General Description

The Cisco TelePresence Content Server is a network telepresence media recording, archiving, streaming, and sharing solution.

With the Cisco TelePresence Content Server, those in your organization can get their message across regardless of the day, time, devices, or location. Whether delivering a CEO briefing to an entire organization, facilitating corporate training programs, or offering a distance education course, video recordings are a powerful organizational tool. Cisco TelePresence Content Server maximizes the impact, reach, and value of these messages by capturing presentations, streaming them live, and recording them for future distribution.

No longer is your message bound by place and time. Recording and streaming telepresence-generated content enables organizations to communicate to dispersed individuals and scale knowledge—anytime, anywhere. Content can integrate easily into familiar third-party tools, extending the reach and chances that your message will be seen and heard. With the Content Server, existing video conferencing investments are fully leveraged, and your messages are viewed by more people more often.

New in Cisco TelePresence Content Server Release 5.2

- Integration with the Cisco Media Experience Engine 3500
- Automated creation of personal recording aliases
- Improved lookup for access control lists
- Ad-hoc recording of a PIN-protected MCU conference

- Support for a static URL for live streaming of MPEG-4 for Flash content from a Wowza Media Server
- PIN protection for watching a recording using a videoconference endpoint

For more information about these new features, see the [Cisco TelePresence Content Server Release 5.2 Release Notes](#).

Obtaining Documentation and Submitting a Service Request

For information on obtaining documentation, submitting a service request, and gathering additional information, see the monthly *What's New in Cisco Product Documentation*, which also lists all new and revised Cisco technical documentation, at:

<http://www.cisco.com/en/US/docs/general/whatsnew/whatsnew.html>

Subscribe to the *What's New in Cisco Product Documentation* as a Really Simple Syndication (RSS) feed and set content to be delivered directly to your desktop using a reader application. The RSS feeds are a free service and Cisco currently supports RSS Version 2.0.
