Introduction

This is an application note for interoperability connectivity of Nortel Communication Server 1000 (formerly known as Succession 1000) PBX with Cisco Unified CallManager Express Release 3.2 via H.323 trunk.

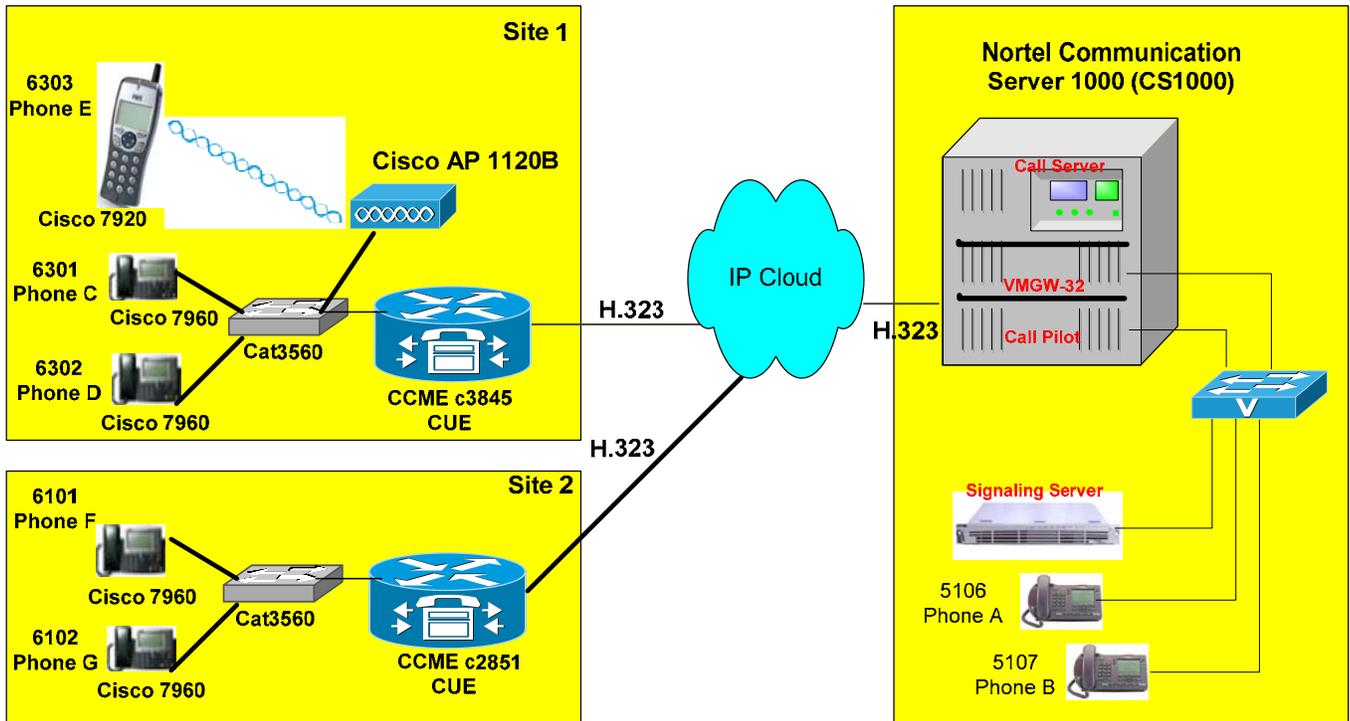

The network topology diagram (Figure 1) shows the test setup for end-to-end interoperability with two different sites of Cisco Unified CallManager Express that has Cisco Unity Express built in connected to Nortel PBX via H323 trunks.

Network Topology

Figure 1. Network Topology

H.323 Call Setup End-to-End Configuration

Limitations

- Called and Calling Name and Number are not displayed on Nortel phone when calling from and to CCME phone
- Calling Number only displayed on CCME phone when calling from Nortel phone
- Dialed Number is displayed on Nortel and CCME phones rather than Connected Number when calling from Nortel or CCME Phone
- H450.2 and H450.3 supplementary services must be disabled and "allow-connections H323 to H323" must be enabled on CCME to support call transfer and call forward to Nortel, Nortel currently does not support H.450 Supplementary Services
- Call Transfer and call Forward calls fail if Nortel phone executes call transfer or forward to CCME phone across H323 trunk
- Full Blind Transfer call fails if CCME phone gets the call from Nortel Phone and executes the full Blind transfer to any phone

System Components

Hardware Requirements

- Cisco Unified CallManager Express Cisco 3845 with NM-CUE
- Cisco Unified CallManager Express Cisco 2851 with NM-CUE
- Cisco Catalyst Switch 3560 48 ports
- Cisco Aironet 1100 Series Access Point
- Cisco 7960 and 7920 phones
- Nortel Communication System 1000 (which includes Call Server, Signaling Server and Media gateway)
- Nortel i2004/i2000 IP phones

Software Requirements

- Cisco Unified CallManager Express Release 3.2
- Cisco IOS software Release 12.3(11)T5
- Cisco CatOS software Release 12.1(19)EA1d
- Cisco 7960 IP phone Firmware P00305000301
- Cisco 7920 IP phone Firmware cmterm_7920.4.0-01-08
- Nortel Succession 4.0 Release
- Nortel IP Phone firmware version 0604D49

Features

The following features are supported between the Nortel Communication System 1000 PBX using an H323 trunk with Cisco Unified CallManager Express Release 3.2. For more information, see the Limitations section.

- CLIP-Calling Line (Number) Identification Presentation
- CNIP-Calling Name Identification Presentation
- CT-Call Transfer by Join
- CFU-Call Forwarding Unconditional
- CFB-Call Forwarding Busy
- CFNR-Call Forwarding no reply
- COLP-Connected Line (Number) Identification Presentation
- CONP-Connected Name Identification Presentation
- Transcoding-CT, CFU, CFB, and CFNR
- UE VM- Integration
- Call Hold / Resume and Call Waiting
- 3-Way Conference

Features Not Supported

- MWI- Message Waiting Indication (lamp ON, lamp OFF) across the H.323 Trunk
- Call Completion (Callback; Automatic Callback) across H323 Trunk
- Alerting Name and Number from CCME across H323 Trunk
- Connected Name and Number Restrictions on CCME

Configuration

Configuration Sequence and Tasks

- Configure Nortel Site which includes Call Server, Signaling Server and Media gateway
- Configure Site 1 which includes C3845, NM-CUE, Cat3560, and Cisco AP 1120B
- Configure Site 2 which includes C2851, NM-CUE, Cat3560

Nortel Communication Server 1000 PBX Configuration Sequence and Tasks

Call Server Setup via SSC card console

1. LD 17 – Configure the D-channel (signaling channel) between the Call Server and the Signaling Server
2. LD 97 – Configure the Super-loop for the Virtual Trunks
3. LD 14 – Configure the H.323 Virtual Trunks to the Signaling Server
4. LD 14 – Configure the Virtual Gateway Trunks
5. LD 11 – Configure for the Virtual lines for the Nortel IP phone (i200x series)
6. LD 16 – Configure the H.323 route
7. LD 86 – Configure the Route List Block for the Virtual Trunk route
8. LD 87 – Configure CDP steering codes

Signaling Server Setup via the Nortel Element Manager

9. Configure the Zones
10. Configure a new IP Telephony Node summary
11. Configure the Node
12. Configure the VGW and IP phone codec profile
13. Configure the Quality of Service (QoS)
14. Configure LAN Configuration
15. Configure the H323 GW Setting
16. Configure the Card section for the MC-32 VGMC card
17. Configure the Signaling Server

NRS (Network Routing Server)

18. Configure the System Wide Settings
19. Configure the NRS Server Settings
20. Configure a Service Domain
21. Configure a L1 Domain (UDP)
22. Configure a L0 Domain (CDP)
23. Configure a H.323 gateway
24. Configure the Routing Entries

Configuration Menus and Commands

Nortel Communication Server 1000 (CS1000) Configuration

Call Server Setup:

1. LD 17 – Configure the D-channel (signaling channel) between the Call Server and the Signaling Server

10. Configure a new IP Telephony Node summary

The screenshot shows the Cisco IP Telephony Configuration interface. On the left is a navigation menu with the following items: System Status, Call Server, IP Telephony, Configuration, Call Server, IP Telephony, Network Numbering Plan, Software Upgrade, Patching, System Utility, Administration, Support, Tools, and Logout. The main content area is titled 'Node Summary' and shows the configuration for Node 102 (Node IP: 172.20.217.100). At the top right of the main area are buttons for 'New Node' (with an input field), 'to Add', and 'Import Node Files'. Below the node header are buttons for 'Edit', 'Transfer / Status', and 'Delete'. The configuration details are as follows:

Voice LAN (TLAN) IP address	TN
Signaling Server	172.20.217.103
Pentium Card	
Succession Media Card	172.20.217.102
	3 0
	VGW Channels
