:54:33       12,583  servm_startup.log
dir count = 4, file count = 1
```

file list inactivelog

file list inactivelog *file-spec* **[page] [detail] [reverse] [date] [size]**

Syntax Description

file-spec	Name of the file. *File-spec* can contain an asterisk (*) as a wildcard.
page	Pauses output.
detail	Shows detailed listing.
reverse	Displays listing in reverse sort order.
date	Sorts listing by date.
size	Sorts listing by file size.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was introduced.

Usage Guidelines   Use this command to list inactive logging files.

Examples
```
admin:file list inactivelog platform detail
01 Dec,2005 14:43:34      <dir>    cli
01 Dec,2005 14:43:34      <dir>    drf
01 Dec,2005 14:43:34      <dir>    log
01 Dec,2005 14:43:34      <dir>    temp
01 Dec,2005 16:54:33       12,583  servm_startup.log
dir count = 4, file count = 1
```

file list install

file list install *file-spec* **[page] [detail] [reverse] [date] [size]**

Syntax Description

file-spec	Name of the file. *File-spec* can contain an asterisk (*) as a wildcard.
page	Pauses output.
detail	Shows detailed listing.
reverse	Displays listing in reverse sort order.
date	Sorts listing by date.
size	Sorts listing by file size.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was introduced.

Usage Guidelines   Use this command to list install logging files.

Examples

```
admin:file list install * detail
09 Dec,2005 17:54:33            140  capture.txt
09 Dec,2005 17:50:43         20,506  install.err
13 Dec,2005 14:02:58        230,018  install.log
09 Dec,2005 17:47:53         21,634  ks.cfg
09 Dec,2005 17:47:53            208  partAlloc
dir count = 0, file count = 5
```

file search activelog

file search activelog *file-spec reg-exp* **[reltime | abstime] [ignorecase] [recurs]**

Syntax Description

file-spec	Name of the file for which to search. *File-spec* can contain an asterisk (*) or a question mark (?) as a wildcard.
reg-exp	Regular expression to be searched
reltime	Searches for files that were modified during relative time period; format this field as follows: months/weeks/days/hours/minutes.
abstime	Searches for files that were modified within a specific time range; format this field as follows: hh:mm:MM/DD/YY hh:mm:MM/DD/YY
ignorecase	Ignores case distinctions
recurs	Searches for patterns recursively through subdirectories.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was introduced.

Usage Guidelines   Use this command to search the contents of active side logging files for the given "regular expression" to display the matching lines.

Examples   admin:**file search activelog platform/log/platform.log Err[a-z] ignorecase**

file search inactivelog

file search inactivelog *file-spec reg-exp* **[reltime | abstime] [ignorecase] [recurs]**

Syntax Description

file-spec	Name of the file for which to search. *File-spec* can contain an asterisk (*) or a question mark (?) as a wildcard.
reg-exp	Regular expression to be searched
reltime	Searches for files that were modified during relative time period; format this field as follows: months/weeks/days/hours/minutes.
abstime	Searches for files that were modified within a specific time range; format this field as follows: hh:mm:MM/DD/YY hh:mm:MM/DD/YY
ignorecase	Ignores case distinctions
recurs	Searches for patterns recursively through subdirectories.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was introduced.

Usage Guidelines   Use this command to search the contents of inactive side logging files for the given "regular expression" to display the matching lines.

Examples   admin:**file search inactivelog platform/log.platfom.log Err[a-z] ignorecase**

file search install

file search install *file-spec reg-exp* **[reltime | abstime] [ignorecase] [recurs]**

Syntax Description

file-spec	Name of the file for which to search. *File-spec* can contain an asterisk (*) or a question mark (?) as a wildcard.
reg-exp	Regular expression to be searched.
reltime	Searches for files that were modified during relative time period; format this field as follows: months/weeks/days/hours/minutes.
abstime	Searches for files that were modified within a specific time range; format this field as follows: hh:mm:MM/DD/YY hh:mm:MM/DD/YY
ignorecase	Ignores case distinctions.
recurs	Searches for patterns recursively through subdirectories.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was introduced.

Usage Guidelines   Use this command to search the contents of install logging files for the given "regular expression" to display the matching lines.

Examples   admin:**file search install install_post.log Err[a-z] page ignorecase**

file tail activelog

file tail activelog *file-spec* [*expression*] [**recent**]

<table>
<tr><td>**Syntax Description**</td><td>*file-spec*</td><td>Name of the file to tail.</td></tr>
<tr><td></td><td>*expression*</td><td>Expression to be searched.</td></tr>
<tr><td></td><td>**recent**</td><td>Tails the most recently changed files in the directory.</td></tr>
</table>

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was introduced.

Usage Guidelines   Use this command to tail the contents of the indicated file on an active side logging area.

Examples   This example shows a tailed file starting with the last 10 lines with pagination enabled:

```
admin:file tail activelog platform/log/cli00001.log page 10
2005-08-03 15:01:41,248 DEBUG [main] - cmdMVL size = 0

2005-08-03 15:06:27,619 INFO [main] - got to save history
2005-08-03 15:06:27,620 INFO [main] - Exiting CLI
```

file tail install

file tail install *file-spec* [*expression*] [**recent**]

Syntax Description		
file-spec	Name of the file to tail.	
expression	Expression to be searched.	
recent	Tails the most recently changed files in the directory.	

Command Modes   Admin

Command History	Release	Modifications
	1.6	This command was introduced.

Usage Guidelines   Use this command to tail the contents of a file on an install side logging area.

Examples
```
admin:file tail install capture.txt
  inflating: Help/ccmcfg/CCM Administration Guide-23-6.html
  inflating: Help/ccmcfg/CCM Administration Guide-23-7.html
  inflating: Help/ccmcfg/CCM Administration Guide-23-8.html
  inflating: Help/ccmcfg/CCM Administration Guide-24-1.html
```

file view activelog

file view activelog *file-spec*

Syntax Description	*file-spec*	Name of the file to view. *File-spec* can contain an asterisk (*) as a wildcard as long as it resolves to a single file.

Command Modes   Admin

Command History	Release	Modifications
	1.6	This command was introduced.

Usage Guidelines   Use this command to show the contents of an active side logging file.

Examples   admin:**file view activelog platform/log/platform.log**

file view inactivelog

file view inactivelog *file-spec*

Syntax Description	*file-spec*	Name of the file to view. *File-spec* can contain an asterisk (*) as a wildcard as long as it resolves to a single file.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was introduced.

Usage Guidelines   Use this command to show the contents of an inactive side logging file.

Examples   admin:**file view inactivelog platform/log.platfom.log**

file view install

file view install *file-spec*

Syntax Description	*file-spec*	Name of the file to view. *File-spec* can contain an asterisk (*) as a wildcard as long as it resolves to a single file.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was introduced.

Usage Guidelines   Use this command to show the contents of an install logging file.

Examples   admin:**file view install install.log**

CTRS Set Commands

Revised: November 2009, OL-19547-01

This chapter contains Cisco TelePresence Recording Server (CTRS) **set** commands:

Note   For information about using the CTRS administration software, refer to the *Cisco TelePresence Recording Server Release 1.6 Administration Guide* at the following URL:

http://www.cisco.com/en/US/products/ps10341/prod_maintenance_guides_list.html

set account

set account *name*

Syntax Description	*name*	Name of the administrative account.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to create a new administrative account. You will be prompted for the appropriate privilege level and password during account creation.

Examples

```
admin:set account test2
Please enter the privilege level :1
        Please enter the password :******
              re-enter to confirm :******
```

set commandcount

set commandcount {**enable** | **disable**}

Syntax Description	enable	Enables command count feature. Using **enable** changes the CLI command prompt so that it displays a numeric value showing how many CLI commands have been executed
	disable	Disables command count feature. Using **disable** changes the CLI command prompt so that it stops displaying a numeric value showing how many CLI commands have been executed.

Command Modes   Admin

Command History	Release	Modifications
	1.6	This command was first documented.

Usage Guidelines   Use this command to either enable or disable the command count feature. This command changes the CLI command prompt so that it displays a numeric value showing how many CLI commands have been executed. This setting is valid for current session only.

Examples

```
admin:set commandcount enable
admin 0005:
```

set diskalertthreshold

set diskalertthreshold threshold *percentage*

threshold *percentage*	Threshold percentage for disk usage. Valid values are from 1 to 100. The default is 80.

Syntax Description

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to specify a threshold percentage for disk usage. If this threshold percentage is reached, the CTRS sends the administrator an alert by email.

Examples   admin:**set diskalertthreshold threshold 85**

set hdcapable

set hdcapable {**enable** | **disable**}

Syntax Description

enable	Enables HD recording capability.
disable	Disables HD recording capability.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to either enable or disable HD recording capability.

Examples   admin:**set hdcapable disable**

set ldcapable

set ldcapable {**enable** | **disable**}

Syntax Description	enable	Enables LD (CIF) recording capability.
	disable	Disables LD (CIF) recording capability.

Command Modes   Admin

Command History	Release	Modifications
	1.6	This command was first documented.

Usage Guidelines   Use this command to either enable or disable LD (CIF) recording capability.

Examples   admin:**set ldcapable disable**

set logging

set logging {**enable** | **disable**}

Syntax Description

enable	Enables logging.
disable	Disables logging.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to either enable or disable logging for the current admin accounts.

Examples   admin:**set logging enable**

set network dhcp eth0

set network dhcp eth0 {enable | disable *node_ip net_mask gateway_ip*}

Syntax Description	enable	Sets the Ethernet interface to use Dynamic Host Configuration Protocol (DHCP).
	disable	Sets the Ethernet interface NOT to use DHCP.
	node_ip	Node IP address
	net_mask	Subnet mask
	gateway_ip	Gateway IP address

Command Modes   Admin

Command History

Release	Modification
1.6	This command was first documented.

Usage Guidelines   Use this command (with the **enable** keyword) to set the Ethernet interface to use Dynamic Host Configuration Protocol (DHCP) if not already enabled, then to restart the system.

Use this command (with the **disable** keyword) to set the Ethernet interface to not use DHCP provided DHCP is enabled, then to restart the system.

Examples
```
admin:set network dhcp eth0 enable
        ***  W A R N I N G  ***
This will cause the system to restart - Do you want to continue ?
Enter "yes" to continue and restart or any other key to abort
yes
executing...
Broadcast message from root (Thu Jun 24 13:00:21 2004):

The system is going down for restart NOW!

admin:set network dhcp eth0 disable 1.2.3.4  255.255.255.0  5.4.3.2
        ***  W A R N I N G  ***
This will cause the system to restart - Do you want to continue ?
Enter "yes" to continue and restart or any other key to abort
yes
executing...
Broadcast message from root (Thu Jun 24 13:00:21 2004):

The system is going down for restart NOW!
```

set network dns

set network dns {primary *address* **| secondary** *address***}**

Syntax Description	**primary** *address*	Defines a new address for the primary Domain Name System (DNS) server. Values for *address* are valid dotted decimal IP addresses.
	secondary *address*	Defines a new address for the secondary DNS server. Values for *address* are valid dotted decimal IP addresses.

Command Modes   Admin

Command History	Release	Modifications
	1.6	This command was first documented.

Usage Guidelines   Use this command to define new IP addresses for primary or secondary DNS servers.

This command causes a temporary loss of network connectivity. If you want to continue with defining a new address for the DNS server, type **Yes**. Otherwise, click any other key to abort.

Examples
```
admin:set network dns primary 1.2.3.4
*** WARNING ***
This will cause the system to temporarily lose network connectivity
Do you want to continue?
Enter "yes" to continue or any other key to abort
yes
```

set network dns options

set network dns options [timeout *value***] [attempts** *value***] [rotate]**

Syntax Description

timeout *value*	Defines how long CTRS waits before considering a Domain Name System (DNS) query to have failed. *Value* indicates number of seconds.
attempts *value*	Defines the number of times CTRS repeats a DNS query before considering the query to have failed. *Value* indicates number of attempts.
rotate	Defines the way in which DNS servers are contacted (round-robin fashion). This options distributes the load across DNS servers.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to set optional features in contacting DNS servers, such as the way in which DNS servers are contacted, the amount of time and the number of retries before a DNS query is considered a failed attempt.

This command causes a temporary loss of network connectivity.

Examples

```
admin:set network dns options timeout 10
        ***  W A R N I N G  ***
This will cause the system to temporarily lose network connectivity

        Do you want to continue ?

Enter "yes" to continue or any other key to abort
yes
executing...
```

set network domain

set network domain *name*

Syntax Description

name	Defines domain name in which the CTRS resides.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to set the domain of the CTRS.

This command causes a temporary loss of network connectivity.

Examples
```
admin:set network domain cisco.com
        ***   W A R N I N G   ***
This will cause the system to temporarily lose network connectivity

        Do you want to continue ?

Enter "yes" to continue or any other key to abort
yes
executing...
```

set network failover

set network failover {enable | disable}

Syntax Description

enable	Enables network failover
disable	Disables network failover

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to enable or disable network failover.

Enabling network failover creates a virtual interface (bond0) that uses Ethernet interface eth0, but fails over to Ethernet interface eth1 if eth0 fails. All three interfaces (bond0, eth0, and eth1) share the same IP and MAC address.

Disabling network failover restores Ethernet interface eth0 with equivalent configuration parameters and removes the virtual interface bond0.

Setting failover will cause a restart of the system.

Examples
```
admin:set network failover enable
Creating virtual interface bond0 to failover ethernet interface eth0 to eth1
should eth0 fail.

        ***   W A R N I N G   ***
This will cause the system to restart - Do you want to continue?
Enter "yes" to continue and restart or any other key to abort
yes
executing...
```

set network gateway

set network gateway *address*

Syntax Description	*address*	Defines new gateway IP address.

Command Modes   Admin

Command History	Release	Modifications
	1.6	This command was first documented.

Usage Guidelines   Use this command to set a new gateway IP address; this command causes a temporary loss of network connectivity.

✎

Note   Entering the wrong gateway address effectively disables network access to this node.

Examples

```
admin:set network gateway 192.168.1.1
        ***   W A R N I N G   ***
This will cause the system to temporarily lose network connectivity

        Do you want to continue ?

Enter "yes" to continue or any other key to abort
```

set network hostname

set network hostname *name*

Syntax Description	*name*	Defines hostname.

Command Modes   Admin

Command History	**Release**	**Modifications**
	1.6	This command was first documented.

Usage Guidelines   Use this command to set the network hostname; this command causes a restart of the system.

> **Note**   The hostname must start with a letter, end with an alphanumeric, and may contain any alphanumeric characters or hyphen in between. The hostname must be 63 characters or less.

Examples
```
admin:set network hostname myname
         ***   W A R N I N G   ***
This will cause the system to restart - Do you want to continue ?
Enter "yes" to continue and restart or any other key to abort
yes
executing...
Broadcast message from root (Thu Jun 24 13:00:21 2004):

The system is going down for restart NOW!
```

set network ip eth0

set network ip eth0 *address*

Syntax Description

address	Defines a new IP address and subnet mask for Ethernet 0. Values for *address* are valid dotted decimal IP addresses followed by subnet mask value.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to define a new IP address and subnet mask for Ethernet 0. The system automatically restarts after you execute this command.

Examples
```
admin:set network ip eth0 192.168.1.5 255.255.255.0
*** WARNING ***
This will cause the system to restart - Do you want to continue?
Enter "yes" to continue and restart or any other key to abort
yes
```

set network max_ip_conntrack

set network max_ip_contrack *value*

Syntax Description	*value*	Defines ip_conntrack_max value.

Command Modes   Admin

Command History	Release	Modifications
	1.6	This command was first documented.

Usage Guidelines   Use this command to set the ip_conntrack_max value.

Examples   admin:**set network max_ip_conntrack 256000**

set network mtu

set network mtu *value*

Syntax Description

value	Defines MTU maximum size. Standard size is 1500.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to set the MTU maximum size. This command causes a temporary loss of network connectivity.

Examples

```
admin:set network mtu 576
        ***   W A R N I N G   ***
This will cause the system to temporarily lose network connectivity

        Do you want to continue ?

Enter "yes" to continue or any other key to abort

yes
executing...
```

set network nic eth0 auto

set network nic eth0 auto {en | dis}

Syntax Description

en	Enables auto negotiation
dis	Disabled auto negotiation

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to configure auto negotiation for speed and duplex settings for a Network Interface card (NIC), meaning that CRMS will attempt to negotiate the highest speed possible with the switch. Per the IEEE standard, 1000BASE-T (1 GB Ethernet) can only be enabled via auto-negotiation.

Note   For the changes to take effect, the NIC will be reset, which will cause a temporary loss of network connectivity.

Examples   admin:**set network nic eth0 auto en**

set network nic eth0 speed

set network nic eth0 speed {10 | 100}

Syntax Description	10	10 megabits per second
	100	100 megabits per second

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to configure speed settings for a Network Interface card (NIC). This command controls the speed of the Ethernet connection in megabits per second. When used, this command disables auto negotiation.

Note   Per the IEEE standard, 1000BASE-T (1 GB Ethernet) can only be enabled via auto-negotiation.

Note   For the changes to take effect, the NIC will be reset, which will cause a temporary loss of network connectivity.

Examples   admin:**set network nic eth0 speed 100**

set network nic eth0 duplex

set network nic eth0 duplex {half | full}

Syntax Description

half	Enables half duplex
full	Enables full duplex

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to configure duplex settings of the Ethernet connection. When used, it will disable auto negotiation.

Note   For the changes to take effect, the NIC will be reset, which will cause a temporary loss of network connectivity.

Examples   admin:**set network nic eth0 duplex half**

set network pmtud

set network pmtud {enable | disable}

Syntax Description

enable	Enables Path MTU Discovery
disable	Disables Path MTU Discovery

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to enable or disable Path MTU Discovery.

> **Note**   For the changes to take effect, this command causes a temporary loss of network connectivity.

Examples
```
admin:set network pmtud enable
        ***  W A R N I N G  ***
This will cause the system to temporarily lose network connectivity

        Do you want to continue?

Enter "yes" to continue or any other key to abort
yes
executing...
```

set network status eth0

set network status eth0 {up | down}

Syntax Description

up	Sets state of eth0 to up.
down	Sets state of eth0 to down.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to set the state of the Ethernet interface eth0 to up or down.

Examples
```
admin:set network restore eth0 down
***   W A R N I N G   ***
This will cause the system to temporarily lose network connectivity
Continue (y/n) ?y
Executed command unsuccessfully
status is down
```

set password admin

set password admin

Syntax Description   None

Command Modes   Admin

Command History

Command	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to set a new administrator password.

Note   Passwords must be at least 6 characters, but not more than 64 characters in length, and can contain upper and lower case alphanumeric characters, and underscore and dash characters. The password should not be a word found in the dictionary. The following passwords are not allowed: apache, daemon, nobody, operator, and shutdown. Do not use your personal or account names or any variation of them.

```
admin:set password admin
Please enter the old password: ******
Please enter the new password: ********
Re-enter new password to confirm: ********
Executed command unsuccessfully
```

set snmp trapdest add

set snmp trapdest add *version username destination* [*level*] [*passphrase*] [*engineID*]

Syntax Description

version	Defines Simple Network Management Protocol (SNMP) version, either 3 or 2c
username	Defines SNMP username (version 3) or community string (version 2c)
destination	Destination host, using the following format: n.n.n.n[:port}
level	SNMP version 3 only: defines level. Available values for this field are: • authNoPriv (default) • authPriv • noauthNoPriv
passphrase	SNMP version 3 only: defines the user passphrase. The passphrase must contain at least 8 characters.
engineID	SNMP version 3 only: defines engine ID to use for trap.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to set a Simple Network Management Protocol (SNMP) trap destination.

Examples   admin:**set snmp trapdest add 3 trapusr 64.101.180.49:162 authnopriv trappass 0x8000DEECAFE8111BEEFADE**

Successfully added trap destination

set snmp trapdest del

set snmp trapdest del

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to delete a Simple Network Management Protocol (SNMP) trap destination.

Examples
```
admin:set snmp trapdest del
1) Host = 64.101.180.49:162 (Version 3)

      Version 3 Options:
            User = TimTrap             PW   = authpriv
           Level = authnopriv          Hash = md5
        EngineID = 0x80001f8803001a6406bc16

 2) Host = 64.101.180.49 (Version 3)

      Version 3 Options:
            User = TimTrap2            PW   = authpriv
           Level = authnopriv          Hash = md5
        EngineID = 0x80001f8803001a6406bc16

 3) Host = 64.101.180.49:162 (Version 3)

      Version 3 Options:
            User = trapusr             PW   = trappass
           Level = authnopriv          Hash = md5
        EngineID = 0x8000DEECAFE8111BEEFADE

   Enter which trap number to delete: 2
 Successfully deleted trap destination
```

set snmp user add

set snmp user add *version username access* [*level*] [*passphrase*]

Syntax Description		
	version	Defines Simple Network Management Protocol (SNMP) version, either 3 or 2c
	username	Defines SNMP username (version 3) or community string (version 2c). User names can be from 1 to 32 characters.
	access	Defines which SNMP tasks can be accessed; values are: • **r** (read) • **w** (write) • **rw** (read and write)
	level	SNMP version 3 only: defines level. Available values for this field are: • authNoPriv (default) • authPriv • noauthNoPriv
	passphrase	SNMP version 3 only: defines the user passphrase. The passphrase must contain at least 8 characters.

Command Modes   Admin

Command History	Release	Modifications
	1.6	This command was first documented.

Usage Guidelines   Use this command to add a new user or community to SNMP. You can add up to eight SNMP users.

> **Note**   For SNMP version 3, hash will always be MD5 and encryption will be DES.

Examples
```
admin:set snmp user add 3 testusr rw authpriv testpass
Successfully added user

admin:set snmp user add 2c test_RO r
Successfully added user
```

set snmp user del

set snmp user del *version username*

Syntax Description

version	Defines Simple Network Management Protocol (SNMP) version, either 3 or 2c
username	Defines SNMP username (version 3) or community string (version 2c)

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to delete a user or community from SNMP.

> **Note**   For SNMP version 3, hash will always be MD5 and encryption will be DES.

Examples
```
admin:set snmp user del 3 tim
Successfully deleted user

admin:set snmp user del 2c test_RO
Successfully deleted user
```

set syslog facility

set syslog facility *facility*

Syntax Description	*facility*	Defines default syslog message facility. Values are from local0 to local7.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to set the default facility used for syslog messages.

Examples
```
admin: set syslog facility local1
Setting to local1 facility
```

set syslog heartbeat facility

set syslog heartbeat facility *facility*

Syntax Description	*facility*	Defines default syslog heartbeat facility. Values are from local0 to local7.

Command Modes   Admin

Command History	Release	Modifications
	1.6	This command was first documented.

Usage Guidelines   Use this command to set the default facility used for heartbeat messages.

Examples   admin:**set syslog heartbeat facility local1**
Setting to local1 facility

set syslog heartbeat interval

set syslog heartbeat interval *interval*

Syntax Description	*interval*	Defines interval in minutes from 0 to 2880. If set to 0, heartbeat messages will be disabled.

Command Modes   Admin

Command History	Release	Modifications
	1.6	This command was first documented.

Usage Guidelines   Use this command to set the syslog heartbeat interval in minutes. Setting this command to 0 disables syslog heartbeat messages.

Examples   admin:**set syslog heartbeat interval 10**

set syslog heartbeat msg

set syslog heartbeat msg *text*

Syntax Description	*text*	Text string within double quotes ("text") for heartbeat messages.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to define the syslog heartbeat message text.

Examples   admin:**set syslog heartbeat msg "example message"**
Setting message to "example message"

set syslog heartbeat severity

set syslog heartbeat severity *level*

Syntax Description	*level*	Defines the level of severity for syslog heartbeat messages. Available choices are from 0 (emergency) to 7(debug).

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to set the level of severity for syslog heartbeat messages.

Examples
```
admin:set syslog heartbeat severity 7
Setting severity to 7
```

set syslog timezone

set syslog timezone *zone*

Syntax Description	*zone* Defines the timezone for syslog message timestamps. Choices are:
	local: local timezone
	gmt: Greenwich mean time

Command Modes Admin

Command History	**Release**	**Modifications**
	1.6	This command was first documented.

Usage Guidelines Use this command to set the timezone used for syslog message timestamps.

Examples admin:**set syslog timezone gmt**

set syslog version

set syslog version *version*

Syntax Description	*version*	Defines the syslog message output format version. Choices are: 0: CiscoLog versions 1.1 format 1: RFC Syslog Protocol Version 1 format

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to set the system message output format version.

Examples

```
admin:set syslog version 0
Setting to 0, the CiscoLog v1.1 format
```

set timezone

set timezone *timezone*

Syntax Description

timezone	Enter the appropriate text string or timezone code for the zone you want to configure. Use the **show timezone list** command to display a complete list of available timezone codes.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to set a new timezone value. This sets system time on CTRS server.

Examples

```
admin:set timezone America/Los_Angeles
Using timezone: America/Los_Angeles

A system restart is required

Change timezone and reboot (yes|no)? yes
Executed command successfully
```

set videoquality

set videoquality {**highest** | **higher** | **high** | **medium** | **low** | **lower** | **lowest**}

Syntax Description

highest	Highest Detail, Best Motion: 1080p
higher	Highest Detail, Better Motion: 1080p
high	Highest Detail, Good Motion: 1080p
medium	High Detail, Best Motion: 720p
low	High Detail, Better Motion: 720p
lower	High Detail, Good Motion: 7200p
lowest	High Detail, Limited Motion: 720p (Lite)

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to set the video recording quality.

Examples   admin:**set videoquality higher**

set web-security

set web-security *orgunit orgname locality state country* [*alternatehostname*]

Syntax Descriptiono

orgunit	Defines organization unit
orgname	Defines organizational name
locality	Defines location of organization
state	Defines state of organization
country	Defines country of organization
alternatehostname	If present, defines alternate host name with SubjectAlternativeName extension with a DNS: Prefix

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to create a new "Tomcat" certificate for HTTPS access to Cisco Unified Communications Manager.

✎

Note   You must restart the "Cisco Tomcat" service for the new certificate to take effect.

Examples

```
admin:set web-security mydept mycorp SanJose CA US
Successfully generated self signed certificate for tomcat
```

set workingdir activelog

set workingdir activelog *directory*

Syntax Descriptiono	*directory*	Valid subdirectory of activelog

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to set the CLI working directory for activelog. Only a valid subdirectory can be used. Do not use a forward slash (/) or a period (.) in front of the directory name. Use the **show workingdir** command to confirm this command worked.

Examples   admin:**set workingdir activelog syslog**

set workingdir inactivelog

set workingdir inactivelog *directory*

Syntax Descriptiono	*directory*	Valid subdirectory of inactivelog

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to set the CLI working directory for inactivelog. Only a valid subdirectory can be used. Do not use a forward slash (**/**) or a period (**.**) in front of the directory name. Use the **show workingdir** command to validate.

Examples   admin:**set workingdir inactivelog syslog**

C H A P T E R 5

CTRS Show Commands

Revised: November 2009, OL-19547-01

This chapter contains Cisco TelePresence Recording Server (CTRS) **show** commands:

Note   For information about using the CTRS administration software, refer to the *Cisco TelePresence Recording Server Release 1.6 Administration Guide* at the following URL:

http://www.cisco.com/en/US/products/ps10341/prod_maintenance_guides_list.html

show account

show account

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display a list of all administrative accounts except for the master administrator account.

Examples

```
admin:show account
Name = test, Privilege = 1
```

show activesessions all

show activesessions all

Syntax Description None

Command Modes Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines Use this command to display all active recordings and replays.

Examples

```
admin:show activesessions all
Setting active types to all
*************Active Call(s) *************
******************************************
```

show activesessions both

show activesessions both

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display all active bidirectional sessions.

Examples

```
admin:show activesessions both
Setting active types to bidirectional
*************Active Call(s) *************
******************************************
```

show activesessions recordings

show activesessions recordings

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display all active recordings.

Examples
```
admin:show activesessions recordings
Setting active types to recordings
*************Active Call(s) *************
******************************************
```

show activesessions replays

show activesessions replays

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display all active replays.

Examples

```
admin:show activesessions replays
Setting active types to replays
*************Active Call(s) *************
*****************************************
```

show diskalertthreshold

show diskalertthreshold

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to show the disk percent usage that will trigger an alert to an administrator.

Examples
```
admin: show diskalertthreshold

show diskspace left

show diskspace left

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display the amount of media diskspace left.

Examples   admin:**show diskspace left**
Disk Space: 621G

show diskspace used

show diskspace used

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display the amount of media diskspace used.

Examples   admin:**show diskspace used**
Disk Space: 18G

show firewall list

show firewall list [**detail** | **page** | **file** *fname*]

Syntax Description	**detail**	Displays firewall port details.
	page	Allows you to control how much output is displayed in CLI. Enter 1 to display one line at a time; press the space bar to display one page of output at a time.
	file *fname*	Saves output to a file.

Command Modes   Admin

Command History	Release	Modifications
	1.6	This command was first documented.

Usage Guidelines   Use this command to show current firewall port information.

Examples   admin:**show firewall list detail**
...

show hardware

show hardware

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display basic platform hardware information.

Examples
```
admin:show hardware
HW Platform      : 7845H2
Processors       : 2
Type             : Family: Xeon
CPU Speed        : 2333
Memory           : 4096 MBytes
Object ID        : 1.3.6.1.4.1.9.1.586
OS Version       : UCOS 4.0.0.0-27
Serial Number    : 2UX90700FN

RAID Version     :
RAID Firmware Version:  5.26
RAID BIOS Version: N/A

BIOS Information  :
11/01/2008

RAID Details      :

Smart Array P400 in Slot 1
   Bus Interface: PCI
   Slot: 1
   Serial Number: PAFGK0P9VWS6D8
   Cache Serial Number: PA82C0J9SWV3HL
   RAID 6 (ADG) Status: Enabled
   RAID 6 (ADG) Enabler Status: Enabled
   Controller Status: OK
   Chassis Slot:
   Hardware Revision: Rev E
   Firmware Version: 5.26
   Rebuild Priority: Medium
   Expand Priority: Medium
   Surface Scan Delay: 3 sec
   Cache Board Present: True
   Cache Status: OK
   Accelerator Ratio: 50% Read / 50% Write
   ...
```

show hdcapable

show hdcapable

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	The command was first documented.

Usage Guidelines   Use this command to display if HD video recording is enabled.

Examples   admin:**show hdcapable**
HD Capability: Enabled

show ldcapable

show ldcapable

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	The command was first documented.

Usage Guidelines   Use this command to display if LD video recording is enabled.

Examples

```
admin:show ldcapable
CIF Capability: Enabled
```

show logins

show logins [*number*]

Syntax Description

number	The optional parameter can be used to specify the number of displayed logins. A value of 0 will display all previously saved logins. The default is 20.

Command Modes   Admin

Command History

Release	Modifications
1.6	The command was first documented.

Usage Guidelines   Use this command to display the last 20 platform admin logins.

Examples

```
admin:show logins
admin    pts/0        dhcp-171-70-13-1 Tue Dec  1 16:05   still logged in
root     pts/0        pnmars-61.cisco. Tue Dec  1 05:53 - 10:45  (04:52)
```

show mediasecurity

show mediasecurity

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	The command was first documented.

Usage Guidelines   Use this command to display the configured box-level security for media.

Examples   admin:**show mediasecurity**

show myself

show myself

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	The command was first documented.

Usage Guidelines   Use this command to display information about the current account. The CLI "set commandcount" and "set logging" commands can be used to modify current account settings.

Examples

```
admin:show myself
Machine Name    : tsbu-ctrs-dev6
account name    : admin
privilege level : 4
command count   : disabled
logging setting : disabled
```

show network all

show network all

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	The command was first documented.

Usage Guidelines   Use this command to display all basic platform network information.

✎

Note   You can use the search option to selectively display the output.

Examples
```
admin:show network all
Ethernet 0

...
```

show network eth0

show network eth0

Syntax Description   None

Command Modes   Admin

Command History

Release	Modification
1.6	The command was first documented.

Usage Guidelines   Use this command to display some basic platform network information about eth0.

> **Note**   You can use the search option to selectively display the output.

Examples

```
admin:show network eth0

Ethernet 0
DHCP         : disabled          Status       : up
IP Address   : 172.28.70.109     IP Mask      : 255.255.252.0
Link Detected: yes               Mode         : Auto enabled, Full, 1000 Mbits/s
Duplicate IP : no

DNS
Primary      : 171.70.168.183    Secondary    : Not Configured
Options      : timeout:5 attempts:2
Domain       : cisco.com
Gateway      : 172.28.68.1 on Ethernet 0
```

show network failover

show network failover

Syntax Description   None

Command Modes   Admin

Command History

Release	Modification
1.6	This command was first documented.

Usage Guidelines   Use this command to display NIC Teaming network fault tolerance information.

Examples

```
admin:show network failover
Network Fault Tolerance is not configured.
```

show network ip_conntrack

show network ip_conntrack

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display the current utilization of ip_conntrack.

Examples   admin:**show network ip_conntrack**

35

show network max_ip_conntrack

show network max_ip_conntrack

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display ip_conntrack_max information.

Examples   admin:**show network max_ip_conntrack**

65536

show network route

show network route

Syntax Description	None

Command Modes	Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display some basic platform network route information.

Note   You can use the search option to selectively display the output.

Examples

```
admin:show network route
172.28.68.0/22 dev eth0  proto kernel  scope link  src 172.28.70.109
169.254.0.0/16 dev eth0  scope link
default via 172.28.68.1 dev eth0
```

show network status

show network status [search *name*]

Syntax Description	**search** *name*	Optional search feature, The variable *name* is a text string indicating network. String cannot contain spaces or tabs and is case insensitive.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display basic platform network status information.

Examples

```
admin:show network status

Active Internet connections (w/o servers)
Proto Recv-Q Send-Q Local Address             Foreign Address         State
tcp       0      0 tsbu-ctrs-dev6.cisco.:41626 tsbu-ct:tsbu_ctrs_dev6_ctis ESTABLISHED
tcp       0      0 tsbu-ctrs-dev6.cisco.:41627 tsbu-ct:tsbu_ctrs_dev6_ctis ESTABLISHED
tcp       0      0 tsbu-ctrs-dev6.cisco.:41624 tsbu-ct:tsbu_ctrs_dev6_ctis ESTABLISHED

Active UNIX domain sockets (w/o servers)
Proto RefCnt Flags       Type       State       I-Node Path
unix  3      [ ]         DGRAM                   7948   /dev/log2
unix  2      [ ]         DGRAM                   28530
```

Example with optional search feature:

```
admin:show network status cisco.com

Active Internet connections (w/o servers)
Proto Recv-Q Send-Q Local Address             Foreign Address         State
tcp       0      0 tsbu-ctrs-dev6.cisco.:41626 tsbu-ct:tsbu_ctrs_dev6_ctis ESTABLISHED
tcp       0      0 tsbu-ctrs-dev6.cisco.:41627 tsbu-ct:tsbu_ctrs_dev6_ctis ESTABLISHED
tcp       0      0 tsbu-ctrs-dev6.cisco.:41624 tsbu-ct:tsbu_ctrs_dev6_ctis ESTABLISHED

Active UNIX domain sockets (w/o servers)
Proto RefCnt Flags       Type       State       I-Node Path
unix  3      [ ]         DGRAM                   7948   /dev/log2
unix  2      [ ]         DGRAM                   28530
/usr/local/platform/conf/clm/unix_socket
unix  11     [ ]         DGRAM                   7809   /dev/log
unix  2      [ ]         DGRAM                   4001   @udevd
unix  2      [ ]         DGRAM                   1173292
unix  2      [ ]         DGRAM                   1171540
```

show open files all

show open files all

Syntax Description   none

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display all open files on the CTRS.

Examples
```
admin:show open files all
Executing.. please wait.

```

show open files regexp

show open files regexp "*string*"

Syntax Description	"*string*"	Regular expression identifying string. String value must be included inside quotation marks.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display all open files on the device that match the regular expression as defined by the *string* value.

Examples
```
admin:show open files regexp "Cisco"
Executing.. please wait.
syslogd   4174    root   10u    FIFO     104,2                   4030835
/var/CiscoSyslogFifo
snmpd    8642    root   6r     FIFO     104,2                   4030835
/var/CiscoSyslogFifo
java     29187   admin  mem       REG    104,2      46642    511301
/usr/local/platform/jar/CiscoIPSec.jar
```

show open ports all

show open ports all

Syntax Description   none

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display all open ports on the device.

Examples

```
admin:show open ports all
Executing.. please wait.
COMMAND     PID      USER     FD    TYPE    DEVICE SIZE NODE NAME

show packages

show packages {active *name* | active *} | {inactive *name* | inactive *}

Syntax Description

active *name*	Retrieves the version number for a specific package on the active partition.
active *	Retrieves the version numbers for all packages on the active partition.
inactive *name*	Retrieves the version number for a specific package on the inactive partition.
inactive *	Retrieves the version number for all packages on the inactive partition.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display the version number of one or more packages on the active side or inactive partition.

Examples

```
admin:show packages active jdk
Active Side Package(s): for jdk package(s)
jdk-1.5.0_17-fcs

admin: show packages inactive jdk
Inactive Side Package(s): for jdk package(s)
jdk-1.5.0_14-fcs
```

■ show process list

show process list

show process list [file *name*] **[detail] [vm]**

Syntax Description

file *name*	Saves output in a separate file.
detail	Displays detailed process information, such as process page fault, virtual memory and start time.
vm	Displays process virtual memory.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display the list of all processes and critical information about each of them. This command also displays the parent-child relationship between these processes.

Use the **detail** option to see a more detailed view of these processes.

Use the **file** *name* option to redirect the output of this command.

Examples
```
admin:show process list
...
 5758 /usr/sbin/racoon -F -f /etc/racoon/racoon.conf
 5759 /usr/local/platform/bin/servM
 7035  \_ /usr/local/cm/bin/dbmon
 7985  \_ /usr/local/cm/bin/cdpd -f
 8045  \_ /usr/local/platform/bin/enStart
 8255  \_ /usr/local/platform/bin/certM
 8514  \_ /usr/local/cm/bin/cdragent /usr/local/cm/conf/cdragent/cdragentCfg.xml
 8538  \_ /usr/local/cm/bin/RisDC
 8551  \_ /usr/local/cm/bin/amc /usr/local/cm/conf/amc/amcCfg.xml
 8695  \_ /usr/local/cm/bin/ctftp
 6627 /usr/local/cm/bin/cmoninit
 6628  \_ /usr/local/cm/bin/cmoninit
 6629      \_ /usr/local/cm/bin/cmoninit
 6630      \_ /usr/local/cm/bin/cmoninit
 6631      \_ /usr/local/cm/bin/cmoninit
 6632      \_ /usr/local/cm/bin/cmoninit
 ...
```

show process load

> show process load [cpu | memory | time] [cont] [clear] [noidle] [page] [thread]
> [num *number* | num all]

Syntax Description

cont	Repeats the command continuously.
clear	Screen clears before displaying output.
cpu	Sorts output by CPU usage. If no options are specified, this is the default.
	Note This option cannot be combined with other options.
memory	Sorts output by memory usage.
	Note This options cannot be combined with other options.
noidle	Command ignores the idle/zombie processes
page	Pauses output.
thread	Displays threads.
time	Sorts output by time usage.
	Note This option cannot be combined with other options.
num *number*	Defines the number of processes to display; minimum value is 1, default is 10.
num all	Displays all processes.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display the current system load including the number of processes using the most CPU, memory or time.

> **Note**   The following options cannot be combined with other command options: cpu, memory or time. If more than one is specified, the last one will be used. If none is specified, cpu will be shown.

Examples

```
admin:show process load num 10
 22:11:35  up  7:50,  4 users,  load average: 0.00, 0.00, 0.00
75 processes: 74 sleeping, 1 running, 0 zombie, 0 stopped
```

```

```

show recordedquality

show recordedquality *recid*

Syntax Description	*recid*	Recording identification number.

Command Modes   Admin

Command History	Release	Modifications
	1.6	This command was first documented.

Usage Guidelines   Use this command to display the quality level for a recorded file that is identified by a recording identification number (*recid*). Recording identification numbers can be found in the Recordings Management section of the administrative user interface.

Examples

```
admin:show recordedquality 2009113021152077726258
Highest Detail, Best Motion: 1080p
```

show refreshrate

show refreshrate

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display the default spacing between IDRs in the video streams.

Examples   admin:**show refreshrate**
IDRs are spaced 15 seconds apart

show snmp trapdests

show snmp trapdests

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display the configured Simple Network Management Protocol (SNMP) trap
destinations.

Examples
```
admin:show snmp trapdests
1) Host = 64.101.180.49:162 (Version 3)

    Version 3 Options:
          User = TimTrap              PW   = authpriv
         Level = authnopriv          hash = md5
       EngineID = 0x80001f8803001a6406bc16

  2) Host = 64.101.180.49 (Version 3)

    Version 3 Options:
          User = TimTrap2             PW   = authpriv
         Level = authnopriv          hash = md5
       EngineID = 0x80001f8803001a6406bc16
```

show snmp users

show snmp users

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display the configured Simple Network Management Protocol (SNMP) users and communities.

Examples
```
admin:show snmp users
1)  Username: admin                 Version: v3
        Level: AuthNoPriv              Mode: RW

2)  Username: tim                   Version: v3
        Level: AuthNoPriv              Mode: RW

3) Community: TimRO                 Version: v2c
        Level: n/a                     Mode: R

4) Community: TimRW                 Version: v2c
        Level: n/a                     Mode: RW
```

show statistics dialnumber

show statistics dialnumber *number*

Syntax Description	*number*	Dial number.
	Admin	

Command History	**Release**	**Modifications**
	1.6	This command was first documented.

Usage Guidelines   Use this command to prints statistics for the session to a dial number.

show stats io

show stats [**file** *name*] [**kilo** | **detail**] [**page**]

Syntax Description		
file *name*		Saves output information to a file. The file is saved in the following format: platform/cli/*name*.txt. The *name* option cannot contain a period (.).
kilo		Shows details statistics in kilobytes.
detail		Shows detailed statistics of every available device on the system. This option overrides **kilo** option.
page		Pauses output.

Command Modes   Admin

Command History	Release	Modifications
	1.6	This command was first documented.

Usage Guidelines   Use this command to display system I/O statistics of the device.

Examples   admin:**show stats io kilo file statsiodump**

show status

show status

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display basic platform status information.

Examples
```
admin:show status

```

show syslog facility

show syslog facility

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display the syslog default facility used for logging messages.

Examples
```
admin:show syslog facility
Using the local1 facility
```

show syslog heartbeat facility

show syslog heartbeat facility

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display the syslog heartbeat facility used for heartbeat messages.

Examples

```
admin:show syslog heartbeat facility
Using the local1 facility
```

show syslog heartbeat interval

show syslog heartbeat interval

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display the syslog heartbeat interval in minutes.

Note   Zero (0) indicates that the syslog heartbeat interval is disabled.

Examples

```
admin:show syslog heartbeat interval
Using the 0 minute interval
```

show syslog heartbeat msg

show syslog heartbeat msg

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display the syslog heartbeat message text.

Examples   admin:**show syslog heartbeat msg**
Using the "Syslog heartbeat message" message

show syslog heartbeat severity

show syslog heartbeat severity

Syntax Description	None

Command Modes	Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display the severity used for syslog heartbeat messages.

Examples

```
admin:show syslog heartbeat severity
Using the 7 severity
```

show syslog timezone

show syslog timezone

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display the syslog timezone setting as either local time or GMT/UTC.

Examples
```
admin:show syslog timezone
Using gmt timezone
```

show syslog version

show syslog version

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display the syslog output version as either CiscoLog v1.1 or IETF/RFC Syslog Protocol Version 1.

Examples

```
admin:show syslog version
Version is 0, the Ciscolog v1.1 format
```

show tech all

show tech all [page] [file *name*]

Syntax Description		
	file *name*	Saves output information to a file. The file is saved in the following format: platform/cli*name*.txt. The *name* option cannot contain a period (.).
	page	Pauses output.

Command Modes	Admin

Command History	**Release**	**Modifications**
	1.6	This command was first documented.

Usage Guidelines   Use this command to display output from all of the **show tech** commands simultaneously.

✎
Note   This command may produce a large output of data.

Examples   admin:**show tech all file techdump**

show tech network all

show tech network all [page] [file *name*] [**search** *text*]

Syntax Description		
	file *name*	Saves output information to a file. The file is saved in the following format: platform/cli/*name*.txt. The *name* option cannot contain a period (.).
	page	Pauses output.
	search *text*	Searches output for a particular text string as indicated by *text*. Search is case insensitive.

Command Modes   Admin

Command History	Release	Modifications
	1.6	This command was first documented.

Usage Guidelines   Use this command to display all of the network-related information associated with the node.

Examples

```
admin:show tech network all
------------------- show platform network --------------------

 Ethernet Interfaces:
1: lo: <LOOPBACK,UP> mtu 16436 qdisc noqueue
    link/loopback 00:00:00:00:00:00 brd 00:00:00:00:00:00
    inet 127.0.0.1/8 brd 127.255.255.255 scope host lo
    inet6 ::1/128 scope host
       valid_lft forever preferred_lft forever
2: eth0: <BROADCAST,MULTICAST,UP> mtu 1500 qdisc pfifo_fast qlen 1000
    link/ether 00:23:7d:62:b1:5a brd ff:ff:ff:ff:ff:ff
    inet 172.28.70.109/22 brd 172.28.71.255 scope global eth0
    inet6 fe80::223:7dff:fe62:b15a/64 scope link
       valid_lft forever preferred_lft forever
3: eth1: <BROADCAST,MULTICAST,UP> mtu 1500 qdisc pfifo_fast qlen 1000

4: sit0: <NOARP> mtu 1480 qdisc noop
    link/sit 0.0.0.0 brd 0.0.0.0

Settings for eth0:
        Supported ports: [ TP ]
        Supported link modes:   10baseT/Half 10baseT/Full
                                100baseT/Half 100baseT/Full
                                1000baseT/Full
        Supports auto-negotiation: Yes
        Advertised link modes:  10baseT/Half 10baseT/Full
                                100baseT/Half 100baseT/Full
                                1000baseT/Full
        Advertised auto-negotiation: Yes
        Speed: 1000Mb/s
    ...
```

show tech network hosts

show tech network hosts [**page**] [**file** *name*] [**search** *text*]

Syntax Description	**file** *name*	Saves output information to a file. The file is saved in the following format: platform/cli*name*.txt. The *name* option cannot contain a period (.).
	page	Pauses output.
	search *text*	Searches output for a particular text string as indicated by *text*. Search is case insensitive.

Command Modes	Admin

Command History	**Release**	**Modifications**
	1.6	This command was first documented.

Usage Guidelines	Use this command to display host-related aspects of the device's network.

Examples

```
admin:show tech network hosts
------------------ show platform network -------------------

 /etc/hosts File:
#This file was generated by the /etc/hosts cluster manager.
#It is automatically updated as nodes are added, changed, removed from the cluster.

127.0.0.1 localhost
::1 localhost
172.28.70.109 tsbu-ctrs-dev6.cisco.com tsbu-ctrs-dev6
```

show tech network interfaces

show tech network interfaces [**page**] [**file** *name*] [**search** *text*]

Syntax Description

file *name*	Saves output information to a file. The file is saved in the following format: platform/cli/*name*.txt. The *name* option cannot contain a period (.).
page	Pauses output.
search *text*	Searches output for a particular text string as indicated by *text*. Search is case insensitive.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display interface-related aspects of the device's network.

Examples
```
admin:show tech network interfaces
------------------ show platform network --------------------

 Ethernet Interfaces:
1: lo: <LOOPBACK,UP> mtu 16436 qdisc noqueue
    link/loopback 00:00:00:00:00:00 brd 00:00:00:00:00:00
    inet 127.0.0.1/8 brd 127.255.255.255 scope host lo
    inet6 ::1/128 scope host
       valid_lft forever preferred_lft forever
2: eth0: <BROADCAST,MULTICAST,UP> mtu 1500 qdisc pfifo_fast qlen 1000
    link/ether 00:23:7d:62:b1:5a brd ff:ff:ff:ff:ff:ff
    inet 172.28.70.109/22 brd 172.28.71.255 scope global eth0
    inet6 fe80::223:7dff:fe62:b15a/64 scope link
       valid_lft forever preferred_lft forever
3: eth1: <BROADCAST,MULTICAST,UP> mtu 1500 qdisc pfifo_fast qlen 1000
    link/ether 00:23:7d:62:b1:58 brd ff:ff:ff:ff:ff:ff
4: sit0: <NOARP> mtu 1480 qdisc noop
    link/sit 0.0.0.0 brd 0.0.0.0

Settings for eth0:
        Supported ports: [ TP ]
        Supported link modes:   10baseT/Half 10baseT/Full
                                100baseT/Half 100baseT/Full
                                1000baseT/Full
        Supports auto-negotiation: Yes
        Advertised link modes:  10baseT/Half 10baseT/Full
                                100baseT/Half 100baseT/Full
                                1000baseT/Full
        Advertised auto-negotiation: Yes
        Speed: 1000Mb/s
...
```

show tech network resolv

show tech network resolv [page] [file *name*] [**search** *text*]

Syntax Description

file *name*	Saves output information to a file. The file is saved in the following format: platform/cli*name*.txt. The *name* option cannot contain a period (.).
page	Pauses output.
search *text*	Searches output for a particular text string as indicated by *text*. Search is case insensitive.

Command Modes   Admin

Command History

Release	**Modifications**
1.6	This command was first documented.

Usage Guidelines   Use this command to display specific information from the resolv.conf file for this device.

Examples
```
admin:show tech network resolv
------------------- show platform network --------------------

 /etc/resolv.conf file
search cisco.com
nameserver 171.70.168.183
```

show tech network routes

show tech network routes [page] [file *name*] [**search** *text*]

Syntax Description

file *name*	Saves output information to a file. The file is saved in the following format: platform/cli/*name*.txt. The *name* option cannot contain a period (.).
page	Pauses output.
search *text*	Searches output for a particular text string as indicated by *text*. Search is case insensitive.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display specific route-related information for this device.

Examples
```
admin:show tech network routes
------------------- show platform network --------------------

 Routes:
172.28.68.0/22 dev eth0  proto kernel  scope link  src 172.28.70.109
169.254.0.0/16 dev eth0  scope link
default via 172.28.68.1 dev eth0
```

show tech network sockets

show tech network sockets [page] [file *name*] [**search** *text*] [**numeric**]

Syntax Description

file *name*	Saves output information to a file. The file is saved in the following format: platform/cli*name*.txt. The *name* option cannot contain a period (.).
page	Pauses output.
search *text*	Searches output for a particular text string as indicated by *text*. Search is case insensitive.
numeric	Displays ports in numeric format

Command Modes

Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines

Use this command to display the list of open sockets. With the **numeric** option, you can show the numerical addresses of the ports instead of determining symbolic hosts.

Examples

```
admin:show tech network sockets numeric
------------------- show platform network --------------------

 Network Connections:
Active Internet connections (w/o servers)
Proto Recv-Q Send-Q Local Address               Foreign Address           State
tcp       0       0 localhost:9000              localhost:32789           ESTABLISHED
tcp       0       0 localhost:32789             localhost:9000            ESTABLISHED
tcp       0      48 tsbu-kht9.cisco.com:22      sjc-tifox-8712.cisco.c:3445 ESTABLISHED
udp       0       0 localhost:32768             localhost:514             ESTABLISHED
Active UNIX domain sockets (w/o servers)
Proto RefCnt Flags       Type        State       I-Node Path
unix  2      [ ]         DGRAM                    16220
/usr/local/platform/conf/clm/unix_socket

...
```

show tech runtime all

show tech runtime all [page] [file *name*]

Syntax Description		
	file *name*	Saves output information to a file. The file is saved in the following format: platform/cli/*name*.txt. The *name* option cannot contain a period (.).
	page	Pauses output.

Command Modes   Admin

Command History	Release	Modifications
	1.6	This command was first documented.

Usage Guidelines   Use this command to display all of the **show tech runtime** information simultaneously, including environment variables, disk, memory and CPU.

Examples
```
admin:show tech runtime all
------------------- show platform runtime --------------------

Environment variables:
TOMCAT_HOME=/usr/local/thirdparty/jakarta-tomcat
SERVER_LOCALE=en_us.utf8
HOSTNAME=tsbu-ctrs-dev6
SR_AGT_CONF_DIR=/usr/local/Snmpri/conf
SHELL=/usr/local/platform/bin/cliscript.sh
TERM=vt100
CATALINA_HOME=/usr/local/thirdparty/jakarta-tomcat
INFORMIXTMP=/usr/local/ctis/db/informix/tmp
...

The disk usage:
Filesystem          Size  Used Avail Use% Mounted on
/dev/cciss/c0d0p2    34G  2.3G   31G   7% /
/dev/cciss/c0d0p1    34G  1.9G   31G   6% /partB
/dev/cciss/c0d1p1   673G   18G  621G   3% /common
none                2.0G     0  2.0G   0% /dev/shm
...
Total memory (RAM+swap) usage (in KB):
            total        used        free      shared     buffers      cached
Mem:      4147676     1198220     2949456           0      112828      524952
-/+ buffers/cache:     560440     3587236
Swap:     2048248           0     2048248
Total:    6195924     1198220     4997704

The processor usage :
top - 21:53:33 up 8 days,  2:10,  3 users,  load average: 0.30, 0.32, 0.27
Tasks: 138 total,   1 running, 137 sleeping,   0 stopped,   0 zombie
...
```

show tech runtime cpu

show tech runtime cpu [page] [file *name* **]**

Syntax Description

file *name*	Saves output information to a file. The file is saved in the following format: platform/cli/*name*.txt. The *name* option cannot contain a period (.).
page	Pauses output.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display the CPU usage at the time the command is executed.

Examples

```
admin:show tech runtime cpu
------------------- show platform runtime -------------------

The processor usage :
top - 21:59:15 up 8 days,  2:16,  3 users,  load average: 0.31, 0.31, 0.27
Tasks: 137 total,   1 running, 136 sleeping,   0 stopped,   0 zombie
Cpu(s):  0.1% us,  0.0% sy,  0.0% ni, 99.9% id,  0.0% wa,  0.0% hi,  0.0% si
Mem:   4147676k total, 1197636k used, 2950040k free,   112828k buffers
Swap:  2048248k total,        0k used, 2048248k free,   524952k cached

```

show tech runtime memory

show tech runtime memory [page] [file *name*]

Syntax Description

file *name*	Saves output information to a file. The file is saved in the following format: platform/cli/*name*.txt. The *name* option cannot contain a period (.).
page	Pauses output.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display runtime memory information.

Examples
```
admin:show tech runtime memory
------------------- show platform runtime -------------------

Total memory (RAM+swap) usage (in KB):
             total       used       free     shared     buffers      cached
Mem:       4147676    1199348    2948328          0      112844      525716
-/+ buffers/cache:     560788    3586888
Swap:      2048248          0    2048248
Total:     6195924    1199348    4996576
```

show tech system all

show tech system all [page] [file *name*]

Syntax Description	file *name*	Saves output information to a file. The file is saved in the following format: platform/cli*name*.txt. The *name* option cannot contain a period (.).
	page	Pauses output.

Command Modes   Admin

Command History	Release	Modifications
	1.6	This command was first documented.

Usage Guidelines   Use this command to display all of the information associated with **show tech system** commands simultaneously, including bus, hardware, host, kernel, software and tools.

Examples
```
admin:show tech system all
------------------- show platform system -------------------

Host related info:

Machine Name: tsbu-ctrs-dev6.cisco.com
Tue Dec  1 22:10:31 UTC 2009 - up for 8 days  2:27

show tech system software

show tech system software [page] [file *name***]**

Syntax Description	**file** *name*	Saves output information to a file. The file is saved in the following format: platform/cli/*name*.txt. The *name* option cannot contain a period (.).
	page	Pauses output.

Command Modes   Admin

Command History	**Release**	**Modifications**
	1.6	This command was first documented.

Usage Guidelines   Use this command to display system-related software information.

Examples

```
admin:show tech system software
------------------ show platform system --------------------

Software Release Version: 2.0.0.0-44
Platform Release Version: 2.0.0.1-1
```

show tech system tools

show tech system tools [page] [file *name*]

Syntax Description		
file *name*		Saves output information to a file. The file is saved in the following format: platform/cli*name*.txt. The *name* option cannot contain a period (.).
page		Pauses output.

Command Modes   Admin

Command History	Release	Modifications
	1.6	This command was first documented.

Usage Guidelines   Use this command to display system-related tools information.

Examples
```
admin:show tech system tools
------------------- show platform system -------------------

software: system versions
java version "1.5.0_17"
Java(TM) 2 Runtime Environment, Standard Edition (build 1.5.0_17-b04)
Java HotSpot(TM) Server VM (build 1.5.0_17-b04, mixed mode)

Tomcat "6.0.20-0"
```

show timezone

show timezone {config | list}

Syntax Description

config	Displays the current timezone setting.
list	Lists all available timezones.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display the current timezone settings or to display a list of all available timezones in long format.

Note   The first value is the timezone index, which may be used to set a new timezone using the set timezone command. You can also use the time zone name.

Examples
```
admin:show timezone config
Current timezone: Coordinated Universal Time

admin:show timezone list

  0 - (GMT-12:00) Eniwetok, Kwajalein
  1 - (GMT-11:00) Midway Island, Samoa
  2 - (GMT-10:00) Hawaii

Current timezone: (GMT+10:00) Canberra, Melbourne, Sydney
Current timezone: (GMT+10:00) Canberra, Melbourne, Sydney

The numbers in first column 0, 1, 2 represent index that can be used in set timezone
command

  0 - (GMT-12:00) Eniwetok, Kwajalein
  1 - (GMT-11:00) Midway Island, Samoa
  2 - (GMT-10:00) Hawaii
  3 - (GMT-09:00) Alaska
  4 - (GMT-08:00) Pacific Time (US & Canada)
  5 - (GMT-07:00) Arizona
  6 - (GMT-07:00) Mountain Time (US & Canada)
  7 - (GMT-06:00) Central Time (US & Canada)
  8 - (GMT-06:00) Central America
  9 - (GMT-06:00) Saskatchewan
 10 - (GMT-06:00) Mexico City
  ...
```

show users

show users

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display the users registered on this device.

Examples   admin:**show users**

```
Users:
Guest  - Anonymous
```

show version

show version {active | inactive}

Syntax Description

active	Displays the version number of the software on the active partition.
inactive	Displays the version number of the software on the inactive partition.

Command Modes Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines Use this command to display information about the version number of the software on the inactive or active partition.

Examples
```
admin:show version active
Active Master Version: 1.1.1.0-30

Active Version Installed Software Options:
No Installed Software Options Found.

admin:show version inactive
Inactive Master Version: 1.6.0.0-213

Inactive Version Installed Software Options:
No Installed Software Options Found.
```

show videoquality

show videoquality

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display the default video quality.

Examples   admin:**show videoquality**
Video Quality: Highest Detail, Best Motion: 1080p

show workingdir

show workingdir

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display the current working directories for activelog, inactivelog, and the TFTP system directories.

Examples

```
admin:show workingdir

activelog : <not set, using default path>
inactivelog : <not set, using default path>
tftp : <not set, using default path>
```

C H A P T E R **6**

CTRS Unset Commands

Revised: November 2009, OL-19547-01

This chapter contains Cisco TelePresence Recording Server (CTRS) **unset** commands:

Note For information about using the CTRS administration software, refer to the *Cisco TelePresence Recording Server Release 1.6 Administration Guide* at the following URL:

http://www.cisco.com/en/US/products/ps10341/prod_maintenance_guides_list.html

unset network dns options

unset network dns options [timeout] [attempts] [rotate]

Syntax Description	timeout	Defaults the wait time before considering a Domain Name System (DNS) query to have failed.
	attempts	Defaults the number of attempts to make before failing.
	rotate	Defaults the method for selecting a name server; this affects how loads are distributed across name servers.

Command Modes   Admin

Command History	Release	Modifications
	1.6	This command was first documented.

Usage Guidelines   Use this command to unset the Domain Name System (DNS) options. This command causes a temporary loss of network connections.

Examples

```
admin:unset network dns options timeout
        ***   W A R N I N G   ***
This will cause the system to temporarily lose network connectivity

        Do you want to continue ?

Enter "yes" to continue or any other key to abort
yes
executing...
```

C H A P T E R 7

CTRS Utils Commands

Revised: November 2009, OL-19547-01

This chapter contains Cisco TelePresence Recording Server (CTRS) **utils** commands:

- utils system restart, page 7-27
- utils system shutdown, page 7-28
- utils system switch-version, page 7-29

Note   For information about using the CTRS administration software, refer to the *Cisco TelePresence Recording Server Release 1.6 Administration Guide* at the following URL:

http://www.cisco.com/en/US/products/ps10341/prod_maintenance_guides_list.html

utils create report hardware

utils create report hardware

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to create a system report containing disk array, remote console, diagnostic, and environmental data.

Examples
```
admin:utils create report hardware
         ***   W A R N I N G   ***
This process can take several minutes as the disk array, remote console,
system diagnostics and environmental systems are probed for their current
values.

Continue? Press y or Y to continue, any other key to cancel request.
Continuing with System Report request...
Collecting Disk Array Data...SmartArray Equipped server detected...Done
Collecting Remote Console Data...Done
Collecting Model Specific System Diagnostic Information...Done
Collecting Environmental Data...Done
Collecting Remote Console System Log Data...Done
Creating single compressed system report...Done
System report written to SystemReport-20070730020505.tgz
To retrieve diagnostics use CLI command:
file get activelog platform/log/SystemReport-20070730020505.tgz
```

utils iothrottle disable

utils iothrottle disable

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to disable I/O throttling enhancements.

✎

Note   Disabling I/O throttling enhancements can adversely affect the system during upgrades.

Examples

```
admin: utils iothrottle disable
I/O throttling has been disabled
```

utils iothrottle enable

utils iothrottle enable

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to enable I/O throttling enhancements.

✎

Note   When enabled, I/O throttling enhancements lower the impact of upgrades on an active system.

Examples
```
admin: utils iothrottle enable
I/O throttling has been enabled
```

utils iothrottle status

utils iothrottle status

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to show the status of the I/O throttling enhancements.

Examples
```
admin: utils iothrottle status
I/O throttling is enabled
```

utils network arp delete

utils network arp delete *host*

Syntax Description	*host*	Defines the name or dotted IP address of the host to delete.

Command Modes   Admin

Command History	Release	Modifications
	1.6	This command was first documented.

Usage Guidelines   Use this command to delete an entry in the Address Resolution Protocol table.

Examples   admin: **utils network arp delete myhost**

utils network arp list

utils network arp list [host *hostname***] [page] [numeric]**

Syntax Description		
	host *hostname*	Identifies the host.
	page	Pauses output.
	numeric	Displays host as dotted IP address.

Command Modes   Admin

Command History	Release	Modifications
	1.6	This command was first documented.

Usage Guidelines   Use this command to list the contents of the Address Resolution Protocol table.

Examples

```
admin: utils network arp list
Address                 HWtype  HWaddress          Flags Mask          Iface
ctms-vmware5.cisco.com   ether   00:0C:29:C5:CF:68  C                   eth0
tsbu-68net-gw.cisco.com  ether   00:19:E8:7C:20:C2  C                   eth0
Entries: 2       Skipped: 0      Found: 2
```

utils network arp set

utils network arp set *host address*

Syntax Description	*host*	Identifies the name or dotted IP address of the host to add.
	address	Identifies the hardware address (MAC address) of the host to be added in the following format: XX:XX:XX:XX:XX:XX

Command Modes	Admin

Command History	**Release**	**Modifications**
	1.6	This command was first documented.

Usage Guidelines   Use this command to set an entry in the Address Resolution Protocol table.

✎

Note   As of kernel 2.2.0 it is no longer possible to set an ARP entry for an entire subnet. Linux instead does automagic proxy arp when a route exists and it is forwarding.

Examples   admin: **utils network arp set myhost 11:22:33:44:55:66**

utils network capture

utils network capture [**page**] [**numeric**] [**file** *filename*] [**count** *number*] [**size** *bytes*]
[**src** *address* **port** *number*] [**dest** *address* **port** *number*] [*host | address protocol*]

Syntax Description		
	page	Pauses output.
	numeric	Shows hosts as dotted IP addresses.
	file *filename*	Saves output from this command in a file; the file is saved in the following format: using the following format: platform/cli/fname.cap. ✎ **Note** *Filename* should not contain a period (.).
	count *number*	Defines the number of packets to capture. The maximum count per screen is 1000, and per file is 100,000.
	size *bytes*	Defines the number of bytes in the packet to capture. The maximum number of bytes per screen is 128, and per file can be any amount, including the variable ALL.
	src *address*	Defines the source address of the packet as a host name or IPV4 address.
	dest *address*	Defines the destination address of the packet as a host name or IPV4 address.
	port *number*	Defines the the port number of the packet (for either src or dest).
	host	Defines the host name of the packet.
	address	Defines the IPv4 address of the packet. ✎ **Note** If you define *host* or *address*, do not use **src** *address* or **dest** *address* *as options,*
	protocol	Defines the protocol to capture. Choices are: • **ip** • **arp** • **rarp** • **all**

Command Modes   Admin

Command History	Release	Modifications
	1.6	This command was first documented.

Usage Guidelines   Use this command to capture IP packets on the Ethernet interface. ETH0 is used as the default device.

You can either display the packets on screen or save them to a file. When using the page or file options, the capture of all requested packets must occur before the command will complete.

✎

Note Line wrapping may occur.

Examples

```
admin:utils network capture count 5 numeric
Executing command with options:
 size=128               count=5                interface=eth0
 src=                   dest=                  port=

11:31:57.900286 philly.cisco.com.5901 > dhcp-128-107-142-57.cisco.com.3313: P
2869804405:2869805083(678) ack 1220658143 win 6420 (DF)
11:31:57.900733 vv1-stern.cisco.com.38536 > dns-sj.cisco.com.domain:  6113+[|domain] (DF)
11:31:57.902032 dns-sj.cisco.com.domain > vv1-stern.cisco.com.38536:  6113*[|domain] (DF)
11:31:57.902172 vv1-stern.cisco.com.38536 > dns-sj.cisco.com.domain:  60216+[|domain] (DF)
11:31:57.903282 dns-sj.cisco.com.domain > vv1-stern.cisco.com.38536:  60216*[|domain] (DF)
```

utils network host

utils network host *name*

Syntax Description

name	Identifies the name or IP address of the host to resolve.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to resolve a hostname to an address, or an address to a hostname. This command looks for the host locally first; if it cannot resolve it locally and Domain Name System (DNS) is configured, then it performs a DNS lookup.

Examples

```
admin: utils network host test1.com
Hostname test1.com resolves to <IP ADDRESS>

admin: utils network host <IP ADDRESS>
IP address <IP ADDRESS> resolves to test1.com
```

utils network ping

utils network ping *dest* [*count*]

Syntax Description

dest	Identifies the host name or dotted IP address of the host to ping.
count	Defines number of ping packets to send. Default is 4.

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to send one or more ping packets to a remote destination.

Examples

```
admin:utils network ping www.cisco.com 5
PING www.cisco.com (198.133.219.25) from 172.22.119.166 : 56(84) bytes of data.
64 bytes from 198.133.219.25: icmp_seq=1 ttl=246 time=0.837 ms
64 bytes from 198.133.219.25: icmp_seq=2 ttl=246 time=0.962 ms
64 bytes from 198.133.219.25: icmp_seq=3 ttl=246 time=1.04 ms
64 bytes from 198.133.219.25: icmp_seq=4 ttl=246 time=0.635 ms
64 bytes from 198.133.219.25: icmp_seq=5 ttl=246 time=0.666 ms
```

utils network traceroute

utils network traceroute *dest*

Syntax Description

| *dest* | Identifies the host name or dotted IP address of the host. |

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to trace the route of IP packets to a remote destination.

Examples
```
admin:utils network traceroute <IP ADDRESS>
traceroute to <IP ADDRESS>(<IP ADDRESS>), 30 hops max, 38 byte packets
 1  vns-gateway1-119 (<IP ADDRESS>)  0.599 ms  0.439 ms  0.381 ms

```

utils ntp config

utils ntp config

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to show the current configuration of the NTP client and server on this device.

Examples
```
admin: utils ntp config
This node is configured to synchronize with one of the following NTP server(s):
  171.68.10.80
```

utils ntp status

utils ntp status

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to show the current status of the NTP client on this device.

Examples

```
admin:utils ntp status
ntpd (pid 10561) is running...
     remote           refid      st t when poll reach   delay   offset  jitter
==============================================================================
 ntp-sj1.cisco.c .GPS.            1 u    3   64    1    5.885   -0.091   0.008
```

utils remote_account create

utils remote_account create *account life*

Syntax Description	*account*	Identifies the name of the remote account.
	life	Identifies the life of the remote account in days.

Command Modes   Admin

Command History	Release	Modifications
	1.6	This command was first documented.

Usage Guidelines   Use this command to create a remote account so that Cisco Technical Support can access the system.

> **Note**   Before using a remote account, it must be enabled using the **utils remote_account enable** command. Only one remote account can be enabled at a time.

Examples
```
admin:utils remote_account create ciscotech 1
Account Successfully created
Account        : ciscotech
Passphrase     : 7RZT7ARZK5
Expiry         : 12-14-2005:15:50:21 (MM-DD-YYYY:Hr:Min:Sec)
```

utils remote_account disable

utils remote_account disable

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to remove remote accounts.

Examples   admin:**utils remote_account disable**

utils remote_account enable

utils remote_account enable

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to enable existing remote accounts so that Cisco Technical Support can access the system.

Examples   admin:**utils remote_account enable**

utils remote_account status

utils remote_account status

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to retrieve status information for remote accounts used by Cisco Technical Support to access the system.

Examples
```
admin:utils remote_account status
Remote Support
Status        : enabled
Decode Version : 1
Account       : dhroot
Passphrase    : BDLHBP4JMY
Expiry        : 8-24-2008:20:00:00(MM-DD-YYYY:Hr:Min:Sec)
```

utils service snmp restart

utils service snmp restart

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to stop and then restart Simple Network Management Protocol (SNMP) processes.

Examples

```
admin:utils service snmp restart
Password:
```

utils service snmp start

utils service snmp start

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to start Simple Network Management Protocol (SNMP) processes if not running and to enable external access to SNMP.

Examples
```
admin:utils service snmp start
Password:
```

utils service snmp status

utils service snmp status

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to display the current Simple Network Management Protocol (SNMP) process status.

Examples
```
admin:utils service snmp status
Password:
snmpd (pid 11326) is running...
```

utils service snmp stop

utils service snmp stop

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to disable external access to Simple Network Management Protocol (SNMP).

Examples   admin:**utils service snmp stop**

utils system boot console

utils system boot console

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to change the output to the console during system boot.

Examples
```
admin:utils system boot console
Boot output has been redirected to the console.
```

utils system boot serial

utils system boot serial

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to change the output to the COM1 (serial port 1) during system boot.

Examples

```
admin:utils system boot serial
Boot output has been redirected to COM1 (serial port 1).
```

utils system restart

utils system restart

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to reboot the CTRS device.

Examples

```
admin:utils system restart
Do you really want to restart ?
Enter "yes" to restart or any other key to abort

Appliance is being Restarted ...

Broadcast message from root (Thu Jun 10 10:10:10 2004):

The system is going down for restart NOW!

Operation succeeded

restart now.
```

utils system shutdown

utils system shutdown

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to power off the CTRS device.

Examples

```
admin:utils system shutdown
Do you really want to shutdown ?
Enter "yes" to shutdown or any other key to abort

Appliance is being Powered - Off ...

Broadcast message from root (Thu Jun 10 10:10:10 2004):

The system is going down for system halt NOW!
```

utils system switch-version

utils system switch-version

Syntax Description   None

Command Modes   Admin

Command History

Release	Modifications
1.6	This command was first documented.

Usage Guidelines   Use this command to switch to another software version installed on the CTRS device.

✎

Note   Switching the software version requires restarting the CTRS device and can take up to 20 minutes.

Examples   admin:**utils system switch-version**

Active Master Version: 2.0.0.0-44

Inactive Master Version: 1.6.0.0-213

Do you really want to switch versions ?
Enter (yes/no)?

Switching Version and Restarting the Appliance ...
Warning: Version switch could take up to 20 minutes.

Broadcast message from root (Thu Jun 10 10:10:10 2004):

The system is going down for restart NOW!
