

# Upgrading Software Using the Online Installer (No Backup and Restore Required)

**Last Updated: September 7, 2010**

This chapter provides the procedures for upgrading the Cisco Video Management and Storage System module from a previous software version to a later version using the “upgrade” online software installer in the application.

An *upgrade installation* replaces only the files on the disk that are necessary for creating the new software image. Your existing configuration will not be erased.

With this procedure, the software files are downloaded in the background while the Cisco Video Management and Storage System module continues to operate. Anytime after the download is finished, you can perform the upgrade. Only an FTP/SFTP server is required.

This section includes the following topics:

- [Task List, page 11](#)
- [Prerequisites, page 12](#)
- [Downloading and Installing an Upgrade Image, page 12](#)
- [What to Do Next, page 15](#)

## Task List

Table 1 lists the tasks required for upgrading to a new software image.

**Table 1      Task List for Upgrading from the Previous Cisco Video Management and Storage System Version**

Checklist	Check Off
1. The Cisco Video Management and Storage System hardware is properly installed in the integrated services router (ISR). See <a href="#">Installing Cisco Network Modules in Cisco Access Routers</a> .	<input type="checkbox"/>
2. The IP communications link to the Cisco Video Management and Storage System software has been activated. See the <a href="#">Activating IP Connectivity</a> chapter.	<input type="checkbox"/>
3. Download and install the software image files. See the “ <a href="#">Downloading and Installing an Upgrade Image</a> ” section on page 12.	<input type="checkbox"/>

## Prerequisites

- The Cisco Video Management and Storage System module is properly installed.
- You have activated the IP communications link to the Cisco Video Management and Storage System module.
- You know the Cisco.com download site of the Cisco Video Management and Storage System software.
- Your FTP/SFTP server is configured and active.
- You have the following information available:
  - FTP/SFTP server IP address
  - FTP/SFTP server user ID
  - FTP/SFTP server password
  - Software package name
- You have checked to make sure that you can ping the Cisco Video Management and Storage System module from your FTP/SFTP server.
- If the Cisco Video Management and Storage System software is configured to use DNS, you can use hostnames to identify the FTP/SFTP server. If the Cisco Video Management and Storage System software is *not* configured to use a DNS, use the IP address of the FTP/SFTP server.

## Downloading and Installing an Upgrade Image

Follow this procedure to upgrade an existing Cisco Video Management and Storage System module software version. Examples show are for an FTP server. If you are using SFTP, you need to modify the commands to support an SFTP server.

**Tip** If you have not already done so, we recommend that you back up your configuration files before starting the upgrade. See “Backing Up Files” in *Cisco Video Management and Storage System CLI Administrator Guide*.

### SUMMARY STEPS

1. Log in and go to the Cisco Software Center website and [Download Software](#).
2. Click **ISR Video Surveillance—VMSS** and download the following Cisco Video Management and Storage System software files and copy them to your FTP/SFTP server:
  - vmss-full-k9.nmx.*version*.prt1
  - vmss-installer-k9.nmx.*version*.prt1
  - vmss-k9.nmx.*version*.pkg
3. (Optional) To download the new software, enter the **software download upgrade** command.

**Note** Although the **software download upgrade** command is optional, it is useful for staging the installation. The command stores the software files on the local disk drive, which can save time during any subsequent installation or upgrade.

4. (Required for Step 5) To continue the download, enter **y**.

**Note** If upgrading from version 1.1, the archives stored on media0 will no longer be valid. The system will prompt if you want to remove these archives. We recommend answering yes to the question to clear old archives.

5. (Optional) To check the download status, enter the **software download status** command.  
 6. To upgrade to the new software, enter the **software install upgrade** command.  
 7. Enter **y** to install the upgrade, or enter **n** to stop the installation procedure.  
     The system automatically reloads when the upgrade is complete.  
 8. To verify the upgrade, enter the **show software versions** command.

**Tip** To view what is in the download directory, enter the **show software directory download** command.

## DETAILED STEPS

**Step 1** Go to the Cisco Software Center website [Download Software](#).

**Step 2** Click **ISR Video Surveillance–VMSS** and download the following Cisco Video Management and Storage System software files and copy them to your FTP/SFTP server:

- *vmss-full-k9.nmx.version.prt1*

This is the package payload containing all data and executable files for a full installation of the Cisco Video Management and Storage System on NME service modules.

- *vmss-installer-k9.nmx.version.prt1*

This is the package payload containing all data and executable files for the installer subsystem associated with the Cisco Video Management and Storage System on NME service modules.

- *vmss-k9.nmx.version.pkg*

This is the main package for installing the Cisco Video Management and Storage System on NME service modules.

**Step 3** (Optional) To download the software from the FTP server, enter the **software download upgrade** command:

```
cvmsss# software download upgrade url
ftp://ftp-server-ip-address/vmss-upgrade&k9.nmx.version.pkg username username password
password
```

**Note** This example uses the default anonymous FTP user.

or, if the FTP server has been configured:

```
cvmsss# software download upgrade vmss-k9.nmx.version.pkg username username password
password
```

**Note** If the FTP server has been set in configuration mode, you do not need to use the FTP parameters.

**■ Downloading and Installing an Upgrade Image**

**Step 4** (Required for Step 5) To begin the download, enter **y**:

**Note**

If upgrading from version 1.1, the archives stored on media0 will no longer be valid. The system will prompt if you want to remove these archives. We recommend answering yes to the question to clear old archives.

WARNING:: This command will download the necessary software to  
WARNING:: complete an upgrade. It is recommended that a backup be done  
WARNING:: before installing software.

```
Would you like to continue? [n] y
Downloading vmss-k9.nmx.version.pkg
Bytes downloaded : xxxxx
```

```
Validating package signature ... done
Validating installed manifests .....complete.
```

**Note**

After you download the software, there are no other prompts for user input. The software package is downloaded from your FTP server to the Cisco Video Management and Storage System module.

At this point, the new software loads from the FTP server and the system restarts.

**Step 5** (Optional) To check the download status, enter the **software download status** command.

**Step 6** To upgrade to the new software, enter the **software install upgrade** command.

**Note**

The following example uses the default anonymous FTP user.

```
cvmss# software install upgrade url ftp://ftp_server_ip_address/vmss-k9.nmx.version.pkg
```

**Note**

In the following example, either the files were previously downloaded using the **software download** command or the FTP server was configured.

```
cvmss# software install upgrade vmss-k9.nmx.version.pkg
```

**Step 7** Enter **y** to install the upgrade, or enter **n** to stop the installation procedure.

WARNING:: This command will install the necessary software to  
WARNING:: complete an upgrade. It is recommended that a backup be done  
WARNING:: before installing software.

```
Would you like to continue? [n] y
```

**Caution**

An upgrade does not replace everything on the local disk drive. It replaces only the files necessary for the upgrade. We recommend that you back up your configuration files before installing any software.

The system automatically reloads when the upgrade is complete.

**Step 8** To verify the upgrade, enter the **show software versions** command.

In the output displayed for the **show software versions** display, the Cisco Video Management and Storage System software version is shown as the Global version. The other versions shown are for internal components of the product and may not correspond to the actual software version.

**Tip**

To view what is in the download directory, enter the **show software directory download** command.

## What to Do Next

Open a Cisco Video Surveillance Management Server (VSMS) session to the Cisco Video Management and Storage System module to verify that all configurations are preserved following the upgrade process.
