

Call Park

The Call Park feature allows you to place a call on hold, so it can be retrieved from another phone in the system. For example, if you are on an active call at your phone, you can park the call to a call park extension by pressing the Park softkey. Someone on another phone in your system can then dial the call park extension to retrieve the call.

For more information about call park, see [Call Park](#) in the *Cisco Unified CallManager Features and Services Guide*.
