

Cisco Integrated Storage System Module Command Reference

Last Updated: April 26, 2010

This section documents commands for the Cisco Integrated Storage System module application and new commands for Cisco IOS software:

- [Cisco Integrated Storage System Module Commands, page 23](#)
- [Cisco IOS Commands, page 26](#)

Cisco Integrated Storage System Module Commands

- [export mount-point media0](#)
- [format storages](#)

 ■ **export mount-point media0**

export mount-point media0

To restrict the NFS client to access only the local disk drive media (media0) of the specified Cisco Video Management and Storage module, use the **export mount-point media0** command.

export mount-point media0 *ip-address*

Syntax Description	<i>ip-address</i>	IP address, in dotted decimal notation, of the Cisco Video Management and Storage module that is permitted to access the ISS module.
---------------------------	-------------------	--

Command Default	Local disk drive media is not formatted.
------------------------	--

Command Modes	Format storages local configuration mode
----------------------	--

Command History	Version	Modification
	1.0	This command was introduced.

Usage Guidelines	Because all NFS clients can access this device by default, use of this command is not required unless you want to restrict the Cisco Integrated Storage System module so that it is accessible only by a single Cisco Video Management and Storage module. Using the IP address of Cisco Video Management and Storage module, this command specifies the permissions of an NFS client to access to the media0 device on this Cisco Integrated Storage System module.
-------------------------	--

The keyword **media0** is the unique string that identifies the hard disk drive on the Cisco Integrated Storage System.

Examples	The following example shows the export mount-point media0 command used to restrict access to a specific Cisco Video Management and Storage module.
-----------------	---

```
iss> conf t
Enter configuration commands, one per line. End with CNTL/Z.
iss(config)> export mount-point media0 1.100.30.218
  modified the export information.
iss(config)>
```

format storages

To format the local disk drive media (*media0*), use the **format storages** command.

format storages local media0

Note For the changes to take effect, the media must first be disabled and then reenabled.

Syntax Description	<i>local media0</i> Local disk drive media (uses unique string identifier: <i>media0</i>) on the Cisco Integrated Storage System network module.
---------------------------	---

Command Default	Local disk drive media is not formatted.
------------------------	--

Command Modes	Format storages local configuration mode
----------------------	--

Command History	Version	Modification
	1.0	This command was introduced.

Usage Guidelines	The local disk drive media is identified by the unique string identifier <i>media0</i> . The Cisco Integrated Storage System module is supported within the ISR only if there is a Cisco Video Management and Storage System module present in the same ISR.
-------------------------	--

Note Allow approximately five minutes for the 500 GB drive to format the media.

Examples	The following example shows the command to format the local disk drive <i>media0</i> . Note the warning message and the two confirmations that you must respond to before an attempt is made to format the device. Only upon the confirmation from the user, will it proceed with the formatting process.
-----------------	---

```
iss-module# format storages local media0
!!!WARNING!!!
!!!WARNING!!! You are about to start a destructive sequence of
!!!WARNING!!! operations. All data on the storage device media0
!!!WARNING!!! will be lost and unrecoverable.
!!!WARNING!!! The device formatting can take up to a few minutes.
!!!WARNING!!! During formatting, your console is locked and
!!!WARNING!!! unavailable for use. Before you proceed further, back
!!!WARNING!!! up the contents of the storage device.
!!!WARNING!!!
!!!WARNING!!! If you are not sure what to do, answer "no" to the
!!!WARNING!!! following question and then exit.
!!!WARNING!!!
Do you wish to proceed [y/n]? : y
Are you sure you want to format the device and lose all the data [y/n]? : n
```

Cisco IOS Commands

This section documents new Cisco IOS commands used for accessing the Cisco Integrated Storage System module from the host router.

Use the following commands to access and configure the Cisco Integrated Storage System module from the host router.

- [**service-module integrated-service-engine**](#)
- [**show controllers integrated-service-engine**](#)
- [**show interfaces integrated-service-engine**](#)

service-module integrated-service-engine

To begin a service module session through a console connection, use the **service-module integrated-service-engine** command in privileged EXEC configuration mode.

```
service-module integrated-service-engine slot/port {password-reset | reload | reset | session |
shutdown | statistics | status}
```

Syntax Description	
slot	Number of the router chassis slot for the network module.
port	Number of the integrated port on the network module. For network modules, always use 0. The slash mark (/) is required between the slot argument and the port argument.
password-reset	Reset of service module password.
reload	Reload of service module.
reset	Hardware reset of the service module.
session	Service module session. Opens a Telnet session that provides the Cisco integrated encoder command-line interface (CLI) from the Cisco IOS interface side.
shutdown	Shutdown of the service module.
statistics	Shows the integrated service module reset statistics.
status	Operational information about the service module.

Command Default	None				
Command Modes	Privileged EXEC				
Command History	<table border="1"> <thead> <tr> <th>Version</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>12.4(11)T</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Version	Modification	12.4(11)T	This command was introduced.
Version	Modification				
12.4(11)T	This command was introduced.				

Usage Guidelines	<p>Use the service-module integrated-service-engine slot/port shutdown command before you remove the integrated service module from the router.</p> <p>Removing the integrated encoder without using the proper shutdown sequence can result in corruption of the hard disk. After successful shutdown of the application, the Cisco IOS software displays a message indicating that the network module can be removed.</p> <p>Only one session at a time is allowed into the network module from the internal network-module-side interface.</p> <p>After starting a session, you can perform any integrated module configuration task. You first access the console in a user-level shell. To access the privileged EXEC command shell, in which most commands are available, use the enable command.</p>
-------------------------	---

service-module integrated-service-engine

After you finish configuring the module and exit the module console session, clear the session by using the **service-module integrated-service-engine slot/port session clear** command. At the confirmation prompt, press **Enter** to confirm the action, or press **n** to cancel.

Examples

The following example shows a session being opened for a Cisco Integrated Storage System module in slot 1:

```
Router# service-module integrated-service-engine 1/0 session
```

```
Trying 31.0.0.99, 2066 ... Open
iss-module>
```

Related Commands

Command	Description
enable	Enters privileged EXEC mode.
interface	Configures an interface and enters interface configuration mode.
show diag	Displays controller information for a network module.
show interface integrated-service engine	Displays basic interface configuration information for the Cisco Integrated Storage System network module.

show controllers integrated-service-engine

To display controller information for the integrated service module, use the **show controllers integrated-service-engine** command in privileged EXEC mode.

show controllers integrated-service-engine slot/unit

Syntax Description

<i>slot</i>	Number of the router chassis slot for the video module.
<i>unit</i>	Number of the video module. For network modules, always use 0. The slash mark (/) is required between the slot argument and the unit argument.

Command Default

None

Command Modes

Privileged EXEC

Command History

Version	Modification
12.4(11)T	This command was introduced.

Examples

The following example shows the output from the **show controllers integrated-service-engine slot/unit** command:

```
