## Introduction

This is an application note for connectivity of NEC IPX2400 Release 15 PBX with Cisco Unified CallManager Release 5.0 via Cisco Communication Media Module CMM-T1 as MGCP gateway using ISO QSIG protocol.

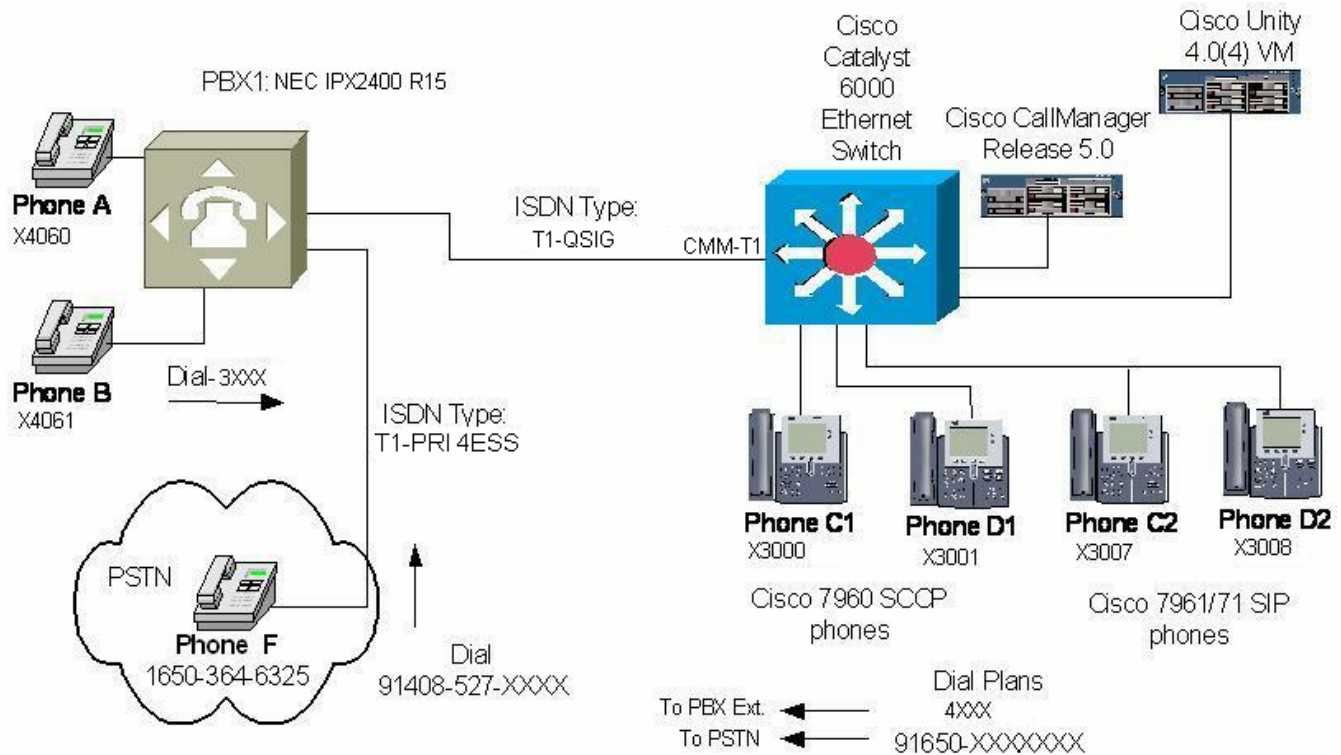

The network topology diagram (Figure 1) shows the test setup for end-to-end interoperability with the Cisco Unified CallManager connected to the PBX via Communication Media Module CMM-T1 link as MGCP gateway. Connectivity is achieved by using the PRI QSIG T1 protocol type on the MGCP gateway with Unified CallManager Service parameter QSIG variant of ISO and ISO switch type on the NEC IPX2400

This Application note uses the Communication Media Module CMM-T1 voice gateway, however other Cisco voice gateways are also an option to use since Unified CallManager QSIG implementation does not depend on the physical interface.

## Network Topology

**Figure 1.** Network Topology or Test Setup

## Limitations

Call Transfer by join (Consultation local Transfer), Cisco IP Phone x3000 calling to Dterm phone x4060 that is Transferred to Dterm phone x4061. Cisco IP phone x3000 display shows unknown/unknown. NEC IPX2400 sends "CallTrasferComplete" connected name and number restricted towards Unified CallManager.

Call Transfer by join (Consultation network/external Transfer), Cisco IP Phone x3000 calling to Dterm phone x4060 that is Transferred to Cisco IP phone x3001. Cisco IP phones x3000 and x3001 display unknown/unknown (SCCP IP phone) and Anonymous (SIP IP phone), respectively. NEC IPX2400 sends "CallTrasferComplete" connected name and number restricted towards Unified CallManager.

Call Transfer by join (Blind network/external Transfer), Cisco IP Phone x3000 calling to Dterm phone x4060 that is Transferred to Cisco IP phone x3001. Cisco IP phone x3001 display shows Anonymous (SIP IP phone). NEC IPX2400 sends "CallTransferComplete" calling Name and number restricted towards Unified CallManager. This limitation is fixed when SS-Path Replacement is activated.

Call Forward by join (local), Cisco IP Phone x3000 calling to Dterm phone x4060 that is forwarded to Dterm phone x4061. Cisco IP phone x3000 display shows "Alerting Name" is presented onlt during 'Alerting' state. When Dterm phone x4061 answers the call the display on the Cisco IP phone changes to "unknown". This behavior is due to NEC PBX sending Callforward update "notificationWithoutDivertedToNr(1)". Unified CallManager uses the "DivertingLegInfo1" data to update the IP phone display, in this CallForward scenario. Connected number is ignored by Unified CallManager.

Call Forward by join (network/external), Dterm Phone x4060 calling to Cisco IP phone x3000 that is forwarded to Dterm phone x4061.

Calling Name is not displayed on Dterm phone x4061, the diverting number is displayed (3000).

Call back, Busy or NR, was invoked from Dterm phone x4060 to Cisco IP phone, the original calling name is not shown on the Cisco IP phone x3000. NEC PBX does not send Calling Name on a locally originated CallBack call.

NEC PBX could not restrict Calling Name, however, NEC has an option to turn off/remove name display delivery, in ASYD command (system wide) or remove name from individual stations using ANDD command, or block Name display at a trunk level using ARTD command.

## System Components

### Hardware Requirements

#### Cisco Hardware

Cisco Unified CallManager Server

Catalyst 6500

WS-SVC-CMM-6T1, Communications Media Module

#### NEC IPX2400

Circuit card PA-24PRT

### Software Requirements

Cisco Unified CallManager: 5.0

Release 15

Cisco IOS Release or 12.3 or higher

## Features

### Features Supported

- CLIP-Calling Line (Number) Identification Presentation
- CLIR-Calling Line (Number) Identification Restriction
- CNIP-Calling Name Identification Presentation
- COLP-Connected Line (Number) Identification Presentation
- CONP-Connected Name Identification Presentation
- Send Alerting Name
- Call Back/Call Completion
- CT-Call Transfer (by join)
- CFU-Call Forwarding Unconditional
- CFB-Call Forwarding Busy
- CFNR-Call Forwarding No Reply
- Call Forward by Reroute
- ANF-PR-Additional Network Feature Path Replacement (for Call Transfer by join)
- ANF-PR-Additional Network Feature Path Replacement (for Trombone connection)

### Features Not Supported

- CONR- Connected Name Identification Restriction – (NEC IPX2400 could not change connected name to restricted).
- COLR- Connected Line (Number) Identification Restriction – (NEC IPX2400 could not change connected number to restricted).
- Q.SIG MWI- Message Waiting Indication (lamp ON, lamp OFF), the current NEC IPX2400 North American Release 15 software does not support QSIG-MWI.
- Overlap sending and overlap receiving are not supported on the current NEC IPX2400 North American Release 15 software.
- ANF-PR-Additional Network Feature Path Replacement (for Call Forward by join), the current NEC IPX2400 North American Release 15 software does not support Path Replacement on Call Forward by join

## Configuration

**Note:** It is important that the engineer/technician modifying the IPX2400 Configuration be well versed in the NEC MAT command line. The NEC MAT command line is very precise and should only be changed by a person who is certified by NEC and has the in-depth knowledge on how to troubleshoot the system in case erratic behavior results.

### Configuring the NEC2400 IPX PBX

#### Sequence

##### Physical Layer Set-up

SW Mode→SW1→SW2→SW4

**Note:** You must set the switches on the PA-24PRT appropriately for QSIG operation

##### Enable QSIG services

ASYD→ASFC

##### Build the QSIG route

ARTD→ARTI→ATRK→ARSC→ARRC→ADPC→ACSC→ACIC1→ACIC2→MBRT

##### Build the Dial Plan

The following step allows you to access the QSIG route (Assumes dummy route has been built and ARRC is assigned properly)

ANPD→ASPA→AMND→AFRS→AOPR→ARNP

### Configuration Menus and Commands

#### Physical Layer Set-up

##### SW Mode

Set to 10 (A in HEX)

##### SW1

Set switch 3 to 'off' (Sets 23B+D mode)

##### SW2

Set switch 4 'on' and switch 5 'on' (Sets ESF framing and B8ZS lincode)

##### SW4

Set switch 2 to 'off' (This switch determines the ISDN protocol side emulation for the route Off=Network/On=User)

**Note:** To set other physical layer parameters such as LBO, alarm monitoring and Loss Pad settings please refer to the NEC USER GUIDE for the PA-24PRT. These parameters are not covered in this document. The value of these parameters will depend upon the installation of each individual Telephony network.

## Enable QSIG services

### ASYD

System 1, Index 186, bit 6 = 1 (ISDN service enabled)

System 1, Index 375, bit 0 = 1 (avoid Bch lockup)

### ASFC

SFI 94 set to '0' (ANI)

## Build QSIG Route

### ARTD

Note: You must build two ARTD forms, one for the b-channels and one for the d-channel

RT 4 (B-Channels)

## Cisco CMM-T1 Configuration

CMM\_Interop# **show version**

Cisco IOS Software, Cat6K-lc Software (wscmm-IPVOICE-M), Version 12.4(5a), RELEASE SOFTWARE (fc3)

Technical Support: <http://www.cisco.com/techsupport>

Copyright (c) 1986-2006 by Cisco Systems, Inc.

Compiled Sat 14-Jan-06 04:52 by alnguyen

ROM: System Bootstrap, Version 12.2(1r)T2, RELEASE SOFTWARE (fc1)

CMM\_Interop uptime is 2 weeks, 22 hours, 21 minutes

System returned to ROM by reload

System image file is "bootflash:wscmm-ipvoice-mz.124-5a.bin"

cisco WS-SVC-CMM Cat6k Voice Linecard (R7000) processor (revision 0xFF) with 196 608K/65536K bytes of memory.

Processor board ID SAD0825032A

R7000 CPU at 400MHz, Implementation 39, Rev 3.3, 256KB L2 Cache

Last reset from power-on

1 FastEthernet interface

1 Gigabit Ethernet interface

93 Serial interfaces

6 Channelized T1/PRI ports

32768K bytes of processor board bootflash (Read/Write)

Configuration register is 0x2

## Acronyms

Acronym	Definitions
ANF-PR	Additional Network Feature Path Replacement
AOC	Advice-of-charge. Information element is sent with the connection setup information for incoming Euro-ISDN connections. The AOC IE is used for call charge calculation.
CCM	Cisco Unified CallManager
CCBS	Call Completion to Busy Subscriber
CCNR	Call Completion on No Reply
CFB	Call Forwarding on Busy
CFNR	Call Forwarding No Reply
CFU	Call Forwarding Unconditional
CLIP	Calling Line (Number) Identification Presentation
CLIR	Calling Line (Number) Identification Restriction

CMM	Communication Media Module (CMM) is a Cisco Catalyst® 6500 Series and Cisco 7600 Series line card that provides flexible and high-density T1/E1 gateways
CNIP	Calling Name Identification Presentation
CNIR	Calling Name Identification Restriction
COLP	Connected Line (Number) Identification Presentation
COLR	Connected Line (Number) Identification Restriction
CONP	Connected Name Identification Presentation
CONR	Connected Name Identification Restriction
CT	Call Transfer
MWI	Message Waiting Indicator
PSTN	Public Switched Telephone Network
