

Configuring Fax Relay

Last Updated: September 21, 2011

This module describes how to enable Skinny Client Control Protocol (SCCP) Fax Relay for analog foreign exchange service (FXS) ports under the control of Cisco Unified CME.

Finding Feature Information in This Module

Your Cisco Unified CME version may not support all of the features documented in this module. For a list of the versions in which each feature is supported, see the [“Feature Information for Fax Relay” section on page 1168](#).

Contents

- [Prerequisites for Fax Relay, page 1161](#)
- [Restrictions for Fax Relay, page 1162](#)
- [Information About Fax Relay, page 1162](#)
- [How to Configure Fax Relay, page 1164](#)
- [Configuration Examples for Fax Relay, page 1166](#)
- [Additional References, page 1166](#)
- [Feature Information for Fax Relay, page 1168](#)

Prerequisites for Fax Relay

- Cisco Unified CME 4.0(3) or a later version.
- If your voice gateway is a separate router than the Cisco Unified CME router, an IP voice image of Cisco IOS Release 12.4(11)T or later is required.
- SCCP Telephony Control (STC) application is enabled.

**Note**

-
- For Cisco Unified CME versions before Cisco Unified CME 4.0(3), there are two manually-controlled options for setting up facsimiles:
 - Fax Gateway Protocol
Configure the Cisco VG224, FXS port, or analog telephone adaptor (ATA) to use H.323 or Session Initiation Protocol (SIP) with a specific fax relay protocol. See the [Cisco IOS Fax, Modem, and Text Support over IP Application Guide](#).
 - G.711 Fax Pass-Through with SCCP
This is the default setup for facsimile on the Cisco VG224 and FXS ports before Cisco Unified CME 4.0(3). See the [Cisco IOS Fax, Modem, and Text Support over IP Application Guide](#).
-

Restrictions for Fax Relay

- RFC2833 dual tone multifrequency (DTMF) digit relay under Cisco Unified CME for SCCP FXS ports is not supported.
- SCCP FXS ports under Cisco Unified CME control do not natively support RFC2833 DTMF-relay. However, Cisco Unified CME can support conversion of DTMF digits to and from RFC2833 DTMF-relay on its H323 and SIP interfaces when used with SCCP-controlled FXS ports.
- Cisco Fax Relay is only supported on those Cisco IOS gateways and network modules listed in [Table 59, Supported Gateways, Modules, and VICs for Fax Relay](#).

Information About Fax Relay

To configure the fax relay feature, you should understand the following concepts:

- [Fax Relay and Equipment, page 1162](#)
- [Feature Design of Cisco Fax Relay, page 1163](#)

Fax Relay and Equipment

- The fax relay feature supports the use of existing customer premises equipment (CPE) in voice networks by allowing legacy analog phones attached to a Cisco IOS gateway to be controlled by Cisco Unified CME, and by providing feature interoperability between analog and IP endpoints.
- The voice gateway can be the same router that is being used for Cisco Unified CME or it may be a separate router (for example, the Cisco VG224).
- The fax relay feature facilitates replacement of the PSTN time-division multiplexing (TDM) infrastructure with VoIP.

Feature Design of Cisco Fax Relay

Cisco Fax Relay is a proprietary fax relay implementation that uses Real-time Transport Protocol (RTP) to transport fax data. It is the default fax relay type on Cisco voice gateways and the only supported fax option for Cisco Unified CME 4.0(3) and later versions. The fax relay feature provides enhanced supplementary feature capability on analog ports connected to a Cisco integrated services router (ISR) or Cisco VG224 analog gateway. Calls through the analog FXS ports are controlled by the Cisco Unified CME system.

Before the introduction of SCCP-enhanced features, SCCP gateways supported fax pass-through only. SCCP-enhanced features add support for Cisco Fax Relay and Super Group 3 (SG3) to G3 fax relay. This feature allows the fax stream between two SG3 fax machines to negotiate down to G3 speeds (less than 14.4 kbps) allowing SG3 fax machines to interoperate over fax relay with G3 fax machines.

The SCCP telephony control (STC) application on the Cisco voice gateway presents the locally attached analog telephones as individual endpoints to the call-control system, which allows the analog phones to be controlled in the same way as IP phones. With this capability, gateway-attached endpoints share the same telephony features that are available on IP phones directly connected to Cisco Unified CME. SCCP-enhanced features provide analog endpoint to analog endpoint interoperability within the IP telephony network.

Figure 40 shows a multisite deployment of the fax relay feature in a Cisco Unified CME topology.

Figure 40 Cisco Unified CME Fax Relay Deployment

For information on configuring gateway-controlled fax relay features, see the “How to Configure Fax Relay” section on page 1164.

Supported Gateways, Modules, and Voice Interface Cards for Fax Relay

Table 59 lists supported gateways, modules, and voice interface cards (VICs).

Table 59 *Supported Gateways, Modules, and VICs for Fax Relay*

Gateways	Extension Modules	Network Modules and Expansion Modules	VICs
<ul style="list-style-type: none"> • Cisco 2801 • Cisco 2811 • Cisco 2821 • Cisco 2851 • Cisco 3825 • Cisco 3845 	—	<ul style="list-style-type: none"> • NM-HD-1V • NM-HD-2V • NM-HD-2VE 	<ul style="list-style-type: none"> • VIC2-2FXS • VIC-4FXS/DID • VIC2-2BRI-NT/TE
<ul style="list-style-type: none"> • Cisco 2801 • Cisco 2821 • Cisco 2851 • Cisco 3825 • Cisco 3845 	<ul style="list-style-type: none"> • EVM-HD 	<ul style="list-style-type: none"> • EVM-HD-8FXS/DID • EM-3FXS/4FXO • EM-HDA-8FXS • EM-4BRI-NT/TE 	—

How to Configure Fax Relay

This section contains the following tasks:

- [SCCP: Configuring Fax Relay, page 1164](#) (required)
- [Verifying and Troubleshooting Fax Relay Configuration, page 1165](#) (optional)

SCCP: Configuring Fax Relay

To configure the fax relay features on Cisco Unified CME, perform the following steps.

SUMMARY STEPS

1. **enable**
2. **configure terminal**

3. **voice service voip**
4. **fax protocol cisco**
5. **fax-relay sg3-to-g3**
6. **exit**

DETAILED STEPS

	Command or Action	Purpose
Step 1	enable Example: Router> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> Enter your password if prompted.
Step 2	configure terminal Example: Router# configure terminal	Enters global configuration mode.
Step 3	voice service voip Example: Router(config)# voice service voip	Enters voice service configuration mode and specifies VoIP encapsulation.
Step 4	fax protocol cisco Example: Router(config-voi-serv)# fax protocol cisco	Specifies the Cisco-proprietary fax protocol as the fax protocol for SCCP analog endpoints. <ul style="list-style-type: none"> This command is enabled by default. This is the only supported option for Cisco Unified CME 4.0(3) and later versions.
Step 5	fax-relay sg3-to-g3 Example: Router(config-voi-serv)# fax relay sg3-to-g3	(Optional) Enables the fax stream between two SG3 fax machines to negotiate down to G3 speeds.
Step 6	exit Example: Router(config-voi-serv)# exit	Exits the current configuration mode.

Verifying and Troubleshooting Fax Relay Configuration

To verify the configuration of Cisco Fax Relay, use the **show-running config** command. Sample output is located in the [“Configuration Examples for Fax Relay”](#) section on page 1166.

Use the following commands to verify and troubleshoot SCCP gateway-controlled Fax Relay:

- show voice call summary**—Displays fax relay voice port settings.
- show voice dsp**—Displays fax relay digital signal processor (DSP) channel status.
- debug voip application stcpp all**—Displays SCCP telephony control (STC) application fax relay information.

- **debug voip dsm all**—Displays fax relay DSP stream manager (DSM) messages.
- **debug voip dsmp all**—Displays fax relay distributed stream media processor (DSMP) messages.
- **debug voip hpi all**—Displays gateway DSP fax relay information on RTP packet events.
- **debug voip vtsp all**—Displays gateway voice telephony service provider (VTSP) debugging information for fax calls.

**Note**

For more information on these and other commands, see the [Cisco IOS Voice Command Reference](#), [Cisco IOS Debug Command Reference](#), [Cisco Unified Communications Manager Express Command Reference](#), and [Cisco IOS Configuration Fundamentals Command Reference](#).

Configuration Examples for Fax Relay

This section contains the following example:

- [Fax Relay: Example, page 1166](#)

Fax Relay: Example

```
voice service voip
  fax-relay sg3-to-g3

ephone-dn 44
  number 1234
  name fax machine

ephone 33
  mac-address 1111.2222.3333
  button 1:44
  type anl
```

Feature Information for Fax Relay

Table 60 lists the features in this module and enhancements to the features by version.

To determine the correct Cisco IOS release to support a specific Cisco Unified CME version, see the *Cisco Unified CME and Cisco IOS Software Version Compatibility Matrix* at http://www.cisco.com/en/US/docs/voice_ip_comm/cucme/requirements/guide/33matrix.htm.

Use Cisco Feature Navigator to find information about platform support and software image support. Cisco Feature Navigator enables you to determine which Cisco IOS software images support a specific software release, feature set, or platform. To access Cisco Feature Navigator, go to <http://www.cisco.com/go/cfn>. An account on Cisco.com is not required.

**Note**

Table 60 lists the Cisco Unified CME version that introduced support for a given feature. Unless noted otherwise, subsequent versions of Cisco Unified CME software also support that feature.

Table 60 **Feature Information for Cisco Fax Relay**

Feature Name	Cisco Unified CME Version	Feature Information
Fax Relay	4.0(3)	Enables Fax Relay on analog FXS ports on Cisco IOS voice gateways under the control of Cisco Unified CME.
