

Release Note – PowerVu® Model D9828 MDR, Software Release Version 2.60

Overview

Introduction

This document describes the changes included in software release version 2.60 for the PowerVu® Model D9828 Multiple Decryption Receiver, since the previous release version, 2.04.

New Features

The following new features are included in software release version 2.60.

- **Live Event Control** – the D9828 Multiple Decryption Receiver will follow Live Event Control messages from the Live Event Controller at the uplink. This will allow for dynamic and fast tuning between virtual channels on a per User Address basis.

Updates

The following enhancements and fault resolutions updates are included in this software release version, 2.60.

Tracking Number	Description
972	Resolved an issue when the default gateway was set to 0.0.0.0, the D9828 receiver would lose all IP connectivity. The receiver will now maintain IP connectivity with a 0.0.0.0 default gateway.
976	Resolved an issue when operating in Mode-I, that the D9828 receiver would output two sets of PMTs per program when booting up. The receiver will now only output the correct PMT per program during the boot up process.
999	Resolved an issue where unknown descriptors in the PMT would not be passed. This occurred with EBIF descriptors.

For Information

Cisco provides customers with telephone support from anywhere in the world. If you require technical telephone assistance or product training support, or if you have any questions concerning your Cisco product, you may contact the appropriate Customer Support Center from those listed below. Charges may apply for customers without a current and applicable product support agreement.
