

Upgrading the Cisco D9887B HDTV Modular Receiver Technical Reference

Overview

Introduction

This document describes the procedure required to upgrade the Cisco® D9887B HDTV Modular Receiver.

Audience

This document is intended for all D9887B operators and service personnel performing a D9887B software upgrade.

Requirements

The following are required prior to upgrading the D9887B software:

Obtain the update file

The update file must be downloaded from Cisco. Contact Cisco customer support for the location of the download.

Note: Do not open the *.update file. The file is for the upgrade process only.

Verify previous software version

The following information determines if a software patch must be applied before the unit can be updated to the released code:

Current Software Version	Upgrade Version	Software Patch
≤ 7.4.0	≥ 7.5.0	BaseUpgrade.24.update
≥ 7.5.0	≤ 7.4.0	BaseDowngrade.23.update
≤ 7.4.0	≤ 7.4.0	N/A
≥ 7.5.0	≥ 7.5.0	N/A

If the above information indicates that a software patch is needed to perform the upgrade, follow *Upgrading the D9887B Software* (on page 3). Once the software patch has been applied, repeat the same procedure to apply the desired software update.

Overview

Establish a connection

The embedded software for the D9887B is updated via the web interface on the unit. To access the web interface, follow the steps below:

- **a** Connect an Ethernet cable to the management port on the back of the unit.
- **b** Connect a computer to the same network as the unit.
- c Assign IP addresses on the same subnet to the unit and computer.

For more information on setting a static IP address on the unit and computer, see *Setting up the IP Address on the D9887B Receiver* (on page 4).

Upgrading the D9887B Software

Proceed as follows to upgrade the D9887B software:

Note: The decoding process will be briefly interrupted during the update process.

- 1 Type the unit's IP address into a web browser (for example, http://192.168.1.4).
- 2 Log on to the admin account. The default password is
blank>.
- 3 Click on the **Admin** tab.
- 4 Scroll down and click on the **Update Unit Software** link.
- **5** Click **Browse** and navigate to the update file (for example, 7.3.0.update) and then click **Open**.
- 6 Click Next.
- 7 Click Next.

During the update, the status bar will display the progress of the update process. After the unit has finished the update, it will automatically reboot and be ready for normal operation upon boot up.

Setting up the IP Address on the D9887B Receiver

Proceed as follows to set the IP address on the D9887B receiver:

- 1 Turn on the unit.
- 2 Once the unit is booted, press the **Menu** button.
- 3 Use the **Up** and **Down** buttons to move the cursor to "Network", then press the **Enter** button.
- 4 Use the **Up** and **Down** buttons to move the cursor to "DHCP:", then press the **Enter** button.

- 5 Use the **Up** and **Down** buttons to change the selection to "off", then press the **Enter** button to save the selection.
- 6 Use the **Up** and **Down** buttons to move the cursor to "IP Address", then press the **Enter** button.

```
↓↑ Network ↓
Dhcp: off
IP Address
▶ 000.000.000.000
```

7 Use the Left and Right buttons to select the column to edit and use the Up and Down buttons to change the IP, then press the Enter button to save the selection. The cursor will now be on "Subnet Mask".

Τţ Network Г 000.000.000.000 Subnet Mask 255.255.255.000

8 Use the **Left** and **Right** buttons to select the column to edit and use the **Up** and **Down** buttons to change the subnet mask, then press the **Enter** button to save the selection. The cursor will now be on "Gateway".

```
↓↑ Network ↓
255.255.255.000
Gateway
▶ 000.000.000.000
```

9 Use the Left and Right buttons to select the column to edit and use the Up and Down buttons to change the gateway, then press the Enter button to save the selection.

Setting up the IP Address on the PC

Proceed as follows to set the IP address on the PC:

Note: The following example is based on a PC running Windows XP:

- 1 Click Start > Control Panel > Network Connections.
- 2 Right-click on Local Area Connection and select Properties.

Local Area Connection	
<u> </u>	Disable
	Status
	Repair
	Bridge Connections
	Create Shortcut
	Delete
	Rename
	Properties

3 Under the General tab, scroll down and double-click Internet Protocol (TCP/IP).

🕹 Local Area Connection Properties 🛛 🔗 🔀			
General Advanced			
Connect using:			
Broadcom NetXtreme 57xx Gigabit C Configure			
This connection uses the following items:			
🗹 👵 QoS Packet Scheduler 🗾			
S Network Monitor Driver			
Internet Protocol (TCP/IP)			
✓			
<			
Install Uninstall Properties			
Description			
Transmission Control Protocol/Internet Protocol. The default wide area network protocol that provides communication across diverse interconnected networks.			
Show icon in notification area when connected Notify me when this connection has limited or no connectivity			
OK Cancel			

4 Assign the computer an IP address on the same subnet as the D9887B's IP address.

For example: **D9887B** IP Address: 192.168.1.4

Setting up the IP Address on the D9887B Receiver

Subnet Mask: 255.255.255.0 Gateway: 0.0.0 **Upgrade Computer** IP address: 192.168.1.3

Subnet Mask: 255.255.255.0

Gateway: 0.0.0.0

Internet Protocol (TCP/IP) Properties 🛛 🔹 🔀			
General			
You can get IP settings assigned automatically if your network supports this capability. Otherwise, you need to ask your network administrator for the appropriate IP settings.			
Obtain an IP address automatically			
 Use the following IP address: — 			
IP address:	192.168.1.3		
Subnet mask:	255 . 255 . 255 . 0		
Default gateway:	· · ·		
Obtain DNS server address autom	natically		
Use the following DNS server addresses:			
Preferred DNS server:			
Alternate DNS server:			
Advanced			
	OK Cancel		

For Information

If You Have Questions

If you have technical questions, call Cisco Services for assistance. Follow the menu options to speak with a service engineer.
