

# **User Orientation in Cisco Unity Connection**

See the following sections:

- Orientation Task List for Cisco Unity Connection Users, page 4-1
- Settings That Cisco Unity Connection Users Can Change, page 4-3

## **Orientation Task List for Cisco Unity Connection Users**

After you set up the client applications that users will use to access Cisco Unity Connection from their phones and computers, use the following task list to acquaint users with Connection. If you are planning supplemental Connection training, also consider reviewing the potential user concerns and misconceptions listed in the "Support Desk Orientation in Cisco Unity Connection" section on page 5-2.

### **Offer User Documentation and Contact Information**

1. Give users a *Cisco Unity Phone Menus and Shortcuts* wallet card. Use the Wallet Card wizard to produce the card. The templates in the wizard list frequently used menu options and shortcuts for managing Connection messages and user preferences by phone; the wizard fills in the applicable keys based on the conversation that you specify. The resulting PDF is formatted as a wallet card that can be printed, then cut out and folded by users.

Procedures in the User Guide for the Cisco Unity Connection Phone Interface do not contain the keys that users press for Connection menu options. Instead, the procedures use the prompts that users hear to specify the menu options to choose. To provide users with key information, you must use the Wallet Card wizard.

The Wallet Card wizard also allows you to customize technical support information and instructions for signing in to Connection. The Wallet Card wizard is a Windows-based remote database administration tool. Download the tool and view Help at http://www.ciscounitytools.com/Applications/CxN/WalletCardWizard/WalletCardWizard.html.

- 2. Give each user applicable user guides. The following Cisco Unity Connection user guides are available at http://www.cisco.com/en/US/products/ps6509/products\_user\_guide\_list.html.
  - User Guide for the Cisco Unity Connection Phone Interface
  - User Guide for the Cisco Unity Connection Messaging Assistant Web Tool
  - User Guide for the Cisco Unity Connection Messaging Inbox Web Tool
  - User Guide for Accessing Cisco Unity Connection Voice Messages in an Email Application
  - User Guide for the Cisco Unity Connection Personal Call Transfer Rules Web Tool
  - Quick Start Guide: Using the Cisco Unity Connection Web Inbox

- Quick Start Guide: Using Cisco ViewMail for Microsoft Outlook

Information in the guides is generally organized by feature. You can distribute the guides for the interfaces that users are using, or you can distribute feature-specific information to users for whom you have enabled the features. (On Cisco.com, select the link for the topics you want, and print the PDF files.)

- **3.** Give users the phone numbers that they dial to access Connection from within your organization and from outside the organization. As applicable, show users which button or key to use on their desk phones to access Connection.
- 4. Give users the URL to the Cisco PCA website: http://<Cisco Unity Connection server name>/ciscopca.
- 5. Give users the URL to the Cisco Unity Connection Web Inbox: http://<Cisco Unity Connection server name>/inbox.
- **6.** Give users the name, extension, and/or email address of the Connection administrator and any support desk contact information.
- 7. Depending on the conversation version that users in your organization are familiar with, you may want to provide them with a list of phone menu differences between Connection and a former voice messaging system—especially if you choose not to offer them an alternative to the standard conversation, which is specified by default in the Voice Mail User template.

### **Provide PINs, Passwords, and Security Guidelines**

8. Provide users with their initial phone PINs. Alternatively, tell users to sign in to the Cisco Personal Communications Assistant (PCA) website to set their phone PINs before they call Connection to complete first-time enrollment. (Users are not required to enter an existing phone PIN in order to change it in the Cisco PCA.)

If users choose not to initially change their PIN in the Cisco PCA, they are prompted to change their phone PIN during first-time enrollment.

- **9.** Provide users with their initial Cisco PCA passwords. Users must use the Connection Messaging Assistant to change their Cisco PCA passwords.
- **10.** Explain to users how to secure their phone and Cisco PCA PINs and passwords so that they adequately protect their Connection mailboxes from unauthorized access. Detail the security guidelines for your organization. Encourage users to enter secure PINs and passwords whenever they change them.
- 11. Make sure users understand that their Cisco PCA passwords are not related to their Connection phone PINs, nor are the passwords and PINs synchronized. Users may assume that their phone and Cisco PCA PIN and password are the same. As a result, they may think that they are changing both when the Connection conversation prompts them to change their phone PIN during first-time enrollment. For this reason, you may find that many users do not consider securing their Cisco PCA passwords, even though you request that they do so.

#### **Remind Users to Complete First-Time Enrollment**

**12.** Make sure that users know that they need to complete first-time enrollment by phone. They do not need to refer to any Connection documentation during enrollment. Connection indicates when the enrollment process is complete. If users hang up before they have completely enrolled, none of their changes are saved and the first-time enrollment conversation plays again the next time that they sign in to Connection.

The "Enrolling as a Cisco Unity Connection User" chapter of the User Guide for the Cisco Unity Connection Phone Interface details the tasks that users are asked to complete as part of enrollment.

### **Explain How Connection Features and Functionality Work**

- 13. Provide training on how to personalize user settings by using the phone and the Connection Messaging Assistant, as summarized in Table 4-1. In particular, users may benefit from a hands-on demonstration of the Messaging Assistant, as they may not be accustomed to using a web interface to set voice messaging options.
- Provide training on how to use the Cisco Unity Connection Personal Call Transfer Rules web tool, and how call transfers, call holding and screening, and caller options are used, as summarized in Table 4-2.

Users can refer to the *User Guide for the Cisco Unity Connection Personal Call Transfer Rules Web Tool* or to Cisco Unity Connection Personal Call Transfer Rules Help for further guidance after orientation.

- Explain how full mailboxes work with Connection. See the "Support Desk Orientation in Cisco Unity Connection" section on page 5-2 for issues that users may encounter. Refer users to the appropriate user guides for similar information.
- 16. If single inbox is configured: Discuss single-inbox behavior with users. For a detailed explanation of how single inbox works, including issues that may be of concern to users, see the "Synchronizing Voice Messages in Connection and Exchange Mailboxes in Cisco Unity Connection (Single Inbox)" section in the "Configuring Cisco Unity Connection and Microsoft Exchange for Unified Messaging" chapter of the Unified Messaging Guide for Cisco Unity Connection Release 9.x at http://www.cisco.com/en/US/docs/voice\_ip\_comm/connection/9x/unified\_messaging/guide/9xcuc umgx.html.
- 17. If your organization has users who will use RSS readers to access voice messages, provide training on using RSS with Connection. See the "Configuring Access to RSS Feeds of Voice Messages in Cisco Unity Connection 9.x" section in the "Messaging in Cisco Unity Connection 9.x" chapter of the *System Administration Guide for Cisco Unity Connection Release 9.x* for details. The guide is available at

http://www.cisco.com/en/US/docs/voice\_ip\_comm/connection/9x/administration/guide/9xcucsagx .html.

- **18.** If your organization has users who will use TTY and the TTY prompt set, provide training on using TTY with Connection.
- **19.** Make sure that users who own call handlers or system distribution lists understand their responsibilities (if applicable).
- **20.** As applicable, tell users how to use the Cisco Unity Greetings Administrator and System Broadcast Administrator.

## **Settings That Cisco Unity Connection Users Can Change**

See the following tables:

- Settings That Users Can Change By Using the Cisco Unity Connection Messaging Assistant and the Phone Menus
- Settings That Users Can Change By Using the Cisco Unity Connection Personal Call Transfer Rules Web Tool and the Phone Menus

1

Table 4-1	Settings That Users Can Change By Using the Cisco Unity Connection Messaging Assistant and the Phone
	Menus

Settings That Can Be Changed by Using the Connection Messaging Assistant	Settings That Can Be Changed by Using the Phone Menus
Call Holding and Screening <sup>1</sup> :	Call Holding and Screening <sup>1</sup> :
• Select how Connection handles indirect calls when the user phone is busy, including placing the caller on hold, prompting the caller to hold or leave a message, and sending the caller directly to the greeting	• None
• Select how Connection handles indirect calls, including telling the user who the call is for, announcing that Connection is transferring the call, prompting the user to accept or refuse a call, and prompting callers to say their names	
Call Transfers <sup>2</sup> :	Call Transfers <sup>2</sup> :
• Configure the three basic transfer rules: standard, alternate, and closed hours	• Configure the three basic transfer rules: standard, alternate, and closed hours
• Enable or disable personal call transfer rules for each of the basic transfer rules	• Enable or disable personal call transfer rules for each of the basic transfer rules
• Transfer indirect calls to an extension or send them to the user greeting	• Transfer indirect calls to an extension or send them to the user greeting
Change extensions	Change extensions
	• Configure alternate contact numbers for caller input keys that are assigned to the Transfer to Alternate Contact Number action
Caller Options:	Caller Options:
• Allow callers to edit messages	• None
• Allow callers to mark messages urgent	
Phone Menu Options:	Phone Menu Options:
Set language for Connection prompts	• Select full or brief Connection conversation menus
• Specify whether users use the phone keypad or voice-recognition input style	
• Set speed and volume of prompts, recorded names, and user greetings	
• Select full or brief Connection conversation menus	
• Select the action that Connection performs when the user calls Connection, including greeting the user by name, and announcing the number of new messages by type	
• Change the time format used for message time stamps	
• Specify alternate extensions	

Γ

Settings That Can Be Changed by Using the Connection Messaging Assistant	Settings That Can Be Changed by Using the Phone Menus	
Greetings:	Greetings:	
• Record a personal greeting	• Record a personal greeting	
• Enable or disable greeting	• Enable or disable greeting	
• Specify an expiration date for an enabled greeting	• Specify an expiration date for an enabled greeting	
• Switch between system prompt and personal greeting		
Message Notification:	Message Notification:	
• Enable or disable a notification device	• Enable or disable a notification device, and change its number	
• Specify dialing or recipient options		
• Select the types of messages and message urgency for which Connection generates a notification		
• Specify a list of message senders (by username or calling phone number) for which Connection generates a notification		
• Set up a notification schedule, and specify what happens when a device does not answer, is busy, or fails		
Message Playback:	Message Playback:	
• Specify the speed and volume of messages that are played by phone	• Speed and volume of message as it is played	
• Specify message playback order		
• Specify whether Connection plays the Message Type menu		
• Select the action that Connection performs when messages are played, including announcing the name and number of the sender who left a message, and whether the time stamp is played before or after the message		
<ul> <li>Specify that messages are marked saved upon hang-up or disconnect</li> </ul>		
• Specify whether Connection asks to confirm deletions of new and saved messages		

# Table 4-1Settings That Users Can Change By Using the Cisco Unity Connection Messaging Assistant and the Phone<br/>Menus (continued)

Table 4-1	Settings That Users Can Change By Using the Cisco Unity Connection Messaging Assistant and the Phone
	Menus (continued)

Settings That Can Be Changed by Using the Connection Messaging Assistant	Settings That Can Be Changed by Using the Phone Menus	
Message Sending and Addressing:	Message Addressing:	
• Specify that Connection prompts to confirm message recipients by name	• Switch between addressing to other users by name or by extension (by pressing ##) <sup>3</sup>	
• Specify that Connection prompts to continue adding names after each recipient	• Review, add, or remove names in the addressing priority list <sup>4</sup>	
• Specify that Connection sends messages when users hang up or a call is disconnected		
• Switch between addressing messages to other users by name, or by extension		
• Specify order for addressing messages by name (last name then first name, or vice versa)		
Personal Settings:	Personal Settings:	
• Record a name	Record a name	
• Specify alternate names	Change directory listing status	
Change directory listing status	Change password or PIN	
Change password or PIN	• Add user-defined alternate extensions <sup>5</sup>	
• Add user-defined alternate extensions <sup>5</sup>	• Edit alternate contact numbers, if an administrator has configured one or more caller input keys to transfer to an alternate contact number during the user greeting	
Private Lists:	Private Lists:	
• Enter a display name	• Record a list name	
• Record a list name	• Add and delete members	
• Add and delete members		
Contacts:	Contacts:	
• Set up contacts to use for both name dialing and call transfer rules	• None	

Call holding and screening options apply only to incoming calls that were routed to the user from the automated attendant or a directory handler, and not
on direct calls. Holding and screening options do not apply when an outside caller or another user dials a user extension directly. In addition, holding and
screening options are only available when supervised transfers are enabled. These settings apply if the user does not have personal call transfer rules
enabled.

2. Call transfer options apply only to incoming calls that were routed to the user from the automated attendant or a directory handler, and not on direct calls. Transfer options do not apply when an outside caller or another user dials a user extension directly.

3. Note that this depends on whether you have enabled spelled name addressing.

- 4. To enable users to access the setup conversation that allows them to review, add, or remove names in the addressing priority list, the users must be assigned to a custom conversation, and you must use the Custom Keypad Mapping tool to map the Addressing Priority List conversation to a key in the Message Settings menu for that conversation.
- 5. Users must belong to a class of service with the Allow Users to Manage Their User-Defined Alternate Extensions option enabled. To enable users to access the phone menu conversation that allows them to review, add, or remove alternate extensions, the users must be assigned to a custom conversation, and you must use the Custom Keypad Mapping tool to map the Edit User-Defined Alternate Extensions option to a key in the Preferences Menu for that conversation.
