Cisco Interactive Experience Manager OVA File

If you install the Cisco Interactive Experience Manager (IEM) on a virtual machine, you will need the IEM OVA file.

The default setting of virtual CPUs in the IEM OVA file is 12 vCPUs, which supports up to 1000 Cisco Interactive Experience Client (IEC) 4600 Series devices.

Table 1 documents the number of vCPUs that are recommended depending on the number of Cisco IEC 4600 Series that are managed by the Cisco IEM.

Table 1.   Recommended Number of vCPUs

Number of IECs	Recommended Number of vCPUs
100	2
300	4
500	6
700	10
1000	12
